Table of Contents

01 01 IN Diagnostic system: reading out fault memory and activating systems - as of MY 2005 1
Tools 1
Performing vehicle handover 1
Reading out and erasing fault memory 2

10 01 TW Technical data, engine - as of MY 2005 5
Technical values 5
M96/05 and M97/01 engines 5
Engine design 6
Engine control 7

13 44 IN Mounting specification for connecting rod bolts - as of MY 2005 10
Tools 10
Securing connecting rod bolts 10
Securing connecting rod bolts 10

17 01 TW Technical data, lubrication system - as of MY 2005 13
Technical values 13
Engine lubrication 13

19 01 TW Technical data, cooling system - as of MY 2005 16
Technical values 16
Engine cooling 16

20 01 AW Basic safety instructions for working with the fuel system - as of MY 2005 19
Information 19
Safety instructions when working on fuel system 19

20 01 TW Technical data, fuel system - as of MY 2005 22
Technical values 22
Fuel supply 22

20 10 EN Emptying and filling the fuel tank - as of MY 2005 25
Tools 25
Preliminary work 25
Preliminary work 25
Emptying the fuel tank 26
Emptying the fuel tank 26
Filling the fuel tank 30
Filling the fuel tank 30
Subsequent work 32
Subsequent work 32

20 15 IN Calibrating fuel-level sensor system - as of MY 2005 34
Warning notes for calibrating fuel-level sensor system 34
Calibrating fuel-level sensor system, C4 35

Table of Contents

20 15 IN Calibrating fuel-level sensor system - as of MY 2005 38
Warning notes for calibrating fuel-level sensor system 38
Calibrating fuel-level sensor system, C2 39

24 46 TW Technical data, intake system - as of MY 2005 42
Technical values 42
Intake system 42
Intake system tightening torques 42

26 01 TW Technical data, exhaust system - as of MY 2005 45
Technical values 45
Exhaust system and emission control 45
Exhaust system tightening torques 45

27 06 IN External power connection, jump lead starting - as of MY 2005 48
Preliminary work 48
Preliminary work for external power connection, jump lead starting 48
General warning notes 49
Warning notes for external power connection, jump lead starting 49
Information 49
External power connection 49
Jump lead starting 50
Subsequent work 51
Rework on external power connection, jump lead starting 51

27 06 IN Work instructions after disconnecting the battery - as of MY 2005 54
Disconnecting and connecting the battery 54
Disconnecting and connecting the battery 54
Effect of disconnection or total discharge of battery on electrical systems in the vehicle and the precautions to be taken 55
Test drive after disconnecting battery 59
Effects of overvoltage on electrical and electronic systems during welding work and the precautions to be taken 59

27 06 IN Electrical emergency release for lid - as of MY 2005 62
Electrical emergency release, front lid 62

34 35 TW Technical data, transmission - as of MY 2005 65
Technical values 65
Technical data 65
Transmission ratios 65
Filling capacities 65

34 35 TW Technical data, transmission - as of MY 2005 68
Technical values 68
Technical data 68
Transmission ratios 68
Filling capacities 68

Table of Contents

37 35 TW Technical data, automatic transmission - as of MY 2005 71
Technical values 71
Technical data 71
Transmission ratios 71
Filling capacities 71

37 35 TW Technical data, automatic transmission - as of MY 2005 74
Technical values 74
Technical data 74
Transmission ratios 74
Filling capacities 74

39 88 TW Technical data on front final drive - as of MY 2006 77
Technical values 77
Technical values 77
Transmission ratio 77
Filling capacities 77

61 01 IN Convertible top service position - as of MY 2005 80
Convertible top service position 80
Move convertible top to service position 80
Ending convertible top service position 81

61 01 IN Overview of convertible-top components - as of MY 2005 85
Overview of convertible-top components 85

61 01 IN Diagram of convertible top - as of MY 2005 88
Diagram of convertible top 88

61 01 K2 Calibrating convertible top - as of MY 2005 91
Preliminary work 91
Preliminary work for calibration 91
General warning notes 91
Warning note on calibration 91
Calibrating convertible top 92

61 02 IN Assembly instructions for hardtop assembly fixture - as of MY 2005 94
Tools 94
Tools and materials 94
Tools and materials 94
Assembly instructions for hardtop assembly fixture 95
Making support cheeks 96
Making swivel arm 96
Fitting swivel and support cheeks on the basic plate 97
Fitting mounting points for the hardtop locking lever on the plate 98
Fitting horizontal banner arm and support on the base plate 99

Table of Contents

61 28 IN Care and cleaning of the convertible top - as of MY 2005 102
Care and cleaning of the convertible top 102
General information 102
Cleaning the convertible top 103
Care of convertible top 103
Care of convertible-top seals 103

64 12 IN Processing of Porsche 2-component window bonding agents - as of MY 2005 106
Pre-treatment of bonding surfaces 106
Pre-treating adhesive flanges on vehicle windows 106
Pre-treating adhesive flanges on vehicle body 107
Handling processing device 107
Double cartridge press 107

69 68 K2 Calibrating AWS control unit - as of MY 2005 113
Tools 113
Calibrating AWS control unit 113
Calibrating AWS control unit 113

87 43 IN Laying compressor/condenser line - as of MY 2005 118
Laying compressor/condenser line 118

87 45 IN Laying compressor/evaporator line - as of MY 2005 122
Laying compressor/evaporator line 122

94 15 IN Converting headlights for left/right-hand driving - as of MY 2005 126
Converting halogen headlights for left/right-hand driving 126
Converting Bi-Xenon headlights for left/right-hand driving 127

94 23 IN Bulb table and installation instructions - as of MY 2005 130
Bulb table 130
Bulb table 130
Installation instructions 131
Installation instructions for bulbs 131

97 72 IN Optical waveguide (LWL) - MOST bus - as of MY 2005 134
Tools 134
Optical waveguide (LWL) - MOST bus 134
Requirements when working with LWL 134
Storage, Packing, Transport 134
Installing the LWL in the vehicle 135
Repair 135
Push-on connector - dust boots 135
Control unit plug connector (wiring harness side) 136
Push-on connector - connection points 136
Optical fiber (LWL) - module 136
Optical waveguide variants 137
Removing and installing optical contacts on connector side 140

Table of Contents

97 72 IN Optical waveguide (LWL) - MOST bus - as of MY 2005
Installing optical contacts on connector side....141
Removing and installing optical contacts on socket side....141
Installing optical contacts on socket side....142

97 97 IN Connector - General information - as of MY 2005....146
Tools....146
Connector - General information....146
Procedure for releasing connectors that are difficult to move....149

01 01 00 Sales check - as of MY 2005....153
Sales check....153

03 24 00 Minor maintenance - as of MY 2005....157
Minor maintenance....157

03 26 00 Major maintenance - as of MY 2005....161
Major maintenance....161

03 35 00 On-board diagnosis (OBD) - as of MY 2005....165
Tools....165
Reading out and erasing fault memory....165
Reading out and erasing fault memory....165

03 60 00 Additional maintenance of drive belt - as of MY 2005....168
Additional maintenance of drive belt....168

03 81 00 Additional maintenance of spark plugs - as of MY 2005....171
Additional maintenance of spark plugs....171
Additional maintenance for spark plugs....171

03 83 00 Additional maintenance every 90,000 km/60.000 mls or every 6 years - as of MY 2005....174
Additional maintenance every 90,000 km/60.000 mls or every 6 years....174

03 88 00 Additional maintenance every 180,000 km/120.000 mls or every 12 years - as of MY 2005...177
Additional maintenance every 180,000 km/120.000 mls or every 12 years....177
Notes....177
Additional maintenance every 180,000 km/120,000 mls or every 12 years....177
Additional maintenance every 180,000 km/120,000 mls or every 12 years....177

03 88 00 Additional maintenance every 180,000 km/120.000 mls or every 12 years - as of MY 2005...180
Additional maintenance every 180,000 km/120.000 mls or every 12 years....180
Notes....180
Additional maintenance every 180,000 km/120,000 mls or every 12 years....180
Additional maintenance every 180,000 km/120,000 mls or every 12 years....180
Additional maintenance every 180,000 km/120,000 mls or every 12 years....181

Table of Contents

10 01 19 Removing and installing engine - as of MY 2005 183
Tools 183
Preliminary work for removing the engine 184
Preparations for removing the engine 185
Removing engine 186
Removing engine 186
Installing engine 201
Installing engine 201
Subsequent work for installation of engine 208
Installing engine - subsequent work 209

10 01 37 Disassembling and assembling engine - as of MY 2005 212
Tools 212
Preliminary work for disassembling engine 214
Preliminary work for disassembling engine 214
Component overview - engine 215
Component overview - engine 215
Disassembling engine - up to crankcase 217
Disassembling engine - up to crankcase 217
Assembling engine - from crankcase 231
Assembling engine - from crankcase 231
Assembling engine, subsequent work 237
Assembling engine, touching up 237

10 30 19 Removing and installing engine carrier - as of MY 2005 240
Preliminary work 240
Preliminary work 240
Removing engine carrier 240
Removing engine carrier 240
Installing engine carrier 242
Installing engine carrier 242
Subsequent work 242
Subsequent work 242

10 55 19 Removing and installing oil separator - as of MY 2005 245
Tools 245
Preliminary work 245
Preliminary work for removing oil separator 245
Removing oil separator 245
Removing oil separator 245
Installing oil separator 249
Installing oil separator 249
Subsequent work 251
Subsequent work for installing oil separator 251

13 10 20 Removing and installing pistons - as of MY 2005 254
Tools 254
Removing pistons, preliminary work 257

Table of Contents

13 10 20 Removing and installing pistons - as of MY 2005
Removing pistons, preliminary work....257
Removing pistons....257
Removing pistons....258
Disassembling pistons/connecting rods, cylinder 1-3....262
Disassembling pistons/connecting rods, cylinder 1-3....262
Assembling pistons/connecting rods, cylinder 1-3....263
Assembling pistons/connecting rods, cylinder 1-3....264
Piston markings....266
Piston markings....266
Installing pistons....267
Installing pistons....267
Installing pistons, touching up....280
Installing pistons, touching up....280

13 48 19 Removing and installing crankshaft - as of MY 2005....283
Tools....283
Removing crankshaft, preliminary work....284
Removing crankshaft, preliminary work....284
Removing crankshaft....287
Removing crankshaft....287
Installing crankshaft....290
Installing crankshaft....290
Installing crankshaft, touching up....294
Installing crankshaft, touching up....294

13 59 19 Removing and installing crankshaft sealing ring - Flywheel side - as of MY 2005....299
Tools....299
Preliminary work for crankshaft sealing ring on flywheel side....300
Preliminary work for crankshaft sealing ring on flywheel side....300
Removing crankshaft sealing ring on flywheel side....301
Removing crankshaft sealing ring on flywheel side....301
Installing crankshaft sealing ring on flywheel side....303
Installing crankshaft sealing ring (PTFE) on flywheel side....303
Subsequent work for crankshaft sealing ring on flywheel side....307
Subsequent work for crankshaft sealing ring on flywheel side....307

13 60 19 Removing and installing double-mass flywheel - as of MY 2005....310
Tools....310
Preliminary work....310
Preliminary work for double-mass flywheel....310
Removing double-mass flywheel - 3.8 l....310
Removing double-mass flywheel - 3.8 l....310
Installing double-mass flywheel....312
Installing double-mass flywheel....312
Subsequent work....312
Subsequent work for double-mass flywheel....312

Table of Contents

13 60 19 Removing and installing double-mass flywheel - as of MY 2005 315
Tools 315
Preliminary work 315
Preliminary work for double-mass flywheel 315
Removing double-mass flywheel - 3.6 l 315
Removing double-mass flywheel - 3.6 l 315
Installing double-mass flywheel 317
Installing double-mass flywheel 317
Subsequent work 317
Subsequent work for double-mass flywheel 317

13 63 19 Removing and installing drive plate for converter - as of MY 2005 320
Tools 320
Preliminary work for drive plate for converter 320
Preliminary work for drive plate for converter 320
Removing drive plate for converter 320
Removing drive plate for converter 320
Installing drive plate for converter 321
Installing drive plate for converter 321
Subsequent work for drive plate for converter 322
Subsequent work for drive plate for converter 322

13 74 19 Removing and installing crankshaft sealing ring - belt pulley side - as of MY 2005 324
Tools 324
Preliminary work for crankshaft sealing ring - belt pulley side 324
Preliminary work for crankshaft sealing ring - belt pulley side 324
Removing crankshaft sealing ring - belt pulley side 324
Removing the crankshaft sealing ring - belt pulley side 324
Installing crankshaft sealing ring - belt pulley side 326
Installing crankshaft sealing ring - belt pulley side 326
Subsequent work for crankshaft sealing ring - belt pulley side 327
Subsequent work for crankshaft sealing ring - belt pulley side 327

13 76 19 Removing and installing belt pulley/vibration damper - engine installed - as of MY 2005 330
Tools 330
Preliminary work - engine installed 330
Preliminary work for removing belt pulley/vibration damper - engine installed 330
Removing belt pulley/vibration damper - engine installed 331
Removing belt pulley (3.6 l) - engine installed 331
Installing belt pulley/vibration damper - engine installed 332
Installing belt pulley - 3.6 l engine installed 332
Subsequent work for installing belt pulley - engine installed 332
Subsequent work for installing belt pulley - engine installed 332

13 76 19 Removing and installing belt pulley/vibration damper - engine installed - as of MY 2005 335
Tools 335
Preliminary work - engine installed 335
Preliminary work for removing belt pulley/vibration damper - engine installed 335

Table of Contents

13 76 19 Removing and installing belt pulley/vibration damper - engine installed - as of MY 2005
Removing belt pulley/vibration damper - engine installed....336
Removing vibration damper (3.8 l) - engine installed....336
Installing belt pulley/vibration damper - engine installed....337
Installing vibration damper - 3.8 l engine installed....337
Subsequent work for installing belt pulley - engine installed....338
Subsequent work for installing belt pulley - engine installed....338

13 78 19 Removing and installing drive belt - as of MY 2005....341
Preliminary work....341
Preliminary work for removing drive belt....341
removing....341
Removing drive belt....341
Installing....342
Installing drive belt....342
Reworking....343
Work subsequent to installing drive belt....343

15 05 20 Removing and installing camshaft, adjusting timing - engine removed - as of MY 2005....345
Tools....345
Camshaft designation M96/05....346
Camshaft designation M96/05....346
Allocation of inlet camshaft adjustment device....347
Allocation of inlet camshaft adjustment device....347
Allocation of chain tensioners....348
Allocation of chain tensioners....348
Preliminary work for removing camshafts....349
Preliminary work for removing camshafts....349
Removing camshaft - engine removed....351
Removing camshafts - engine removed....351
Installing camshaft - engine removed....354
Installing camshafts, adjusting timing - engine removed....354
Subsequent work for installing camshafts....363
Subsequent work for installing camshafts....363

15 05 20 Removing and installing camshaft, adjusting timing - engine removed - as of MY 2005....367
Tools....367
Allocation of inlet camshaft adjustment device....368
Allocation of inlet camshaft adjustment device....368
Allocation of chain tensioners....369
Allocation of chain tensioners....369
Preliminary work for removing camshafts....370
Preliminary work for removing camshafts....370
Removing camshaft - engine removed....372
Removing camshafts - engine removed....372
Installing camshaft - engine removed....375
Installing camshafts, adjusting timing - engine removed....375
Subsequent work for installing camshafts....384

Table of Contents

15 05 20 Removing and installing camshaft, adjusting timing - engine removed - as of MY 2005
Subsequent work for installing camshafts....384

15 05 20 Removing and installing camshaft, adjusting timing - engine removed - as of MY 2005....388
Tools....388
Camshaft designation M97/01....389
Camshaft designation M97/01....389
Allocation of inlet camshaft adjustment device....390
Allocation of inlet camshaft adjustment device....390
Allocation of chain tensioners....391
Allocation of chain tensioners....391
Preliminary work for removing camshafts....392
Preliminary work for removing camshafts....392
Removing camshaft - engine removed....394
Removing camshafts - engine removed....394
Installing camshaft - engine removed....397
Installing camshafts, adjusting timing - engine removed....397
Subsequent work for installing camshafts....406
Subsequent work for installing camshafts....406

15 21 19 Removing and installing bearing cover for intermediate shaft - as of MY 2005....410
Tools....410
Preliminary work for bearing cover for intermediate shaft....411
Preliminary work for bearing cover for intermediate shaft....411
Removing bearing cover for intermediate shaft....411
Removing bearing cover for intermediate shaft....412
Installing bearing cover for intermediate shaft....415
Installing bearing cover for intermediate shaft....415
Subsequent work for bearing cover for intermediate shaft....417
Subsequent work for bearing cover for intermediate shaft....417

15 21 19 Removing and installing bearing cover for intermediate shaft - M97/01 - as of MY 2005....420
Tools....420
Preliminary work for bearing cover for intermediate shaft....421
Preliminary work for bearing cover for intermediate shaft....421
Removing bearing cover for intermediate shaft....422
Removing bearing cover for intermediate shaft - up to engine number 685 09 790....422
Removing bearing cover for intermediate shaft - from engine number 685 09 791....426
Installing bearing cover for intermediate shaft....431
Installing bearing cover for intermediate shaft - up to engine number 685 09 790....432
Installing bearing cover for intermediate shaft - from engine number 685 09 791....434
Subsequent work for bearing cover for intermediate shaft....437
Subsequent work for bearing cover for intermediate shaft....437

15 21 19 Removing and installing bearing cover for intermediate shaft - M96/05 - as of MY 2005....440
Tools....440
Removing bearing cover for intermediate shaft....441
Removing bearing cover for intermediate shaft - up to engine number 695 07 475....441

Table of Contents

15 21 19 Removing and installing bearing cover for intermediate shaft - M96/05 - as of MY 2005
Removing bearing cover for intermediate shaft - from engine number 695 07 476 445
Installing bearing cover for intermediate shaft 451
Installing bearing cover for intermediate shaft - up to engine number 695 07 475 451
Installing bearing cover for intermediate shaft - from engine number 695 07 476 453

15 23 55 Replacing sealing ring for bearing cover for intermediate shaft - as of MY 2005 458
Preliminary work for bearing cover sealing ring 458
Preliminary work for bearing cover sealing ring 458
Replacing sealing ring for bearing cover for intermediate shaft 458
Replacing sealing ring for bearing cover for intermediate shaft 458
Subsequent work for bearing cover sealing ring 459
Subsequent work for bearing cover sealing ring 459

15 37 19 Removing and installing solenoid hydraulic valve (camshaft timing) - as of MY 2005 462
Tools 462
Removing hydraulic valve for camshaft timing 462
Removing hydraulic valve for camshaft timing 462
Installing hydraulic valve for camshaft timing 465
Installing hydraulic valve for camshaft timing 465

15 55 19 Removing and installing solenoid hydraulic valve (valve lift control) - as of MY 2005 470
Removing hydraulic valve for valve lift control 470
Removing hydraulic valve for valve lift control 470
Installing hydraulic valve for valve lift control 472
Installing hydraulic valve for valve lift control 472

15 70 19 Removing and installing cylinder head - engine removed - as of MY 2005 475
Tools 475
Preliminary work for removing cylinder head 475
Preliminary work for removing cylinder head 475
Removing cylinder head 477
Removing cylinder head 477
Installing cylinder head 478
Installing cylinder head 478
Subsequent work for installing cylinder head 480
Subsequent work for installing cylinder head 480

15 70 37 Disassembling and assembling cylinder head - as of MY 2005 484
Tools 484
Preliminary work for disassembling cylinder head 485
Preliminary work for disassembling cylinder head 485
Disassembling cylinder head 485
Disassembling cylinder head 485
Assembling cylinder head 489
Assembling cylinder head 489
Assembling cylinder head, touching up 491
Assembling cylinder head, touching up 491

Table of Contents

15 70 49 Machining the cylinder head - as of MY 2005 493
Preliminary work 493
Preliminary work for machining cylinder head 493
Machining the cylinder head 493
Machining the cylinder head 493
Subsequent work 494
Subsequent work for machining cylinder head 494

15 75 02 Checking valve guide (valve lateral play) - as of MY 2005 497
Tools 497
Preliminary work 497
Preliminary work 497
Checking valve guide (valve lateral play) 498
Checking valve guide (valve lateral play) 498
Subsequent work 499
Subsequent work 499

15 84 19 Removing and installing actuator for inlet camshaft - as of MY 2005 502
Tools 502
Removing actuator - camshaft removed 502
Removing actuator - camshaft removed 502
Installing actuator - camshaft removed 503
Installing actuator - camshaft removed 503

15 91 19 Removing and installing cylinder head cover - engine removed - as of MY 2005 507
Tools 507
Preliminary work for removing cylinder head cover 507
Preliminary work for removing cylinder head cover 507
Removing cylinder head cover - engine removed 507
Removing cylinder head cover - engine removed 507
Installing cylinder head cover - engine removed 510
Installing cylinder head cover - engine removed 511
Touch up for installing cylinder head cover 514
Touch up for installing cylinder head cover 514

17 01 01 Checking engine oil level - as of MY 2005 516
Checking engine oil level 516
Checking engine oil level 516

17 01 55 Engine oil and oil filter change - as of MY 2005 522
Tools 522
Draining engine oil 522
Draining engine oil 522
Changing oil filter 524
Changing oil filter 524
Refilling engine oil 526
Fill in engine oil 526
Reworking 527

Table of Contents

17 01 55 Engine oil and oil filter change - as of MY 2005
Subsequent work - topping up engine oil ... 527

17 04 19 Removing and installing oil-pressure sender - as of MY 2005 ... 529
Tools ... 529
Removing oil-pressure sender ... 529
Removing oil-pressure sender ... 529
Installing oil-pressure sender ... 531
Installing oil-pressure sender ... 531

17 15 19 Removing and installing oil filler neck - as of MY 2005 ... 534
Preliminary work ... 534
Preliminary work ... 534
Removing oil filler neck ... 535
Removing oil filler neck ... 536
Installing oil filler neck ... 536
Installing oil filler neck ... 536
Subsequent work ... 537
Subsequent work ... 537

19 01 01 Checking cooling system - as of MY 2005 ... 541
Tools ... 541
checking ... 541
Coolant - check antifreeze and fluid level ... 541
Checking the cooling system for leaks ... 542
Cleaning the cooling air guides ... 543
Checking the antifreeze content using a refractometer ... 543

19 24 19 Removing and installing air guide - as of MY 2005 ... 548
Preliminary work ... 548
Preliminary work for removing air guide ... 548
Removing air guide ... 548
Removing air guide for middle radiator ... 548
Removing air guide for side radiator ... 549
Installing air guide ... 550
Installing air guide for middle radiator ... 550
Installing air guide for side radiator ... 550
Subsequent work ... 552
Subsequent work for installing air guide ... 552

19 38 17 Draining and filling in coolant - as of MY 2005 ... 554
Tools ... 554
Preliminary work ... 554
Preliminary work ... 554
Draining coolant ... 555
Draining coolant ... 555
Filling with coolant ... 558
Filling coolant (includes bleeding) ... 558

Table of Contents

19 38 17 Draining and filling in coolant - as of MY 2005
Reworking....561
Subsequent work....561

19 40 19 Removing and installing reservoir for coolant - as of MY 2005....564
Tools....564
Preliminary work....564
Preliminary work....564
Removing reservoir for coolant....566
Removing reservoir for coolant....566
Installing reservoir for coolant....569
Installing reservoir for coolant....569
Subsequent work....570
Subsequent work....570

19 50 19 Removing and installing coolant pump - as of MY 2005....573
Preliminary work....573
Preliminary work....573

24 73 19 Removing and installing oxygen sensor behind catalytic converter - as of MY 2005 748
Tools 748
Preliminary work 748
Preliminary work for removing oxygen sensor behind the catalytic converter 748
Removing oxygen sensor behind the catalytic converter 749
Removing oxygen sensor behind catalytic converter of cylinder bank 1-3 749
Removing oxygen sensor behind catalytic converter of cylinder bank 4-6 750
Installing oxygen sensor behind the catalytic converter 750
Installing oxygen sensor behind catalytic converter of cylinder bank 1-3 751
Installing oxygen sensor behind catalytic converter of cylinder bank 4-6 751
Subsequent work 752
Subsequent work for installing oxygen sensor behind the catalytic converter 752

Table of Contents

24 74 19 Removing and installing tuning pipe - as of MY 2005 754
Preliminary work 754
Preliminary work for removing tuning pipe 754
Removing tuning pipe 754
Removing tuning pipe 754
Installing tuning pipe 756
Installing tuning pipe 756
Subsequent work 757
Work subsequent to installing tuning pipe 757

26 10 19 Removing and installing exhaust manifold - as of MY 2005 760
Removing exhaust manifold 760
Removing exhaust manifold 760
Installing exhaust manifold 762
Installing exhaust manifold 762

26 33 19 Removing and installing rear silencer - as of MY 2005 766
Tools 766
Preliminary work 766
Preliminary work 766
Removing rear silencer 767
Removing rear silencer 767
Installing rear silencer 769
Installing rear silencer 769
Subsequent work 770
Subsequent work 770

26 34 19 Removing and installing tailpipe - as of MY 2005 773
Removing tailpipe - 3.6 l 773
Removing tailpipe - M 96/05 (3.6 l) 773
Installing tailpipe - 3.6 l 773
Installing tailpipe - 3.6 l 773

26 34 19 Removing and installing tailpipe - as of MY 2005 777
Removing tailpipe -3.8 l 777
Removing tailpipe - 3.8 l 777
Installing tailpipe -3.8 l 777
Installing tailpipe - 3.8 l 777

26 65 19 Removing and installing secondary air pump - as of MY 2005 781
Preliminary work 781
Preliminary work for removing secondary air pump 781
Removing secondary air pump 781
Removing secondary air pump 781
Installing secondary air pump 782
Installing secondary air pump 783
Subsequent work 784
Work subsequent to installing secondary air pump 784

Table of Contents

26 73 19 Removing and installing catalytic converter - as of MY 2005 787
Preliminary work 787
Preliminary work 787
Removing catalytic converter 788
Removing catalytic converter 788
Installing catalytic converter 790
Installing catalytic converter 790
Subsequent work 791
Subsequent work 791

27 06 01 Battery trickle charge - as of MY 2005 794
Preliminary work 794
General warning notes 794
Tools and materials 794
Checking battery charging condition with battery tester 794
Reworking 795

27 06 19 Removing and installing battery - as of MY 2005 797
Removing battery 797
Removing battery 797
Installing battery 798
Installing battery 798
Subsequent work 799
Subsequent work - battery 800

27 12 19 Removing and installing battery cover - as of MY 2005 802
Removing battery cover 802
Removing battery cover 802
Installing battery cover 802
Installing battery cover 803
Subsequent work 803
Reworking if cowl panel cover deformed 803

27 22 19 Removing and installing three-phase generator - as of MY 2005 807
Preliminary work 807
Preliminary work - three-phase generator 807
Removing three-phase generator 807
Removing three-phase generator 807
Installing three-phase generator 809
Installing three-phase generator 809
Subsequent work 811
Subsequent work - three-phase generator 811

27 60 19 Removing and installing starter - as of MY 2005 814
Preliminary work 814
Preliminary work - starter 814
Removing starter 814
Removing starter 814

Table of Contents

27 60 19 Removing and installing starter - as of MY 2005
Installing starter....816
Installing starter....816
Subsequent work....817
Subsequent work - starter....817

28 04 19 Removing and installing ignition switch - as of MY 2005....820
Tools....820
Removing ignition switch....820
Removing ignition switch....820
Installing ignition switch....821
Installing ignition switch....822
Information....822
Emergency operation of the ignition key lock....822

28 70 20 Removing and installing spark plugs - as of MY 2005....825
Tools....825
Preliminary work....825
Preliminary work....826
Removing....826
Removing spark plugs....826
Installing....827
Installing spark plugs....827
Subsequent work....827
Reworking....828

28 72 19 Removing and installing knock sensor - as of MY 2005....830
Preliminary work....830
Preliminary work for removing knock sensor....830
Removing knock sensor....830
Removing knock sensor, cylinder bank 1-3....830
Removing knock sensor, cylinder bank 4-6....831
Installing knock sensor....831
Installing knock sensor, cylinder bank 1 -3....831
Installing knock sensor, cylinder bank 4 -6....832
Subsequent work....832
Work subsequent to installing knock sensor....832

30 01 07 Bleeding the clutch system - as of MY 2005....835
Information....835
Important notes on bleeding....835
Filling/bleeding....835

30 05 01 Checking clutch pedal (end position) - as of MY 2005....839
Clutch pedal: checking play and pedal end position....839
Checking clutch free play....839
Clutch: Checking pedal end position (pedal return/return force)....839

Removing rear connecting link (suspension/stabiliser) 1205
Installing rear connecting link (suspension/stabiliser) 1205

43 16 19 Removing and installing PASM control unit - as of MY 2005 1208
Tools 1208
Removing PASM control unit 1208
Removing PASM control unit 1208
Installing PASM control unit 1210
Installing PASM control unit 1210
Programming PASM control unit 1210
Reading out and writing values for PASM control unit 1210

44 05 19 Removing and installing wheel - as of MY 2005 1214
Information 1214
Wheel mounting 1214
Removing wheel 1214

Table of Contents

44 05 19 Removing and installing wheel - as of MY 2005
Removing wheel....1214
Installing wheel....1215
Installing wheel....1216

44 05 94 Balancing/optimising wheels - as of MY 2005....1220
Tools....1220
Balancing/optimising wheels....1220
General....1220
Explanation of terms....1221
Balancing/optimising wheels....1222
Further to 1: Fitting the tyre on the rim....1222
Further to 2A: Measuring radial force variations....1223
Further to 2B: Stationary balancing with optimisation of rolling smoothness....1224
Further to 3: Fitting the wheel on the vehicle....1224
Balancing weights....1225
Attaching the balance stick-on weights....1225

44 12 02 Checking disc wheels - as of MY 2005....1228
Checking the radial and lateral runout....1228

44 32 19 Removing and installing wheel electronics - as of MY 2005....1231
Removing wheel electronics....1231
General information on wheel electronics....1231
Removing wheel electronics....1232
Installing wheel electronics....1234

44 34 19 Removing and installing tyre pressure monitoring system control unit - as of MY 2005....1237
Tools....1237
Preliminary work....1237
Preliminary work for tyre pressure monitoring system (RDK) control module....1237
Removing tyre pressure monitoring system (RDK) control unit....1237
Removing tyre pressure monitoring system (RDK) control module....1237
Installing tyre pressure monitoring system (RDK) control unit....1238
Installing tyre pressure monitoring system (RDK) control module....1238
Subsequent work....1239
Rework on tyre pressure monitoring system (RDK) control module....1239
Programming tyre pressure monitoring system (RDK) control unit....1239
Control units - reading and writing replacement values....1239

44 38 19 Removing and installing antenna for tyre pressure monitoring system - as of MY 2005....1243
Preliminary work....1243
Preliminary work....1243
Removing antenna for tyre pressure monitoring system....1243
Removing antenna of front tyre pressure monitoring system....1243
Removing antenna of rear tyre pressure monitoring system....1245
Installing antenna for tyre pressure monitoring system....1246
Installing antenna of front tyre pressure monitoring system....1246

Table of Contents

44 38 19 Removing and installing antenna for tyre pressure monitoring system - as of MY 2005
Installing antenna of rear tyre pressure monitoring system....1246
Subsequent work....1248
Subsequent work....1248

44 40 19 Tyre mounting (removing and installing tyres) - for vehicle with and without tyre pressure monitoring system - as of MY 2005....1250
Notes on removing/mounting tyres....1250
Tools....1250
Notes on removing/mounting tyres....1251
Special notes for tyre pressure monitoring system (RDK)....1252
Removal....1253
Installation....1255

44 95 03 Suspension alignment, complete - as of MY 2005....1258
Tools....1258
Information....1258
General procedure for wheel alignment....1258
Measuring vehicle at front and rear....1259
Vehicle height (height check)....1259
Wheel alignment....1260
Rear axle....1260
Front axle....1262

45 01 01 PSM/ABS check using the PIWIS Tester - as of MY 2005....1267
Tools....1267
....1267
Test overview....1267
PSM check using the PIWIS Tester....1268

46 36 02 Checking the thickness of the disc brake pads - as of MY 2005....1271
Test....1271

46 36 19 Removing and installing front brake pads - as of MY 2005....1275
Preliminary work....1275
General warning notes....1275
Danger of accidents....1275
Removal....1276
Removing front disc brake pads....1276
Installing....1276
Installing front disc brake pads....1276
Subsequent work....1278

46 38 02 Checking the thickness of the rear disc brake pads - as of MY 2005....1280
Preliminary work....1280
Checking....1280
Subsequent work....1281

Table of Contents

46 38 19 Removing and installing the rear disc brake pads - as of MY 2005 1284
Preliminary work 1284
General warning notes 1284
Danger of accidents 1284
Removal 1285
Removing rear disc brake pads 1285
Installation 1285
Installing rear disc brake pads 1285
Subsequent work 1287

46 50 19 Removing and installing the front brake disc - as of MY 2005 1289
Tools 1289
Preliminary work 1289
General warning notes 1289
Removing front brake disc 1290
Installing 1291
Subsequent work 1292

46 50 19 Removing and installing the front PCCB brake disc - as of MY 2005 1294
Tools 1294
Preliminary work 1294
General warning notes 1294
Removing front brake disc 1295
Installing 1296
Subsequent work 1297
Bedding in the brake pads 1297

46 51 02 Checking front PCCB brake discs (wear assessment) - as of MY 2005 1300
Checking information on PCCB brake discs 1300
Basic information 1300
General information on replacing worn PCCB brake discs 1301
Replacing brake discs (notes/decision-making aid) 1302
Cracks (stress-relief microstructure) in the brake disc friction surface 1302
Note concerning bores (perforations) in the brake disc friction surface 1303
Coating on the PCCB brake discs (potential causes) 1304
Note on bedding in the new brake pads 1304
Checking PCCB brake discs (wear assessment) 1305
Visual inspection of the surfaces of the brake disc friction surfaces (indication of wear) 1305
Evaluating surface roughness (Sr) (max. 80 micrometre permitted) 1306
Checking brake discs for minimum thickness 1310
Checking brake discs for edge damage 1310

46 53 19 Removing and installing rear brake disc - as of MY 2005 1314
Tools 1314
Preliminary work 1314
General warning notes 1314
Removing rear brake disc 1315
Installing rear brake disc 1316

Table of Contents

46 53 19 Removing and installing rear brake disc - as of MY 2005
Subsequent work 1317

46 53 19 Removing and installing rear brake disc - as of MY 2005 1320
Tools 1320
Preliminary work 1320
General warning notes 1320
Removing rear brake disc 1321
Installing rear brake disc 1322
Subsequent work 1323

46 53 19 Removing and installing the rear PCCB brake disc - as of MY 2005 1326
Tools 1326
Preliminary work 1326
General warning notes 1326
Removing rear brake disc 1327
Installing rear brake disc 1328
Subsequent work 1330
Bedding in the brake pads 1330

46 54 02 Checking rear PCCB brake discs (wear assessment) - as of MY 2005 1332
Checking information on PCCB brake discs 1332
Basic information 1332
General information on replacing worn PCCB brake discs 1333
Replacing brake discs (notes/decision-making aid) 1334
Cracks (stress-relief microstructure) in the brake disc friction surface 1334
Note concerning bores (perforations) in the brake disc friction surface 1335
Coating on the PCCB brake discs (potential causes) 1336
Note on bedding in the new brake pads 1336
Checking PCCB brake discs (wear assessment) 1337
Visual inspection of the surfaces of the brake disc friction surfaces (indication of wear) 1337
Evaluating surface roughness (Sr) (max. 80 micrometre permitted) 1338
Checking brake discs for minimum thickness 1342
Checking brake discs for edge damage 1342

46 83 16 Adjusting the parking brake shoes - as of MY 2005 1346
Adjusting the parking brake shoes 1346

47 01 07 Bleeding brake system - as of MY 2005 1349
Notes 1349
Bleeding the brake system 1349
Procedure for bleeding 1349
1. Step: Bleeding (primary circuit) 1349
2nd Step: Bleeding (secondary circuit) 1351

47 08 01 Check brake fluid level - as of MY 2005 1354
Check brake fluid level 1354
Checking brake fluid level 1354

Table of Contents

47 08 55 Replacing brake fluid - as of MY 2005 1357
Replacing brake fluid 1357
Changing brake fluid 1357

48 02 01 Checking the fluid level for the power-assisted steering - as of MY 2005 1361
Checking the fluid level for the power-assisted steering 1361
Notes on power-steering fluid 1361
Checking fluid level for power-assisted steering 1361
Checking the steering system for leaks (visual check) 1362
Bleeding the steering system 1362

48 10 19 Removing and installing steering wheel - as of MY 2005 1365
Preliminary work 1365
Warning notes for removing and installing steering wheel 1365
Removal 1365
Installation 1366

48 15 19 Removing and installing steering column - as of MY 2005 1369
Preliminary work 1369
Preliminary work 1369
Removing the steering column 1370
Installing the steering column 1372
Subsequent work 1375
Subsequent work 1375

48 90 19 Removing and installing power-steering gear - as of MY 2005 1378
Tools 1378
Preliminary work 1378
Preliminary work 1378
General warning notes 1379
General warning notes 1379
Removal 1379
Removing 1379
Installation 1382
Installing 1382
Subsequent work 1383
Subsequent work 1383

50 10 55 Replacing closing panel - as of MY 2005 1386
Tools 1386
General warning notes 1387
Safety instructions for body repairs 1387
Tools and materials 1387
Tools and materials 1387
Preliminary work for body repairs with alignment bench 1388
Preliminary work for body repairs with alignment bench 1388
Preliminary work for body repairs 1388
Preliminary work for body repairs 1388

Table of Contents

50 10 55 Replacing closing panel - as of MY 2005
Removing closing panel....1389
Removing end plate....1389
Preparing connection areas of body for installing end plate....1391
Fitting front closing panel and preparing for installation....1392
Safety instructions for sharp-edged body and unit parts....1392
Fitting front closing panel and preparing for installation....1392
Installing front closing panel....1394
Danger of injury when welding....1394
Safety instructions for flying sparks during grinding and welding work....1394
Installing front closing panel....1395
Reworking....1396
Subsequent work for body repairs....1396

50 14 55 Replacing front panel - as of MY 2005....1399
Tools....1399
General warning notes....1400
Safety instructions for body repairs....1400
Tools and materials....1400
Tools and materials....1400
Preliminary work for body repairs with alignment bench....1401
Preliminary work for body repairs with alignment bench....1401
Preliminary work for body repairs....1401
Removing front panel....1402
Removing front panel....1402
Preparing connection areas of the body for installing the front panel....1404
Safety instructions for flying sparks during grinding and welding work....1404
Preparing connection areas of the body for installing the front panel....1404
Preparing front panel for installation....1406
Safety instructions for sharp-edged body and unit parts....1406
Preparing front panel for installation....1406
Installing front panel....1408
Danger of injury when welding....1408
Installing front panel....1409
Subsequent work....1411
Subsequent work for body repairs....1411

50 20 55 Replacing front floor panel - as of MY 2005....1414
Tools....1414
General warning notes....1415
Safety instructions for body repairs....1415
Tools and materials....1415
Tools and materials....1415
Preliminary work for body repairs....1416
Preliminary work for body repairs with alignment bench....1416
Preliminary work for body repairs....1416
Removing floor front section....1417
Removing floor front section....1417

Table of Contents

50 20 55 Replacing front floor panel - as of MY 2005
Preparing connection areas of the body for installing front floor panel....1419
Safety instructions for flying sparks during grinding and welding work....1419
Preparing connection areas of body for installing floor front section....1419
Safety instructions for sharp-edged body and unit parts....1420
Adjusting floor front section and preparing for installation....1420
Installing front floor panel....1421
Danger of injury when welding....1421
Installing floor front section....1422
Subsequent work....1423
Subsequent work for body repairs....1423

50 55 19 Removing and installing wing - as of MY 2005....1426
Preliminary work....1426
Preliminary work....1426
Removing the wing....1427
Removing fuel tank cap....1427
Releasing tank filler neck....1428
Releasing bottom of wing....1428

66 77 55 Replacing stone guard film - as of MY 2005....2675
Replacing stone guard film....2675
General affixing regulations for the stone guard film....2675
Affixing the stone guard film....2675

66 82 19 Removing and reinstalling mirror adjuster motor - as of MY 2005....2679
Preliminary work....2679
Preliminary work....2679
Removing mirror adjuster motor....2679
Removing mirror adjusting motor....2679
Installing mirror adjuster motor....2680
Installing mirror adjuster motor....2680
Subsequent work....2681
Subsequent work....2681

66 89 19 Removing and installing rear-view mirror - as of MY 2005....2684
Removing rear-view mirror....2684
Removing trim panel for mirror triangle....2684
Removing seal for mirror triangle....2685
Disconnecting electrical plug connection....2685
Removing rear-view mirror....2686
Installing rear-view mirror....2687
Installing rear-view mirror....2687
Locking electrical plug connection....2687
Fitting seal for mirror triangle....2688
Installing trim panel for mirror triangle....2689

66 92 19 Removing and installing the roof transport system - as of MY 2005....2692
General warning notes....2692
Warning notes....2692
Removing the roof transport system....2693
Removing the Roof Transport System....2693
Removing base plate of roof transport system....2695
Removing base plate of Roof Transport System....2695

Table of Contents

66 92 19 Removing and installing the roof transport system - as of MY 2005
Installing base plate of roof transport system....2697
Installing base plate of Roof Transport System....2697
Installing the roof transport system....2698
Installing the Roof Transport System....2698

68 05 19 Removing and installing inner door sill trim - as of MY 2005....2703
Removing inner door sill trim....2703
Removing inner door sill trim (driver's side)....2703
Removing inner door sill trim (passenger's side)....2704
Installing inner door sill trim....2706
Installing inner door sill trim (driver's side)....2706
Installing inner door sill trim (passenger's side)....2707

68 07 19 Removing and installing cover strip - as of MY 2005....2711
Preliminary work....2711
Preliminary work....2711
Removing cover strip....2711
Removing cover strip....2711
Installing cover strip....2712
Installing cover strip....2712
Subsequent work....2714
Subsequent work....2714

68 11 19 Removing and installing glove compartment lock - as of MY 2005....2716
Removing glove compartment lock....2716
Removing support for glove compartment lid....2716
Removing glove compartment lock....2717
Installing glove compartment lock....2718
Installing glove compartment lock....2718
Installing support for glove compartment lid....2719

68 12 19 Removing and installing lid for glove compartment - as of MY 2005....2722
Preliminary work....2722
Preliminary work....2722
Removing lid for glove compartment....2722
Removing lid for glove compartment....2722
Installing lid for glove compartment....2723

Subsequent work for ventilation cover....3519

85 78 19 Installing and removing fresh/recirc. air servo motor - as of MY 2005....3522
Preliminary work....3522
Preliminary work for fresh/recirc. air servo motor....3522
Removing fresh/recirc. air servo motor....3522
Removing fresh/recirc. air servo motor....3522
Installing fresh/recirc. air servo motor....3524
Installing fresh/recirc. air servo motor....3524
Subsequent work....3526
Subsequent work for fresh/recirc. air servo motor....3526

87 02 19 Removing and installing air-conditioning system regulator - as of MY 2005....3529
Tools....3529
Preliminary work....3529
Preliminary work for removing and installing air-conditioning system regulator....3529
Removing air-conditioning system regulator....3529
Removing air-conditioning system regulator....3529
Installing air-conditioning system regulator....3531
Installing air-conditioning system regulator....3531
Subsequent work....3531
Subsequent work for the air-conditioning system regulator....3531
Coding air-conditioning regulator....3532
Coding the air-conditioning control....3532

87 03 17 Draining and filling in refrigerant - as of MY 2005....3535
Tools....3535
General warning notes....3535
Warning notes for handling refrigerant....3535
Technical values....3535

Table of Contents

87 03 17 Draining and filling in refrigerant - as of MY 2005
Servicing equipment....3535
Draining and filling in refrigerant....3536
Assembly work involving the refrigerant system....3536
General assembly sequence....3536

87 14 19 Removing and installing sun sensor. - as of MY 2005....3541
Removing sun sensor....3541
Remove sun sensor....3541
Installing sun sensor....3542
Installing sun sensor....3542

87 20 19 Removing and installing footwell/defrost (yellow) servo motor - as of MY 2005....3545
Preliminary work....3545
Preliminary work for footwell/defrost servo motor....3545
Removing footwell/defrost servo motor....3545
Removing footwell/defrost servo motor....3545
Installing footwell/defrost servo motor....3547
Installing footwell/defrost servo motor....3547
Subsequent work....3548
Subsequent work for footwell/defrost servo motor....3548

87 20 19 Removing and installing servo motor for temperature mixing flap (pink) - as of MY 2005....3551
Preliminary work....3551
Preliminary work - servo motor for temperature mixing valve....3551
Removing servo motor for temperature mixing flap....3551
Removing servo motor for temperature mixing flap....3551
Installing servo motor for temperature mixing flap....3554
Installing servo motor for temperature mixing flap....3554
Subsequent work....3555
Subsequent work - servo motor for temperature mixing valve....3555

87 20 19 Removing and installing servo motor for central distributor flap (green) - as of MY 2005....3558
Preliminary work....3558
Preliminary work - servo motor for central distributor flap....3558
Removing servo motor for central distributor flap....3558
Removing servo motor for central distributor flap....3558
Installing servo motor for central distributor flap....3561
Installing servo motor for central distributor flap....3561
Subsequent work....3562
Subsequent work - servo motor for central distributor flap....3562

87 27 19 Removing and installing magnetic coupling - as of MY 2005....3565
Preliminary work....3565
Preliminary work for magnetic clutch....3565
Removing the magnetic coupling....3565

Table of Contents

87 27 19 Removing and installing magnetic coupling - as of MY 2005
Removing the magnetic coupling....3565
Installing the magnetic coupling....3569
Installing magnetic clutch....3569
Checking the magnetic coupling....3573
Check air gap of magnetic clutch....3573
Subsequent work....3574
Subsequent work for magnetic clutch....3574

87 34 19 Removing and installing air-conditioning compressor - as of MY 2005....3577
Preliminary work....3577
Preliminary work for air-conditioning compressor....3577
General warning notes....3577
General warning notes for air-conditioning compressor....3577
Tools and materials....3578
Tools for air-conditioning compressor....3578
Removing air-conditioning compressor....3578
Removing the air-conditioning compressor....3578
Installing air-conditioning compressor....3579
Installing the air-conditioning compressor....3579
Subsequent work....3580
Subsequent work for the air-conditioning compressor....3580
Checking refrigerant oil in "new" air-conditioning compressor....3581
Correct the refrigerant oil level in the "new" air-conditioning compressor....3581

87 42 19 Removing and installing condenser-condenser line - as of MY 2005....3585
Preliminary work....3585
Preliminary work for line condenser-condenser....3585
Removing the condenser-condenser line....3585
Removing the condenser-condenser line....3585
Installing the condenser-condenser line....3587
Installing the condenser-condenser line....3587
Subsequent work....3588
Subsequent work for line condenser-condenser....3588

87 43 19 Removing and installing compressor-condenser line at front - as of MY 2005....3591
Preliminary work....3591
Preliminary work on compressor-condenser line....3591
Removing compressor-condenser line....3591
Removing compressor-condenser line....3591
Installing compressor-condenser line....3593
Installing compressor-condenser line....3593
Subsequent work....3594
Subsequent work on compressor-condenser line....3594

87 43 19 Removing and installing compressor-condenser line in area of engine - as of MY 2005....3597
Preliminary work....3597
Preliminary work on compressor-condenser line....3597

Table of Contents

87 43 19 Removing and installing compressor-condenser line in area of engine - as of MY 2005
Removing compressor-condenser line....3597
Removing compressor-condenser line....3597
Installing compressor-condenser line....3599
Installing compressor-condenser line....3599
Subsequent work....3599
Subsequent work on compressor-condenser line....3600

87 45 19 Removing and installing compressor-evaporator line - as of MY 2005....3602
Preliminary work....3602
Preliminary work on compressor-evaporator line....3602
Removing compressor-evaporator line....3602
Removing compressor-evaporator line....3602
Installing compressor-evaporator line....3604
Installing compressor-evaporator line....3604
Subsequent work....3604
Subsequent work on compressor-evaporator line....3605

87 46 19 Removing and installing condenser-fluid tank line - as of MY 2005....3607
Preliminary work....3607
Preliminary work for line condenser-fluid tank....3607
Removing the condenser-fluid tank line....3607
Removing the condenser-fluid tank line....3607
Installing the condenser-fluid tank line....3609
Installing the condenser-fluid tank line....3609
Subsequent work....3611
Subsequent work for line condenser-fluid tank....3611

87 47 19 Removing and installing evaporator-fluid tank line - as of MY 2005....3613
Preliminary work....3613
Preliminary work line condenser-fluid tank....3613
Removing the condenser-fluid tank line....3613
Removing the condenser-fluid tank line....3613
Installing the condenser-fluid tank line....3615
Installing the condenser-fluid tank line....3615
Subsequent work....3616
Subsequent work line condenser-fluid tank....3616

87 50 19 Removing and installing condenser - as of MY 2005....3618
Preliminary work....3618
Preliminary work for condenser....3618
Removing the condenser....3618
Removing the condenser....3618
Installing the condenser....3620
Installing the condenser....3620
Subsequent work....3622
Rework on condenser....3622

Table of Contents

87 55 19 Removing and installing dryer (fluid tank) - as of MY 2005 3625
Preliminary work 3625
Preliminary work for dryer 3625
General warning notes 3625
General safety regulations for work on the air-conditioning systems 3625
Tools and materials 3626
Tools for air-conditioning compressor 3626
Removing dryer (fluid tank) 3626
Removing desiccator (fluid tank) 3626
Installing dryer (fluid tank) 3627
Installing desiccator (fluid tank) 3627
Subsequent work 3628
Subsequent work for the dryer 3628

87 58 19 Removing and installing temperature sensor - as of MY 2005 3631
Removing temperature sensor 3631
Removing temperature sensor 3631
Installing temperature sensor 3632
Installing temperature sensor 3632

87 59 19 Removing and installing outside temperature sensor - as of MY 2005 3635
Preliminary work 3635
Preliminary work for outside temperature sensor 3635
Removing outside temperature sensor 3635
Removing outside temperature sensor 3635
Installing outside temperature sensor 3637
Installing outside temperature sensor 3637
Subsequent work 3637
Subsequent work for outside temperature sensor 3637

87 70 19 Removing and installing expansion valve - as of MY 2005 3640
Preliminary work 3640
Preliminary work for expansion valve 3640
Removing expansion valve 3640
Removing expansion valve 3640
Installing expansion valve 3641
Installing expansion valve 3641
Subsequent work 3642
Rework on expansion valve 3642

87 78 19 Removing and installing blower regulator - as of MY 2005 3645
Preliminary work 3645
Preliminary work for blower regulator 3645
Removing blower regulator 3645
Removing blower regulator 3645
Installing blower regulator 3647
Installing blower regulator 3647
Subsequent work 3648

Table of Contents

87 78 19 Removing and installing blower regulator - as of MY 2005
Subsequent work for blower regulator....3648

87 83 19 Removing and installing pressure switch - as of MY 2005....3651
Preliminary work....3651
Preliminary work for pressure switch....3651
Removing pressure switch....3651
Removing pressure switch....3651
Installing pressure switch....3652
Installing pressure switch....3652
Subsequent work....3653
Subsequent work for pressure switch....3653

90 03 19 Removing and installing dashboard insert - as of MY 2005....3655
Preliminary work....3655
Preliminary work for the dashboard insert....3655
Removing dashboard insert....3655
Removing dashboard insert....3655
Installing dashboard insert....3656
Installing dashboard insert....3656
Subsequent work....3656
Subsequent work for the dashboard insert....3657

90 22 19 Removing and installing stopwatch - as of MY 2005....3659
Tools....3659
Removing stopwatch....3659
Removing stopwatch....3659
Installing stopwatch....3661
Installing stopwatch....3661
Programming stopwatch....3662
Reading out and writing stopwatch values....3662
Coding stopwatch....3663

90 25 19 Removing and installing instrument cluster - as of MY 2005....3666
Tools....3666
General warning notes....3666
General warnings for instrument cluster....3666
Preliminary work....3667
Preliminary work for instrument cluster....3667
Removing instrument cluster....3667
Removing instrument cluster....3667
Installing instrument cluster....3668
Installing instrument cluster....3668
Subsequent work....3669
Reworking instrument cluster....3669
Programming instrument cluster....3669
Reading and printing values....3670

Table of Contents

90 35 19 Removing and installing gateway control unit - as of MY 2005 3673
Tools 3673
Preliminary work 3673
Preliminary work for gateway control unit 3673
General warning notes 3673
General warnings for gateway control module 3674
Removing gateway control unit 3674
Removing gateway control unit 3674
Installing gateway control unit 3676
Installing gateway control module 3676
Subsequent work 3676
Subsequent work for gateway control unit 3676
Coding gateway control unit 3677
Coding the gateway control unit 3677
Programming gateway control unit 3678

90 50 19 Removing and installing horn - as of MY 2005 3681
Preliminary work 3681
Preliminary work for horn 3681
Removing horn 3681
Removing horn 3681
Installing horn 3682
Installing horn 3683
Subsequent work 3684
Reworking the horn 3684

90 58 19 Installing and removing socket - as of MY 2005 3686
Preliminary work 3686
Preliminary work for passenger's footwell socket 3686
Preliminary work for centre console socket 3686
Removing socket 3686
Removing passenger's footwell socket 3686
Removing centre console socket 3688
Installing socket 3689
Installing passenger's footwell socket 3689
Installing the centre console socket 3689
Subsequent work 3690
Reworking the passenger's footwell socket 3690
Reworking the centre console socket 3690

90 62 19 Removing and installing cigar lighter - as of MY 2005 3693
Preliminary work 3693
Preliminary work for cigar lighter 3693
Removing cigar lighter 3693
Removing cigar lighter 3693
Installing cigar lighter 3694
Installing cigar lighter 3695
Subsequent work 3695

Table of Contents

90 62 19 Removing and installing cigar lighter - as of MY 2005
Reworking the cigar lighter....3695

91 10 19 Removing and installing PCM display and control unit - as of MY 2005....3698
Tools....3698
Preliminary work....3698
Preliminary work for display and PCM operator control unit....3698
Removing PCM display and control unit....3698
Removing display for the PCM operator control unit....3698
Installing PCM display and control unit....3700
Installing display and PCM operator control unit....3700
Subsequent work....3701
Subsequent work for display and PCM operator control unit....3701
Reading out PCM display and control unit....3701
Reading from and writing to the PCM display and operator control unit....3701
Programming PCM display and control unit....3702
Programming the display and operator control unit....3702

91 12 19 Removing and installing navigation unit - as of MY 2005....3709
Tools....3709
Preliminary work....3709
Preliminary work for navigation unit....3710
Removing navigation unit....3710
Removing navigation unit....3710
Removing the navigation unit with retaining bracket....3711
Installing navigation unit....3712
Installing navigation unit....3712
Installing the navigation unit with retaining bracket....3713
Subsequent work....3714
Reworking the navigation unit....3714
Programming navigation unit....3714
Reading out and writing values for navigation unit....3714
Coding navigation unit....3715
Coding navigation unit....3715

91 12 19 Removing and installing navigation unit - as of MY 2005....3719
Tools....3719
Preliminary work....3719
Preliminary work for navigation unit....3720
Removing navigation unit....3720
Removing navigation unit....3720
Removing the navigation unit (US version)....3722
Installing navigation unit....3724
Installing navigation unit....3724
Installing the navigation unit (US version)....3724
Subsequent work....3725
Reworking the navigation unit....3726
Programming navigation unit....3726

Table of Contents

91 12 19 Removing and installing navigation unit - as of MY 2005
Reading out and writing values for navigation unit ... 3726
Coding navigation unit ... 3727
Coding navigation unit ... 3727

91 13 19 Removing and installing GPS antenna - as of MY 2005 ... 3730
Preliminary work ... 3730
Preliminary work GPS antenna ... 3730
Removing GPS antenna ... 3730
Removing GPS antenna ... 3730
Installing GPS antenna ... 3731
Installing GPS antenna ... 3731
Subsequent work ... 3732
Reworking GPS antenna ... 3732

91 24 19 Removing and installing car radio CD player - as of MY 2005 ... 3735
Tools ... 3735
Preliminary work ... 3735
Preliminary work for car radio ... 3735
Removing the car radio ... 3735
Removing the car radio ... 3735
Installing the car radio ... 3737
Installing the car radio ... 3737
Subsequent work ... 3738
Subsequent work for car radio ... 3738
Reading out car radio ... 3738
Reading out and transferring car radio codes ... 3738
Programming car radio ... 3739
Programming the car radio ... 3739

91 28 55 Replacing the antenna leads - as of MY 2005 ... 3744
Preliminary work ... 3744
Preliminary work for PCM/radio antenna lead up to antenna control unit ... 3744
Preliminary work for antenna lead for left antenna amplifier up to right antenna amplifier ... 3744
Preliminary work for antenna lead for left antenna amplifier up to KESSY/PAS control unit ... 3744
Preliminary work for antenna lead for right antenna amplifier up to rod antenna ... 3745
Preliminary work for navigation unit antenna lead up to GPS antenna ... 3745
Installing the antenna leads ... 3745
Installing antenna leads ... 3745
Subsequent work ... 3747
Subsequent work for PCM/radio antenna lead up to antenna control unit ... 3747
Subsequent work for antenna lead for left antenna amplifier up to right antenna amplifier ... 3747
Subsequent work for antenna lead for left antenna amplifier up to KESSY/PAS control unit ... 3748
Subsequent work for antenna lead for right antenna amplifier up to rod antenna ... 3748
Subsequent work for navigation unit antenna lead up to GPS antenna ... 3748

Table of Contents

91 28 55 Replacing the antenna leads - as of MY 2005 3751
Preliminary work 3751
Preliminary work for PCM/radio antenna lead up to antenna control unit 3751
Preliminary work for antenna lead for left antenna amplifier up to right antenna amplifier 3751
Preliminary work for antenna lead for left antenna amplifier up to KESSY/PAS control unit 3751
Preliminary work for antenna lead for right antenna amplifier up to rod antenna 3752
Preliminary work for navigation unit antenna lead up to GPS antenna 3752
Installing the antenna leads 3752
Installing antenna leads 3752
Subsequent work 3754
Subsequent work for PCM/radio antenna lead up to antenna control unit 3754
Subsequent work for antenna lead for left antenna amplifier up to right antenna amplifier 3754
Subsequent work for antenna lead for left antenna amplifier up to KESSY/PAS control unit 3755
Subsequent work for antenna lead for right antenna amplifier up to rod antenna 3755
Subsequent work for navigation unit antenna lead up to GPS antenna 3755

91 28 55 Replacing the antenna leads - as of MY 2005 3758
Preliminary work 3758
Preliminary work for PCM/radio antenna lead up to antenna control unit 3758
Preliminary work for antenna lead for left antenna amplifier up to right antenna amplifier 3758
Preliminary work for antenna lead for left antenna amplifier up to KESSY/PAS control unit 3758
Preliminary work for antenna lead for right antenna amplifier up to rod antenna 3759
Preliminary work for navigation unit antenna lead up to GPS antenna 3759
Installing the antenna leads 3759
Installing antenna leads 3759
Subsequent work 3761
Subsequent work for PCM/radio antenna lead up to antenna control unit 3761
Subsequent work for antenna lead for left antenna amplifier up to right antenna amplifier 3761
Subsequent work for antenna lead for left antenna amplifier up to KESSY/PAS control unit 3762
Subsequent work for antenna lead for right antenna amplifier up to rod antenna 3762
Subsequent work for navigation unit antenna lead up to GPS antenna 3762

91 28 55 Replacing the antenna leads - as of MY 2005 3765
Preliminary work 3765
Preliminary work for PCM/radio antenna lead up to antenna control unit 3765
Preliminary work for antenna lead for left antenna amplifier up to right antenna amplifier 3765
Preliminary work for antenna lead for left antenna amplifier up to KESSY/PAS control unit 3765
Preliminary work for antenna lead for right antenna amplifier up to rod antenna 3766
Preliminary work for navigation unit antenna lead up to GPS antenna 3766
Installing the antenna leads 3766
Installing antenna leads 3766
Subsequent work 3768
Subsequent work for PCM/radio antenna lead up to antenna control unit 3768
Subsequent work for antenna lead for left antenna amplifier up to right antenna amplifier 3768
Subsequent work for antenna lead for left antenna amplifier up to KESSY/PAS control unit 3769

Table of Contents

91 28 55 Replacing the antenna leads - as of MY 2005
Subsequent work for antenna lead for right antenna amplifier up to rod antenna....3769
Subsequent work for navigation unit antenna lead up to GPS antenna....3769

91 36 19 Removing and installing subwoofer - as of MY 2005....3772
Removing subwoofer....3772
Removing subwoofer....3772
Installing subwoofer....3773
Installing subwoofer....3773

91 36 19 Removing and installing subwoofer - as of MY 2005....3777
Removing subwoofer....3777
Removing subwoofer....3777
Installing subwoofer....3778
Installing subwoofer....3778

91 38 19 Removing and installing rod antenna - as of MY 2005....3782
Preliminary work....3782
Preliminary work....3782
Removing rod antenna....3782
Removing rod antenna....3782
Installing rod antenna....3784
Installing rod antenna....3784
Reworking....3786
Subsequent work....3786

91 38 19 Removing and installing rod antenna - as of MY 2005....3788
Preliminary work....3788
Removing rod antenna....3788
Removing rod antenna....3788
Installing rod antenna....3790
Installing rod antenna....3790
Reworking....3791
Subsequent work....3791

91 40 19 Removing and installing front loudspeakers (dashboard) - as of MY 2005....3794
Preliminary work....3794
Preparation for front loudspeakers (dashboard)....3794
Removing front loudspeakers (dashboard)....3794
Removing front loudspeakers (dashboard)....3794
Removing central speaker from dashboard....3795
Installing front loudspeakers (dashboard)....3795
Installing front loudspeakers (dashboard)....3795
Installing the centre speaker into the instrument panel....3796
Subsequent work....3797
Subsequent work for front speakers (dashboard)....3797

Table of Contents

91 41 19 Removing and installing front loudspeakers (door) - as of MY 2005 3799
Preliminary work 3799
Preliminary work - front door speakers 3799
Removing front loudspeakers (door) 3799
Removing bass speaker 3799
Removing mid-tone speaker 3800
Installing front loudspeakers (door) 3800
Installing bass speaker 3800
Installing mid-tone speaker 3801
Subsequent work 3801
Subsequent work - front door speakers 3801

91 42 19 Removing and installing rear loudspeakers - as of MY 2005 3804
Removing rear loudspeakers 3804
Removing rear speakers 3804
Installing rear loudspeakers 3805
Installing rear speakers 3805

91 44 19 Removing and installing loudspeaker amplifier - as of MY 2005 3809
Tools 3809
Preliminary work 3809
Preliminary work for loudspeaker amplifier 3809
Removing loudspeaker amplifier 3809
Removing loudspeaker amplifier 3809
Removing the loudspeaker amplifier (US version) 3811
Installing loudspeaker amplifier 3813
Installing loudspeaker amplifier 3813
Installing the loudspeaker amplifier (US version) 3815
Subsequent work 3816
Subsequent work for loudspeaker amplifier 3816
Programming loudspeaker amplifier 3816
Reading out and writing to the BOSE loudspeaker amplifier 3816
Coding the BOSE loudspeaker amplifier 3817

91 44 19 Removing and installing loudspeaker amplifier - as of MY 2005 3821
Tools 3821
Removing loudspeaker amplifier 3821
Removing loudspeaker amplifier 3821
Installing loudspeaker amplifier 3823
Installing loudspeaker amplifier 3823
Programming loudspeaker amplifier 3825
Reading out and writing to the BOSE loudspeaker amplifier 3825
Coding the BOSE loudspeaker amplifier 3826

91 47 19 Removing and installing radio antenna - as of MY 2005 3829
Preliminary work 3829
Preliminary work - radio antenna 3829
Removing radio antenna 3829

Table of Contents

91 47 19 Removing and installing radio antenna - as of MY 2005
Removing radio antenna....3829
Installing radio antenna....3831
Installing radio antenna....3831
Subsequent work....3832
Subsequent work - radio antenna....3832

91 57 19 Removing and installing microphone for telephone - as of MY 2005....3835
Preliminary work....3835
Preliminary work - microphone....3835
Removing microphone for telephone....3835
Removing microphone for telephone....3835
Installing microphone for telephone....3836
Installing microphone for telephone....3836
Subsequent work....3837
Subsequent work - microphone for telephone....3837

91 60 19 Removing and installing CD changer - as of MY 2005....3839
Preliminary work....3839
Preliminary work - removing CD changer....3839
Removing CD changer....3839
Removing CD changer....3840
Installing CD changer....3841
Installing CD changer....3841
Subsequent work....3842
Subsequent work - CD changer....3842

91 60 19 Removing and installing CD changer - as of MY 2005....3845
Preliminary work....3845
Preliminary work - removing CD changer....3845
Removing CD changer....3845
Removing CD changer....3845
Removing the US version of the CD changer....3847
Installing CD changer....3849
Installing CD changer....3849
Installing the US version of the CD changer....3851
Subsequent work....3852
Subsequent work - CD changer....3852
Subsequent work - CD changer....3852

91 61 19 Removing and installing multi-function remote control - as of MY 2005....3855
Preliminary work....3855
Preliminary work for multi-function remote control....3855
Removing multi-function remote control....3855
Removing multi-function remote control....3855
Installing multi-function remote control....3856
Installing multi-function remote control....3856
Subsequent work....3857

Table of Contents

91 61 19 Removing and installing multi-function remote control - as of MY 2005
Subsequent work for multi-function remote control 3857

91 62 19 Removing and installing control unit for steering wheel electronics - as of MY 2005 3860
Tools 3860
Preliminary work 3860
Preliminary work 3860
Removing control unit for steering wheel electronics 3860
Removing control unit for steering wheel electronics 3861
Installing control unit for steering wheel electronics 3862
Installing control unit for steering wheel electronics 3862
Subsequent work 3864
Subsequent work 3864
Reading data out of and writing data into the control unit for steering wheel electronics 3864
Reading and printing values 3864
Coding control unit for steering wheel electronics 3866
Coding control unit for steering wheel electronics 3866
Calibrating steering-angle sensor 3867
Calibrating steering-angle sensor 3867

91 68 19 Removing and installing outside temperature sensor - as of MY 2005 3870
Removing outside temperature sensor 3870
Removing outside temperature sensor 3870
Installing outside temperature sensor 3871
Installing outside temperature sensor 3871

91 74 19 Removing and installing control module for ParkAssist - as of MY 2005 3874
Tools 3874
Preliminary work 3874
Preliminary work - control module for ParkAssist 3874
Removing control module for ParkAssist 3874
Removing control module for ParkAssist 3874
Installing control module for ParkAssist 3877
Installing control module for ParkAssist 3877
Subsequent work 3878
Subsequent work - control module for ParkAssist 3878
Programming control unit for ParkAssist 3878
Reading out and writing values for ParkAssist control unit 3878
Coding control unit for ParkAssist 3879

91 75 19 Removing and installing sensor for ParkAssist - as of MY 2005 3883
Preliminary work 3883
Preliminary work - sensor for ParkAssist 3883
Removing sensor for ParkAssist 3883
Removing sensor for ParkAssist 3883
Installing sensor for ParkAssist 3884
Installing sensor for ParkAssist 3884
Subsequent work 3884

Table of Contents

91 75 19 Removing and installing sensor for ParkAssist - as of MY 2005
Subsequent work - sensor for ParkAssist ... 3884

91 77 19 Removing and installing multi-function control unit - as of MY 2005 ... 3887
Preliminary work ... 3887
Preliminary work for multi-function remote control ... 3887
Removing multi-function control unit ... 3887
Removing multi-function control unit ... 3887
Installing multi-function control unit ... 3888
Installing multi-function control unit ... 3889
Subsequent work ... 3890
Subsequent work for multi-function control unit ... 3890

91 84 19 Removing and installing antenna amplifier - as of MY 2005 ... 3892
Preliminary work ... 3892
Preliminary work - antenna amplifier ... 3892
Removing antenna amplifier ... 3892
Removing antenna amplifier ... 3892
Installing antenna amplifier ... 3893
Installing antenna amplifier ... 3893
Subsequent work - antenna amplifier ... 3893

91 86 19 Removing and installing control unit for antenna - as of MY 2005 ... 3896
Preliminary work ... 3896
Preliminary work - antennacontrol unit ... 3896
Removing control unit for antenna ... 3896
Removing antenna control unit ... 3896
Installing control module for antenna ... 3897
Installing antenna control unit ... 3898
Subsequent work ... 3898
Subsequent work - antenna control unit ... 3898

91 88 19 Removing and installing console for telephone - as of MY 2005 ... 3901
Removing console for telephone ... 3901
Removing console for telephone ... 3901
Installing console for telephone ... 3902
Installing console for telephone ... 3903

91 90 19 Removing and installing control unit for telephone - as of MY 2005 ... 3906
Preliminary work ... 3906
Preliminary work - telephone control unit ... 3906
Technical values ... 3906
Tightening torques for telephone control unit ... 3906
Removing control unit for telephone ... 3906
Removing control unit for telephone ... 3906
Installing control unit for telephone ... 3908
Installing control unit for telephone ... 3908
Subsequent work ... 3910

Table of Contents

91 90 19 Removing and installing control unit for telephone - as of MY 2005
Subsequent work - telephone control unit....3910
Coding control unit for telephone....3910
Coding the telephone control unit....3910

91 91 19 Installing and removing additional telephone receiver - as of MY 2005....3913
Preliminary work....3913
Preliminary work for additional receiver for telephone....3913
Removing additional telephone receiver....3913
Removing additional receiver for telephone....3913
Installing additional telephone receiver....3914
Installing additional receiver for telephone....3914
Subsequent work....3915
Subsequent work for additional receiver for telephone....3915

92 12 19 Removing and installing rain sensor - as of MY 2005....3917
Removing rain sensor....3917
Removing rain sensor....3917
Installing rain sensor....3920
Installing rain sensor....3920

92 15 19 Removing and installing wiper motor - as of MY 2005....3926
Preliminary work on wiper motor....3926
Preliminary work on wiper motor....3926
Removing wiper motor....3926
Removing wiper motor....3926
Installing wiper motor....3927
Installing wiper motor....3927
Reworking wiper motor....3928
Touching up wiper motor....3929

92 19 19 Removing and installing wiper link - as of MY 2005....3931
Preliminary work....3931
Preliminary work on wiper motor....3931
Preliminary work for wiper link....3931
Removing wiper link....3931
Removing wiper link....3931
Installing wiper link....3932
Installing wiper link....3933
Subsequent work....3933
Reworking wiper link....3934

92 25 15 Adjusting wiper arm attack angle - as of MY 2005....3936
Tools....3936
Preliminary work....3936
Preliminary work for adjusting wiper arm attack angle....3936
Adjusting wiper arm....3936
Adjusting wiper arm attack angle....3937

Table of Contents

92 25 15 Adjusting wiper arm attack angle - as of MY 2005
Subsequent work....3939
Subsequent work for adjusting wiper arm attack angle....3939

92 25 19 Removing and installing wiper arm - as of MY 2005....3941
Removing wiper arm....3941
Removing wiper arm....3941
Installing wiper arm....3941
Installing wiper arm....3942

92 27 19 Removing and installing wiper blade - as of MY 2005....3945
Removing wiper blade....3945
Removing wiper blade....3945
Installing wiper blade....3946
Installing wiper blade....3946

92 34 19 Removing and installing wiper motor for rear window washer - as of MY 2005....3949
Preliminary work....3949
Preliminary work for wiper motor for rear window wiper system....3949
Removing wiper motor for rear window washer....3949
Removing wiper arm for rear window wiper system....3949
Installing wiper motor for rear window washer....3951
Installing the wiper motor for rear window wiper system....3951
Subsequent work....3953
Reworking for wiper motor for rear window wiper system....3953

92 41 19 Removing and installing wiper arm for rear window washer - as of MY 2005....3956
Removing wiper arm for rear window washer system....3956
Removing wiper arm for rear window washer system....3956
Installing wiper arm for rear window washer system....3957
Installing wiper arm for rear window washer system....3957

92 43 19 Removing and installing wiper blade for rear window washer - as of MY 2005....3960
Removing wiper blade for rear window washer system....3960
Removing wiper blade for rear window washer system....3960
Installing wiper blade for rear window washer system....3961
Installing wiper blade for rear window washer system....3961

92 56 19 Removing and installing pump for windscreen washer system - as of MY 2005....3964
Tools....3964
Preliminary work....3964
Preliminary work....3964
Removing pump for windscreen washer system....3964
Removing pump for windscreen washer system....3964
Installing pump for windscreen washer system....3966
Installing pump for windscreen washer system....3966
Subsequent work....3967
Subsequent work....3967

Table of Contents

92 60 19 Removing and installing reservoir for windscreen washer system - as of MY 2005 3970
Preliminary work 3970
Preliminary work - tank for windscreen washer system 3970
Removing reservoir for windscreen washer system 3970
Removing tank for windscreen washer system 3970
Installing reservoir for windscreen washer system 3972
Installing tank for windscreen washer system 3972
Subsequent work 3973
Subsequent work - tank for windscreen washer system 3974

92 66 19 Removing and installing spray nozzle for windscreen washer system - as of MY 2005 3976
Preliminary work 3976
Preliminary work for windscreen-washer spray nozzle 3976
Removing spray nozzle for windscreen washer system 3976
Removing spray nozzle for windscreen washer system 3976
Installing spray nozzle for windscreen washer system 3977
Installing spray nozzle for windscreen washer system 3977
Subsequent work 3978
Subsequent work for spray nozzle of windscreen washer system 3978

92 67 19 Removing and installing sensor for fluid level display - as of MY 2005 3981
Tools 3981
Preliminary work 3981
Preliminary work 3981
Removing sensor for fluid level display 3981
Removing sensor for fluid level display 3981
Installing sensor for fluid level display 3983
Installing sensor for fluid level display 3983
Subsequent work 3983
Subsequent work 3983

92 72 19 Removing and installing spray nozzle for headlight washer system - as of MY 2005 3986
Preliminary work 3986
Preliminary work for spray nozzle of headlight washer system 3986
Removing spray nozzle for headlight washer system 3986
Removing spray nozzle for headlight washer system 3986
Installing spray nozzle for headlight washer system 3988
Installing spray nozzle for headlight washer system 3988
Subsequent work 3988
Subsequent work for spray nozzle of headlight washer system 3989
Removing and installing spray nozzle head 3989
Removing spray nozzle head 3989
Installing spray nozzle head 3989

92 77 19 Removing and installing hose for headlight washer system - as of MY 2005 3992
Preliminary work 3992
Preliminary work for removing hose for headlight washer system (front apron) 3992
Preliminary work for removing hose for headlight washer system (at tank) 3992

Table of Contents

92 77 19 Removing and installing hose for headlight washer system - as of MY 2005
Removing hose for headlight washer system ... 3992
Removing hose for headlight washer system (front apron) ... 3992
Removing hose for headlight washer system (at tank) ... 3994
Installing hose for headlight washer system ... 3995
Installing hose for headlight washer system (front apron) ... 3995
Installing hose for headlight washer system (at tank) ... 3996
Subsequent work ... 3997
Subsequent work for installing hose for headlight washer system (front apron) ... 3997
Subsequent work for installing hose for headlight washer system (at tank) ... 3997

92 78 19 Removing and installing pump for headlight washer system - as of MY 2005 ... 4000
Tools ... 4000
Preliminary work ... 4000
Preliminary work ... 4000
Removing pump for headlight washer system ... 4000
Removing pump for headlight washer system ... 4000
Installing pump for headlight washer system ... 4002
Installing pump for headlight washer system ... 4002
Subsequent work ... 4003
Subsequent work ... 4003

94 05 19 Removing and installing main light switch - as of MY 2005 ... 4006
Removing main light switch ... 4006
Removing main light switch ... 4006
Installing main light switch ... 4007
Installing main light switch ... 4007

94 14 19 Removing and installing headlight mounting - as of MY 2005 ... 4010
Preliminary work ... 4010
Preliminary work - headlight mounts ... 4010
Removing headlight mounting ... 4010
Removing headlight mount ... 4010
Installing headlight mounting ... 4011
Installing headlight mount ... 4011
Testing and adjusting headlight mount ... 4012
Subsequent work ... 4013
Subsequent work - headlight mounts ... 4013

94 15 19 Removing and installing main headlight - as of MY 2005 ... 4016
Removing main headlight ... 4016
Removing main headlight ... 4016
Installing main headlight ... 4017
Installing main headlight ... 4017

94 23 19 Removing and installing halogen bulb - as of MY 2005 ... 4021
Preliminary work ... 4021
Preliminary work ... 4021

Table of Contents

94 23 19 Removing and installing halogen bulb - as of MY 2005
Removing halogen bulb....4021
Removing cap of main headlight....4021
Removing halogen bulb....4022
Removing high beam halogen bulb....4023
Installing halogen bulb....4025
Installing halogen bulb....4025
Installing high beam halogen bulb....4026
Installing main headlight cap....4027
Subsequent work....4027
Subsequent work....4027

94 27 19 Removing and installing bulb for parking light - as of MY 2005....4030
Preliminary work....4030
Preliminary work for parking light bulb....4030
Removing bulb for parking light....4030
Removing parking light bulb....4030
Installing bulb for parking light....4031
Installing parking light bulb....4031
Subsequent work....4032
Subsequent work for parking light bulb....4032

94 31 19 Removing and installing tail light - as of MY 2005....4034
Removing tail light....4034
Removing tail light....4034
Installing tail light....4035
Installing tail light....4035
Information....4036
Lamp overview: tail light....4036

94 36 19 Removing and installing stop light switch - as of MY 2005....4039
Removing stop light switch....4039
Removing stop light switch....4039
Installing stop light switch....4040
Installing stop light switch....4040

94 44 19 Removing and installing bulb for number plate light - as of MY 2005....4044
Removing bulb for number plate light....4044
Removing number plate light....4044
Removing bulb for number plate light....4045
Installing bulb for number plate light....4046
Installing bulb for number plate light....4046
Installing number plate light....4046

94 47 19 Removing and installing hazard warning light switch - as of MY 2005....4050
Removing hazard warning light switch....4050
Removing hazard warning light switch....4050
Installing hazard warning light switch....4051

Table of Contents

94 47 19 Removing and installing hazard warning light switch - as of MY 2005
Installing hazard warning light switch....4051

94 49 19 Removing and installing front control unit - as of MY 2005....4054
Tools....4054
Preliminary work....4054
Preliminary work - front control unit....4054
Technical values....4054
Technical values - front control unit....4054
Removing front control unit....4055
Removing front control unit....4055
Installing front control unit....4056
Installing front control unit....4057
Subsequent work....4058
Subsequent work - front control unit....4058
Coding control unit....4058
Reading out and printing out values....4058
Coding the front end control unit....4059

94 50 19 Removing and installing steering-column switch - as of MY 2005....4062
Preliminary work....4062
Preliminary work - steering column switch....4062
Technical values....4062
Technical values - steering column switch....4062
Removing steering-column switch....4062
Removing steering column switch....4062
Installing steering-column switch....4064
Removing steering column switch....4064
Subsequent work....4066
Subsequent work - steering column switch....4066

94 50 37 Disassembling and assembling steering column switch - as of MY 2005....4069
Preliminary work - steering column switch....4069
Preliminary work - steering column switch....4069
Disassembling and assembling steering column switch....4069
Disassembling steering column switch....4069
Assembling steering column switch....4071
Subsequent work - steering column switch....4073
Subsequent work - steering column switch....4073

94 53 19 Removing and installing side direction indicator light - as of MY 2005....4075
Removing side direction indicator light....4075
Removing side direction indicator light....4075
Installing side direction indicator light....4076
Installing side direction indicator light....4076

Table of Contents

94 56 19 Removing and installing bulb for front direction indicator - as of MY 2005 4080
Preliminary work 4080
Preliminary work - bulb for front direction indicator light 4080
Removing bulb for front direction indicator 4080
Removing bulb for front direction indicator light 4080
Installing bulb for front direction indicator 4082
Installing bulb for front direction indicator light 4082
Subsequent work 4083
Subsequent work - bulb for front direction indicator light 4083

94 57 19 Removing and installing control unit for gas discharge - as of MY 2005 4085
Preliminary work 4085
Preliminary work on control unit for gas discharge 4085
Removing control unit for gas discharge 4085
Removing cap of main headlight 4085
Removing control unit for gas discharge 4086
Installing control unit for gas discharge 4087
Installing control unit for gas discharge 4087
Installing main headlight cap 4087
Subsequent work 4088
Subsequent work on control unit for gas discharge 4088

94 59 19 Removing and installing gas discharge lamp - as of MY 2005 4091
Preliminary work 4091
Preliminary work 4091
Removing cap of main headlight 4091
Removing gas discharge lamp 4092
Removing gas discharge lamp 4092
Installing gas discharge lamp 4092
Installing gas discharge lamp 4093
Subsequent work 4094
Installing main headlight cap 4094
Subsequent work 4094

94 67 19 Removing and installing bulb for fog light - as of MY 2005 4097
Preliminary work 4097
Preliminary work 4097
Removing bulb for fog light 4097
Removing bulb for fog light 4097
Installing bulb for fog light 4098
Installing bulb for fog light 4098
Subsequent work 4098
Subsequent work 4098

94 70 19 Removing and installing auxiliary brake light - as of MY 2005 4101
Removing auxiliary stop light in rear centre panel 4101
Preliminary work for auxiliary brake light in rear centre panel 4101
Removing auxiliary brake light in rear centre panel 4101

Table of Contents

94 70 19 Removing and installing auxiliary brake light - as of MY 2005
Removing auxiliary stop light in rear spoiler....4102
Removing auxiliary brake light in rear spoiler....4102
Installing auxiliary stop light in rear centre panel....4103
Installing auxiliary brake light in rear centre panel....4103
Subsequent work for auxiliary brake light in rear centre panel....4104
Installing auxiliary stop light in rear spoiler....4104
Installing auxiliary brake light in rear spoiler....4105

94 70 19 Removing and installing auxiliary brake light - as of MY 2005....4108
Tools....4108
Removing auxiliary stop light in rear spoiler....4108
Removing auxiliary brake light in rear spoiler....4108
Removing auxiliary stop light in convertible top compartment lid....4109
Removing auxiliary stop light in convertible top compartment lid....4109
Installing auxiliary stop light in rear spoiler....4110
Installing auxiliary brake light in rear spoiler....4110
Installing auxiliary stop light in convertible top compartment lid....4111
Installing auxiliary stop light in convertible top compartment lid....4111

94 71 19 Removing and installing auxiliary headlight - as of MY 2005....4114
Removing auxiliary headlight....4114
Removing auxiliary headlamp....4114
Installing auxiliary headlight....4115
Installing auxiliary headlamp....4115
Subsequent work....4116
Reworking auxiliary headlight....4116

94 72 19 Removing and reinstalling switch for reversing light - as of MY 2005....4119
Preliminary work....4119
Preliminary work....4119
Removing switch for reversing light....4119
Removing switch for reversing light....4119
Installing switch for reversing light....4120
Installing switch for reversing light....4120
Subsequent work....4121
Subsequent work....4121

94 78 19 Removing and installing front angle sensor for headlight levelling system - as of MY 2005....4124
Tools....4124
Preliminary work....4124
Preliminary work - front angle sensor for headlight levelling system....4124
Removing front angle sensor for headlight levelling system....4124
Removing front angle sensor for headlight levelling system....4124
Installing front angle sensor for headlight levelling system....4125
Installing front angle sensor for headlight levelling system....4125
Subsequent work....4126

Table of Contents

94 78 19 Removing and installing front angle sensor for headlight levelling system - as of MY 2005
Subsequent work - front angle sensor for headlight levelling system....4126

94 79 19 Removing and installing rear angle sensor for headlight levelling system - as of MY 2005....4129
Tools....4129
Removing rear angle sensor for headlight levelling system....4129
Removing rear angle sensor for headlight levelling system....4129
Installing rear angle sensor for headlight levelling system....4130
Installing rear angle sensor for headlight levelling system....4130
Subsequent work....4130
Subsequent work - rear angle sensor for headlight levelling system....4131

94 94 19 Removing and installing servo motor for headlight levelling system - as of MY 2005....4133
Tools....4133
Preliminary work....4133
Preliminary work - servo motor for headlight levelling system....4133
Removing cap of main headlight....4133
Removing servo motor for headlight levelling system....4134
Removing servo motor for headlight levelling system....4134
Installing servo motor for headlight levelling system....4135
Installing servo motor for headlight levelling system....4135
Subsequent work....4136
Installing main headlight cap....4136
Subsequent work - servo motor for headlight levelling system....4137

96 07 19 Removing and installing contact switch for glove compartment light - as of MY 2005....4140
Preliminary work....4140
Preliminary work....4140
Removing contact switch for glove compartment light....4140
Removing contact switch for glove compartment light....4140
Installing contact switch for glove compartment light....4142
Installing contact switch for glove compartment light....4142
Subsequent work....4142
Subsequent work....4142

96 15 19 Removing and installing footwell light - as of MY 2005....4145
Removing footwell light....4145
Removing footwell light....4145
Installing footwell light....4146
Installing footwell light....4147

96 16 19 Removing and installing door warning light - as of MY 2005....4150
Removing bulb for door warning light....4150
Removing door warning light....4150
Removing bulb for door warning light....4151
Installing bulb for door warning light....4152
Installing bulb for door warning light....4152

Table of Contents

96 16 19 Removing and installing door warning light - as of MY 2005
Installing door warning light....4153

96 22 19 Removing and installing bulb for interior light - as of MY 2005....4156
Removing bulb for interior light....4156
Removing interior light....4156
Removing lens for interior light....4157
Removing bulb for interior light....4158
Installing bulb for interior light....4158
Installing bulb for interior light....4158
Installing lens for interior light....4159
Installing interior light....4159

96 27 19 Removing and installing switch console - as of MY 2005....4163
Preliminary work....4163
Preliminary work for switch console....4163
Remove switch console....4163
Removing switch console....4163
Install switch console....4164
Installing switch console....4164
Subsequent work....4165
Subsequent work for switch console....4165

96 41 19 Removing and installing bulb for luggage compartment light - as of MY 2005....4168
Removing bulb for luggage compartment light....4168
Removing luggage compartment light....4168
Removing bulb for light....4169
Installing bulb for luggage compartment light....4170
Installing bulb for light....4170
Installing luggage compartment light....4170

96 43 19 Removing and installing bulb for engine compartment light - as of MY 2005....4174
Removing bulb for engine compartment light....4174
Removing engine compartment light....4174
Removing bulb for light....4176
Installing bulb for engine compartment light....4176
Installing bulb for light....4176
Installing engine compartment light....4177

96 44 19 Removing and installing glove compartment light - as of MY 2005....4181
Removing glove compartment light....4181
Removing glove compartment light....4181
Installing glove compartment light....4182
Installing glove compartment light....4183

96 47 19 Removing and installing bulb for reading light - as of MY 2005....4186
Removing bulb for reading light....4186
Removing interior light....4186

Table of Contents

96 47 19 Removing and installing bulb for reading light - as of MY 2005
Removing bulb for reading light....4187
Installing bulb for reading light....4188
Installing bulb for reading light....4189
Installing interior light....4190

96 60 21 Removing main switch for power supply - as of MY 2005....4193
Removing main switch for power supply....4193
Removing main power supply switch....4193
Information....4195
Vehicle electrical system - switching on....4195
Vehicle electrical system - switching off....4195

96 62 25 Teaching hand-held transmitter - as of MY 2005....4198
Teaching hand-held transmitter....4198

96 62 55 Replacing hand-held transmitter - as of MY 2005....4201
Disassembling hand-held transmitter....4201
Removing cover of hand-held transmitter....4201
Removing hand-held transmitter key....4201
Removing battery for hand-held transmitter....4202
Assembling hand-held transmitter....4202
Installing battery for hand-held transmitter....4202
Installing hand-held transmitter key....4203
Installing cover of hand-held transmitter....4203

96 63 19 Removing and installing tilt sensor control unit - as of MY 2005....4206
Preliminary work....4206
Preliminary work....4206
Removing tilt sensor control unit....4206
Removing tilt sensor control unit....4206
Installing tilt sensor control unit....4208
Installing tilt sensor control unit....4208
Subsequent work....4209
Subsequent work....4209

96 65 19 Removing and installing the alarm siren - as of MY 2005....4211
Preliminary work....4211
Preliminary work....4211
Removing the alarm siren....4211
Removing alarm horn....4211
Removing alarm siren....4212
Installing the alarm siren....4213
Installing alarm horn....4213
Installing alarm siren....4213
Subsequent work....4214
Subsequent work....4214

HomeLink 4232
Assigning garage door opener/HomeLink signals to buttons 4232
Garage door opener/HomeLink with fixed code system 4233
Garage door opener/HomeLink with variable code system 4234
Re-programming an individual button 4235
Erasing programmed signals on the HomeLink 4236

96 85 19 Removing and installing interior monitoring sensor - as of MY 2005 4239
Preliminary work 4239
Preliminary work for interior monitoring sensor 4239
Removing interior monitoring sensor 4239
Removing interior monitoring sensor 4239
Installing interior monitoring sensor 4240
Installing interior monitoring sensor 4240
Subsequent work 4240
Subsequent work for interior monitoring sensor 4240

Table of Contents

97 09 19 Removing and installing main wire harness - as of MY 2005 4243
Tools 4243
Preliminary work 4243
Preliminary work 4243
Removing main wire harness 4245
Removing main wire harness 4245
Exposing main wire harness in passenger compartment 4251
Removing main wire harness in passenger compartment 4252
Installing main wire harness 4263
Installing main wire harness in passenger compartment 4264
Completing the vehicle 4274
Installing front main wire harness 4275
Subsequent work 4281
Subsequent work 4282

97 10 19 Removing and installing vehicle electrical system control unit - as of MY 2005 4285
Preliminary work 4285
Preliminary work - vehicle electrical system control unit 4285
Removing vehicle electrical system control unit 4285
Removing vehicle electrical system control unit 4285
Installing vehicle electrical system control unit 4287
Installing vehicle electrical system control unit 4287
Subsequent work for vehicle electrical system control unit 4288
Subsequent work - vehicle electrical system control unit 4288
Coding vehicle electrical system control unit 4289
Programming the vehicle electrical system control unit: 4289
Reading out and printing out values 4289
Coding (programming) the control module 4290

97 15 19 Removing and installing front wiring harness - as of MY 2005 4293
Preliminary work 4293
Preliminary work for front wiring harness 4293
Removing front wiring harness 4293
Removing front wiring harness 4293
Installing front wiring harness 4294
Installing front wiring harness 4294
Subsequent work 4295
Subsequent work for front wiring harness 4295

97 16 19 Removing and installing wire harness for front-end - as of MY 2005 4297
Preliminary work 4297
Preliminary work 4297
Removing wire harness for front-end 4297
Removing wire harness for front-end 4297
Installing wire harness for front-end 4302
Installing wire harness for front-end 4302
Subsequent work 4306
Subsequent work 4306

Table of Contents

97 20 19 Removing and installing wiring harness for centre console - as of MY 2005 4308
Preliminary work 4308
Preliminary work for interior monitoring sensor 4308
Removing wiring harness for centre console 4308
Removing wiring harness for centre console 4308
Installing wiring harness for centre console 4309
Installing wiring harness for centre console 4309
Subsequent work 4310
Subsequent work for interior monitoring sensor 4310

97 25 19 Removing and installing rear wire harness - as of MY 2005 4312
Tools 4312
Preliminary work 4312
Preliminary work 4312
Removing rear wire harness 4313
Exposing rear wire harness 4314
Removing rear wire harness 4316
Removing wire harness for auxiliary stop light (Cabriolet) 4319
Removing wire harness for roll-over protection system (cabriolet) 4321
Installing rear wire harness 4322
Installing rear wire harness 4322
Installing wire harness for auxiliary stop light (Cabriolet) 4326
Installing wire harness for roll-over protection system (cabriolet) 4327
Completing the vehicle 4328
Subsequent work 4331
Subsequent work 4331

97 25 19 Removing and installing rear wire harness - as of MY 2005 4334
Tools 4334
Preliminary work 4334
Preliminary work 4334
Removing rear wire harness 4335
Exposing rear wire harness 4336
Removing rear wire harness 4338
Installing rear wire harness 4341
Installing rear wire harness 4341
Completing the vehicle 4345
Subsequent work 4348
Subsequent work 4348

97 32 19 Removing and installing wiring harness for door - as of MY 2005 4351
Preliminary work 4351
Preliminary work for door wiring harness 4351
Preliminary work for wiring harness for door trim panel 4351
Removing wiring harness for door 4351
Removing lateral footwell trim on driver's side 4351
Removing lateral footwell trim on passenger's side 4352
Disconnect wire harness for door (driver's side) at the A-pillar 4353

Table of Contents

97 32 19 Removing and installing wiring harness for door - as of MY 2005
Disconnect wire harness for door (passenger's side) at the A-pillar....4355
Removing wiring harness for door....4357
Removing wiring harness for door trim panel....4358
Installing wiring harness for door....4359
Installing wiring harness for door....4359
Locking wire harness for door (driver's side) at the A-pillar....4361
Locking wire harness for door (passenger's side) at the A-pillar....4362
Installing lateral footwell trim on driver's side....4364
Installing lateral footwell trim on passenger's side....4365
Installing wiring harness for door trim panel....4365
Subsequent work....4367
Subsequent work for door wiring harness....4367
Subsequent work for wiring harness for door trim panel....4367

97 37 55 Replacing wire harness for PASM - as of MY 2005....4370
Tools....4370
Preliminary work....4370
Preliminary work for wire harness for front PASM....4370
Preliminary work for wire harness for rear PASM....4370
Removing wire harness for PASM....4371
Removing wire harness for front PASM....4371
Removing wire harness for rear PASM....4372
Installing wire harness for PASM....4372
Installing wire harness for front PASM....4373
Installing wire harness for rear PASM....4374
Subsequent work....4375
Subsequent work for wire harness for front PASM....4375
Subsequent work for wire harness for rear PASM....4375

97 37 55 Replacing wire harness for PASM - as of MY 2005....4378
Tools....4378
Preliminary work....4378
Preliminary work for wire harness for front PASM....4378
Preliminary work for wire harness for rear PASM....4379
Removing wire harness for PASM....4379
Removing wire harness for front PASM....4379
Removing wire harness for rear PASM....4380
Installing wire harness for PASM....4381
Installing wire harness for front PASM....4381
Installing wire harness for rear PASM....4382
Subsequent work....4383
Subsequent work for wire harness for front PASM....4383
Subsequent work for wire harness for rear PASM....4383

97 45 19 Removing and installing wire harness for battery wiring - as of MY 2005....4386
Tools....4386
Preliminary work....4386

Table of Contents

97 45 19 Removing and installing wire harness for battery wiring - as of MY 2005
Preliminary work for ground strap and B+ line of battery....4386
Preliminary work for B+ line from power distributor to transmission connection point....4386
Preliminary work for B+ line from starter to transmission connection point....4387
Preliminary work for engine ground strap....4387
Removing wire harness for battery wiring....4387
Removing ground strap and B+ line of battery....4387
Remove B+ line from power distributor to transmission connection point....4389
Removing B+ line from starter to transmission connection point....4392
Removing engine ground strap....4394
Installing wire harness for battery wiring....4395
Installing ground strap and B+ line of battery....4395
Install B+ line from power distributor to transmission connection point....4397
Installing B+ line from starter to transmission connection point....4401
Fitting ground strap to engine....4403
Subsequent work....4403
Subsequent work for ground strap and B+ line of battery....4404
Subsequent work for B+ line from power distributor to transmission connection point....4404
Subsequent work for B+ line from starter to transmission connection point....4404
Subsequent work for engine ground strap....4404

97 52 19 Removing and installing wire harness for engine - as of MY 2005....4407
Preliminary work....4407
Preliminary work....4407
Removing wire harness for engine....4407
Removing wire harness for engine....4407
Installing wire harness for engine....4412
Installing wire harness for engine....4412
Subsequent work....4417
Subsequent work....4417

97 53 19 Removing and installing wire harness for seat heater - as of MY 2005....4420
Information....4420
Spare parts information....4420

97 55 19 Removing and installing wire harness for convertible top - as of MY 2005....4423
Preliminary work....4423
Preliminary work for convertible top wiring harness....4423
Preliminary work for wiring harness for roll-over protection system....4423
Removing wire harness for convertible top....4423
Removing plastic panel....4423
Disconnecting wire harness plug connection for convertible top....4424
Removing wire harness for convertible top....4425
Removing wire harness for roll-over protection system....4427
Installing wire harness for convertible top....4428
Installing wire harness for convertible top....4428
Connecting wire harness plug connection for convertible top....4430
Installing plastic panel....4431

Table of Contents

97 55 19 Removing and installing wire harness for convertible top - as of MY 2005
Installing wire harness for roll-over protection system....4431
Subsequent work....4432
Subsequent work for convertible top wiring harness....4433
Subsequent work for wiring harness for roll-over protection system....4433

97 56 19 Removing and installing wire harness for backrest (front seat) - as of MY 2005....4435
Preliminary work....4435
Preliminary work....4435
Removing wire harness for backrest (front seat)....4435
Removing support for left backrest side part....4435
Removing backrest side support....4436
Taking off foam part....4437
Removing wire harness for backrest (front seat)....4438
Installing wire harness for backrest (front seat)....4440
Installing wire harness for backrest (front seat)....4440
Fitting foam part....4442
Installing backrest side support....4442
Installing support for left backrest side part....4443
Subsequent work....4444
Subsequent work....4444

97 57 19 Removing and installing wire harness for electrically adjustable seat - as of MY 2005....4447
Preliminary work....4447
Preliminary work....4447
Removing wire harness for electrically adjustable seat....4447
Removing wire harness for electrically adjustable seat....4447
Installing wire harness for electrically adjustable seat....4449
Installing wire harness for electrically adjustable seat....4449
Subsequent work....4450
Subsequent work....4450

97 65 55 Replacing wire harness for anti-lock brake system (ABS) - as of MY 2005....4453
Tools....4453
Preliminary work....4453
Preliminary work on front ABS wire harness....4453
Preliminary work on rear ABS wire harness....4453
Removing wire harness for anti-lock brake system (ABS)....4454
Removing front ABS wire harness....4454
Removing rear ABS wire harness....4455
Installing wire harness for anti-lock brake system (ABS)....4457
Installing front ABS wire harness....4457
Installing rear ABS wire harness....4460
Subsequent work....4462
Subsequent work on front ABS wire harness....4462
Subsequent work on rear ABS wire harness....4462

Table of Contents

97 65 55 Replacing wire harness for anti-lock brake system (ABS) - as of MY 2005 4465
Tools 4465
Preliminary work 4465
Preliminary work on front ABS wire harness 4465
Preliminary work on rear ABS wire harness 4465
Removing wire harness for anti-lock brake system (ABS) 4466
Removing front ABS wire harness 4466
Removing rear ABS wire harness 4468
Installing wire harness for anti-lock brake system (ABS) 4470
Installing wire harness for front airbag 4470
Installing rear ABS wire harness 4472
Subsequent work 4474
Subsequent work on front ABS wire harness 4474
Subsequent work on rear ABS wire harness 4474

97 66 23 Installing wire harness for airbag - as of MY 2005 4477
Tools 4477
Preliminary work 4477
Preliminary work for wire harness for passenger's airbag unit 4477
Preliminary work for wire harness for left seat-belt tensioner 4477
Preliminary work for wire harness for right seat-belt tensioner 4478
Preliminary work for wire harness for left head airbag (triggering unit to A-pillar connection point) 4479
Preliminary work for wire harness for right head airbag (triggering unit to A-pillar connection point) 4479
Preliminary work for head airbag wire harness (head airbag to A-pillar connection point) 4479
Tools and materials 4480
Tools 4480
Installing wire harness for airbag 4480
Installing components for airbag from triggering unit to passenger's airbag unit or seat-belt tensioner 4480
Installing wire harness for airbag from the triggering unit to the A-pillar connection point 4485
Installing wire harness for airbag from the A-pillar connection point to the head airbag 4493
Subsequent work 4500
Subsequent work for wire harness for passenger's airbag unit 4500
Subsequent work for wire harness for left seat-belt tensioner 4500
Subsequent work for wire harness for right seat-belt tensioner 4501
Subsequent work for wire harness for left head airbag (triggering unit to A-pillar connection point) 4501
Subsequent work for wire harness for right head airbag (triggering unit to A-pillar connection point) 4502
Subsequent work for head airbag wire harness (head airbag to A-pillar connection point) 4502

97 67 19 Removing and installing wiring harness for rear spoiler - as of MY 2005 4505
Information 4505
Note on removing and installing wiring harness for rear spoiler 4505

Table of Contents

97 70 19 Removing and installing wiring harness for number plate light - as of MY 2005 4508
Preliminary work 4508
Preliminary work 4508
Removing wiring harness for number plate light 4508
Removing wiring harness for number plate light 4508
Installing wiring harness for number plate light 4509
Installing wiring harness for number plate light 4509
Subsequent work 4510
Subsequent work 4510

97 72 23 Installing optical waveguide - as of MY 2005 4513
Tools 4513
Preliminary work 4513
Preliminary work 4513
Optical waveguide variants 4513
Optical waveguide variants 4513
Installing optical waveguide 4517
Disconnecting optical waveguide 4517
Removing and installing optical contacts on connector side 4518
Installing optical contacts on connector side 4519
Removing and installing optical contacts on socket side 4519
Installing optical contacts on socket side 4520
Installing optical waveguide 4521
Subsequent work 4522
Subsequent work 4522

97 81 19 Removing and installing wire harness for Tiptronic transmission - as of MY 2005 4525
Preliminary work 4525
Preliminary work 4525
Removing wire harness for Tiptronic transmission 4525
Removing wire harness for Tiptronic transmission 4525
Installing wire harness for Tiptronic transmission 4527
Installing wire harness for Tiptronic transmission 4527
Subsequent work 4529
Subsequent work 4529

97 83 19 Removing and installing relay carrier 1 - as of MY 2005 4532
Preliminary work 4532
Preliminary work for relay carrier 1 4532
Removing relay carrier 1 4532
Removing relay carrier 1 from the retaining frame 4532
Installing relay carrier 1 4534
Installing relay carrier 1 in the retaining frame 4534
Subsequent work 4534
Subsequent work on relay carrier 1 4534

Table of Contents

97 84 09 Undoing and securing fusebox - as of MY 2005 4537
Preliminary work 4537
Preliminary work for fusebox 4537
Undoing fusebox 4537
Undoing fusebox 4537
Securing fusebox 4538
Securing fusebox 4539
Subsequent work 4539
Subsequent work on fusebox 4540

97 89 19 Removing and installing power distributor - as of MY 2005 4542
Preliminary work 4542
Preliminary work for power distributor 4542
Removing power distributor 4542
Removing power distributor 4542
Installing power distributor 4545
Installing the current distributor 4545
Subsequent work 4547
Subsequent work for power distributor 4547

97 90 19 Removing and installing relay carrier - as of MY 2005 4550
Preliminary work 4550
Preliminary work for relay carrier 4550
Removing relay carrier 4550
Removing relay carrier 4550
Removing relay carrier for cabriolet 4552
Installing relay carrier 4553
Installing relay carrier 4553
Installing relay carrier for cabriolet 4554
Subsequent work 4556
Subsequent work for relay carrier 4556

97 90 19 Removing and installing relay carrier - as of MY 2005 4558
Tools 4558
Preliminary work 4558
Preliminary work for relay carrier of cabriolet 4558
Removing relay carrier 4558
Removing relay carrier 4558
Removing relay carrier for cabriolet 4560
Installing relay carrier 4561
Installing relay carrier 4561
Installing relay carrier for cabriolet 4562
Subsequent work 4564
Subsequent work for relay carrier of cabriolet 4564

97 92 55 Replacing fuse element - as of MY 2005 4566
Preliminary work 4566
Preliminary work for fuse element 4566

Table of Contents

97 92 55 Replacing fuse element - as of MY 2005
Replacing fuse element....4566

01 01 IN Diagnostic system: reading out fault memory and activating systems - as of MY 2005

Tools

Designation	Type	Number	Explanation	
PIWIS Tester	special tool	9718		

Performing vehicle handover

WARNING

Sudden voltage interruption of the power supply to the control unit.

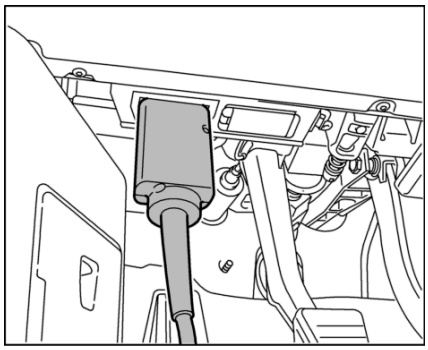
- **Risk of irreparable damage to the control unit.**

→ During vehicle handover, it is essential to guarantee the power supply for the Porsche System Tester. A battery charger with a current rating of at least 40 A must be connected to the external power supply.

1. **PIWIS Tester 9718** must be connected to the vehicle, then start the System Tester. **Switch on ignition**. Press >> to continue.
2. Select **vehicle type** using the cursor keys.
3. Select **Control units** and **Special functions** using the cursor keys. Then press >> .
4. Select **Vehicle handover** menu. Then press >> .
5. Follow the instructions on the Tester (vehicle handover log). Press >> to continue.
6. Start function by pressing F8 .
7. The Tester runs the functions and displays the confirmation message **Functions ended**. Press >> to continue.
8. **Enter Vehicle Ident. No.** and press >> . Compare **Vehicle Ident. No.** and if it is OK, confirm with F7 .

8.1. If necessary, **read out all fault memories**.

9. Select **Erase all fault memories** menu. Then press >> .
10. For vehicles with navigation system, insert navigation DVD into the navigation unit (DVD) in the luggage compartment and switch on PCM.



10.1. Switch on the PCM in clear surroundings (to load GPS almanac). The almanac is loaded as soon as four

satellites are identified.

10.2. Message on PCM >>Loading navigation DVD<< - do not interrupt loading operation.

11. Print out vehicle handover log and place it in vehicle documents folder.
12. Test-drive the vehicle and read out the fault memory. Check faults after diagnosis if necessary and erase fault memory before delivering the vehicle.

Reading out and erasing fault memory

Diagnostic socket

The **PIWIS tester 9718** is connected to the vehicle via a diagnostic socket. The diagnosis socket is located inside the vehicle in the vicinity of the driver's A-pillar below the instrument panel.

1. Start the **PIWIS tester 9718** and follow the instructions on the tester.
2. Select vehicle type, press >> and start the automatic control unit search.
3. If an asterisk appears in front of the relevant control unit, read out the fault memory and follow the instructions on the tester.

WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

M96/05 and M97/01 engines

Engine data	997	997 S
Engine type	M96/05	M97/01
No. of cylinders	6	6
Cubic capacity	3,596 cm³	3,824 cm³
Bore	96 mm	99 mm
Stroke	82.8 mm	82.8 mm
Compression ratio	11.3 : 1 (-0.6)	11.8 : 1 (-0.6)
Max. engine power (EU)	239 kW (325 HP)	261 kW (355 HP)
At engine speed	6,800 rpm	6,600 rpm
Max. torque (EU)	370 Nm (274 ftlb.)	400 Nm (296 ftlb.)
At engine speed	4,250 rpm	4,600 rpm
Max. output per litre	66.5 kW/l (90.4 HP/l)	68.3 kW/l (92.9 HP/l)
rpm limitation	via fuel feed interruption and electronic throttle	via fuel feed interruption and electronic throttle
At engine speed	7,300 rpm	7,300 rpm
Idle speed	670 ± 40 rpm	670 ± 40 rpm
Engine weight according to DIN 70020 A	Manual transmission*: 201.7 kg	Manual transmission*: 201.6 kg
	Automatic transmission: 191.5 kg	Automatic transmission: 191 kg

* including double-mass flywheel

Engine design

Designation	997	997 S
Type	6-cylinder aluminium opposed-cylinder engine, water-cooled	
Crankcase	Vertically split light alloy cylinder housing with separate crankshaft bearing housing	
Crankshaft	Forged, supported by 7 bearings	
Crankshaft bearings	Plain bearings, Ø 63 mm, sub groove	
Connecting rods	Forged, l = 142 mm	
Con-rod bearings	Plain bearings	
Pistons	Pressed light alloy	
Cylinders	Lokasil oil running surface	
Cylinder head	Three-part light alloy head	
Valve arrangement	Two input and output valves per cylinder suspended in parallel v-format	
Diameter of inlet valve	40.2 mm	
Diameter of exhaust valve	34.5 mm	
Valve lift of inlet	Large lift: 11.0 mm	
	Small lift: 3.6 mm	
Valve lift of outlet	11.0 mm	
Valve gear	Inlet: via switchable flat-base tappets	
	Outlet: via flat-base tappets	
Camshaft	From the crankshaft via toothed chain to the intermediate shaft and from there via one pulley chain per cylinder bank to the inlet and outlet camshafts	
Camshaft adjustment	Porsche VarioCam Plus with 42° adjustment (vane adjuster and valve travel adjustment)	
Valve clearance	Hydraulic valve clearance compensation	
Timing*: Inlet opens, large lift	9° after top dead centre	11° after top dead centre
Timing*: inlet closes, large lift	61° after bottom dead centre	59° after bottom dead centre
Timing*: inlet opens, small lift	39° after top dead centre	39° after top dead centre
Timing*: inlet closes, small lift	19° after bottom dead centre	19° after bottom dead centre
Timing*: outlet opens	50° before BDC	50° before BDC
Timing*: Outlet closes	4° before TDC	4° before TDC

* Timing in late position with 1 mm valve lift and zero clearance

Engine control

Designation	997	997 S
Engine control module	Bosch ME 7.8	
Ignition	DME, individual spark coils, knock control	
Firing order	1-6-2-4-3-5	
Spark plugs	Bosch FRG 5 KQEO	
Electrode gap	1.6 ± 0.05 mm	
Electronic throttle	Electronic throttle actuator control via DME	
USA-LEV trim	On-Board Diagnosis II (OBDII)	
Euro 4	Euro-On Board Diagnosis (EOBD)	
Euro 2	Customer service - OBD I

 WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se

correspondan con el contenido de la imagen de la pantalla.

13 44 IN Mounting specification for connecting rod bolts - as of MY 2005

- Securing connecting rod bolts

Tools

Designation	Type	Number	Explanation	
cover for dust protection when fitting the engine	commercially available tool	NR.165		

top of page

Securing connecting rod bolts

Securing connecting rod bolts

ATTENTION

Risk of damage due to particles of dirt.

- **Oil bores/oil ducts can become blocked up.**

→ When working on the engine, absolute cleanliness is essential.
→ Lay removed engine parts on a clean base and cover them without fail.
→ Use the **cover for dust protection when fitting the engine NR.165** on the engine assembly support.

ATTENTION

Damage to engine caused by refitting of connecting rod bolts that have already been fitted.

→ Always replace connecting rod bolts.
→ New connecting rod bolts may be screwed in a maximum of four times during assembly.

1. Position the new connecting rod bolts with the associated connecting rod caps and tighten the screws by hand.

2. Pre-tighten connecting rod bolts to the specified torque and retighten with a torque angle wrench. →**Initial tightening: 15 ftlb.** ; →**Torque angle: 110 °**
3. Unscrew connecting-rod bolts.
4. Pre-tighten connecting rod bolts to the specified torque and perform the final tightening with a torque angle wrench. →**Initial tightening: 15 ftlb.** ; →**Final tightening - torque angle: 110 °**

20 01 AW Basic safety instructions for working with the fuel system - as of MY 2005

- Information

top of page

Information

Safety instructions when working on fuel system

 DANGER

Lethal danger of explosion and fire from escaping fuel and vapours.

→ Ensure adequate ventilation and extract all fuel vapours.
→ Do not work on fuel system when engine is hot.
→ No welding or grinding work when the fuel system is open.
→ Smoking prohibited and no naked lights.
→ Secure vehicle clearly, e.g with warning signs.
→ Wear fuel-resistant protective gloves and goggles.
→ Wear a breathing mask with active charcoal filter; do not breathe in any fuel vapours.
→ Pay attention to cleanliness when working on the fuel system.
→ Before opening fuel lines or fuel hoses, relieve the fuel pressure.
→ Collect escaping fuel, absorb it if necessary with a suitable binding material and dispose of properly.

 WARNING

Skin and eye damage from toxic and caustic effects of fuel.

→ In case of contact with skin or eyes wash immediately with plenty of warm water and acid-free soap.
→ Consult a doctor as soon as possible.

Preliminary work

Preliminary work

 DANGER

Risk of fire from escaping fuel.

- **Danger of fatal injury and damage to property.**

→ Observe basic safety instruction when working on the fuel system, *→201000 Precautionary measures when working on fuel system.*

→ Secure working area.

Example of a warning sign

1. Attach a clearly visible warning sign to the area of the vehicle on which you are working.
2. Place protective covers on the vehicle.

Carrera 2:

– Disconnect and remove battery →270619 Removing and installing battery - section on "Removing".

Carrier plate for battery

– Remove carrier plate for battery. Unscrew four M8 hexagon collar nuts **-1-** and remove lid. Check seal for damage and replace it if necessary.

Carrera 4:

– Disconnect the battery →2706IN Work instructions after disconnecting the battery.
– Remove luggage compartment cover →*700519 21 Removing and installing trim panel for front luggage compartment - section on "Removing"*.

Cover for tank flange

– Remove cover for tank flange. Unscrew four M6 cap nuts **-2-** , remove the four washers and lift off the lid. Check seal for signs of damage.

Note

Watch out for emerging fuel when disconnecting fuel lines. Place a clean cloth on the connection point, then loosen the connection.

3. Remove fuel level sensor →*201519 21 Removing and installing fuel level sensor - section on "Removing"*.

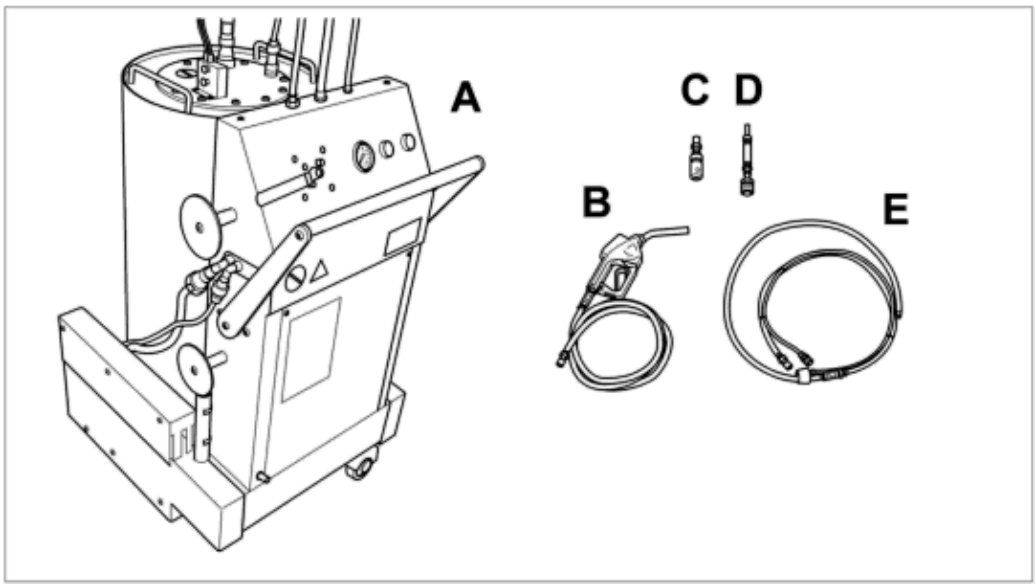
Emptying the fuel tank

Emptying the fuel tank

DANGER

Risk of fire from escaping fuel.

- **Danger of fatal injury and damage to property.**

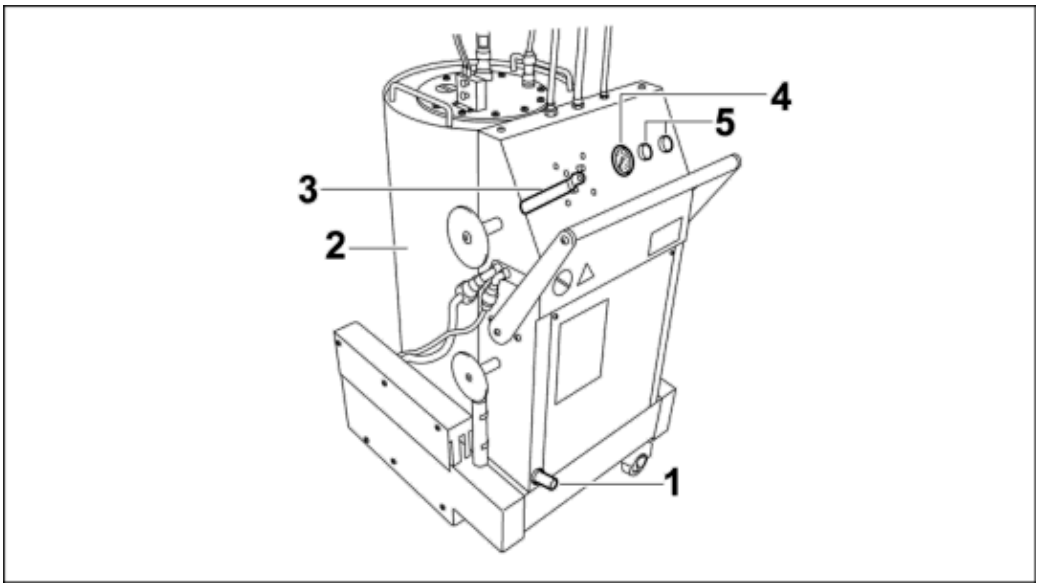


→ Observe basic safety instruction when working on the fuel system, *→201000 Precautionary measures when working on fuel system.*

→ Secure working area.

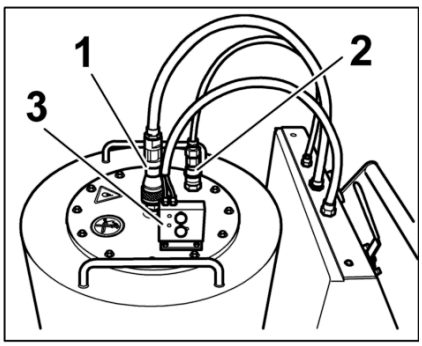
Note

Refer to the operating instructions for information on using the fuel transfer unit.



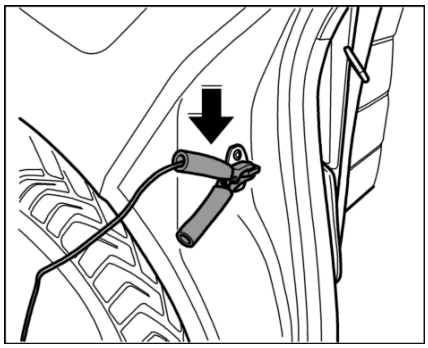
Using the fuel transfer unit WE 1262

Special tool



Item	Designation	Source	Explanation
A	**Fuel transfer unit WE1262**	Workshop Equipment Manual, Chapter 3.2.2	This unit has been tested and approved by PORSCHE.
B	Fuel nozzle (special accessory)	Workshop Equipment Manual, Chapter 3.2.2	For refuelling vehicles. The fuel nozzle switches off automatically as soon as the fuel tank is full.
C	Porsche adapter	Workshop Equipment Manual, Chapter 3.2.2	This adapter fits 8-mm to 10-mm fuel lines; Order No. 400 110
E	Connecting piece between Porsche adapter and suction line	Workshop Equipment Manual, Chapter 3.2.2	This is screwed onto the suction line **-E-** and connected to the Porsche adapter.
E	Suction line with venting device	Workshop Equipment Manual, Chapter 3.2.2	Attach venting device (rubber taper with transparent hose) to the fuel filler neck. Minimises emerging fuel vapours.

Device connections

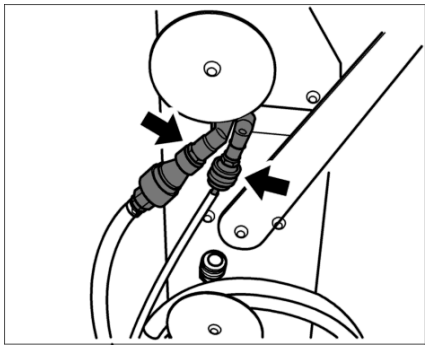


Pump connections

Item	Designation	Explanation
1	Compressed air connection	Connection for unlubricated/oil-free compressed air
2	Fuel tank (capacity: 110 litres)	The scale starts at approx. 10 litres. Other markings are shown in 5-litre steps.
3	Pump activation	Changes the direction of the pump from the fuel feed direction (suction mode - refill mode).
4	Operating pressure display	Displays the operating pressure set for the pump. The value cannot be more than 6.5 bar.
5	On/Off switch	

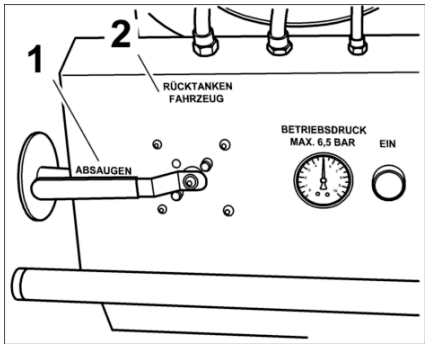
Connections on tank, top

1. Get the device ready. Connect fuel hose to the tank **-1-** and connect venting device **-2-** . Then attach the pneumatic stop switch to the tank **-3-** and tighten the knurled nuts.



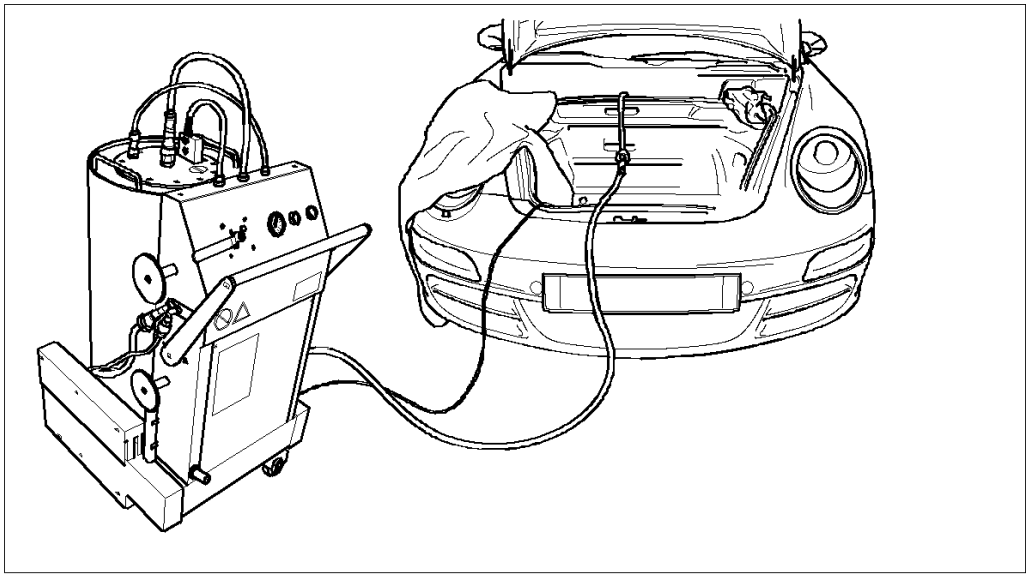
Grounding cable

Note



When using the fuel transfer unit, always make sure that the grounding cable is connected to a ground point on the vehicle.

2. Secure grounding terminal of device to an (unpainted) ground point on the vehicle.



Connections for suction hose and fuel nozzle package

3. Attach the suction hose and venting device to the side connections on the device.
4. Guide suction hose as far as possible into the fuel tank.

Operating lever

5. Set operating lever for pump to **"Suction"** mode **-1-** and switch on the device.
6. Remove the fuel via the tank flange opening.

Fuel transfer unit WE 1262

7. As an alternative to using the fuel transfer unit, you can also use the PIWIS Tester function for fuel pump relay activation →206601 Checking fuel pump electrically.

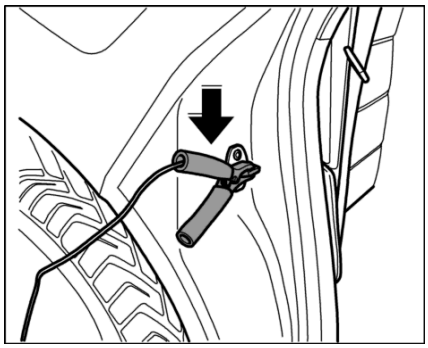
Filling the fuel tank

Filling the fuel tank

Filling the fuel tank

DANGER



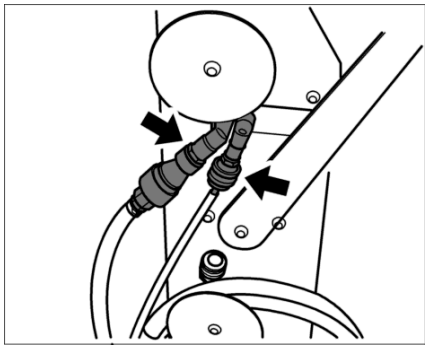
Risk of fire from escaping fuel.

- **Danger of fatal injury and damage to property.**

→ Observe basic safety instruction when working on the fuel system, *→201000 Precautionary measures when working on fuel system.*

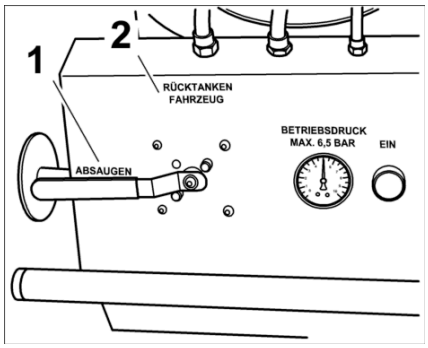
→ Secure working area.

1. Attach fuel nozzle hose package to the side connections on the device.



Grounding cable

Note



When using the fuel transfer unit, always make sure that the grounding cable is connected to a ground point on the vehicle.

2. Secure grounding terminal of device to an (unpainted) ground point on the vehicle.

Connections for suction hose and fuel nozzle package

3. Insert fuel nozzle at tank filler neck.

Operating lever

4. Set operating lever for pump to **"Refill"** mode **-2-** and switch on the device.
5. Fill the vehicle using the fuel nozzle, then switch off and remove the device.
6. Alternatively, the vehicle must be filled using a canister and a suitable funnel.

Country C00, C02, C05, C07, C08, C09, C10, C11, C12, C13, C14, C15, C16, C18, C19, C20, C21, C22, C23, C24, C25, C26, C27, C28, C32, C33, C34, C35, C36, C37, C38, C39, C45, C46, C98, C99

WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

Warning notes for calibrating fuel-level sensor system

 WARNING

Danger of fire and injury!

- **Danger of fire and injury!**

→ Observe general safety regulations on the fuel system!

→ Wear protective gloves!

 DANGER

Lethal danger of explosion and fire from escaping fuel and vapours.

→ Ensure adequate ventilation and extract all fuel vapours.

→ Do not work on fuel system when engine is hot.

→ No welding or grinding work when the fuel system is open.

→ Smoking prohibited and no naked lights.

→ Secure vehicle clearly, e.g with warning signs.

→ Wear fuel-resistant protective gloves and goggles.

→ Wear a breathing mask with active charcoal filter; do not breathe in any fuel vapours.

→ Pay attention to cleanliness when working on the fuel system.

→ Before opening fuel lines or fuel hoses, relieve the fuel pressure.

→ Collect escaping fuel, absorb it if necessary with a suitable binding material and dispose of properly.

 WARNING

Skin and eye damage from toxic and caustic effects of fuel.

→ In case of contact with skin or eyes wash immediately with plenty of warm water and acid-free soap.

→ Consult a doctor as soon as possible.

Calibrating fuel-level sensor system, C4

Note

- *Tank calibration is necessary after replacement of the fuel tank, fuel-level sensor or instrument cluster. Calibrate the fuel-level sensor system - after replacing the instrument cluster - only if the function **Read out values** cannot be performed!*
- *The fuel-level sensor system need not be calibrated if the battery was disconnected or a plug connection on the instrument cluster or fuel-level sensor was removed. The values remain stored in the instrument cluster.*
- *A range on remaining fuel of less than 15 km is not displayed in the instrument cluster.*

Observe warning notes: →2015IN IN Calibrating fuel-level sensor system - section on "General warning notes"
Empty the fuel tank, e.g. see Checking quantity delivered by fuel system. →206601 Checking fuel delivery rate

1. Fill the fuel tank with **28 litres** of fuel, metered by volume.
2. Wait for a short time to allow the tank sensor to settle down to the level.
3. Connect the Porsche System Tester to the vehicle and start the System Tester. Switch on the ignition. >> Continue.
4. Select vehicle type, then go to the list of control units.
5. Select **Instrument cluster** control unit, then press >> .
6. Select the **Special functions** menu, then press >> .
7. Select the **Tank check** menu, then press >> .
8. Carry out the tank calibration; the tester gives a reading in litres, which is then synchronised to **28 litres**.
9. Check position of tank needle in instrument cluster. Tank needle in lower third.
10. Fill vehicle with fuel and check position of tank needle in instrument cluster. Wait for a few minutes. Tank needle shows full.

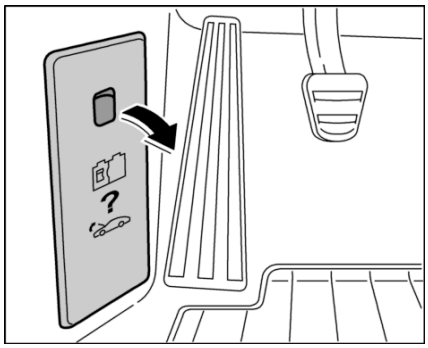
Preliminary work



Preliminary work for external power connection, jump lead starting

Jump lead starting:

1. Open the turn-lock fasteners **-A-** of the battery cover and remove cover.

External power connection:

1. Unclipping the cover for the fuse carrier.

top of page

General warning notes

Warning notes for external power connection, jump lead starting

 WARNING

Improper handling of jump leads.

- **Risk of explosion as a result of electrolytic gas.**
- **Danger of injury from short circuit.**
- **Risk of damage to the vehicle's electrical system, e.g. control modules.**
- **Risk of causticisation.**

→ Keep ignition sources away from the battery, e.g. naked flames, lit cigarettes or sparking from wire contact.

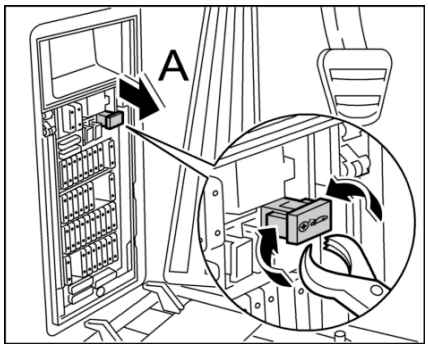
→ A frozen battery must always be thawed before connecting just leads.

→ Use only standard jump leads with a sufficiently wide cross section and fully insulated terminal clamps. Observe the cable manufacturer's specifications.

→ Route the jump leads so that they cannot become entangled in moving parts in the engine compartment.

→ No contact is allowed between the vehicles, otherwise electricity could flow as soon as the positive terminal is connected.

top of page



Information

External power connection

 **Note**

- *If the battery is flat, jump leads can be used together with the battery of another vehicle to start the car or to supply external power to the vehicle.*

Both batteries must be 12 V batteries.
The capacity (Ah) of the battery supplying the power must not be significantly lower than that of the flat battery.
The flat battery must be properly connected to the vehicle electrical system.

1. Pull out the power connection **-A-** on the fuse carrier.

2. First connect the positive cable to the battery, then to the power connection **-A-** on the fuse carrier.
3. First connect the negative cable to the negative terminal of the battery supplying the power, then to the ground point **-B-** .
4. Now the servomotors for the front and rear covers can be operated.

Jump lead starting

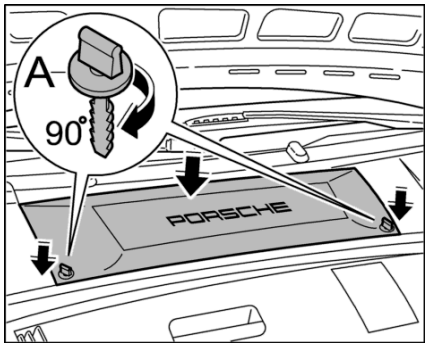
Both batteries must be 12 V batteries.
The capacity (Ah) of the battery supplying the power must not be significantly lower than that of the flat battery.
The flat battery must be properly connected to the vehicle electrical system.

1. First connect the positive cable to the positive terminal of the recipient battery, then to the positive terminal of the donor battery.
2. First connect the negative cable to the negative terminal of the donor battery, then to a suitable ground point on the recipient car.

A suitable ground point can be e.g. one specially for jump starts, a solid metal component or the engine block. The ground point should be as far away from the battery as possible.
If a suitable ground point is only present in the donor vehicle, then first connect the negative cable to the negative terminal of the recipient battery and then to the ground point of the donor vehicle.
If neither vehicle has a ground point, first connect the negative cable to the negative terminal of the donor battery, then **carefully** to the negative terminal of the recipient battery.

3. Have the engine of the vehicle supplying the power run at a higher speed.
4. Start engine. Do not spend longer than 15 seconds trying to start the vehicle with the jump leads - after 15 seconds have elapsed, wait for at least one minute.

Before disconnecting the jump leads, switch on high electrical loads in the recipient vehicle, e.g. rear window heater and interior blower, in order to reduce any voltage peaks on disconnection. The light must not be turned on.



5. Disconnect the two jump leads in reverse sequence when the engine is running.

top of page

Subsequent work

Rework on external power connection, jump lead starting

Jump lead starting:

1. Put on the battery cover and secure by means of the two turn-lock fasteners **-A-** .

External power connection:

1. Clip in the cover for the fuse carrier.

997110, 997111, 997120, 997121, 997310, 997311, 997320, 997321, 997410, 997411, 997430, 997431, 997610, 997611, 997620, 997621

WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y**

materiales.

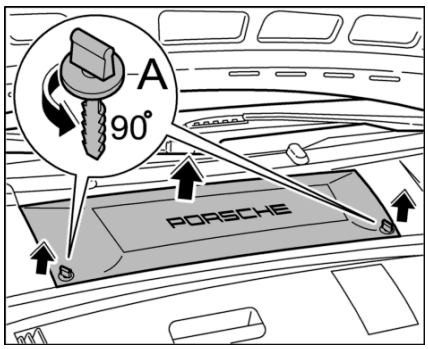
→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

27 06 IN Work instructions after disconnecting the battery - as of MY 2005

- Disconnecting and connecting the battery

top of page

Disconnecting and connecting the battery



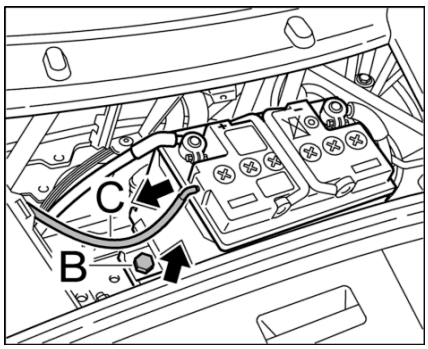
Disconnecting and connecting the battery

DANGER

Risk of explosion, injury, short circuit and damage to the generator and electronic control units!

→ Protective goggles must be worn at all times when working on the battery.
→ Do not disconnect battery with engine running.
→ Disconnect and reconnect battery with extreme caution. Risk of short circuit and explosion.
→ Do not tilt battery when removing it. Risk of acid burns as a result of emerging acid.
→ Do not rub the battery with a dry cloth. Risk of explosion as a result of static charge.
→ All loads must be switched off beforehand!
→ Never start engine without securely connected battery!
→ Do not use a boost charger to start the engine!
→ Whenever possible, use jump leads with overvoltage protection!
→ Always disconnect and cover both battery terminals before carrying out welding work on the vehicle!
→ For vehicles with auxiliary battery, also disconnect and cover both terminals of this battery before carrying out welding work!
→ Always pull off or push on the wiring harness plugs of control units or other electronic components when the ignition is switched off.

The battery is located at the front in the radiator tank.

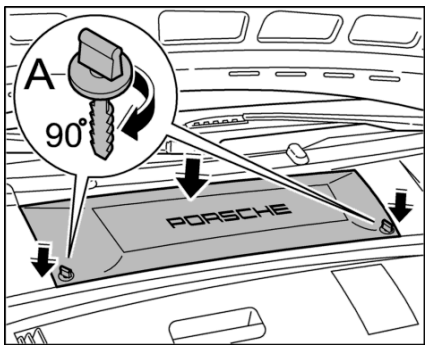


Battery cover

1. Open the turn-lock caps **-A-** of the battery cover and take off the plastic lid.

Note

For vehicles with a Vehicle Tracking System (VTS), please read the →*906323 Vehicle Tracking System (VTS)* TI!



Disconnecting battery

2. Disconnect the negative cable from the battery.
3. Route or isolate negative cable so that all contact with a ground carrier (e.g. body) is avoided.

Screwing ground strap onto battery:

4. Connect the negative cable. →**M6: 5 (3.5 ftlb.) Nm**

Battery cover

5. Position the battery cover and secure by means of the two turn-lock caps **-A-** .

Effect of disconnection or total discharge of battery on electrical systems in the vehicle and the precautions to be taken

Note

Control unit memories

Values and faults stored in the control units can be deleted if the battery is disconnected or completely discharged.

- *If possible, all fault memories should be checked and, if necessary, printed out before the battery is disconnected.*

Note

Supply voltage fault entry

The entry "supply voltage" may be stored in various control units if the battery has been completely discharged.

- *Delete the "supply voltage" entry from the control units in question.*

Note

Ready status

In some countries (presently the U.S.A. and Canada), after disconnecting the battery, it is necessary to reach the Ready status by a test drive and/or by using the Porsche System Tester DME control module menu). If in doubt about this, contact the relevant importer.

Note

2470 DME control module

With all DME systems, the engine must run for several minutes before the engine control module can relearn the idle speed and mixture adaptation values!
After disconnection of the power supply, the idle speed might change or fluctuate briefly until the throttle valve adjusting unit has been readapted.
The mixture adaptation is also lost.

After the battery is connected:

With the DME, it is necessary to carry out a learning and adaptation routine as described below:

- *Switch ignition on for 30 seconds without starting the engine.*
- *Do not actuate accelerator pedal.*

This completes the adaptation of the throttle valve adjusting unit.

Note

Tyre pressure monitoring system

When the battery is disconnected and connected, the tyre pressure is first displayed as "- - - ".

- *Once the battery has been disconnected and work is complete, the vehicle must be driven for a short distance.*

The actual pressures will then be displayed again.

Note

4560 Steering angle sensor

The steering angle sensor must be re-initialised when the battery is disconnected and connected.

- *Turn wheels to straight-ahead position.*
- *Switch ignition off and then on again twice.*
- *Start engine.*
- *From the straight-ahead position, turn steering wheel approx. 20° to the right, past the straight-ahead position.*
- *Drive the vehicle straight ahead for at least one second at a speed above 4 km/h (2.5 mph).*

The steering angle sensor segment is recognised again in this process.
Once the sensor has been successfully initialised, the fault code that is stored in the fault memory is documented using the fault deletion counter.
The fault memory erases itself automatically.
The PSM indicator light in the instrument cluster goes out.

Note

Motor for sunroof

The limit positions of the sunroof are deleted from the control unit when the battery is disconnected and connected.

- *Switch on ignition.*
- *Press the rocker switch to open until the sunroof is completely open.*
- *Press the rocker switch to close until the sunroof is completely closed.*
- *Touch the one-touch function and check if the sunroof is in the end position for "optimal noise level". If not, then repeat the process.*

The end positions of the sunroof are now stored in the control unit again.

Note

6452 Power windows

The end positions of the power windows are deleted from the control unit when the battery is disconnected and connected.

Perform the following procedure for all power windows:

- *Actuate rocker switch and fully close window once.*
- *Actuate rocker switch once more to close.*

The upper end position of the window is stored.

- *Actuate rocker switch and fully open window once.*
- *Actuate rocker switch once more to open.*

The lower end position of the window is stored.

Note

9025 Instrument cluster

Clock

The time is deleted when the power supply is disconnected.

- *Press clock control button approx. 1 second on instrument cluster. Hour display flashes.*
- *Press clock control button in the corresponding direction. Hours can be adjusted.*
- *Press the clock control button again, the minute display flashes and can be adjusted by turning the clock control button.*

Trip odometer

- *The trip counter is set to 0 when the power supply is disconnected.*

Note

Airbag control module

If the battery is disconnected for less than 100 seconds when the ignition is switched on, a CAN time fault, which makes diagnosis of the airbag control unit impossible, may be stored in the airbag control unit.

- *The fault is erased by removing the ignition key.*

Note

On-board computer

Disconnection of the vehicle battery deletes the memories for average speed and average consumption. As a result, the displayed range on remaining fuel can be markedly different or even 0. The outside temperature display loses its memory effect. In other words, the indicated outside temperature can be too high due to the heat radiated when the vehicle is hot.

Note

PCM

When the power supply is disconnected, the built-in GPS receiver loses the so-called almanac containing the satellite orbital paths.

- *Switch on PCM when there is a free panoramic view (load GPS almanac); the almanac is reloaded as soon as four satellites have been identifed.*

The date and time are deleted when the battery is disconnected. The summer-/wintertime recognition feature is maintained. The time is lost and is updated again when there is a plausible GPS reception (four satellites).

- *The date and time are also adopted once the GPS almanac has been loaded; it may be necessary to change over to summer time (daylight-saving time). This time is transferred to the instrument cluster. If the time is then manually changed by means of the instrument cluster, this time is adopted by the PCM and synchronised with GPS time.*

If the telephone car had been inserted and the telephone was ready for operation, the telephone is subsequently disabled (only if "Use last PIN" is deactivated).

- *The telephone is enabled again when the telephone PIN code is entered with the SIM telephone card inserted.*

Test drive after disconnecting battery

Note

Depending on the vehicle equipment fitted, all these work steps are carried out during the test drive.
The fault memories of all vehicle control units should be read out again after the test drive!

Effects of overvoltage on electrical and electronic systems during welding work and the precautions to be taken

ATTENTION

Risk of damage to generator and electronic control units.

→ Disconnect and cover both battery terminals before carrying out welding work on the vehicle! →270619 Removing and reinstalling battery - chapter on "Removing".

→ Risk of triggering of airbag modules! Before starting welding work, the airbag triggering unit must be disconnected from the vehicle electrical system by pulling off the connector. →695319 Removing and reinstalling airbag triggering unit - chapter on "Removing"

→ During electric arc welding (e.g. gas shielded arc welding), high currents and voltages flow; these are greater than the vehicle voltage and can lead to the damage or destruction of electric and electronic components. To keep the risk of damage as low as possible, the ground strap must be clamped as near as possible to the welding area.

→ On completion, first install the airbag triggering unit →695319 Removing and reinstalling airbag triggering unit - chapter on "Installing", then connect the battery →270619 Removing and reinstalling battery - chapter on "Installing" →270619 Removing and reinstalling battery - chapter on "Removing and reinstalling".

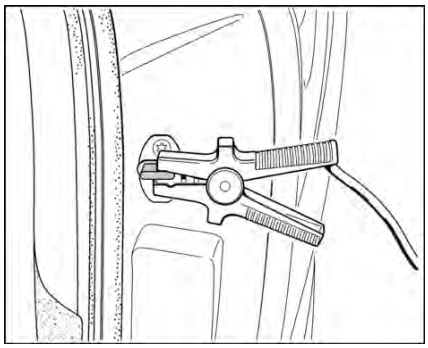
27 06 IN Electrical emergency release for lid - as of MY 2005

Electrical emergency release, front lid

Note



- *In the event of a flat battery, the release motors of both lids can be supplied with power through the power feed via a battery jump lead.*
- *An emergency power contact, coloured red for identification, is located on the fuse box in the driver's footwell.*
- *This emergency power contact, to which the positive jump lead is connected, can be pulled out of the fuse box by approx. 3 cm.*
- *The power supply is switched to the release motors by a change-over relay (mini-relay), located behind the fuse box.*
- *If the vehicle is locked (alarm protected), the alarm will sound if the jumper lead is connected.*
- *Turn off alarm system by locking and then unlocking the door lock.*

1. Unlock the vehicle at the door lock with the key.
2. Remove lid on fuse box and pull emergency power contact out of the fuse box.

Connecting the positive terminal

3. Connect the red jumper lead (positive) to this contact.

Connecting the negative terminal

4. Connect second (negative) jump lead to vehicle ground (e.g. to the lock striker on the B-pillar).
5. Connect jumper leads to an appropriate power source (e.g. separate vehicle battery).
6. Actuate the lid switch on the sill cover and open the lid.
7. Disconnect jumper leads and push the emergency power contact back in.
8. Clip cover back onto the fuse box.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo**

risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

61 01 K2 Calibrating convertible top - as of MY 2005

- Preliminary work
- General warning notes

top of page

Preliminary work

Preliminary work for calibration

1. The convertible-top compartment lid drive must be repaired (after an emergency operation).
2. The valve screw of the hydraulic pump must be closed.
3. The engine compartment lid must be closed.
4. The upper microswitches of the left and right rear side section flaps are actuated when the opened convertible top is set down. See under Input signals in the Tester: Side flap top left or side flap top right. Read out fault memory if necessary and proceed according to the guided troubleshooting.
5. The lower microswitches of the left and right rear side section flaps are actuated when the convertible top is closed. See under Input signals in the Tester: Side flap bottom left or side flap bottom right. Read out fault memory if necessary and proceed according to the guided troubleshooting.
6. The convertible top compartment lid microswitch must be unlocked when the convertible top compartment lid is open. See under Input signals in the Tester: Convertible-top compartment lid released. The microswitch must be locked when the convertible top compartment lid is closed. See under Input signals in the Tester: Convertible-top compartment lid locked. Read out fault memory if necessary and proceed according to the guided troubleshooting.

General warning notes

Warning note on calibration

 WARNING

Danger of injury and damage to property!

- **Danger of injury when working on the convertible top**

→ No tools or other items should be stored within the movement range of the convertible top.

→ The movement range of the convertible top and side window must be kept clear.

Calibrating convertible top

Calibration of the Cabriolet convertible top and the convertible top compartment lid is carried out via the diagnosis interface in the car and the PIWIS Tester. The respective potentiometer values (convertible top and convertible top compartment lid) are established during calibration. If the potentiometer values are plausible, the values are stored. The calibration values can then be calculated as a percentage by the convertible top control module from the potentiometer values.

1. Connect the Porsche System Tester to the diagnostic socket.
2. Switch on ignition.
3. Select the **Convertible top** menu item, **Drive links**, and select the**Calibrate** menu item in the command line which then appears.
4. Start calibration with the F8 key. Calibration can be started irrespective of whether the convertible top position is open or closed. The latching hook in roof frame 1 does not close during calibration.

The latching hook in roof frame 1 does not close during calibration.
Calibration is not counted as actuation. Calibration can be interrupted at any time with the F8 key on the Tester.

WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though**

the display on the screen is correct.
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

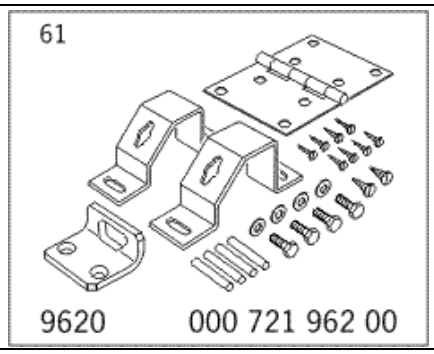
Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.



- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

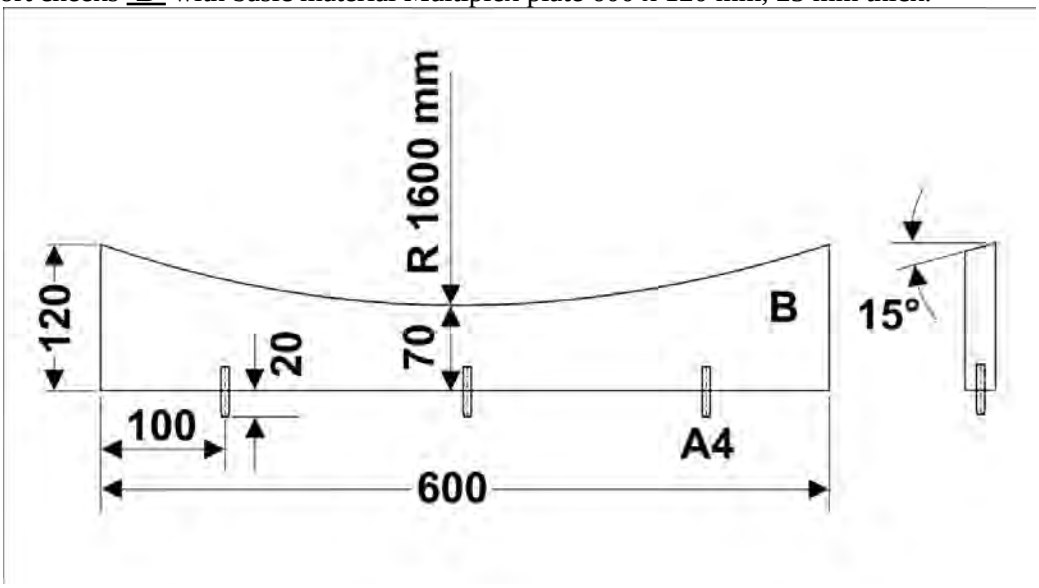
Hardtop assembly fixture

The following fixture is required for assembly work on the outer area:

Item	Designation	Explanation
G	Wall support for 911 Carrera Cabriolet hardtop	→"Special tool Gr. 3.5; Workshop Equipment Manual"

The following tools and materials are required to construct the fixture for work in the inner area:



Item	Designation	Explanation
	Drill	
	Drill bit 6 mm	
	Drill bit 3 mm	
	Sabre saw	
	Measuring tape	
B	Support cheek (2x)	Multiplex plate 25 mm thick, 600 x 120 mm
C	Swivel arm 1x)	Multiplex plate 25 mm thick, 550 x 200 mm
D	Base plate (1x)	Wood-core plywood 19 mm thick, 1500 x 900 mm
E	Horizontal banner arm (1x)	Hardwood block 30 mm thick, 650 x 50 mm
F	Base (1x)	Hardwood block 50 mm thick, 90 x 140 x 190 mm
All materials listed are commercially available.		
	Mounting component 9620	→"Special tool Gr. 2.2.2; Workshop Equipment Manual"
	Set of fittings includes:	
A1	Retaining bracket (1x)	
A2	Hinge (1x)	
A3	Base (2x)	
A4	Straight pin 6 M6 x 40 (6x)	
A5	Countersunk screw 4.5 x 20 (8x)	
A6	Countersunk screw 6 x 20 (2x)	
A7	Countersunk screw 6 x 20 with disc (4x)	
A8	Countersunk screw 6 x 60 (2x)	
A9	Countersunk screw 6 x 50 (3x)

Assembly instructions for hardtop assembly fixture

Making support cheeks

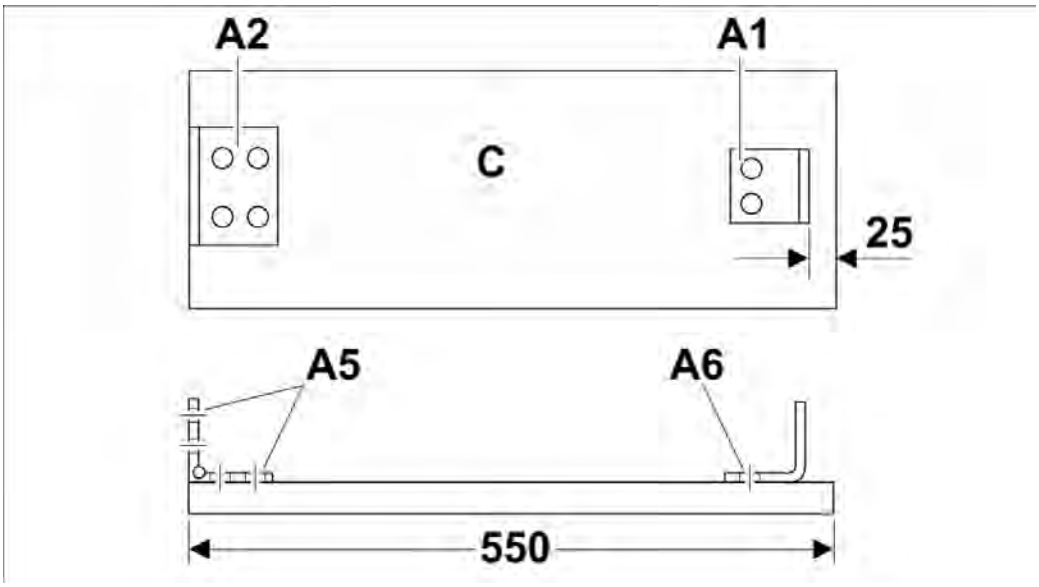
Make support cheeks **-B-** with basic material Multiplex plate 600 x 120 mm, 25 mm thick.

Making support cheeks

A4 = Straight pin 6 M6 x 40 / B = Support cheek

1. **Work procedure:**

1.1. Transfer 160 mm radius to the multiplex plates.



1.2. Saw multiplex plates along the traced radius. The foot of the sabre saw must be tilted by 15° for this purpose.

1.3. Drill four 6 mm holes in the support radii of each support cheek to provide clearance for the Tucker studs on the hardtop body. Obtain the dimensions from the hardtop body.

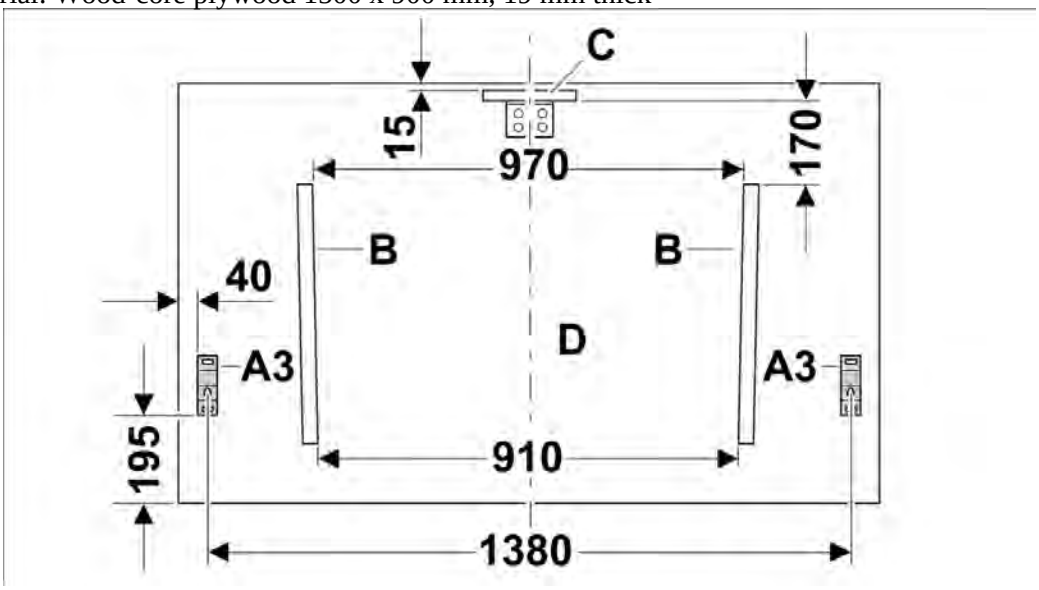
1.4. Drill three holes, 20 mm deep, 6 mm for each support cheek, to secure the support cheeks **-B-** to the base plate **-D-** with the straight pins contained in the set of fittings **-A4-** 6 m6 x 40 - attach to the support cheeks **-B-** .

Making swivel arm

Make swivel arm **-C-** with basic material Multiplex plate 550 x 200 mm, 25 mm thick.

Making swivel arm

-A1- = Retaining bracket
-A2- = Hinge
-A5- = countersunk screw 4.5 x 20
-A6- = countersunk screw 6 x 20
-C- = Swivel arm



1. **Work procedure:**

1.1. Fit retaining bracket **-A1-** with 2 countersunk screws **-A6-** following the dimensions specified on the swivel arm **-C-** .

1.2. Fit hinge **-A2-** with 4 countersunk screws **-A5-** following the dimensions specified on the swivel arm **-C-** .

Fitting swivel and support cheeks on the basic plate

Basic material: Wood-core plywood 1500 x 900 mm, 19 mm thick

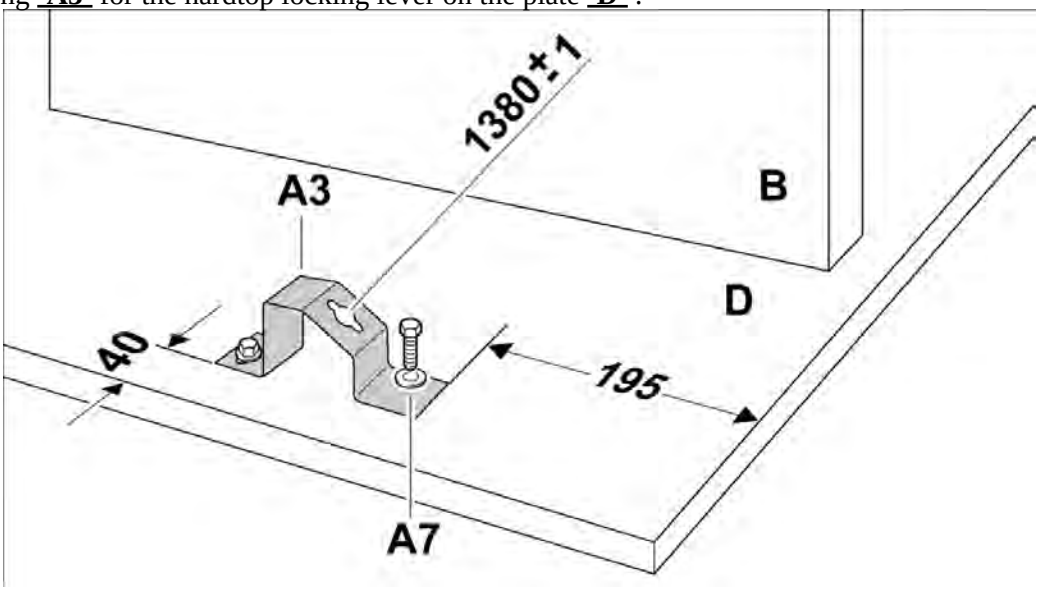
Fitting swivel and support cheeks on the basic plate

-A3- = Base
-B- = Support cheek
-C- = Swivel arm
-D- = Base plate

1. **Work procedure:**

1.1. During assembly, all parts are positioned from the centre!

1.2. Measure and mark the plate **-D-** .



1.3. Fasten completed swivel arm **-C-** on the hinge **-A2-** with four 4.5 x 20 countersunk screws in accordance with the dimensions specified on the plate **-D-** .

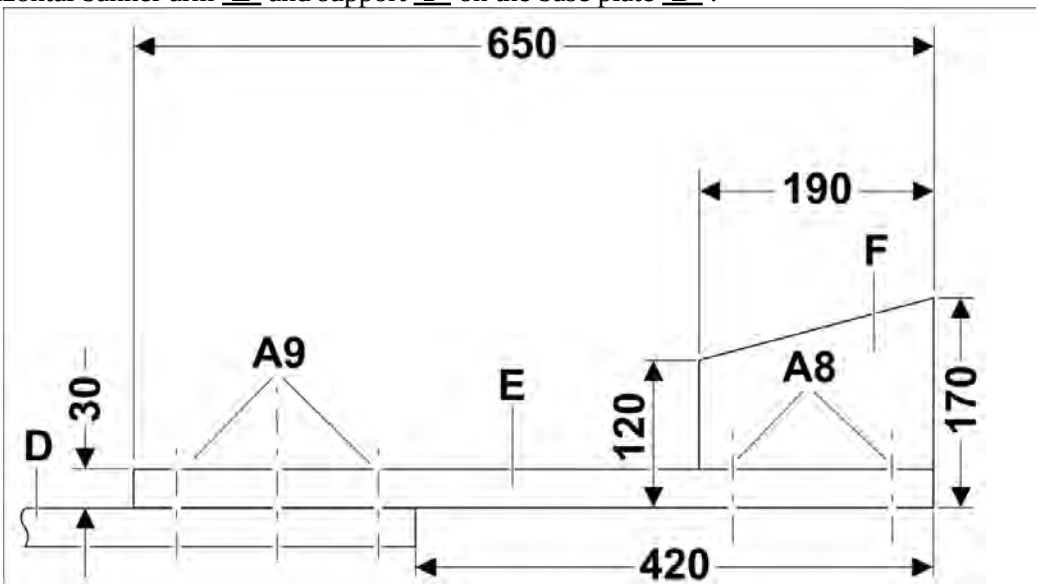
1.4. Transfer hole pattern of the support cheeks **-B-** onto the base plate **-D-** in accordance with the specified dimensions, and drill holes using a 6-mm drill bit.

1.5. Fit support cheeks **-B-** over the prefitted straight pins **-A4-** onto the plate **-D-** .

Fitting mounting points for the hardtop locking lever on the plate

Fit. mounting **-A3-** for the hardtop locking lever on the plate **-D-** .

Fitting mounting points for the hardtop locking lever on the plate



-A3- = Base
-A7- = Hexagon-head bolt 6 x 20 with disc
-B- = Support cheek
-D- = Base plate

1. **Work procedure:**

1.1. Fit mounting points **-A3-** both with hexagon-head bolts **-A7-** according to the dimensions specified on the plate **-D-** .

Fitting horizontal banner arm and support on the base plate

Fitting horizontal banner arm **-E-** and support **-F-** on the base plate **-D-** .

Fitting horizontal banner arm and support on the 'base plate

-D- = Base plate
-E- = Horizontal banner arm
-F- = Base
-A8- = Countersunk screw 6 x 60 (2x)
-A9- = Countersunk screw 6 x 50 (3x)

1. **Work procedure:**

1.1. Measure and mark the plate **-D-** .

1.2. Fit horizontal banner arm **-E-** with 3 countersunk screws **-A9-** according to the measurements on the plate **-D-** .

1.3. Fit support **-F-** with the 2 countersunk screws **-A8-** in accordance with the specified dimensions on the horizontal banner arm **-E-** .

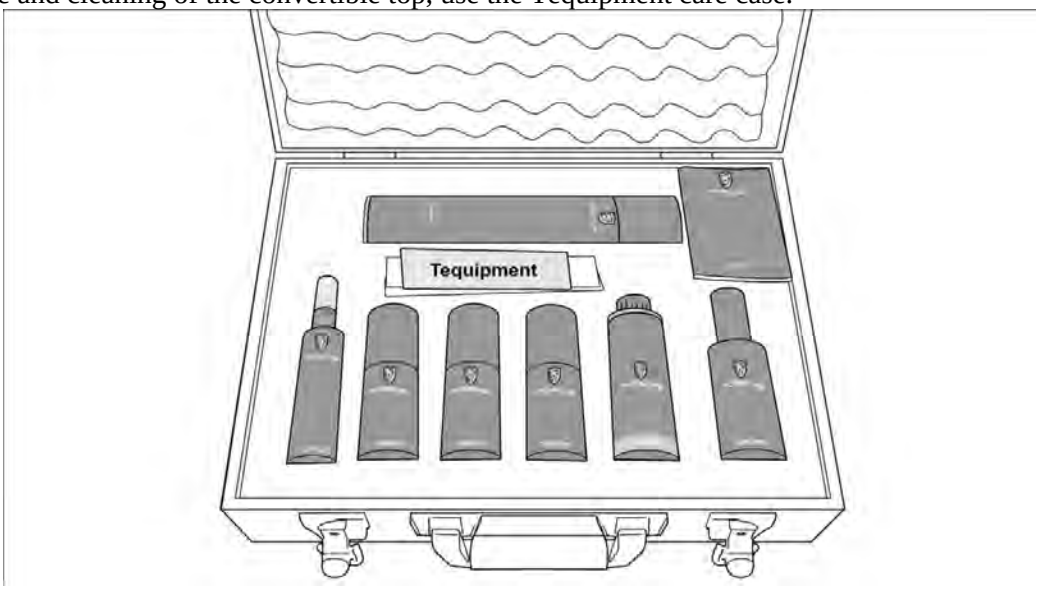
61 28 IN Care and cleaning of the convertible top - as of MY 2005

- Care and cleaning of the convertible top

top of page

Care and cleaning of the convertible top

General information



ATTENTION

The convertible top and the flexible rear window may be damaged or discoloured by improper care or handling.

→ Never remove snow and ice with sharp objects.

→ Never affix adhesive strips, stickers, etc. to the flexible rear window or cover it with plastic film.

For the care and cleaning of the convertible top, use the Tequipment care case.

Tequipment care case, Cabriolet

– The service life and the appearance of the convertible top are largely dependent on proper care and operation.

– The car should be parked in the shade whenever possible, as the fabric, rubber coating and colour can be harmed by long exposure to sun radiation.

Cleaning the convertible top

– Do not wash the convertible top every time the car is washed. It is normally sufficient to wash or rinse the convertible top with clear water. In the event of heavy soiling, moisten the convertible top with lukewarm water and Porsche Wash-Shampoo & convertible-top cleaner and rub gently with a sponge or soft brush. Then rinse off the convertible top with clear water until no traces of the Porsche Wash-Shampoo & convertible-top cleaner remain.
– Remove bird droppings immediately, because the acids they contain will cause the rubber material to swell and will make the convertible top leak.
– Only open the convertible top when it is completely dry, because otherwise damp stains and abrasions may occur which cannot be removed afterwards.
– In the case of light soiling and always before washing, brush the convertible top with a soft brush or with a strip of convertible-top covering (cut out of an old convertible-top covering) in the direction of the fabric lines of the convertible-top material.
– To prevent scratches on the flexible rear window, first remove all soiling from the exterior with plenty of water.

Care of convertible top

– Light scratches and dull areas on the flexible rear window can be removed with the Porsche Polyglas window cleaner.
– Do not apply Porsche Polyglas window cleaner to the convertible-top material.
– In the case of leaks in the convertible-top covering or seams or in the folded sections, use the Porsche convertible-top care product.
– Do not use the Porsche convertible-top care product on painted surfaces, glass or the flexible rear window; if this is used, remove the product immediately.
– Do not remove stains on the convertible top and on the flexible rear window with petrol, spot remover, benzene, paint thinner or other solvents; they attack the rubber layer between the fabrics and diminish the water-tightness and the service life of the convertible top.
– Recommendation: treat the convertible top with the Porsche convertible-top care product twice a year or before installing the hardtop (winter driving).

Care of convertible-top seals

Note

- *The convertible-top seals have an anti-friction coating or are flocked and do not require any special care.*
- *Never grease or lubricate or spray on gaskets that are flocked or have an anti-friction coating.*

– Clean soiled seals with clear water.

– It is only possible to rinse the convertible top or to use an automatic car wash after the flocked gaskets have dried.

Pre-treatment of bonding surfaces

Pre-treating adhesive flanges on vehicle windows

Note

- *The table below shows how to use cleaners, primers and activators when preparing the adhesive surface.*

Preparing the body glass for installation		
Old glass		New glass
(window removed)		with preliminary coat (durable primer)
Cut back adhesive bead ?		**Cleaner** ?
		Clean rim (ceramic layer and durable primer) ?
Activator ?		**Primer** ?
Activate adhesive bead (only necessary after idle periods > 24 h) ?		Apply primer from the adhesive kit over the durable primer on the spare part ?
Apply adhesive		
Install glass		

Pre-treating adhesive flanges on vehicle body

Note

- *The table below shows how to use cleaners, primers and activators when preparing the adhesive surface.*

Preparing the window flange for installation		
Old flange (old paint job)		New flange (new paint job)
Cut back adhesive bead ?		**Cleaner** ?
		Clean flange surface ?
Activator ?		**Primer** ?
Activate adhesive bead (only necessary after idle periods > 24 h) ?		Prime flange surface ?
Apply adhesive		
Install glass		

top of page

Handling processing device

Double cartridge press

ATTENTION

Danger of poisoning and injury when handling adhesive!

- **Danger of poisoning from breathing in vapours or from swallowing adhesive.**
- **Risk of injury due to contact with skin or eyes.**

→ Ventilate the work area well.

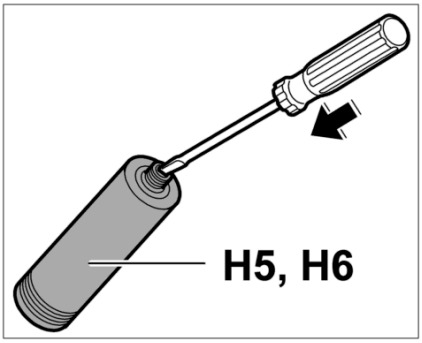
→ Do not eat, drink, or smoke while carrying out work.

→

Avoid direct contact with eyes and skin. Wear suitable protective equipment, such as protective clothing, gloves, and if necessary, a protective mask.

→ If clothing is soiled with adhesive, change clothing immediately and only use again after they have been cleaned.

→ Also observe the product-specific processing and safety instructions on the packing container and packing container imprints.

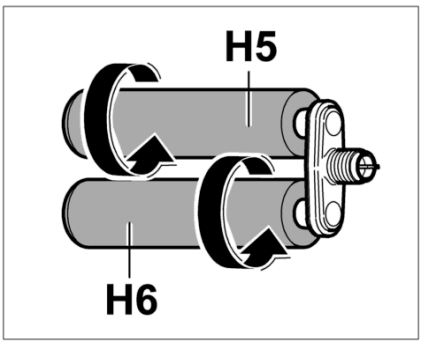


→ In case of eye contact: Rinse eyes immediately and thoroughly with lukewarm running water and consult an eye doctor.

→ In case of skin contact: Rinse contacted skin areas immediately with lukewarm running water and soap.

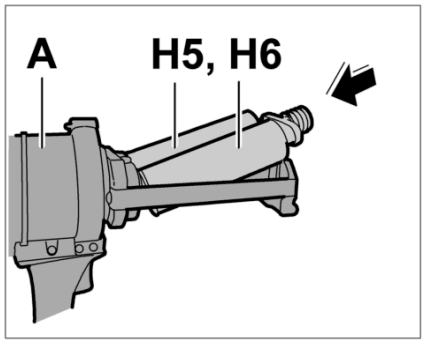
→ If adhesive is swallowed: Rinse mouth and consult a doctor.

Note



- *In addition to this manual, observe the relevant job descriptions for installing car windows!*

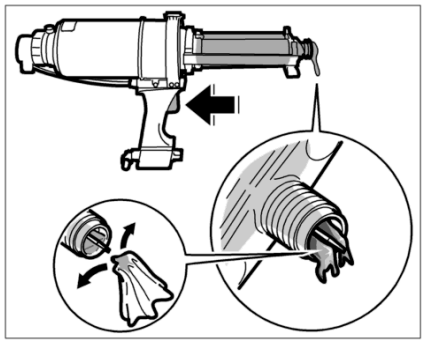
1. Preparing cartridge components A and B



1.1. Pierce the membrane in the nozzle connection of components A and B (aluminium cartridge) **-H5, H6-** with a screwdriver and extend the opening.

1.2. Remove flanged cover on end of cartridge.

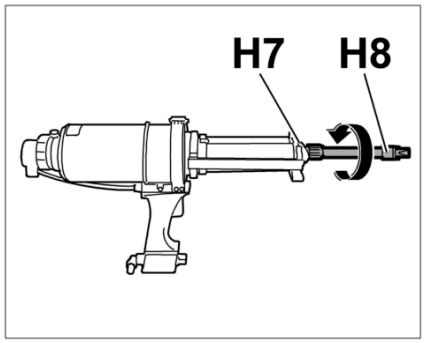
2. Screw on mixing nozzle.



2.1. Screw both cartridges **-H5, H6-** onto the mixing nozzle.

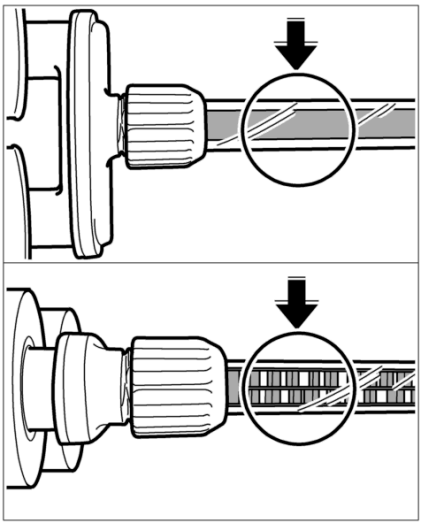
3. Placing cartridges in the double cartridge gun

3.1. Move pressure piston back fully.



3.2. Insert the double cartridges **-H5, H6-** into the bonding gun **-A-** .

4. Press out the adhesive

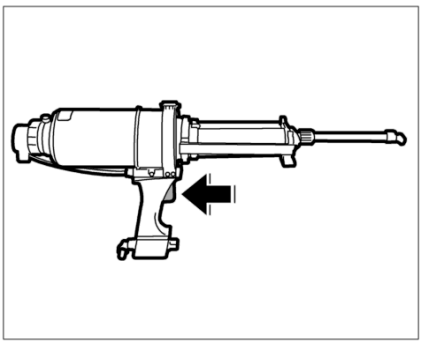


4.1. By activating the valve **-arrow-** allow the pressure piston to move out slowly until both components of the adhesive are visible at the mixing nozzle.

4.2. Wipe off the emerging adhesive.

5. Screwing on processing nozzle

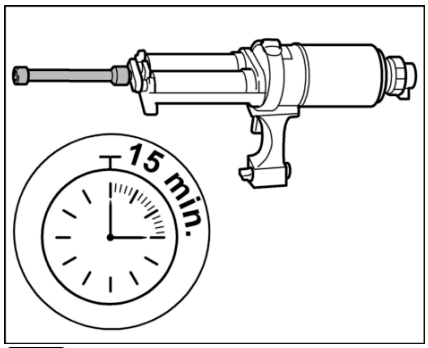
5.1. Screw processing nozzle **-H8-** onto the mixing nozzle **-H7-** .



6. Align processing nozzle

6.1. Turn the processing nozzle on the mixing nozzle until the illustrated position is reached.

7. Mixing adhesive components



7.1. By activating the valve **-arrow-** allow the pressure piston to move out slowly until the adhesive is visible in the processing pipe.

Note

In this position, when the mixing nozzle is horizontal, the closed surfaces must be visible on the processing nozzle from above and below and the mixer insert's mixing plates must be visible from the sides.

8. Affixing car window

Note

- *The bonding material has an open time of **15 min**, which means that the bonding material must be applied and the car window must be assembled within this period of time.*

- *In order to ensure that the substance is completely mixed, apply a 30 mm long adhesive bead of fresh adhesive to a piece of cardboard before processing.*

Calibrating AWS control unit

Calibrating AWS control unit

Note

Calibration applies to vehicles as of MY '06 with country equipment (USA, Canada, Mexico).

Note

Follow the instructions on the Tester.
Later versions of the software may display slightly different text or require a slightly different procedure. The instructions you receive from the tester itself take precedence over this description.

DANGER

Incorrect information for AWS control module.

- **Passenger's airbag is triggered differently.**

→ If the passenger's seat was removed and re-installed, the AWS control module must be calibrated.

→ If the seat bracket was replaced, the AWS control module must be calibrated.

→ If the AWS control module was replaced, the AWS control module must be calibrated.

WARNING

Sudden voltage interruption of the power supply to the control module.

- **Destruction of the control module.**

→ During programming, it is essential to guarantee the power supply for the Porsche System tester. It is essential to connect a battery charger with a current rating of at least 40 A to the vehicle battery.

→ Prior to disconnecting the control module, switch off the ignition and remove the ignition key.

1. Connect battery charger to the vehicle. Move passenger's seat longitudinally until flush with the seat rails and to its lowest position.
2. Connect the Porsche System Tester **PIWIS Tester 9718** to the vehicle and start the System Tester. Switch on ignition. Press >> to continue.
3. Select vehicle type.
4. Switch from the vehicle type to the list of control units >> .
5. Select **AWS** control unit and press the >> key.
6. Select the **Calibration** menu. Press >> .
7. The Tester displays several messages and instructions relating to the individual work steps until the message **Test step was completed successfully** appears. Press >> .

Note

A system test can only be performed successfully if:

- *The AWS control unit has been taught on the airbag control unit.*
- *There are no faults in the AWS and airbag control unit.*

8. Select the **System test** menu in the **AWS** control unit.
9. Follow the instructions on the Tester. Press >> and perform the test using the default sequence.

9.1. **Seat empty** - the passenger's seat must be empty. The Passenger Airbag Off indicator light in the centre console **must not** come on. To determine the status, press F7 or F8 . Then press >> .

9.2. **Child** - place the special tool **test weight P 9742** on the passenger's seat. The Passenger Airbag Off indicator light in the centre console **must** come on. To determine the status, press F7 or F8 . Then press >> .

9.3. **Adult** - get an assistant, for example, to sit on the passenger's seat. The Passenger Airbag Off indicator light in the centre console **must not** come on. To determine the status, press F7 or F8 . Then press >> .

9.4. **Seat jammed** - the passenger's seat must be empty. The seat must also be relieved of any pressure, e.g. by lifting the seat up with your hand. The Passenger Airbag Off indicator light in the centre console **must** come on. In addition to the Airbag Off indicator light, a message is displayed in the instrument cluster: **Check passenger seat adjustment**. To determine the status, press F7 or F8 . Then press >> .

10. To check the system, select the **Actual values** menu under the **AWS** control unit. Then press >> .

10.1. Select the **Weight group (0-4)** and **Gross weight calibrated** options.

10.1.1. If there is **no weight** on the passenger's seat, compare values (see table below) using the PIWIS Tester. The Passenger Airbag Off indicator light in the centre console **must not** come on.

10.1.2. Place the special tool **test weight P 9742** on the passenger's seat. The Passenger Airbag Off indicator light in the centre console **must** come on. Compare values (see table below) using the PIWIS Tester.

10.1.3. Get an assistant, for example, to sit on the passenger's seat. The Passenger Airbag Off indicator light in the centre console **must not** come on. Compare values (see table below) using the PIWIS Tester.

Test state	**Weight group (0-4)**	**Gross weight calibrated**
No weight on the passenger's seat.	0	**→Control value: 0 kg +/-1 kg**
Special tool **test weight P 9742** on passenger's seat	1	**→Control value: 6.7 kg +/-1 kg**
Get a person weighing at least 65 - 85 kg to sit on the passenger's seat.	2, 3 or 4	**→Control value: Weight of test person kg +/-1 kg**

11. Read out and erase the fault memories in the **Airbag** and **AWS** control unit, perform a test drive and then read out the fault memories again. If faults are found, determine the cause using the PIWIS Tester and correct the faults.

WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

Installation instructions for bulbs

 WARNING

Risk of injury due to high voltage to built-in Bi-Xenon headlights.

→ Switch ignition off, remove ignition key and turn off light switch.

 ATTENTION

Danger of damage to property if bulbs are used or handled incorrectly!

- **Risk of damage to bulbs and bulb housing.**

→ Switch off ignition and remove ignition key.
→ To prevent short circuits, the load in question must be switched off while changing bulbs.
→ Only bulbs specified in the bulb table may be used.
→ Bulbs with a higher wattage may damage the bulb housing.
→ New bulbs must be clean and free of grease. Therefore, never touch the bulbs with your bare hands. Use a cloth or soft paper when changing bulbs.
→ In certain states, it is compulsory to carry spare light bulbs.

Tools

Designation	Type	Number	Explanation	
press-out and unlocking tools for tab and round plug connectors of all sizes	commercially available tool	NR.155		

top of page

Optical waveguide (LWL) - MOST bus

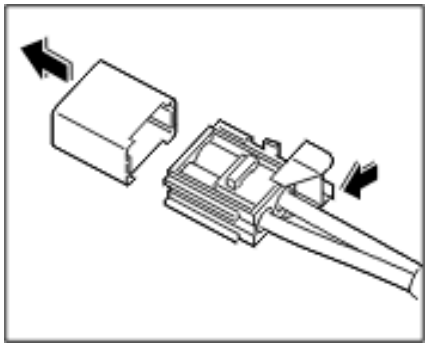
Requirements when working with LWL

The plug connections must not be plugged or separated with tools.
The LWL and the plug connections must not come into contact with fluids such as water, creeping compound, preservative, anti-freeze protection, cleaning agent. They will impair the MOST system function or cause complete system failure. Even plug connectors with plugged-in protective caps must not come into contact with the fluids listed.
If the optical contacts, plug connections, or sockets are not plugged in, or if there are no protective caps installed on the plug, contact with dust and other solid materials (lubricants) must also be avoided.
The optical contacts, plug connectors, or sockets must not be cleaned.

Storage, Packing, Transport

The LWL must not be stored outside.
The LWL must be protected from direct sunlight during storage.
The LWL must be protected from high humidity during storage. Recommended storage conditions:
Temperature - between -20 °C and +40 °C, humidity - between 40% and 60%.
The LWL must be stored in a box made of cardboard, or in a plastic bag.
Force must not be applied to the stored LWL which could deform or damage it.
The LWL must be stored with the dust boot attached.
While storing, the bending radius must not be smaller than 300 mm.
LWL with damaged surfaces must be replaced.

Installing the LWL in the vehicle



The following limit values listed must not be exceeded when installing a LWL in the vehicle.
Maximum permissible tensile load: 60 N (45 ftlb.)
Minimum bending radius after and during installation in the vehicle: 25 mm
Maximum number of torsions: 10 torsions per m
The following points must be observed when fitting the LWL and fitting wiring harnesses containing LWL:
Damaged LWL must not be installed.
Before installing the LWL or wiring harness with LWL in the vehicle, it must be checked if the dust boots have been attached properly. If this is not the case, the LWL set must not be installed.
After and during the installation of LWL in the vehicle, the bending radius must not be smaller than 25 mm.
During installation of the optical waveguide into the vehicle, the optical guide must not be pulled to set the length of the wiring harness (max. tensile load 60 N) and the optical guide must not be twisted or coiled up.
After installing the LWL in the vehicle, the twisted LWL must be straightened out.
External forces on the LWL are to be avoided when installing the LWL in the vehicle.

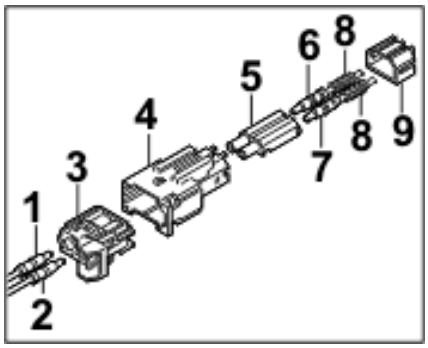
Repair

The defective LWL must be replaced. The LWL will not be repaired.
When exchanging the LWL, the optical contacts from the plug connection must be removed.

Push-on connector - dust boots

Dust boot for optical contacts:
If a LWL is stored, transported, or installed in a vehicle, then the dust boot must only be removed right before the LWL is used in the connector.
When testing the LWL, the dust boot must be put back on.
The dust boots can be removed without the use of a locking mechanism.
Do not touch the exposed contact surfaces while or after removing the dust boot, as otherwise the optical contacts could become damaged or dirty.
Dust boot for connector (wiring harness side):
If a pre-assembled wiring harness is installed, there is a dust boot on the connector for the LWL.

Dust boot for connector (wiring harness side)



The dust boots can be removed by activating the locking mechanism **-arrow-** .
When testing the LWL, the dust boot must be put back on.

Do not touch the exposed contact surfaces while or after removing the dust boot, as otherwise the optical contacts could become damaged or dirty.

Control unit plug connector (wiring harness side)

The LWL is delivered with affixed plastic contacts. These contacts are latched in the connector housing in the case of repairs. Grey and black contacts with identical mechanical dimensions are used.
Grey contacts are used in the wiring harness >> control unit junction (optical input).
Black contacts are used in the control unit >> wiring harness junction.

Push-on connector - connection points

Optical fiber (LWL) - module

In all MOST control units, at least one sending diode and one receiver diode are installed. The sending diode of a MOST device is connected to a receiver diode of a 2nd MOST device. This results in a ring where the light signal is reinforced in each control unit (in each control unit, the light signal is transformed into an electrical signal).
The graphic clarifies the cabling of the individual MOST control units which vary according to their equipment.

Optical waveguide variants

Note

Depending on the equipment I No., the installation positions of the audio components in the front luggage compartment differ.

Removing and installing optical contacts on connector side

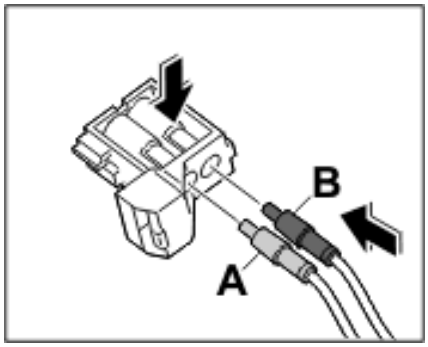
Unlocking secondary locking of the optical contacts (connector side)

1. Open the secondary locking mechanism using the **press-out and unlocking tools for tab and round plug connectors of all sizes NR.155**. Insert the tool in the opening provided and lift the locking mechanism. The locking mechanism engages in the upper position.

Unlocking primary locking of the optical contacts (connector side)

2. Position the **press-out and unlocking tools for tab and round plug connectors of all sizes NR.155** on the primary locking mechanism and lift the locking mechanism.

A - Optical contact, grey



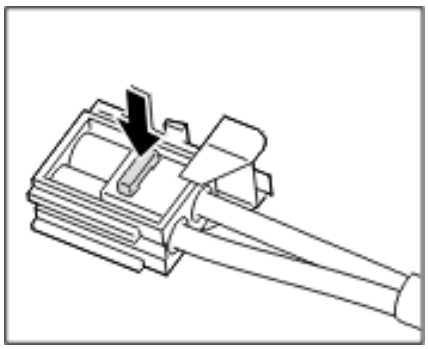
B - Optical contact, black

3. Carefully pull on the optical waveguide **-A and B-** in **-direction of arrow-** . If it is not possible to pull out the optical waveguide, check again if the secondary locking mechanism is completely released and if the primary locking mechanism is raised sufficiently.

Perform visual inspection of locking mechanisms, connector housings and contacts for possible damage, and exchange the damaged parts, if necessary.

Installing optical contacts on connector side

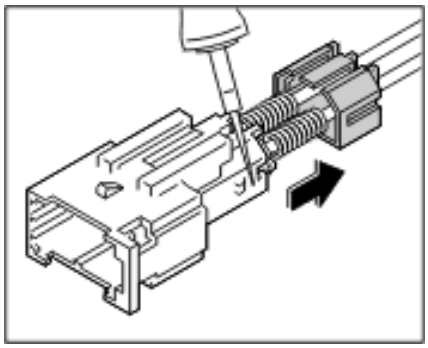
Remove the dust boot right before plugging.
Check the proper condition of the contacts.



Locking primary locking of the optical contacts (connector side)

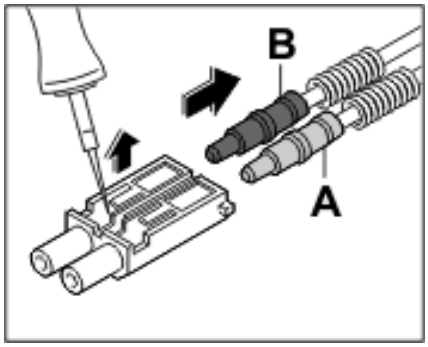
1. Insert the optical contact **-A and B-** in the connector until it engages audibly.

A - Optical contact, grey



B - Optical contact, black

Locking secondary locking of the optical contacts (connector side)



2. Lock the secondary locking and check the optical contacts for tightness.

Removing and installing optical contacts on socket side

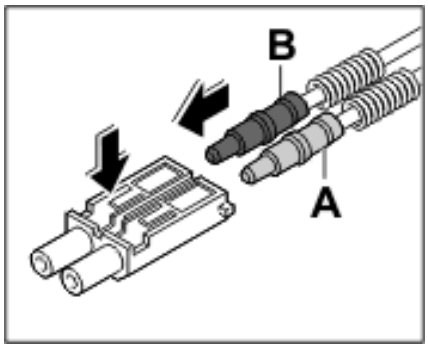
Unlocking spring cap of the optical contacts (on the socket side)

1. Release the spring cap on both sides using the **press-out and unlocking tools for tab and round plug connectors of all sizes NR.155** and remove it.
2. Remove optical waveguide module from connector.

Unlocking contact locking of the optical contacts (on the socket side)

3. Position the **press-out and unlocking tools for flat-type and round plug connectors of all sizes NR.155** for releasing the contact locking mechanism of the optical waveguide module and lift up the locking mechanism.

A - Optical contact, grey



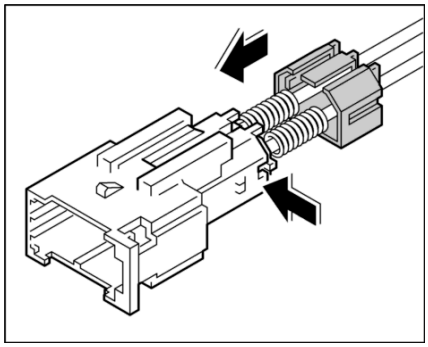
B - Optical contact, black

4. Carefully pull on the optical waveguide **-A and B-** in **-direction of arrow-** . If it is not possible to pull out the optical waveguide, check again if the locking mechanism is completely released.

Perform visual inspection of locking mechanisms, connector housings and contacts for possible damage, and exchange the damaged parts, if necessary.

Installing optical contacts on socket side

Remove the dust boot right before plugging.
Check the proper condition of the contact.
At a force of 10 N (7.5 lb.) the springs installed in the connection point will be compressed. This leads to an increase in attenuation, which could lead to system impairment and system failure. Therefore a maximum force of 10 N (7.5 lb.) may be used to pull on optical waveguides at connection points.



Locking contact locking of the optical contacts (on the socket side)

1. Insert optical contact **-B-** into the optical waveguide module until it is felt to engage, and check the optical contact is seated securely.

A - Optical contact, grey

B - Optical contact, black

2. Insert optical waveguide module into the connection point on the socket side.

Locking spring cap of the optical contacts (on the socket side)

3. Slide the spring cap on the connection point until it can be felt to engage **-arrow-** .

WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

97 97 IN Connector - General information - as of MY 2005

Tools

Designation	Type	Number	Explanation	
Repair kit for harnesses	commercially available tool	NR.155-1		
PIWIS tester	special tool	P 9718		

Connector - General information

Note

For repairing wire harnesses, the wire harnesses listed in step 1 are only offered as complete units, without exchanging individual connectors.
For repairing or replacing connectors on wire harnesses which do not have to be completely replaced, the correct procedure is listed under Step 2 and 3.

1. **Wire harnesses which are replaced only as a complete unit.**

1.1. Wire harness for door and wire harness for door trim panel →973219 Removing and installing wiring harness for door

1.2. Wire harness for centre console →972019 Removing and installing wire harness for centre console

1.3. Wire harness for number plate light →977019 Removing and installing wire harness for number plate light

1.4. Wire harness for rear spoiler →976719 Removing and installing wire harness for rear spoiler

1.5. Wire harness for glove compartment →960719 Removing and installing contact switch for glove compartment light

1.6. Wire harness for engine →975219 Removing and installing wire harness for engine

1.7. Wire harness for Tiptronic →978119 Removing and installing wire harness for Tiptronic

1.8. Wire harness for battery wiring →974519 Removing and installing wire harness for starter battery

1.9. Antenna leads →912855 Replacing the antenna leads [997110 997111 997120 997121] →912855 Replacing the antenna leads [997310 997311 997320 997321] →912855 Replacing the antenna leads [997410 997411 997430 997431] →912855 Replacing the antenna leads [997610 997611 997620 997621]

Note

Only in the cabriolet.

1.10. Wire harness for roll-over protection system →975519 Removing and installing wire harness for convertible top [997310 997311 997320 997321 997610 997611 997620 997621] →*975519 Removing and installing wire harness for convertible top [997110 997111 997120 997121 997410 997411 997430 997431]*

Note

Only in the cabriolet.

1.11. Wire harness for auxiliary stop light. →970919 Removing and installing main wiring harness

2. **Connectors contained in the Repair kit for harnesses NR.155-1 and can be replaced individually.**

WARNING

Danger of material damage by using plug-in contacts made of different materials.

- **Using plug-in contacts made of different materials can lead to oxidation of the plug-in contacts.**

→ Only use the plug-in contacts listed in the wiring diagram for the corresponding plug connection. Make sure that gold contacts are always plugged together with gold contacts, for example.

→ The wiring diagrams can be displayed with the **PIWIS tester P 9718**.

For repairing wire harnesses individual connectors are offered in a **Repair kit for harnesses NR.155-1**. In this **Repair kit for harnesses NR.155-1**, connectors are contained primarily that are installed in crash and external areas.

The **Repair kit for harnesses NR.155-1** contains detailed descriptions about removing and installing individual plug-in contacts.

3. **Connectors not contained in the Repair kit for harnesses NR.155-1.**

Connectors not contained in the **Repair kit for harnesses NR.155-1** can be ordered from the CARTOOL company.

Note

Ordering connectors refers to the model **911 Carrera as of model year 98**.

The order must contain the following specifications.

3.1. Version 1 for identifying the required connector:

3.1.1. Legible specifications of the manufacturer on the connector, e.g., complete item number, number of pins, housing colour, and whether pin or socket housing.

3.1.2. If the data mentioned in Version 1 is not legible, is incomplete, or not present, Version 2 is also possible for ordering.

3.2. Version 2 for identifying the required connector:

3.2.1. Vehicle type

3.2.2. Model year

3.2.3. PORSCHE part number from the parts catalogue

3.2.4. Which wire harness (e.g. main wire harness, wire harness for engine, etc.)

3.2.5. Specifications from the wiring diagram

a) Page number

b) Field

c) Component (for components with multiple connectors e.g. instrument cluster, please specify connector 1, 2, 3 etc.)

d) Connection point (e.g. X11, X12 etc.)

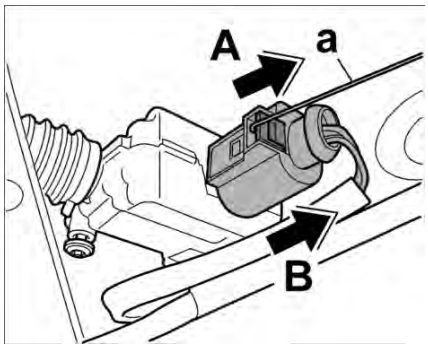
3.3. Version 3 for identifying the required connector:

3.3.1. Call up corresponding wiring diagram in **PIWIS tester P 9718**.

3.3.2. Click on the plug-in contact of the required connector with the mouse.

Note

The specifications displayed are subject to a constant updating process. For this reason, it can happen that specifications are incomplete or not available. If this is the case, use one of the other versions for ordering connectors if possible.



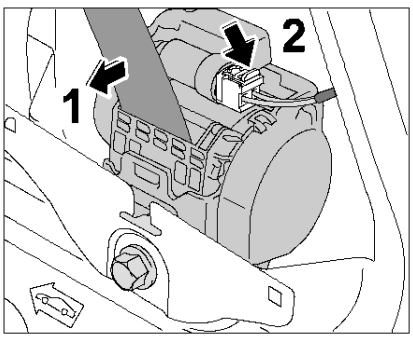
3.3.3. Note all displayed specifications for this connector and specify when ordering the connector.

3.4. If the data listed under Version 1 to Version 3 is included and complete, the CARTOOL company can identify the correct connector.

3.5. Ordering address:

CARTOOL company, GmbH
Straußenlettenstr. 15
85053 Ingolstadt
Tel. (0841) 96 500-70 (in Germany)
Tel. (0841) 96 500-80 (outside of Germany)
Fax (0841) 96 500-90

Procedure for releasing connectors that are difficult to move

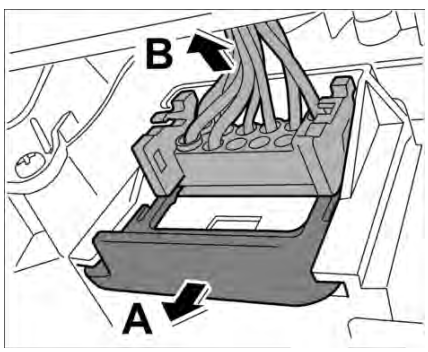


Pulling connector off lid-release motor from rear

1. Pull connector off lid-release motor.

1.1. Release connector on motor for lid-release with suitable auxiliary materials (e.g.. angled piece of wire with diameter of approx. 1mm) **-a-** **-arrow A-** and pull off **-arrow B-** .

Engage wire at the release. Pulling on the wire in direction of arrow releases the connector and can be pulled off.

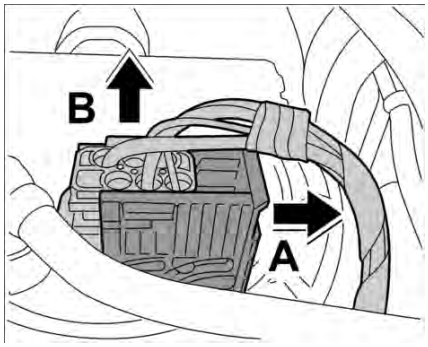


Releasing connector for seat-belt tensioner

2. Pull off connector on seat belt tensioner.

2.1. Release connector **-2-** on seat-belt tensioner with a screw driver in **-direction of arrow-** .

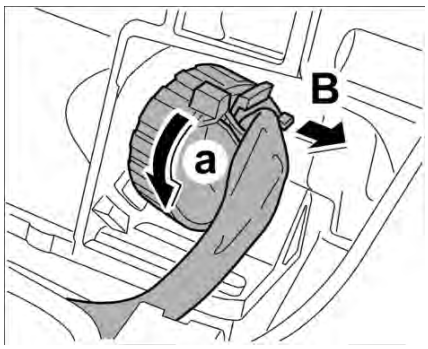
2.2. Pull off connector on seat belt tensioner.



Pulling off connector on headlight

3. Pull off connector on headlight.

3.1. Pull securing clip completely down and out **-arrow A-** .



3.2. Pull off connector on headlight **-arrow B-** .

Pulling connector off sensor for fuel level

4. Pull connector off sensor for fuel level.

4.1. Release connector completely on fuel level sensor **-arrow A-** and pull it off **-arrow B-** .

Pulling off connector on Tiptronic transmission

5. Pull off connector on Tiptronic transmission.

5.1. Release connector on Tiptronic transmission by turning anti-clockwise **-arrow a-** and remove **-arrow B-** .

03 24 00 Minor maintenance - as of MY 2005

- Minor maintenance

top of page

Minor maintenance

Note

- *The engine oil and oil filter must be changed every 10,000 km (6,000 mls) in vehicles which are operated in countries where leaded fuel is used.*
- *If the mileage for scheduled maintenance is not reached, minor maintenance must be carried out after 2, 6, 10..... years.*
- *The terms "inspect" and "check" include all necessary subsequent work such as adjustment, readjustment, corrections and replenishment. They do not include the repair, replacement or overhaul of components or assemblies.*
- *Maintenance item > Check drive belt< must always be performed 60,000 km (40,000 mls) after replacement of the drive belt. Observe the chapter on additional maintenance for this purpose.*

Minor maintenance at: 30,000, 90,000, 150,000, 210,000 km etc./ 20,000, 60,000, 100,000, 140,000 mls etc.	OK
Diagnosis system: read out fault memory →033500 On-board diagnosis .	
Change engine oil and oil filter →170155 Engine oil and oil filter change	
Vehicle underside and engine compartment: Visual inspection for leaks (oils and fluids) and abrasion (lines and hoses) Underbody panel: visual inspection for completeness, installation and damage	
Coolant hoses: check condition Radiators and air inlets: visual inspection for external contamination and blockage	

Coolant: check the level and antifreeze protection →190101 Checking cooling system	
Particle filter: replace filter element →851819 Removing and installing particle filter	
Brake system: visual inspection of the brake pads and brake discs for wear → Visual inspection: brake lines/brake pads/brake discs	
Brake hoses and lines: visual inspection for leaks, damage, routing and corrosion → Visual inspection: brake lines/brake pads/brake discs	
Drive shafts: visual inspection of the boots for leaks and damage → Running gear maintenance: axle joints/drive shafts	
Tyres: check condition and tyre pressure → Wheels and tyres/tyre pressure	
Check the door locks, lid locks and safety hooks of the front lid to ensure that they are secure and function properly → Checking lids and doors	
Vehicle lighting: check operation All headlights: check adjustment Horn: check operation → Checking the function of the vehicle's lights	
Windscreen wiper/washer system, headlight washer system: check fluids and nozzle settings; pay attention to antifreeze protection in winter months; check wiper blades → Windscreen washer/headlight cleaning system: check operation, nozzle settings	
Electrical equipment, warning and indicator lights: check function → Checking the function of electrical equipment, as well as the indicator and warning lights	
Test drive: Remote control, front seats, foot and parking brakes (also actuation travel), engine, clutch, steering, transmission, ParkAssist, cruise control, PSM switch, PASM switch, heating, air-conditioning system and instruments: check operation → Test drive	
Oils, fluids: visual inspection for leaks

 WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

03 26 00 Major maintenance - as of MY 2005

- Major maintenance

top of page

Major maintenance

Note

- *The engine oil and oil filter must be changed every 10,000 km (6,000 mls) in vehicles which are operated in countries where leaded fuel is used.*
- *If the mileage for scheduled maintenance is not reached, major maintenance must be carried out after 4, 8, 12..... years.*
- *The terms "inspect" and "check" include all necessary subsequent work such as adjustments, readjustments, corrections and replenishment. They do not include the repair, replacement or overhaul of components or assemblies.*
- *Maintenance item > Check drive belt< must always be performed 60,000 km (40,000 mls) after replacement of the drive belt. Observe the chapter on additional maintenance for this purpose.*

Major maintenance at 60,000, 120,000, 180,000, 240,000 km etc./ 40,000, 80,000, 120,000, 160,000 mls etc.	OK
Diagnostic system: read out fault memory →033500 On-board diagnosis (OBD)	
Change engine oil and oil filter →170155 Engine oil and oil filter change	
Vehicle underside and engine compartment: visual inspection for leaks (oils and fluids) and abrasion (lines and hoses) Underbody panels: visual inspection for completeness, installation and damage	
Coolant hoses: check condition Radiators and air inlets: visual inspection for external contamination and blockage Coolant: check the level and antifreeze protection →190101 Checking cooling system	
Air cleaner: replace air cleaner element →242419 Removing and installing air cleaner element	
Particle filter: replace filter element →851819 Removing and installing particle filter	
Fuel system: visual inspection for damage, routing and secure fit of line connections	

Handbrake: check the free play of the parking-brake lever →468316 Adjusting parking brake shoes	
Brake system: visual inspection of the brake pads and brake discs for wear → Visual inspection: brake lines/brake pads/brake discs	
Brake hoses and lines: visual inspection for leaks, damage, routing and corrosion → Visual inspection: brake lines/brake pads/brake discs	
Clutch: check pedal end position → Checking clutch pedal (end position)	
Steering gear: visual inspection of bellows for damage Tie rod ends: check the play and dust bellows → Running gear maintenance: steering gear - visual inspection of bellows and tie rod joints	
Axle joints: check the play and visually inspect the dust bellows for damage → Running gear maintenance: axle joints/drive shafts	
Check that the threaded connections of the running gear adjustment at the front and rear are secure	
Drive shafts: visual inspection of the boots for leaks and damage → Running gear maintenance: axle joints/drive shafts	
Exhaust system: visual inspection for leaks and damage, check mounts	
Tyres: check condition and tyre pressure → Wheels and tyres/tyre pressure	
Check the door locks, lid locks and safety hooks of the front lid to ensure that they are secure and functioning properly → Checking doors and lids	
Seat belts: check operation and condition → Checking seat belts	
Vehicle lighting: check operation All headlights: check adjustment Horn: check operation → Checking the function of the vehicle's lights	
Windscreen wiper/washer system, headlight washer system: check operation, fluid level and nozzle settings, pay attention to antifreeze protection in winter months; check wiper blades → Windscreen washer/headlight cleaning system: checking operation, nozzle settings	
Electrical equipment, warning and indicator lights: check function → Checking the function of electrical equipment, as well as the indicator and warning lights	
Test drive: Remote control, front seats, foot and parking brakes (also actuation travel), engine, clutch, steering, transmission, ParkAssist, cruise control, PSM switch, PASM switch, heating, air-conditioning system and instruments: check operation → Test drive

Reading out and erasing fault memory

Reading out and erasing fault memory

Diagnostic socket

The **PIWIS tester 9718** is connected to the vehicle via a diagnostic socket. The diagnosis socket is located inside the vehicle in the vicinity of the driver's A-pillar below the instrument panel.

1. Start the **PIWIS tester 9718** and follow the instructions on the tester.
2. Select vehicle type, press >> and start the automatic control unit search.
3. If an asterisk appears in front of the relevant control unit, read out the fault memory and follow the instructions on the tester.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

03 88 00 Additional maintenance every 180,000 km/120.000 mls or every 12 years - as of MY 2005

- Additional maintenance every 180,000 km/120.000 mls or every 12 years

top of page

Additional maintenance every 180,000 km/120.000 mls or every 12 years

Notes

Note

- *The engine oil and oil filter must be changed every 10,000 km (6,000 mls) in vehicles which are operated in countries where leaded fuel is used.*
- *Maintenance item > Check drive belt< must always be performed 60,000 km (40,000 mls) after replacement of the drive belt.*

Additional maintenance every 180,000 km/120,000 mls or every 12 years

Additional maintenance every 180,000 km/120,000 mls or every 12 years	OK
Manual transmission: change oil →340155 Changing transmission oil	

Additional maintenance every 180,000 km/120,000 mls or every 12 years

Additional maintenance every 180,000 km/120,000 mls or every 12 years	OK

Automatic transmission: change ATF and ATF filter →370255 Changing ATF →375855 Changing ATF filter	
Automatic transmission: change oil in final drive →399055 Changing oil for final drive

Country C00, C02, C05, C07, C08, C09, C10, C11, C12, C13, C14, C15, C16, C18, C19, C20, C21, C22, C23, C24, C25, C26, C27, C28, C32, C33, C34, C35, C36, C37, C38, C39, C45, C46, C98, C99

WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**

- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

10 01 19 Removing and installing engine - as of MY 2005

- Preliminary work for removing the engine
- Removing engine
- Installing engine
- Subsequent work for installation of engine

Tools

Designation	Type	Number	Explanation	
socket wrench insert	special tool	300		
mounting peg	special tool	9163/2		
retainer plate	special tool	9592		
support plate	special tool	9592/1		

support plate	special tool	9592/2		
assembly aid	special tool	9622		
test tool	special tool	9623		
3/8" extension, 16° movable	commercially available tool	NR.15		

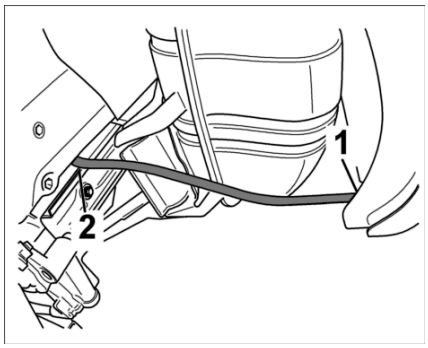
top of page

Preliminary work for removing the engine

Preparations for removing the engine

Note

- *Take care to maintain access to the screws for the diagonal struts in the vicinity of the rear jacking points.*



DANGER

Incorrect raising of the vehicle

- **Damage to person or property caused by the car falling down**

→ Raise the vehicle at the prescribed jacking points.

1. Place jacks under the vehicle at the prescribed jacking points. → Raise the vehicle.
2. Use PIWIS tester to read out error memory →*Self diagnosis*.
3. Position protective supports on the body to avoid damage.
4. Disconnect battery and cover up battery or contacts → Work instructions for disconnecting battery.
5. Remove both rear wheels. Use the specified special tool **socket wrench insert 300** to avoid damage to the wheel rims →*440520 21 Removing and installing wheel - removing*.
6. Remove rear apron → *21 Removing and installing rear apron - removing*.
7. Removing side retaining frames (heat shields), left and right → *21 Removing and installing rear bumper - removal*.

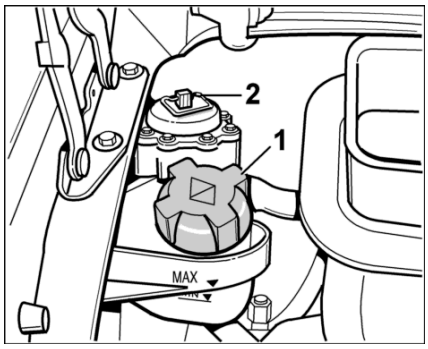
Rear spoiler support

8. Undo support holding rear spoiler to body **-2-** . Turn the support towards the brake disc.
9. Remove cover for rear and centre underbody →*5190 21 Removing and installing underside panel - removal*.

top of page

Removing engine

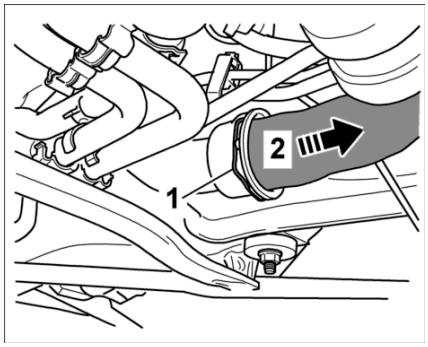
Removing engine



WARNING

Danger of injury from hot engine parts.

- **Risk of burns, damage to skin, injury to the eyes.**



→ Do not work on the engine while it is hot.

1. Remove the air cleaner housing completely →*Removing air cleaner housing*.

Reservoir cap for coolant expansion tank

2. Open reservoir cap on coolant expansion tank **-1-** , fold up bleeder valve **-2-** .

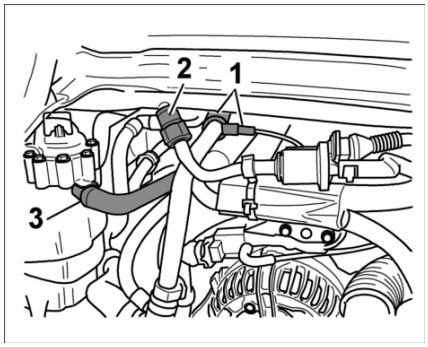
coolant feed line (Henn coupling) to engine

WARNING

Coolant is hazardous to health

- **Irration of skin**

→ Wear protective gloves and goggles



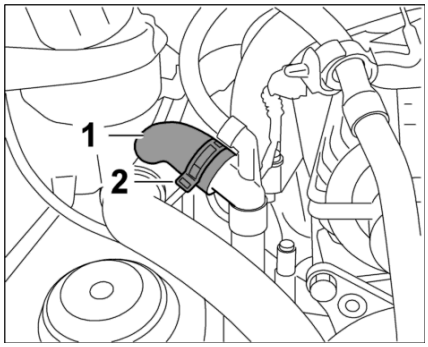
→ In case of contact with the skin or eyes, wash immediately with plenty of water!

3. Drain coolant → *AC Draining and filling coolant - filling*.

3.1. Open coolant drain plug and refit with new sealing ring →**Tightening torque: 10 (7.5 ftlb.) Nm**

3.2. Open coolant feed line (Henn coupling) to engine at underbody and reconnect.

3.3. Heating supply and return lines (open spring band clamps in direction of radiator)



Left engine compartment line connections

4. Open line connections in engine compartment.

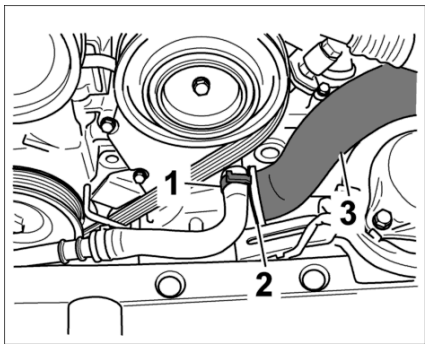
4.1. Loosen the vacuum lines for the brake booster **-1-** . For the tandem pump feed line, remove the plastic protection, push the holder forward and pull off the line. Immediately put plastic protection back in place.

4.2. Disconnect tank vent line **-2-** . In order to do this, press the lugs of the rapid-action coupling and pull off the line.

4.3. Disconnect bleeder hose from coolant expansion tank **-3-** .

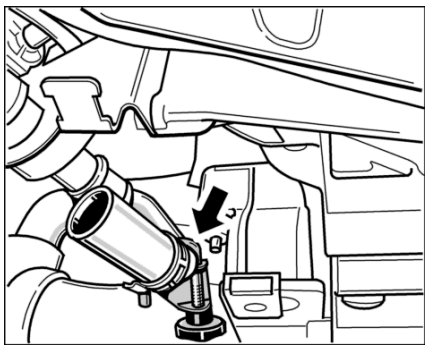
Coolant pump coolant feeder hose

Note



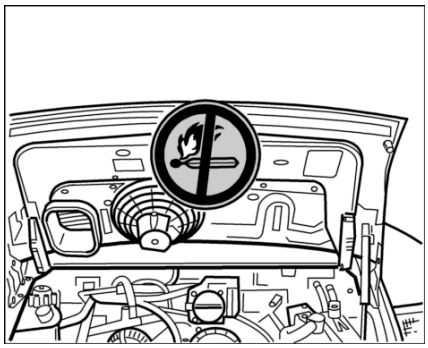
- *The spring band clamp is vulcanised on the coolant supply hose of the coolant expansion tank to the engine! The vulcanisation diminishes after the clamp has been opened and tightened several times. Therefore do not pull off as this could damage the hose.*

5. Disconnect coolant pump feeder hose **-1-** . Open spring band clamp **-2-** and pull off the hose.



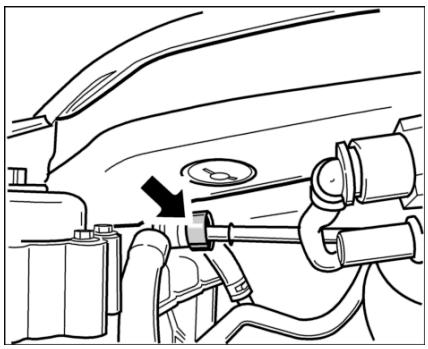
Coolant pipe feeder hose

6. Pull off hose from coolant pipe under coolant expansion tank **-1-** . In order to do this, lift the safety clip on the Henn coupling out of the lock **-Arrow-** using a screwdriver and pull out the hose. Plug the opening with a clean cloth. Put the safety clip back in place after removing the engine



Right coolant pipe hose

7. Pull off tandem pump feeder line **-1-** and right coolant pipe feeder hose **-3-** . Open and remove spring band clamp on vacuum line. After that, lift safety clip on Henn coupling out of the lock **-2-** , pull off coolant hose. Plug the opening with a clean cloth. Put the safety clip back in place after removing the engine



Coolant hose to flat-seat valve

8. In Tiptronic vehicles, pull the coolant hose to the flat-seat valve off the transmission. Clamp shut hose **-Arrow-** , open the spring band clamp and pull off the hose. Collect escaping coolant, close off hose and flat-seat valve with plugs.

Warning sign

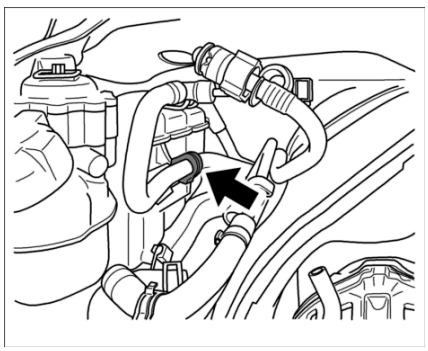
9. Before opening the fuel lines, put up or attach to vehicle a warning sign in a clearly visible position →*Warning sign* .

Fuel line rapid-action coupling

DANGER

Fuel can escape when fuel line is disconnected.

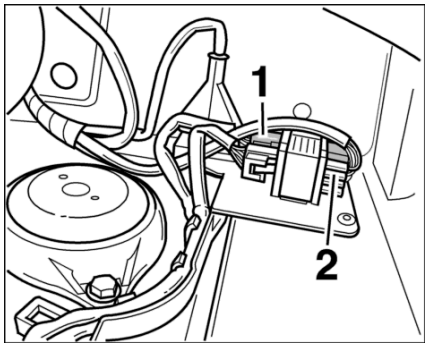
- **Risk of fatal injury!**
- **Damage to skin**



→ Do not work on fuel system if engine is hot!

→ Do not smoke, avoid fire and naked flames!

→ Wear fuel-resistant protective gloves and goggles.



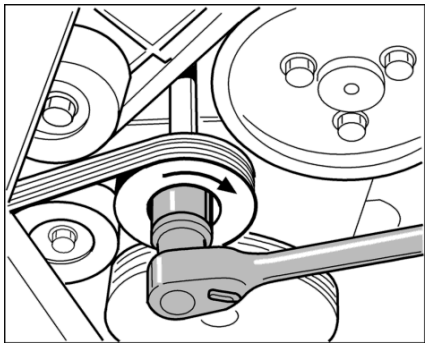
→ Attach warning sign to vehicle in a clearly visible position.

10. Open fuel supply line. Press the lugs on the rapid-action coupling and pull off the line. Collect escaping fuel with a cloth.

Holder for fuel line

11. Unclip fuel line from holder on coolant expansion tank **-Arrow-** .

Oxygen sensor connector in the engine compartment



ATTENTION

Trapping of oxygen sensor cables when lowering the engine

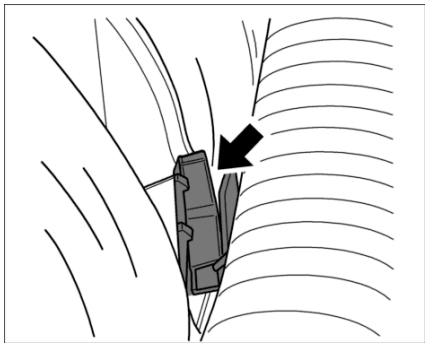
- **Material damage!**

→ place between engine and engine strut

12. Unclip the oxygen sensor plug connections **-1,2-** from the holders on the right and left in the engine compartment. Push the red lugs upward with a small screwdriver and unplug the connector. The connectors are colour-coded to prevent confusing them.

Drive belt tensioning pulley

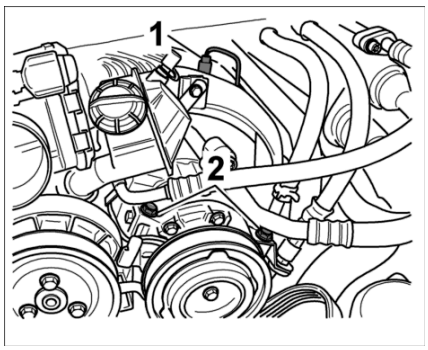
13. Loosen drive belt. Mark the running direction of the belt with a coloured pen. Slacken belt by turning the tensioning pulley (wrench size 24) clockwise **-Arrow-** , hold tightly and simultaneously take the drive belt off the deflection pulley. Carefully allow the tensioning roller to turn back into tensioning position.



Note

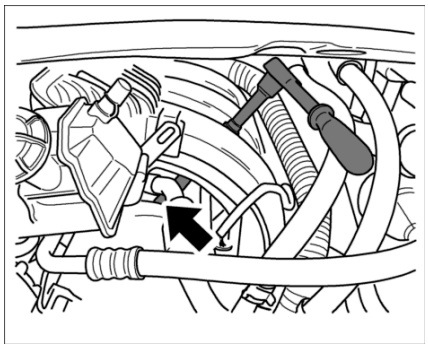
The air-conditioning lines on the compressor do not have to be disconnected in order to remove engine/transmission unit.

Note



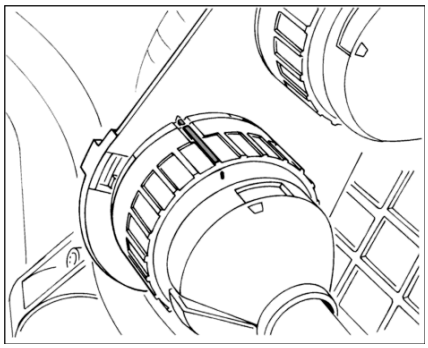
- *After removal, place the air-conditioning compressor on a suitable protective support (e.g. foam, neoprene, etc.).*

14. Remove air-conditioning compressor *→873409 11 Detaching and fastening compressor - detaching*.



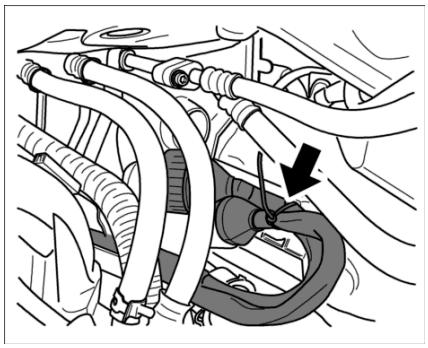
Air-conditioning compressor ground line

15. Disconnect ground connector from intake distributor side 4-6 **-Arrow-** .



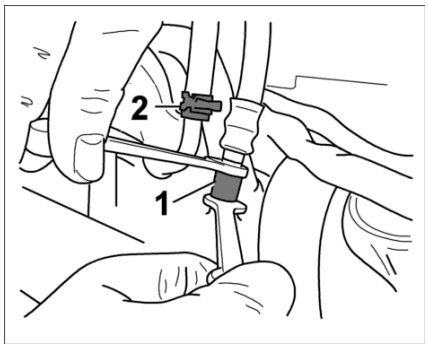
Rear fastening of the air-conditioing compressor

16. Pull the engine comaprtment temperature sensor out of the intake distributor 4-6 together with the rubber sleeve **-1-** and unscrew the rear fastening screws **-2-** of the air-conditioing compressor.



Front fastening screw of the air-conditioning compressor

17. Unscrew the front fastening screw **-Arrow-** of the air-conditioning compressor. Due to the restricted accessibility, the use of a **3/8" extension, 16° movable NR.15** with a long Torx E10 socket wrench is recommended. To lift out the air-conditioning compressor, the screw must be pulled upwards and held in position.
18. Remove the holder for the servo lines, lift out the air-conditioning compressor with the connected lines and place on its side on a protective support. Secure additionally with a tie-wrap.



Engine wiring harness round connectors

19. Disconnect engine wiring harness (2 round connectors with bayonet locks) from the plug connections in the right of the engine compartment. In order to do this, open the bayonet locks by turning them anti-clockwise.

Engine wiring harness fastening

20. Open tie-wrap **-Arrow-** on engine wiring harness cable guide and lay wiring harness on engine.

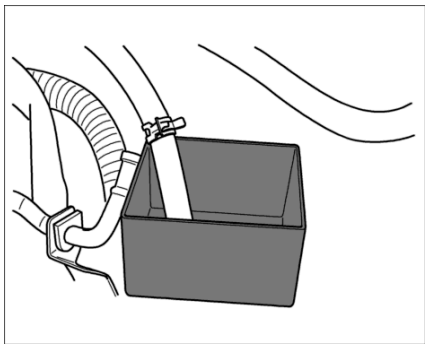
Servo lines in engine compartment

WARNING

Danger of injury and damage to material through Pentosin

- **Irritation and damage to skin**
- **Damage to hoses and wiring**

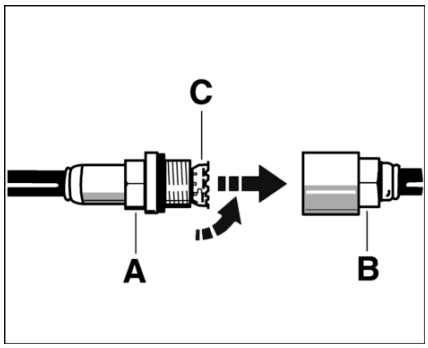
→ Wear protective gloves and goggles



→ If the eyes or skin come into contact with the fluid, wash immediately with water!

→ Collect escaping Pentosin

→ Use caps to protect the wiring against soiling and damage!

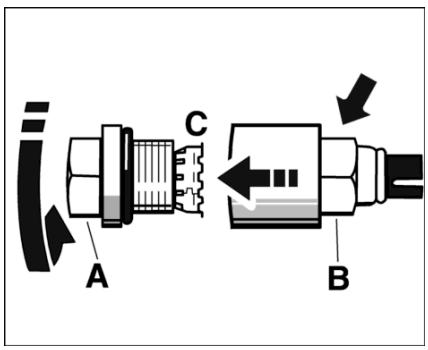


→ Immediately clean hoses and wiring thoroughly

21. Open power steering pressure pipe and return line. Loosen screws on pressure line (counter) **-1-** . Open spring band clamp on return line (hose).

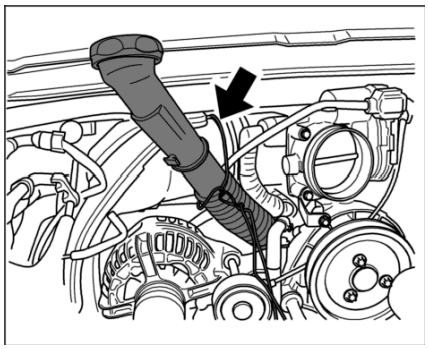
Collecting the Pentosin.

22. Pull off return hose and open pressure pipe. Collect escaping Pentosin in a small container and then close off the return line again.



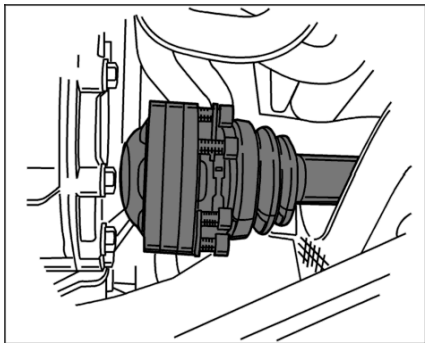
Removing pressure pipe holder

Note



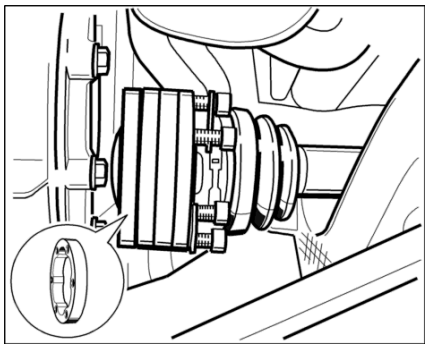
- *If the holder on the servo line's plug-in coupling needs to be replaced, the special tool **assembly aid 9622** is already contained in the parts set.*

23. Loosen pressure pipe nipple **-A-** on the pipe. Tilt holder on one side **-C, Arrow-** and simultaneously pull to disengage. Detach nipple from the pipe and remove the old O-ring. Close off line.



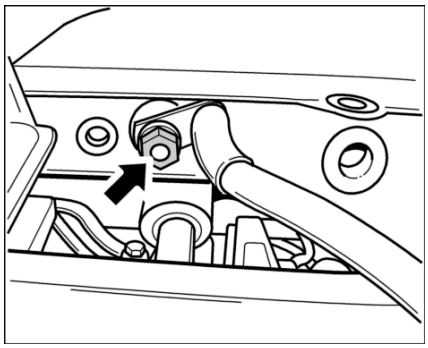
Servo line plug-in coupling

24. Place holder **-C-** into threaded part **-A-** and, if necessary, fasten using **assembly aid 9622**. Screw threaded part with new O-ring into the screw coupling **-B-** and tighten. Always counter when tightening.
→**Tightening torque: 30 (22 ftlb.) Nm**



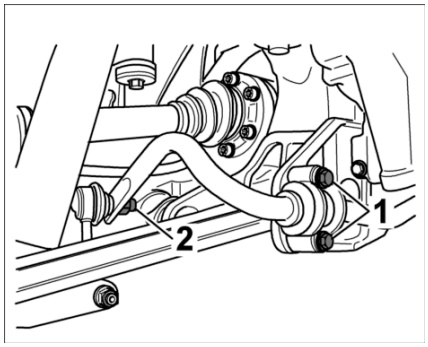
Tying up oil filler neck

25. Tie up oil filler neck with welding wire, string or tie-wrap.



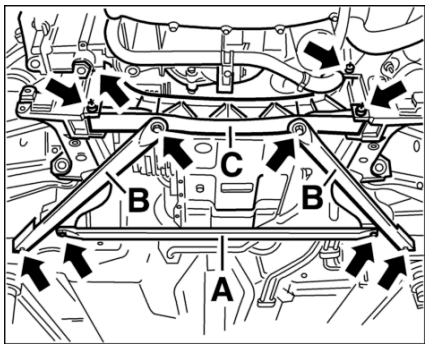
Manual transmission drive shaft

26. Release drive shafts from transmission (a second person should actuate the brake pedal to hold it). Slide suitable protection (e.g. an open plastic pipe, an old coolant hose with a diameter of about 30 mm) over the shaft in the area of the rear axle or place foam padding underneath it *→422120 12 Removing and installing drive shaft - removing.*



Spacer ring on Tiptronic drive shaft

27. In Tiptronic vehicles, an aluminium spacer ring is installed between the drive shaft and the transmission flange. These rings must be removed.

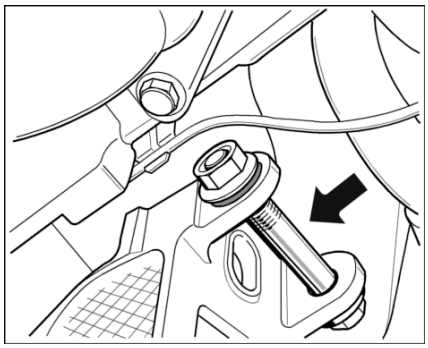


Engine ground strap

28. Disconnect the ground strap on the underside between the engine and the body. Unscrew one M8 hexagon nut **-Arrow-** , remove ground strap from threaded pin.

Rear fastening of the stabiliser

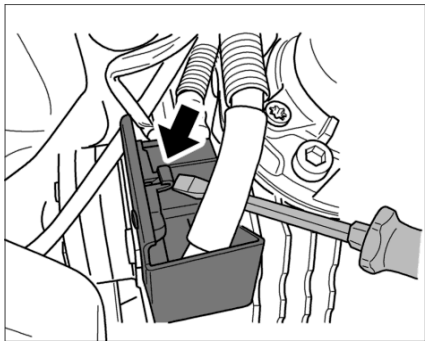
29. Remove the rear stabiliser. Unscrew two M8x40 hexagon-head bolts **-1-** on the left and right. Remove the M10 hexagon nuts on the connecting rod while holding the internal Torx **-2-** to counter. Remove stabiliser *→429019 21 Removing and installing stabiliser - removing.*



Cross member with accessories

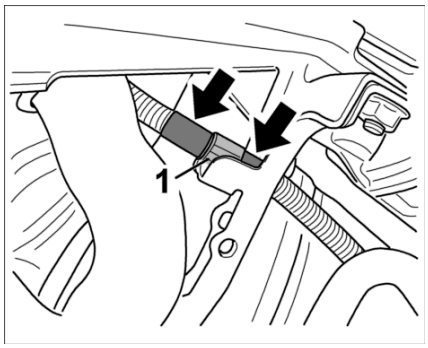
30. Remove the front transverse strut, both the diagonal braces and the rear cross member.

30.1. Front transverse strut **-A-** : unscrew two M10x40 hexagon-head bolts .



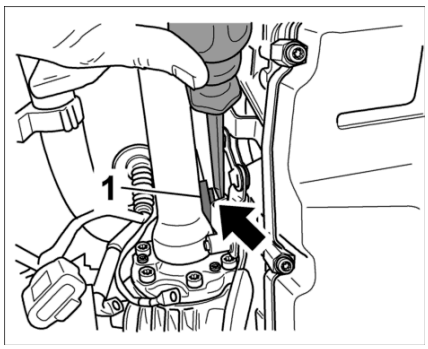
30.2. Diagonal braces **-B-** : Unscrew two M12x30 hexagon-head bolts on the rear cross member, two M10x40 hexagon-head bolts at the front and two M10 hexagon nuts on the rubber mounts.

30.3. Rear cross member, lower fastening **-C-** : unscrew two M12 hexagon nuts while holding the M12x80 hexagon-head bolts to counter, pull both screws out of drillings.



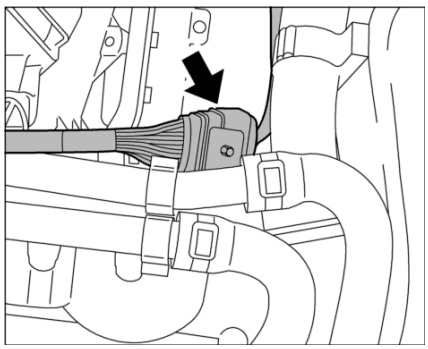
Top fastening of rear cross member

31. Rear cross member, top fastening: Loosen (do not remove) two M12 hexagon nuts (long slots on cross member), take off cross member downwards.



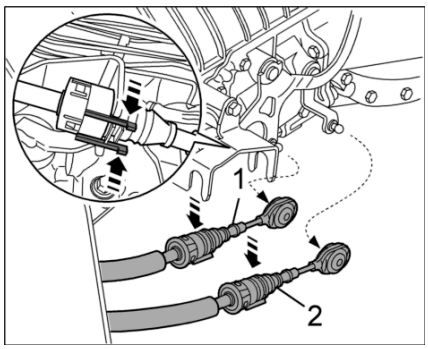
B-Plus box on Tiptronic transmission

32. Open B-Plus box on transmission **-Arrow-** , unscrew hexagon nut and disconnect the cables.



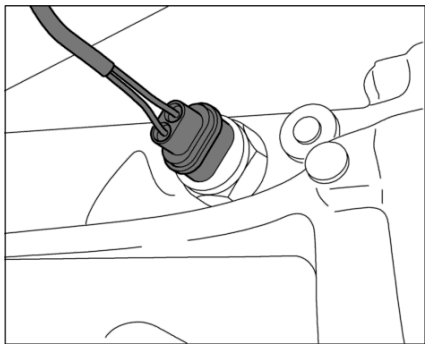
Manual transmission B-Plus line

33. Manual transmission: Unclip B-Plus line from shift console **-1-** and pull through in direction of travel.



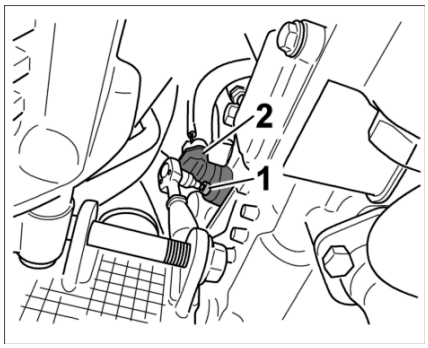
Connection of Tiptronic selector cable

34. Tiptronic transmission: Detach selector cable. Lever out selector cable end piece **-1-** at the ball head of the selector lever **-Arrow-** using a screwdriver.



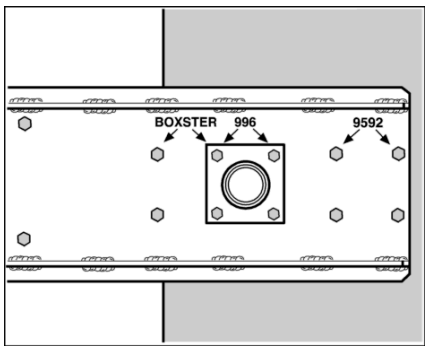
Tiptronic cable plug

35. Unclip Tiptronic transmission cable plug and then disconnect plug connection.



Shift cable connection of manual transmission

36. Manual transmission: detach shift cables from the support bracket. Lever off the end pieces from the ball heads of the external shift mechanism. Press the retaining clips together and pull the cable sleeves out of the support bracket.

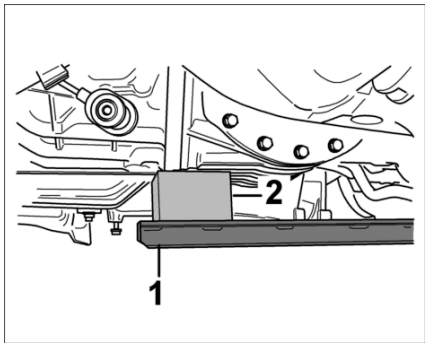


Cable plug for reverse gear switch of manual transmission

37. Manual transmission: disconnect cable plug for reverse gear switch and unclip from cable guide.

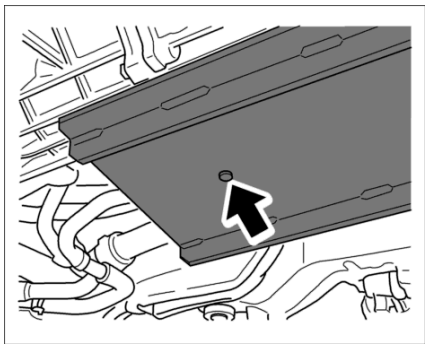
Hall sender cylinder side 4-6

38. Remove the hall sender from cylinder bank 4-6. Unscrew one M6 hexagon socket head bolt (micro-encapsulated) **-1-** pull hall sender **-2-** out of the drilling and hang to one side.
39. Attach special tool **retainer plate 9592** to engine.



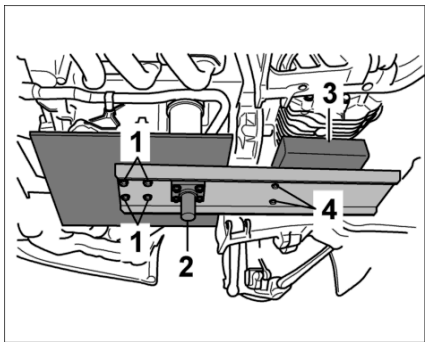
Support plate 9592/1 with adapter 9163/2 on retainer plate

40. Screw special tool **support plate 9592/1** to retainer plate in position **-9592-** using four M8x20 hexagon bolts.



40.1. Screw special tool **mounting peg 9163/2** to the support plate in the marked position **-996-** using four M8x25 hexagon bolts.

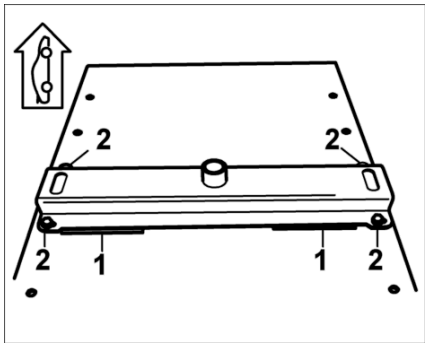
41. Tiptronic vehicles: Attach special tool **support plate 9592/2** to the **support plate 9592/1** using three fastening screws.



Support for manual transmission

42. Manual transmission: to support the manual transmission, attach scantling (approx. 6.5 cm) **-2-** to **support plate 9592/1** **-1-** using a wooden bolt.

Scantling bolting



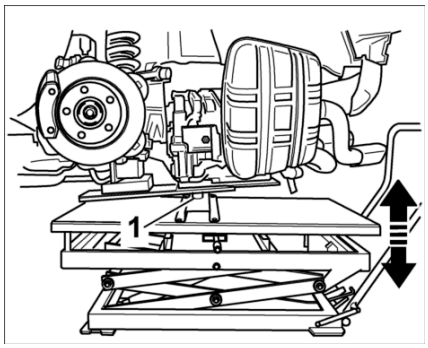
43. Attachment of scantling **-Arrow-** to support plate 9592/1

Engine retainer plate fully attached to engine (Tiptronic).

44. Engine retainer plate fully attached to engine.

    - 1 - support plate on retainer plate: position 9592
    - 2 - mounting plate 9163/2 on retainer plate: position 996
    - 3 - support plate 9592/2 for Tiptronic transmission
    - 4 - fastening for support plate 9592/2

Mounting plate on Master Gear



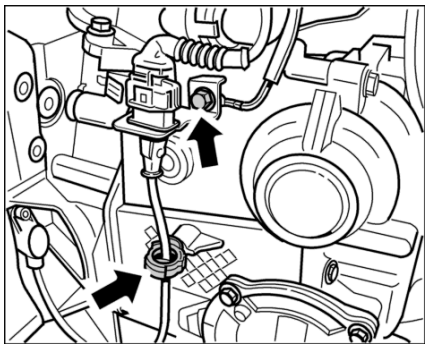
45. Fasten mounting plate for sports cars **-2-** to the Master Gear unit lifting platform (see figure) using four screws and nuts. To counter the tilt of the engine within the vehicle, the plate must be raised by 6 mm on one side in the opposite direction to the direction of travel. This can be achieved for example by using two sheet steel panels **-1-** or thick washers for the rear screws.

see Workshop Equipment Manual gr. 3.0.13 Unit lifting platform (+ sports cars mounting accessory)

Transmission support

46. Remove the transmission support. Unscrew four M10 hexagon nuts and two M10x55 hexagon-head bolts and remove the transmission support.
47. Undo the screw connection of the transmission bracket. Loosen two M10 hexagon-collar nuts on the transmission bracket (do not unscrew completely!)

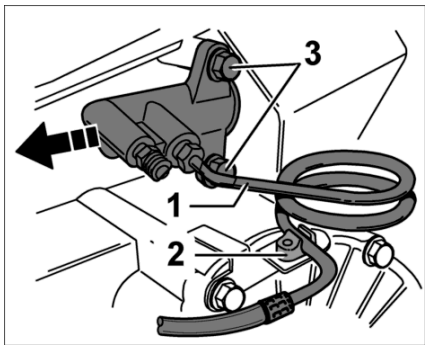
Unit lifting platform engine mounting



48. Position unit lifting platform under the vehicle and position the take-up bore of the mounting peg **-1-** with a slight degree of pre-tension.
49. Unscrew two M10 hexagon-collar nuts from the transmission bracket.
50. Loosen two M12 hexagon-collar nuts on the engine carrier (wrench size 18) and unscrew.

ATTENTION

Material damage when lowering engine



→ Enlist assistance of second and, if necessary, third person

51. Slowly lower the engine/transmission unit about halfway with the unit lifting platform.

Pulse sender holder and connector

52. Remove wire retainer and sheetmetal bracket for the plug connection of the pulse sender. Unscrew one M6x12 hexagon-head bolt, unclip cable from the wire retainer and unscrew it. Put plug connection with cable to one side.

Clutch slave cylinder

53. Manual transmission: remove clutch slave cylinder →303019 Removing and installing clutch slave cylinder - removing. Unclip line **-2-** , unscrew two fastening screws **-3-** and remove cylinder.

ATTENTION

Material damage when lowering engine

→ Enlist assistance of second and, if necessary, third person

Note

- *If the vehicle is placed on its wheels or moved in the workshop, the rear cross member must be refitted under all circumstances to maintain the structural strength.*

54. Completely lower the engine/transmission unit using the unit lifting platform.

top of page

Installing engine

Installing engine

Note

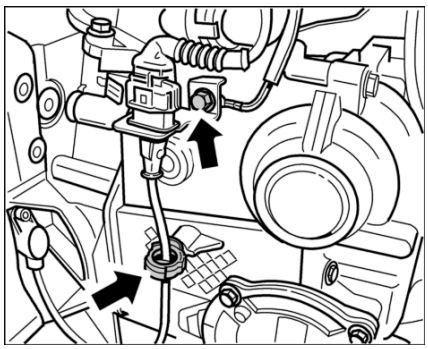
- *The engine/transmission unit is installed in the reverse order of its removal. The following work steps are specially repeated here to avoid faulty installation or damage.*

Note

- *The ground cable on the holder of the plug connection of the impulse sender must always also be screwed on !*

Coolant pipe feeder hose

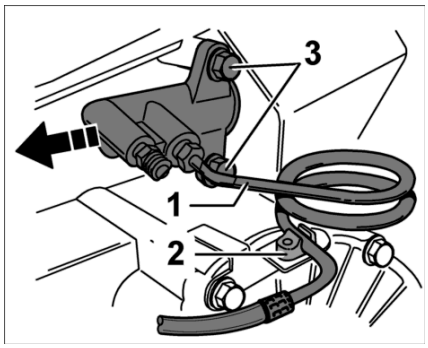
1. Attach safety clip of **-arrow-** Henn coupling for coolant hose to coolant expansion tank.



ATTENTION

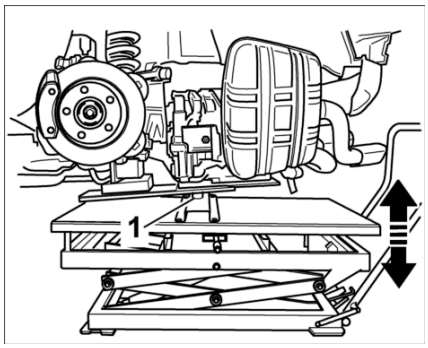
Risk of damage when inserting the engine/transmission unit into the vehicle

- **Material damage!**



→ Enlist assistance of second and, if necessary, third person

2. Lift engine/transmission unit about half the run-in of the engine using the unit lifting platform.



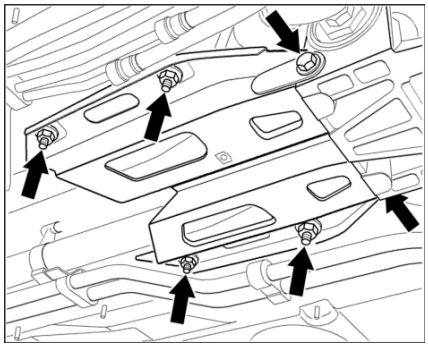
Pulse sender holder and connector

3. Fit sheetmetal holder for the plug connection of the pulse sender and the plastic wire retainer. Position and tighten one M6x12 hexagon-head bolt →**Tightening torque: 7.5 ftlb.** . Screw in wire retainer and clip in cable.

Clutch slave cylinder

4. Manual transmission: install clutch slave cylinder →303019 Removing and installing clutch slave cylinder - installing. Insert cylinder and push in. Position both screws by hand and tighten. Clip line into holder. → **Tightening torque: 17 ftlb.**

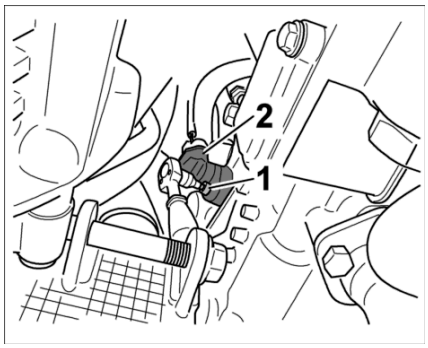
Unit lifting platform engine mounting



ATTENTION

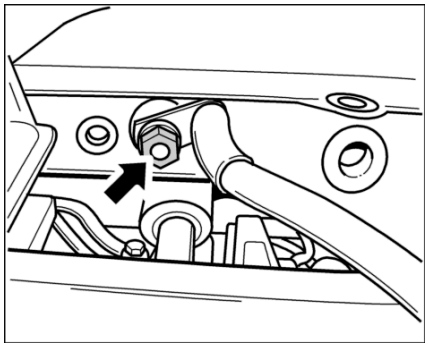
Risk of damage when inserting the engine/transmission unit into the vehicle

- **Material damage!**



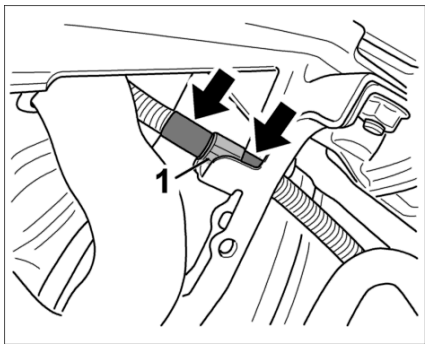
→ Enlist assistance of second and, if necessary, third person

5. Lift engine/transmission unit to installation position and tighten the collar nuts of the engine and transmission mounts. →**Tightening torque: 63 ftlb.** →**Tightening torque: 48 ftlb.**



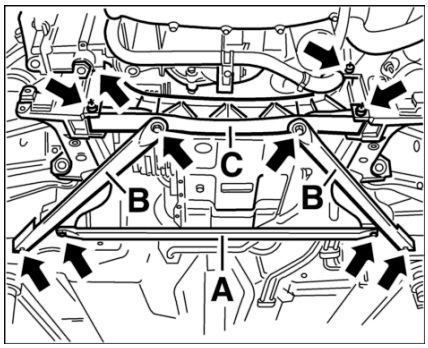
Transmission support

6. Fit transmission support. →**Tightening torque: 48 ftlb.**
7. Enlisting the assistance of a second person, completely detach the engine retainer plate.



Hall sender cylinder side 4-6

8. Install the hall sender in cylinder bank 4-6. Insert hall sender and fasten using a new M6 hexagon socket head bolt (micro-encapsulated) **-1-** . →**Tightening torque: 7.5 ftlb.**



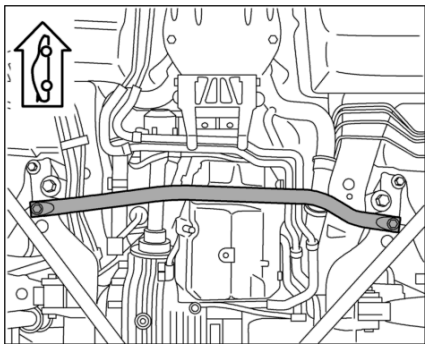
Engine ground strap

9. Attach engine ground cable to body. →**Tightening torque: 17 ftlb.**
10. Fasten drive shafts to transmission flange. In Tiptronic vehicles, insert the spacer rings. → **Tightening torque: 60 ftlb.**
11. Attach B-Plus line to transmission. Connect lines to B-Plus box and fasten using collar nuts. → **Tightening torque: 17 ftlb.**

Manual transmission B-Plus line

12. Manual transmission: clip the B-Plus lines into the cable guide on the transmission bracket between the yellow markings **-arrows-** .
13. Connect and clip in cable plug of reversing switch (manual transmission)/connector for Tiptronic transmission.

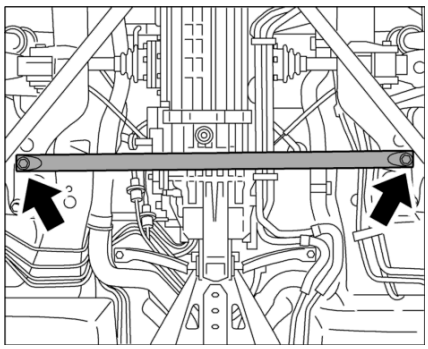
Cross member with accessories



14. Install chassis components:

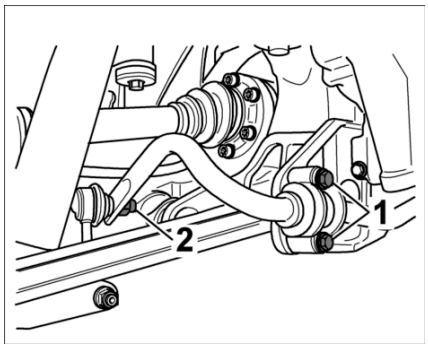
14.1. Rear cross member: M12 hexagon-collar nuts →**Tightening torque: 74 ftlb.**

14.2. Diagonal braces on rear cross member: hexagon-head bolt →**Tightening torque: 74 ftlb.**



14.3. Diagonal brace on rear-axle support: collar nut →**Tightening torque: 48 ftlb.**

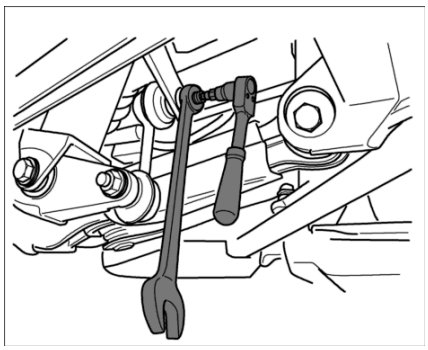
14.4. Diagonal brace to body: hexagon-head bolt →**Tightening torque: 48 ftlb.**



Transverse strut, Tiptronic

15. Front transverse strut, Tiptronic transmission: hexagon-head bolt →**Tightening torque: 48 ftlb.**

Transverse strut, manual transmission

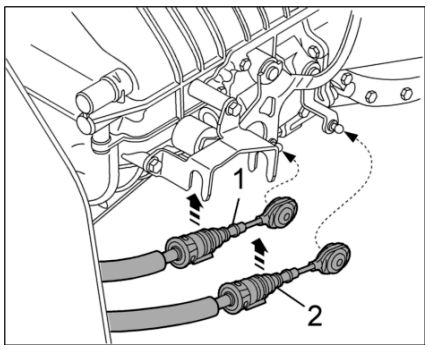


16. Transverse strut, manual transmission: hexagon-head bolt →**Tightening torque: 48 ftlb.**

Rear fastening of the stabiliser

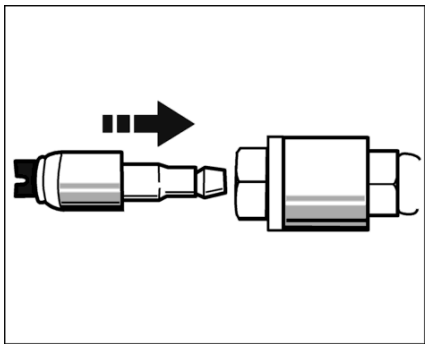
17. Installing rear stabiliser *→429019 23 Removing and installing rear stabiliser - installing*.

17.1. Engage stabiliser in connecting rod and then fasten to rear-axle support using two hexagonal-head bolts respectively. →**Tightening torque: 17 ftlb.**



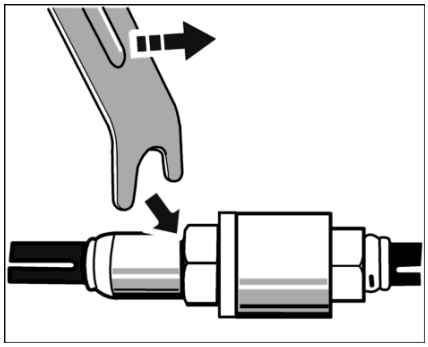
Stabiliser to connecting rod

18. Position new M10 collar nuts on the connections to the connecting rod. Make sure to counter with a Torx socket wrench insert when tightening *→Stabiliser to connecting rod* . →**Tightening torque initial tightening: 37 ftlb.**



18.1. Loosen collar nuts and tighten them again. →**Tightening torque final tightening: 37 ftlb.**

19. Install Tiptronic selector cable →371519 Removing and installing selector lever cable - installing.



Shift cables for manual transmission

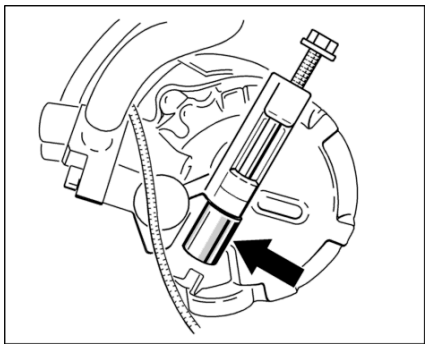
20. Install shift cables for manual transmission →341219 Removing and installing shift lever cable - installing.

Connecting servo pressure pipe

21. Connect servo pressure pipe. Push plug into the plug-in coupling in a straight line. The plug must audibly engage in the holder.

Test tool 9623

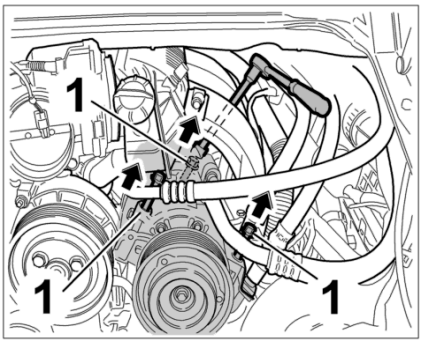
Note



- *The servo line plug-in coupling is designed so that there is an axial play of approx. 1 mm in the coupling.*

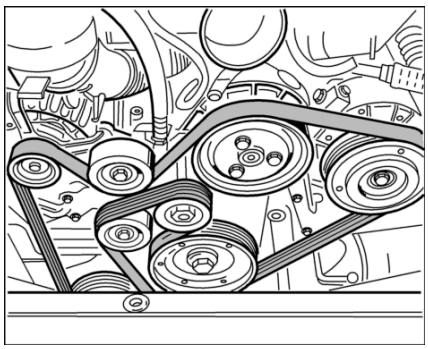
22. Inspect correct engagement of the plug coupling with special tool **test tool 9623**. Insert special tool into the groove and check that the plug is seated correctly in the coupling by applying slight pressure. The plug must not slide out.
23. Attach servo return hose to the line using the spring band clamp.

Note



- *Allocation of the engine wiring harness round connectors:*
- *Lower plug - grey inner ring*
- *Upper plug - black inner ring*

24. Fit engine wiring harness. Turn bayonet lock in clockwise direction (approx. 90°), until the markings of the round connector and the housing correspond. Fix the wiring harness onto the holder with a new tie-wrap.



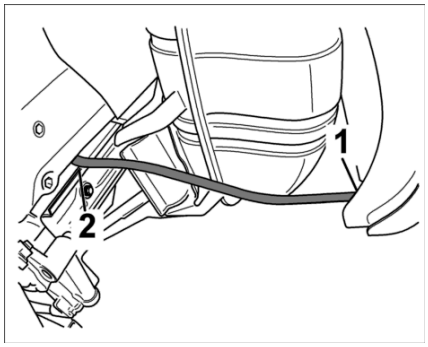
Front air-conditioning compressor fastening screw and sleeve

25. Installing air-conditioning compressor: before installing the compressor check whether the aluminium spacer sleeve **-arrow-** is inserted. Grease and fit sleeve. Also connect ground cable before installation.

Fastening of the air-conditioning compressor

26. Fit air-conditioning compressor and fasten using three M8 Torx screws (two short ones at the rear, one long one at the front) **-1-** . →**Tightening torque: 17 ftlb.**

Drive belt



27. Fit drive belt. Pay attention to operating direction of used belts. Double-check that the position of the belt on the belt pulleys is correct.

top of page

Subsequent work for installation of engine

Installing engine - subsequent work

1. Top up coolant and bleed cooling system → *A8 Draining and topping up coolant - topping up* .

Support for rear spoiler

2. Position rear spoiler support with M6 hexagon-head bolt on the body **-2-** , do not tighten until after fitting the rear spoiler. →**Tightening torque: 7.5 ftlb.**
3. Install lateral retaining brackets (heat shields) of rear spoiler→ *23 Removing and installing bumper - installing*.
4. Install rear spoiler → *23 Removing and installing rear spoiler -installing* .
5. Fit rear wheels, to tighten the wheel bolts use special tool **socket wrench insert 300** . →440519 Removing and installing wheel - installing. →**Tightening torque: 96 ftlb.**
6. Connect the battery → *A6 Work instructions after disconnecting the battery - reconnecting* .
7. Warm up engine to operating temperature and recheck the coolant level. Inspect all cooling system connections that were opened during removal for leaks.
8. Check power steering fluid level (Pentosin) and top up if necessary → *01 Checking power steering fluid level - checking*.
9. Check engine oil level and top up if necessary → *01 Checking engine oil level - checking*.
10. Remove protective covers.

as of MY 2005
Country C02, C05, C07, C08, C09, C10, C11, C12, C13, C14, C15, C16, C18, C19, C20, C21, C22, C23, C24, C25, C26, C27, C28, C32, C33, C34, C35, C36, C37, C38, C39, C45, C46, C98, C99

WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

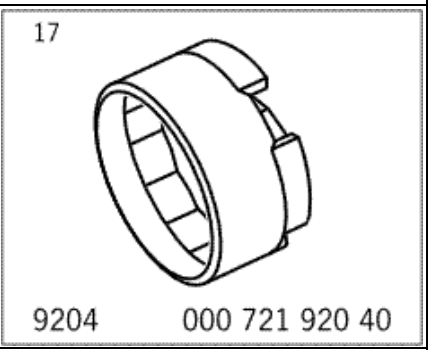
Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

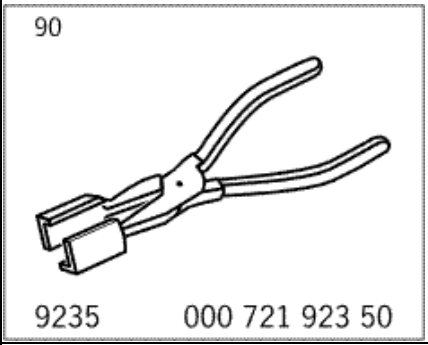
- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

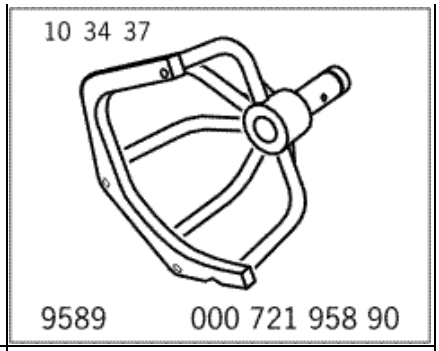
 ADVERTENCIA

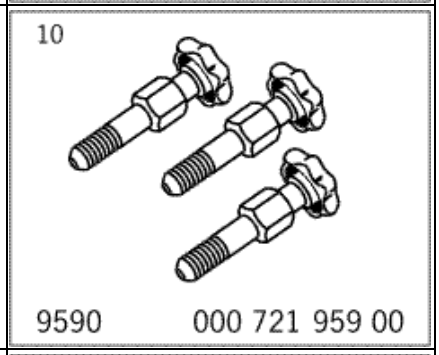
Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

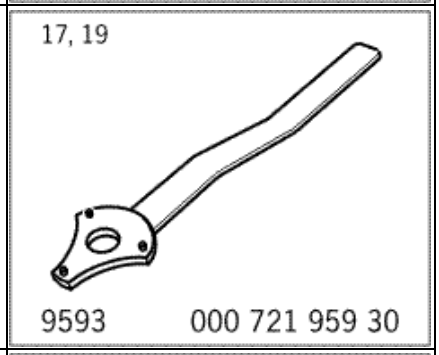


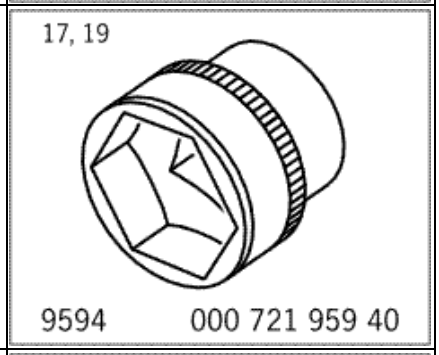


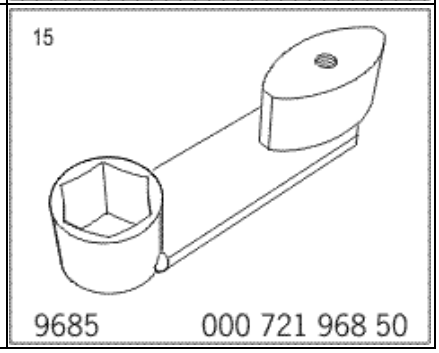
- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**



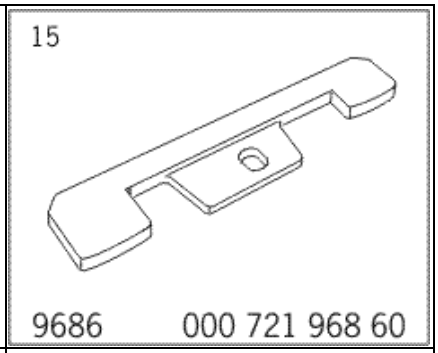


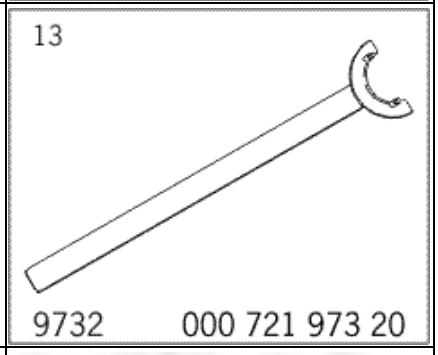






→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.





10 01 37 Disassembling and assembling engine - as of MY 2005

- Preliminary work for disassembling engine
- Component overview - engine
- Disassembling engine - up to crankcase
- Assembling engine - from crankcase
- Assembling engine, subsequent work

Preliminary work for disassembling engine

Preliminary work for disassembling engine

1. Remove engine *→101019 21 Removing and installing engine - section on "Removing"*.
2. Remove transmission →373527 Removing and refitting automatic transmission - section on "Removing" [997110 997111 997120 997121 997310 997311 997320 997321] *→373527 A3 Removing and refitting automatic transmission - section on "Removing" [997410 997411 997430 997431 997610 997611 997620 997621]* or →343527 Removing and refitting transmission - section on "Removing".

Tiptronic transmission:

3. Remove converter housing →324319 Removing and installing converter housing - section on "Removing".
4. Remove drive plate for converter →136319 Removing and installing drive plate for converter - section on "Removing".

Manual transmission:

5. Remove clutch →305019 Removing and installing clutch - section on "Removing".
6. Remove double-mass flywheel →136019 Removing and installing double-mass flywheel - section on "Removing" [997110 997111 997310 997311 997410 997411 997610 997611]→136019 Removing and installing double-mass flywheel - section on "Removing" [997120 997121 997320 997321 997430 997431 997620 997621].
7. Remove rear silencer and catalytic converters.

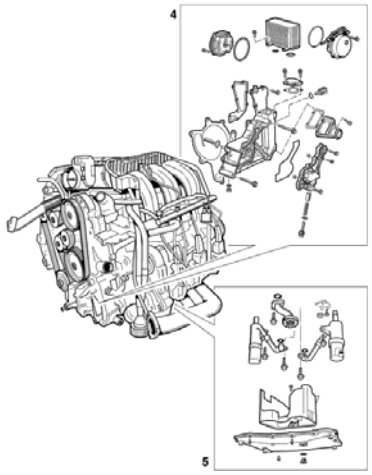
Component overview - engine

Component overview - engine

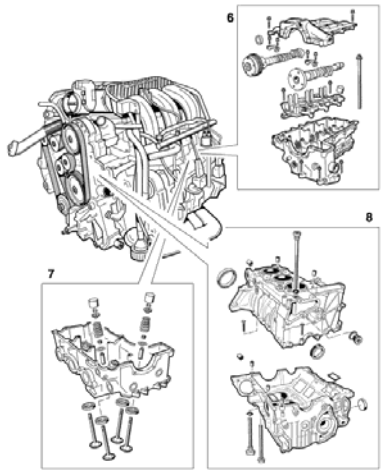
Note



The overview graphics are shown schematically and may be slightly different to how the components actually look.

Peripheral engine component 1

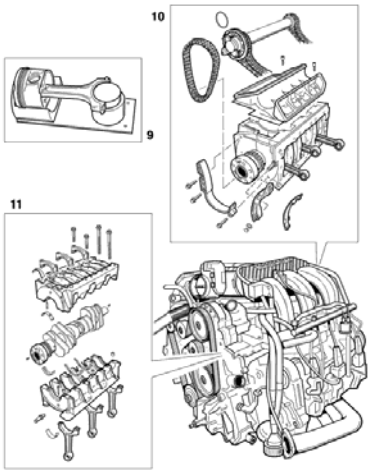
Intake system, belt drive



- 1 - Intake distributor
- 2 - Belt drive
- 3 - Belt guide and belt tensioner

Engine - lubrication

Engine - lubrication



- 4 - Oil pumps, heat exchanger, coolant guide housing
- 5 - Oil pan, oil separator

Cylinder head, crankcase

Cylinder head, crankcase

- 6 - Cylinder-head cover, camshafts, flat-base tappet housing, cylinder head
- 7 - Cylinder head, flat-base tappets
- 8 - Crankcase halves

Crank drive, pistons

Crank drive, pistons

- 9 - Pistons, connecting rods
- 10 - Bearing housing with intermediate shaft
- 11 - Bearing housing halves with crankshaft

top of page

Disassembling engine - up to crankcase

Disassembling engine - up to crankcase

ATTENTION
Risk of damage due to particles of dirt.

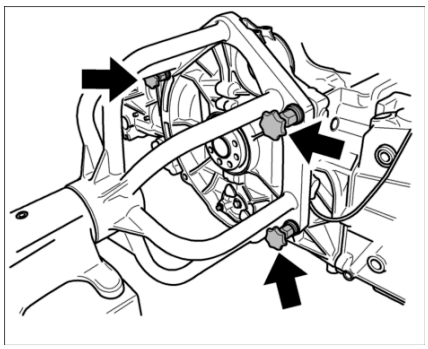
- **Oil bores/oil ducts can become blocked up.**

→ When working on the engine, absolute cleanliness is essential.
→ Lay removed engine parts on a clean base and cover them without fail.
→ Use the **cover for dust protection when fitting the engine NR.165** on the engine assembly support.

WARNING
Coolant is corrosive and hazardous to health.

- **Skin and eye irritation**

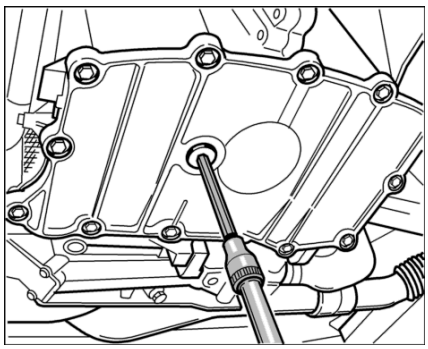
→ Wear protective gloves and goggles.
→ If you come into contact with coolant, wash off immediately with plenty of warm water.



WARNING
Pentosin is hazardous to health

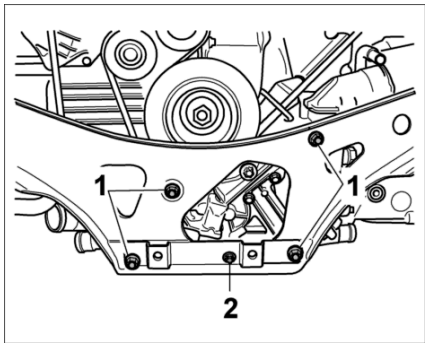
- **Danger of material damage and injury**

→ Wear protective gloves and goggles.
→ If the eyes or skin come into contact with the fluid, wash immediately with water.
→ Collect emerging Pentosin. Clean hoses which come into contact with Pentosin thoroughly.
→ Use caps to protect the wiring against soiling and damage.



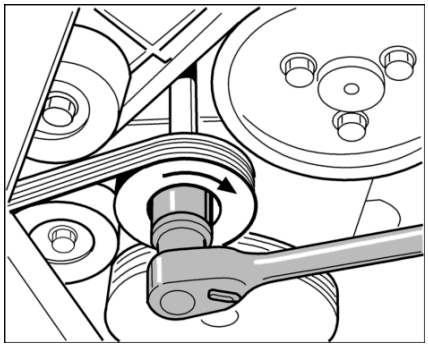
Note

- *The bearing housing remains screwed to the retaining device when the bearing housing and intermediate shaft are disassembled.*



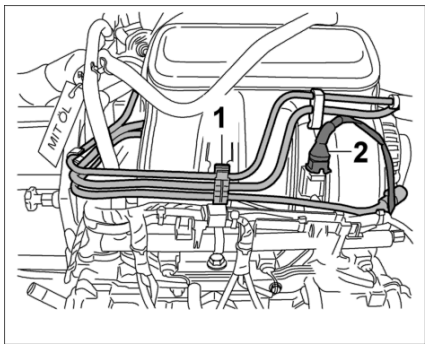
Engine support

1. Fasten the **engine support 9589** to the crankcase using special tool **mounting elements 9590**. Refit engine with support on the engine assembly support.



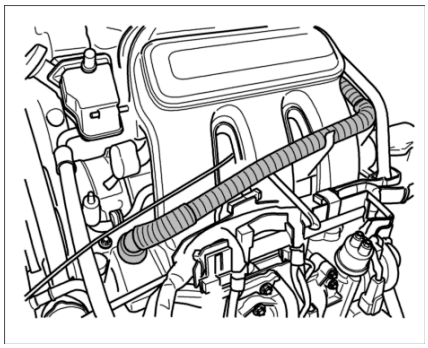
Oil drain plug

2. Drain engine oil. Unscrew the oil drain plug (hexagon socket a/f 8) →170155 Engine oil and oil filter change - section on "Draining" .



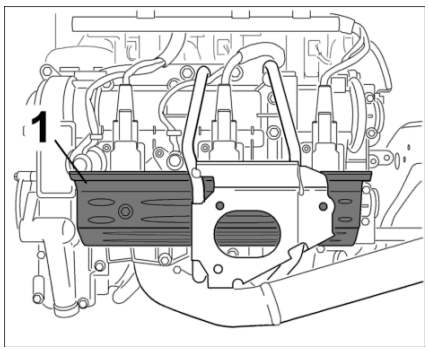
Engine carrier

3. Remove engine carrier. Unscrew 4 M10 collar nuts and 1 M6 x 20 Torx screw.
4. Undo 3 M8 x 12 fastening screws on the belt pulley for the servo pump (do not remove).



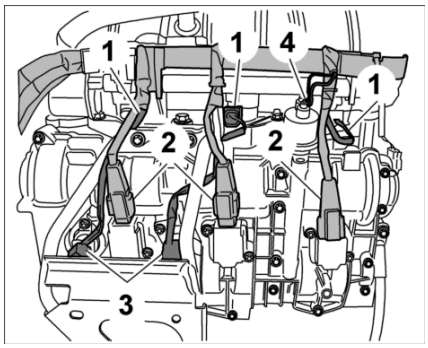
Belt tensioner

5. Remove drive belt . Mark the running direction with a coloured pen, turn the tensioning roller (a/f 24) clockwise, hold still and simultaneously remove the belt from the drive pulleys. Check the belt for damage, replace if necessary. →137819 Removing and installing drive belt - section on "Removing".
6. Only for Tiptronic: remove guide for drive belt, to do this, unscrew two M6 x 20 Torx screws.



Vacuum lines

7. Unclip hose assembly on the intake distributor, cylinder side 1 - 3:

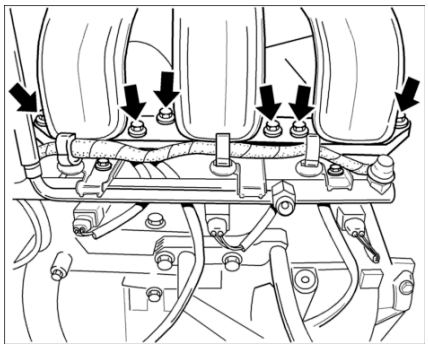


View of engine, side 4-6

8. Unplug crankcase ventilation line on pre-separator, cylinder 4-6.

Ignition coil shield

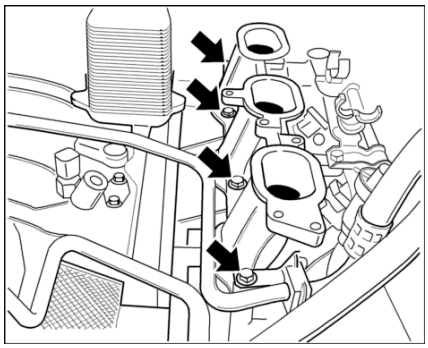
9. Remove shields for ignition coils on the left and the right, unscrew 2 M6 x 16 fastening screws.



View of engine, side 1-3

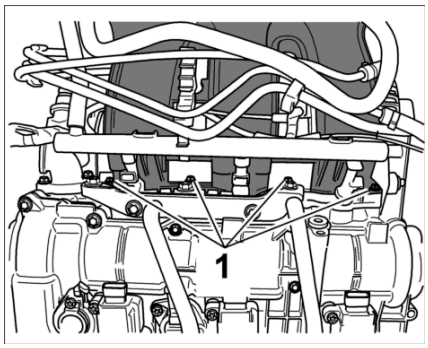
10. Disconnect electrical plug connections (engine wiring harness) on engine and unclip wiring harness on the fuel collection pipes.

- Three injection valve plugs per cylinder side **-1-**
- Three ignition coil plugs per cylinder side **-2-**
- Two plugs for camshaft adjustment hydraulic valves, two for valve lift adjustment hydraulic valves **-3-**
- Plug forengine coolant temperature sensor, two plugs for oil pressure sensor on cylinder head cover 4 - 6 **-4-**
- Two hall sender connectors
- Plugs for speed sender
- Plug for electrical switch-over valve (intake distributor 1-3)
- Ground cable for front face of cylinder 4-6 (one M6 x 12 Torx screw)



- Plug for engine compartment temperature sensor (intake distributor 4-6)

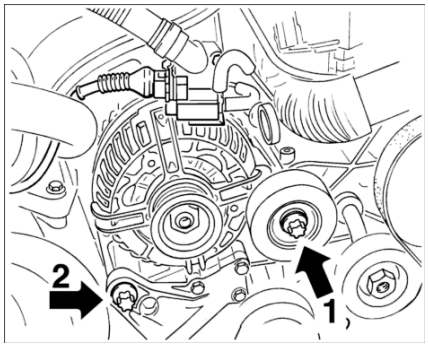
11. Unclip fuel ring pipe on the engine eyelet and unscrew two M6 x 16 Torx screws, remove engine eyelet.
12. Detach holder for the throttle body on the servo pump. To do so, unscrew an M6 hexagon nut. Unplug cable plug for potentiometer and line for crankcase venting.
13. Undo holder for servo supply tank on intake distributor 4-6.



3.6l intake distributor

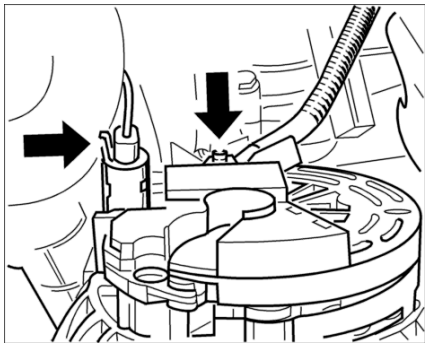
14. **Only for 3.6l engine:** Remove the relevant six M6 x 35 (micro-encapsulated) fastening screws for the intake distributor on the intake pipe supports on the left and the right. Pull off one vacuum line and remove the intake distributor completely.

Intake pipe support



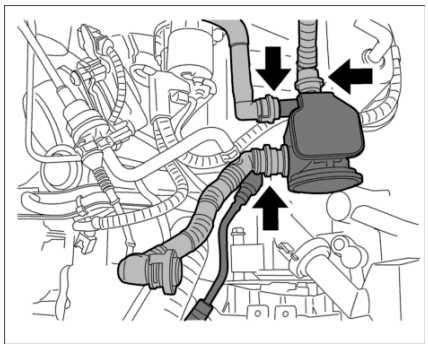
15. **Only for 3.6l engine:** Remove intake pipe support. Unscrew four M6 x 35 screws, unscrew one M6 x 12 screw for ground strap on cylinder bank 4 - 6. Take off intake pipe support, seal intake openings on cylinder head (e.g. with adhesive tape).

Intake distributor screw connection



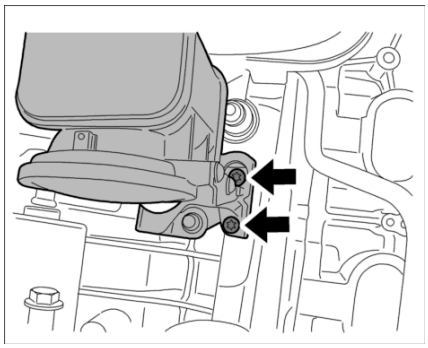
16. **Only for 3.8l engine:** Unscrew the four M6 x 35 Torx screws. Completely remove the intake distributor. Seal intake openings on cylinder head (e.g. with adhesive tape).

17. Remove belt pulley from servo pump. Unscrew three fastening screws and remove belt pulley.



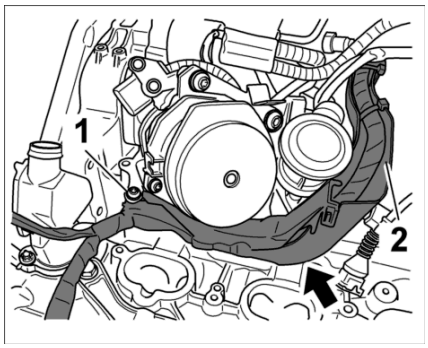
Three-phase generator

18. Remove generator . Undo the fastening screw on the deflection roller **-1-** and unscrew approx. three turns. Using an aluminium mandrel, tap lightly on the screw head to undo the pilot bushing in the generator swivel arm. Unscrew the screw and remove with the deflection roller. Unscrew the second screw **-2-** and carefully take out the generator.



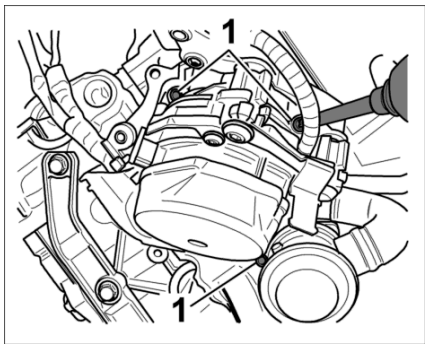
Electrical connections on generator

19. Lift the generator out of the bracket and disconnect the two electrical connecting leads **-Arrows-** .
20. Remove mount for the coolant vent line. Unscrew one M6 x 16 (micro-encapsulated), remove mount, replace screw.



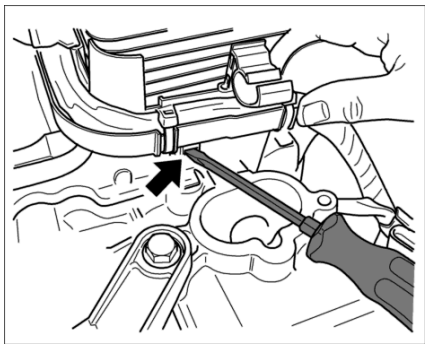
Oil mist collector - line connections

21. Unplug all vent lines for oil mist collector.



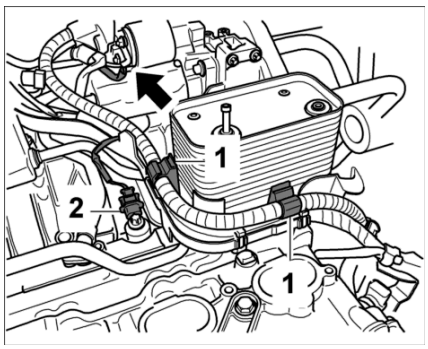
Oil mist collector screw connection

22. Unscrew the two M6 x 20 Torx screws on the oil mist collector mount and pull off collector. Replace two O-rings during installation. The screws tighten the secondary-air line on the cylinder head 4-6 at the same time.



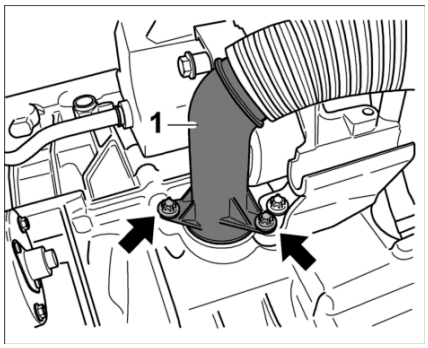
Wiring harness on secondary air pump

23. Unscrew one fastening screw for the wiring harness guide on the bracket for the secondary-air pump **-1-** and unclip the guide **-2-** on the bracket **-Arrow-** .



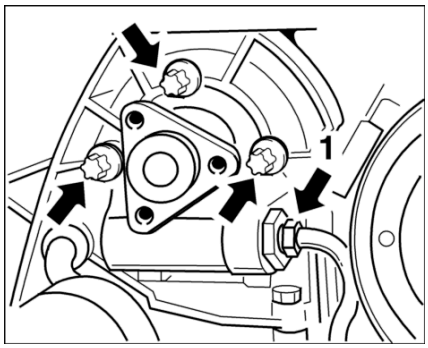
Secondary air pump with bracket

24. Remove the secondary air pump. Unplug cable plug, usncrew three M6 x 20 Torx screws on the bracket **-1-** and completely take out the pump with bracket and line. Use new seals when installing.



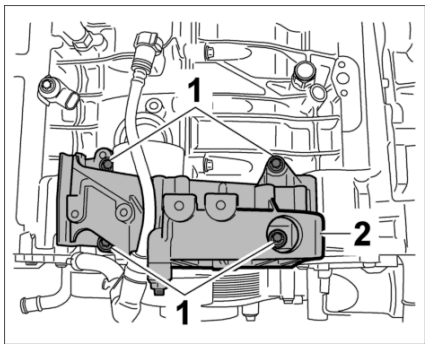
Wiring harness on the heat exchanger

25. Release the wiring harness on the holder before the heat exchanger. Then unscrew the plastic holder.



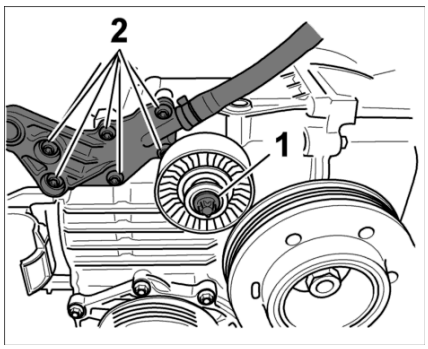
Releasing wiring harness

26. Undo the wiring harness on the centre of engine (connections to starter) **-Arrow-** and unclip on the heat exchanger **-1-** . Unplug cable plug for knock sensors **-2-** and oil-level sensor. Then completely remove the engine wiring harness.



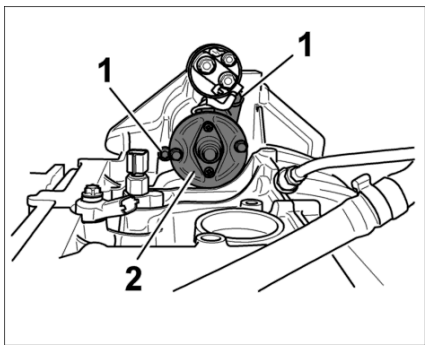
Oil filler neck

27. Remove the oil filler neck. Unscrew 2 M6 x 16 Torx screws (micro-encapsulated), pull out oil filler neck, check the O-ring and replace if necessary.
28. Remove oil/water heat exchanger. Unscrew the four inner M6 x 16 Torx screws, take off heat exchanger. Replace O-rings during installation.



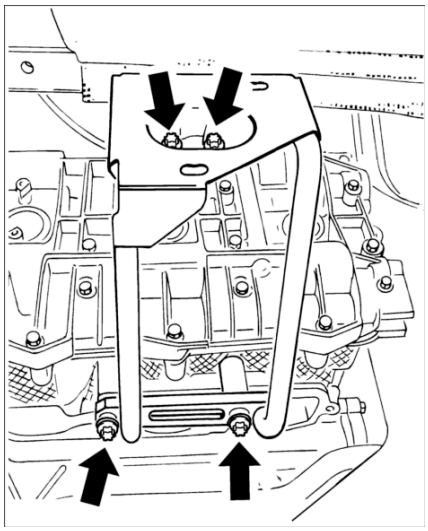
Servo pump

29. Remove hydraulic pump with servo line and supply tank. Undo servo line (a/f 16) **-1-** , counter on large hexagon when doing this (a/f 27). Unscrew four Torx screws (3 M8 x 30 at the front **-Arrows-** , one M8 x 12 at the back), take the servo pump with line and supply tank out of the bracket.



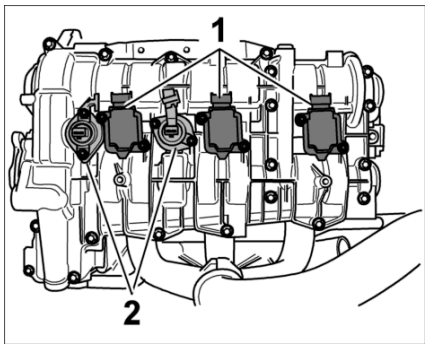
Bracket for servo pump

30. Remove bracket for servo pump. Unscrew 4 M8 x 35 Torx screws, remove bracket.



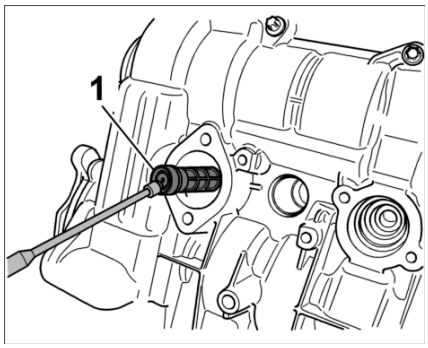
Deflection roller and closure cap for coolant

31. Remove one M8 x 60 screw for deflection roller **-1-** and six M6 x 20 Torx screws for closure cap **-2-** with bleeder lines for coolant system.



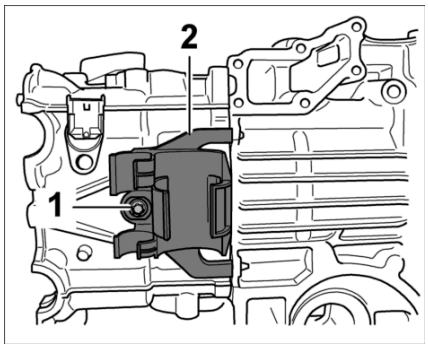
Starter

32. Only in manual transmissions: Remove the starter. Unscrew two M10 x 35 Torx screws **-1-** , take off starter **-2-** .
33. Remove oil-level sensor (a/f 19), remove knock sensor, to do this, mark the installation position with a paint marker, then unscrew one M8 x 35 Torx screw each and take off the sensors.
34. Remove canister for additional volumes of crankcase venting to the cylinder heads 1-3 and 4-6. Unscrew two M6 x 25 Torx screws each, take off canister. Use new O-rings when installing.



NSD mount

35. Remove the holder for the main muffler on the left and right. Unscrew two M8 x 30 Torx screws each on the intake side and two M8 x 25 each on the exhaust side and take off mount.

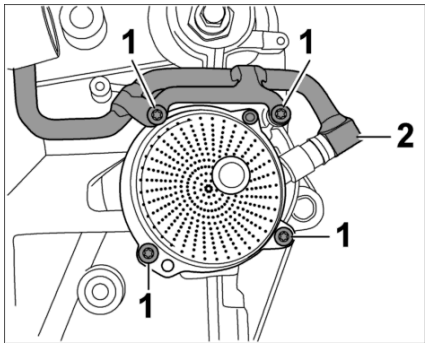


*Hydraulic valves for camshaft adjustment *

36. Remove mount and sealing cap for hydraulic valves for camshaft adjustment **-2-** . Unscrew two M6 x 20 Torx screws each, take off mount and sealing cap.
37. Remove three ignition coils per cylinder side **-1-** . Unscrew 12 M6 x 25 Torx screws, pull off ignition coils.
38. Remove six spark plugs. Use only approved tool **spark plug socket wrench 14** from Snap-On (in case ceramic body breaks) →287020 Removing and installing spark plugs - section on "Removing".

Oil strainer hydraulic valve NVS

39. Pull off hydraulic valves for camshaft and valve lift adjustment. To do this, the special tool **relay puller 9235** can be used. Pull the oil strainer for the camshaft adjustment valve out of the valve bore **-1-** with a magnet, replace the oil strainer.
40. Remove the exhaust manifold. Unscrew six M8 x 28 screws each, remove manifold and seal.
41. Remove coolant pipe for heating. Side 1-3: unscrew two M6 x 12 Torx screws, side 4-6: unscrew three M6 x 12 Torx screws, remove coolant pipe.
42. Remove oil pressure sensor on cylinder head cover 4 - 6 (a/f 19).
43. Remove the mount for the air conditioning compressor. Unscrew two M8 fastening screws, and remove bracket.
44. Remove hall sender. Unscrew 1 M6 x 16 pan-head screw (hexagon socket a/f 5, micro-encapsulated) and pull off hall sender, replace screws.
45. Remove knock sensors. Mark installation position (plug connection) with a paint marker, unscrew one M8 x 35 Torx screw each, pull sensors out of crankcase.
46. Remove speed sender, unscrew one M6 x 16 pan-head screw (hexagon socket a/f 5, micro-encapsulated), remove sender, replace screw.



Mount for coolant hoses

47. Pull coolant hose assembly out of plastic holder on crankcase. Undo spring band clamps on water pump and thermostat and take off hoses. Remove mount, to do this, unscrew one M6 x 16 Torx screw (micro-encapsulated), replace screw.
48. Remove all plastic closure caps on the cylinder heads, and replace closure caps.
49. Turn engine on the belt pulley of the crankshaft clockwise to the overlapping TDC of cylinder bank 1 - 3. To check cylinder 1-3, insert the special tool **adjusting gauge 9686** in the camshaft slots. If the gauge cannot be inserted, the engine must be turned an additional 360°.

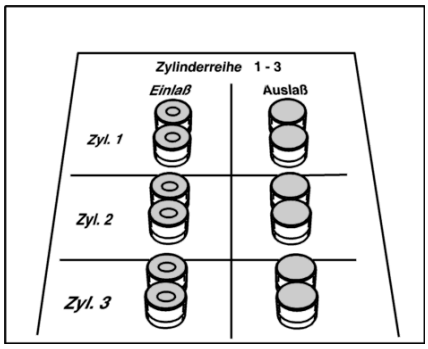
Figure

50. Remove oil extraction pump cylinders 1-3. Unscrew four M6 x 20Torx screws (micro-encapsulated), carefully pull the oil extraction pumps out of the fitting bore. Replace screws.

Tandem pump side 4 -6

51. Remove tandem pump on cylinder side 4-6. Unscrew four M6 x 30 fastening screws **-1-** , pull vacuum line **-2-** out of the connection fitting on the pump, take out the pump. Replace O-rings.

Removing camshafts, cylinder bank 1 - 3



Note

- *The central screws of the camshaft adjustment elements must be undone before removing the cylinder head cover.*

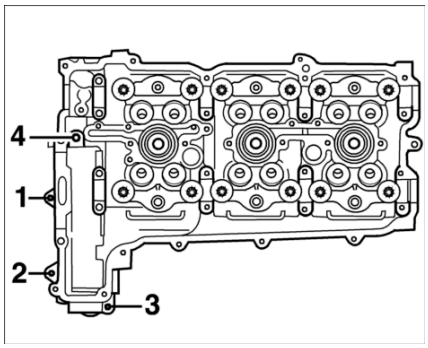
52. The central screws of the camshaft adjuster must be undone before removing the cylinder head covers. To do this, place special tool **retaining tool 9685** on the large hexagon of the central screw and cylinder head cover and undo the screws.

Figure

53. Remove cylinder head cover →159119 Removing and installing cylinder head cover - section on "Removing".
54. Remove all chain tensioners, replace aluminium sealing rings.
55. Remove upper M6 screw (hexagon socket a/f 5) for guide rail cylinder 4-6.
56. Remove camshaft side 1-3 →150520 Removing and installing camshaft - section on "Removing" [997430 997431]→150520 Removing and installing camshaft - section on "Removing" [997110 997111 997310 997311 997410 997411 997610 997611]→150520 Removing and installing camshaft - section on "Removing" [997120 997121 997320 997321 997620 997621].

Example of laying aside flat-base tappets

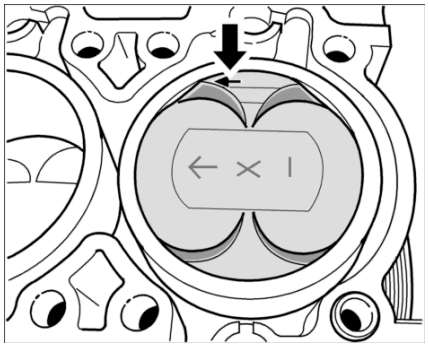
ATTENTION



Interchanged or dirty flat-base tappets.

- **Damage to engine components**

→ The components have been run in in the fitting bores in the housing, therefore do not interchange them.

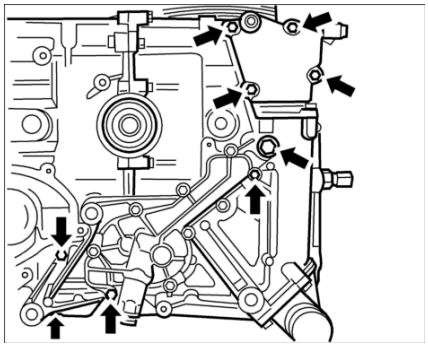


→ Pay attention to cleanliness.

57. Remove the flat-based tappets. Pull the components out with a strong magnet out of theflat-base tappets housing. To avoid confusing the individual flat-based tappets, lay them on a labelled, clean surface (see example) and cover.
58. Unscrew the top M6 guide rail screw (hexagon socket a/f 5) on cylinder 4-6.
59. Remove camshaft side 4-6 →150520 Removing and installing camshaft - section on "Removing" [997430 997431]→150520 Removing and installing camshaft - section on "Removing" [997110 997111 997310 997311 997410 997411 997610 997611]→150520 Removing and installing camshaft - section on "Removing" [997120 997121 997320 997321 997620 997621].
60. Remove flat-base tappet housing. Unscrew 11 M6 x 35 Torx screws per housing, one 1/4-inch E10 socket is necessary for this. Take flat-base tappet housing out of the cylinder head. It is absolutely necessary to replace O-rings for spark-plug recesses when installing.
61. Unscrew the top M6 guide rail screw (hexagon socket a/f 5) on cylinder 1-3.

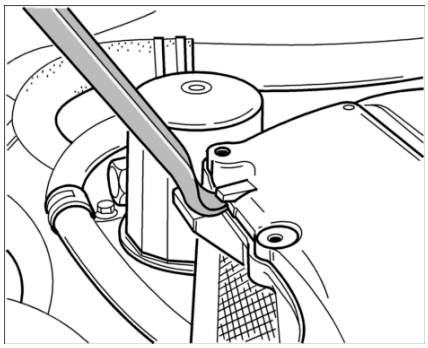
External cylinder head screwed connection

62. Unscrew four M6 x 30 Torx screws **-Pos 1 - 4-** per cylinder bank.
63. Remove cylinder head. Undo and unscrew 12 M10 x 230 Torx screws from inside to outside on each cylinder head. Lift the cylinder header and seal off the crankcase.



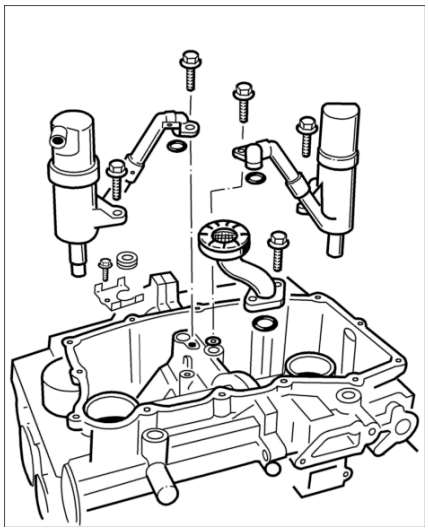
Installation position of the pistons

64. Remove all carbon deposits and other residues on all six pistons with a brass brush, which will make the engraved markings **-Arrow facing flywheel side-** visible. Before removing, number and mark the pistons in the installation position.
65. Unscrew M27 aluminium screw plug for the assembly bore (piston pin).
66. Remove coolant closure cap (with connection for coolant ventilation). Unscrew six M6 x 20 inner Torx screws, remove cover, and replace the seal.
67.



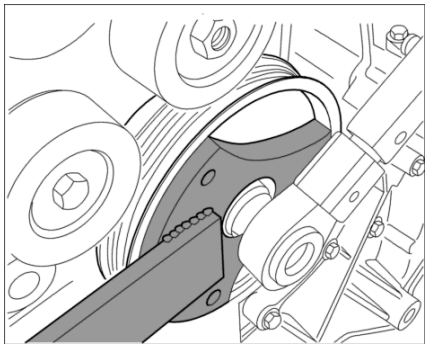
Remove connection supports for coolant hose on the top of the coolant guide housing. Unscrew two M6 x 20 Torx screws and remove cover.

68. Remove coolant temperature sensor (a/f 22).
69. Remove coolant closure cap at the bottom of the coolant guide housing. Unscrew four M6 x 20 Torx screws and remove cover.
70. Remove coolant pump. Unscrew seven hexagon-head bolts (two M6 x 30 and five M6 x 25) and remove pump.
71. Remove thermostat housing. Unscrew four M6 x 20 Torx screws and remove housing, including thermostat.



Coolant guide housing screw connection

72. Remove coolant guide housing and oil pump. Unscrew ten Torx screws, from those, eight M6 x 20 and two M6 x 70, and carefully lift housing with seal (if needed, press lightly with a assembly lever). Pull out the driver for the oil pump. Remove the drive belt guide in Tiptronic vehicles.
73. Remove lower M6 guide and tensioning rail screws (hexagon socket a/f 5), remove the guide and tensioning rails from the chain spaces.
74. Remove oil filter with special tool **release key 9204**.



Lifting the oil pan cover

75. Unscrew 13 M6 x 20 Torx screws on the oil pan cover. Tap cover gently on the sides using a plastic hammer, then carefully lift it at the leverage bar **-see Figure-** using a plastic-coated mounting lever and remove the oil pan.

Components in the oil pan

76. Remove air/oil separator (swirl pots) and oil suction pipe. To remove the separator, unscrew two M6 x 20 Torx screws and pull out the separator. Unscrew two M6 x 20 Torx screws on the oil suction pipe and remove the oil suction pipe.
77. Remove bearing cover for intermediate shaft →152119 Removing and installing bearing cover for intermediate shaft - section on "Removing" [997110 997111 997310 997311 997410 997411 997610 997611]→152119 Removing and installing bearing cover for intermediate shaft - section on "Removing" [997120 997121 997320 997321 997430 997431 997620 997621].

Screw on belt pulley- 3.6l engine

78. Undo M16 x 1.5 x 60 hexagon-head bolt for belt pulley or vibration damper with special tool **socket wrench insert 9594**, while countering with special tool **retaining device 9593** →*Screw on belt pulley- 3.6l engine* or **holding wrench 9732**. Do not unscrew the screw.

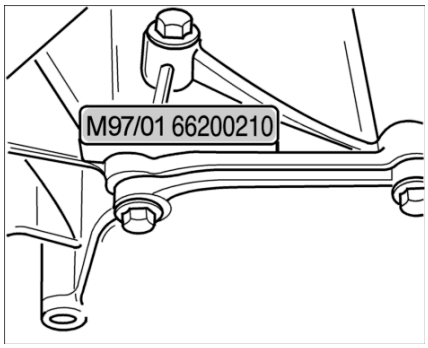
top of page

Assembling engine - from crankcase

Assembling engine - from crankcase

ATTENTION

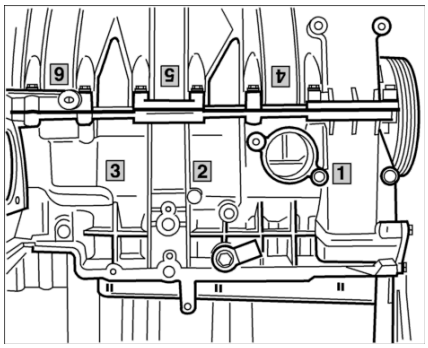
Risk of damage due to particles of dirt.



- **Oil bores/oil ducts can become blocked up.**

→ When working on the engine, absolute cleanliness is essential.
→ Lay removed engine parts on a clean base and cover them without fail.
→ Use the **cover for dust protection when fitting the engine NR.165** on the engine assembly support.

Note



- *All O-rings and seals (shaft seals) and micro-encapsulated screws or lock nuts must be replaced.*

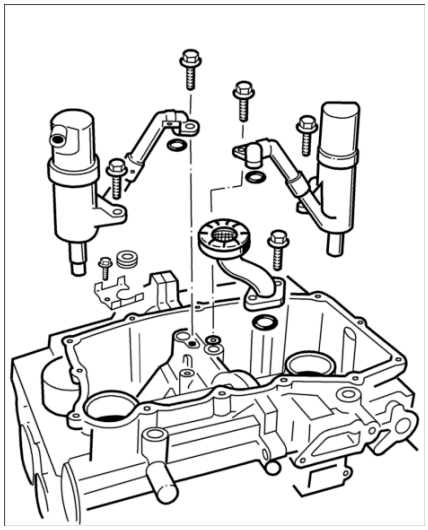
The engine is assembled in reverse order to the disassembly. Components that are not replaced must be cleaned.
Markings on crankcase:

Engine number, e.g. 3.8l

Engine number

Cylinder arrangement

Cylinder arrangement



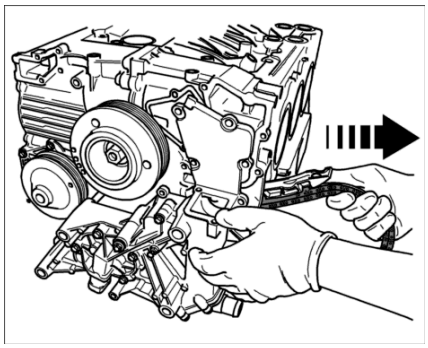
Note

- *Replace M6 microencapsulated screws and M8 hexagon collar nut for intermediate shaft bearing cap.*

1.

Fit bearing cover for intermediate shaft with new sealing ring →152119 Removing and installing bearing cover for intermediate shaft - section on "Installing" [997110 997111 997310 997311 997410 997411 997610 997611] →152119 Removing and installing bearing cover for intermediate shaft - section on "Installing" [997120 997121 997320 997321 997430 997431 997620 997621].

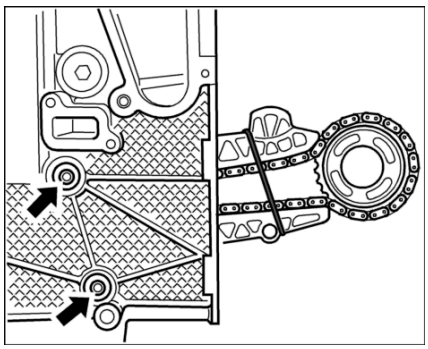
2. Install guide rail for cylinder 4-6. Insert guide rail with slot into the crankcase. Fit screw with new O-ring, grease the O-ring with Optimol MP3. →**Tightening torque: 10 (7.5 ftlb.) Nm**
3. Install tensioning rail for cylinder 4-6. Fit screw with new O-ring, grease the O-ring with Optimol MP3. → **Tightening torque: 10 (7.5 ftlb.) Nm**
4. Remove auxiliary screw for gear carrier.



Components in the oil pan

5. Fit air/oil separator (swirl pots) and suction pipe. Replace two microencapsulated M6 x 20 Torx screws and O-rings for the suction tube. →**Tightening torque: 10 (7.5 ftlb.) Nm**
6. Install oil pan. Apply a bead of sealant, **Loctite 5900**, to the cleaned and greased oil pan and secure with 13 M6 x 20 Torx screws from the inside out. →**Tightening torque: 10 (7.5 ftlb.) Nm**
7. Fit oil filter, grease new O-ring with Optimol MP3. →**Tightening torque: 25 (19 ftlb.) Nm**
8. Fit thermostat with new seal. Tighten four M6 x 20 Torx screws. →**Tightening torque: 10 (7.5 ftlb.) Nm**
9. Fit tensioning rail for cylinder 1-3. Fit screw with new O-ring, grease the O-ring with Optimol MP3. →**Tightening torque: 10 (7.5 ftlb.) Nm**

Note

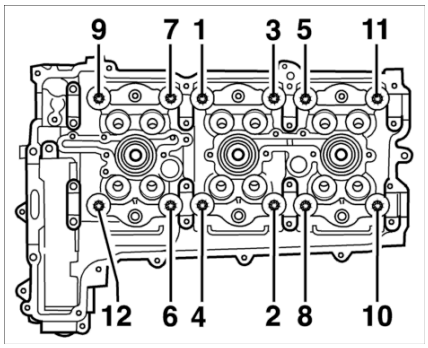


- *Replace O-rings for the oil pump and sealing rings for coolant guide housing.*

10. Install water pump. Position water pump with the new seal (a single part in conjunction with the seal for the oil pump housing). Position and tighten seven M6 Torx screws (two M6 x 30 screws on the dowel sleeves, five M6 x 25 screws). →**Tightening torque: 10 (7.5 ftlb.) Nm**

Tension timing chain 4-6

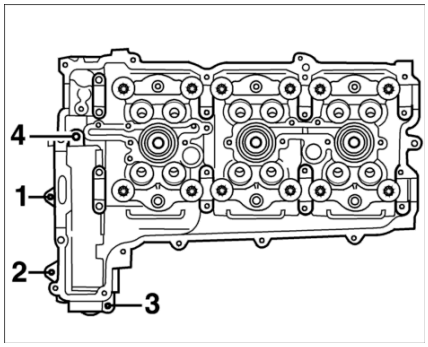
11. Remove centring mandrel for intermediate shaft. Position oil pump with new seal and two new O-rings. Grease the O-rings with Optimol MP3. Pull timing chain 4-6 outward so that the intermediate shaft is centred. Align driver for the oil pump and then push the housing together with the oil pump into the bearing seat. It is advisable to get a second person to assist to make the assembly easier.
12. Coat the thread of two M6 x 70 Torx screws with Loctite 574 and position on oil pump housing. Position the remaining eight M6 x 20 Torx screws, tighten all screws. →**Tightening torque: 10 (7.5 ftlb.) Nm**
13. Fit coolant neck with new seal and two M6 x 20 inner Torx screws. →**Tightening torque: 10 (7.5 ftlb.) Nm**
14. Fit coolant breather adapter with new seal and six M6 x 20 inner Torx screws. →**Tightening torque: 10 (7.5 ftlb.) Nm**
15. Fit pulse sender with new, microencapsulated M6 cheese head bolt. →**Tightening torque: 10 (7.5 ftlb.) Nm**
16. Fit belt pulley/vibration balancer →137619 Removing and installing belt pulley/vibration balancer - section on "Installing" [997120 997121 997320 997321 997430 997431 997620 997621]→137619 Removing and installing belt pulley/vibration balancer - section on "Installing" [997110 997111 997310 997311 997410 997411 997610 997611].



Fixing timing chains

17. Fix timing chains with chain sprockets, e.g. with the old O-rings from the oil suction pumps.
18. Install temperature sensor for coolant (M14 a/f 22). →**Tightening torque: 25 (19 ftlb.) Nm +/-5 (3.5 ftlb.) Nm**

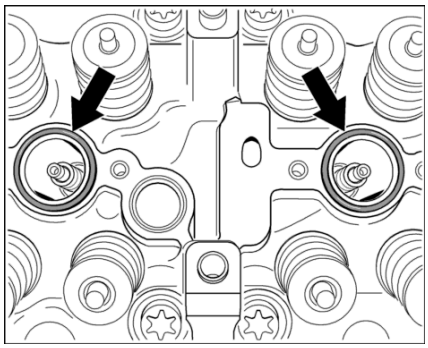
Note



- *Cylinder-head gaskets are identical parts, lay them down with the TOP identification facing upwards.*

19. Fit new cylinder-head gaskets, the **TOP** inscription is legible from above.

Tightening sequence for cylinder head

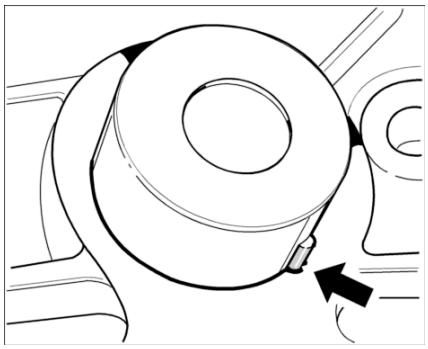


20. Fit cylinder heads →157019 Removing and installing cylinder heads - section on "Installing". Observe tightening sequence and tightening specification of cylinder-head screws. →**Initial tightening: 30 (22 ftlb.) Nm** , loosen all screws, →**2nd initial tightening: 20 (15 ftlb.) Nm** ; →**2 x torque angle (final tightening): 70 °**

External cylinder head screwed connection

21. Tighten external M6 (Torx) cylinder-head screws. →**Tightening torque: 13 (9.5 ftlb.) Nm**
22. Install guide rail for cylinder 1-3. The slot is positioned in the crankcase, the sealing lip towards the outside. Fit screw with new O-ring, grease the O-ring with Optimol MP3. →**Tightening torque: 10 (7.5 ftlb.) Nm**

The threaded pin for guide rail 4 - 6 (belt pulley side) on the cylinder head is inserted only after the timing chain has been fitted on the camshaft wheels.



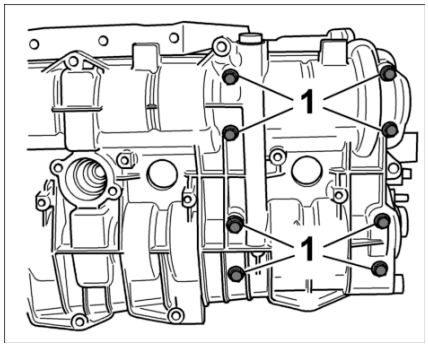
O-rings for spark-plug recess

Note

- *The O-rings for the spark-plug recesses must be replaced.*

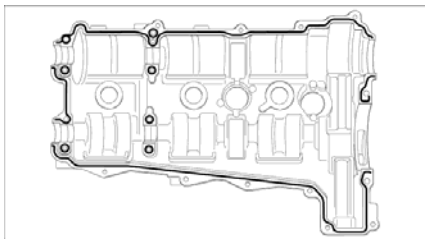
23.

Insert three new O-rings in the spark-plug recesses, lightly coat with high pressure grease. Fit flat-base tappet housing with 11 M6 x 35 Torx screws and tighten screws from the inside out. → **Tightening torque: 10 (7.5 ftlb.) Nm**



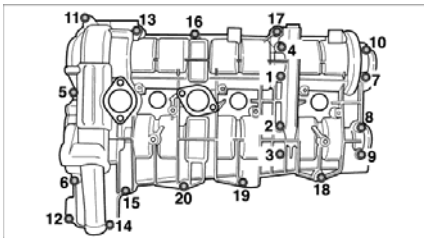
Switchable tappet

Note



- *Re-insert flat-base tappets in the fitted bores in which they were positioned before the disassembly. The flat-base tappets have been run in in the fitting bores in the housing and therefore may not be switched.*

24. Coat flat-base tappets with new engine oil and insert in the fitted bores in the flat-base tappet housing (operating plunger with dowel pin on the inlet side).
25. Install camshafts and adjust controls as for engine type M96/03-3, 6l as of model year 2002. *→150519 24 Removing and installing camshaft - section on "Installing".*



Screws for camshaft bearing surface

26. Fit cylinder head cover. Eight new, coated screws **-1-** must be used for the threaded joints on the camshaft bearing surfaces. For each one, tighten 20 M6 fastening screws according to the tightening sequence. Of each of the sets of 20 screws, only position two screws on the oil suction side (or tandem pump) and only perform the final tightening after fitting the pumps. →**Tightening torque: 13 (9.5 ftlb.) Nm** →159119 Removing and installing cover for camshaft housing - section on "Installing".

Sealant application on cylinder head cover

Sealant application on cylinder head cover

Tightening sequence for cylinder head cover

Tightening sequence for cylinder head cover

27. Install tandem pump and oil suction pump with new, microencapsulated screws and new O-rings. Fit the line on the tandem pump with two new O-rings. Grease O-rings with Optimol MP3 →**Tightening torque: 10 (7.5 ftlb.) Nm**

Install engine accessories in the reverse sequence to that in which they were removed. Some additional instructions follow.

- Install six spark plugs: →**Tightening torque: 30 (22 ftlb.) Nm** ; →**Tightening torque: 25 (19 ftlb.) Nm**
- Six ignition coils: tighten two M6 inner Torx screws for each of them. →**Tightening torque: 10 (7.5 ftlb.) Nm**
- Hall sender: use two new M6 microencapsulated screws. →**Tightening torque: 10 (7.5 ftlb.) Nm +/-0.5 (0.5 ftlb.) Nm**
- Exhaust manifold: use new M8 x 28 hexagon-head bolts. →**Tightening torque: 23 (17 ftlb.) Nm**
- Support for coolant ventilation: replace one M6 x 16 (micro-encapsulated). →**Tightening torque: 10 (7.5 ftlb.) Nm**
- Install secondary air pump three M6 x 20 Torx screws on the bracket →**Tightening torque: 10 (7.5 ftlb.) Nm**
- Intake pipe support in the 3.6 l: install with four M6 x 35 Torx screws and new seals. →**Tightening torque: 10 (7.5 ftlb.) Nm**
- Intake-air distributor in the 3.6 l: install with six M6 x 35 Torx screws and new moulded seals on intake pipe support. →**Tightening torque: 10 (7.5 ftlb.) Nm**
- Intake-air distributor in the 3.8 l: four M6 Torx screws. →**Tightening torque: 10 (7.5 ftlb.) Nm**
- Install generator: tighten M8 hexagon nut for B+ cable to the specified torque. →**Tightening torque: 15 (11 ftlb.) Nm** →272219 Removing and installing generator - section on "Installing".

 WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

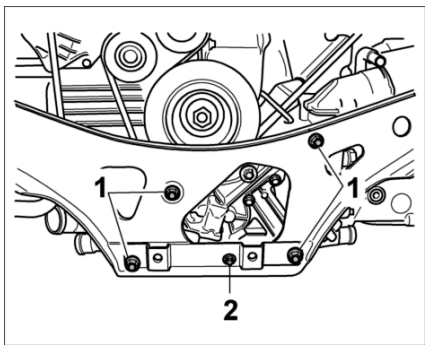
Removing engine carrier

Removing engine carrier

Engine carrier components

Overview of engine carrier

Item	Designation	Explanation
1	Engine carrier	Clean after removal and check for damage
2	M10 collar nut	
3	Hydraulic mount	Check for leaks and damage
4	M12 collar nut	



WARNING

Risk of falling engine.

- **Danger of material damage and injury.**

→ Support engine at all times.

1. Support engine in installation position with a transmission jack. .

Engine carrier

2. Remove engine carrier. Unscrew four M10 collar nuts **-1-** and one M6 Torx screw **-2-** .

3. Unscrew M12 collar nuts on engine mounting (hydraulic mount).
4. Carefully lower engine and move engine carrier out of threaded bolts, remove carrier.
5. Carefully clean engine carrier using solvent naphtha and check for damage (e.g. cracks).
6. The engine carrier must be replaced if it is damaged.

top of page

Installing engine carrier

Installing engine carrier

1. Insert engine carrier in threaded bolts. Screw on four M10 collar nuts and one M6 Torx screw.
2. Raise engine in installation position using transmission jack, screw in two M12 collar nuts on engine mounting.
3. Tighten the four M10 collar nuts and the M6 Torx screw. →**Tightening torque: 65 (48 ftlb.) Nm** ; →**Tightening torque: 10 (7.5 ftlb.) Nm**
4. Tighten M12 collar nuts on left and right engine mountings. →**Tightening torque: 85 (63 ftlb.) Nm** .

10 55 19 Removing and installing oil separator - as of MY 2005

- Preliminary work
- Removing oil separator
- Installing oil separator
- Subsequent work

Tools

Designation	Type	Number	Explanation	
3/8" extension, 16° movable	commercially available tool	NR.15		

top of page

Preliminary work

Preliminary work for removing oil separator

1. Remove air cleaner housing →242519 Removing and installing air cleaner housing - chapter on "removing".

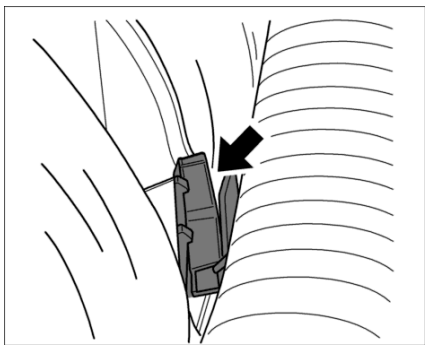
top of page

Removing oil separator

Removing oil separator

Note

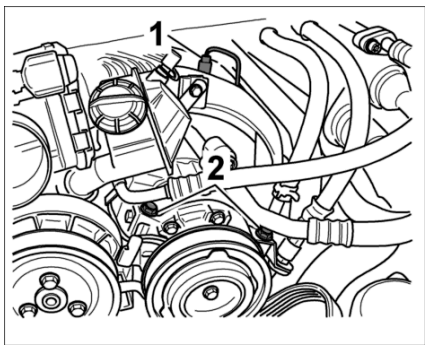
Cover engine openings (e.g. intake openings, crankcase, oil lines, open reservoirs etc.) cover with a cloth to avoid dirt and foreign bodies falling in.



Note

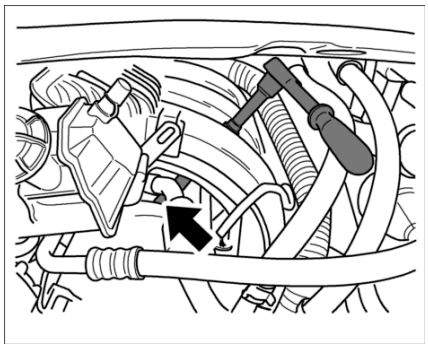
- *After removal, place the air-conditioning compressor on a suitable protective support (e.g. foam, neoprene, etc.).*

Note



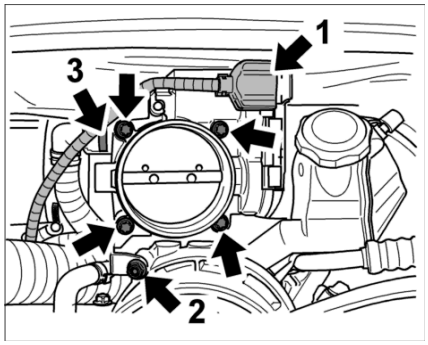
The air-conditioning lines on the compressor do not have to be disconnected in order to remove engine/transmission unit.

1. Detach air-conditioning compressor without disconnecting the air-conditioning lines *→873409 11 Detaching and fastening compressor - detaching*.



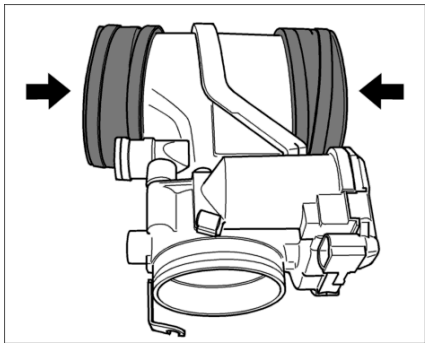
Air-conditioning compressor ground line

2. Disconnect ground connector from intake distributor side 4-6 **-arrow-** .



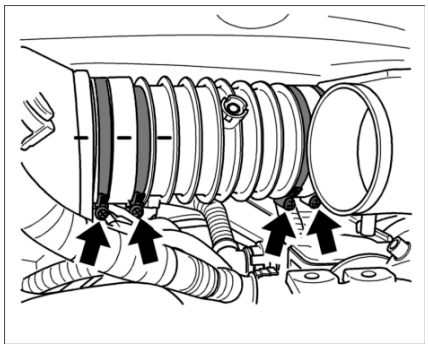
Rear fastening of the air-conditioning compressor

3. Pull the engine compartment temperature sensor out of the intake distributor 4-6 together with the rubber sleeve **-1-** and unscrew the rear fastening screws **-2-** of the air-conditioning compressor.



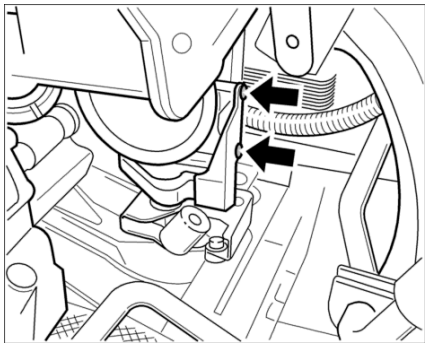
Front fastening screw of the air-conditioning compressor

4. Unscrew the front fastening screw **-arrow-** of the air-conditioning compressor. Due to the restricted accessibility, the use of a **3/8" extension, 16° movable NR.15** with a long Torx E10 socket wrench is recommended. To lift out the air-conditioning compressor, the screw must be pulled upwards and held in position.
5. Lift out the air-conditioning compressor with the leads connected and lay to one side on a protective support. Secure additionally with a tie-wrap.



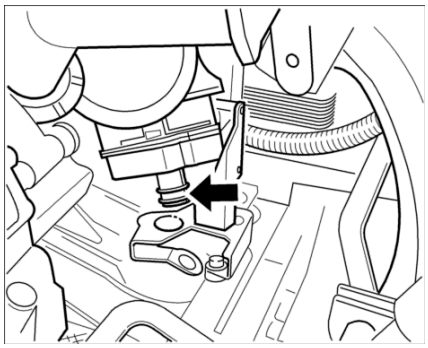
Throttle body

6. Remove distributor pipe. To do this, remove the fastening nut M6 of the throttle body from the rubber mount of the servo pump **-2-** .
7. Release cable plug on throttle body, and pull out and release cable **-1-** .
8. Release crankcase venting pipe connection from distributor pipe and remove **-3-** .



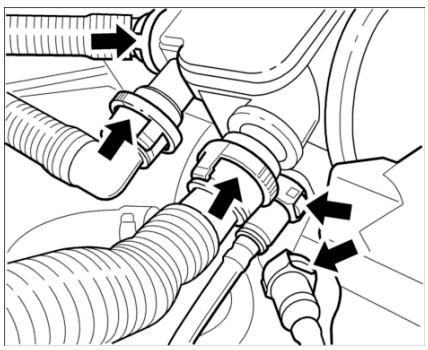
Distributor pipe

9. Loosen the four screw-type hose clamps on the rubber sleeves to the side intake distributors and push the rubber sleeves onto the distributor pipe. Remove distributor pipe together with mounted throttle body. Remove distributor pipe from the engine compartment.



Tuning pipe

10. Release tuning pipe. To do this, mark the installation position of the tuning pipe and loosen screw-type hose clamps **-arrows-** .

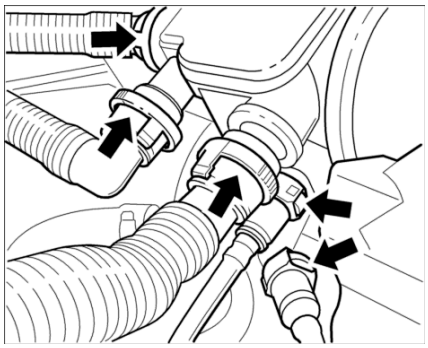


Mounting of oil mist separator

11. Remove both side fastening screws **-arrows-** .

Oil mist separator sealing rings

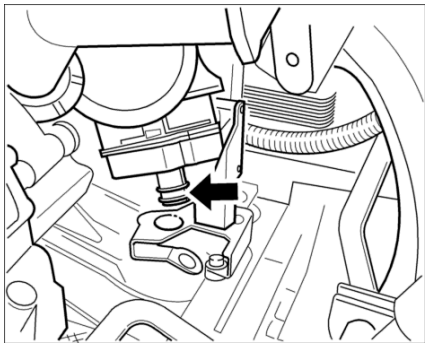
12. Carefully turn the oil separator and pull it out of the bore. Check sealing rings and replace if necessary **-arrow-** .



Oil mist separator connections

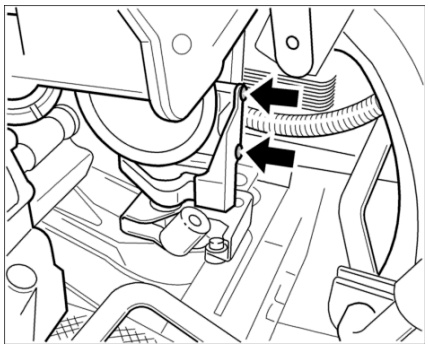
13. Remove connections to the oil separator . For this purpose, place a cloth underneath as coolant emerges from the bottom vent line. Press and remove the connections **-arrows-** . Remove oil separator from the engine compartment.

top of page



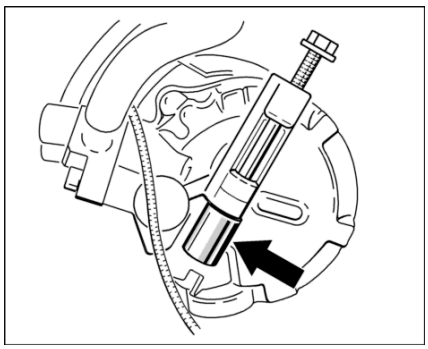
Installing oil separator

Installing oil separator



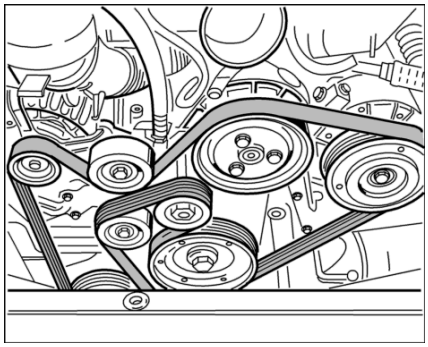
Oil mist separator connections

1. Check seals of oil separator and replace if necessary. Place oil separator in the installation position and make all connections **-arrows-** .



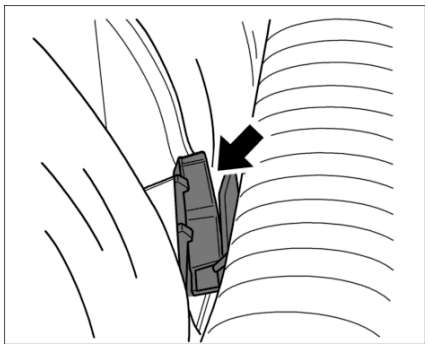
Oil mist separator sealing rings

2. Lightly coat the sealing rings to the crankcase with Optimol MP3 **-arrow-** . Carefully turn the oil separator and press it into the bore of the crankcase.



Mounting of oil mist separator

3. Fit both side fastening screws **-arrows-** .



Front air-conditioning compressor fastening screw and sleeve

4. Fit air-conditioning compressor: before installing the compressor check whether the aluminium spacer sleeve **-arrow-** is inserted. Grease and fit sleeve. Also guide through ground cable before installation.
5. Fit air-conditioning compressor and fasten using three M8 Torx screws (two short ones at the rear, one long one at the front). See details and tightening torques →873419 Removing and installing compressor - chapter on "installing".

Drive belt

6. Fit drive belt. Pay attention to operating direction of used belts. Double-check that the position of the belt on the belt pulleys is correct.
7. Fit engine compartment temperature sensor with the rubber sleeve in the intake distributor 4-6.

Air-conditioning compressor ground line

8. Connect ground connector to intake distributor side 4-6 **-arrow-** .

top of page

Subsequent work

Subsequent work for installing oil separator

1. Install air cleaner housing →242519 Removing and installing air cleaner housing - chapter on "installing".

Removing pistons, preliminary work

Removing pistons, preliminary work

1. Disassemble engine to crankcase →100137 Disassembling and assembling engine - "Disassembling" section.

top of page

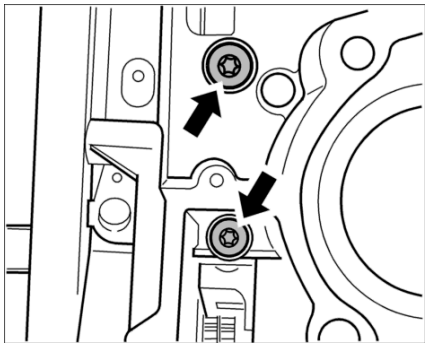
Removing pistons

Removing pistons

ATTENTION

Risk of damage due to particles of dirt.

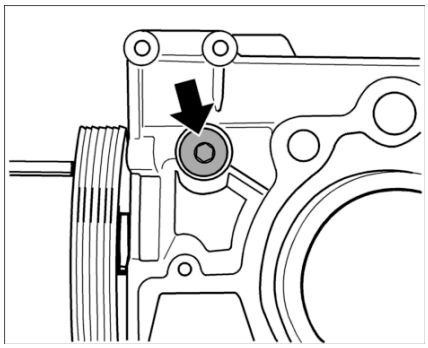
- **Oil bores/oil ducts can become blocked up.**



→ When working on the engine, absolute cleanliness is essential.
→ Lay removed engine parts on a clean base and cover them without fail.
→ Use the **cover for dust protection when fitting the engine NR.165** on the engine assembly support.

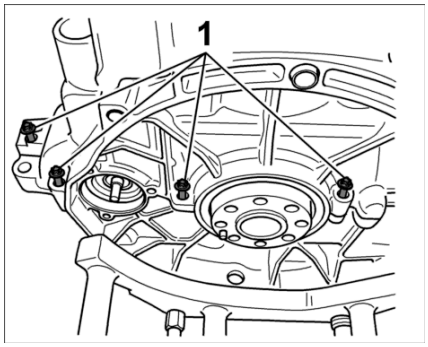
Note

- *Fix the gear carrier for removing the pistons with two auxiliary screws to crankcase half 1-3.*



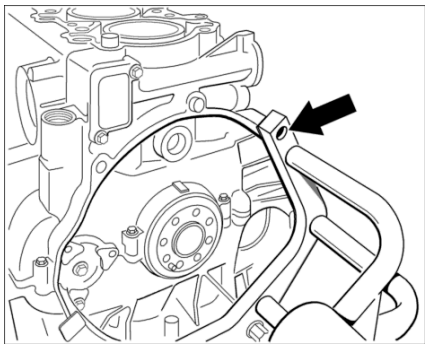
Note

- *Mark pistons in installation position before removal. Combustion residues (carbon desposits) can be removed with a brass brush.*
- *Hard to remove residues can be removed in the ultrasound bath following disassembly.*



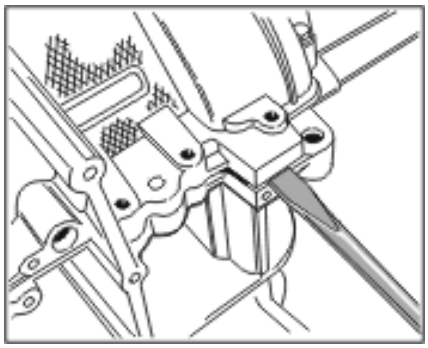
Additional screws for gear carrier, side 1-3

1. Unscrew inner Torx screws with O-ring (M9 x 94 inside and M9 x 84 outside) for gear carrier **-arrows-** on crankcase half 1-3.



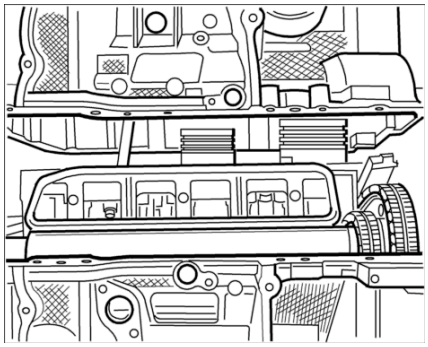
Additional screw for gear carrier, side 4-6

2. Unscrew inner Torx screw with O-ring M9 x 140 for gear carrier **-arrow-** on crankcase half 4-6.
3. Turn crankcase at assembly support until crankcase half 4-6 stands vertically upwards.



Coated screws for cross bolt connection

4. Unscrew four coated M6 x 35 Torx screws **-1-** on crankcase half 4-6 on flywheel side. Replace screws during assembly.
5. Unscrew 20 remaining M6 x 35 Torx screws in the crankcase cross bolt connection.



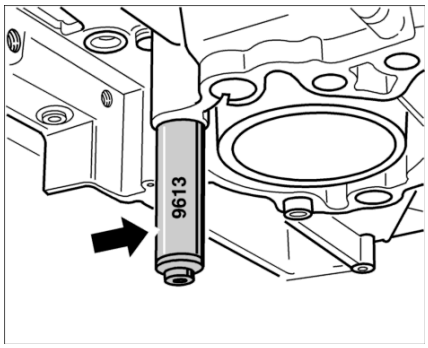
Mount for crankcase half 4-6 on engine support

6. Unscrew the star screw that fixes crankcase half 4-6 to the engine support **-arrow-** .

Separating the crankcase half

7. Tap the crankcase halves gently with a plastic hammer. Carefully lever the various cast lugs with a screwdriver to separate the crankcase halves from one another.

Levering off crankcase half 4-6

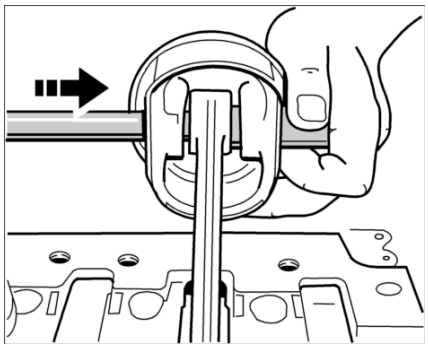


ATTENTION

Crankcase half 4-6 incorrectly levered off

- **Damage to pistons, piston rings**

→ Lever off crankcase half 4-6 only with the help of a second person.



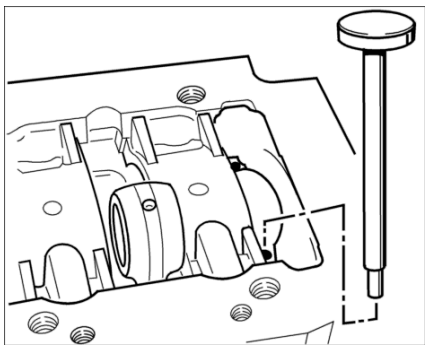
8. Carefully lever off crankcase half 4-6 with the help of a second person to avoid damaging the pistons (e.g. by tilting). Remove old shaft seals.

Auxiliary screws for securing gear carrier

9. For the following steps, fasten the gear carrier to crankcase housing half 1-3 with two cylinder-head screws using **spacer sleeves 9613**. →**Tightening torque: 15 ftlb.**

Removing pistons, side 4-6

Removing piston pins



10. Lever off the front piston-pin circlips of marked pistons 4-6 (from the viewpoint of the drive belt side) using a small screwdriver, push out the piston pin **-arrow-** and remove the pistons one by one. Assign the piston pins again to the appropriate pistons.

Removing pistons and connecting rods, side 1-3

Connecting rod bolts

11. Remove marked pistons 1-3, including connecting rods. To do this, turn the crankshaft on the belt pulley/vibration balancer until the respective connecting rod bearing cap stands upwards. Undo and remove the connecting rod bolts (twelve-edged socket wrench insert a/f 14), remove connecting rod bearing cap.

Removing connecting rod using plastic mandrel (shop-made)

Note

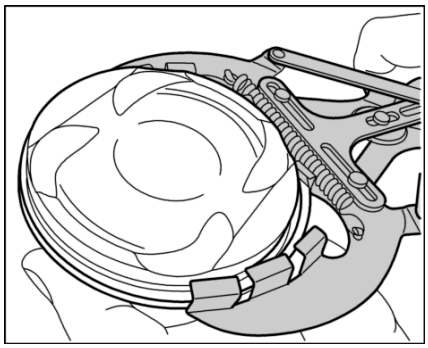
- *Join connecting rod and connecting rod bearing cap together again immediately after removal.*
- *Connecting rod bolts must be replaced.*

12. Carefully press connecting rod and pistons downwards out of crankcase half 1-3 using a

shop-made plastic mandrel. Allocate a connecting rod cap immediately to the relevant connecting rod and screw on loosely. Pay attention to the bearing shells.

13. Unscrew fastening screw for belt pulley/vibration balancer and remove washer or damper. In the case of the vibration balancer, pay attention to the friction plate.
14. To remove connecting rod 4-6, remove the gear carrier; see →134819 Removing and installing crankshaft - "Preliminary work" section.

top of page



Disassembling pistons/connecting rods, cylinder 1-3

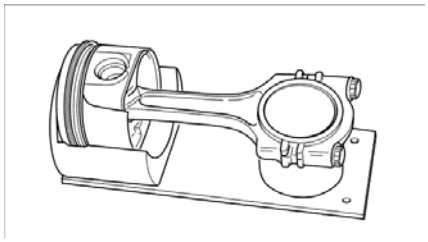
Disassembling pistons/connecting rods, cylinder 1-3

Note

When removing pistons, the piston-pin circlip always remains in the piston, which is installed opposite the large assembly bore (no chamfer) for the piston pin.

1. Remove piston/connecting rod unit. To do this, clamp the connecting rod to a vice with aluminium jaws, for example.

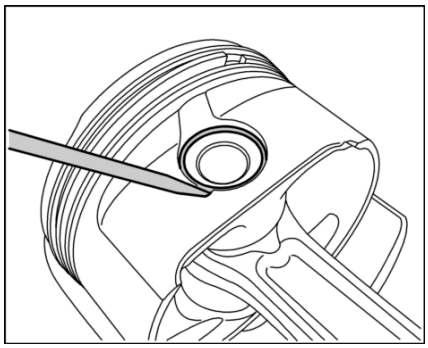
Removing/installing piston rings



ATTENTION

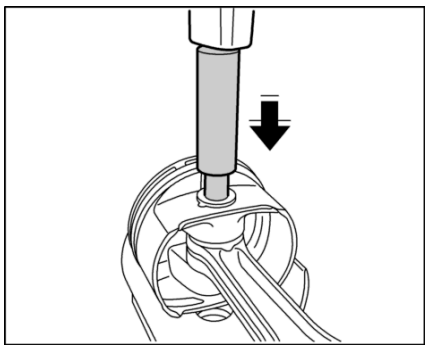
Over-extension of piston rings

- **Damage or breakage**



→ Using the piston ring pliers, spread open the piston rings only far enough so that the rings can be installed or removed (without scratching the piston).

2. Remove piston ring groove 1 and groove 2 separately using a **piston ring pliers Gr. 1 NR.58**. Remove piston ring groove 1 first. The piston rings must not be overstretched.
3. The three-piece oil scraper ring can be removed by hand. First, carefully remove both rings, then remove the springs.



Piston assembly device 9597

4. Insert piston/connecting rod unit into the **retaining device 9597** in such a way that the twist lock in the second piston ring groove faces the observer.

Removing piston pin circlip

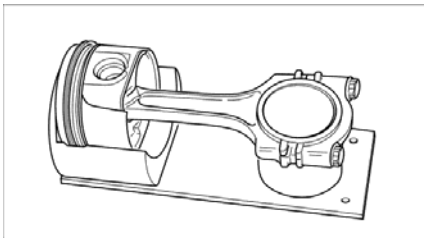
5. Carefully press out piston-pin circlip with a screwdriver; while doing so, place a cloth over the piston so that the circlip does not pop out.

Pressing out piston pin

6. Turn piston/connecting rod unit through 180° on the assembly device and press out piston pin with the plunger special tool **assembly tool 9500**.
7. Repeat steps for removing pistons/connecting rods on cylinders 2 and 3.

top of page

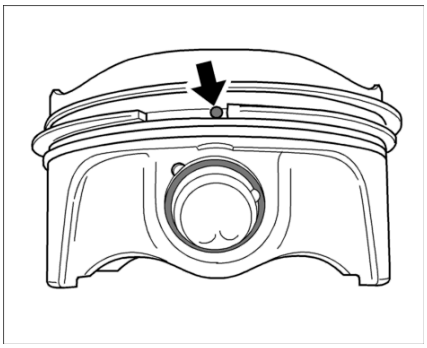
Assembling pistons/connecting rods, cylinder 1-3



Assembling pistons/connecting rods, cylinder 1-3

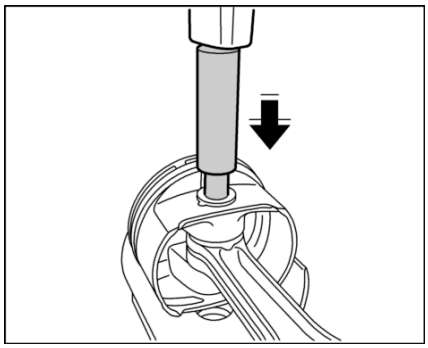
Note

When removing pistons, the piston-pin circlip always remains in the piston, which is installed opposite the large assembly bore (no chamfer) for the piston pin.



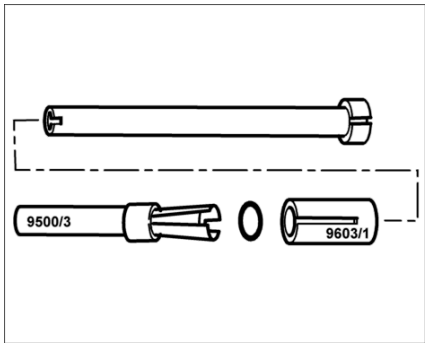
Note

The lug of the piston-pin circlip must always be touching the contact surface facing the oil piston shank.



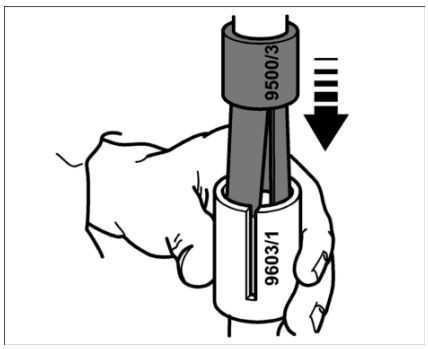
Piston assembly device 9597

Special tool **retaining device 9597** with **spacer ring 9597/1**.



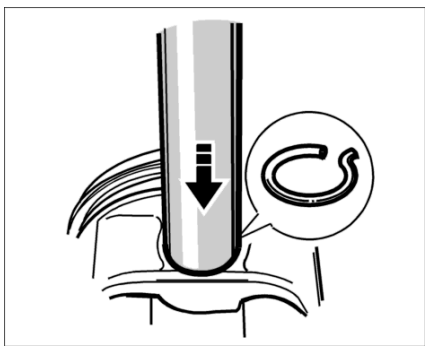
Piston pin assembly bore

1. Insert the piston (without piston rings) into retaining device 9597 so that the deep assembly bore for the piston pin in the piston is facing the observer and the remaining circlip is located underneath (check: twist lock of piston ring, second groove, is also pointing towards the observer **-arrow-** , arrow opposite piston crown).
2. Place connecting rod in piston so that the twist lock of the connecting rod bearing shell is pointing downwards in the connecting rod (i.e. in the direction of the arrow on the piston crown).



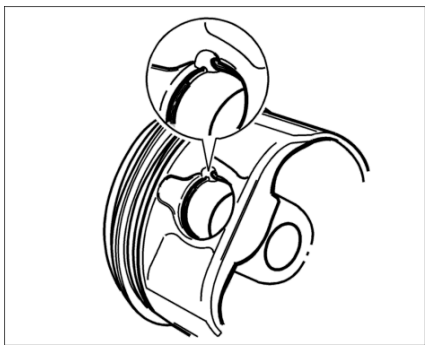
Pressing in piston pin

3. Coat piston pin with new engine oil and press it in manually or using the plunger special tool **assembly tool 9500**.



Assembly sequence for piston-pin circlip

4. Insert new piston-pin circlip in the taper of the **assembly aid 9603/1**. Position the cylindrical part on the assembly tube of the special tool **assembly tool 9602/1**.

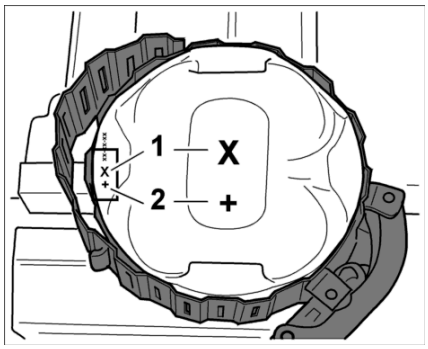


Application of tool 9500/3

5. Press circlip into assembly tube using the **assembly aid 9500/3**.

Assembling piston pin circlip

6. Position assembly tube on piston eye and press piston-pin circlip into the ring groove using the pressure pin **assembly tool 9602/1**. The circlip must audibly engage.



Installation position of circlip

7. Check installation position and secure fit of circlip. The lug of the circlip must always be touching the contact surface running in the direction of the oil piston shank opposite the piston ring grooves.
8. Repeat steps for pistons/connecting rods on **cylinders 2 and 3**.

top of page

Piston markings

Piston markings

Piston marking

Markings on piston crown: Replacement pistons are available from Porsche Parts Service only in dimensional group '**X**' and in two weight groups '**+**' **and** '**-**'. The weight groups are listed in the table.

- **Marking X** appears as a large coloured stamp in the middle of the piston crown, small as an engraved feature **-1-** .
- **Marking + or - appears** appears as a large coloured stamp in the middle of the piston crown, small as an engraved feature **-2-** .

Weight group	Full weight in g (with piston rings) 997 3.8l - Ø 99mm	Full weight in g (with piston rings) 997 3.6l - Ø 96mm
-	**536 - 542**	**525 - 530**
+	**542 - 548**	**531 - 536**

top of page

Installing pistons

Installing pistons

 ATTENTION

Risk of damage due to particles of dirt.

- **Oil bores/oil ducts can become blocked up.**

→ When working on the engine, absolute cleanliness is essential.
→ Lay removed engine parts on a clean base and cover them without fail.
→ Use the **cover for dust protection when fitting the engine NR.165** on the engine assembly support.

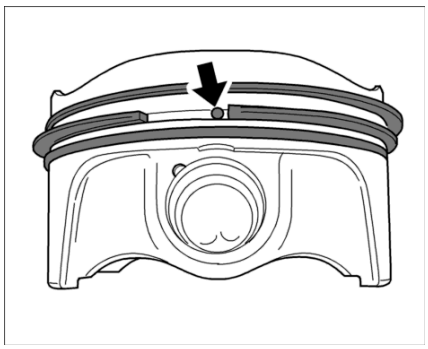
 **Note**

- *If the piston, piston pin or piston-pin circlip are incorrectly assembled, the corresponding piston can be pulled out of the cylinder as follows. Degrease centre of piston crown with acetone. Coat suitable plastic mandrel with instant adhesive, allow adhesive to cure, pull out piston, remove plastic mandrel immediately.*

 **Note**

- *All O-rings and seals (shaft seals) and micro-encapsulated screws or lock nuts must be replaced.*

 **Note**



- *Replace M9 x 1.25 connecting rod bolts and the piston-pin circlips that have been removed.*

Note

- *With the help of a second person, carefully place crankcase half 4-6 in position on crankcase half 1-3.*

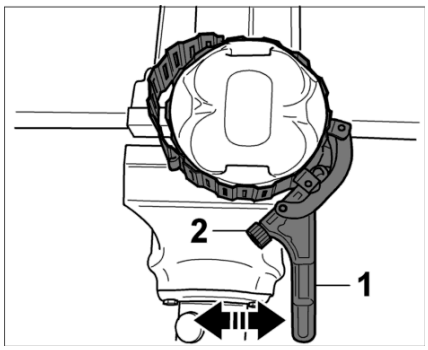
Piston/connecting rod assembly, cylinder 1-3:

1. Install gear carrier in crankcase half 1-3. →134819 Removing and installing crankshaft - "Touching up" section
2. Screw on belt pulley/vibration balancer with fastening screw. Turn the crankcase at the assembly support so that cylinders 1, 2 and 3 stand vertically upwards.
3. Turn crankshaft on belt pulley/vibration balancer until the connecting-rod bearing from cylinder 1 stands vertically upwards. In doing so, the bore marked **'U4'** can be fixed with the bore in the crankcase using the **fixing pin 9595/1**.

Twist lock of piston ring, second groove

Note

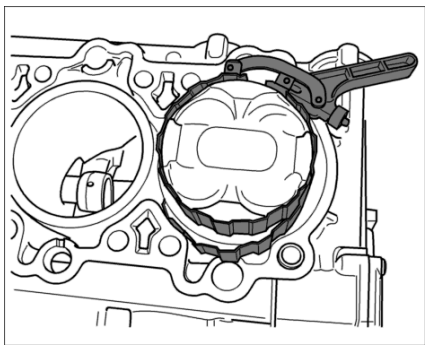
- *Observe information on aligning piston ring gaps at all times.*



4. Prepare pre-assembled piston/connecting rod unit of **cylinder 1** for installation. To do this, clamp the connecting rod to a vice with aluminium jaws, for example. Align the gaps in the piston rings as follows:

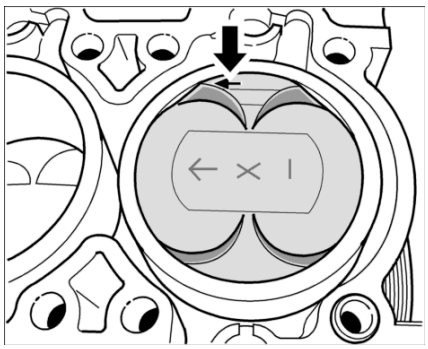
4.1. Align the second groove on the piston ring with the twist lock **-arrow-** .

4.2. Turn gap of piston ring, groove 1, through 180°.



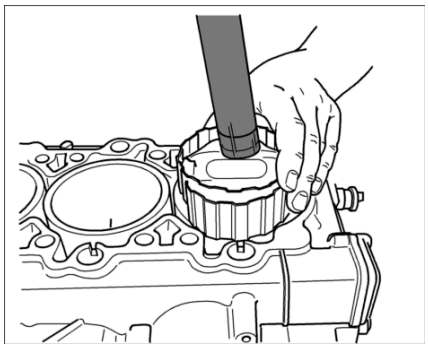
4.3. Turn the gaps of the oil scraper ring so that the gaps are located at the oil piston shank area. When doing so, the gaps of both rings and the springs should not be on top of one another (they should be slightly offset with respect to one another).

5. Coat piston and piston rings with plenty of new engine oil.
6. Insert connecting rod bearing in connecting rod and connecting rod cap. Coat sliding surface with Optimol Optipit (available from Porsche Parts Service: 000.043.204.17).



Piston with restraining strap

7. Position clamping tool **universal piston ring restraining strap, 75 - 125 mm NR.55** on the piston; when doing so, ensure that the piston rings are positioned correctly. Adjust restraining strap to piston diameter, use tensioning lever **-1-** and tensioning screw **-2-** to fine-tune the adjustments.
8. Coat cylinder bores 1-3 with plenty of new engine oil.



Piston in cylinder bore

9. Insert piston, together with connecting rod, into cylinder bore 1, **universal piston ring restraining strap, 75-125 mm NR.55** must lie evenly on cylinder surface.

Piston - installation position in crankcase

10. **Pay attention to direction of assembly: arrow on piston crown always points to flywheel side**

Pressing piston into cylinder bore

ATTENTION

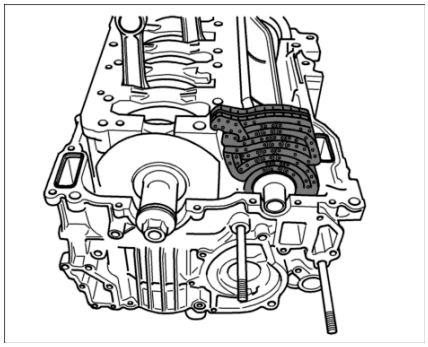
Incorrect and careless assembly of pistons.

- **Component damage (pistons, piston rings, cylinder line)**

→ Assemble pistons carefully and gently.

→ Stop process immediately if there is increased resistance during assembly; eliminate the cause of the problem.

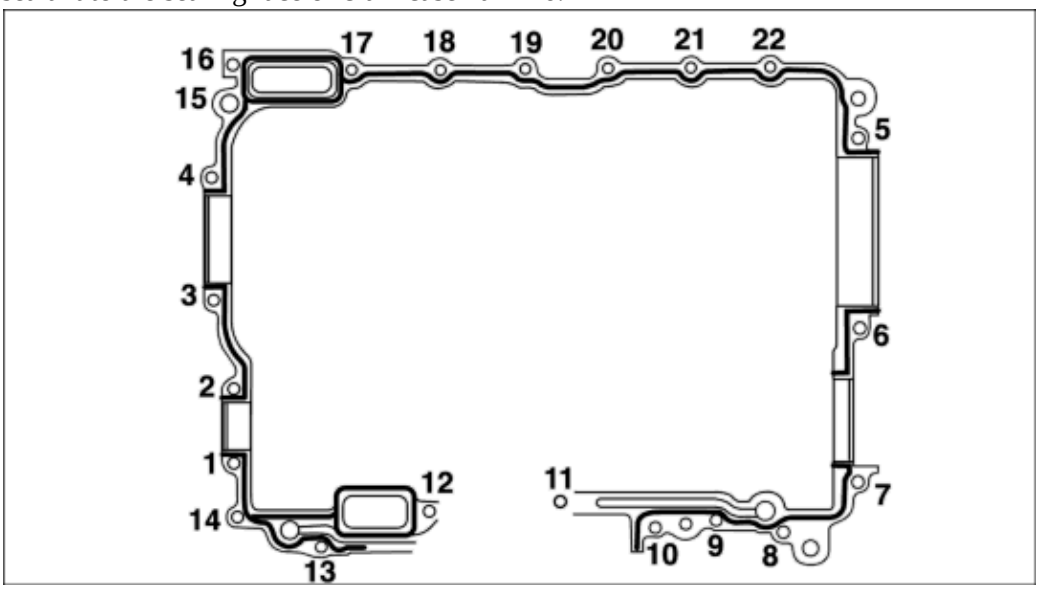
11. Hold the piston ring restraining strap firmly and press piston in a cable into the cylinder bore using a plastic mandrel.
12. **Check installation position of connecting rod:** In the installation position, the recesses of the twist lock in the connecting rod bearing point towards the oil pan.



Connecting rod bolts

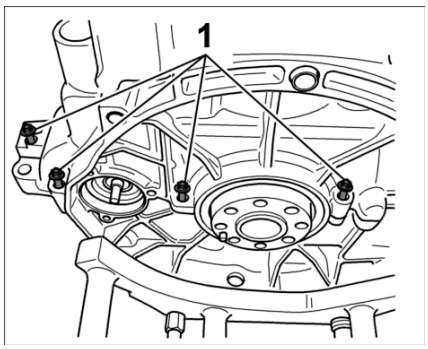
13. Turn crankcase through 180° on assembly support, position marked connecting rod cap with new, greased bearing shell and screw in two new connecting rod bolts.
14. First, screw in connecting rod bolts to the required torque and tighten to the specified torque angle. Then loosen the bolts again. The final tightening is performed again with an initial tightening per the torque and the concluding tightening is performed with the torque angle wrench. **→Initial tightening: 15 ftlb.** ; **→Final tightening - torque angle: 110 °**
15. Repeat steps 3-14 for the pistons/connecting rods on cylinders 2 and 3. For the assembly of cylinder 2, bore **'U5'** will be fixed with the fixing pin after the crankshaft is turned on the belt pulley/vibration balancer; for the assembly of cylinder 3, bore **'U6'** will be fixed.
16. Remove the cylinder-head screw from crankcase 1-3 using the **spacer sleeve 9613**.

Only the following sealants may be used to seal the engine:



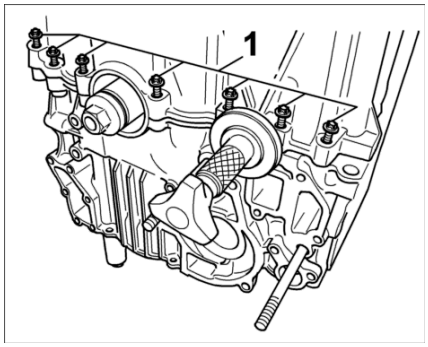
- Loctite 5900

- Drei Bond or Loctite 1209 (optional)



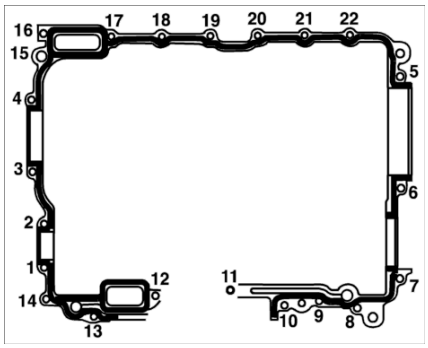
Aligning timing chain and connecting rod

17. Prepare crankcase half 4-6 to fit it onto crankcase half 1-3. Carefully grease sealing faces of both halves with acetone. Align connecting rods 4-6 vertically upwards and fold timing chain.
18. Apply sealant to the sealing face of crankcase half 4-6.



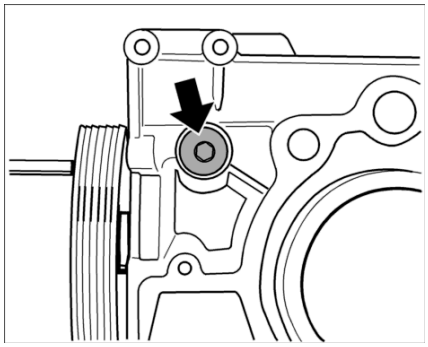
Application of sealant and tightening sequence for crankcase

19. With the help of a second person, place crankcase half 4-6 in position on crankcase half 1-3. Knock gently on crankcase half 4 -6 using a plastic hammer. Pull timing chain out through chain space using a bent welding wire.



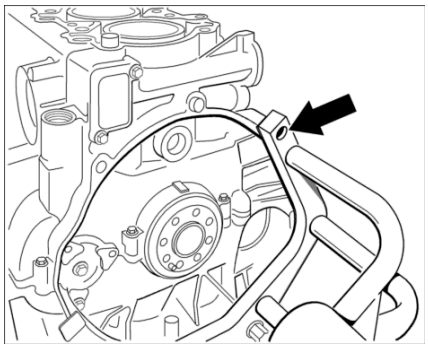
Coated screws for cross bolt connection

20. Position four new, coated M6 x 35 Torx screws **-1-** on flywheel side.



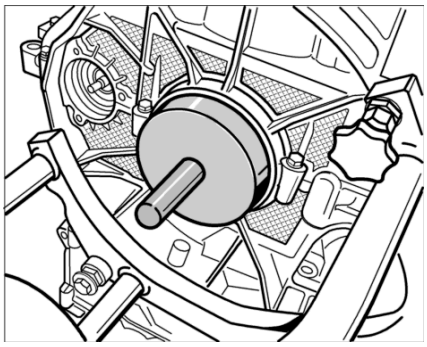
Cross bolt connection on belt side

21. Position seven M6 x 35 Torx screws on belt pulley side **-1-** ; then fit special tool **centring mandrel 9645** for the intermediate shaft. Position centring mandrel on the mounting point of the oil pump and turn the star knob clockwise until it is braced in the crankcase.



Tightening sequence for crankcase

22. Position the remaining 13 M6 x 35 Torx screws on the crankcase. Tighten all screws in the cross bolt connection to the required torque in accordance with the specified tightening sequence. → **Tightening torque: 9.5 ftlb.**
23. Carefully remove any remaining sealant on crankcase (particularly around the oil pan, intermediate-shaft bearing and crankshaft sealing rings).

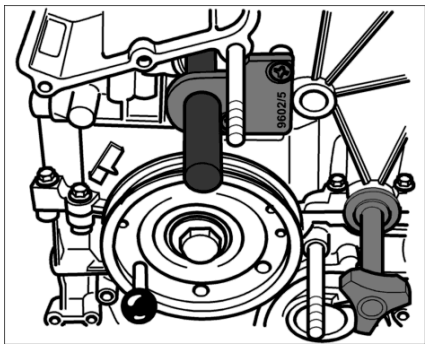


Additional screw for gear carrier, side 4-6

24. Fit inner Torx screw with O-ring M9 x 140 for gear carrier **-arrow-** on crankcase half 4-6. →**Tightening torque: 16 ftlb.**

Mount for crankcase half 4-6 on engine support

25. Tighten third star screw for crankcase half 4-6 on engine support.
26. Remove belt pulley/vibration balancer.
27. Fit crankshaft sealing ring on belt pulley side →137419 Removing and installing crankshaft sealing ring - belt pulley side -"Installing" section.
28. Only position belt pulley/vibration balancer with fastening screw (to turn the crankshaft).



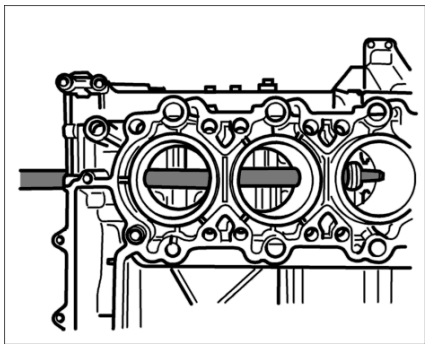
Measuring mandrel 9699/1

29. Check the position of the crankshaft using the **measuring mandrel 9699/1**.
30. Fit crankshaft sealing ring on flywheel side. Use the **insertion device 9699** for the assembly. →135919 Removing and installing crankshaft sealing ring - flywheel side - "Installing" side .

Piston assembly, cylinder side 4-6:

31. Turn the crankcase at the assembly support so that cylinder bank 4-6 stands upwards.
32. Move crankshaft of cylinder 6 to TDC by turning it on the belt pulley/vibration balancer (in a clockwise direction). **Bore U6** on the belt pulley/vibration balancer must be aligned with the fixing bore on the crankcase. Fix the crankshaft using a **fixing pin 9595/1**.

Guide for piston pin assembly



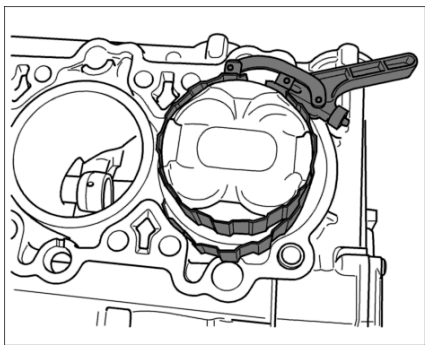
33.

Secure special tool **centring aid 9602/5** to the crankcase using two countersunk crosshead screws.

Note

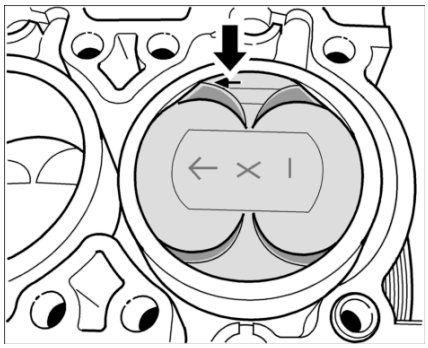
- *Observe information on aligning piston ring gaps at all times.*

34. Prepare pistons for installation in the same way as cylinder bank 1-3 (piston rings, oiling, piston ring tensioning clamp) .



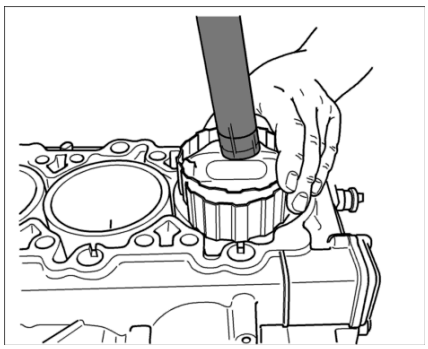
Aligning connecting rod

Note



- *Leave the centring mandrel in the eye of the connecting rod until the relevant piston (4-6) contacts the centring mandrel during assembly.*

35. Align connecting rod using the **centring mandrel 9608**



Piston in cylinder bore

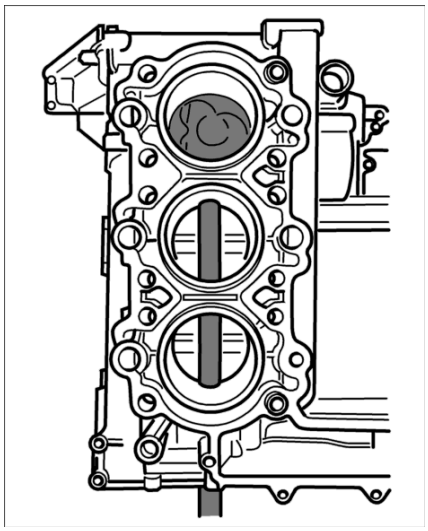
36. Coat cylinder bore with new engine oil. Place piston 6 on cylinder bore 6 using the **universal piston ring restraining strap, 75-125 mm NR.55**.

Piston - installation position in crankcase

37. **Pay attention to direction of assembly: arrow on piston crown always points to flywheel side**

Pressing piston into cylinder bore

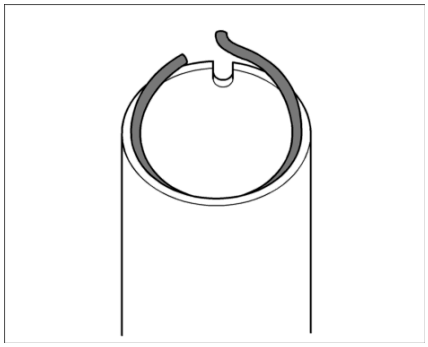
ATTENTION



Incorrect and careless assembly of pistons.

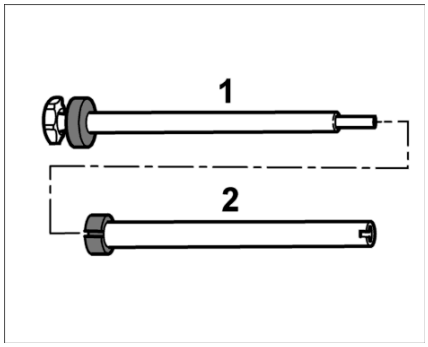
- **Component damage (pistons, piston rings, cylinder line)**

→ Assemble pistons carefully and gently.



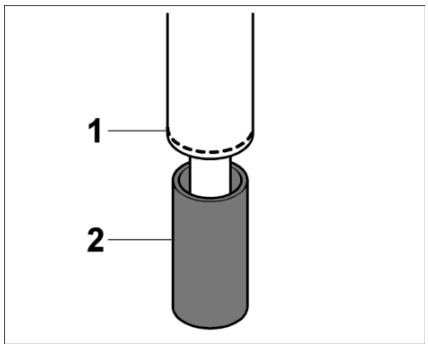
→ Stop process immediately if there is increased resistance during assembly; eliminate the cause of the problem.

38. Hold the piston ring restraining strap firmly and press piston in one move into the cylinder bore using a plastic mandrel until the piston touches the centring mandrel
39. **Check installation position of connecting rod:** In the installation position, the recesses of the twist lock in the connecting rod bearing point towards the oil pan.



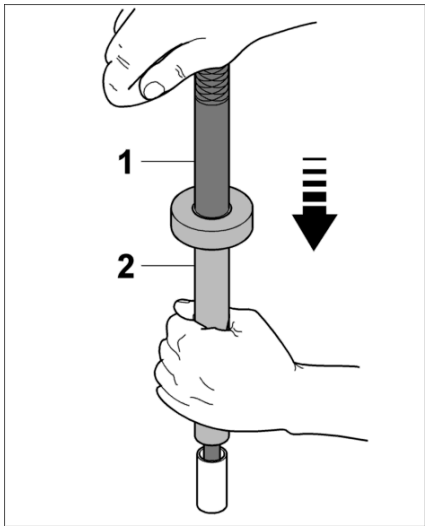
Align piston connecting rod using the centring mandrel.

40. Align piston and connecting rod again using the **centring mandrel 9608** before fitting the piston pins.



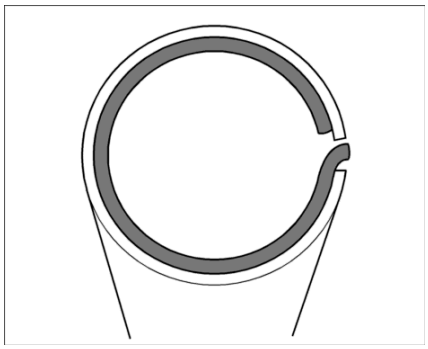
Inserting piston-pin circlip into assembly tube

41. Insert piston-pin circlip into the assembly tube of the special tool **assembly tool 9602/1**. Insert the lug of the circlip so that it is aligned to the right in the groove.



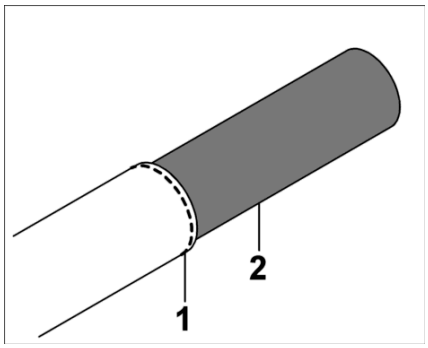
Pressure pin in assembly tool

42. Insert pressure pin **-1-** carefully into assembly tube **-2-** , ensuring that the circlip does not pop out.



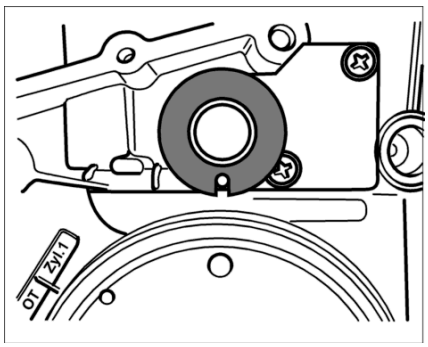
Assembly tool on piston pin

43. Oil piston pin **-3-** with new engine oil and place it in an upright position on a clean surface on the workbench. Position assembly tube with circlip **-1-** and pressure pin on piston pin.



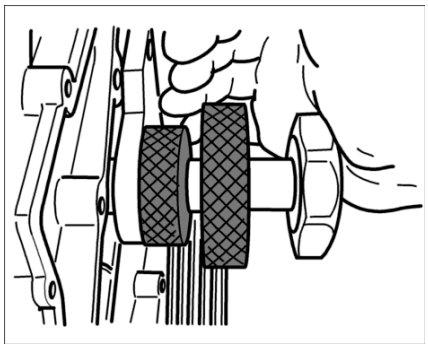
Moving piston-pin circlip into installation position

44. Press piston-pin circlip with pressure pin **-1-** onto piston pin; while doing so, press assembly tube **-2-** firmly onto piston pin. This will move the piston-pin circlip into the correct installation position.



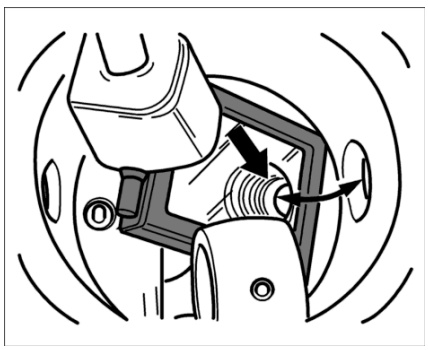
Installation position of piston-pin circlip in assembly tube

45. Check installation position of piston-pin circlip in assembly tube.



Piston pin and circlip on assembly tool 9602/1

46. Insert **assembly tool 9602/1** with piston pin circlip and piston pin through the **centring aid 9602/5** into the crankcase. Press piston pin into assembly bore of piston/connecting rod eye.



Position of assembly tube on centring aid 9602/5

47. Groove in assembly tube must sit on dowel pin of centring aid 9602/5.

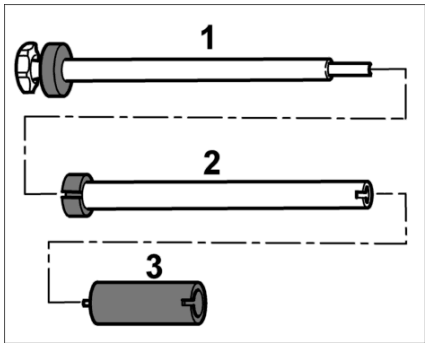
Inserting piston-pin circlip in cylinder 6

48. Push the piston pin circlip to its installation position by briefly and forcefully striking the palm of your hand against the star knob of the pressure pin.

Seating of piston-pin circlip

49. Using a mirror, check that the piston-pin circlip is seated correctly.

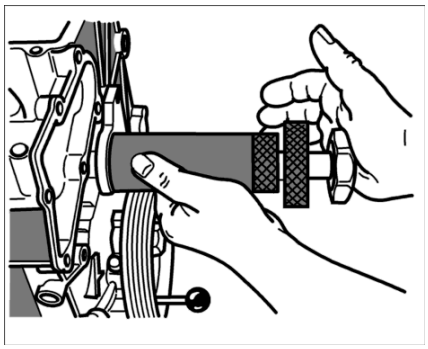
ATTENTION



Incorrect and careless assembly of pistons.

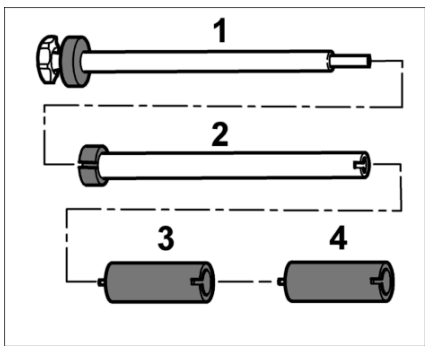
- **Component damage (pistons, piston rings, cylinder line)**

→ Assemble pistons carefully and gently.



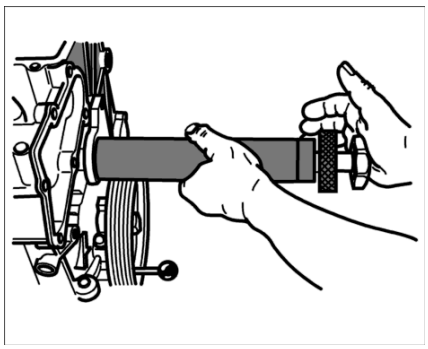
→ Stop process immediately if there is increased resistance during assembly; eliminate the cause of the problem.

50. Repeat steps 35- 49 carefully to assemble pistons 5 and 4. During this process, the crankshaft is fixed to the crankcase through **bore U5** for cylinder 5 and through **bore U4** to the belt pulley/vibration balancer. Convert the **assembly tool 9602/1** as described below.



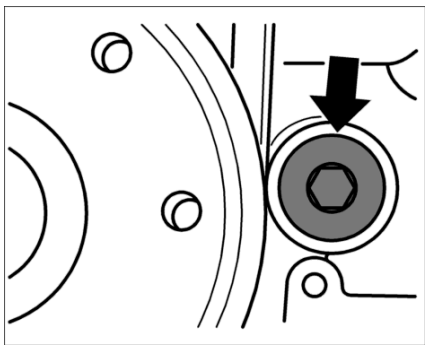
Spacer sleeve for cylinder 5

51. Push a spacer sleeve onto the assembly tube for the assembly of pistons pins and circlip on cylinder 5.



Inserting piston-pin circlip for cylinder 5

52. Fit the piston-pin circlip for cylinder 5 using a sleeve.



Spacer sleeves for cylinder 4

53. Push two spacer sleeve onto the assembly tube for the assembly of pistons pins and circlip on cylinder 4.

Inserting piston-pin circlip in cylinder 4

54. Fit the piston-pin circlip for cylinder 4 using two sleeves.

Screw plug for assembly bore in crankcase

55. Once the pistons have been installed, seal the bore for the piston pin and circlip assembly on the crankcase using the aluminium screw plug and new sealing ring. →**Tightening torque: 59 ftlb.**

 WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

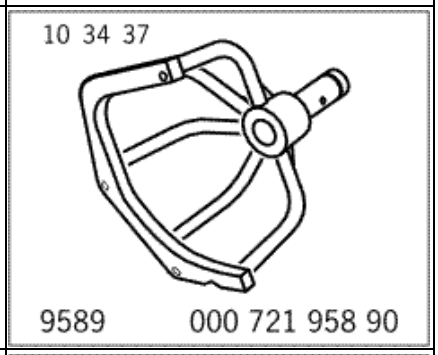
Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

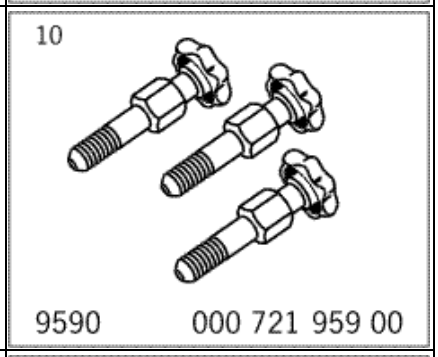
- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

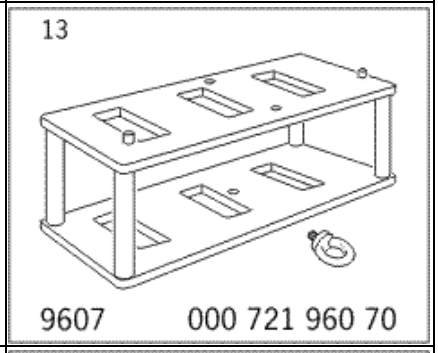
→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

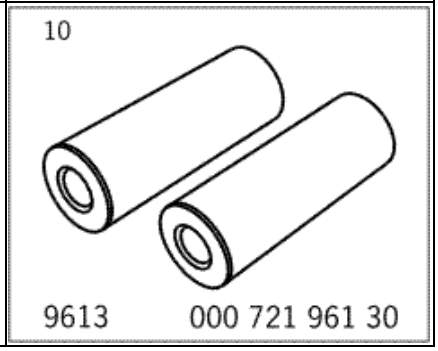
 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.









- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

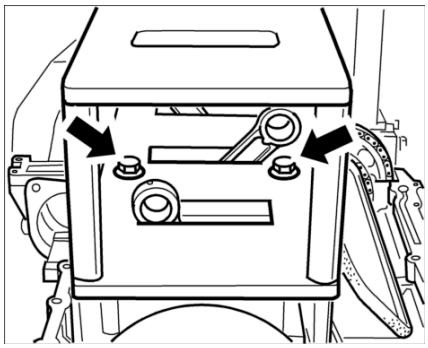
Removing crankshaft, preliminary work

Removing crankshaft, preliminary work

Removing crankshaft, preliminary work

ATTENTION

Risk of damage due to particles of dirt.

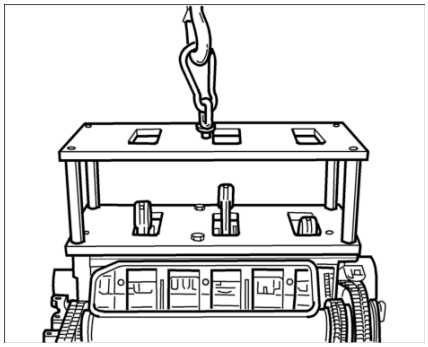


- **Oil bores/oil ducts can become blocked up.**

→ When working on the engine, absolute cleanliness is essential.

→ Lay removed engine parts on a clean base and cover them without fail.

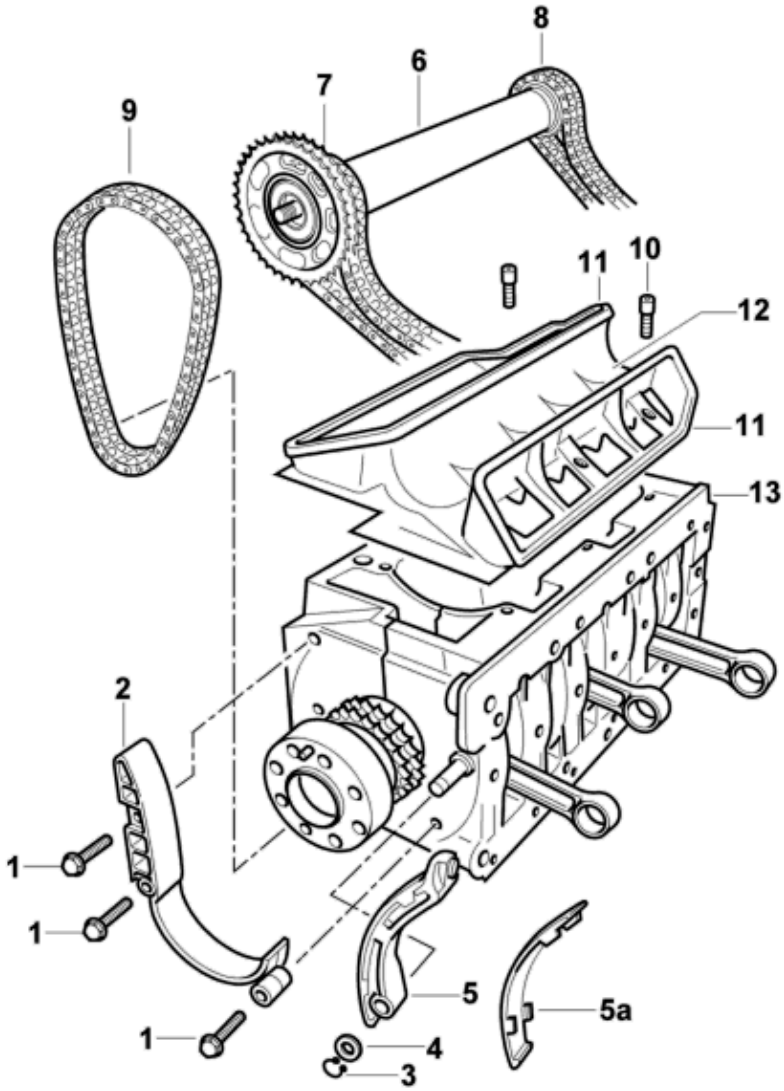
→ Use the **cover for dust protection when fitting the engine NR.165** on the engine assembly support.



1. Disassemble engine to crankcase →100137 Disassembling and assembling engine - "Disassembling" section.
2. Remove piston →131020 Removing and installing pistons - "Removing" section.

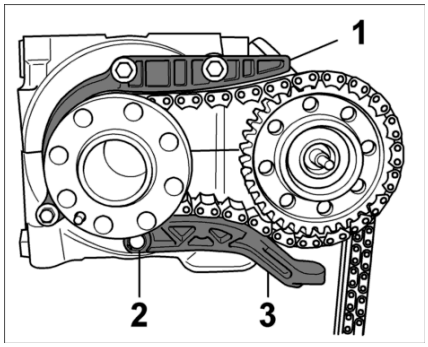
Retaining device, gear carrier

3. Fix special tool **retaining device 9607** to the gear carrier with two M10 x 25 hexagon-head bolts **-arrows-**.



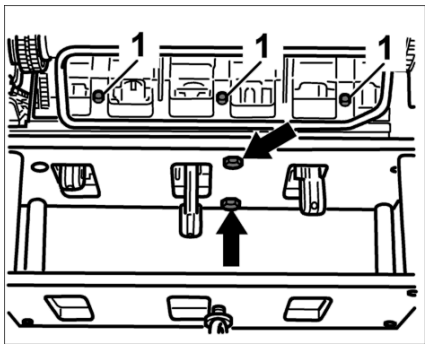
4. Unscrew cylinder-head screws with **spacer sleeves 9613**.

Lifting gear carrier out of crankcase



5. Screw in retaining eyes on retaining device, lift gear carrier out of the crankcase half using a workshop crane or engine lifter and secure in a vice.
6. Remove accessories on gear carrier.

Gear carrier components overview with intermediate shaft



Overview of gear carrier with intermediate shaft

Item No.	Designation	Number	Removal	Fitting
1	M6 x 40 fastening screw with captive washer	3		Tightening torque [Nm] (ftlb.)
2	Guide rail	1	Visually inspect for scoring or damage and replace if necessary	
3	Snap ring	1		Replace
4	Shim 10 x 16 x 1.2	1		
5	Tensioning rail	1		
5a	Lining for tensioning rail	1	Visually inspect for scoring or damage and replace if necessary	
6	Intermediate shaft	1	Check toothing for signs of damage	
7	Chain for camshaft driving mechanism, cylinder 1-3	1	Check for visible damage, replace if necessary	
8	Chain for camshaft driving mechanism, cylinder 4-6	1	Check for visible damage, replace if necessary	
9	Chain for intermediate shaft driving mechanism	1	Check for visible damage, replace if necessary	
10	Oil guide fastening screw (Torx, M6 x 16)	6		Replace micro-encapsulated screws
11	Seal for oil guide	2		Replace
12	Oil guide	1		
13	Gear carrier	1	Fit on **retaining device 9607**	Fit on **retaining device 9607**

Chain guide, intermediate shaft

7. Remove tensioning rail and guide rail. Unscrew three M6 x 40 hexagon-head bolts and remove tensioning rail **-1-** . Remove circlip and washer **-2-** , remove guide rail **-3-** .
8. Remove intermediate shaft with timing chains and place on a clean surface. Check timing chains and toothing on intermediate shaft for signs of damage, replace if necessary.

Oil guide, intermediate shaft

9. Remove oil guide on gear carrier. Unscrew six M6 x 16 Torx screws **-1-** and remove guide with seals.

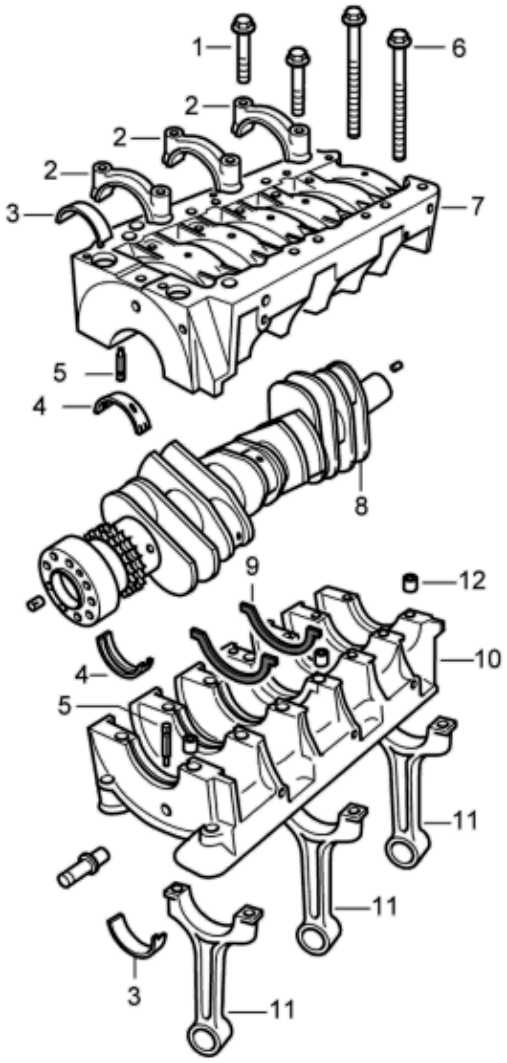
Removing crankshaft

Removing crankshaft

ATTENTION

Engine damage due to incorrect allocation of connecting rod and connecting rod cap



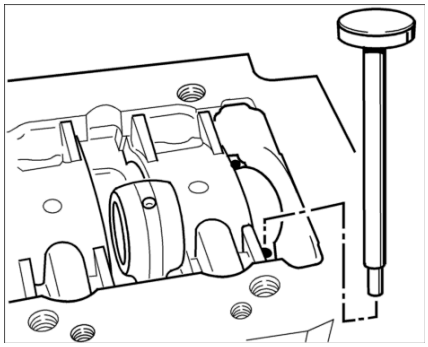
→ Remove connecting rods one-by-one

→ When disassembling connecting rod cap, allocate it immediately to associated connecting rod

→ Mark installation position and cylinder allocation on connecting rod and connecting rod cap, using an electric engraver, for example

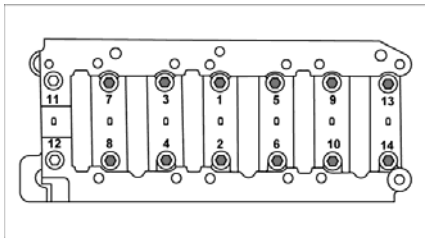
→ Do not use prick punches or number embossing tools

Gear carrier components overview with crankshaft



Overview of gear carrier

Item No.	Designation	Number	Removal	Fitting
1	Connecting rod bolt, M9 x 1.25	6		Always replace
2	Connecting rod cap	3	Screw on immediately to associated connecting rod	
3	Connecting rod bearing shell	6		Replace, grease (Optimol Optipit)
4	Crankshaft bearing shell	14		Replace, coat with new engine oil
5	Oil spray jet	6	Clean, replace if damaged	Press in right to the stop using a plastic mandrel (ø 4 mm)

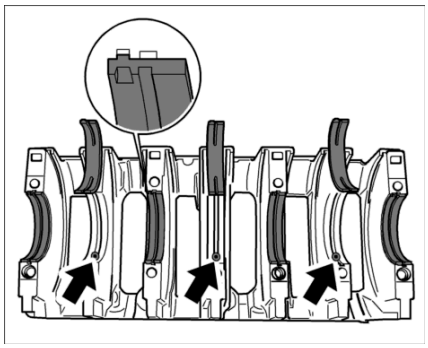


6	Thrust-bearing screw, M9 x 127	14		Tightening torque [Nm] (ftlb.)
7	Gear carrier half, cylinder 1-3	1		
8	Crankshaft	1		
9	Thrust washer	2		Position correctly, oil grooves always point outwards
10	Gear carrier half, cylinder 4-6	1		
11	Connecting rods, cylinder 4-6	3	Immediately join with the associated connecting rod cap after removal	

1. Fasten the special tool **retaining device 9607** onto the workbench using two screw clamps.
2. Mark connecting rod 4-6 in the installation position.

Plastic mandrel

3. Remove connecting rods on cylinder side 4-6 one after another. Loosen the two connecting rod bolts on each connecting rod, remove connecting rod cap. Using a plastic mandrel (possibly an in-house tool) push connecting rod down and out. Immediately after this, screw on loosely to associated connecting rod cap. Place on a clean surface.



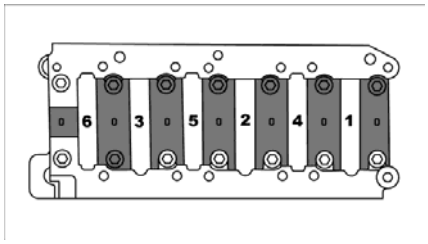
Gear carrier

4. Loosen 14 M9 x 127 screws for the gear carrier in the opposite order to the tightening sequence, from the outside inwards, and unscrew them.

Note

Watch out for bearing shells and oil spray jets that may fall out

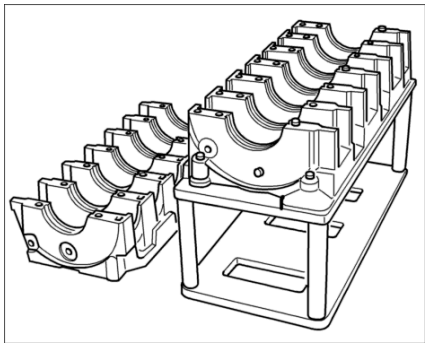
5. Remove gear carrier half 1-3, possibly tapping it gently with a plastic hammer.



Oil spray jets in gear carrier half 1-3

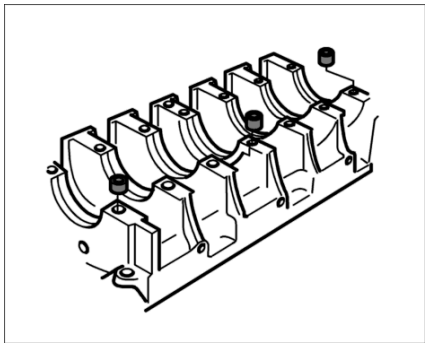
6. Place gear carrier half on a clean surface, remove seven crankshaft bearing shells and three oil spray jets for piston cooling.
7. Lever out crankshaft with timing chain and place on a soft, clean surface.
8. Remove seven crankshaft bearing shells and oil spray jets for piston cooling from gearing carrier half 4-6. Unscrew gear carrier half from the retaining device and place on a clean surface.

top of page



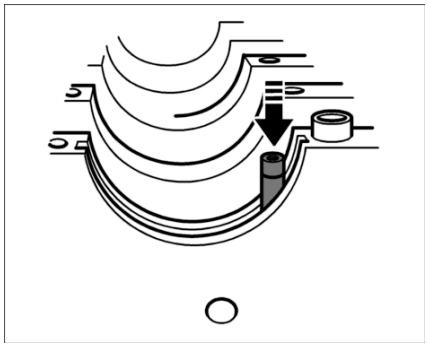
Installing crankshaft

Installing crankshaft



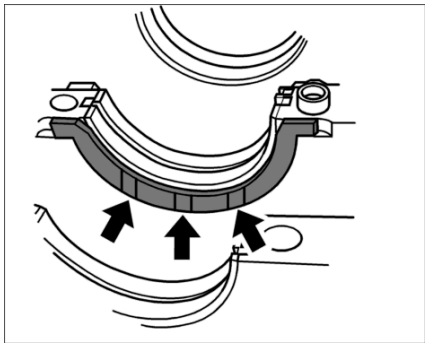
Connecting rod bearing position in gear carrier

Overview of connecting rod bearing position



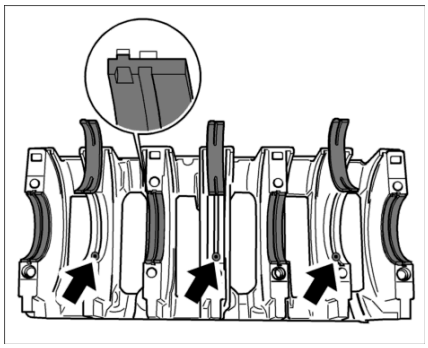
Gear carrier half 4-6 on device

1. Fit gearing carrier half 4-6 on special tool **retaining device 9607** using two M10 x 25 hexagon-head bolts.



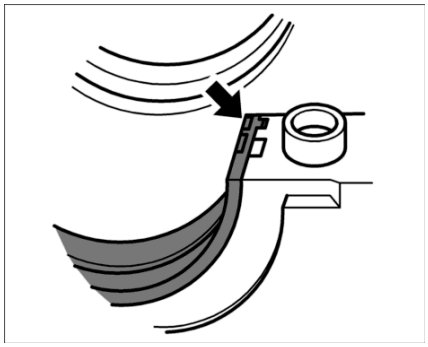
Dowel sleeves, gear carrier 4-6

2. Ensure that the dowel sleeves are seated correctly in gear carrier half 4-6.



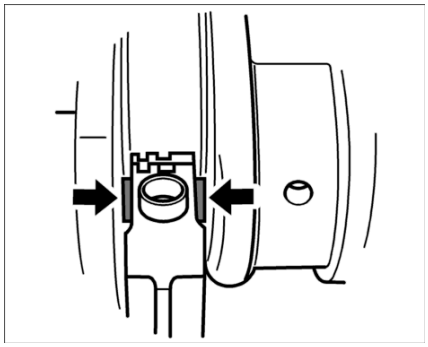
Oil spray jets for piston cooling

3. Insert three oil spray jets in the take-up bores in each of the gear carrier halves, press in gently to the stop using a plastic mandrel (ø 4 mm).



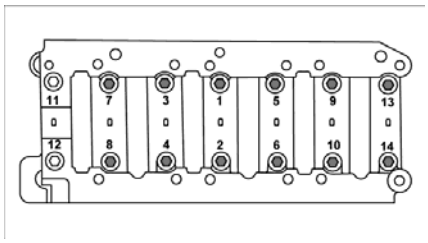
Thrust washer, thrust block

4. Insert two thrust washers onto the centre thrust block (no. 4) of gear carrier half 4-6; when doing so, the oil pockets **-arrows-** must always point outwards (to the belt pulley side or flywheel side).



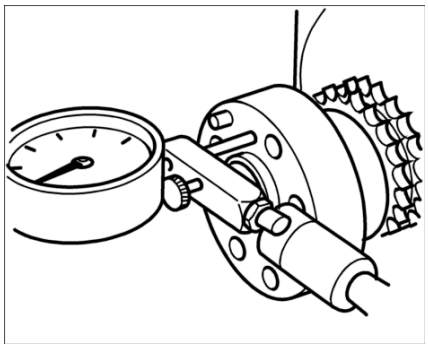
Oil spray jets and bearing shells in gear carrier half 1-3

5. Insert seven new bearing shells for the crankshaft and coat with new engine oil. **Pay attention to the installation position:** the fixing lugs of the bearing shells in gear carrier half 4-6 point towards the dowel sleeve side, the fixing lugs of the bearing shells in gear carrier half 1-3 face the opposite side.



Twist lock of bearing shell in gear carrier half 4-6

Twist lock of bearing shell



Seating of thrust washer with crankshaft

6. Insert crankshaft. Check that the thrust washers are seated properly.
7. Carefully position gear carrier half 1-3 on the crankshaft and gear carrier half 4-6. Fix the gear carrier halves by tapping them carefully with a plastic hammer.

Tightening sequence for gear carrier

8. Position 14 M9 x 127 thrust-bearing screws manually. Pre-tighten screws to the required tightening torque in accordance with the tightening sequence. Then tighten to the required torque angle. →**Initial tightening: 11 ftlb.** ; →**Torque angle: 120 °**

Dial gauge, crankshaft axial play

9. Check axial play of crankshaft. Fit dial gauge and dial gauge holder on gear carrier (flywheel side) and place against crankshaft flange. Press crankshaft manually against probe of dial gauge and set dial gauge to **'0'**. Press crankshaft away from dial gauge. Repeat process several times and note measured value.

Status	Tolerance range	Wear limit
First fitting	0.05 - 0.24 mm	0.28 mm

10. Insert connecting rod bearing in connecting rod and connecting rod cap. Coat sliding surface with Optimol Optipit (available from Porsche Parts Service: 000.043.204.17).

Note

Connecting rod bolts must always be replaced.

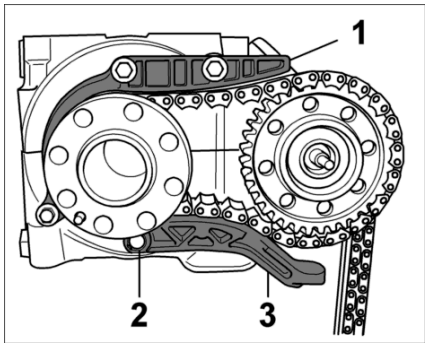
11. Fit each of the connecting rods of cylinder 4-6 with the allocated connecting rod cap at the bearing surfaces of cylinders 4, 5 and 6. Position new screws manually. **Pay attention to the installation position of the connecting rods:** The recesses of the connecting-rod bearing twist lock face the oil pan (when the gear carrier is installed in the crankcase).

Connecting rod bolts

12. First, screw in connecting rod bolts to the required torque and tighten to the specified torque angle. Then loosen the bolts again. The final tightening is performed again with an initial tightening per the torque and the final tightening is performed with the torque angle wrench. →**Initial tightening: 15 ftlb.** ; →**Torque angle: 110 °**

top of page

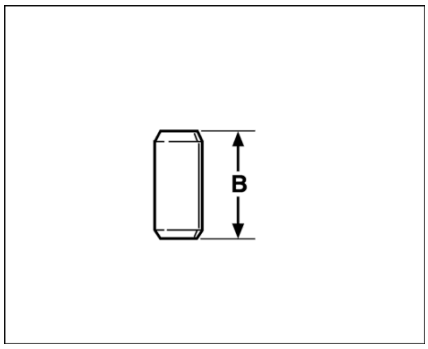
Installing crankshaft, touching up



Installing crankshaft, touching up

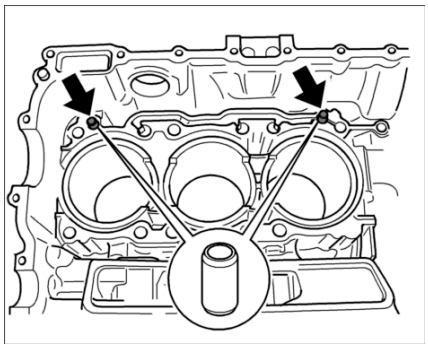
1. Fit oil guide with new seals. Tighten six new M6 x 16 (micro-encapsulated) Torx screws. →**Tightening torque: 7.5 ftlb.**

Note



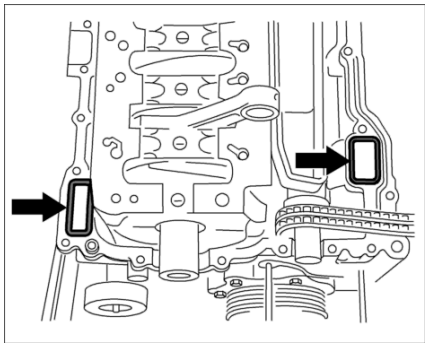
Fix the intermediate shaft to the crankshaft using old O-rings, for example, to secure it.

2. Insert intermediate shaft with timing chains.



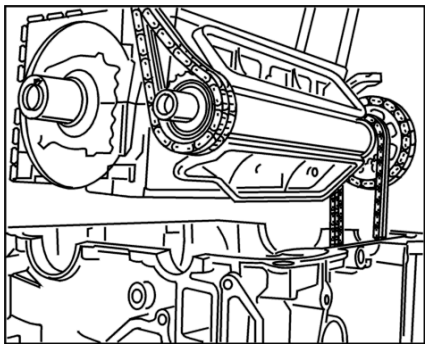
Chain guide, intermediate shaft

3. Install tensioning rail and guide rail. Tighten three M6 x 40 hexagon-head bolts for guide rail **-1-** . Fit tensioning rail **-3-** with new circlip and shim **-2-** . →**Tightening torque: 7.5 ftlb.**
4. Secure **engine support 9589** engine assembly support.
5. Fit crankcase half 1-3 with two **mounting parts 9590** to the **engine support 9589**. Check sealing face to gear carrier for damage. Carefully clean sealing face with a clean cloth that has been soaked in solvent naphtha or acetone.



Dowel sleeves for gear carrier in crankcase

Use only dowel sleeves whose dimension **'B' = 26.5 mm** for fixing the gear carrier.

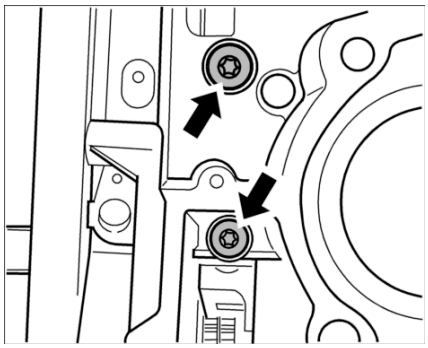


Dowel sleeves, crankcase half 1-3

6. Check dowel sleeves to ensure that they are seated correctly or insert two new dowel sleeves in crankcase **-arrows-** .

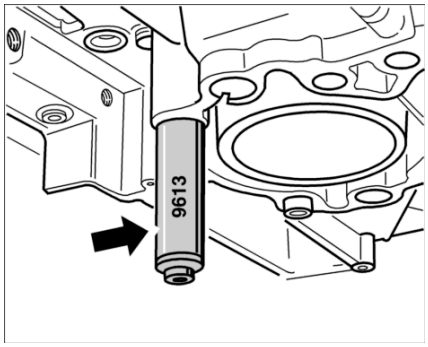
Seals for coolant ducts

7. Replace seals for coolant ducts **-arrows-** .



Gear carrier in crankcase half 1-3

Note



It is advisable to get a second person to assist in inserting the gear carrier into crankcase half 1-3.

8. Insert gear carrier in crankcase half 1-3 with retaining device.

Additional screws for gear carrier 1-3

9. Screw in and tighten two additional screws for fastening the gear carrier to cylinder side 1-3, replace O-ring. **-arrows-** . →**Tightening torque: 16 ftlb.**

Auxiliary screw with spacer sleeve 9613

10. Screw in and tighten another cylinder-head screw with **spacer sleeve 9613** **-arrow-** on the belt pulley side. →**Tightening torque: 15 ftlb.**
11. Unscrew special tool **retaining device 9607** from gear carrier.
12. Install piston →131020 Removing and installing pistons - "Installing" section.

Preliminary work for crankshaft sealing ring on flywheel side

Preliminary work for crankshaft sealing ring on flywheel side

Note

- *In Tiptronic vehicles, the complete engine/transmission unit must be removed.*
- *In vehicles with manual transmission, the sealing ring can be changed on the engine, irrespective of whether it is installed or removed.*

Manual transmission:

1.

Remove manual transmission →343519 Removing and installing transmission - chapter on "removing" [997410 997411 997430 997431 997610 997611 997620 997621]→343519 Removing and installing transmission - chapter on "removing" [997110 997111 997120 997121 997310 997311 997320 997321].

2. Remove clutch →305019 Removing and installing clutch - chapter on "removing".
3. Remove double-mass flywheel →136019 Removing and installing double-mass flywheel - chapter on "removing" [997110 997111 997310 997311 997410 997411 997610 997611]→136019 Removing and installing double-mass flywheel - chapter on "removing" [997120 997121 997320 997321 997430 997431 997620 997621].

Tiptronic transmission

4. Remove engine →100119 Removing and installing engine - chapter on "removing".
5. Remove Tiptronic transmission →373527 Removing and refitting automatic transmission - chapter on "removing" [997110 997111 997120 997121 997310 997311 997320 997321]→*373527 21 Removing and refitting automatic transmission - chapter on "removing" [997410 997411 997430 997431 997610 997611 997620 997621]*.
6. Remove drive plate for converter →136319 Removing and installing drive plate for converter - chapter on "removing".

top of page

Removing crankshaft sealing ring on flywheel side

Removing crankshaft sealing ring on flywheel side

Note

Perform a visual inspection of the crankshaft flange and crankcase bore for damage.

ATTENTION

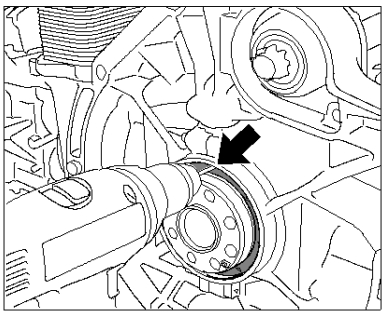
Ingress of dirt

- **Risk of engine damage.**

→ When working on the engine, absolute cleanliness is essential.

1. Carefully remove small edges or burrs on the chamfer of the crankshaft flange with an oilstone. Then, carefully remove metal filings and any dirt remaining on the crankshaft journal and crankcase bore (using a clean, lint-free cloth that has been soaked in solvent naphtha or acetone).

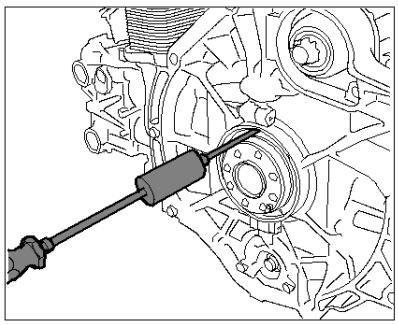
ATTENTION



The crankshaft flange can be damaged if not cleaned correctly.

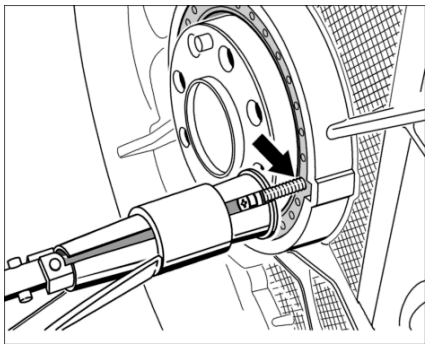
- **Leaks**

→ Never use an abrasive or polishing cloth or brushes with metal bristles.



→ Follow cleaning instructions.

2. If there are corroded spots on the crankshaft flange, clean them off using a metal-polishing pad (e.g. Nevr Dull, available in car and motor bike accessory stores). Then, carefully rub off the flange (using a clean, lint-free cloth that has been soaked in solvent naphtha or acetone).
3. Punch the **installed** sealing ring at a depression (round window in the ring) with a **drift punch (1 mm tip) NR.167**.

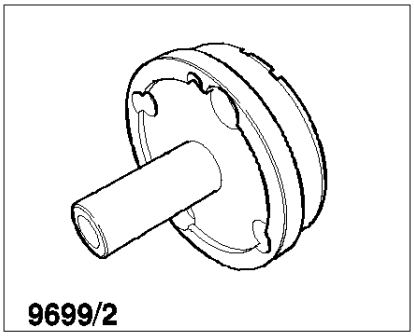


Boring the sealing ring

4. Drill crankshaft sealing ring at the punched position with a greased drill bit (ø 3 mm) and carefully remove the swarf (e.g. with compressed air).

Pulling out sealing ring

5. Screw extractor tip of the tool **puller, model G for sealing rings NR.168-1** into the bore on the sealing ring and pull out the sealing ring.
6. Alternatively, screw a sheetmetal screw with washer approx. 5 mm into the bore.



Pulling out sealing ring

7. Pull out sealing ring using **puller 9237** at the tapping screw.
8. Check crankshaft flange and crankcase bore for damage.
9. If necessary, clean the crankshaft flange again using the metal-polishing pad. Then, carefully degrease the flange and crankcase bore using a clean, lint-free cloth that has been soaked in solvent naphtha or acetone. Ventilate this for at least three minutes to prevent the acetone vapours from destroying the new sealing ring.

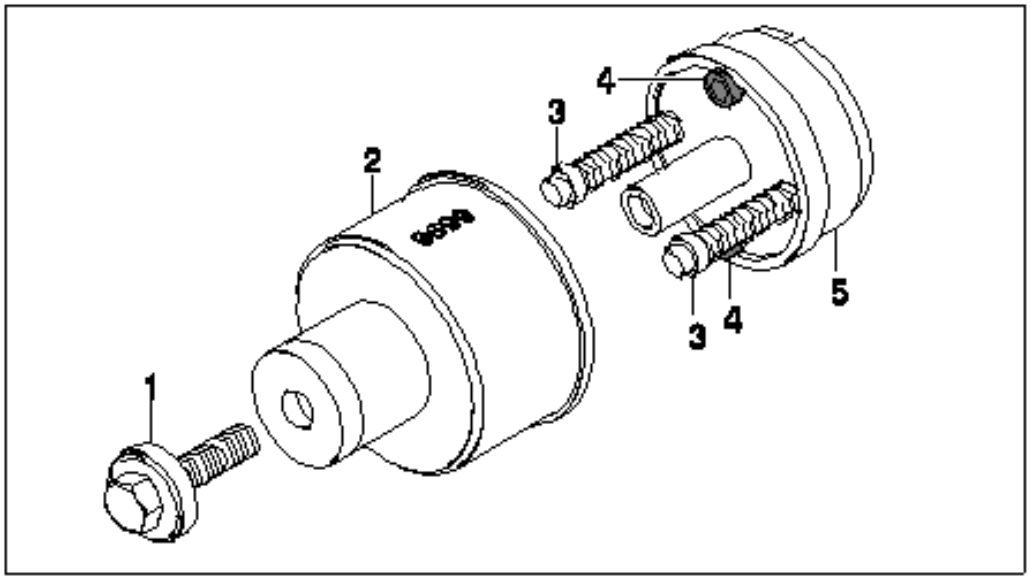
Installing crankshaft sealing ring on flywheel side



Installing crankshaft sealing ring (PTFE) on flywheel side

Insert part 9699/2

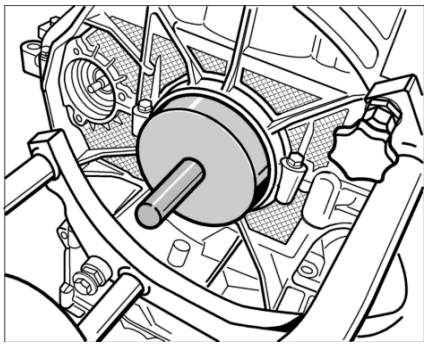
New insert part **assembly aid P 9699/2** for special tool **insertion tool P 9699**.

Component overview of insertion tool

Individual parts of insertion tool

Item	Designation	Explanation
1	Screw	For pulling in the sealing ring
2	Sleeve	Body of insertion tool 9699
3	Guide pin	For guiding the insert part **-5-** into the sleeve.
4	Fastening screws	For securing the insertion tool on the crankshaft flange
5	**Assembly aid P 9699/2**	For fitting the PTFE sealing ring with supporting sleeve

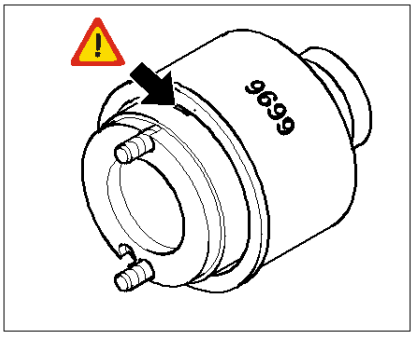
1. Fit **assembly aid P 9699/2** into the **insertion tool P 9699**. To do so, unscrew the hexagon-head bolt and replace the insert parts.



ATTENTION

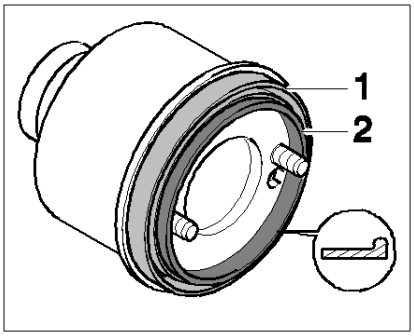
Sharp tool edges and burrs.

- **Damage to the sealing lip.**



→ Always examine tools for signs of burrs and sharp edges.

2. Small burred spots or damaged areas on the tools can be eliminated with a nail file; then whet with an oilstone, fine abrasive or polishing cloth. Remove residual dirt on the tools, e.g. using solvent naphtha or acetone.



Checking that crankshaft is centred using measuring mandrel 9699/1

3. Check crankshaft installation position. To do this, insert special tool **measuring mandrel 9699/1** across the crankshaft flange into the fitted bore of the crankcase **-figure-** . The measuring mandrel must be placed with slight resistance in the bore. If the measuring mandrel cannot be positioned, the engine must be replaced.

Adjusting insertion part for positioning sealing ring

4. Adjust insertion tool in order to position the supporting sleeve of the sealing ring. Unscrew the hexagon-head bolt until the groove of the **assembly aid P 9699/2** is flush with the contact surface of the sleeve **-arrow-** .

Sliding PTFE sealing ring with supporting sleeve onto tool

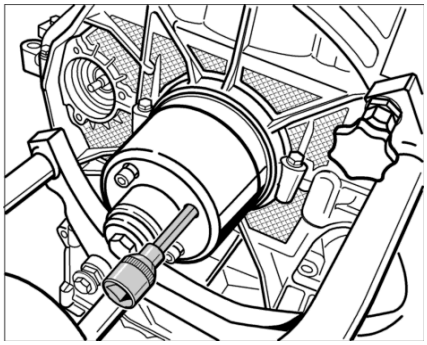
ATTENTION

Damage to the sealing lip.

- **Leaks**

→ The crankshaft flange and tools must be perfectly clean and free of grease.

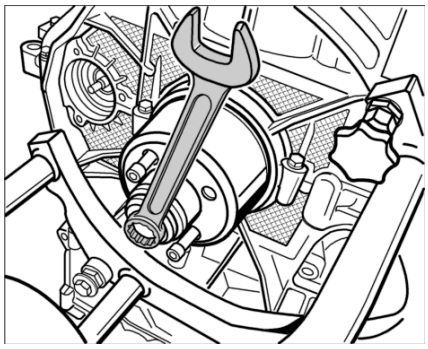
→ The sealing ring must be fitted dry, i.e. no oil, grease or other lubricants can be used.



→ The crankcase bore must not be oiled.

→ The sealing ring can only be positioned on the assembly tool using the supporting sleeve.

→ The new crankshaft sealing ring (PTFE) is supplied on a supporting sleeve as a spare part.

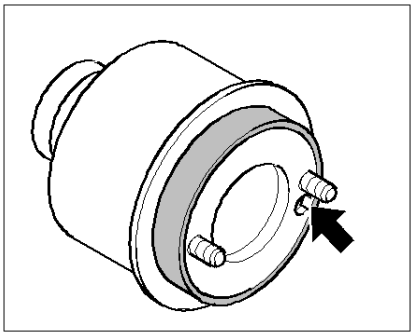


→ Do not remove the sealing ring from the supporting sleeve.

5. Slide new crankshaft sealing ring **-1-** with supporting sleeve onto the **assembly aid P 9699/2** by pushing only on the sleeve **-2-** . The collar of the sleeve must point away from tool **-inset-** . Make sure sealing ring is dry.

Fit insertion tool on crankshaft flange (shown with engine removed)

6. Fit **insertion tool 9699** between the two internal M8 pan-head screws, (hexagon socket a/f 8) on the crankshaft flange and fasten it. The crankshaft flange's dowel pin must sit in the bore of the device.



Inserting sealing ring using tool 9699

Note

After pulling in the sealing ring, leave assembly tool 9699 in place for about one minute so that the sealing lip can settle into position on the crankshaft flange.

7. To position the crankshaft sealing ring correctly on the crankshaft flange, turn at the hexagon (a/f 19) of the device in a clockwise direction as far as it will go **-figure-** . Let the tool in place for about one minute.
8. Remove tool. Loosen the large hexagon-head bolt and the two inner hexagon-head bolts alternately on the crankshaft flange until the tool can be removed.
9. Check whether the sealing ring is properly seated and aligned. To do this, measure at four points, offset by 90°, from the flywheel attachment surface on the crankshaft flange to the sealing ring (outer radius). → **Dimension: 13 mm**

Support ring on insertion tool

10. Leave supporting sleeve on the tool following assembly to protect the edges of the tool. Carefully lift off the sleeve at the bore with a small screwdriver to remove it.

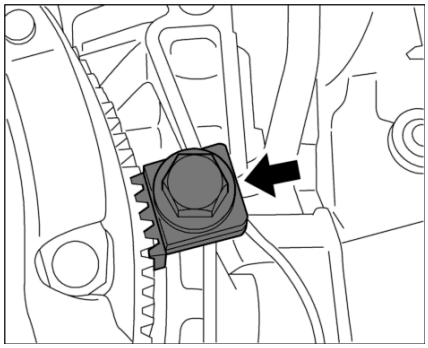
Removing double-mass flywheel - 3.8 l

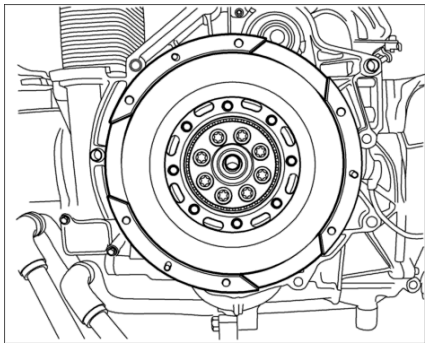


Removing double-mass flywheel - 3.8 l

Overview of double-mass flywheel, 3.8 l

Component overview

- 1 - Double-mass flywheel, 3.8 l
- 2 - Fastening screw for double-mass flywheel, (8 M10 screws)
- 3 - Clutch plate
- 4 - Clutch pressure plate
- 5 - Fastening screw for clutch pressure plate, (6 M8 screws)



Toothed segment 9538/1

Note

The **toothed segment 9538/1** must be bored to ø 15 mm to guarantee a perfect fit and to avoid damaging the thread in the crankcase.

1. To counter, fit **toothed segment 9538/1** to the crankcase using an M12 x 50 hexagon-head bolt (fine thread).

2. Loosen and unscrew fastening screws on flywheel. Carefully take off flywheel (watch the thread!). Undo fastening screw for toothed segment.

Note

Check the friction surface of the flywheel. The flywheel must be replaced if it is damaged or discoloured.

3. Inspect the friction surface of the flywheel visually.

top of page

Installing double-mass flywheel

Installing double-mass flywheel

Note

Before re-installation, clean the friction surface of the flywheel with a clean lint-free cloth that has been soaked in solvent naphtha or acetone.

1. Position double-mass flywheel on the crankshaft's dowel pin and press on to the crankshaft flange. Insert all fastening screws (8).
2. Align **toothed segment 9538/1** and tighten fastening screw again.
3. Screw in and tighten fastening screws in diagonally opposite sequence. →**Initial tightening: 19 ftlb.** ; → **Final tightening - torque angle: 120 °**
4. Remove toothed segment.

 ATTENZIONE

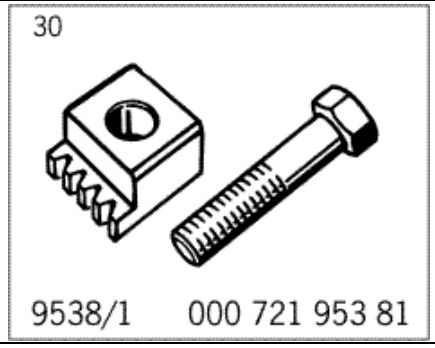
Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.



- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

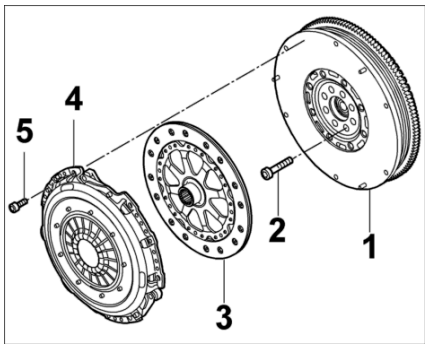
Preliminary work

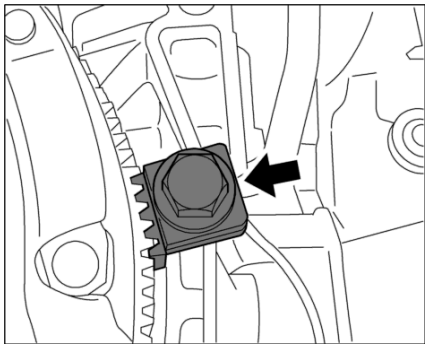


Preliminary work for double-mass flywheel

1. Remove manual transmission →343519 Removing and installing transmission - chapter on "removing" [997410 997411 997610 997611] →343519 Removing and installing transmission - chapter on "removing" [997110 997111 997310 997311].
2. Remove clutch →305019 Removing and installing clutch - chapter on "removing".

top of page

Removing double-mass flywheel - 3.6 l

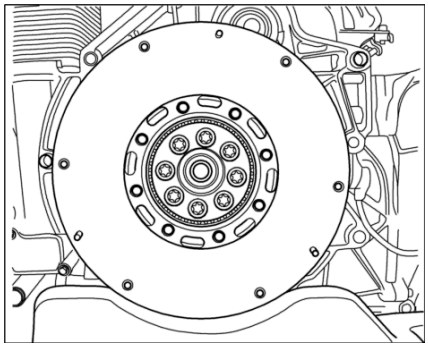


Removing double-mass flywheel - 3.6 l

Overview of double-mass flywheel, 3.6 l

Component overview

- 1 - Double-mass flywheel, 3.6 l
- 2 - Fastening screw for double-mass flywheel, (8 M10 screws)
- 3 - Clutch plate
- 4 - Clutch pressure plate
- 5 - Fastening screw for clutch pressure plate, (6 M8 screws)



Toothed segment 9538/1

Note

The **toothed segment 9538/1** must be bored to ø 15 mm to guarantee a perfect fit and to avoid damaging the thread in the crankcase.

1. To counter, fit **toothed segment 9538/1** to the crankcase using an M12 x 50 hexagon-head bolt (fine thread).

2. Loosen and unscrew fastening screws on flywheel. Carefully take off flywheel (watch the thread!). Undo fastening screw for toothed segment.

Note

Check the friction surface of the flywheel. The flywheel must be replaced if it is damaged or discoloured.

3. Inspect the friction surface of the flywheel visually.

top of page

Installing double-mass flywheel

Installing double-mass flywheel

Note

Before re-installation, clean the friction surface of the flywheel with a clean lint-free cloth that has been soaked in solvent naphtha or acetone.

1. Position double-mass flywheel on the crankshaft's dowel pin and press on to the crankshaft flange. Insert all fastening screws (8).
2. Align **toothed segment 9538/1** and tighten fastening screw again.
3. Screw in and tighten fastening screws in diagonally opposite sequence. →**Initial tightening: 19 ftlb.** ; → **Final tightening - torque angle: 120 °**
4. Remove toothed segment.

top of page

Subsequent work

Subsequent work for double-mass flywheel

1. Install clutch →305019 Removing and installing clutch - chapter on "installing".
2. Install manual transmission →343519 Removing and installing transmission - chapter on "installing" [997410 997411 997610 997611]→343519 Removing and installing transmission - chapter on "installing" [997110 997111 997310 997311].

 WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

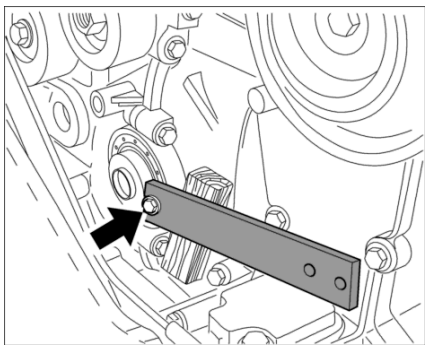
1. Remove air cleaner housing →242519 Removing and installing air cleaner housing - chapter on "removing".
2. Release drive belt →137819 Removing and installing drive belt - chapter on "removing".
3. Remove belt pulley or vibration damper →137619 Removing and installing belt pulley [997120 997121 997320 997321 997430 997431 997620 997621]→137619 Removing and installing belt pulley [997110 997111 997310 997311 997410 997411 997610 997611].

top of page



Removing crankshaft sealing ring - belt pulley side

Removing the crankshaft sealing ring - belt pulley side

Boring the sealing ring

1. Make a 3-mm hole at the front of the sealing ring using an angle drill. Grease the drill in order to bind the chips caused by drilling. Screw a sheetmetal screw with a washer approx. 5 mm into the bore hole.

Levering out the sealing ring

ATTENTION

Ingress of dirt

- **Risk of engine damage.**

→ When working on the engine, absolute cleanliness is essential.

2. Position a lever tool on the sheetmetal screw, place a wooden wedge between the lever tool and the crankcase and lever out the sealing ring. Carefully remove any residual dirt on the crankshaft flange.

ATTENTION

The crankshaft flange can be damaged if not cleaned correctly.

- **Leaks**

→ Never use an abrasive or polishing cloth or brushes with metal bristles.

→ Follow cleaning instructions.

3. If there are corroded spots on the crankshaft flange, clean them off using a metal-polishing pad (e.g. Nevr Dull, available in car and motor bike accessory stores). Then, carefully degrease the flange and crankcase bore using a clean, lint-free cloth that has been soaked in solvent naphtha or acetone.

Note

Perform a visual inspection of the crankshaft flange and crankcase bore for damage.

4. Check crankshaft flange and crankcase bore for damage.

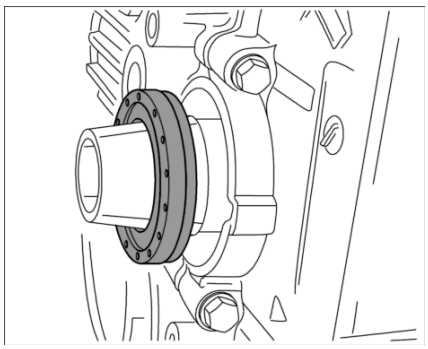
top of page

Installing crankshaft sealing ring - belt pulley side

Installing crankshaft sealing ring - belt pulley side

Note

- *The standard shaft seal is pressed 12.5 mm in, measured from the end of the flange. The new sealing ring is pressed 14.5 mm in using the special tool **assembly sleeve 9610/1** in order to generate a new running track.*



ATTENTION

Sharp tool edges and burrs.

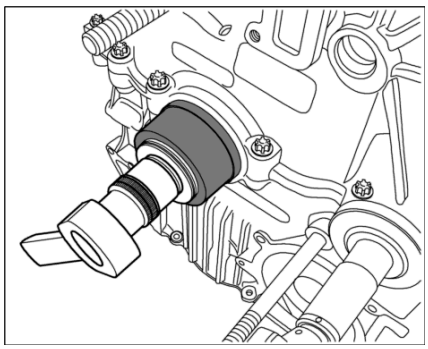
- **Damage to the sealing lip.**

→ Always examine tools for signs of burrs and sharp edges.

1. Small burred spots or damaged areas on the tools can be eliminated with a nail file, then pull off with a fine abrasive or polishing cloth. Remove residual dirt on the tools, e.g. using solvent naphtha or acetone.

Taper assembly sleeve, sealing ring

ATTENTION



Grease on sealing ring can cause material damage

- **Damage to micro-sealing lip**

→ Do not oil or grease the crankshaft sealing ring

→ Only coat the crankshaft housing bore with new engine oil

2. Coat the crankshaft case bore with new engine oil and slide the new crankshaft sealing ring with the taper of the **assembly sleeve 9610/1** special tool over the crankshaft flange.

Insertion device for sealing ring

3. Fit sealing ring with the insertion device of the **assembly sleeve 9610/1**.
4. Check that the sealing ring is seated correctly. To do this, measure at four points, offset by 90°, from the belt pulley attachment surface on the crankshaft flange to the sealing ring (outer radius). →**Dimension: 14.5 mm**

Removing belt pulley/vibration damper - engine installed

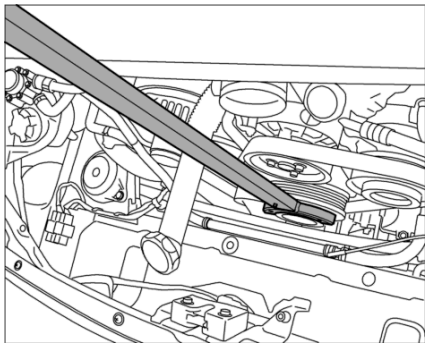
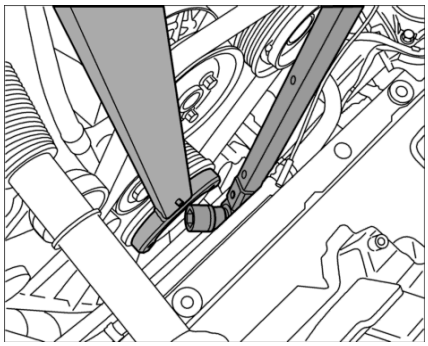
Removing vibration damper (3.8 l) - engine installed

Note



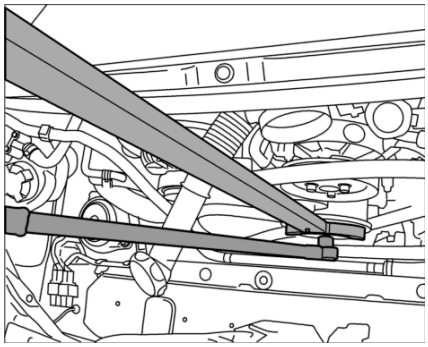
To release and tighten the belt pulley, a second person must counter with the relevant retaining tool.

Vibration damper components



Component overview

- 1 - Vibration damper
- 2 - Friction washer
- 3 - Fastening screw



Holding wrench 9732 on damper

1. Keep turning the vibration damper clockwise until the special tool **holding wrench 9732** can be inserted vertically into the fixing bores of the damper.

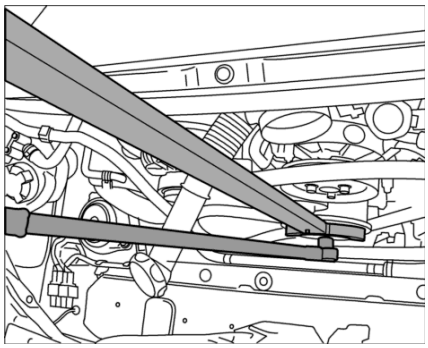
Torque wrench on damper

2. Position a large torque wrench with a socket wrench insert (a/f 24) on the fastening screw.

Damper screw

3. Loosen the fastening screw while a second person helps by countering with the special tool **holding wrench 9732**.
4. Unscrew fastening screw and remove vibration damper - watch the friction washer between the damper and the crankshaft flange.

top of page



Installing belt pulley/vibration damper - engine installed

Installing vibration damper - 3.8 l engine installed

Note

Degrease the belt pulley before installation on the flange side of the crankshaft using solvent naphtha or acetone.

1. Position new friction washer on dowel pin on crankshaft flange. Position vibration damper (groove for dowel pin).

Damper screw

Note

To release and tighten the belt pulley, a second person must counter with the relevant retaining tool.

2. Insert fastening screw and tighten in two stages. Counter at the same time with special tool **holding wrench 9732**. →**Tightening torque: 37 ftlb.** ; →**Torque angle: 120 °**

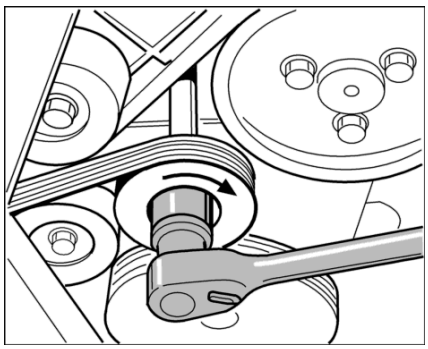
Preliminary work



Preliminary work for removing drive belt

1. Remove air cleaner housing . → *21 Removing and installing air cleaner housing - removing*.

top of page

removing

Removing drive belt

Tensioning pulley for drive belt

WARNING

Do not remove the drive belt when the engine is warm!

- **Risk of damage or deformation!**

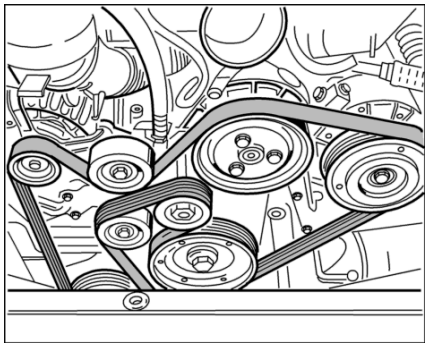
→ Drive belts should only be removed when they have cooled down.

1. Turn the tensioning pulley on the hexagonal axle clockwise and simultaneously remove the belt from the deflection pulleys.

Note

- *To check drive belt for damage by the naked eye, it needs to have been removed.*
- *Mark running direction of drive belt with a coloured pen.*
- *Even minor damage means that the drive belt must be replaced (even if the maintenance interval has not expired).*

2. Take the drive belt off the belt pulleys and give it a detailed inspection. Examine it to see if it has picked up foreign bodies, cracks or other damage and replace if necessary.



top of page

Installing

Installing drive belt

Note

- *After installing the drive belt you should check again that the individual belt pulleys and rollers are positioned correctly.*

Installed position of drive belt

1. Install the drive belt as shown in the illustration. Position the drive belt by taking the tension off tensioning pulley in a clockwise direction then allow the pulley to slide back to its normal position.

top of page

Reworking

Work subsequent to installing drive belt

1. Install air cleaner housing . → *23 Removing and installing air cleaner housing - installing*.

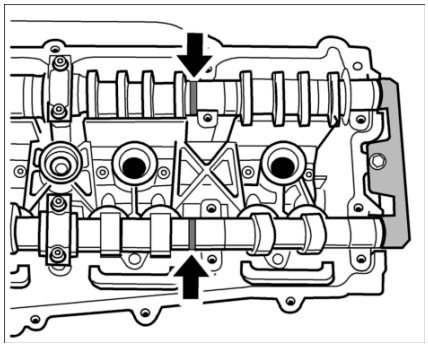
15 05 20 Removing and installing camshaft, adjusting timing - engine removed - as of MY 2005

- Camshaft designation M96/05
- Allocation of inlet camshaft adjustment device
- Allocation of chain tensioners
- Preliminary work for removing camshafts
- Removing camshaft - engine removed
- Installing camshaft - engine removed
- Subsequent work for installing camshafts

Tools

Designation	Type	Number	Explanation	
locating pin	special tool	9595/1		
retaining tool	special tool	9685		
adjusting gauge	special tool	9686		

cover for dust protection when fitting the engine	commercially available tool	NR.165		



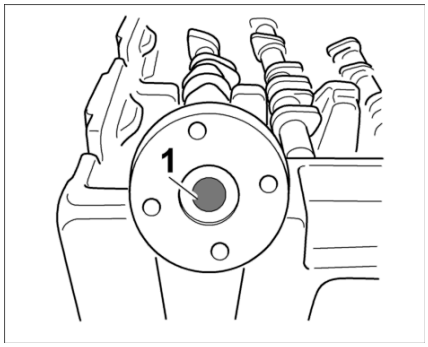
top of page

Camshaft designation M96/05

Camshaft designation M96/05

Note

Between the start of series production in April 2004 and August 2004, the camshaft manufacturer changed the lettering of the camshafts. In order to avoid a mixed installation, particular attention must be paid to the designation of engines installed in standard vehicles during this period.



Position of camshaft designation

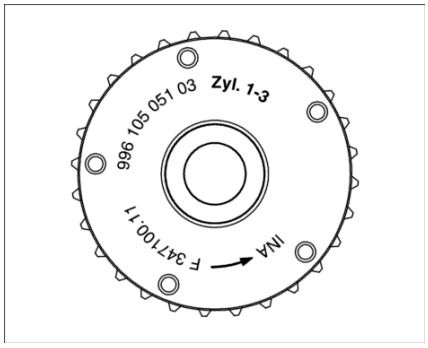
Position of lettering: -arrows-
Camshafts for cylinders 1 - 3

- Inlet camshaft 261.08 3,6 IN 1-3
- Exhaust camshaft: 262.05 3,6 EX 1-3
- Inlet camshaft (new): 996.105.047.02/03 3,6 IN 1-3
- Exhaust camshaft (new): 996.105.059.01 3,6 EX 1-3

Camshafts for cylinders 4 -6:

- Inlet camshaft: 263.08 3,6 IN 4-6
- Exhaust camshaft: 264.05 3,6 EX 4-6 (with aluminium plugs)
- Inlet camshaft (new): 996.105.048.02/03 3,6 IN 4-6
- Exhaust camshaft (new): 997.105.060.01 3,6 EX 4-6 (with aluminium plugs)

Aluminium plugs in exhaust camshaft 4 - 6



Additional identifying feature for exhaust camshaft 4 - 6: aluminium plugs with lubrication bore for tandem pump

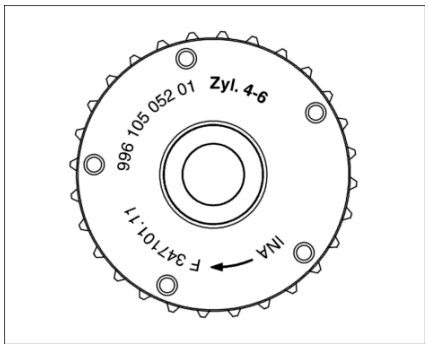
top of page

Allocation of inlet camshaft adjustment device

Allocation of inlet camshaft adjustment device

Camshaft adjustment device on inlet camshaft, cylinder bank 1 - 3

Designation of adjuster 1 - 3



Note

- *Side 1 - 3: the arrow should be attached anti-clockwise*

– Designation, side 1 - 3:

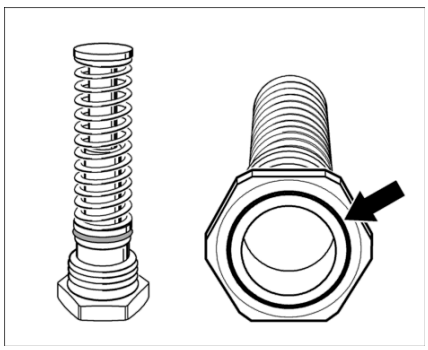
- Part number, cylinder bank, manufacturer information, direction of rotation of engine (arrow), production date.

Camshaft adjustment device on inlet camshaft, cylinder bank 4 - 6

Designation of adjuster 4 -6

Note

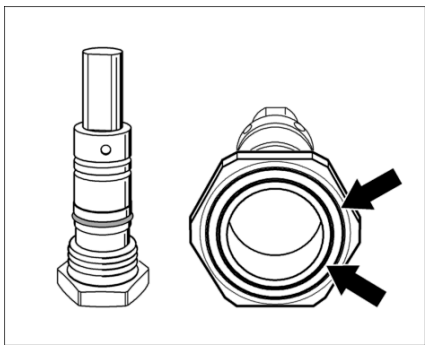
- *Side 4 - 6: the arrow should be attached clockwise*



– Designation, side 4 - 6:

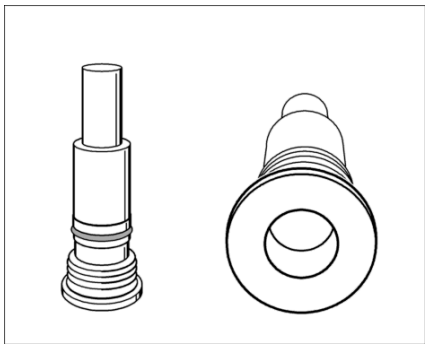
- Part number, cylinder bank, manufacturer information, direction of rotation of engine (arrow), production date.

top of page



Allocation of chain tensioners

Allocation of chain tensioners



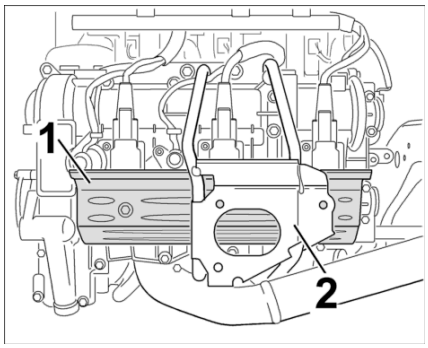
Primary chain tensioner

– Primary chain tensioner on crankcase (oil filter area), identification: **one ring -arrow-**

Chain tensioner, cylinders 1 - 3

– Chain tensioner on cylinder head, cylinder bank 1 - 3, identification: **two rings -arrows-**

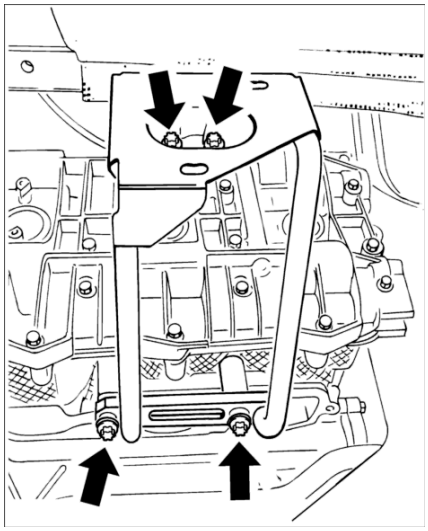
Chain tensioner 4 - 6



– Chain tensioner on cylinder head, cylinder bank 4 - 6, no identification.

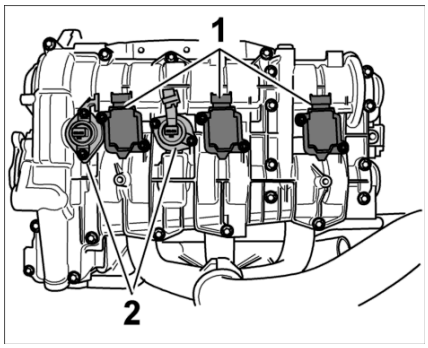
top of page

Preliminary work for removing camshafts



Preliminary work for removing camshafts

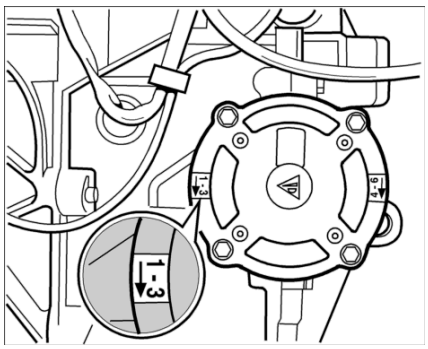
1. Remove engine →100119 Removing and installing engine - chapter on "removing".
2. Remove rear muffler →263319 Removing and installing rear muffler - chapter on "removing".



Cover plate and support for rear muffler

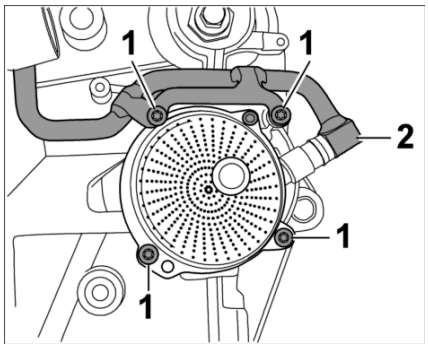
3. Remove cover plate for ignition coils **-1-** . Unscrew two M6 x 16 Torx screws and remove cover plate.

Rear muffler support



4. Remove support for rear muffler. Disconnect cable plugs of ignition coils and magnetic hydraulic valves. Unscrew four Torx screws: intake side two M8 x 30, exhaust side two M8 x 25, remove support.
5. For disassembling cylinder bank 4 - 6, undo the ground cable on the cylinder head by unscrewing a Torx screw M8 and removing the cable. Disconnect two cable plugs from oil pressure switch.

Hydraulic valves for camshaft adjustment and ignition coils



6. Remove ignition coils **-1-** . In each case unscrew two Torx socket screws M6 x 25 and pull the ignition coils out of the spark-plug recess.
7. Remove solenoid hydraulic valves **-2-** (NVS und VHS). →153719 Removing and installing solenoid hydraulic valve NVS - chapter on "removing" and →155519 Removing and installing solenoid hydraulic valve VHS - chapter on "removing".

8. Remove spark plugs. →287020 Removing and installing spark plugs - chapter on "removing".

Oil suction pump for cylinders 1 - 3

9. Remove oil suction pump for cylinders 1 - 3. Unscrew four Torx screws M6 x 20 (micro-self-locking), remove oil suction pump, and replace O-ring and screws.

Tandem pump side 4 - 6

10. Remove tandem pump for cylinders 4 - 6. Unscrew four Torx screws M6 (micro-self-locking) **-1-** . Pull off the vacuum line on pump **-2-** . Remove pump and replace O-rings and micro-self-locking screws.

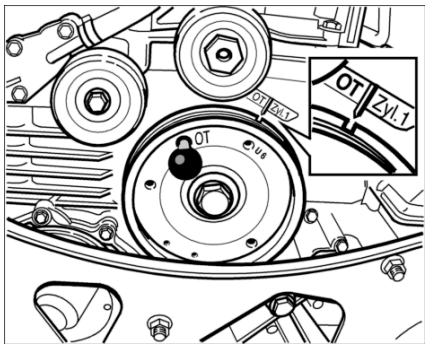
top of page

Removing camshaft - engine removed

Removing camshafts - engine removed

ATTENTION

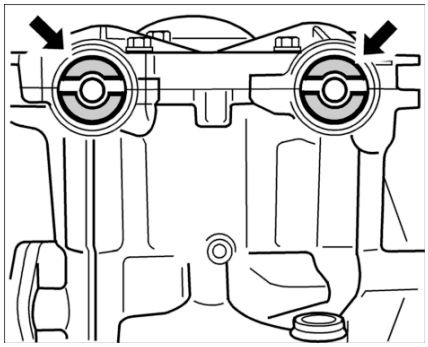
Risk of damage due to particles of dirt.



- **Oil bores/oil ducts can become blocked up.**

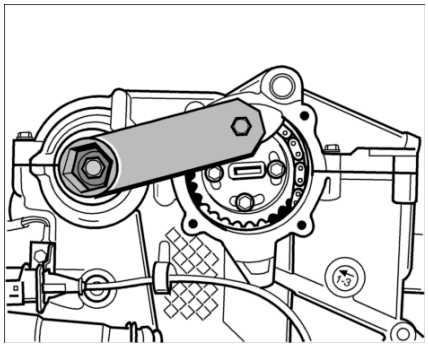
→ When working on the engine, absolute cleanliness is essential.

→ Lay removed engine parts on a clean base and cover them without fail.



→ Use the **cover for dust protection when fitting the engine NR.165** on the engine assembly support.

1. Remove the plastic caps on the cylinder head. Press a small screwdriver into the centre of the piercing point of each cap and lever out the cap.

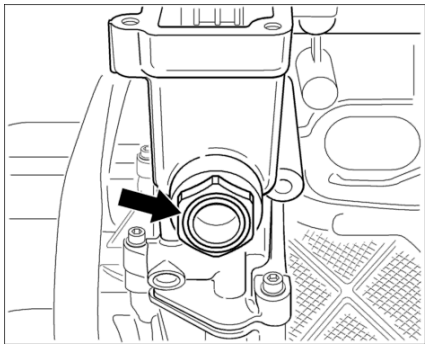


TDC marking on pulley

2. **Disassembling cylinder bank 1 - 3 Turn** crankshaft at the pulley/vibration balancer **clockwise** to the overlapping TDC of cylinder 1. **Disassembling cylinder bank 4 -6** Turn crankshaft to the TDC for cylinder 4. Using a **locating pin 9595/1** fix the pulley or vibration balancer .

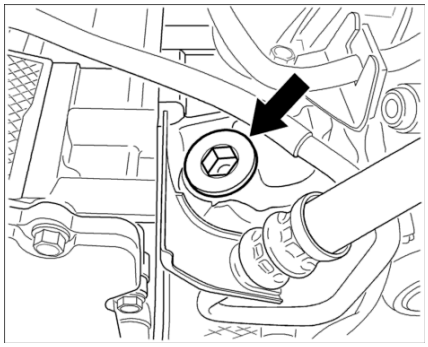
Position of the camshafts in overlapping TDC of cylinders 1 or 4

3. If the camshafts of cylinder bank 1 - 3 are removed, the smaller circular cut-outs at the grooves of the inlet and outlet camshafts **-arrows-** of **cylinder 1** must point to the cylinder head cover. For cylinder bank 4-6 the corresponding position is then on **cylinder 4**. Check the position using the **adjusting gauge 9686**.



Unscrew the central screw on the camshaft adjuster.

Note



- *Before disassembling the cylinder head cover, it is essential to unscrew the central screw on the camshaft adjustment device.*

4. Unscrew the central screw on the camshaft adjustment device. Position **retaining tool 9685** on the hexagon of the adapter and place the contact block as a counter on the fitting bore of the cylinder head cover for the oil suction pump; if necessary, position the contact block by undoing and tightening the screw. If the special tool cannot be positioned on the hexagon of the adapter in this way, the engine must be turned further in the direction of rotation at the pulley of the crankshaft until the contact block comes into contact with the central screw of the cylinder head cover, ready for unscrewing. Unscrew the central screw.
5. Remove cylinder head cover. →159119 Removing and installing cylinder head cover- chapter on "removing".
6. Release the four Torx screws M6 x 16 on the sprocket of the respective exhaust camshaft. Do not remove the sprocket.

Chain tensioner, cylinders 1 - 3

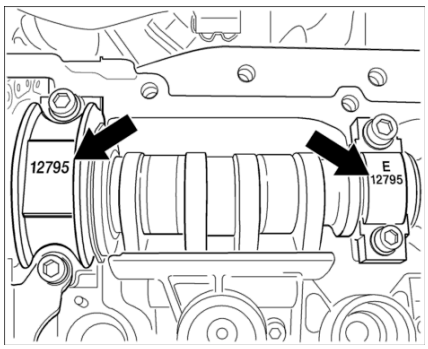
7. Remove chain tensioner for cylinders 1 - 3 or 4 - 6.

Chain tensioner, cylinders 4 - 6

8. **Cylinder bank 4 - 6** Unscrew guide rail screw M6 on pulley side (hexagon socket a/f 5).
9. Turn the engine at the assembly support so that cylinder bank to be worked on stands vertically upwards.
10. Unscrew four Torx screws for exhaust camshaft sprocket. Lift timing chain off sprocket and remove the sprocket. Lay timing chain on the mounting tab for the sprocket.
11. Remove the four camshaft thrust bearings and the guide rail. Unscrew eight Torx screws, six M6 x 35, two M6 x 40 (screws for guide rail). Lift the thrust bearing and the guide rail carefully off the mounting points or timing chain.
12. Remove the camshafts. Remove exhaust camshaft, lift timing chain off the camshaft adjuster of the inlet camshaft and remove the camshaft. Lay the timing chain in the chain housing in the cylinder head.

top of page

Installing camshaft - engine removed

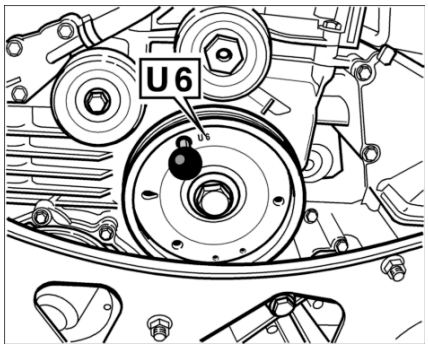


Installing camshafts, adjusting timing - engine removed

ATTENTION

Risk of damage due to particles of dirt.

- **Oil bores/oil ducts can become blocked up.**

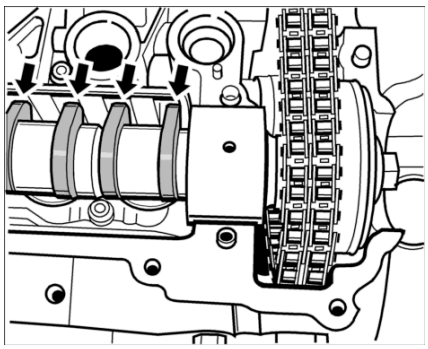


→ When working on the engine, absolute cleanliness is essential.
→ Lay removed engine parts on a clean base and cover them without fail.
→ Use the **cover for dust protection when fitting the engine NR.165** on the engine assembly support.

Identification of camshaft housing:

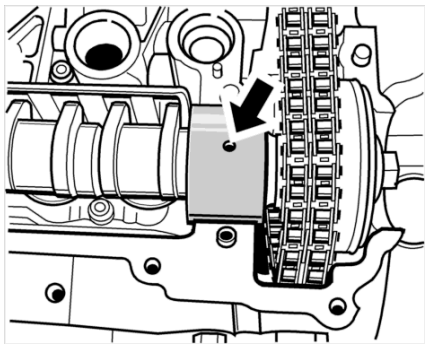
Identification of housings of camshafts:

- **Inlet camshaft:**
- **Thrust bearing:** 'E' and matching number on cylinder head/cylinder head cover
- **Housing of bearing sleeve:** only matching number
- **Outlet camshaft:**
- **Thrust bearing on sprocket:** '1A' and matching number on cylinder head/cylinder head cover
- **2nd Thrust bearing:** '2A' and matching number on cylinder head/cylinder head cover



Pulley fixed at 60° before TDC

1. To remove the play from the timing chain drive, turn the crankshaft by means of the pulley or vibration balancer**clockwise (running direction of engine** to 60° before TDC **: marking U6 on pulley or vibration balancer coincides with fixing bore in crankcase**. Fix with **locating pin 9595/1**.

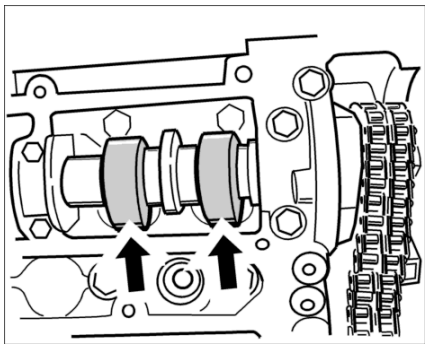


Assembly of cylinder bank 4 - 6

2. Turn the engine on the assembly support until cylinder bank 4 - 6 stands vertically upwards.
3. Oil the bearing surfaces of the camshafts with new engine oil.

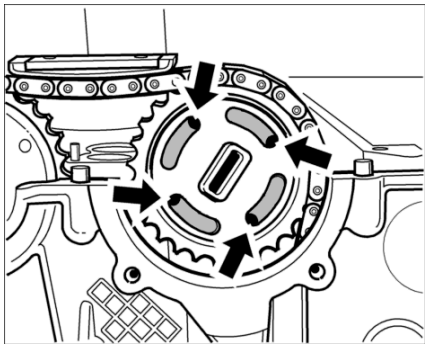
Inlet camshaft 4 - 6 in overlap

4. Insert inlet camshaft 4 - 6. Pull the timing chain out of the chain housing of the cylinder head with a welding wire and position on the ring gear of the camshaft adjuster, at the same time inserting the camshaft at overlapping TDC of cylinder 4 (the cams of cylinder 4 point towards the bulkhead of the flat-base tappet housing **-arrows-**).



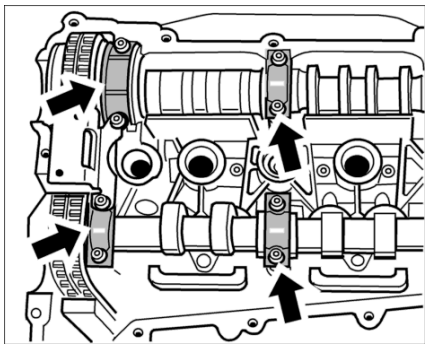
Position of bearing sleeve for inlet camshaft

Note



- *Make sure that the bearing sleeve on the inlet camshaft is positioned correctly.*

5. The bearing sleeve of the inlet camshaft must be positioned so that the centrally bored blind hole points vertically upwards **-arrow-** (the rib of the cylinder head should also be at the centre in relation to the bearing sleeve). In this position, the dowel pin in the bearing bore of the cylinder head will fit precisely into the opposite off-centre blind hole bore. Any other bores are through-holes for guiding the oil.

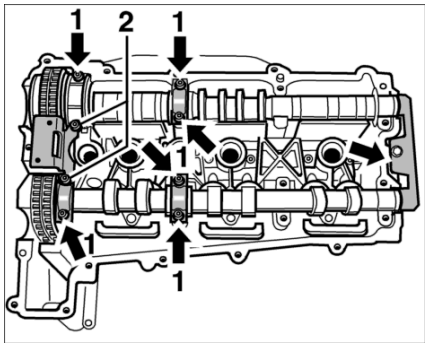


Exhaust camshaft 4 - 6

6. Insert exhaust camshaft 4 - 6. Lay the timing chain on the flange for the sprocket, then insert the camshaft at overlapping TDC of cylinder 4 (the outlet cams of cylinder 4 point towards the cams of the inlet camshaft **-arrows-**).

Position of sprocket 4 - 6 at 60° before TDC

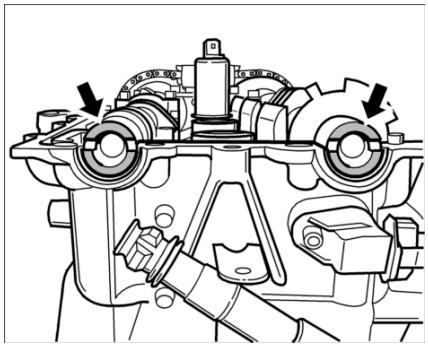
7. Insert exhaust camshaft sprocket in the timing chain and position on camshaft flange. The four threaded bores in the camshaft flange must be covered by the slots of the sprocket **in the clockwise running direction of the engine** approximately half way **-arrows-** .
8. Oil the bearing surfaces of the camshafts with new engine oil.



Installation position of housing

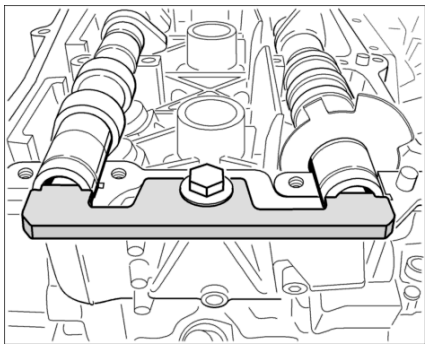
Note

- *Do not interchange the thrust bearings of the inlet and exhaust camshafts during assembly; observe identification markings.*



9. Insert three thrust bearings and one housing **-arrows-** for the bearing sleeve of the camshafts together with the guide rail for the timing chain.

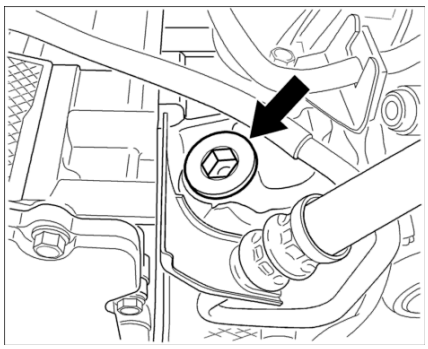
Position of housing screws



10. Insert eight housing screws (Torx): six M6 x 35 **-1-** and two M6 x 40 **-2-** for camshaft bearing and guide rail. Tighten screws evenly and just finger-tight.

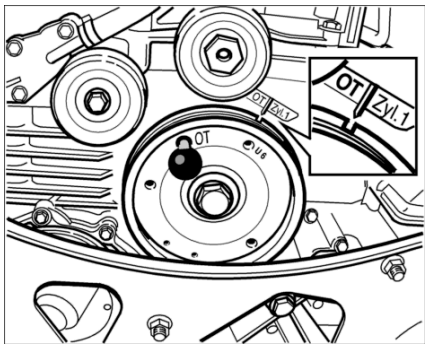
Adjust timing, cylinder bank 4 - 6

Slot position of camshafts at overlap



11. Align both camshafts. The small circular cut-outs must point upwards **-arrows-** .

Position of adjusting gauge 9689

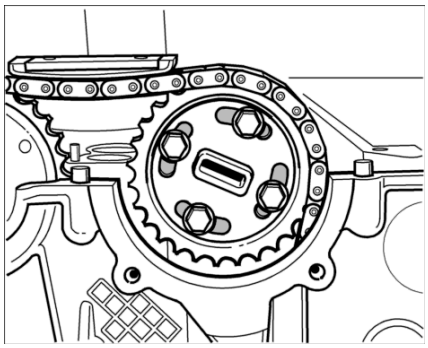


12. Using special tool **adjusting gauge 9686**, fix camshafts (if necessary with the gauge twisted) with an M8 screw (e.g. hexagon-head bolt M8 x 16). The flat tool face points upwards. Screw in fastening screw by hand.
13. Screw the housing screws of the inlet and exhaust camshafts and the auxiliary screw of the adjustment gauge alternately by approx. another 90° until the specified tightening torque is reached. →**Tightening torque: 7.5 ftlb.**

14. Insert guide rail screw with a new O-ring and tighten (hexagon socket M6, a/f 5) Grease O-ring with Optimol MP3. →**Tightening torque: 7.5 ftlb.**

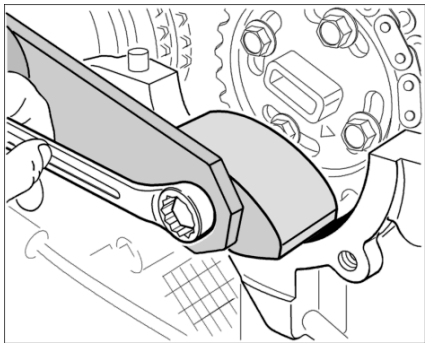
Chain tensioner, cylinders 4 - 6

15. Fit chain tensioner, side 4 - 6 (hexagon socket a/f 14). Fit chain tensioner with new aluminium sealing ring and tighten. →**Tightening torque: 59 ftlb.**



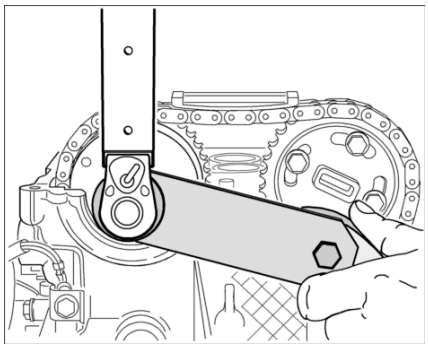
Pulley fixed at TDC marking

Note



- *Position crankshaft above the pulley or vibration balancer before final adjustment of the timing to the TDC marking.*

16. Turn the crankshaft by means of the pulley or vibration balancer **clockwise (running direction of engine** to TDC mark **: marking U6 on pulley or vibration balancer coincides with fixing bore in crankcase**. Fix with **locating pin 9595/1**.



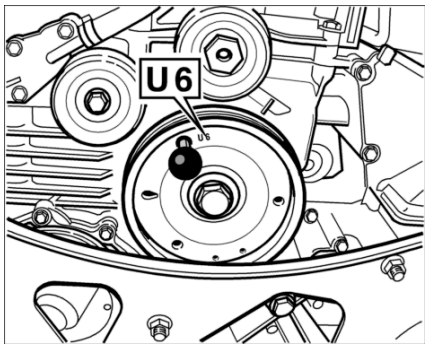
Exhaust camshaft sprocket tightened

17. Insert four Torx screws M6 to sprocket of exhaust camshaft and tighten evenly in diagonally opposite sequence. →**Tightening torque: 10.5 ftlb.**

Contact block at the fitting bore of the cylinder head

18. Tighten the central screw of the camshaft adjusting device. Fit special tool **retaining tool 9685** on hexagon of intermediate piece of the central screw. Screw in the central screw gently by hand so that the loose contact block just touches the fitting bore of the oil suction pump. Fix the hexagon-head bolt to the contact block.

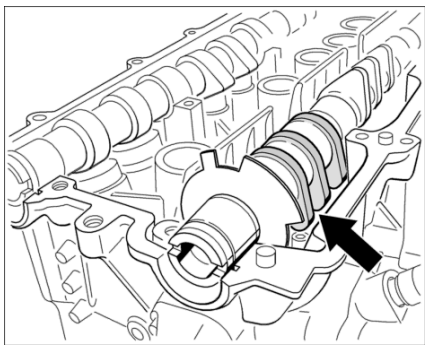
Tighten central screw of camshaft adjusting device.



Note

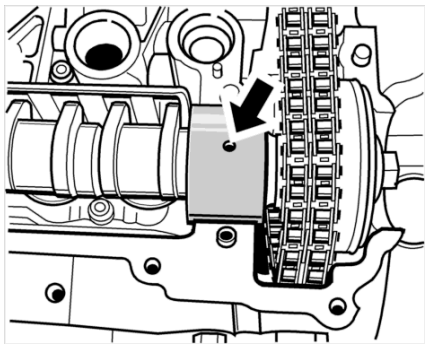
- *Before final tightening (torque angle) of the central screw, the special tool **adjusting gauge 9686** must be removed.*

19. Tighten the central screw in two stages. Initial tightening to the specified toque. →**Initial tightening: 37 ftlb.**
20. Remove special tool **adjustment gauge 9686**. Undo the M8 screw and remove gauge.
21. Apply final tightening to central screw with torque angle wrench. →**Final tightening torque angle: 110 °**



Assembly of cylinder bank 1 -3

22. Turn the engine on the assembly support until cylinder bank 1 - 3 stands vertically upwards.

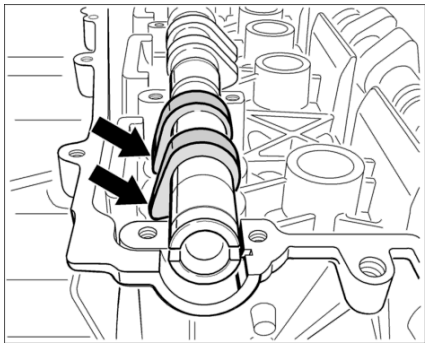


Pulley fixed at 60° before TDC

23. Turn the crankshaft by means of the pulley or vibration balancer **clockwise (running direction of engine** further still until the **marking U6 on pulley or vibration balancer coincides with fixing bore in crankcase** (60° before TDC). Fix with **locating pin 9595/1**.
24. Oil the bearing surfaces of the camshafts with new engine oil.

Inlet camshaft 1-3 in overlap

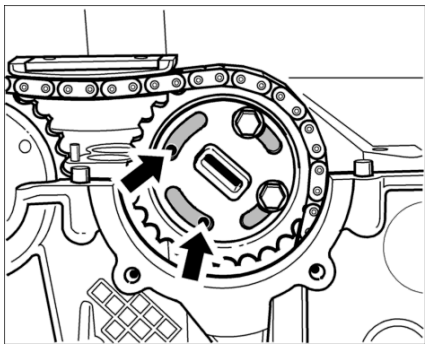
25. Insert inlet camshaft 1 - 3. Pull the control chain out of the chain housing of the cylinder head with a welding wire and position on the toothed ring of the camshaft adjuster. Then insert the camshaft at overlapping TDC of cylinder 1 (the cams of cylinder 1 point diagonally downwards towards the outside of the cylinder head **-arrow-**).



Position of bearing sleeve for inlet camshaft

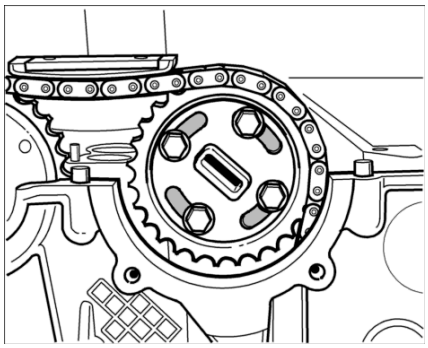
Note

- *Make sure that the bearing sleeve on the inlet camshaft is positioned correctly.*



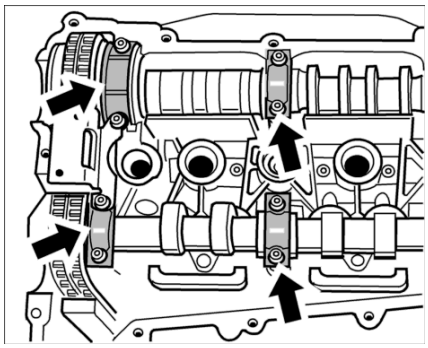
26. The bearing sleeve of the inlet camshaft must be positioned so that the centrally bored blind hole points vertically upwards **-arrow-** (the rib of the cylinder head should also be at the centre in relation to the bearing sleeve). In this position, the dowel pin in the bearing bore of the cylinder head will fit precisely

into the opposite off-centre blind hole bore. Any other bores are through-holes for guiding the oil.



Exhaust camshaft 1-3 in overlap

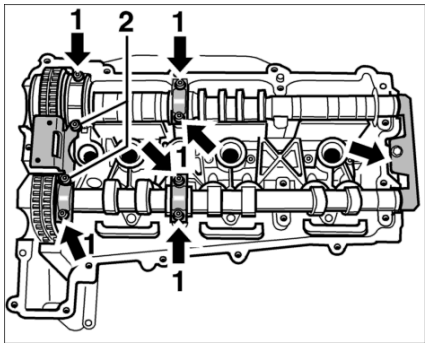
27. Insert exhaust camshaft 1 - 3. Lay the control chain on the flange for the chain sprocket, then insert the camshaft at overlapping TDC of cylinder 1 (the cams of cylinder 1 point diagonally downwards towards the outside of the cylinder head).



Exhaust sprocket 1 - 3 at 60° before TDC

28. Insert exhaust camshaft sprocket in the timing chain and position on camshaft flange. The four threaded bores in the camshaft flange must be fully visible **on the left at the slotted curves of the sprocket -arrows-** so that the Torx screws M6 x 12 can still be positioned to fasten the sprocket.

Exhaust sprocket 1 - 3, all screws fitted



Installation position of housing

Note

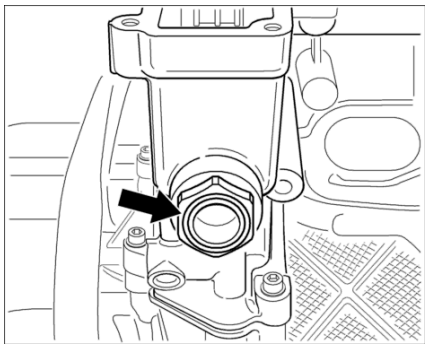
- *Do not interchange the thrust bearings of the inlet and exhaust camshafts during assembly; observe identification markings.*

29. Insert three thrust bearings and one housing **-arrows-** for the bearing sleeve of the camshafts together with the guide rail for the timing chain.

Position of housing screws

30. Insert eight housing screws (Torx): six M6 x 35 **-1-** and two M6 x 40 **-2-** for camshaft bearing and guide rail. Tighten screws evenly and just finger-tight.

Timing for side 1 - 3

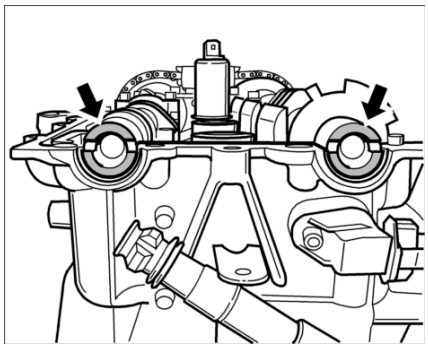


Note

- *Position crankshaft above the pulley or vibration balancer before final adjustment of the timing to the TDC marking.*

Note

- *Before final tightening (torque angle) of the central screw, the special tool **adjusting gauge 9686** must be removed.*

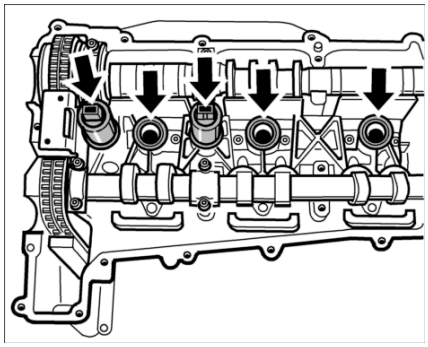


31. Final timing adjustment for cylinder bank 1 - 3 is analogous to that for cylinder bank 4 - 6. ;

Chain tensioner, cylinder 1 - 3

32. Fit chain tensioner for side 1 - 3 (hexagon a/f 32) before turning crankshaft to the TDC mark. Fit chain tensioner with new sealing ring and tighten. →**Tightening torque: 59 ftlb.**

After adjusting the timing, this should be re-checked.



Slot position of camshafts at overlap

33. Turn the engine 360° at the crankshaft and fix at the TDC mark. Check camshaft position of cylinder bank 4 - 6 using the **adjusting gauge 9686**. Then turn a further 360° and check the camshaft position of cylinder bank 1 - 3.

top of page

Subsequent work for installing camshafts

Subsequent work for installing camshafts

Gaskets for spark plug recess and solenoid hydraulic valves

1. Insert solenoid hydraulic valves and new gaskets for the spark-plug recesses. Fit new O-rings into both solenoid hydraulic valves and insert into the bores in the cylinder head. Grease O-rings with Optimol MP3. →153719 Removing and installing solenoid hydraulic valve NVS - chapter on "installing" and →155519 Removing and installing solenoid hydraulic valve VHS - chapter on "installing".
2. Install cylinder head cover →159119 Removing and installing cylinder head cover - chapter on "installing".
3. Fit oil suction pump (1 - 3) and tandem pump (4 - 6) with new, micro-self-locking Torx screws M6. Replace O-rings and grease with Optimol MP3. →**Tightening torque: 7.5 ftlb.**
4. Fit new plastic cap dry on cylinder head. Tap in with a plastic hammer.
5. Fit ground strap to cylinder head 4 - 6 with Torx screw M8 x 20 and tighten. →**Tightening torque: 17 ftlb.**
6. Insert each ignition coil into its spark plug recess, fit two M6 x 25 Torx socket screws and tighten. → **Tightening torque: 7.5 ftlb.**
7. Fit retainer plates and holders for the solenoid hydraulic valves. →153719 Removing and installing solenoid hydraulic valve NVS - chapter on "installing" and →155519 Removing and installing solenoid hydraulic valve VHS - chapter on "installing". →**Tightening torque: 7.5 ftlb.**
8. Fit holder for rear muffler. Fit and tighten two Torx screws M8 x 30 intake side and two Torx screws M8 x 25 exhaust side. Fit cable plugs for ignition coils and solenoid hydraulic valves, fixing cable in the sheetmetal clips. →**Tightening torque: 17 ftlb.**
9. Fit and tighten cover plate with two Torx screws M6 x 16. →**Tightening torque: 7.5 ftlb.**
10. Connect two cable plugs to the oil temperature switch for cylinder bank 4 - 6..

WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

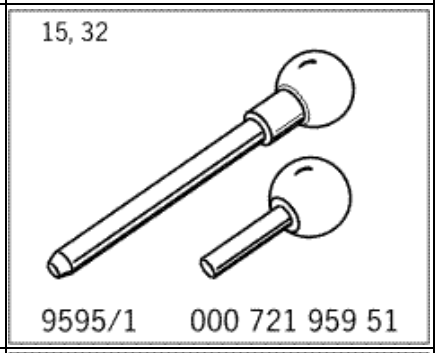
Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

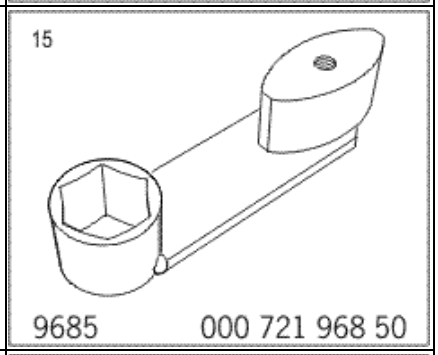
- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

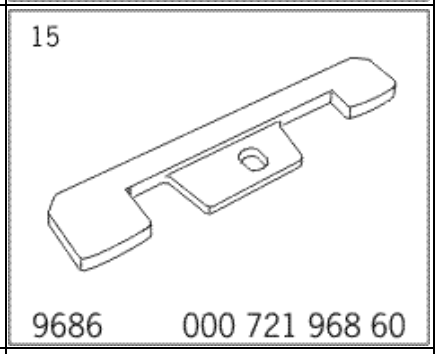
→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.







- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

15 05 20 Removing and installing camshaft, adjusting timing - engine removed - as of MY 2005

- Allocation of inlet camshaft adjustment device
- Allocation of chain tensioners
- Preliminary work for removing camshafts
- Removing camshaft - engine removed
- Installing camshaft - engine removed
- Subsequent work for installing camshafts

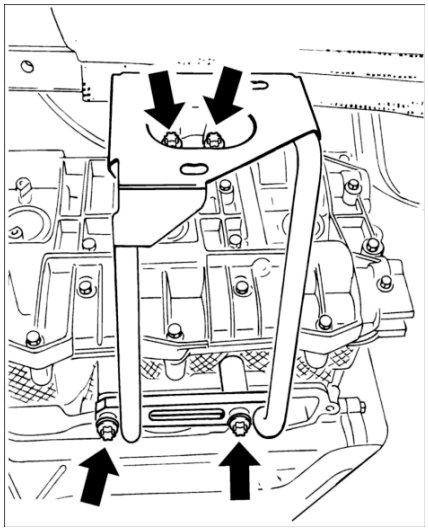
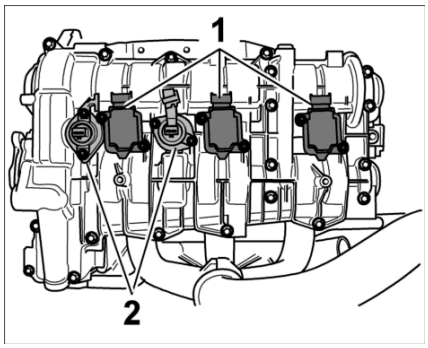
Preliminary work for removing camshafts



Preliminary work for removing camshafts

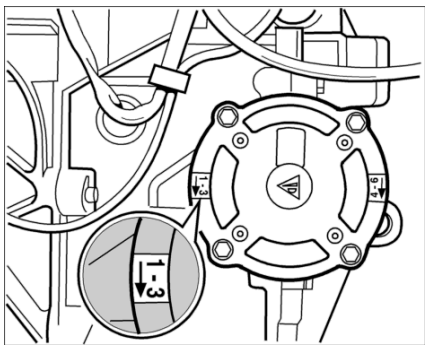
1. Remove engine →100119 Removing and installing engine - chapter on "removing".
2. Remove rear muffler →263319 Removing and installing rear muffler - chapter on "removing".



Cover plate and support for rear muffler

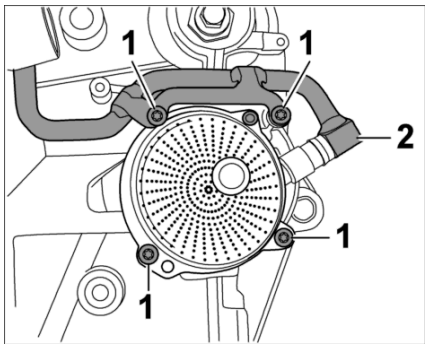
3. Remove cover plate for ignition coils **-1-** . Unscrew two M6 x 16 Torx screws and remove cover plate.

Rear muffler support



4. Remove support for rear muffler. Disconnect cable plugs of ignition coils and magnetic hydraulic valves. Unscrew four Torx screws: intake side two M8 x 30, exhaust side two M8 x 25, remove support.
5. For disassembling cylinder bank 4 - 6, undo the ground cable on the cylinder head by unscrewing a Torx screw M8 and removing the cable. Disconnect two cable plugs from oil pressure switch.

Hydraulic valves for camshaft adjustment and ignition coils



6. Remove ignition coils **-1-** . In each case unscrew two Torx socket screws M6 x 25 and pull the ignition coils out of the spark-plug recess.
7. Remove solenoid hydraulic valves **-2-** (NVS und VHS). →153719 Removing and installing solenoid hydraulic valve NVS - chapter on "removing" and →155519 Removing and installing solenoid hydraulic valve VHS - chapter on "removing".

8. Remove spark plugs. →287020 Removing and installing spark plugs - chapter on "removing".

Oil suction pump for cylinders 1 - 3

9. Remove oil suction pump for cylinders 1 - 3. Unscrew four Torx screws M6 x 20 (micro-self-locking), remove oil suction pump, and replace O-ring and screws.

Tandem pump side 4 - 6

10. Remove tandem pump for cylinders 4 - 6. Unscrew four Torx screws M6 (micro-self-locking) **-1-** . Pull off the vacuum line on pump **-2-** . Remove pump and replace O-rings and micro-self-locking screws.

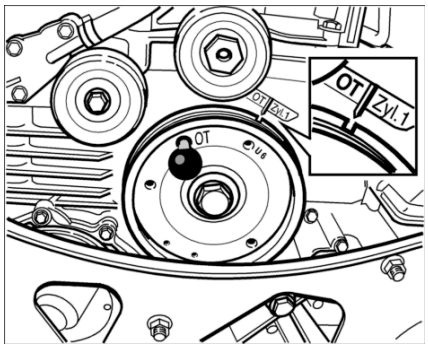
top of page

Removing camshaft - engine removed

Removing camshafts - engine removed

ATTENTION

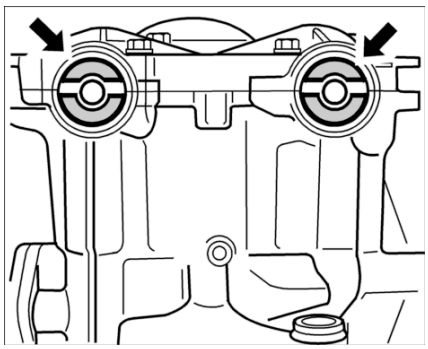
Risk of damage due to particles of dirt.



- **Oil bores/oil ducts can become blocked up.**

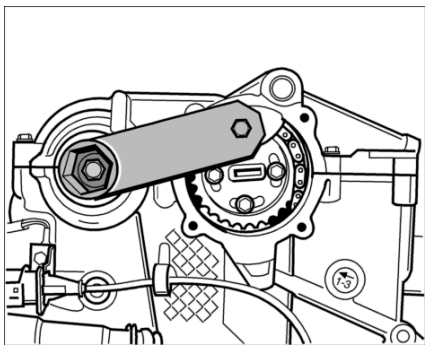
→ When working on the engine, absolute cleanliness is essential.

→ Lay removed engine parts on a clean base and cover them without fail.



→ Use the **cover for dust protection when fitting the engine NR.165** on the engine assembly support.

1. Remove the plastic caps on the cylinder head. Press a small screwdriver into the centre of the piercing point of each cap and lever out the cap.

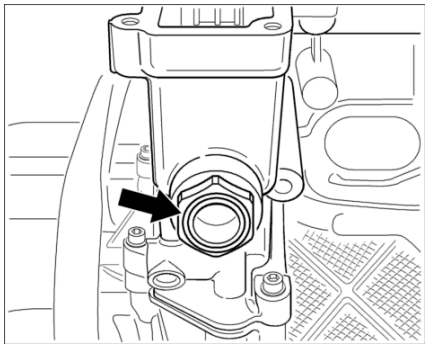


TDC marking on pulley

2. **Disassembling cylinder bank 1 - 3 Turn** crankshaft at the pulley/vibration balancer **clockwise** to the overlapping TDC of cylinder 1. **Disassembling cylinder bank 4 -6** Turn crankshaft to the TDC for cylinder 4. Using a **locating pin 9595/1** fix the pulley or vibration balancer .

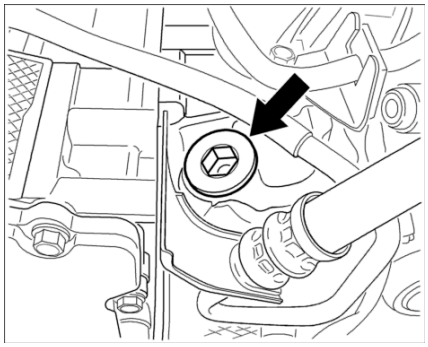
Position of the camshafts in overlapping TDC of cylinders 1 or 4

3. If the camshafts of cylinder bank 1 - 3 are removed, the smaller circular cut-outs at the grooves of the inlet and outlet camshafts **-arrows-** of **cylinder 1** must point to the cylinder head cover. For cylinder bank 4-6 the corresponding position is then on **cylinder 4**. Check the position using the **adjusting gauge 9686**.



Unscrew the central screw on the camshaft adjuster.

Note



- *Before disassembling the cylinder head cover, it is essential to unscrew the central screw on the camshaft adjustment device.*

4. Unscrew the central screw on the camshaft adjustment device. Position **retaining tool 9685** on the hexagon of the adapter and place the contact block as a counter on the fitting bore of the cylinder head cover for the oil suction pump; if necessary, position the contact block by undoing and tightening the screw. If the special tool cannot be positioned on the hexagon of the adapter in this way, the engine must be turned further in the direction of rotation at the pulley of the crankshaft until the contact block comes into contact with the central screw of the cylinder head cover, ready for unscrewing. Unscrew the central screw.
5. Remove cylinder head cover. →159119 Removing and installing cylinder head cover- chapter on "removing".
6. Release the four Torx screws M6 x 16 on the sprocket of the respective exhaust camshaft. Do not remove the sprocket.

Chain tensioner, cylinders 1 - 3

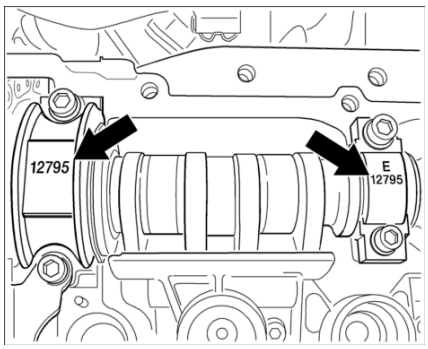
7. Remove chain tensioner for cylinders 1 - 3 or 4 - 6.

Chain tensioner, cylinders 4 - 6

8. **Cylinder bank 4 - 6** Unscrew guide rail screw M6 on pulley side (hexagon socket a/f 5).
9. Turn the engine at the assembly support so that cylinder bank to be worked on stands vertically upwards.
10. Unscrew four Torx screws for exhaust camshaft sprocket. Lift timing chain off sprocket and remove the sprocket. Lay timing chain on the mounting tab for the sprocket.
11. Remove the four camshaft thrust bearings and the guide rail. Unscrew eight Torx screws, six M6 x 35, two M6 x 40 (screws for guide rail). Lift the thrust bearing and the guide rail carefully off the mounting points or timing chain.
12. Remove the camshafts. Remove exhaust camshaft, lift timing chain off the camshaft adjuster of the inlet camshaft and remove the camshaft. Lay the timing chain in the chain housing in the cylinder head.

top of page

Installing camshaft - engine removed

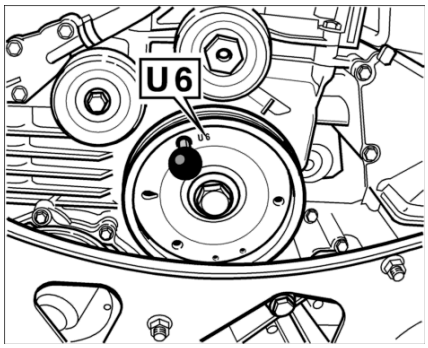


Installing camshafts, adjusting timing - engine removed

ATTENTION

Risk of damage due to particles of dirt.

- **Oil bores/oil ducts can become blocked up.**

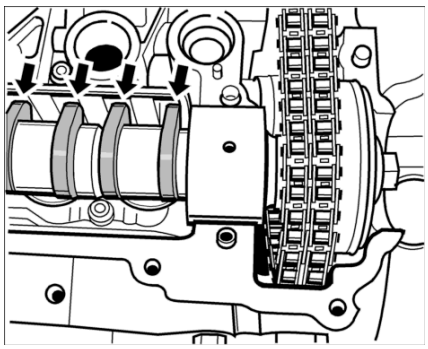


→ When working on the engine, absolute cleanliness is essential.
→ Lay removed engine parts on a clean base and cover them without fail.
→ Use the **cover for dust protection when fitting the engine NR.165** on the engine assembly support.

Identification of camshaft housing:

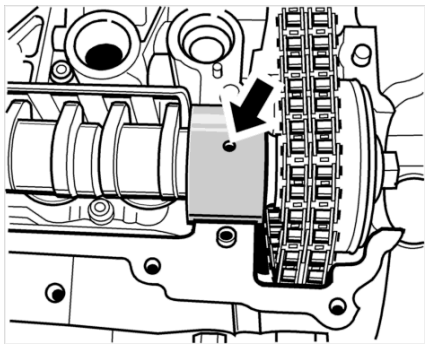
Identification of housings of camshafts:

- **Inlet camshaft:**
- **Thrust bearing:** 'E' and matching number on cylinder head/cylinder head cover
- **Housing of bearing sleeve:** only matching number
- **Outlet camshaft:**
- **Thrust bearing on sprocket:** '1A' and matching number on cylinder head/cylinder head cover
- **2nd Thrust bearing:** '2A' and matching number on cylinder head/cylinder head cover



Pulley fixed at 60° before TDC

1. To remove the play from the timing chain drive, turn the crankshaft by means of the pulley or vibration balancer**clockwise (running direction of engine** to 60° before TDC **: marking U6 on pulley or vibration balancer coincides with fixing bore in crankcase**. Fix with **locating pin 9595/1**.

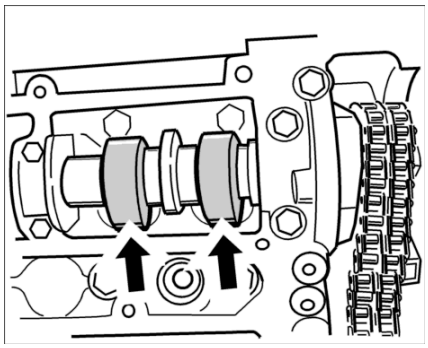


Assembly of cylinder bank 4 - 6

2. Turn the engine on the assembly support until cylinder bank 4 - 6 stands vertically upwards.
3. Oil the bearing surfaces of the camshafts with new engine oil.

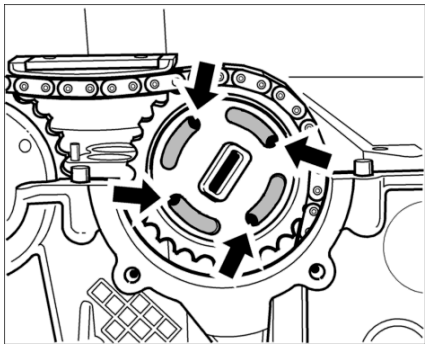
Inlet camshaft 4 - 6 in overlap

4. Insert inlet camshaft 4 - 6. Pull the timing chain out of the chain housing of the cylinder head with a welding wire and position on the ring gear of the camshaft adjuster, at the same time inserting the camshaft at overlapping TDC of cylinder 4 (the cams of cylinder 4 point towards the bulkhead of the flat-base tappet housing **-arrows-**).



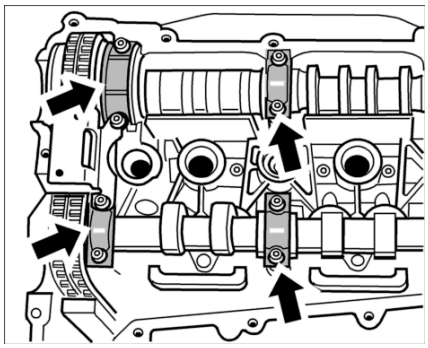
Position of bearing sleeve for inlet camshaft

Note



- *Make sure that the bearing sleeve on the inlet camshaft is positioned correctly.*

5. The bearing sleeve of the inlet camshaft must be positioned so that the centrally bored blind hole points vertically upwards **-arrow-** (the rib of the cylinder head should also be at the centre in relation to the bearing sleeve). In this position, the dowel pin in the bearing bore of the cylinder head will fit precisely into the opposite off-centre blind hole bore. Any other bores are through-holes for guiding the oil.

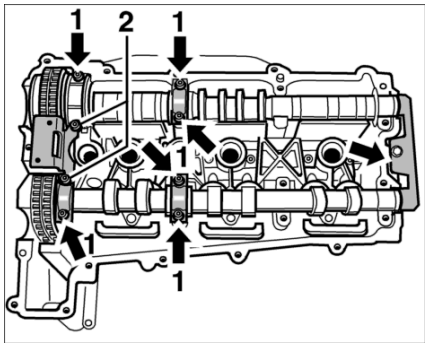


Exhaust camshaft 4 - 6

6. Insert exhaust camshaft 4 - 6. Lay the timing chain on the flange for the sprocket, then insert the camshaft at overlapping TDC of cylinder 4 (the outlet cams of cylinder 4 point towards the cams of the inlet camshaft **-arrows-**).

Position of sprocket 4 - 6 at 60° before TDC

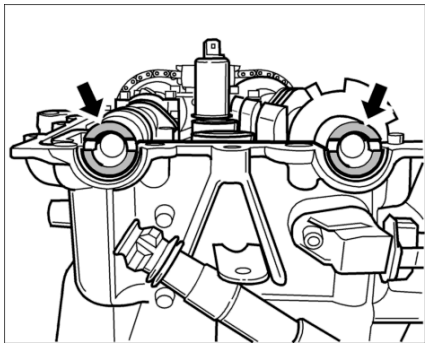
7. Insert exhaust camshaft sprocket in the timing chain and position on camshaft flange. The four threaded bores in the camshaft flange must be covered by the slots of the sprocket **in the clockwise running direction of the engine** approximately half way **-arrows-** .
8. Oil the bearing surfaces of the camshafts with new engine oil.



Installation position of housing

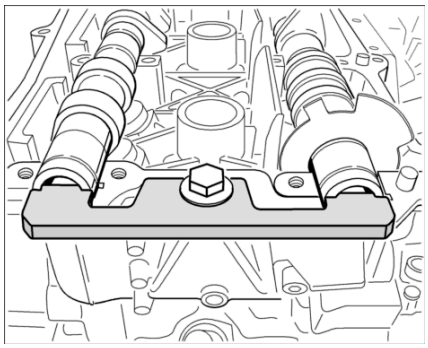
Note

- *Do not interchange the thrust bearings of the inlet and exhaust camshafts during assembly; observe identification markings.*



9. Insert three thrust bearings and one housing **-arrows-** for the bearing sleeve of the camshafts together with the guide rail for the timing chain.

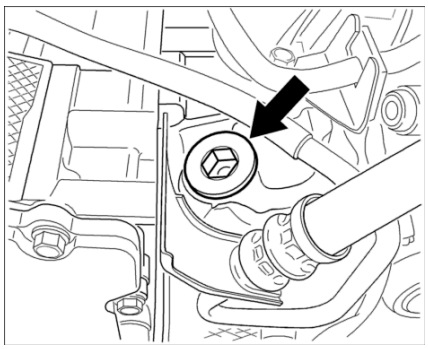
Position of housing screws



10. Insert eight housing screws (Torx): six M6 x 35 **-1-** and two M6 x 40 **-2-** for camshaft bearing and guide rail. Tighten screws evenly and just finger-tight.

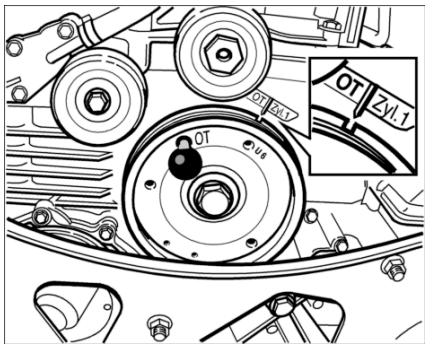
Adjust timing, cylinder bank 4 - 6

Slot position of camshafts at overlap



11. Align both camshafts. The small circular cut-outs must point upwards **-arrows-** .

Position of adjusting gauge 9689

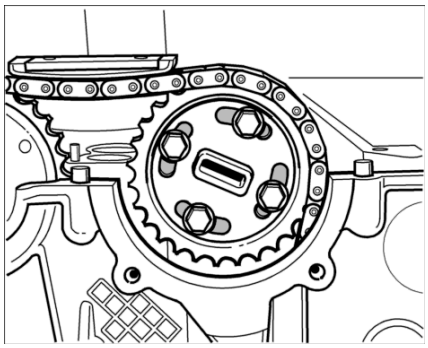


12. Using special tool **adjusting gauge 9686**, fix camshafts (if necessary with the gauge twisted) with an M8 screw (e.g. hexagon-head bolt M8 x 16). The flat tool face points upwards. Screw in fastening screw by hand.
13. Screw the housing screws of the inlet and exhaust camshafts and the auxiliary screw of the adjustment gauge alternately by approx. another 90° until the specified tightening torque is reached. →**Tightening torque: 7.5 ftlb.**

14. Insert guide rail screw with a new O-ring and tighten (hexagon socket M6, a/f 5) Grease O-ring with Optimol MP3. →**Tightening torque: 7.5 ftlb.**

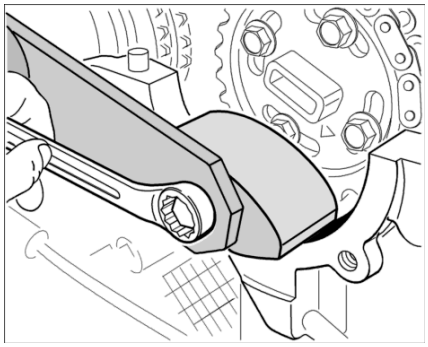
Chain tensioner, cylinders 4 - 6

15. Fit chain tensioner, side 4 - 6 (hexagon socket a/f 14). Fit chain tensioner with new aluminium sealing ring and tighten. →**Tightening torque: 59 ftlb.**



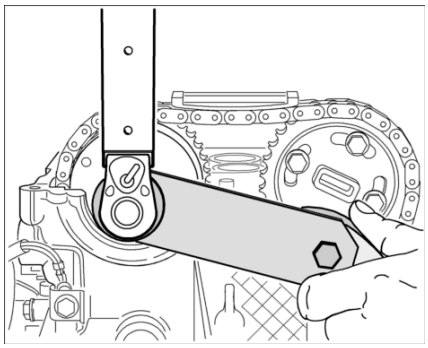
Pulley fixed at TDC marking

Note



- *Position crankshaft above the pulley or vibration balancer before final adjustment of the timing to the TDC marking.*

16. Turn the crankshaft by means of the pulley or vibration balancer **clockwise (running direction of engine** to TDC mark **: marking U6 on pulley or vibration balancer coincides with fixing bore in crankcase**. Fix with **locating pin 9595/1**.



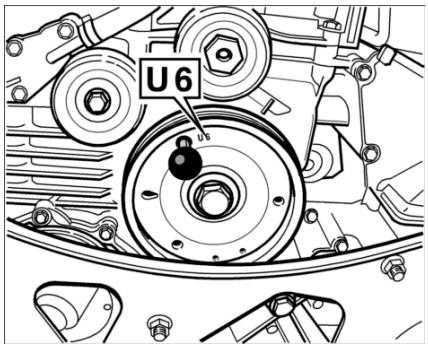
Exhaust camshaft sprocket tightened

17. Insert four Torx screws M6 to sprocket of exhaust camshaft and tighten evenly in diagonally opposite sequence. →**Tightening torque: 10.5 ftlb.**

Contact block at the fitting bore of the cylinder head

18. Tighten the central screw of the camshaft adjusting device. Fit special tool **retaining tool 9685** on hexagon of intermediate piece of the central screw. Screw in the central screw gently by hand so that the loose contact block just touches the fitting bore of the oil suction pump. Fix the hexagon-head bolt to the contact block.

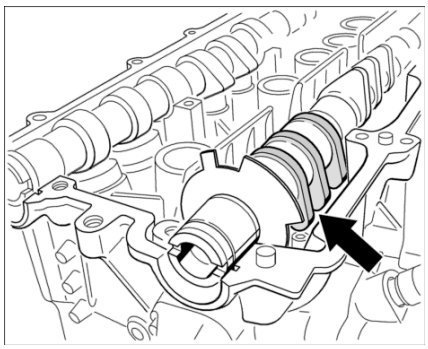
Tighten central screw of camshaft adjusting device.



Note

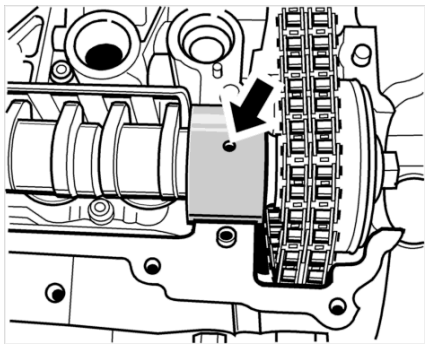
- *Before final tightening (torque angle) of the central screw, the special tool **adjusting gauge 9686** must be removed.*

19. Tighten the central screw in two stages. Initial tightening to the specified toque. →**Initial tightening: 37 ftlb.**
20. Remove special tool **adjustment gauge 9686**. Undo the M8 screw and remove gauge.
21. Apply final tightening to central screw with torque angle wrench. →**Final tightening torque angle: 110 °**



Assembly of cylinder bank 1 -3

22. Turn the engine on the assembly support until cylinder bank 1 - 3 stands vertically upwards.

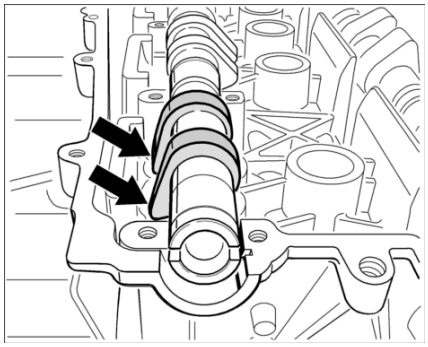


Pulley fixed at 60° before TDC

23. Turn the crankshaft by means of the pulley or vibration balancer **clockwise (running direction of engine** further still until the **marking U6 on pulley or vibration balancer coincides with fixing bore in crankcase** (60° before TDC). Fix with **locating pin 9595/1**.
24. Oil the bearing surfaces of the camshafts with new engine oil.

Inlet camshaft 1-3 in overlap

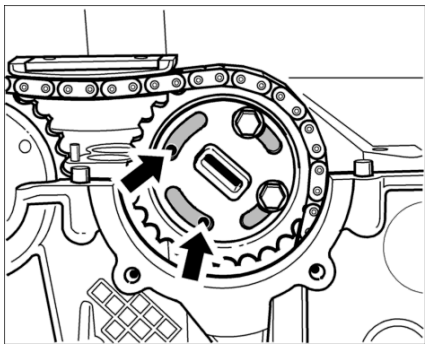
25. Insert inlet camshaft 1 - 3. Pull the control chain out of the chain housing of the cylinder head with a welding wire and position on the toothed ring of the camshaft adjuster. Then insert the camshaft at overlapping TDC of cylinder 1 (the cams of cylinder 1 point diagonally downwards towards the outside of the cylinder head **-arrow-**).



Position of bearing sleeve for inlet camshaft

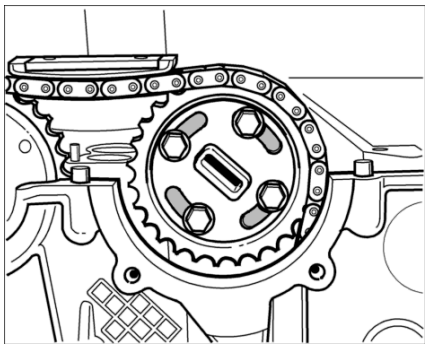
Note

- *Make sure that the bearing sleeve on the inlet camshaft is positioned correctly.*



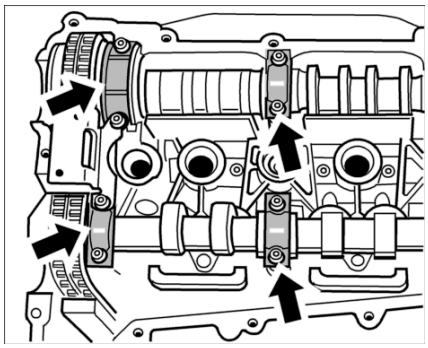
26. The bearing sleeve of the inlet camshaft must be positioned so that the centrally bored blind hole points vertically upwards **-arrow-** (the rib of the cylinder head should also be at the centre in relation to the bearing sleeve). In this position, the dowel pin in the bearing bore of the cylinder head will fit precisely

into the opposite off-centre blind hole bore. Any other bores are through-holes for guiding the oil.



Exhaust camshaft 1-3 in overlap

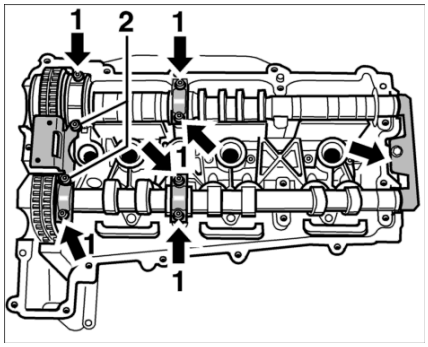
27. Insert exhaust camshaft 1 - 3. Lay the control chain on the flange for the chain sprocket, then insert the camshaft at overlapping TDC of cylinder 1 (the cams of cylinder 1 point diagonally downwards towards the outside of the cylinder head).



Exhaust sprocket 1 - 3 at 60° before TDC

28. Insert exhaust camshaft sprocket in the timing chain and position on camshaft flange. The four threaded bores in the camshaft flange must be fully visible **on the left at the slotted curves of the sprocket -arrows-** so that the Torx screws M6 x 12 can still be positioned to fasten the sprocket.

Exhaust sprocket 1 - 3, all screws fitted



Installation position of housing

Note

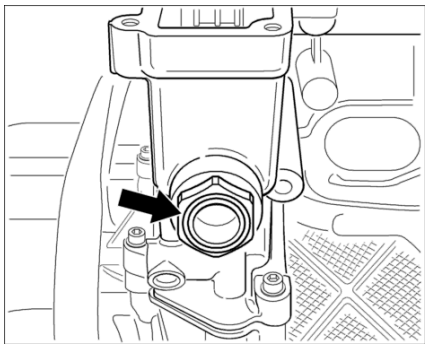
- *Do not interchange the thrust bearings of the inlet and exhaust camshafts during assembly; observe identification markings.*

29. Insert three thrust bearings and one housing **-arrows-** for the bearing sleeve of the camshafts together with the guide rail for the timing chain.

Position of housing screws

30. Insert eight housing screws (Torx): six M6 x 35 **-1-** and two M6 x 40 **-2-** for camshaft bearing and guide rail. Tighten screws evenly and just finger-tight.

Timing for side 1 - 3

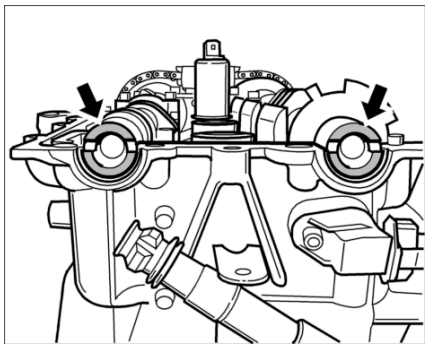


Note

- *Position crankshaft above the pulley or vibration balancer before final adjustment of the timing to the TDC marking.*

Note

- *Before final tightening (torque angle) of the central screw, the special tool **adjusting gauge 9686** must be removed.*

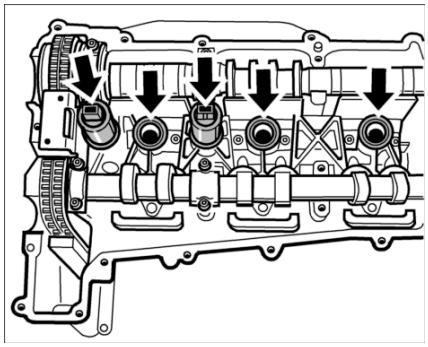


31. Final timing adjustment for cylinder bank 1 - 3 is analogous to that for cylinder bank 4 - 6. ;

Chain tensioner, cylinder 1 - 3

32. Fit chain tensioner for side 1 - 3 (hexagon a/f 32) before turning crankshaft to the TDC mark. Fit chain tensioner with new sealing ring and tighten. →**Tightening torque: 59 ftlb.**

After adjusting the timing, this should be re-checked.



Slot position of camshafts at overlap

33. Turn the engine 360° at the crankshaft and fix at the TDC mark. Check camshaft position of cylinder bank 4 - 6 using the **adjusting gauge 9686**. Then turn a further 360° and check the camshaft position of cylinder bank 1 - 3.

top of page

Subsequent work for installing camshafts

Subsequent work for installing camshafts

Gaskets for spark plug recess and solenoid hydraulic valves

1. Insert solenoid hydraulic valves and new gaskets for the spark-plug recesses. Fit new O-rings into both solenoid hydraulic valves and insert into the bores in the cylinder head. Grease O-rings with Optimol MP3. →153719 Removing and installing solenoid hydraulic valve NVS - chapter on "installing" and →155519 Removing and installing solenoid hydraulic valve VHS - chapter on "installing".
2. Install cylinder head cover →159119 Removing and installing cylinder head cover - chapter on "installing".
3. Fit oil suction pump (1 - 3) and tandem pump (4 - 6) with new, micro-self-locking Torx screws M6. Replace O-rings and grease with Optimol MP3. →**Tightening torque: 7.5 ftlb.**
4. Fit new plastic cap dry on cylinder head. Tap in with a plastic hammer.
5. Fit ground strap to cylinder head 4 - 6 with Torx screw M8 x 20 and tighten. →**Tightening torque: 17 ftlb.**
6. Insert each ignition coil into its spark plug recess, fit two M6 x 25 Torx socket screws and tighten. → **Tightening torque: 7.5 ftlb.**
7. Fit retainer plates and holders for the solenoid hydraulic valves. →153719 Removing and installing solenoid hydraulic valve NVS - chapter on "installing" and →155519 Removing and installing solenoid hydraulic valve VHS - chapter on "installing". →**Tightening torque: 7.5 ftlb.**
8. Fit holder for rear muffler. Fit and tighten two Torx screws M8 x 30 intake side and two Torx screws M8 x 25 exhaust side. Fit cable plugs for ignition coils and solenoid hydraulic valves, fixing cable in the sheetmetal clips. →**Tightening torque: 17 ftlb.**
9. Fit and tighten cover plate with two Torx screws M6 x 16. →**Tightening torque: 7.5 ftlb.**
10. Connect two cable plugs to the oil temperature switch for cylinder bank 4 - 6..

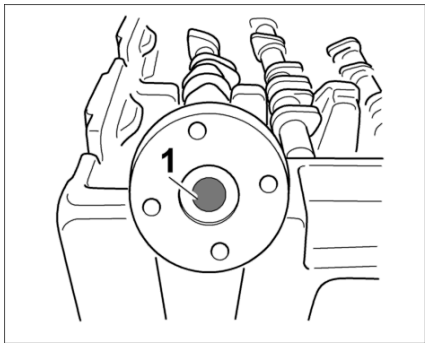
Camshaft designation M97/01

Camshaft designation M97/01

Camshaft designation M97/01

Note

Between the start of series production in April 2004 and August 2004, the camshaft manufacturer changed the lettering of the camshafts. In order to avoid a mixed installation, particular attention must be paid to the designation of engines installed in standard vehicles during this period.



Position of camshaft designation

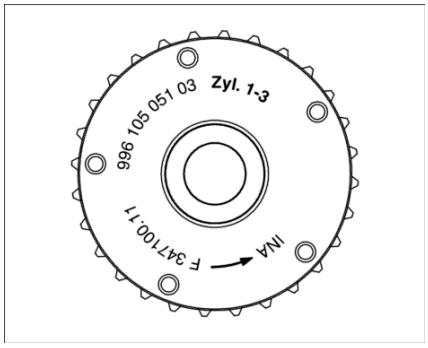
Position of lettering: -arrows-
Camshafts for cylinders 1 - 3:

- Inlet camshaft: 997.105.211.01
- Exhaust camshaft: 996.105.262.05 3,8 EX 1-3
- Inlet camshaft (new): 997.105.047.00/02
- Exhaust camshaft (new): 996.105.059.01 3.8 EX 1-3

Camshafts for cylinders 4 - 6:

- Inlet camshaft: 997.105.213.01
- Exhaust camshaft: 996.105.264.05 3,8 EX 4-6 (with aluminium plugs)
- Inlet camshaft (new): 997.105.048.00/02
- Exhaust camshaft (new): 996.105.060.01 3,8 EX 4-6 (with aluminium plugs)

Aluminium plugs in exhaust camshaft 4 - 6



Additional identifying feature for exhaust camshaft 4 - 6: aluminium plugs with lubrication bore for tandem pump

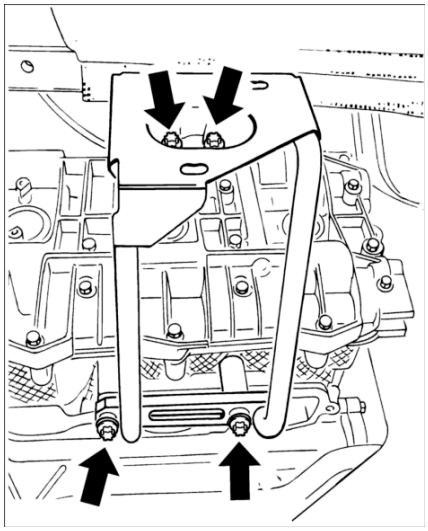
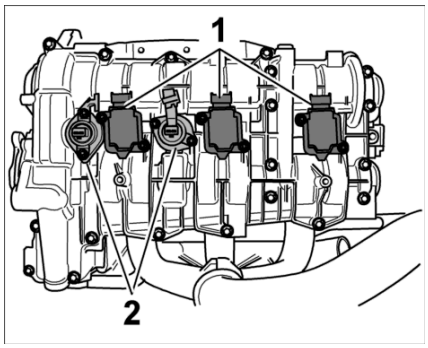
Preliminary work for removing camshafts



Preliminary work for removing camshafts

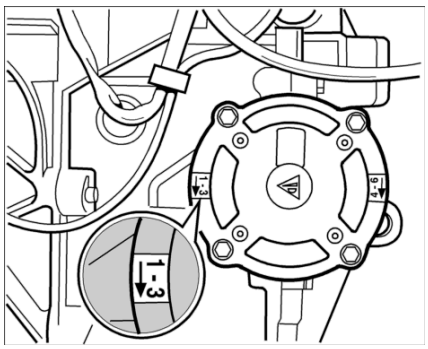
1. Remove engine →100119 Removing and installing engine - chapter on "removing".
2. Remove rear muffler →263319 Removing and installing rear muffler - chapter on "removing".



Cover plate and support for rear muffler

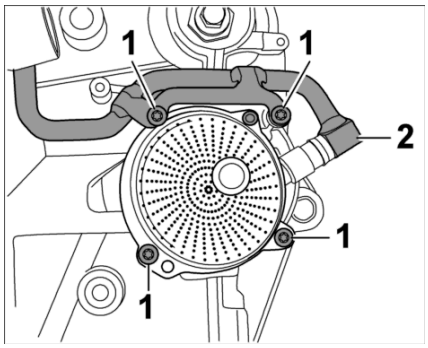
3. Remove cover plate for ignition coils **-1-** . Unscrew two M6 x 16 Torx screws and remove cover plate.

Rear muffler support



4. Remove support for rear muffler. Disconnect cable plugs of ignition coils and magnetic hydraulic valves. Unscrew four Torx screws: intake side two M8 x 30, exhaust side two M8 x 25, remove support.
5. For disassembling cylinder bank 4 - 6, undo the ground cable on the cylinder head by unscrewing a Torx screw M8 and removing the cable. Disconnect two cable plugs from oil pressure switch.

Hydraulic valves for camshaft adjustment and ignition coils



6. Remove ignition coils **-1-** . In each case unscrew two Torx socket screws M6 x 25 and pull the ignition coils out of the spark-plug recess.
7. Remove solenoid hydraulic valves **-2-** (NVS und VHS). →153719 Removing and installing solenoid hydraulic valve NVS - chapter on "removing" and →155519 Removing and installing solenoid hydraulic valve VHS - chapter on "removing".

8. Remove spark plugs. →287020 Removing and installing spark plugs - chapter on "removing".

Oil suction pump for cylinders 1 - 3

9. Remove oil suction pump for cylinders 1 - 3. Unscrew four Torx screws M6 x 20 (micro-self-locking), remove oil suction pump, and replace O-ring and screws.

Tandem pump side 4 - 6

10. Remove tandem pump for cylinders 4 - 6. Unscrew four Torx screws M6 (micro-self-locking) **-1-** . Pull off the vacuum line on pump **-2-** . Remove pump and replace O-rings and micro-self-locking screws.

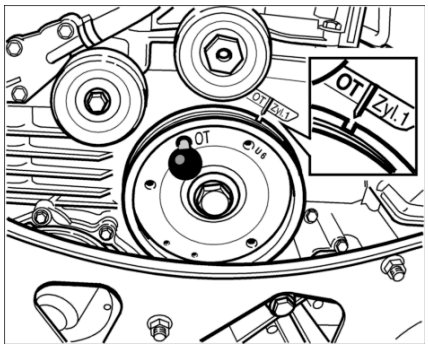
top of page

Removing camshaft - engine removed

Removing camshafts - engine removed

ATTENTION

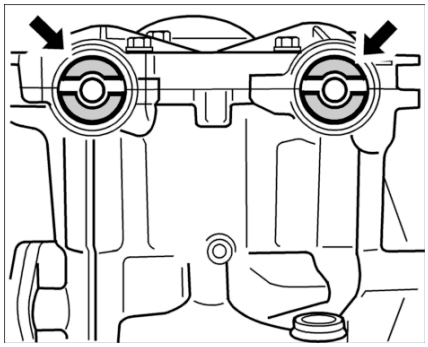
Risk of damage due to particles of dirt.



- **Oil bores/oil ducts can become blocked up.**

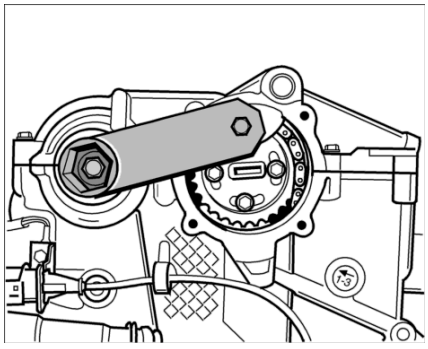
→ When working on the engine, absolute cleanliness is essential.

→ Lay removed engine parts on a clean base and cover them without fail.



→ Use the **cover for dust protection when fitting the engine NR.165** on the engine assembly support.

1. Remove the plastic caps on the cylinder head. Press a small screwdriver into the centre of the piercing point of each cap and lever out the cap.

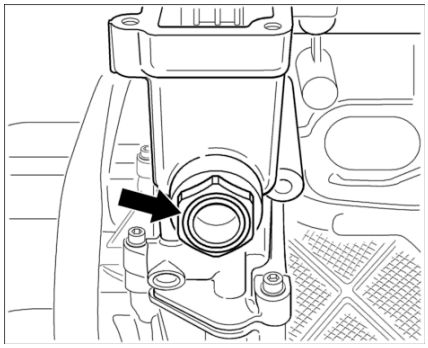


TDC marking on pulley

2. **Disassembling cylinder bank 1 - 3 Turn** crankshaft at the pulley/vibration balancer **clockwise** to the overlapping TDC of cylinder 1. **Disassembling cylinder bank 4 -6** Turn crankshaft to the TDC for cylinder 4. Using a **locating pin 9595/1** fix the pulley or vibration balancer .

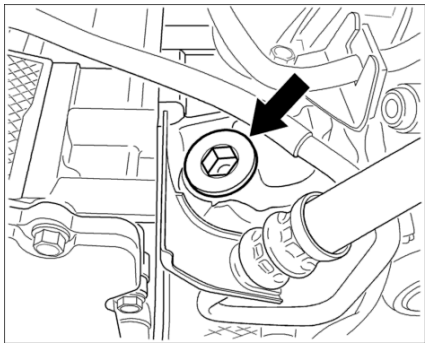
Position of the camshafts in overlapping TDC of cylinders 1 or 4

3. If the camshafts of cylinder bank 1 - 3 are removed, the smaller circular cut-outs at the grooves of the inlet and outlet camshafts **-arrows-** of **cylinder 1** must point to the cylinder head cover. For cylinder bank 4-6 the corresponding position is then on **cylinder 4**. Check the position using the **adjusting gauge 9686**.



Unscrew the central screw on the camshaft adjuster.

Note



- *Before disassembling the cylinder head cover, it is essential to unscrew the central screw on the camshaft adjustment device.*

4. Unscrew the central screw on the camshaft adjustment device. Position **retaining tool 9685** on the hexagon of the adapter and place the contact block as a counter on the fitting bore of the cylinder head cover for the oil suction pump; if necessary, position the contact block by undoing and tightening the screw. If the special tool cannot be positioned on the hexagon of the adapter in this way, the engine must be turned further in the direction of rotation at the pulley of the crankshaft until the contact block comes into contact with the central screw of the cylinder head cover, ready for unscrewing. Unscrew the central screw.
5. Remove cylinder head cover. →159119 Removing and installing cylinder head cover- chapter on "removing".
6. Release the four Torx screws M6 x 16 on the sprocket of the respective exhaust camshaft. Do not remove the sprocket.

Chain tensioner, cylinders 1 - 3

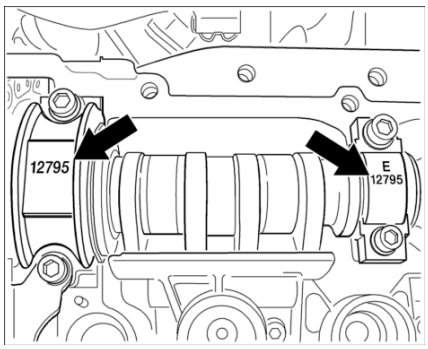
7. Remove chain tensioner for cylinders 1 - 3 or 4 - 6.

Chain tensioner, cylinders 4 - 6

8. **Cylinder bank 4 - 6** Unscrew guide rail screw M6 on pulley side (hexagon socket a/f 5).
9. Turn the engine at the assembly support so that cylinder bank to be worked on stands vertically upwards.
10. Unscrew four Torx screws for exhaust camshaft sprocket. Lift timing chain off sprocket and remove the sprocket. Lay timing chain on the mounting tab for the sprocket.
11. Remove the four camshaft thrust bearings and the guide rail. Unscrew eight Torx screws, six M6 x 35, two M6 x 40 (screws for guide rail). Lift the thrust bearing and the guide rail carefully off the mounting points or timing chain.
12. Remove the camshafts. Remove exhaust camshaft, lift timing chain off the camshaft adjuster of the inlet camshaft and remove the camshaft. Lay the timing chain in the chain housing in the cylinder head.

top of page

Installing camshaft - engine removed

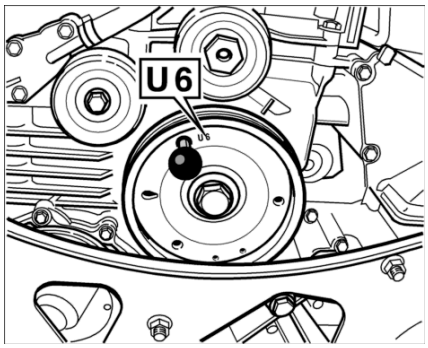


Installing camshafts, adjusting timing - engine removed

ATTENTION

Risk of damage due to particles of dirt.

- **Oil bores/oil ducts can become blocked up.**

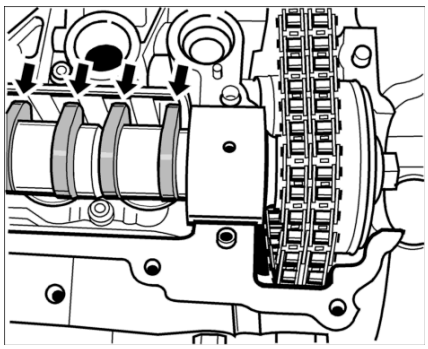


→ When working on the engine, absolute cleanliness is essential.
→ Lay removed engine parts on a clean base and cover them without fail.
→ Use the **cover for dust protection when fitting the engine NR.165** on the engine assembly support.

Identification of camshaft housing:

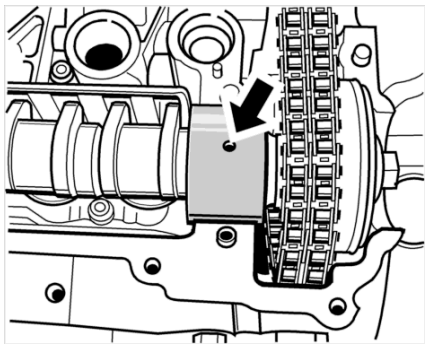
Identification of housings of camshafts:

- **Inlet camshaft:**
- **Thrust bearing:** 'E' and matching number on cylinder head/cylinder head cover
- **Housing of bearing sleeve:** only matching number
- **Outlet camshaft:**
- **Thrust bearing on sprocket:** '1A' and matching number on cylinder head/cylinder head cover
- **2nd Thrust bearing:** '2A' and matching number on cylinder head/cylinder head cover



Pulley fixed at 60° before TDC

1. To remove the play from the timing chain drive, turn the crankshaft by means of the pulley or vibration balancer**clockwise (running direction of engine** to 60° before TDC **: marking U6 on pulley or vibration balancer coincides with fixing bore in crankcase**. Fix with **locating pin 9595/1**.

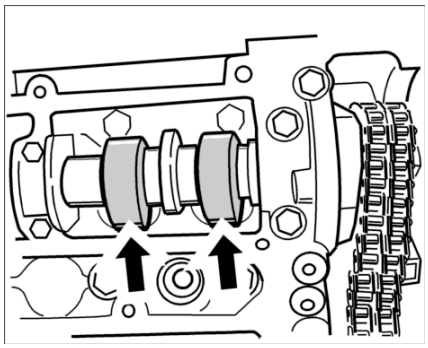


Assembly of cylinder bank 4 - 6

2. Turn the engine on the assembly support until cylinder bank 4 - 6 stands vertically upwards.
3. Oil the bearing surfaces of the camshafts with new engine oil.

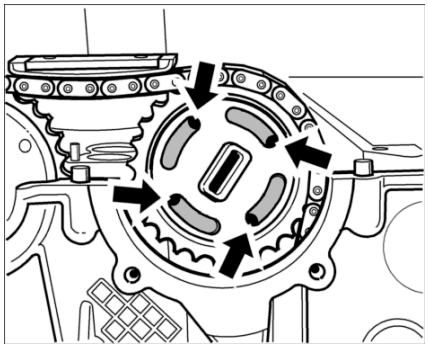
Inlet camshaft 4 - 6 in overlap

4. Insert inlet camshaft 4 - 6. Pull the timing chain out of the chain housing of the cylinder head with a welding wire and position on the ring gear of the camshaft adjuster, at the same time inserting the camshaft at overlapping TDC of cylinder 4 (the cams of cylinder 4 point towards the bulkhead of the flat-base tappet housing **-arrows-**).



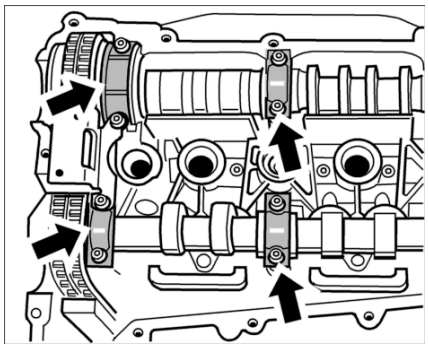
Position of bearing sleeve for inlet camshaft

Note



- *Make sure that the bearing sleeve on the inlet camshaft is positioned correctly.*

5. The bearing sleeve of the inlet camshaft must be positioned so that the centrally bored blind hole points vertically upwards **-arrow-** (the rib of the cylinder head should also be at the centre in relation to the bearing sleeve). In this position, the dowel pin in the bearing bore of the cylinder head will fit precisely into the opposite off-centre blind hole bore. Any other bores are through-holes for guiding the oil.

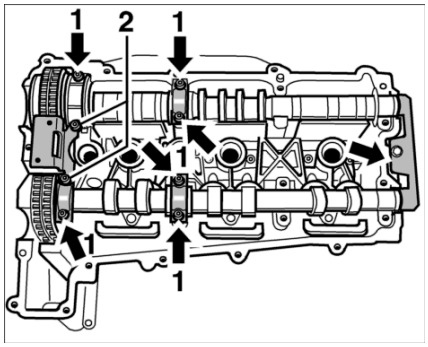


Exhaust camshaft 4 - 6

6. Insert exhaust camshaft 4 - 6. Lay the timing chain on the flange for the sprocket, then insert the camshaft at overlapping TDC of cylinder 4 (the outlet cams of cylinder 4 point towards the cams of the inlet camshaft **-arrows-**).

Position of sprocket 4 - 6 at 60° before TDC

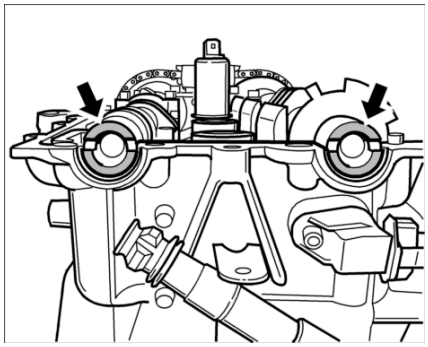
7. Insert exhaust camshaft sprocket in the timing chain and position on camshaft flange. The four threaded bores in the camshaft flange must be covered by the slots of the sprocket **in the clockwise running direction of the engine** approximately half way **-arrows-** .
8. Oil the bearing surfaces of the camshafts with new engine oil.



Installation position of housing

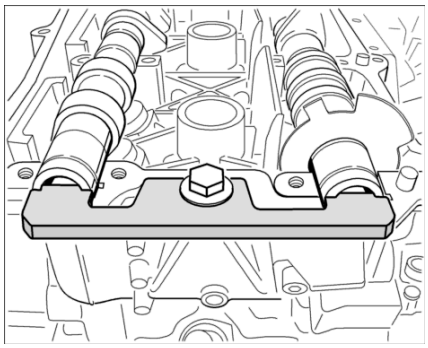
Note

- *Do not interchange the thrust bearings of the inlet and exhaust camshafts during assembly; observe identification markings.*



9. Insert three thrust bearings and one housing **-arrows-** for the bearing sleeve of the camshafts together with the guide rail for the timing chain.

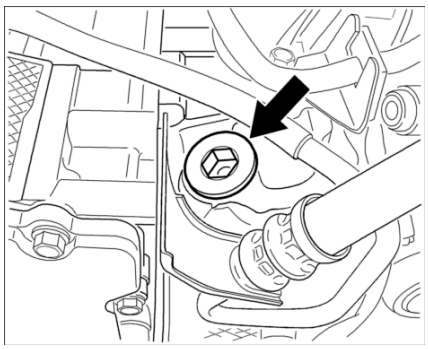
Position of housing screws



10. Insert eight housing screws (Torx): six M6 x 35 **-1-** and two M6 x 40 **-2-** for camshaft bearing and guide rail. Tighten screws evenly and just finger-tight.

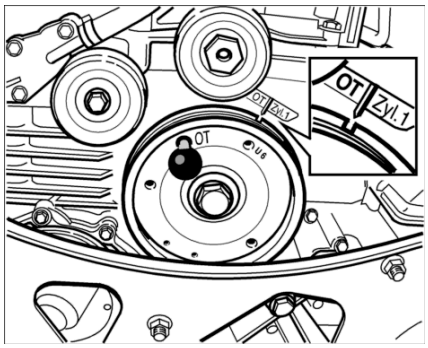
Adjust timing, cylinder bank 4 - 6

Slot position of camshafts at overlap



11. Align both camshafts. The small circular cut-outs must point upwards **-arrows-** .

Position of adjusting gauge 9689

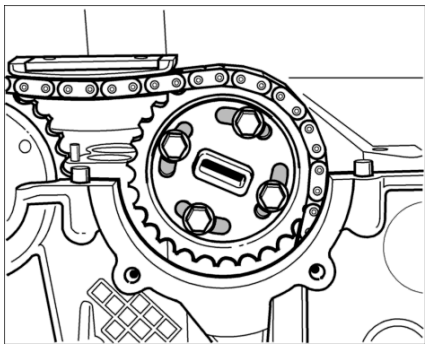


12. Using special tool **adjusting gauge 9686**, fix camshafts (if necessary with the gauge twisted) with an M8 screw (e.g. hexagon-head bolt M8 x 16). The flat tool face points upwards. Screw in fastening screw by hand.
13. Screw the housing screws of the inlet and exhaust camshafts and the auxiliary screw of the adjustment gauge alternately by approx. another 90° until the specified tightening torque is reached. →**Tightening torque: 7.5 ftlb.**

14. Insert guide rail screw with a new O-ring and tighten (hexagon socket M6, a/f 5) Grease O-ring with Optimol MP3. →**Tightening torque: 7.5 ftlb.**

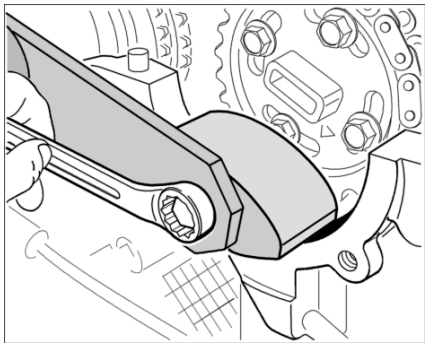
Chain tensioner, cylinders 4 - 6

15. Fit chain tensioner, side 4 - 6 (hexagon socket a/f 14). Fit chain tensioner with new aluminium sealing ring and tighten. →**Tightening torque: 59 ftlb.**



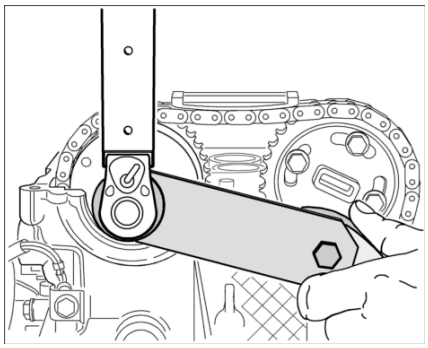
Pulley fixed at TDC marking

Note



- *Position crankshaft above the pulley or vibration balancer before final adjustment of the timing to the TDC marking.*

16. Turn the crankshaft by means of the pulley or vibration balancer **clockwise (running direction of engine** to TDC mark **: marking U6 on pulley or vibration balancer coincides with fixing bore in crankcase**. Fix with **locating pin 9595/1**.



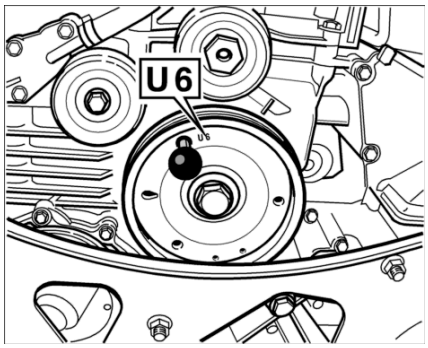
Exhaust camshaft sprocket tightened

17. Insert four Torx screws M6 to sprocket of exhaust camshaft and tighten evenly in diagonally opposite sequence. →**Tightening torque: 10.5 ftlb.**

Contact block at the fitting bore of the cylinder head

18. Tighten the central screw of the camshaft adjusting device. Fit special tool **retaining tool 9685** on hexagon of intermediate piece of the central screw. Screw in the central screw gently by hand so that the loose contact block just touches the fitting bore of the oil suction pump. Fix the hexagon-head bolt to the contact block.

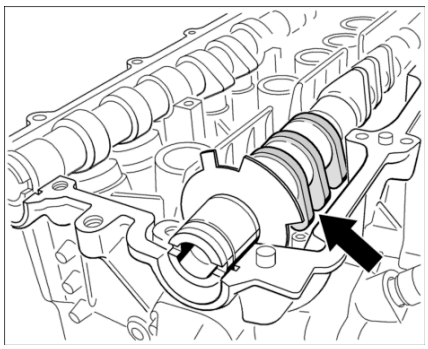
Tighten central screw of camshaft adjusting device.



Note

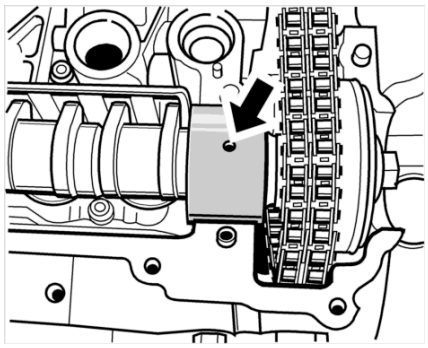
- *Before final tightening (torque angle) of the central screw, the special tool **adjusting gauge 9686** must be removed.*

19. Tighten the central screw in two stages. Initial tightening to the specified toque. →**Initial tightening: 37 ftlb.**
20. Remove special tool **adjustment gauge 9686**. Undo the M8 screw and remove gauge.
21. Apply final tightening to central screw with torque angle wrench. →**Final tightening torque angle: 110 °**



Assembly of cylinder bank 1 -3

22. Turn the engine on the assembly support until cylinder bank 1 - 3 stands vertically upwards.

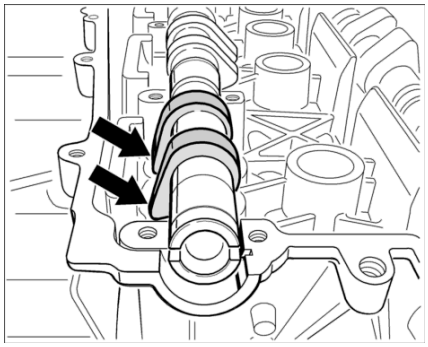


Pulley fixed at 60° before TDC

23. Turn the crankshaft by means of the pulley or vibration balancer **clockwise (running direction of engine** further still until the **marking U6 on pulley or vibration balancer coincides with fixing bore in crankcase** (60° before TDC). Fix with **locating pin 9595/1**.
24. Oil the bearing surfaces of the camshafts with new engine oil.

Inlet camshaft 1-3 in overlap

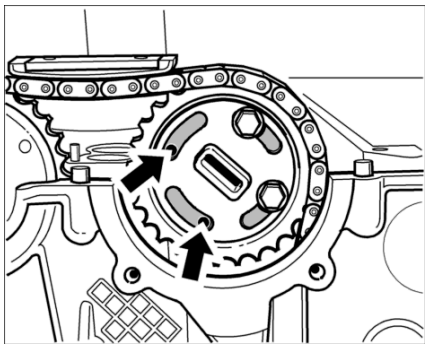
25. Insert inlet camshaft 1 - 3. Pull the control chain out of the chain housing of the cylinder head with a welding wire and position on the toothed ring of the camshaft adjuster. Then insert the camshaft at overlapping TDC of cylinder 1 (the cams of cylinder 1 point diagonally downwards towards the outside of the cylinder head **-arrow-**).



Position of bearing sleeve for inlet camshaft

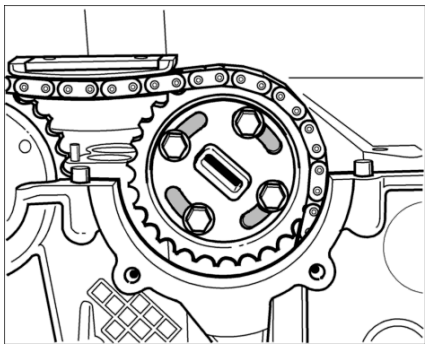
Note

- *Make sure that the bearing sleeve on the inlet camshaft is positioned correctly.*



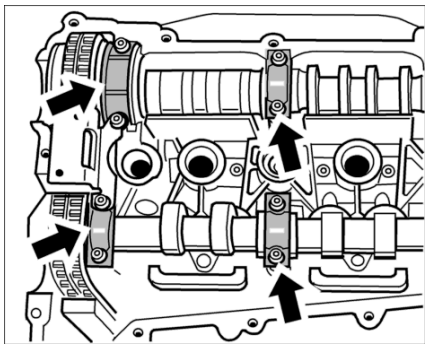
26. The bearing sleeve of the inlet camshaft must be positioned so that the centrally bored blind hole points vertically upwards **-arrow-** (the rib of the cylinder head should also be at the centre in relation to the bearing sleeve). In this position, the dowel pin in the bearing bore of the cylinder head will fit precisely

into the opposite off-centre blind hole bore. Any other bores are through-holes for guiding the oil.



Exhaust camshaft 1-3 in overlap

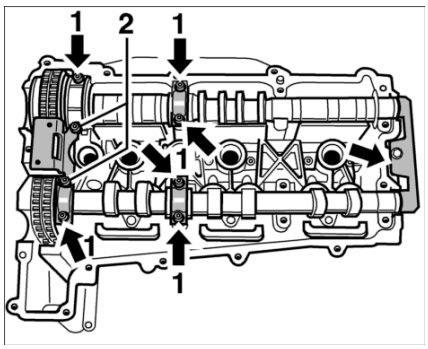
27. Insert exhaust camshaft 1 - 3. Lay the control chain on the flange for the chain sprocket, then insert the camshaft at overlapping TDC of cylinder 1 (the cams of cylinder 1 point diagonally downwards towards the outside of the cylinder head).



Exhaust sprocket 1 - 3 at 60° before TDC

28. Insert exhaust camshaft sprocket in the timing chain and position on camshaft flange. The four threaded bores in the camshaft flange must be fully visible **on the left at the slotted curves of the sprocket -arrows-** so that the Torx screws M6 x 12 can still be positioned to fasten the sprocket.

Exhaust sprocket 1 - 3, all screws fitted



Installation position of housing

Note

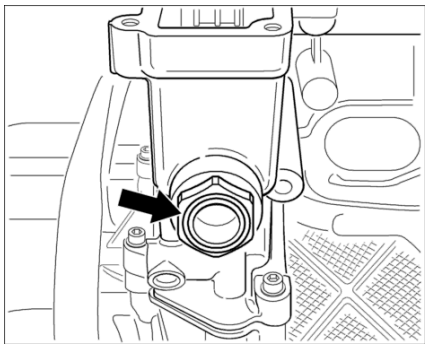
- *Do not interchange the thrust bearings of the inlet and exhaust camshafts during assembly; observe identification markings.*

29. Insert three thrust bearings and one housing **-arrows-** for the bearing sleeve of the camshafts together with the guide rail for the timing chain.

Position of housing screws

30. Insert eight housing screws (Torx): six M6 x 35 **-1-** and two M6 x 40 **-2-** for camshaft bearing and guide rail. Tighten screws evenly and just finger-tight.

Timing for side 1 - 3

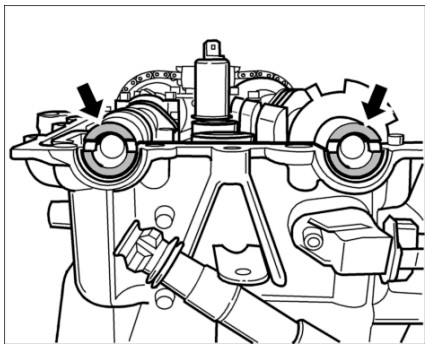


Note

- *Position crankshaft above the pulley or vibration balancer before final adjustment of the timing to the TDC marking.*

Note

- *Before final tightening (torque angle) of the central screw, the special tool **adjusting gauge 9686** must be removed.*

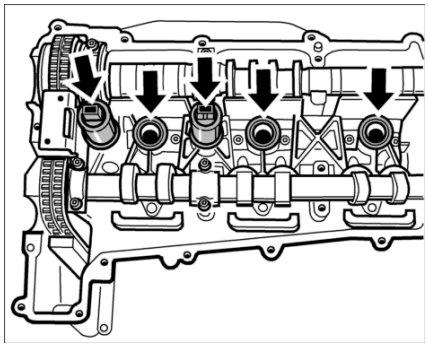


31. Final timing adjustment for cylinder bank 1 - 3 is analogous to that for cylinder bank 4 - 6. ;

Chain tensioner, cylinder 1 - 3

32. Fit chain tensioner for side 1 - 3 (hexagon a/f 32) before turning crankshaft to the TDC mark. Fit chain tensioner with new sealing ring and tighten. →**Tightening torque: 59 ftlb.**

After adjusting the timing, this should be re-checked.



Slot position of camshafts at overlap

33. Turn the engine 360° at the crankshaft and fix at the TDC mark. Check camshaft position of cylinder bank 4 - 6 using the **adjusting gauge 9686**. Then turn a further 360° and check the camshaft position of cylinder bank 1 - 3.

Subsequent work for installing camshafts

Subsequent work for installing camshafts

Gaskets for spark plug recess and solenoid hydraulic valves

1. Insert solenoid hydraulic valves and new gaskets for the spark-plug recesses. Fit new O-rings into both solenoid hydraulic valves and insert into the bores in the cylinder head. Grease O-rings with Optimol MP3. →153719 Removing and installing solenoid hydraulic valve NVS - chapter on "installing" and →155519 Removing and installing solenoid hydraulic valve VHS - chapter on "installing".
2. Install cylinder head cover →159119 Removing and installing cylinder head cover - chapter on "installing".
3. Fit oil suction pump (1 - 3) and tandem pump (4 - 6) with new, micro-self-locking Torx screws M6. Replace O-rings and grease with Optimol MP3. →**Tightening torque: 7.5 ftlb.**
4. Fit new plastic cap dry on cylinder head. Tap in with a plastic hammer.
5. Fit ground strap to cylinder head 4 - 6 with Torx screw M8 x 20 and tighten. →**Tightening torque: 17 ftlb.**
6. Insert each ignition coil into its spark plug recess, fit two M6 x 25 Torx socket screws and tighten. → **Tightening torque: 7.5 ftlb.**
7. Fit retainer plates and holders for the solenoid hydraulic valves. →153719 Removing and installing solenoid hydraulic valve NVS - chapter on "installing" and →155519 Removing and installing solenoid hydraulic valve VHS - chapter on "installing". →**Tightening torque: 7.5 ftlb.**
8. Fit holder for rear muffler. Fit and tighten two Torx screws M8 x 30 intake side and two Torx screws M8 x 25 exhaust side. Fit cable plugs for ignition coils and solenoid hydraulic valves, fixing cable in the sheetmetal clips. →**Tightening torque: 17 ftlb.**
9. Fit and tighten cover plate with two Torx screws M6 x 16. →**Tightening torque: 7.5 ftlb.**
10. Connect two cable plugs to the oil temperature switch for cylinder bank 4 - 6..

WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

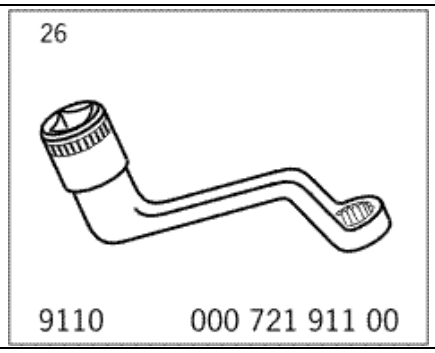
Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

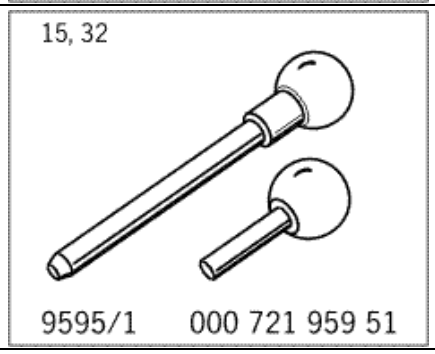
- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

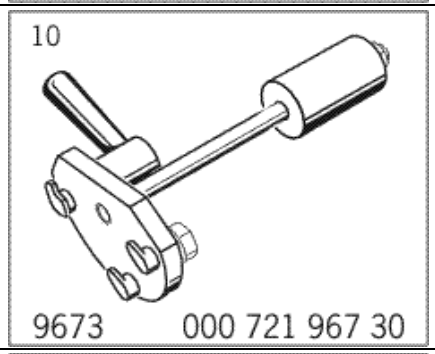
→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

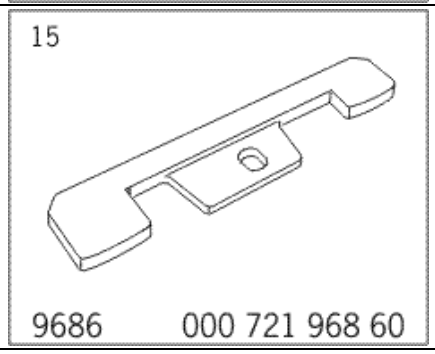
 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.









- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

top of page

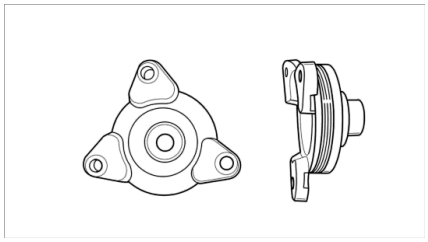
Removing bearing cover for intermediate shaft

Removing bearing cover for intermediate shaft

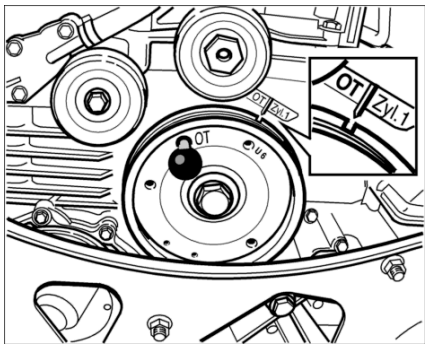


ATTENTION
Timing chain may jump over.

- **Risk of engine damage**

→ Following removal of the chain tensioner, the crankshaft must not be turned under any circumstances.

Note

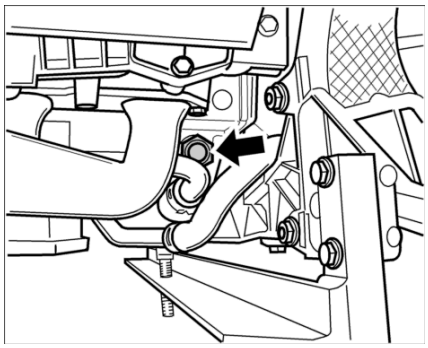


- *It is only possible to remove the bearing cover with the engine installed in vehicles with manual transmission.*
- *In Tiptronic vehicles, the complete engine/transmission unit must be removed.*

Bearing cover with sealing ring

Bearing cover

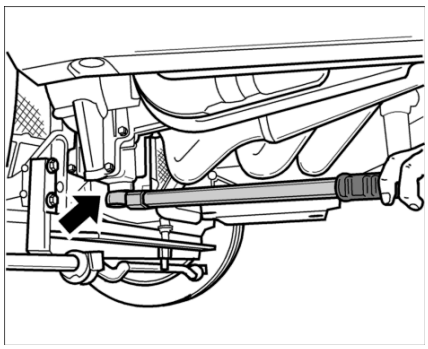
1. Lever out two green closure caps on pulley side of cylinder bank 1 - 3.



Fixing belt pulley (damper)

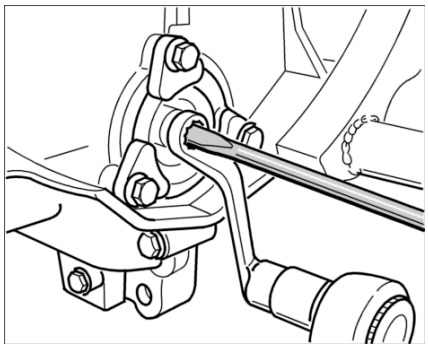
2. Turn the engine at the hexagon-head bolt (a/f 24) of the crankshaft belt pulley (or vibration damper) clockwise to overlapping TDC of cylinder bank 1-3 and fix it with special tool **fixing pins 9595/1**.

Note



- *For checking with the adjusting gauge, the timing adjustment must be correct.*

3. To check the camshaft adjustment, insert **adjusting gauge 9686** for camshaft into the camshaft slots (pulley side) (inscription on gauge pointing towards cylinder head cover). If the gauge cannot be inserted, rotate the crankshaft a further 360° and secure it again.
4. Unscrew two M6 x 12 hexagon-head bolts on the coolant pipe (heating) at cylinder side 4 - 6.



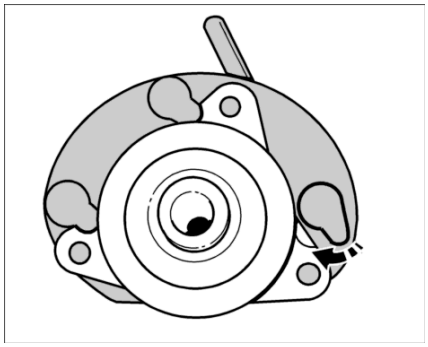
Primary chain tensioner

5. Remove primary chain tensioner (hexagon socket a/f 32).

Chain tensioner, cylinder 1-3

6. Remove chain tensioner, cylinder bank 1 - 3 (hexagon socket a/f 32).

Collar nut for bearing cover



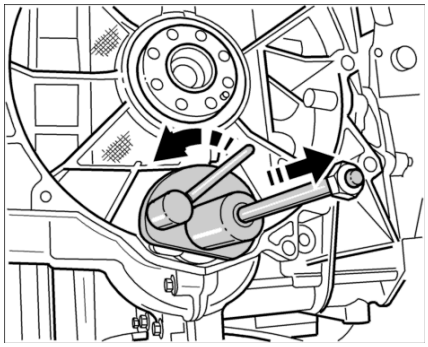
Note

- *To make it easier to remove the bearing cover, spray the sealing surface with anti-rust agent.*

7. Unscrew M8 hexagon collar nut on the bearing cover of the intermediate shaft with special tool **socket wrench 9110**, while at the same time countering the slotted threaded pin on the intermediate shaft with a

screwdriver.

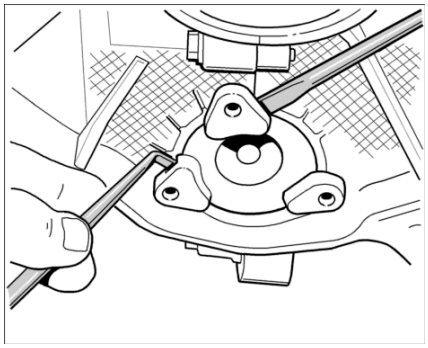
8. Unscrew the three M6 x 20 hexagon-head bolts (coated) on the intermediate-shaft flange. Replace screws during installation and clean thread.



Puller on bearing cover: View from intermediate shaft

Note

- *Remove bearing cover using special tool **puller 9673**. If this is not available, lever the bearing cover out carefully with two screwdrivers so as not to damage the sealing surfaces. Turning several times to the left and right loosens the bearing cover.*



- *After removing the bearing cover, do not press the threaded bolts of the intermediate shaft.*

9. Position special tool **puller 9673** at the bearing cover grooves and secure by turning the locking lever anti-clockwise.

Removing bearing cover

10. Pull the slide hammer on the puller a number of times against the stop nuts while countering the tool at the same time with the other hand.

Levering out bearing cover

11. If the puller is not available, lever the bearing cover out carefully using two screwdrivers (or angle screwdrivers), for example. Move the bearing cover frequently to the left and right to make the levering easier. Do not damage the sealing surfaces.

Installing bearing cover for intermediate shaft

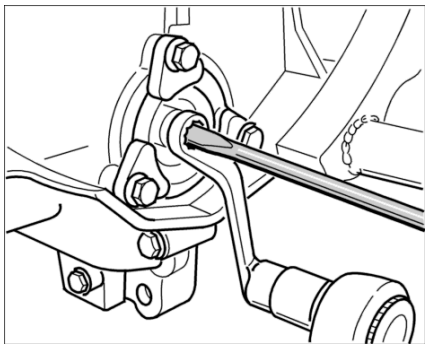
Installing bearing cover for intermediate shaft

Installing bearing cover for intermediate shaft

Note

- *Clean working area of bore for bearing cover and crankcase thoroughly using acetone or solvent naphtha.*

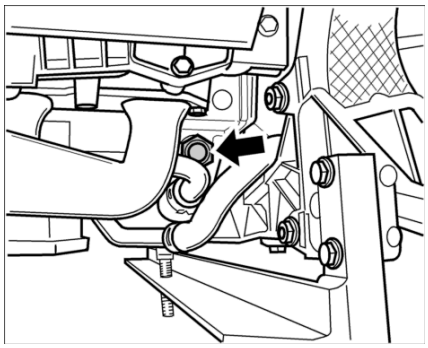
Note



- *Replace bearing cover or sealing ring for bearing cover →152355 Replacing sealing ring for intermediate shaft.*

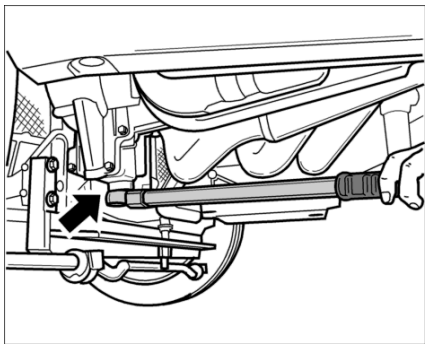
1. Before installing the new bearing cover, check the fitted bore (axial attachment surface, bore chamfers) on the crankcase for sharp edges and burrs. They should be removed with an oilstone or a polishing cloth. Remove any existing residue and clean the bore with a clean cloth soaked in solvent naphtha or acetone.
2. Grease fitted bore in crankcase and new bearing cover (with new sealing ring) with special grease Optimoly MP3 (available from Porsche Parts Service) and place bearing cover in position.

Note



- *Replace collar nut M8 x 1 and coated M6 screws for bearing cover.*

3. Position three new, coated M6 x 20 screws on the crankcase and pull in the bearing cover by screwing in the screws uniformly. Tighten screws →**Tightening torque: 7.5 ftlb.** .



Collar nut for bearing cover

4. Position new M8 x 1 collar nut on the threaded pin of the intermediate shaft. Then tighten the nut using special tool **socket wrench 9110**. At the same time, counter with a screwdriver in the slotted threaded pin of the intermediate shaft. →**Tightening torque: 9 ftlb. +0.5 ftlb.**

Primary chain tensioner

5. Insert primary chain tensioner with new aluminium sealing ring (hexagon a/f 32) and tighten to the specified torque. →**Tightening torque: 59 ftlb.**

Chain tensioner, cylinder 1-3

6. Insert chain tensioner for cylinder 1 - 3 with new aluminium sealing ring (hexagon a/f 32) and tighten to the specified torque. →**Tightening torque: 59 ftlb.**
7. Fasten coolant pipe (heating), cylinder side 4 - 6, with two M6 x 12 hexagon-head bolts. →**Tightening torque: 7.5 ftlb.**
8. Fit two new closure caps on cylinder head cover.
9. Pull fixing pin out of the crankshaft belt pulley.

Country C00, C02, C05, C07, C08, C09, C10, C11, C12, C13, C14, C15, C16, C18, C19, C20, C21, C22, C23, C24, C25, C26, C27, C28, C32, C33, C34, C35, C36, C37, C38, C39, C45, C46, C98, C99

WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

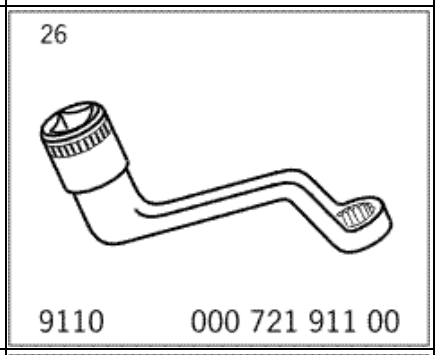
Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

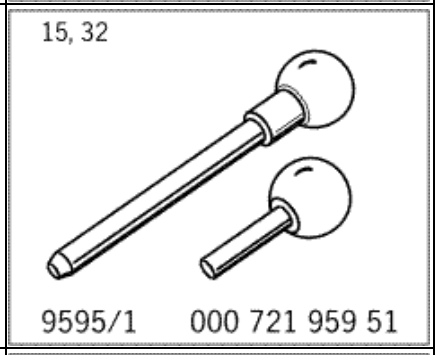
- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

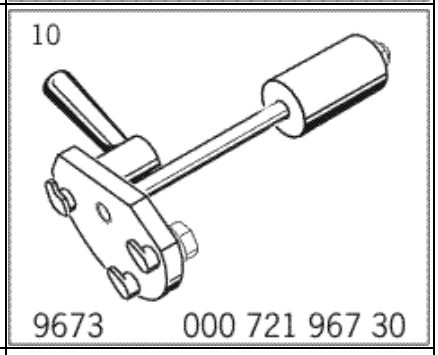
→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

ADVERTENCIA

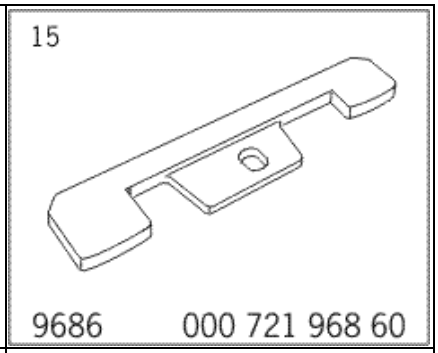
Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.







- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**



→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

Removing bearing cover for intermediate shaft

Removing bearing cover for intermediate shaft - up to engine number 685 09 790

ATTENTION
Timing chain may jump over.

- **Risk of engine damage**

→ Following removal of the chain tensioner, the crankshaft must not be turned under any circumstances.

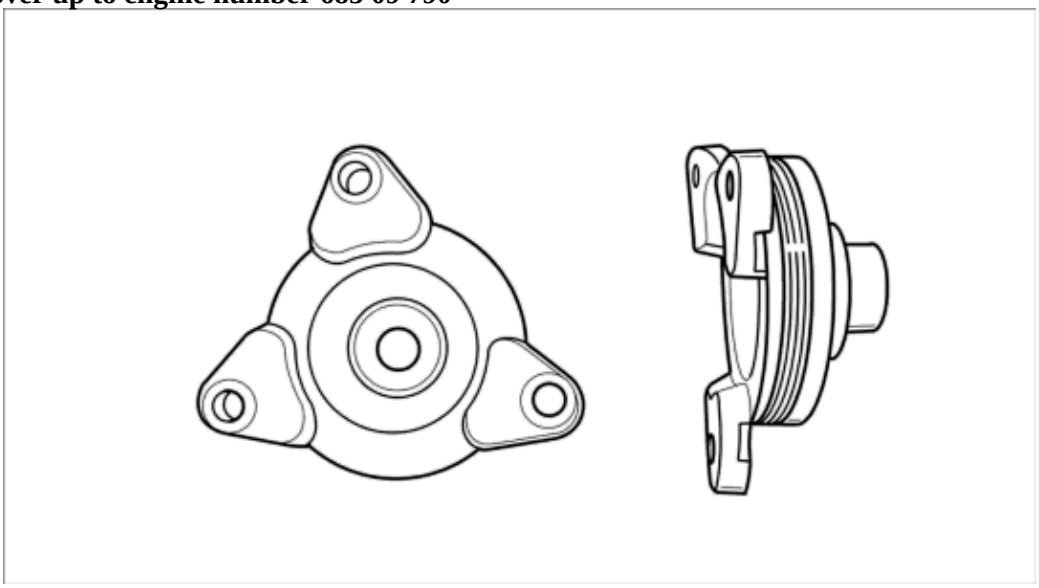
ATTENTION
Risk of damage due to particles of dirt.

- **Oil bores/oil ducts can become blocked up.**

→ When working on the engine, absolute cleanliness is essential.
→ Lay removed engine parts on a clean base and cover them without fail.
→ Use the **cover for dust protection when fitting the engine NR.165** on the engine assembly support.

Note

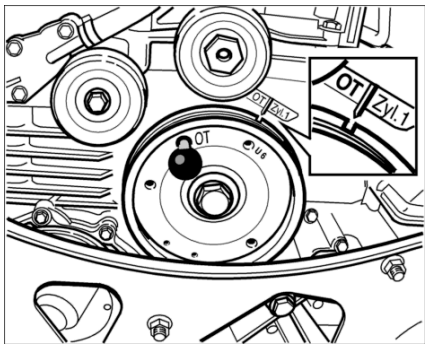
- *It is only possible to remove the bearing cover with the engine installed in vehicles with manual transmission.*
- *In Tiptronic vehicles, the complete engine/transmission unit must be removed.*



Note

Always observe specified engine number range.

Note



Always observe specified engine number range.

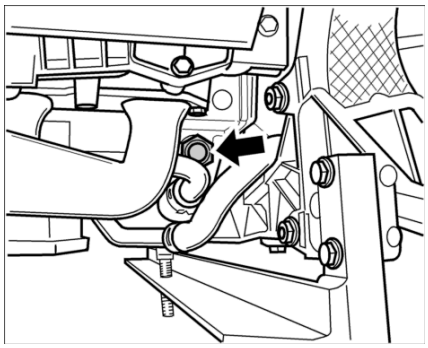
Bearing cover up to engine number 685 09 790

Bearing cover with sealing ring

1. Lever out two green closure caps on pulley side of cylinder bank 1 - 3.

Fixing vibration damper

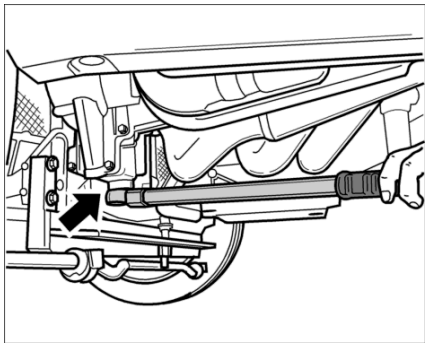
2. Turn the engine at the hexagon-head bolt (a/f 24) of the crankshaft vibration balancer clockwise to overlapping TDC of cylinder bank 1 - 3 and fix it with special tool **locating pins 9595/1**.



Note

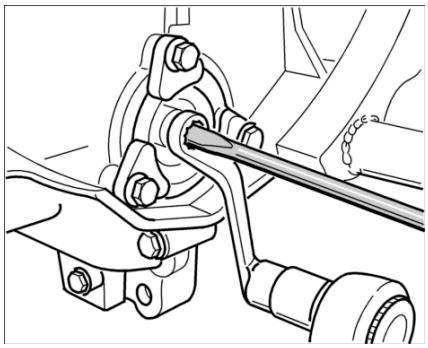
- *For checking with the adjusting gauge, the timing adjustment must be correct.*

Note



- *For checking with the adjusting gauge, the timing adjustment must be correct.*

3. To check the camshaft adjustment, insert **adjusting gauge 9686** for camshaft into the camshaft slots (pulley side) (inscription on gauge pointing towards cylinder head cover). If the gauge cannot be inserted, rotate the crankshaft a further 360° and secure it again.
4. Unscrew two M6 x 12 hexagon-head bolts on the coolant pipe at cylinder side 4 - 6.



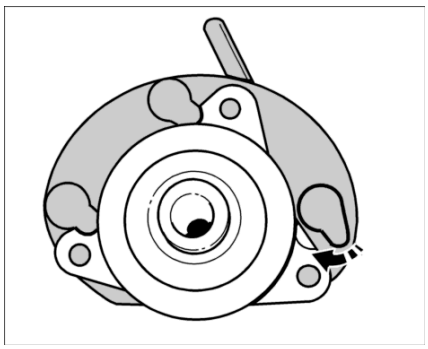
Primary chain tensioner

5. Remove primary chain tensioner (hexagon socket a/f 32).

Chain tensioner, cylinders 1 - 3

6. Remove chain tensioner, cylinder bank 1 - 3 (hexagon socket a/f 32).

Collar nut for bearing cover



Note

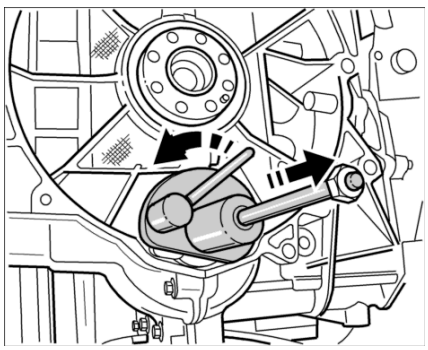
- *To make it easier to remove the bearing cover, spray the sealing surface with anti-rust agent.*

Note

- *To make it easier to remove the bearing cover, spray the sealing surface with anti-rust agent.*

7. Unscrew M8 hexagon collar nut on the bearing cover of the intermediate shaft with special tool **socket wrench 9110**, while at the same time countering the slotted threaded pin on the intermediate shaft with a screwdriver.
8. Unscrew the three M6 x 20 fastening screws (coated) on the intermediate-shaft flange. Replace screws during installation and clean thread in crankcase.

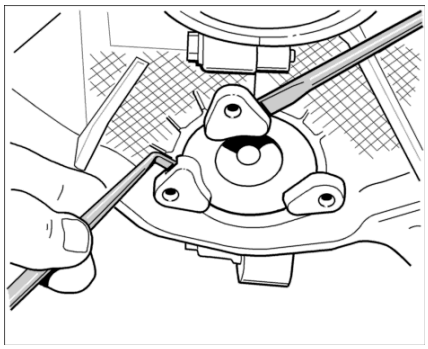
Puller on bearing cover: view when removed



Note

- *Remove bearing cover using special tool **puller 9673**. If this is not available, lever the bearing cover out carefully with two screwdrivers so as not to damage the sealing surfaces. Turning several times to the left and right loosens the bearing cover.*
- *After removing the bearing cover, do not press the threaded bolts of the intermediate shaft.*

Note



- *Remove bearing cover using special tool **puller 9673**. If this is not available, lever the bearing cover out carefully with two screwdrivers so as not to damage the sealing surfaces. Turning several times to the left and right loosens the bearing cover.*
- *After removing the bearing cover, do not press the threaded bolts of the intermediate shaft.*

9. Position special tool **puller 9673** at the bearing cover grooves and secure by turning the locking lever anti-clockwise.

Removing bearing cover

10. Pull the slide hammer on the puller a number of times against the stop nuts while countering the tool at the same time with the other hand.

Levering out bearing cover

11. If the puller is not available, lever the bearing cover out carefully using two screwdrivers (or angle screwdrivers). Move the bearing cover a number of times to the left and right to make levering easier. Do not damage the sealing surfaces.

Removing bearing cover for intermediate shaft - from engine number 685 09 791

ATTENTION
Timing chain may jump over.

- **Risk of engine damage**

→ Following removal of the chain tensioner, the crankshaft must not be turned under any circumstances.

ATTENTION
Risk of damage due to particles of dirt.

- **Oil bores/oil ducts can become blocked up.**

→ When working on the engine, absolute cleanliness is essential.
→ Lay removed engine parts on a clean base and cover them without fail.
→ Use the **cover for dust protection when fitting the engine NR.165** on the engine assembly support.

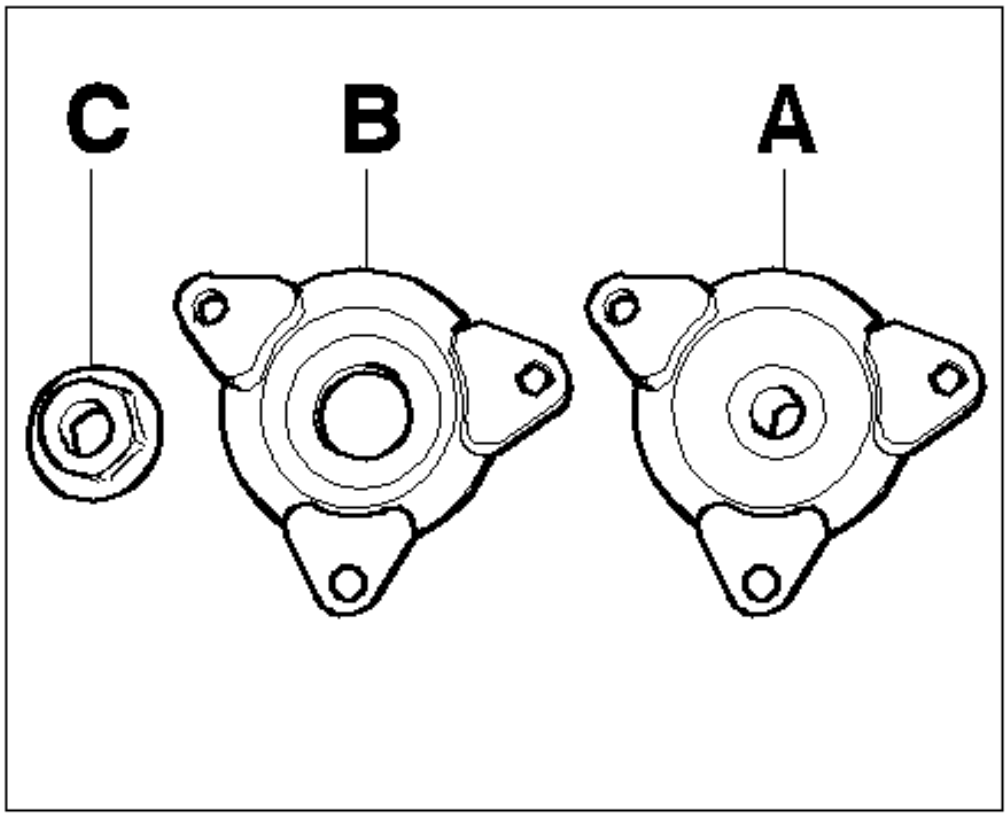
Note

- *It is only possible to remove the bearing cover with the engine installed in vehicles with manual transmission.*

- *In Tiptronic vehicles, the complete engine/transmission unit must be removed.*

Note

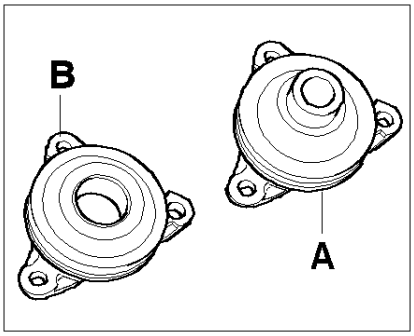
Always observe specified engine number range.



Note

Always observe specified engine number range.

Note



- *The same sealing ring and installation/removal procedure applies as for the "old" bearing cover.*
- *The new bearing cover can only be retrofitted along with the new intermediate shaft up to model year 2002 (M96/03).*

Overview of bearing covers for intermediate shaft

Differentiation of bearing covers for intermediate shaft

Installing bearing cover for intermediate shaft

Installing bearing cover for intermediate shaft - up to engine number 685 09 790

ATTENTION

Risk of damage due to particles of dirt.

- **Oil bores/oil ducts can become blocked up.**

→ When working on the engine, absolute cleanliness is essential.

→ Lay removed engine parts on a clean base and cover them without fail.

→ Use the **cover for dust protection when fitting the engine NR.165** on the engine assembly support.

Note

- *Clean working area of bore for bearing cover and crankcase thoroughly using acetone or solvent naphtha.*

Note

- *Clean working area of bore for bearing cover and crankcase thoroughly using acetone or solvent naphtha.*

1. Before installing the new bearing cover, check the fitted bore (axial attachment surface, bore chamfers) on the crankcase for sharp edges and burrs. They should be removed with an oilstone or a polishing cloth. Remove any existing residue and clean the bore with a clean cloth soaked in solvent naphtha or acetone.

Note

- *Replace bearing cover or sealing ring for bearing cover →152355 Replacing sealing ring for intermediate shaft.*

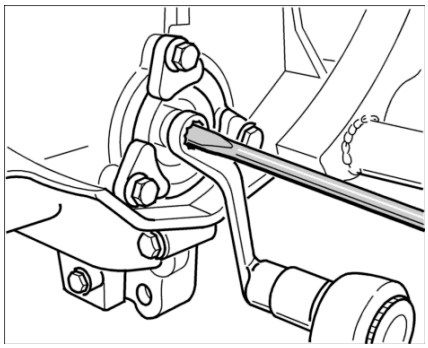
Note

- *Replace bearing cover or sealing ring for bearing cover →152355 Replacing sealing ring for intermediate shaft.*

Note

Always observe specified engine number range.

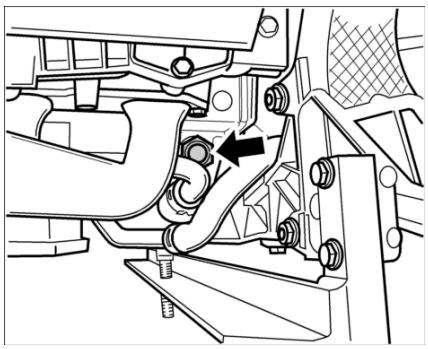
Note



Always observe specified engine number range.

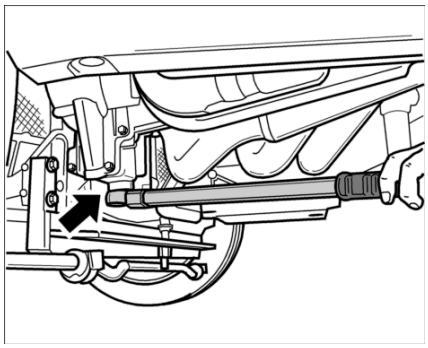
2. Grease fitted bore in crankcase and new bearing cover (with new sealing ring) with special grease Optimoly MP3 (available from Porsche Parts Service) and place bearing cover in position.

Note



- *Replace collar nut M8 x 1 and coated M6 screws for bearing cover.*

3. Position three new, coated M6 x 20 screws on the crankcase and pull in the bearing cover by screwing in the screws uniformly. Tighten the screws. →**Tightening torque: 10 (7.5 ftlb.) Nm**



Collar nut for bearing cover

4. Position new M8 x 1 collar nut on the threaded pin of the intermediate shaft. Then tighten the nut using special tool **socket wrench 9110**. At the same time, counter with a screwdriver in the slotted threaded pin of the intermediate shaft. →**Tightening torque: 12 (9 ftlb.) Nm +1 (0.5 ftlb.) Nm**

Primary chain tensioner

5. Insert primary chain tensioner with new sealing ring (hexagon a/f 32) and tighten to the specified torque. →**Tightening torque: 80 (59 ftlb.) Nm**

Chain tensioner, cylinders 1 - 3

6. Insert chain tensioner for cylinder 1 - 3 with new sealing ring (hexagon a/f 32) and tighten to the specified torque. →**Tightening torque: 80 (59 ftlb.) Nm**
7. Secure coolant pipe on cylinder side 4 - 6 with two M6 x 12 hexagon-head bolts. →**Tightening torque: 10 (7.5 ftlb.) Nm**
8. Fit new closure caps on cylinder head cover.
9. Pull locating pin out of the crankshaft vibration balancer.

Installing bearing cover for intermediate shaft - from engine number 685 09 791

ATTENTION

Risk of damage due to particles of dirt.

- **Oil bores/oil ducts can become blocked up.**

→ When working on the engine, absolute cleanliness is essential.

Removing bearing cover for intermediate shaft

Removing bearing cover for intermediate shaft - up to engine number 695 07 475

ATTENTION
Timing chain may jump over.

- **Risk of engine damage**

→ Following removal of the chain tensioner, the crankshaft must not be turned under any circumstances.

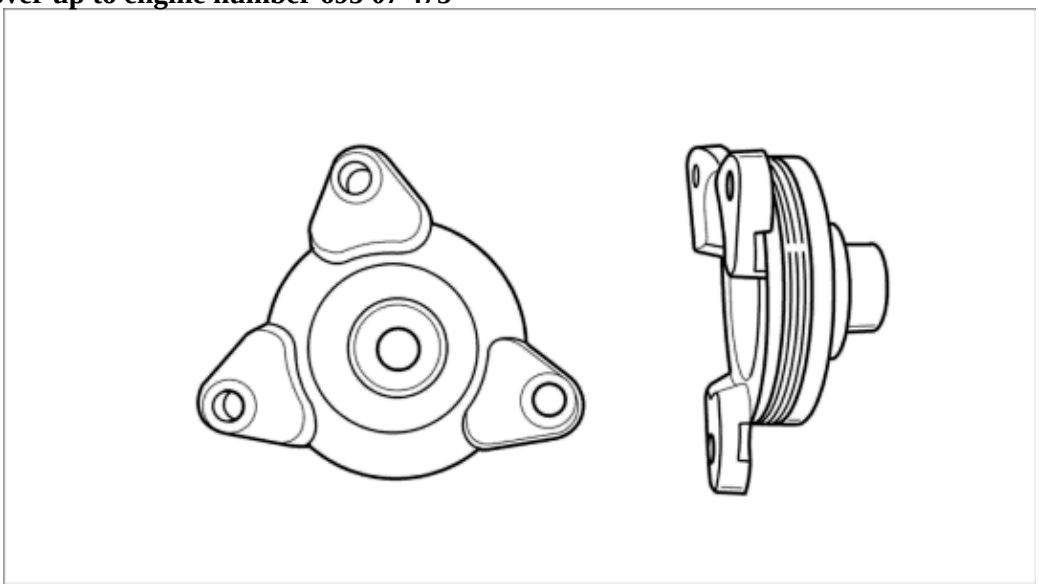
ATTENTION
Risk of damage due to particles of dirt.

- **Oil bores/oil ducts can become blocked up.**

→ When working on the engine, absolute cleanliness is essential.
→ Lay removed engine parts on a clean base and cover them without fail.
→ Use the **cover for dust protection when fitting the engine NR.165** on the engine assembly support.

Note

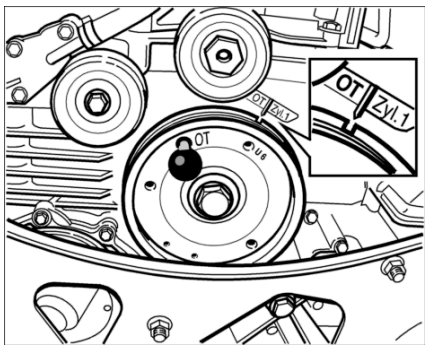
- *It is only possible to remove the bearing cover with the engine installed in vehicles with manual transmission.*
- *In Tiptronic vehicles, the complete engine/transmission unit must be removed.*



Note

Always observe specified engine number range.

Note



Always observe specified engine number range.

Bearing cover up to engine number 695 07 475

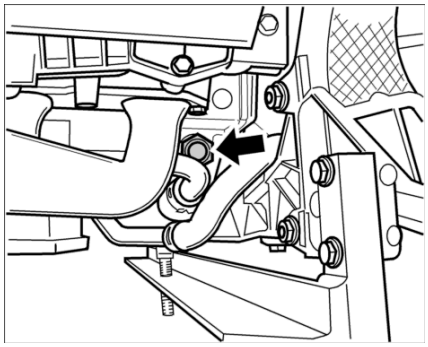
Bearing cover with sealing ring

1. Lever out two green closure caps on pulley side of cylinder bank 1 - 3.

Fixing belt pulley (damper)

2.

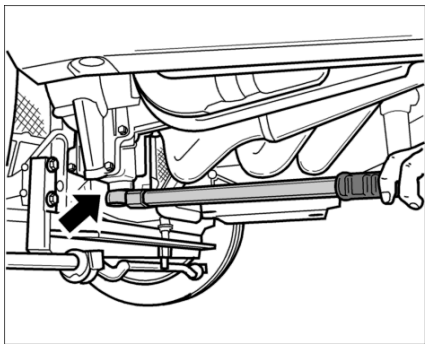
Turn the engine at the hexagon-head bolt (a/f 24) of the crankshaft belt pulley clockwise to overlapping TDC of cylinder bank 1 - 3 and fix it with special tool **locating pins 9595/1**.



Note

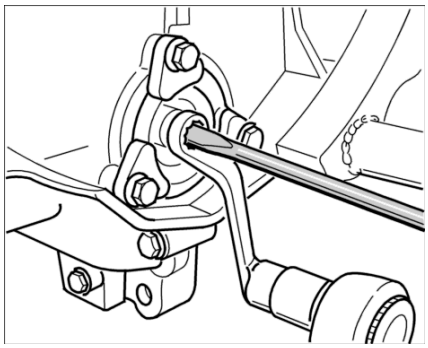
- *For checking with the adjusting gauge, the timing adjustment must be correct.*

Note



- *For checking with the adjusting gauge, the timing adjustment must be correct.*

3. To check the camshaft adjustment, insert **adjusting gauge 9686** for camshaft into the camshaft slots (pulley side) (inscription on gauge pointing towards cylinder head cover). If the gauge cannot be inserted, rotate the crankshaft a further 360° and secure it again.
4. Unscrew two M6 x 12 hexagon-head bolts on the coolant pipe at cylinder side 4 - 6.



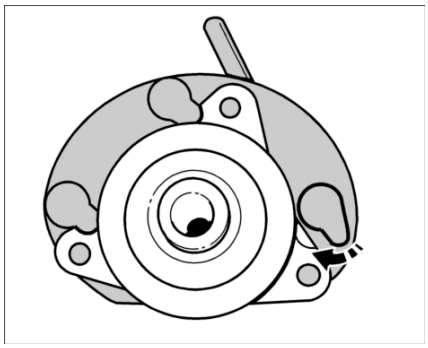
Primary chain tensioner

5. Remove primary chain tensioner (hexagon socket a/f 32).

Chain tensioner, cylinders 1 - 3

6. Remove chain tensioner, cylinder bank 1 - 3 (hexagon socket a/f 32).

Collar nut for bearing cover



Note

- *To make it easier to remove the bearing cover, spray the sealing surface with anti-rust agent.*

Note

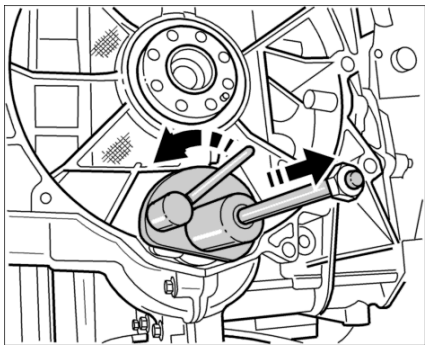
- *To make it easier to remove the bearing cover, spray the sealing surface with anti-rust agent.*

7. Unscrew M8 hexagon collar nut on the bearing cover of the intermediate shaft with special tool **socket wrench 9110**, while at the same time countering the slotted threaded pin on the intermediate shaft with a screwdriver.
8. Unscrew the three M6 x 20 fastening screws (coated) on the intermediate-shaft flange. Replace screws during installation and clean thread in crankcase.

Puller on bearing cover: view when removed

Note

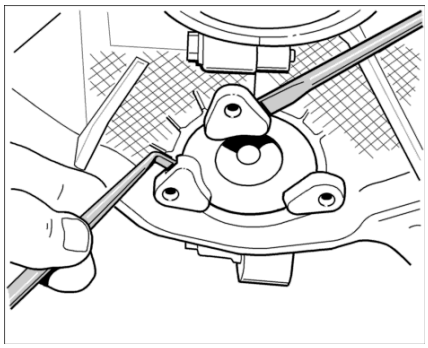
- *Remove bearing cover using special tool **puller 9673**. If this is not available, lever the bearing cover out carefully with two screwdrivers so as not to damage the sealing surfaces. Turning several times to the left and right loosens the bearing cover.*



- *After removing the bearing cover, do not press the threaded bolts of the intermediate shaft.*

Note

- *Remove bearing cover using special tool **puller 9673**. If this is not available, lever the bearing cover out carefully with two screwdrivers so as not to damage the sealing surfaces. Turning several times to the left and right loosens the bearing cover.*



- *After removing the bearing cover, do not press the threaded bolts of the intermediate shaft.*

9. Position special tool **puller 9673** at the bearing cover grooves and secure by turning the locking lever anti-clockwise.

Removing bearing cover

10. Pull the slide hammer on the puller a number of times against the stop nuts while countering the tool at the same time with the other hand.

Levering out bearing cover

11. If the puller is not available, lever the bearing cover out carefully using two screwdrivers (or angle screwdrivers). Move the bearing cover a number of times to the left and right to make levering easier. Do not damage the sealing surfaces.

ATTENTION

Timing chain may jump over.

- **Risk of engine damage**

→ Following removal of the chain tensioner, the crankshaft must not be turned under any circumstances.

ATTENTION

Risk of damage due to particles of dirt.

- **Oil bores/oil ducts can become blocked up.**

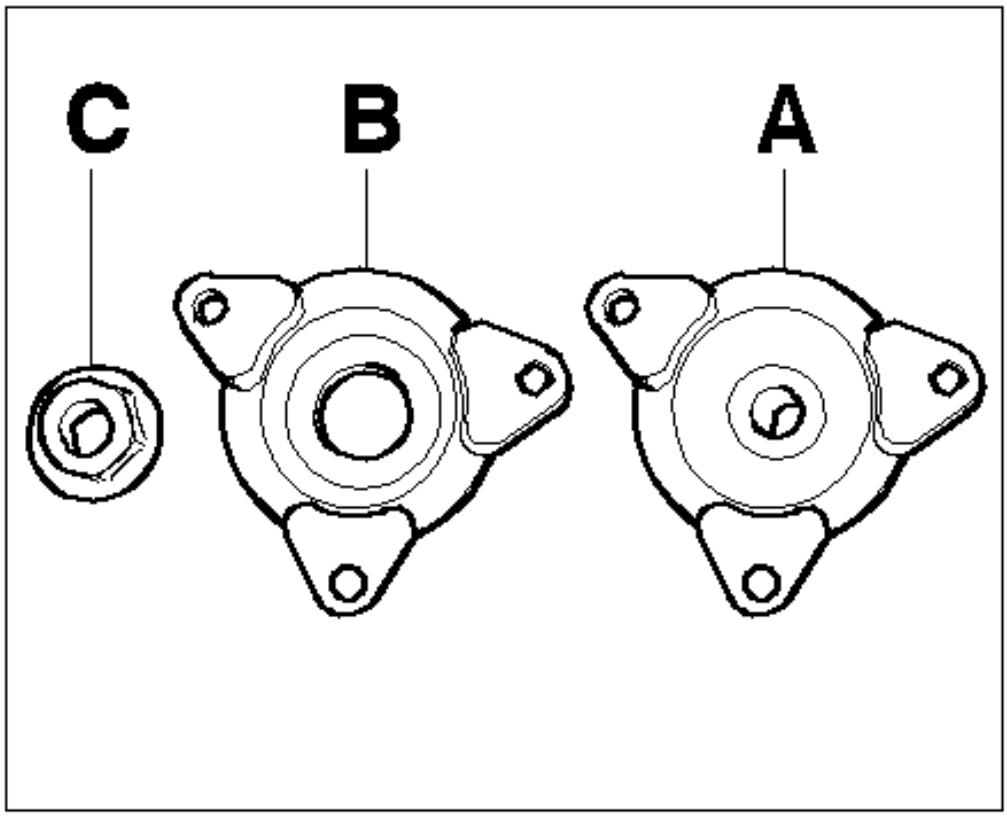
→ When working on the engine, absolute cleanliness is essential.
→ Lay removed engine parts on a clean base and cover them without fail.
→ Use the **cover for dust protection when fitting the engine NR.165** on the engine assembly support.

Note

- *It is only possible to remove the bearing cover with the engine installed in vehicles with manual transmission.*
- *In Tiptronic vehicles, the complete engine/transmission unit must be removed.*

Note

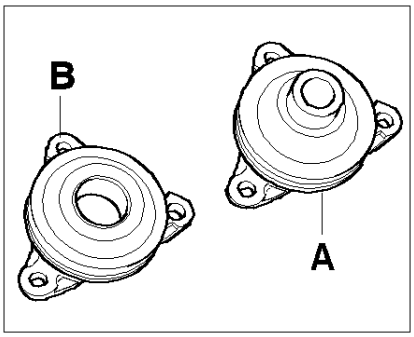
Always observe specified engine number range.



Note

Always observe specified engine number range.

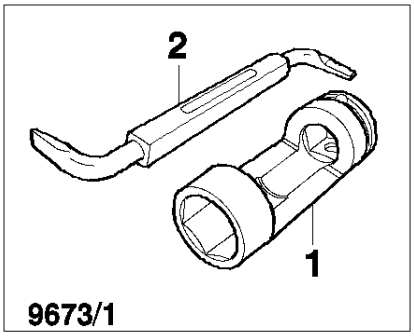
Note



- *The same sealing ring and installation/removal procedure applies as for the "old" bearing cover.*
- *The new bearing cover can only be retrofitted along with the new intermediate shaft up to model year 2002 (M96/03).*

Overview of bearing covers for intermediate shaft.

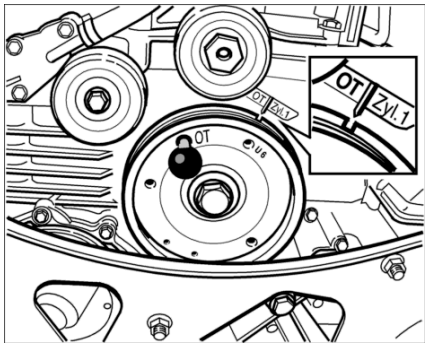
Differentiation of bearing covers for intermediate shaft



- A - Bearing cover 996.105.024.01
- B - Bearing cover 996.105.024.06
- C - New collar nut, M12 x 1.25

Rear view of bearing cover for intermediate shaft

Rear of bearing cover



- A - Rear of bearing cover 996.105.024.01
- B - Rear of bearing cover 996.105.024.06

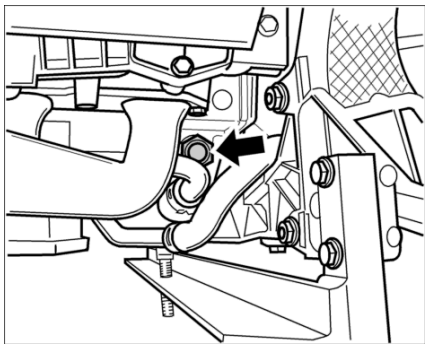
Special tool 9673/1

Use the special tool **assembly tool P 9673/1** for bolting the new bearing cover.

1. Lever out two green closure caps on pulley side of cylinder bank 1 - 3.

Fixing pulley

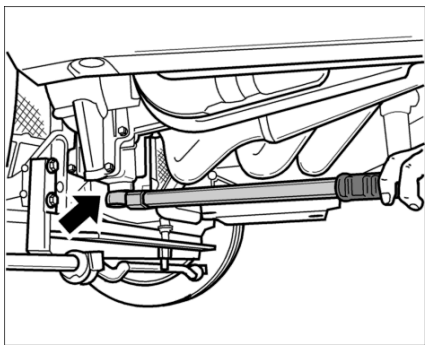
2. Turn the engine at the hexagon-head bolt (a/f 24) of the crankshaft belt pulley clockwise to overlapping TDC of cylinder bank 1 - 3 and fix it with special tool **locating pins 9595/1**.



Note

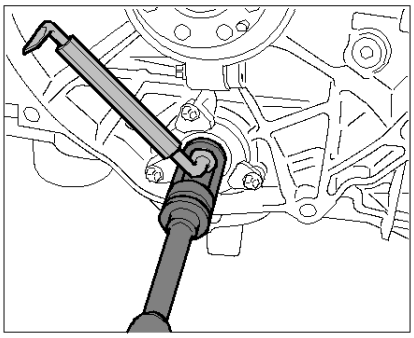
- *For checking with the adjusting gauge, the timing adjustment must be correct.*

Note



- *For checking with the adjusting gauge, the timing adjustment must be correct.*

3. To check the camshaft adjustment, insert **adjusting gauge 9686** for camshaft into the camshaft slots (pulley side) (inscription on gauge pointing towards cylinder head cover). If the gauge cannot be inserted, rotate the crankshaft a further 360° and secure it again.
4. Unscrew two M6 x 12 hexagon-head bolts on the coolant pipe at cylinder side 4 - 6.



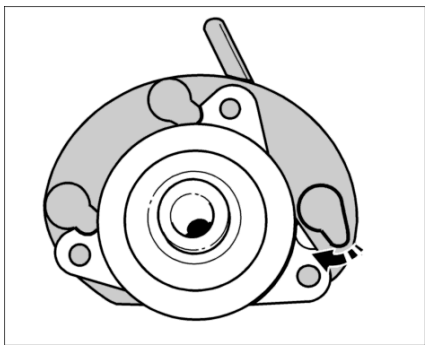
Primary chain tensioner

5. Remove primary chain tensioner (hexagon socket a/f 32).

Chain tensioner, cylinders 1 - 3

6. Remove chain tensioner, cylinder bank 1 - 3 (hexagon socket a/f 32).

Threaded joint with collar nut on bearing cover for intermediate shaft



Note

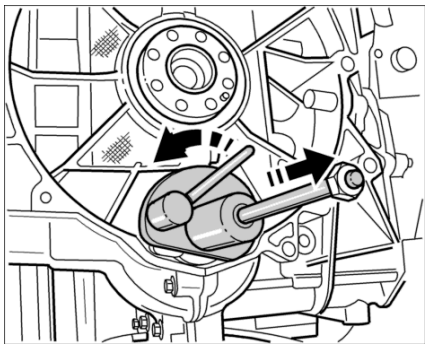
- *To make it easier to remove the bearing cover, spray the sealing surface with anti-rust agent.*

Note

- *To make it easier to remove the bearing cover, spray the sealing surface with anti-rust agent.*

7. Loosen M12 hexagon collar nut (a/f 22) on bearing cover for intermediate shaft with special tool **assembly tool P 9673/1** and screw it off *→Threaded joint with collar nut on bearing cover for intermediate shaft* .
8. Unscrew the three M6 x 20 fastening screws (coated) on the intermediate-shaft flange. Replace screws during installation and clean thread in crankcase.

Puller on bearing cover: view when removed

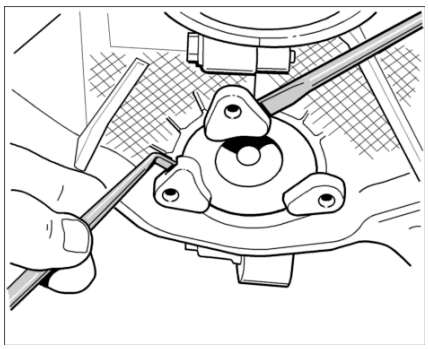


Note

- *Remove bearing cover using special tool **puller 9673**. If this is not available, lever the bearing cover out carefully with two screwdrivers so as not to damage the sealing surfaces. Turning several times to the left and right loosens the bearing cover.*
- *After removing the bearing cover, do not press the threaded bolts of the intermediate shaft.*

Note

- *Remove bearing cover using special tool **puller 9673**. If this is not available, lever the bearing cover out carefully with two screwdrivers so as not to damage the sealing surfaces. Turning several times to the left and right loosens the bearing cover.*
- *After removing the bearing cover, do not press the threaded bolts of the intermediate shaft.*



9. Position special tool **puller 9673** at the bearing cover grooves and secure by turning the locking lever anti-clockwise.

Removing bearing cover

10.

Pull the slide hammer on the puller a number of times against the stop nuts while countering the tool at the same time with the other hand.

Levering out bearing cover

11. If the puller is not available, lever the bearing cover out carefully using two screwdrivers (or angle screwdrivers). Move the bearing cover a number of times to the left and right to make levering easier. Do not damage the sealing surfaces.

Installing bearing cover for intermediate shaft

Installing bearing cover for intermediate shaft - up to engine number 695 07 475

ATTENTION

Risk of damage due to particles of dirt.

- **Oil bores/oil ducts can become blocked up.**

→ When working on the engine, absolute cleanliness is essential.

→ Lay removed engine parts on a clean base and cover them without fail.

→ Use the **cover for dust protection when fitting the engine NR.165** on the engine assembly support.

Note

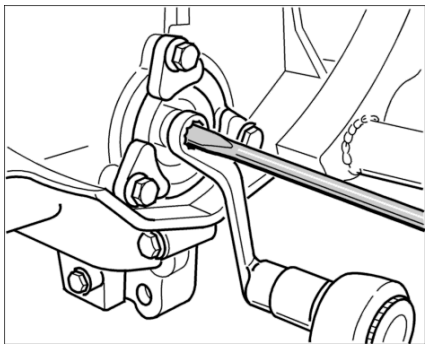
- *Clean working area of bore for bearing cover and crankcase thoroughly using acetone or solvent naphtha.*

1. Before installing the new bearing cover, check the fitted bore (axial attachment surface, bore chamfers) on the crankcase for sharp edges and burrs. They should be removed with an oilstone or a polishing cloth. Remove any existing residue and clean the bore with a clean cloth soaked in solvent naphtha or acetone.

Note

- *Replace bearing cover or sealing ring for bearing cover →152355 Replacing sealing ring for intermediate shaft.*

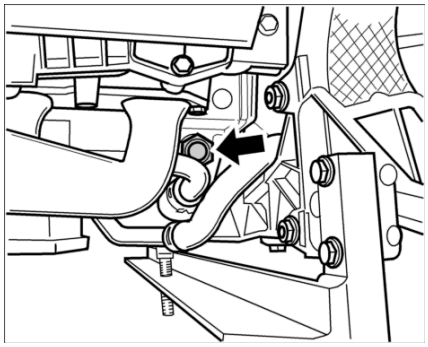
Note



Always observe specified engine number range.

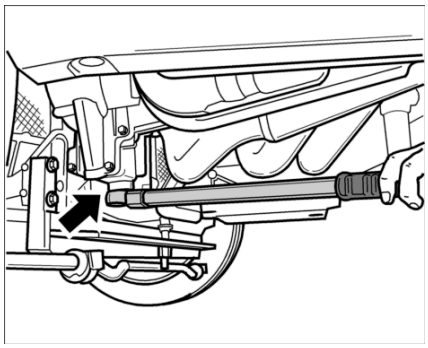
2. Grease fitted bore in crankcase and new bearing cover (with new sealing ring) with special grease Optimoly MP3 (available from Porsche Parts Service) and place bearing cover in position.

Note



- *Replace collar nut M8 x 1 and coated M6 screws for bearing cover.*

3. Position three new, coated M6 x 20 screws on the crankcase and pull in the bearing cover by screwing in the screws uniformly. Tighten the screws. →**Tightening torque: 10 (7.5 ftlb.) Nm**



Collar nut for bearing cover

4. Position new M8 x 1 collar nut on the threaded pin of the intermediate shaft. Then tighten the nut using special tool **socket wrench 9110**. At the same time, counter with a screwdriver in the slotted threaded pin of the intermediate shaft. →**Tightening torque: 12 (9 ftlb.) Nm +1 (0.5 ftlb.) Nm**

Primary chain tensioner

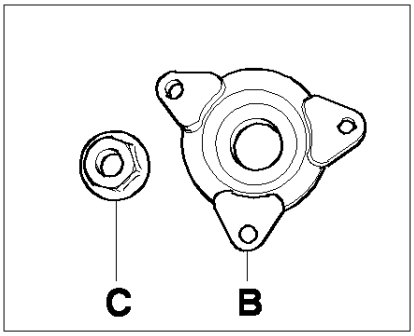
5. Insert primary chain tensioner with new sealing ring (hexagon a/f 32) and tighten to the specified torque. →**Tightening torque: 80 (59 ftlb.) Nm**

Chain tensioner, cylinders 1 - 3

6. Insert chain tensioner for cylinder 1 - 3 with new sealing ring (hexagon a/f 32) and tighten to the specified torque. →**Tightening torque: 80 (59 ftlb.) Nm**
7. Secure coolant pipe on cylinder side 4 - 6 with two M6 x 12 hexagon-head bolts. →**Tightening torque: 10 (7.5 ftlb.) Nm**
8. Fit new closure caps on cylinder head cover.
9. Pull locating pin out of crankshaft belt pulley.

Installing bearing cover for intermediate shaft - from engine number 695 07 476

ATTENTION



Risk of damage due to particles of dirt.

- **Oil bores/oil ducts can become blocked up.**

→ When working on the engine, absolute cleanliness is essential.

→ Lay removed engine parts on a clean base and cover them without fail.

→ Use the **cover for dust protection when fitting the engine NR.165** on the engine assembly support.

New bearing cover for intermediate shaft

Note

Always observe specified engine number range.

New bearing cover.

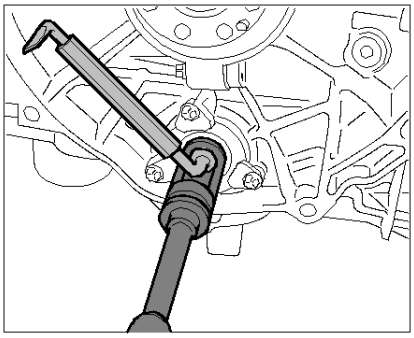
- B - Bearing cover 996.105.024.06
- C - Collar nut, M12 x 1.25

Note

- *Clean working area of bore for bearing cover and crankcase thoroughly using acetone or solvent naphtha.*

1. Before installing the new bearing cover, check the fitted bore (axial attachment surface, bore chamfers) on the crankcase for sharp edges and burrs. They should be removed with an oilstone or a polishing cloth. Remove any existing residue and clean the bore with a clean cloth soaked in solvent naphtha or acetone.

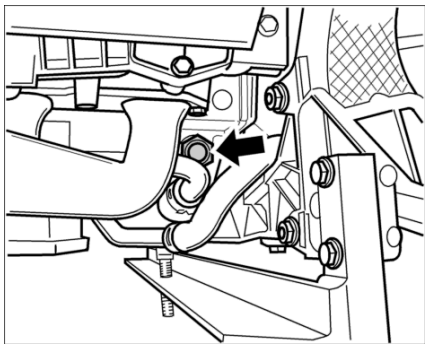
Note



- *Replace bearing cover or sealing ring for bearing cover →152355 Replacing sealing ring for intermediate shaft.*

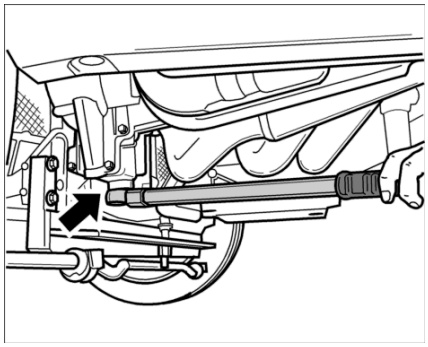
2. Grease fitted bore in crankcase and new bearing cover (with new sealing ring) with special grease Optimoly MP3 (available from Porsche Parts Service) and place bearing cover in position.

Note



- *Replace collar nut M12 and coated M6 screws for bearing cover.*

3. Position three new, coated M6 x 20 screws on the crankcase and pull in the bearing cover by screwing in the screws uniformly. Tighten the screws. →**Tightening torque: 10 (7.5 ftlb.) Nm**



Threaded joint with collar nut on bearing cover for intermediate shaft

4. Position new M12 x 1.25 collar nut on the threaded pin of the intermediate shaft. Then tighten the nut using special tool **assembly tool P 9673/1**. At the same time, counter with an angle screwdriver in the slotted threaded pin of the intermediate shaft. →**Tightening torque : 20 (15 ftlb.) Nm +/-1 (0.5 ftlb.) Nm**

Primary chain tensioner

5. Insert primary chain tensioner with new sealing ring (hexagon a/f 32) and tighten to the specified torque. →**Tightening torque: 80 (59 ftlb.) Nm**

Chain tensioner, cylinders 1 - 3

6. Insert chain tensioner for cylinder 1 - 3 with new sealing ring (hexagon a/f 32) and tighten to the specified torque. →**Tightening torque: 80 (59 ftlb.) Nm**
7. Secure coolant pipe on cylinder side 4 - 6 with two M6 x 12 hexagon-head bolts. →**Tightening torque: 10 (7.5 ftlb.) Nm**
8. Fit new closure caps on cylinder head cover.
9. Pull locating pin out of crankshaft belt pulley.

top of page

Replacing sealing ring for bearing cover for intermediate shaft

Replacing sealing ring for bearing cover for intermediate shaft

Installation position of sealing ring

Sealing ring on bearing cover

Levering off sealing ring

Note

Do not use a sharp object to lever off the sealing ring.

1. Carefully lever off sealing ring with a small piece of wood or a plastic spatula in order to avoid damaging the groove.

Note

- *Before fitting the new sealing ring, check the edges of the bearing cover for burred spots. Carefully remove these using an oilstone or polishing cloth. Clean bearing cover (without sealing ring) thoroughly using acetone or solvent naphtha.*

2. Insert new sealing ring into the groove on the bearing cover by hand. The sealing ring can be fitted in any direction since the sealing lips are facing vertically upwards and do not therefore have to be fitted in a specific direction.
3. Before installation, grease the new sealing ring on the bearing cover and the fitting bore in the crankcase with special grease Optimoly MP3 (available from Porsche Parts Service).

15 37 19 Removing and installing solenoid hydraulic valve (camshaft timing) - as of MY 2005

- Removing hydraulic valve for camshaft timing
- Installing hydraulic valve for camshaft timing

Tools

Designation	Type	Number	Explanation	
relay puller	special tool	9235		

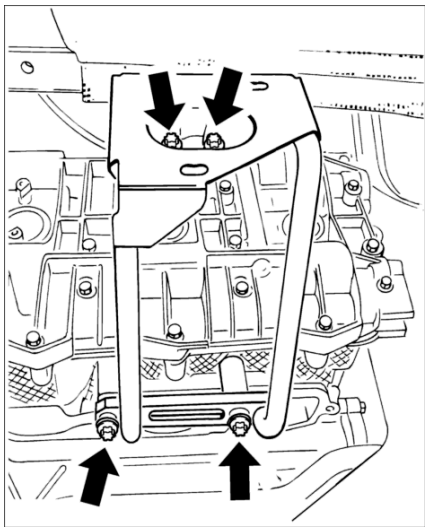
top of page

Removing hydraulic valve for camshaft timing

Removing hydraulic valve for camshaft timing

ATTENTION

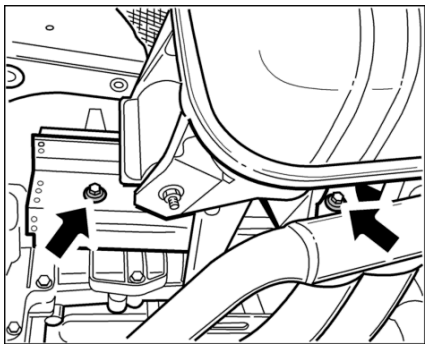
Risk of oil contamination and blocked oil bores



- **Faulty engine parts, engine damage**

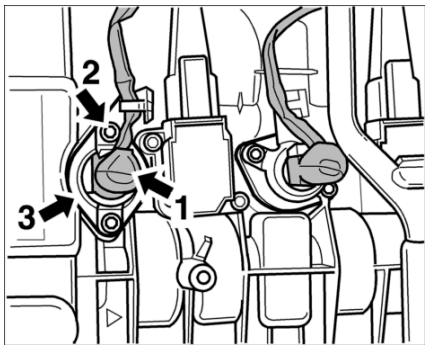
→ Absolute cleanliness is essential when working on hydraulic valves.

Note



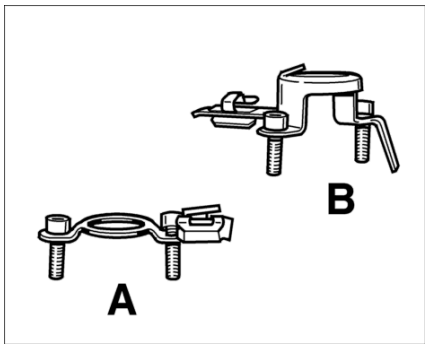
- *The rear silencer must be removed and the holder must be detached before the hydraulic valve on cylinder side 4 - 6 can be removed.*

1. **Cylinder side 4 - 6 only:** Remove rear silencer.



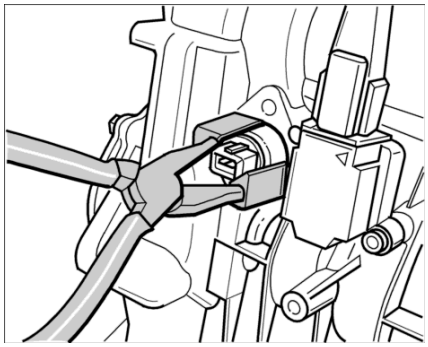
Holder for rear silencer

2. **Cylinder side 4 - 6 only:** Remove holder for rear silencer. Unscrew two M8 x 30 Torx screws on the intake side and two M8 x 25 screws on the exhaust side and remove the holder.



Removing and installing shield

3. Remove the side shield on the relevant side of the engine. To do this, unscrew the two M6 x 16 Torx screws **-arrows-** .

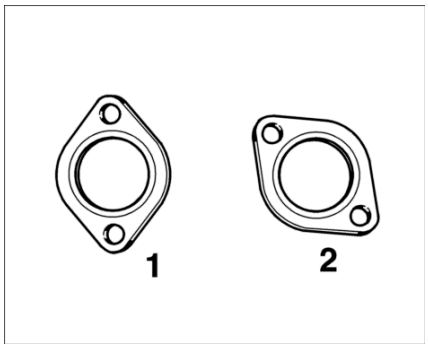


Camshaft timing valve

4. Disconnect cable plug on hydraulic valve **-1-** by pressing the clip and pulling off the cable plug.

Holder for solenoid hydraulic valves

5. Unscrew two M6 x 20 inner Torx screws **-2-** at the valve holder and remove the holder along with the screws **-A-** .



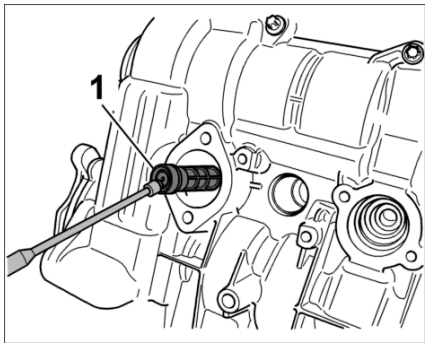
Pulling out hydraulic valve with relay puller

Note

- *Handle the hydraulic valve with care; do not turn it at the valve tip or at the safety contact.*
- *A seal against leaks cannot be ensured if there is damage in the area of the retainer plate, therefore handle the pliers indicated with care.*

6. Carefully pull the hydraulic valve out of the cylinder head using special tool **relay puller 9235**.
   Before using the puller, mask the valve body in fabric tape in order to prevent slippage or damage.

Retainer plate with seal - installation position of valve for camshaft timing and valve lift control



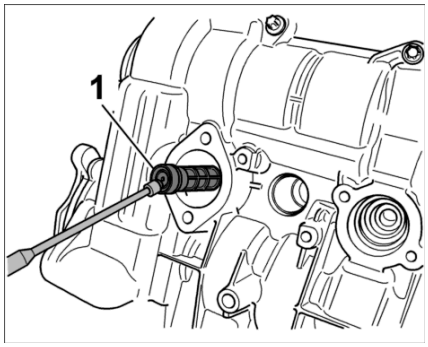
7. Remove retainer plate with integrated seal **-1-** from the valve.

Note

- *Handle the hydraulic valve with care; do not turn it at the valve tip or at the safety contact.*

- *A seal against leaks cannot be ensured if there is damage in the area of the retainer plate, therefore handle the pliers indicated with care.*

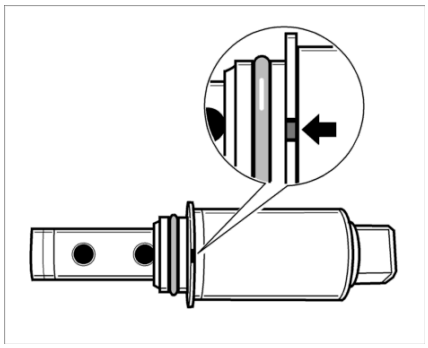
8. Check the valve body for damage in the sealing area of the retainer plates. If necessary, the valve must be replaced.



Oil strainer for hydraulic valve for camshaft timing

9. Pull the oil strainer with bar magnet out of the cylinder head bore. Clean using solvent naphtha, check for damage and soiling, replace if necessary. Pay attention to the installation position.

top of page

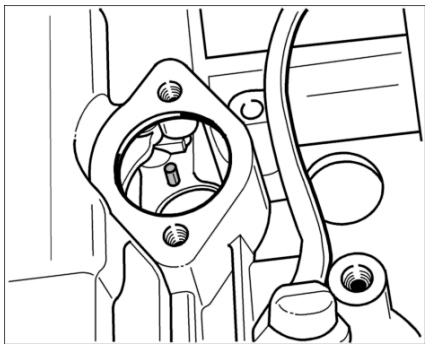


Installing hydraulic valve for camshaft timing

Installing hydraulic valve for camshaft timing

Oil strainer for hydraulic valve for camshaft timing

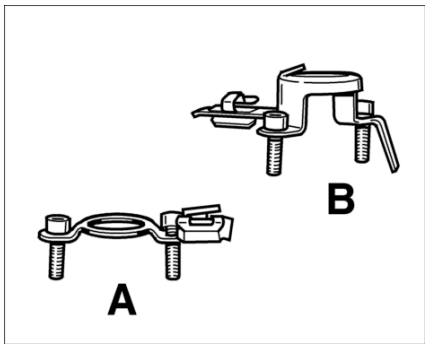
1. Fit cleaned or new oil strainer with bar magnet into the cylinder bore **-1-** . Pay attention to the installation position.



Groove on valve for camshaft timing

Note

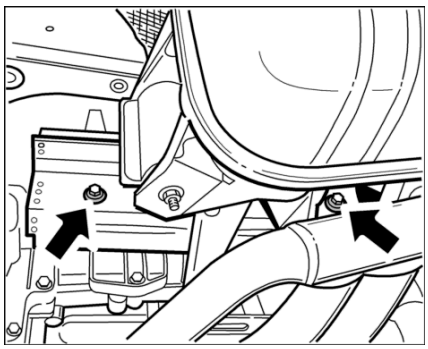
- *Replace O-ring on hydraulic valve and retainer plate with seal.*
- *Observe installation position of the hydraulic valve.*



2. Replace the O-ring of the hydraulic valve and coat the new O-ring with engine oil. Insert hydraulic valve into the cylinder head. Pay attention to installation position while doing this. The groove on the valve **-arrow-** points to the dowel pin in the cylinder head.

Dowel pin for valve for camshaft timing

Position of dowel pin in cylinder head



3. Coat seal of the retainer plate with engine oil and slide it over the hydraulic valve.

Holder for solenoid hydraulic valves

4. Position two M6 x 20 inner Torx screws complete with support **-A-** on the valve and tighten the screws. Observe installation position of the cable terminal (to intake distributor). →**Tightening torque: 7.5 ftlb.**
5.

Push cable plug onto the hydraulic valve. Make sure that the plug engages audibly.

Removing and installing shield

6. Fit the side shield to the relevant side of the engine. To do this, insert and tighten the two M6 x 16 Torx screws **-arrows-** . →**Tightening torque: 7.5 ftlb.**

Note

The clamp between the rear silencer and the catalytic converter must be replaced.

7. On cylinder side 4 - 6, fit the holder for the rear silencer and re-install the rear silencer. → **Tightening torque: 17 ftlb.** ; →**Tightening torque: 17 ftlb.** ; →**Tightening torque: 33 ftlb.** ; → **Tightening torque: 17 ftlb.** ; →**Tightening torque: 22 ftlb.**

WARNING
Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the

printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

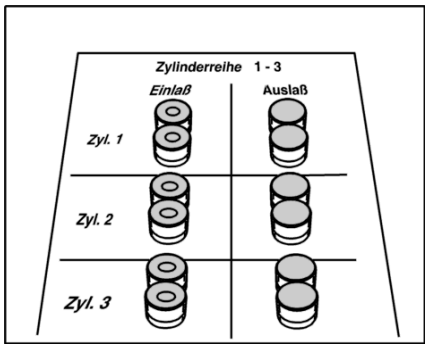
- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

15 70 19 Removing and installing cylinder head - engine removed - as of MY 2005

- Preliminary work for removing cylinder head
- Removing cylinder head
- Installing cylinder head
- Subsequent work for installing cylinder head

Tools



Designation	Type	Number	Explanation	
cover for dust protection when fitting the engine	commercially available tool	NR.165

Preliminary work for removing cylinder head

Preliminary work for removing cylinder head

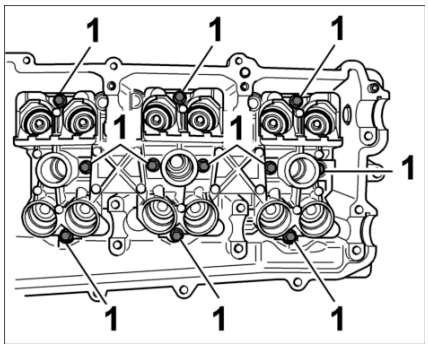
1. Remove exhaust manifold. Remove old seal.
2. Remove cylinder head cover →159119 Removing and installing cylinder head cover - engine removed - chapter on "Removing".
3. Remove camshafts →150520 Removing and installing camshaft - chapter on "Removing" [997430 997431]→150520 Removing and installing camshaft - chapter on "Removing" [997110 997111 997310 997311 997410 997411 997610 997611]→150520 Removing and installing camshaft - chapter on "Removing" [997120 997121 997320 997321 997620 997621].

Example of laying aside flat-base tappets

ATTENTION

Interchanged or dirty flat-base tappets.

- **Damage to engine components**



→ The components have been run in in the fitting bores in the housing, therefore do not interchange them.

→ Pay attention to cleanliness.

Note

There must be no visible signs of wear on the flat-base tappets and fitting bores of the flat-base tappet housing.

4. Remove the flat-based tappets. Pull each of the components out of the flat-base tappet housing using a strong magnet. Check running surfaces for signs of damage. To avoid confusing the individual flat-based tappets, lay them on a labelled, clean surface *→Example of laying aside flat-base tappets* and cover them.

Flat-base tappet housing bolts

5. Remove flat-base tappet housing. Unscrew 11 Torx screws **-1-** from the outside to the inside. Remove housing and check the fitting bores for damage.
6. Remove the old O-rings at the spark-plug recesses.

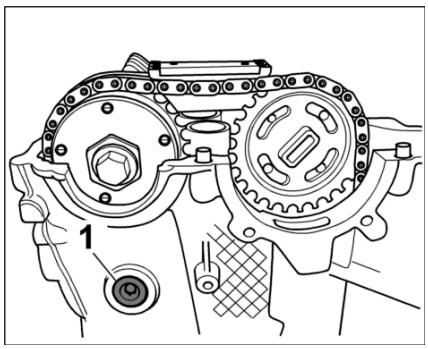
top of page

Removing cylinder head

Removing cylinder head

ATTENTION

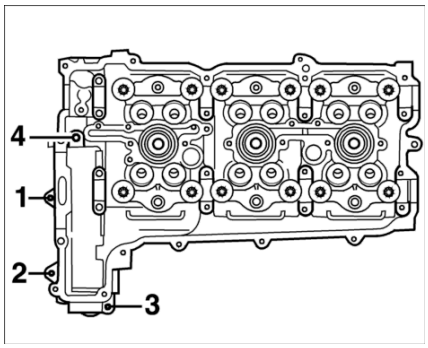
Risk of damage due to particles of dirt.



- **Oil bores/oil ducts can become blocked up.**

→ When working on the engine, absolute cleanliness is essential.

→ Lay removed engine parts on a clean base and cover them without fail.

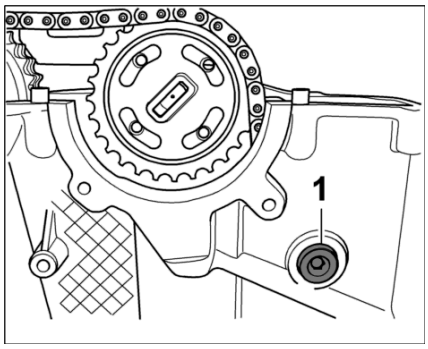


→ Use the **cover for dust protection when fitting the engine NR.165** on the engine assembly support.

Cylinder head 1-3:

Guide rail screw for cylinders 1-3

1. Unscrew M6 threaded bolt (hexagon socket) for guide rail (flywheel side) **-1-** .



External cylinder head screwed connection

2. Unscrew four Torx screws with M6 x 30 captive washers (10.9) **-1-4-** at the chain slot. Use of a magnetic bit is recommended so that the screw to be fitted in the slot **-item 4-** cannot fall into the crankcase.
3. Loosen and unscrew 12 M10 Torx cylinder-head screws from outside to inside.
4. Carefully lift off the cylinder head and remove the old cylinder-head gasket.
5. Carefully clean the sealing faces on the cylinder head and crankcase (e.g. using a nylon brush and a clean, lint-free cloth soaked in acetone). Check the sealing face from cylinder head to crankcase for damage and

cracks, and rework the flat surface if necessary.

The removal of cylinder head 4-6 is the same as for side 1-3 with the following change

– The threaded bolt for guide rail 4-6 on the cylinder head (belt pulley side) **-1-** is removed even before the camshaft timing gears are removed.

Guide rail screw for cylinders 4-6

top of page

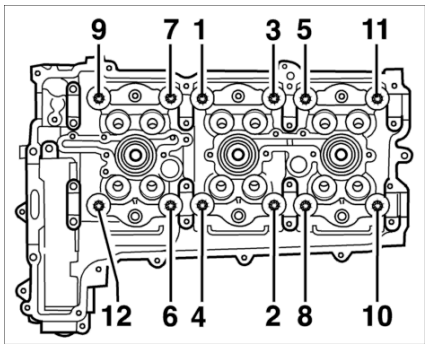
Installing cylinder head

Installing cylinder head

ATTENTION

Risk of damage due to particles of dirt.

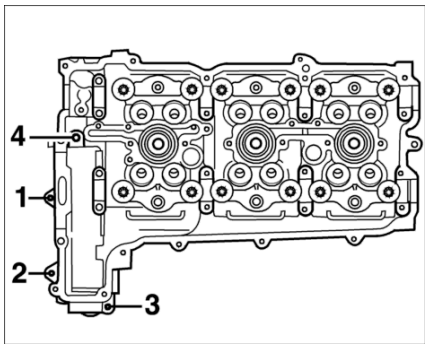
- **Oil bores/oil ducts can become blocked up.**



→ When working on the engine, absolute cleanliness is essential.

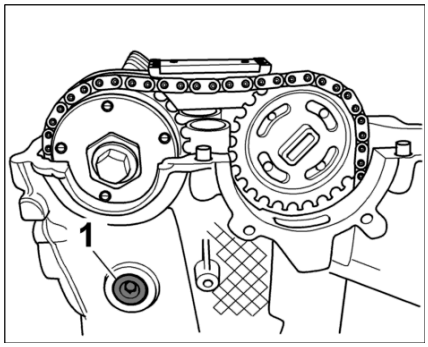
→ Lay removed engine parts on a clean base and cover them without fail.

→ Use the **cover for dust protection when fitting the engine NR.165** on the engine assembly support.



Fitting cylinder head side 1 - 3:

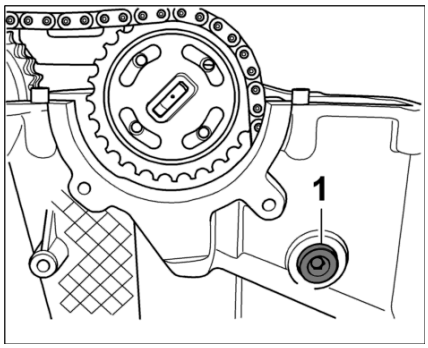
1. Turn the crankcase at the assembly support in such a way that side 1-3 stands vertically upwards.
2. Fit new cylinder-head gasket. The inscription **'OBEN/TOP'** must be clearly visible.
3. Carefully position the cylinder head on the crankcase. Pay attention to the dowel sleeves.



Tightening sequence for cylinder-head screws

4. Screw in 12 M10 Torx screws evenly and tighten according to the prescribed tightening sequence **-1-12-** . →**Initial tightening: 22 ftlb.** , loosen all screws in reverse tightening sequence; →**Initial tightening: 15 ftlb.** ; →**Final tightening, 2 x torque angle: 70 °**

External cylinder head screwed connection

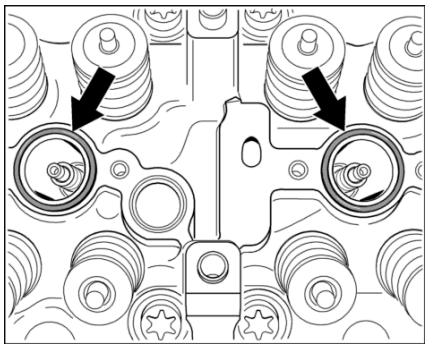


5. Screw in and tighten four Torx screws with M6 x 30 captive washers (10.9) **-1-4-** at the chain slot. Use of a magnetic bit is recommended so that the screw to be fitted in the slot **-item 4-** cannot fall into the crankcase. →**Tightening torque: 9.5 ftlb.**

Guide rail screw for cylinders 1-3

6. Fit threaded bolt for guide rail **-1-** with a new O-ring at the cylinder head. →**Tightening torque: 7.5 ftlb.**

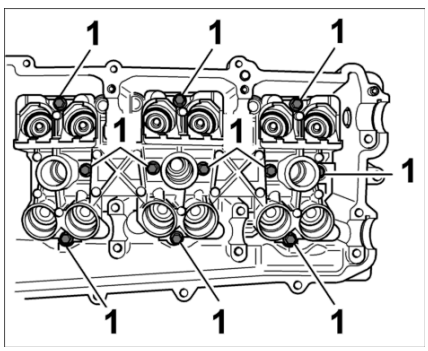
The installation of cylinder head side 4 -6 is carried out in the same way as the assembly sequence for side 1-3 with the following change:



Guide rail screw for cylinders 4-6

– The threaded bolt for guide rail 4-6 on the cylinder head (belt pulley side) **-1-** is inserted only after the timing chain has been fitted on the camshaft timing gears.

top of page

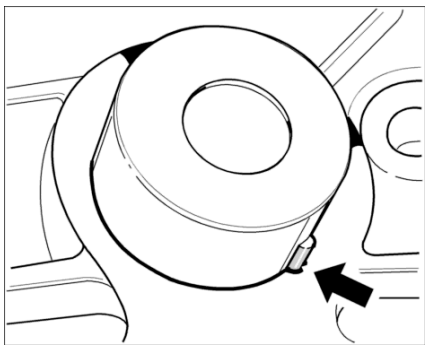


Subsequent work for installing cylinder head

Subsequent work for installing cylinder head

O-rings on spark-plug recess seal

1. Insert three new O-rings at the spark-plug recesses **-arrows-** , lightly coat with high-pressure grease.



Flat-base tappet housing bolts

Note

There must be no visible signs of wear on the flat-base tappets and fitting bores of the flat-base tappet housing.

2. Fit flat-base tappet housing with 11 M6 x 35 Torx screws **-1-** and tighten screws from the inside out. → **Tightening torque: 7.5 ftlb.**

Operating plunger position

ATTENTION

Interchanged or dirty flat-base tappets.

- **Damage to engine components**

→ The components have been run in in the fitting bores in the housing, therefore do not interchange them.

→ Pay attention to cleanliness.

3. Coat the flat-base tappets with new engine oil and insert them in their original position into the fitting bores in the flat-base tappet housing. The operating plunger position (inlet side) is pre-set by the dowel pin **-arrow-** .
4. Install camshaft and set timing →150520 Removing and installing camshafts - chapter on "Installing" [997430 997431]→150520 Removing and installing camshafts - chapter on "Installing" [997110 997111 997310 997311 997410 997411 997610 997611]→150520 Removing and installing camshafts - chapter on "Installing" [997120 997121 997320 997321 997620 997621].
5. Install cylinder head cover →159119 Removing and installing cylinder head cover - chapter on "Installing".
6. Fit exhaust manifold with new screws M8 x 26. Position new metal seal with the seam towards the cylinder head. Tighten screws from the inside out. . →**Tightening torque: 17 ftlb.**

Disassembling cylinder head

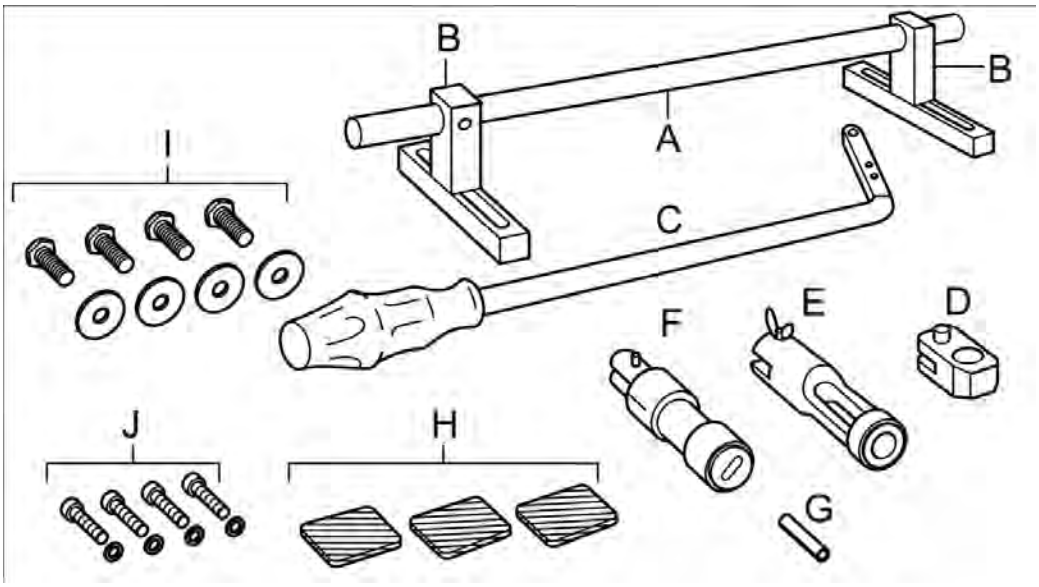
 ATTENTION

Risk of damage due to particles of dirt.

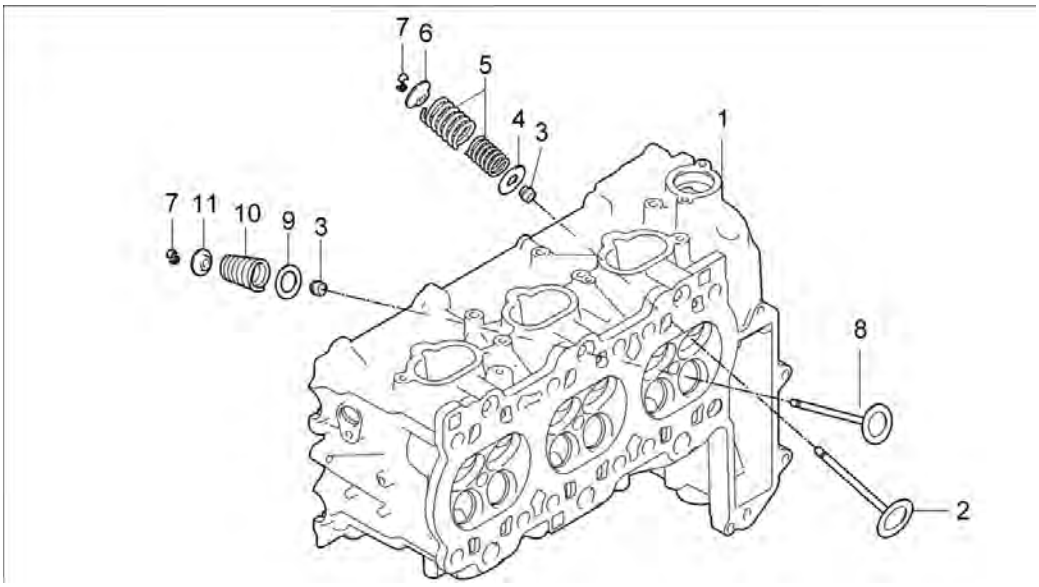


- **Oil bores/oil ducts can become blocked up.**

→ When working on the engine, absolute cleanliness is essential.

→ Lay removed engine parts on a clean base and cover them without fail.

→ Use the **cover for dust protection when fitting the engine NR.165** on the engine assembly support.

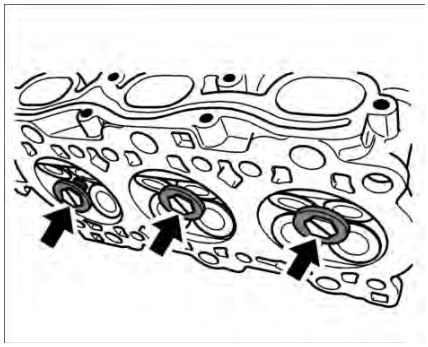


The following tool is used and recommended for the described work: commercially available tool Valve keys assembly- disassembly tool for Boxster + Carrera NR.54 (Sauer Co., Art. No. for standard case 600 50 00).

Disassembling and assembling cylinder head tools

Item	Designation	Explanation
A	Shaft (ø 20 x 450 mm)	Art. No. 602 45 15
B	Aluminium supports, slotted, 2-piece	Art. No. 602 36 20
C	Lever arm	Art. No. 602 35 30
E	Joint with screw	Art. No. 602 45 20
E	Disassembly head with magnet	Art. No. 602 46 50
F	Assembly head 1b (for valve keys)	Art. No. 600 01 02
G	Pressure pieces Gr. 6a, 3-piece	Art. No. 600 60 15
H	Plates, 3-piece	Art. No. 602 56 65
	Additional scope:	Not included in scope of delivery, article 600 50 00
I	Valve locating screws set, 4-piece	Art. No. 609 64 50
J	Screws with washer (4 ea.)	M6 x 40

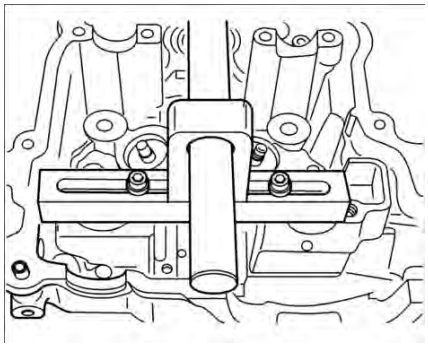
Component overview of cylinder head



Cylinder head components

Note

Reusable inner parts of the cylinder head must always be cleaned thoroughly and assigned to their original installation location.

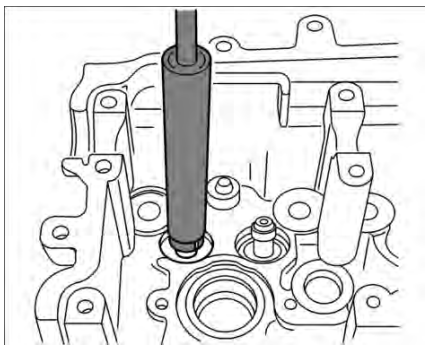


Item	Designation	Removal	Fitting
1	Cylinder head	A second person should help with removing and positioning	Replacing cylinder-head gasket; pay attention to the dowel pins
2	Intake valve	Check tilt play of valve guide if necessary; observe assignment.	Lightly oil valve stem
3	Valve stem seal	Use puller 3364	Replace; use 9606 assembly driver
4	Lower valve-spring plate (intake)		
5	Valve spring set (intake)		
6	Upper valve-spring plate (intake)		
7	Valve collets		
8	Exhaust valve	Check tilt play of valve guide if necessary; observe assignment.	Lightly oil valve stem
9	Lower valve-spring plate (exhaust)		
10	Valve spring (exhaust)		
11	Upper valve-spring plate (exhaust)		

1. Remove spark plugs, if not already done.

Valve locating screws

2. Screw in the three valve locating screws **-arrows-** in the spark plug threads.



Mounting aluminium supports

Note

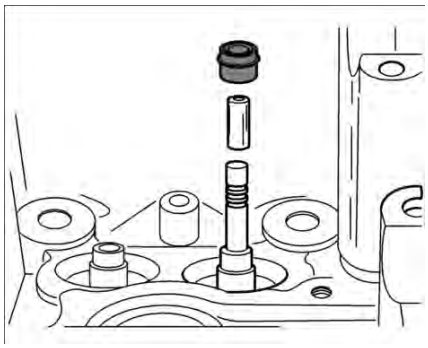
Put the screw clamps for fixing the cylinder head only on the aluminium supports, under no circumstances on the sealing surface.

3. Align aluminium supports on the cylinder head with fastening screws. Fix cylinder head to the workbench with screw clamps. Slide on assembly shaft with the joint to the aluminium supports and fasten them.
4. Screw lever arm on joint and the disassembly head on the lever arm.
5. Place disassembly head on upper valve-spring plate and press together the valve springs with the lever arm. The valve keys and the concave washer stick due to the magnetic insert on the disassembly head. Repeat this process by moving the joint at the required valves.

Pulling off the valve-stem seal (VW-special tool 3364)

6. Using the VW special tool **puller 3364** pull off the valve-stem seal.
7. Check valve springs, valves, valve guides, and valve seats for damage.
8.

Thoroughly clean cylinder head and all parts before assembling. Carry out repairs approved by PAG, if necessary.



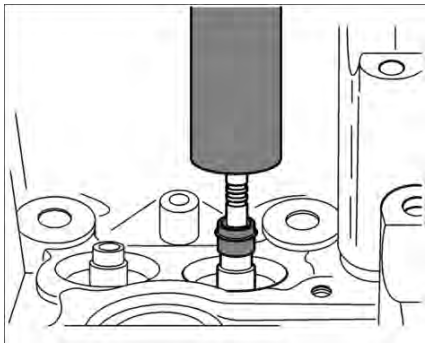
top of page

Assembling cylinder head

Assembling cylinder head

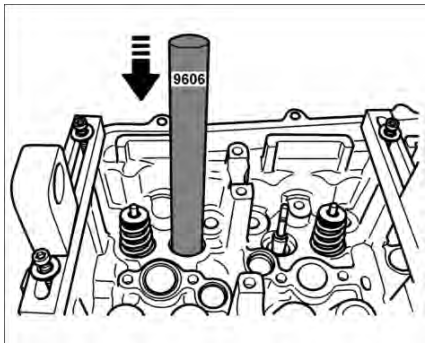
Note

Reusable inner parts of the cylinder head must always be cleaned thoroughly and assigned to their original installation location.



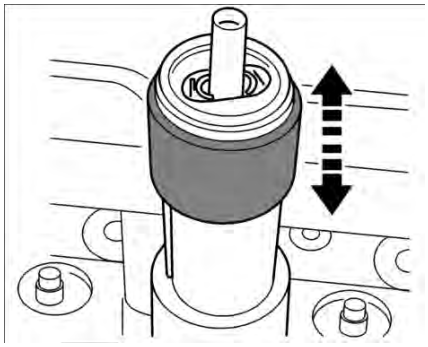
Valve stem seal

Note



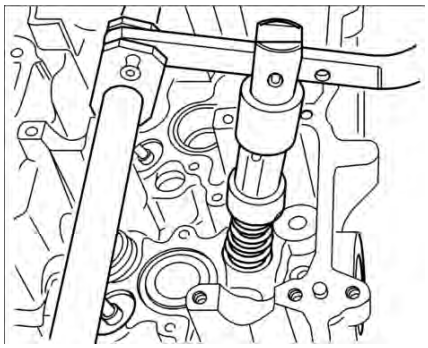
Replace valve-stem seal.

1. Insert lower valve-spring plate, oil valve stem lightly and position assembly sleeve (shim set for valve-stem seals). Either set new valve-stem seal on the assembly sleeve or insert in the **assembly driver 9606**.



Valve-stem seal on valve stem

2. Press valve-stem seal with the **assembly driver 9606** up to the stop on the valve stem. Take off tool and assembly sleeve.



Pressing in valve-stem seal

3. Insert corresponding valve spring(s) and upper valve-spring plate.

Assembly head for valve keys

4. Fasten assembly head to lever arm. Push sliding sleeve downward to the stop and insert the valve keys. In order to ensure correct assembly, the wedges should be centred. Then push the sliding sleeve back again (valve keys fixed).

Mounting the valve keys

5. Position assembly head with the pressure piece over the valve stem and align the assembly head so that it is aligned with the valve. Slowly press the assembly head downwards and guide it with your hand until a clicking sound can be heard. The valve keys are then automatically pressed into the correct installation position.
6. Swivel out the lever with the assembly head and check the seat of the valve keys. Repeat the process if necessary.

top of page

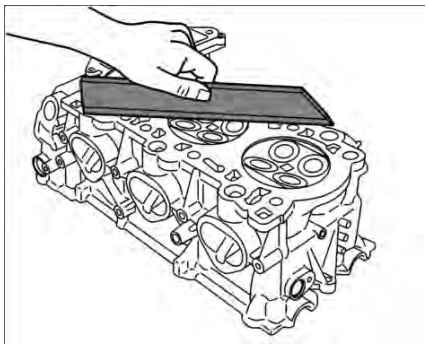
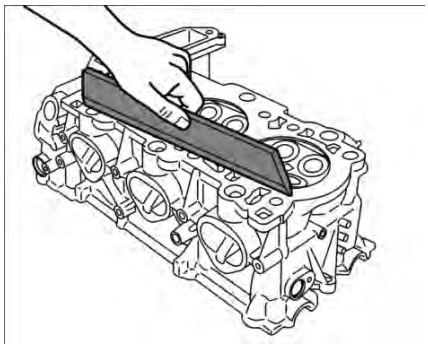
Machining the cylinder head

Machining the cylinder head



1. Measure cylinder head height on a level surface (surface plate recommended).

Cylinder head height



Standard dimension -X- : 142.0 ± 0.1 mm

2. Check combustion chamber sealing face of the cylinder head for distortion (flatness) using a straight-edge and feeler gauge.

Flatness of sealing face of cylinder head (diagonal)

Permissible unevenness of parting surface for used cylinder head: 0.05 mm

Flatness of cylinder head (longitudinal)

3. Cylinder heads with distorted or scored sealing surface can be repaired by plain-milling them. The following machining criteria must be observed.

Permissible unevenness after machining: 0.03 mm
Permissible roughness profile (can be measured with contact stylus procedure): 15pt14
Permissible surface depth from standard dimension: 0.15 ± 0.05 mm

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

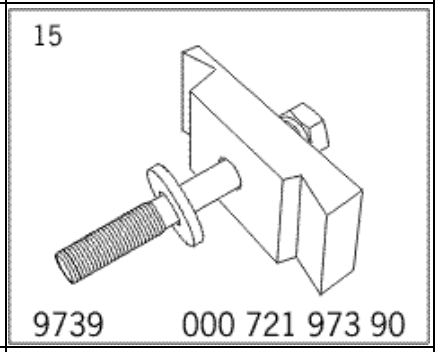
Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.



- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

15 75 02 Checking valve guide (valve lateral play) - as of MY 2005

- Preliminary work
- Checking valve guide (valve lateral play)
- Subsequent work

Tools

Designation	Type	Number	Explanation	
retaining device	special tool	9739		
cover for dust protection when fitting the engine	commercially available tool	NR.165		

top of page

Preliminary work

Preliminary work

ATTENTION

Risk of damage due to particles of dirt.

- **Oil bores/oil ducts can become blocked up.**

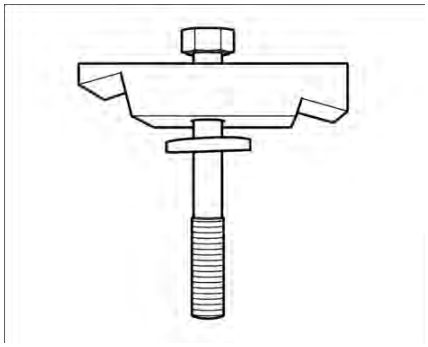
→ When working on the engine, absolute cleanliness is essential.

→ Lay removed engine parts on a clean base and cover them without fail.

→ Use the **cover for dust protection when fitting the engine NR.165** on the engine assembly support.

ATTENTION
Incorrect tray.

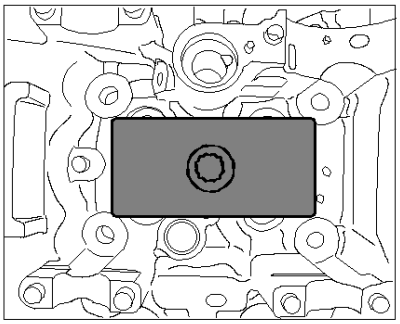
- **Damaged and scratched sealing face.**



→ Work on cylinder head only on a clean surface on the work bench.

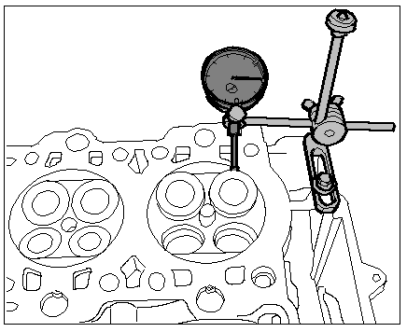
1. Remove cylinder head →157019 Removing and installing cylinder head - chapter on "Removing".
2. Disassemble cylinder head and clean components →157037 Disassembling and assembling cylinder head - chapter on "Disassembling".

top of page



Checking valve guide (valve lateral play)

Checking valve guide (valve lateral play)

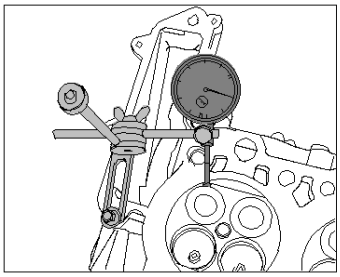


Tool for fixing valve position

Special tool **retaining device 9739**

Special tool 9739 fitted

1. Fit special tool **retaining device 9739** in cylinder head (valve stem side). To do this, screw in the fastening screws by hand into the spark plug thread.



Checking valve tilt play of intake valve

Note

The permitted valve tilt play is 0.25 mm.

2. Check valve tilt play on intake valve. Adjust the dial gauge to the relevant angle of the valve to be checked and set to **'0'** with preload. Press valve disc towards dial gauge and pull it back again. Read off value and note it.

Checking valve tilt play on exhaust valve

3. Check valve tilt play on exhaust valve. Adjust the dial gauge to the relevant angle of the valve to be checked and set to **'0'** with preload. Press valve disc towards dial gauge and pull it back again. Read off value and note it.
4. Check all valves.

top of page

Subsequent work

Subsequent work

1. When all valve guides are within the permitted tolerances, assemble cylinder head again. If the specification is exceeded, the cylinder head must be replaced.

2. Install cylinder head →157019 Removing and installing side cylinder head - chapter on "Installing".

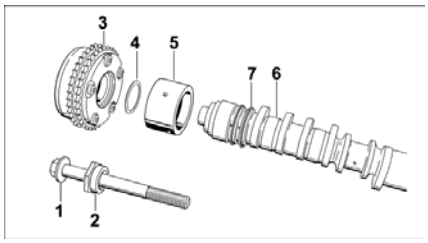
15 84 19 Removing and installing actuator for inlet camshaft - as of MY 2005

- Removing actuator - camshaft removed
- Installing actuator - camshaft removed

Tools

Designation	Type	Number	Explanation	
pliers for circlips	commercially available tool	NR.70		



top of page

Removing actuator - camshaft removed

Removing actuator - camshaft removed

Note

- *During assembly and disassembly, absolute cleanliness is essential!*
- *The identification on the bearing sleeve should point towards the camshaft (see illustration).*

Inlet camshaft

Component overview of inlet camshaft

Item	Designation	Qty.	Removal	Fitting
1	Central screw	1		
2	Adapter	1		
3	Camshaft adjustment device	1		
4	Friction washer	1		Replace
5	Bearing sleeve	1		
6	Inlet camshaft	1	Check for visible signs of wear, taking care not to damage rotor trim	replace if necessary
7	Plain compression rings	2	Check for visible signs of wear	replace if necessary

1. Unscrew central screw **-1-** with adapter **-2-** .
2. Remove camshaft adjustment device **-3-** .
3. Remove washer **-4-** .
4. Pull bearing sleeve **-5-** carefully off the camshaft **-6-** .

Note

- *Carry out disassembly and assembly of the plain compression rings carefully and gently.*

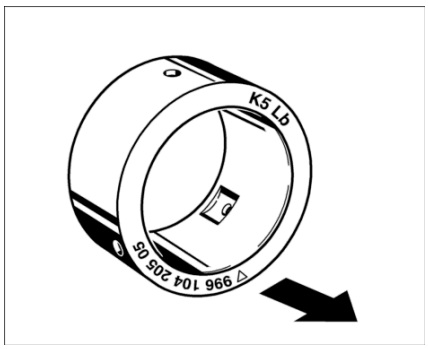
5. Check plain compression rings **-7-** for visible and perceptible signs of wear; replace if necessary. To remove and install, use snap-ring pliers, e.g. **pliers for circlips NR.70**.
6. Check plain compression rings for visible and perceptible signs of wear; replace if necessary.

top of page

Installing actuator - camshaft removed

Installing actuator - camshaft removed

Note



- *During assembly and disassembly, absolute cleanliness is essential!*
- *The identification on the bearing sleeve should point towards the camshaft (see illustration).*

Assemble inlet camshaft before inserting in cylinder head

Note

- *Carry out disassembly and assembly of the plain compression rings carefully and gently.*

1. Insert plain compression rings (if removed) carefully into the rig grooves. To remove and install, use snap-ring pliers, e.g. **pliers for circlips NR.70**.

Direction of installation of bearing sleeve - identification towards camshaft

2. Install bearing sleeve: lightly oil running surface with new engine oil. Press together the first piston ring and carefully push up the bearing sleeve. Proceed in the same way with the second piston ring. Pay attention to direction of installation.

Note

- *Make sure that the new friction washer is inserted.*

3. Position new friction washer and place the camshaft adjustment device in position. Insert the central screw with the adapter and tighten gently by hand.

15 91 19 Removing and installing cylinder head cover - engine removed - as of MY 2005

- Preliminary work for removing cylinder head cover
- Removing cylinder head cover - engine removed
- Installing cylinder head cover - engine removed
- Touch up for installing cylinder head cover

Tools

Designation	Type	Number	Explanation	
cover for dust protection when fitting the engine	commercially available tool	NR.165		

top of page

Preliminary work for removing cylinder head cover

Preliminary work for removing cylinder head cover

1. Remove engine →100119 Removing and installing engine - chapter on "Removing".
2. Remove rear muffler →263319 Removing and installing rear muffler - chapter on "Removing".

top of page

Removing cylinder head cover - engine removed

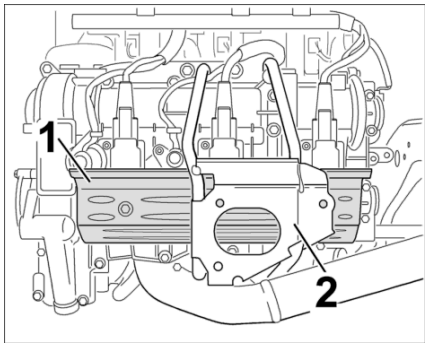
Removing cylinder head cover - engine removed

ATTENTION

Risk of damage due to particles of dirt.

- **Oil bores/oil ducts can become blocked up.**

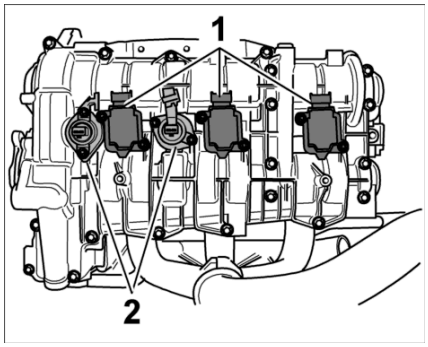
→ When working on the engine, absolute cleanliness is essential.



→ Lay removed engine parts on a clean base and cover them without fail.

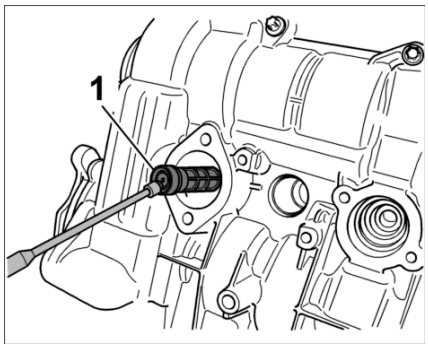
→ Use the **cover for dust protection when fitting the engine NR.165** on the engine assembly support.

Note



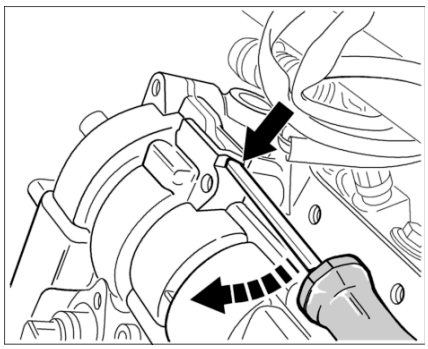
Replace the O-ring on the oil suction pump (tandem pump).

Cylinder row 1-3:



Cover plate and support for rear muffler

1. Remove cover plate for ignition coils **-1-** . Unscrew two M6 x 16 Torx screws and remove cover plate.
2. Remove holder for rear muffler **-2-** . Pull off cable plug for ignition coil cylinder 2 (side 4-6 cylinder 5) and cable plug for solenoid hydraulic valves. Unscrew the four Torx screws: intake side, two M8 x 30, exhaust side, two M8 x 25, remove support.



Hydraulic valves for camshaft adjustment and ignition coils

3. Remove ignition coils **-1-** . Pull off remaining ignition coil cable plugs. Unscrew two M6 x 25 Torx socket screws, pull the ignition coils out of the spark-plug recess.
4. Remove support and retainer plates (with integrated seal) for the solenoid hydraulic valves (camshaft timing and valve lift control) **-2-** , →153719 Removing and installing solenoid hydraulic valve (camshaft timing) - chapter on "Removing" und →155519 Removing and installing solenoid hydraulic valve (valve lift control) - chapter on "Removing". If the valves do not have to be replaced, these can remain in the cylinder head (side 1-3 both, side 4-6 camshaft timing only)

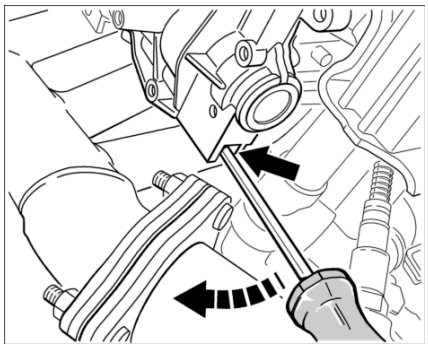
Oil strainer hydraulic valve NVS

5. If the solenoid hydraulic valve is removed for camshaft timing, the oil strainer **-1-** must be checked for damage and contamination, and replaced if necessary.
6. Remove oil suction pump. Unscrew four M6 x 20 Torx screws (micro-self-locking), remove oil suction pump, replace O-ring and screws.

Lifting cylinder head cover from above

ATTENTION

Damage when levering off the cylinder head cover



- **Cast lugs could break.**

→ Perform work steps carefully and gently.

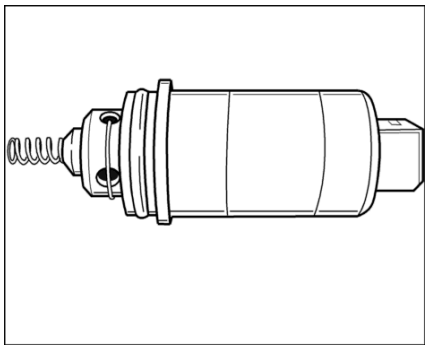
Note

The coated screws for the bearing surfaces of the camshaft in the cylinder head cover must be replaced when installing.

7. Remove the cylinder head cover . Unscrew 20 M6 x 30 Torx screws from the cylinder head cover. To loosen the cylinder head cover, raise the cover carefully at the two protruding cast edges with a screw driver or mounting lever. Remove cylinder head cover.

Lifting cylinder head cover from below

8. Remove the plastic cap.



Note

Make sure that it is cleaned thoroughly and that residual sealing compound is removed completely. Even the smallest particles can block up oil bores.

9. Clean the sealing faces on the cylinder head cover and cylinder head thoroughly (use brass - or nylon brush, a clean and lint-free cloth soaked in acetone). All residual sealing compound in the cylinder head and on the cover must be removed before assembling.

Additional work steps on the cylinder row 4-6:

- Loosen ground cable on the cylinder head, to do this, unscrew on M8 Torx screw and remove the cable.
- Unplug two cable plugs for the oil pressure switch.
- A tandem pump is installed on side 4-6 instead of the oil suction pump. Pull off the vacuum line on the pump. Replace O-rings and micro-self-locking screws.

Solenoid hydraulic valve, valve lift control

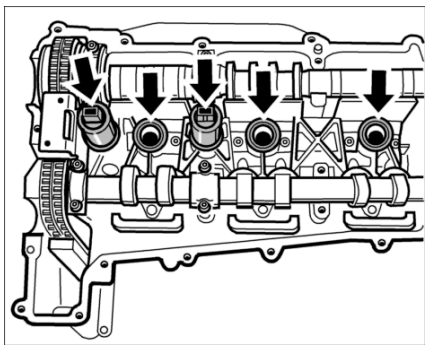
- Because of the small distance to the exhaust manifold, the valve lift control valve must be removed, so that the cover can be removed and installed without difficulty. →155519 Removing and installing solenoid hydraulic valve, valve lift control - chapter on "Removing". Pay attention to the spring element.

top of page

Installing cylinder head cover - engine removed

Installing cylinder head cover - engine removed

ATTENTION



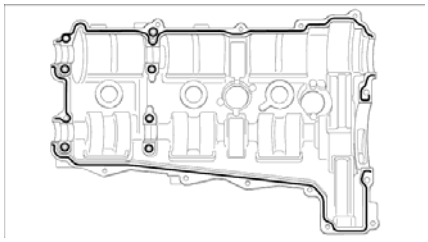
Risk of damage due to particles of dirt.

- **Oil bores/oil ducts can become blocked up.**

→ When working on the engine, absolute cleanliness is essential.
→ Lay removed engine parts on a clean base and cover them without fail.
→ Use the **cover for dust protection when fitting the engine NR.165** on the engine assembly support.

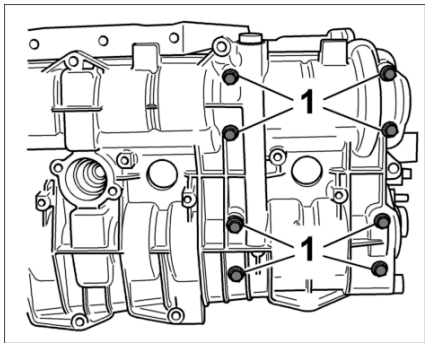
Note

The coated screws for the bearing surfaces of the camshaft in the cylinder head cover must be replaced when installing.



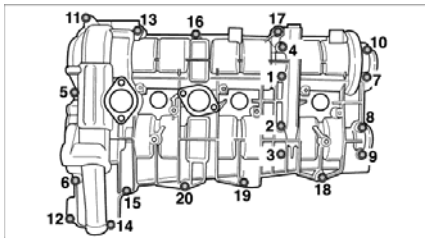
Spark plug slot seals and solenoid hydraulic valves

1. Insert three new seals for the spark-plug recesses.



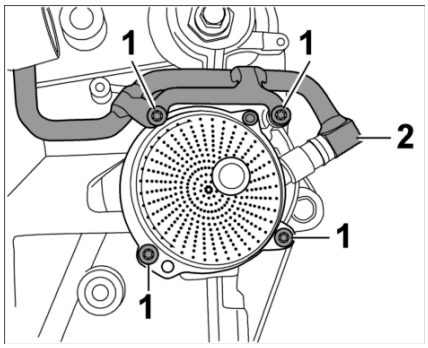
Only the following sealants may be used to seal the cylinder head cover:

- "Drei Bond" silicone - type 1209
- Loctite 5900



Sealant application cylinder head cover

2. Prepare cylinder head cover for assembly. Apply a thin bead of sealant on the cylinder head cover (not higher than 1.5 mm). *→Sealant application cylinder head cover*



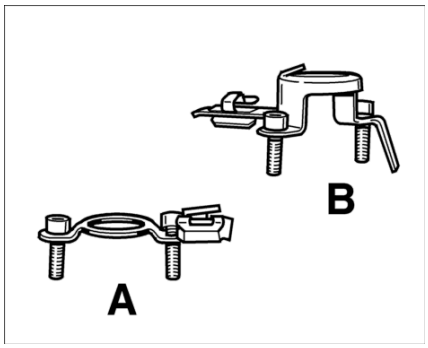
Screws for camshaft bearing surface

3. Coated screws on the camshaft bearing surfaces **-1-** must be replaced.
4. Place the cylinder head cover carefully onto the cylinder head. The bead of sealing compound must not be wiped off or interrupted.

Tightening sequence, cylinder head cover

5. Position 20 Torx screws (eight of these should be new, coated screws) on the cylinder head cover and tighten according to the specified tightening sequence. Only lightly screw in the two screws in the area of the oil suction pump/tandem pump. They will be tightened after the pump is assembled. **→Tightening torque: 9.5 ftlb.** *→Tightening sequence, cylinder head cover*
6. Position a new cap ø 45 mm (brown) on the bore of the intake camshaft on the pulley side and tap it gently into place with a plastic hammer (dry mount).
7. Insert two new caps (green) into the small bores on the clutch side. Tap it in with a plastic hammer (dry mount).

Tandem pump side 4 -6

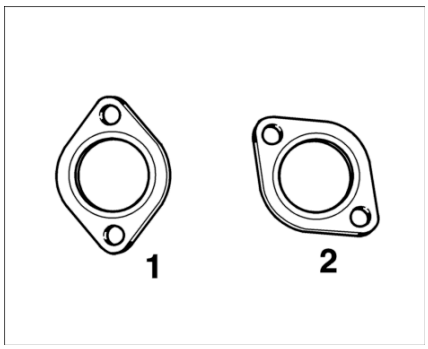


Note

Replace the O-ring on the oil suction pump (tandem pump).

8.

Mount the oil suction pump or tandem pump with four new, micro-self-locking Torx screws **-1-** . Replace O-rings on the pumps and the vacuum line **-2-** . Lightly grease O-rings with Optimol MP3. →**Tightening torque: 7.5 ftlb.**



9. Tighten the two screws on cylinder head cover in area of oil suction pump/tandem pump. →**Tightening torque: 9.5 ftlb.**
10. Insert the solenoid hydraulic valve, valve lift control on cylinder 4-6 with a new O-ring. →155519 Removing and installing solenoid hydraulic valve, valve lift control - chapter on "Installing". Note installation position (plug connection is horizontal).

Holder for solenoid hydraulic valves

11. Push on two new retainer plates on the solenoid hydraulic valves on each cylinder row →*Installation position for solenoid hydraulic valve retainer plates* . Position support and tighten with two M6 x 20 Torx socket screws. →**Tightening torque: 7.5 ftlb.**

- A: support for camshaft adjustment valve (camshaft timing)
- B: support for valve lift adjustment valve (valve lift control)

Installation position for solenoid hydraulic valve retainer plates

Retainer plate with integrated gaskets (identical parts)

- 1 - camshaft timing retainer plate
- 2 - valve lift control retainer plate

12. Insert ignition coils into the spark-plug recesses. Position and tighten two M6 x 25 Torx socket screws per ignition coil. →**Tightening torque: 7.5 ftlb.**
13. Position support for rear muffler with four Torx screws: intake side, two M8 x 30, exhaust side, two M8 x 25, then tighten to the specified torque. →**Tightening torque: 17 ftlb.**

14. Plug in cable plugs for ignition coils and magnetic hydraulic valves. Secure the cables of the hydraulic valves in the sheetmetal clips.
15. Install cover plate, position and tighten two M6 x 16 Torx screws. →**Tightening torque: 7.5 ftlb.**

Cylinder side 4-6:

16. Connect the two cable plugs on the oil temperature switch.
17. Fasten ground cable on cylinder head with M8 Torx screw. →**Tightening torque: 17 ftlb.**

top of page

Touch up for installing cylinder head cover

Touch up for installing cylinder head cover

1. Fit rear mufflers. →263319 Removing and installing rear muffler - chapter on "Installing".
2. Install engine. →100119 Removing and installing engine - chapter on "Installing".

17 01 01 Checking engine oil level - as of MY 2005

- Checking engine oil level

top of page

Checking engine oil level

Checking engine oil level

 WARNING
Incorrect oil level!

- **Engine or catalytic converter damage**

→ Check oil level regularly (if possible at every refuelling).
→ Oil level must not fall below the minimum mark or rise above the maximum mark.
→ Only use engine oils tested and approved by Porsche AG.

 **Note**

- *The engine oil level can only be checked with the display in the instrument cluster.*
- *Any malfunctions in the oil level indicator show up via a warning in the instrument cluster.*
- *Use the Info function to display the requirements for oil level measurement.*

 **Note**

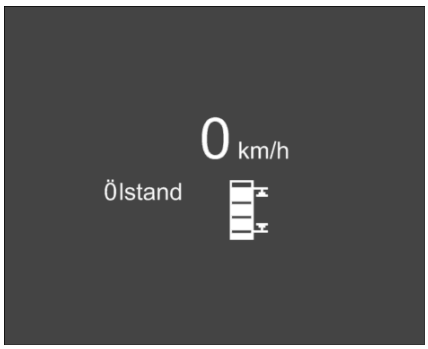
- *If the oil level drops below the minimum mark, the segment below starts flashing!*
- *The difference between the minimum and maximum marks is approx. 1.2 litres, one segmentof the display corresponding to approx. 0.4 litres of oil.*
- *Never fill or top up with engine oil above the maximum mark.*

Requirements for correct oil level measurement (not during refuelling)

- Vehicle is parked horizontally.
- Engine is off.

- Ignition switched on.

Oil return time: Before measuring the oil level, the engine oil must have returned to the oil pan. The duration depends on the temperature and the time the engine has been stationary.
Starting measurement:

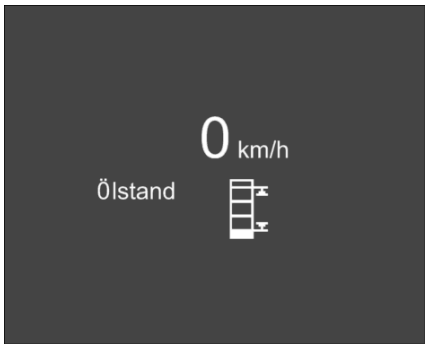


Oil level measurement

Note

- *The waiting time for the oil level measurement is indicated by a countdown time display and cycling segments on the oil level indicator.*
- *Short waiting times when measuring the engine oil level are obtained after the vehicle has been idle for a long period or if the engine is at operating temperature.*

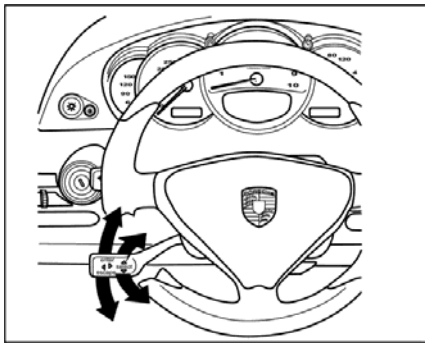
1. Switch on the ignition (do not start the engine). Measurement starts automatically. The display for the oil level measurement appears on the on-board computer.



Oil level indicator (maximum mark)

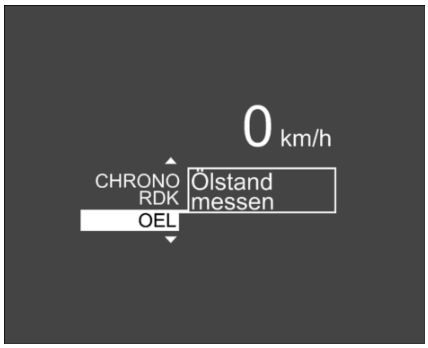
Note

- *The oil level must be between the minimum and maximum marks.*
- *Adjust the engine oil level if necessary (pour engine oil in slowly) and check the level again.*



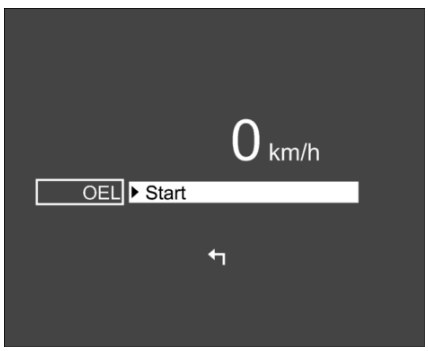
2. The oil level can be read off from the segment display after measurement is completed (at end of waiting time). The permitted oil level lies between the minimum and maximum marks.

Minimum oil level



3. If the lowest segment of the oil level indicator is filled *→Minimum oil level* , the minimum oil level has been reached and the oil must be topped up immediately *→ A8 Engine oil and oil filter change - topping up*.

Oil level measurement in the "OIL" menu (requirements as above):



Operating lever for on-board computer (example 986)

4. Switch on selection field **"D"**. Push operating lever forwards.

Menu item" OIL"

5. Use the operating lever to select the menu item **OIL** and press the operating lever.

Starting the oil level measurement

Note

- *The waiting time for the oil level measurement is indicated by a countdown time display and cycling segments on the oil level indicator.*
- *Short waiting times when measuring the engine oil level are obtained after the vehicle has been idle for a long period or if the engine is at operating temperature.*

6. Start measurement by pressing the operating lever.

Oil level measurement during refuelling:

7. The oil level is measured in the background when the vehicle is being refuelled. If the oil level is too low, the message Check oil level appears on the on-board computer display.

Requirements

- Vehicle is parked horizontally.
- Engine is at operating temperature.
- Ignition switched off.
- There must be at least **5 minutes**between switching off and starting the engine.
- Refuelling completed within the last **15 minutes**.

8. If these requirements are not satisfied, the measurement is interrupted.
9. If the oil level measurement cannot be carried out for two refuellings, the message "Check oil level" appears in the display of the instrument cluster.

997110, 997111, 997120, 997121, 997310, 997311, 997320, 997321, 997410, 997411, 997430, 997431, 997610, 997611, 997620, 997621

as of MY 2005
Country C00, C02, C05, C07, C08, C09, C10, C11, C12, C13, C14, C15, C16, C18, C19, C20, C21, C22, C23, C24, C25, C26, C27, C28, C32, C33, C34, C35, C36, C37, C38, C39, C45, C46, C98, C99

WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

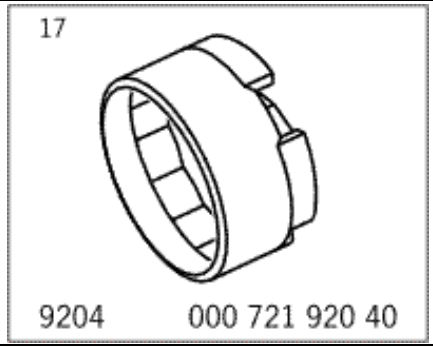
Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.



- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

17 01 55 Engine oil and oil filter change - as of MY 2005

- Draining engine oil
- Changing oil filter
- Refilling engine oil
- Reworking

Tools

Designation	Type	Number	Explanation	
Oil filter spanner	special tool	92040		

top of page

Draining engine oil

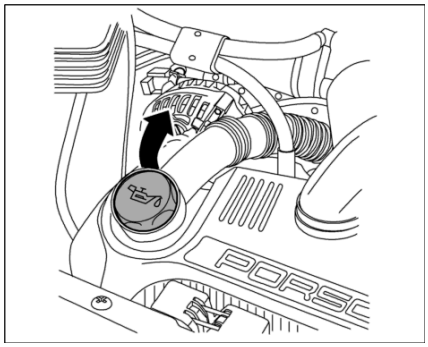
Draining engine oil

WARNING

Danger due to oil draining out and spraying when the engine is hot!

- **Danger of scalding and injury**

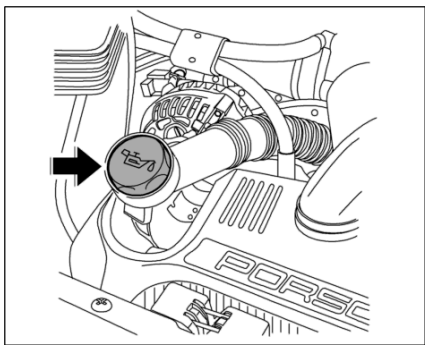
→ Allow the engine to cool



→ Wear specified protective gear.

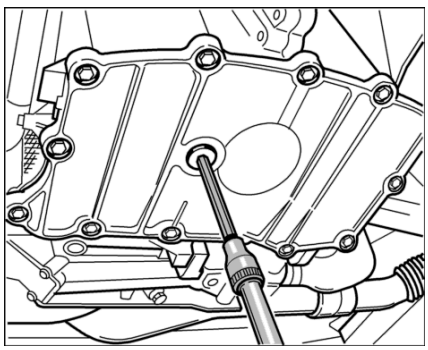
Note

Use only engine oils tested and approved by Porsche AG.



Note

- *Never remove and install O-ring for oil filter with a sharp object!*
- *Do not scratch the sealing surface of the oil filter housing.*



Unclip oil filler neck

1. Unclip the oil filler neck on the oil filter housing upwards.

Cap for oil filler tube

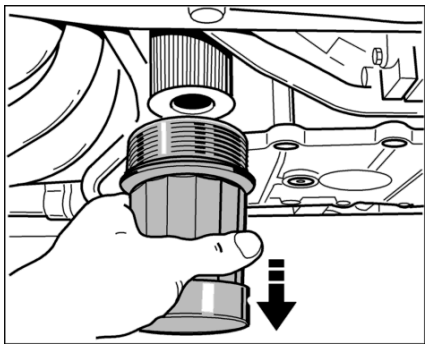
2. Unscrew cap on oil filler neck.

Oil drain plug

Note

- *To be able to fill the correct quantity of oil after draining the old oil, a time of 20 minutes should be allowed for the oil to drip out.*
- *Dispose of waste oil in accordance with legal requirements in your country.*

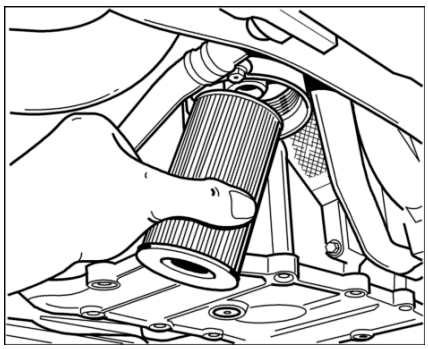
3. Unscrew oil drain plug on the oil sump (SW 8) and allow the oil to drain into a collecting basin.
4. Clean the oil drain plug and screw it back in with a new aluminium sealing ring. →**Tightening torque: 37 ftlb**



top of page

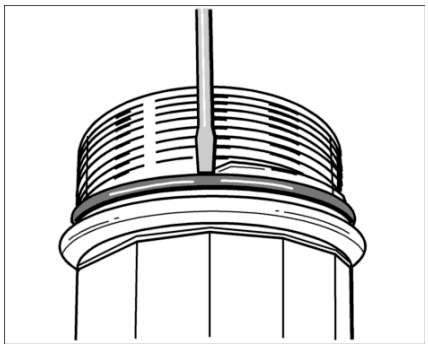
Changing oil filter

Changing oil filter



Changing oil filter

1. Loosen oil filter using special tool **Oil filter spanner 92040**.

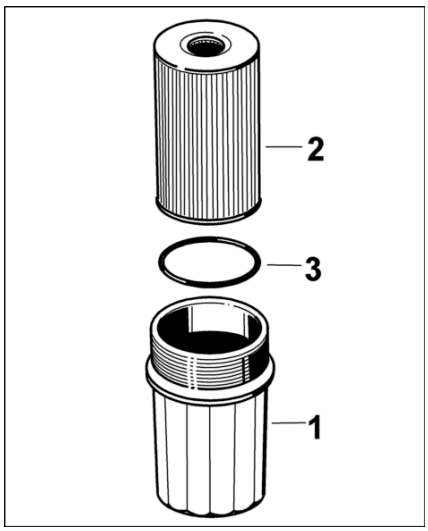


Oil filter housing

2. Remove oil filter housing vertically downwards. Drain remaining oil into an oil collection container. Dispose of waste oil in accordance with legal requirements.

Oil filter cartridge

3. Remove the filter element. Remove the paper filter downwards and dispose of it in accordance with legal requirements.



O-ring for oil filter housing

Note

- *Never remove and install O-ring for oil filter with a sharp object!*
- *Do not scratch the sealing surface of the oil filter housing.*

4. Lever off the old O-ring on the housing groove with a screwdriver.

Oil filter components

5. Clean oil filter housing thoroughly both inside and outside. Replace O-ring with a new one and smear gently with white Optimoly MP3 lubricant (available from the Porsche Parts Catalogue).

   - 1 - Oil filter housing
   - 2 - Oil filter cartridge
   - 3 - O-ring

6. Insert a new filter element.
7. Screw the oil-filter housing back in and secure it with the **Oil filter spanner 92040**. →**Tightening torque: 19 ftlb**

top of page

Refilling engine oil

Fill in engine oil

Closure cap for oil filler neck

ATTENTION
Incorrect oil level

- **Damage to engine and catalytic converter.**

→ Specification of correct oil level must be adhered to under all circumstances.

Note

- *Lift the oil filler neck slightly in order to fill engine oil.*

Note
Use only engine oils tested and approved by Porsche AG.

1. Fill the engine oil slowly using a suitable filler container in order to avoid the oil overflowing at the filler neck. Don't forget to screw the cap on again tightly.

Engine oil filling capacities: →Filling capacity without oil filter: 8.00 litre ; →Filling capacity with oil filter: 8.25 litre ; →Filling capacity without oil filter: 8.25 litre ; →Filling capacity with oil filter: 8.50 litre

2. Clip the oil filler neck into the holding slot on the air cleaner.

top of page

Reworking

Subsequent work - topping up engine oil

1. Check engine oil level via on-board computer (display in instrument cluster) → *Check engine oil level*.

17 04 19 Removing and installing oil-pressure sender - as of MY 2005

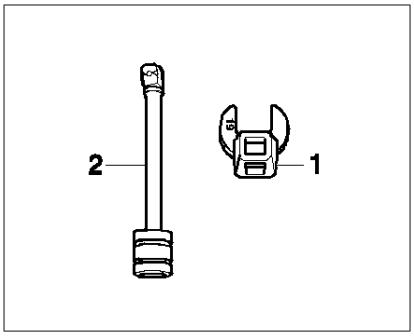
- Removing oil-pressure sender
- Installing oil-pressure sender

Tools

Designation	Type	Number	Explanation	
Crowfoot wrench a/f 19	commercially available tool	NR.11-1		
Extension 3/8-inch, 16° moveable	commercially available tool	NR.15		

top of page

Removing oil-pressure sender



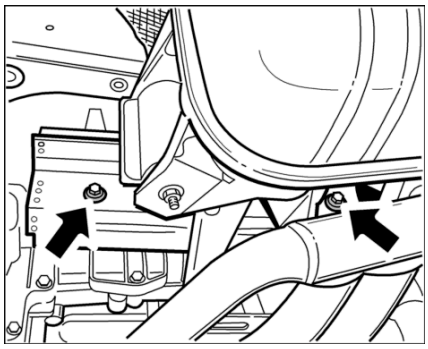
Removing oil-pressure sender

WARNING

Danger of injury from hot engine parts.

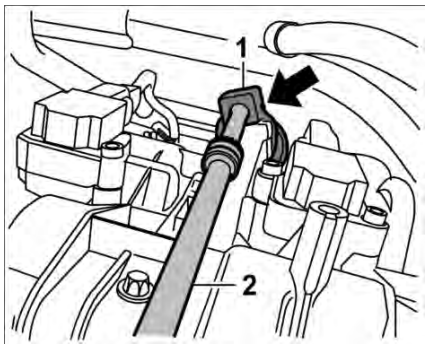
- **Risk of burns, damage to skin, injury to the eyes.**

→ Do not work on the engine while it is hot.



Oil-pressure sender tool

Oil-pressure sender tool



- 1 - **Crowfoot wrench a/f 19 NR.11-1** (snap-on).
- 2 - **Extension 3/8-inch, 16° moveable NR.15**.

1. Remove both cable plugs in engine compartment (cylinder head cover, side 4-6).

Cover plate for ignition coils

2. Remove cover plate for ignition coils. Unscrew two M6 Torx screws and remove plate.

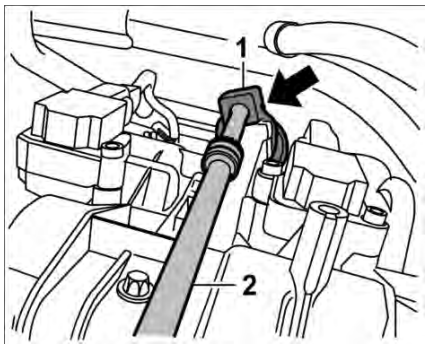
Tool usage - oil-pressure sender

Note

The sender is removed from and fitted onto the underside of the engine, therefore the direction of rotation must be observed.

- ***Undo: in a clockwise direction***.
- ***Tighten: in an anticlockwise direction***.

3. Remove oil-pressure sender with **Extension 3/8-inch, 16° moveable NR.15** and a **crowfoot wrench a/f 19 NR.11-1** **-1-** . Use a long, 3/8-inch extension **-2-** also.



top of page

Installing oil-pressure sender

Installing oil-pressure sender

Installing oil-pressure sender

1. Position oil-pressure sender with new sealing ring on cylinder head cover, side 4-6.

Tool usage - oil-pressure sender

Note

The sender is removed from and fitted onto the underside of the engine, therefore the direction of rotation must be observed.

- ***Undo: in a clockwise direction***.
- ***Tighten: in an anticlockwise direction***.

2. Tighten sender using the specified tools. →**Tightening torque: 30 (22 ftlb.) Nm** .
3. Fit cover plate, tighten two M6 Torx screws. →**Tightening torque: 10 (7.5 ftlb.) Nm**
4. Insert cable plug in engine compartment.

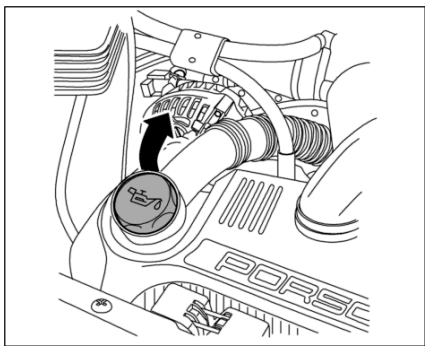
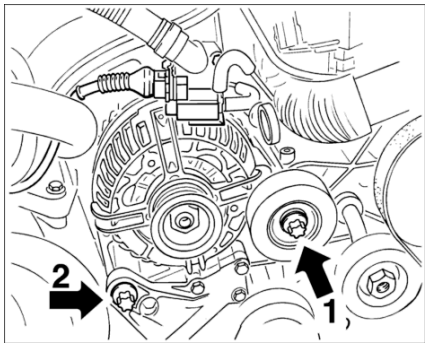
17 15 19 Removing and installing oil filler neck - as of MY 2005



- Preliminary work
- Removing oil filler neck
- Installing oil filler neck
- Subsequent work

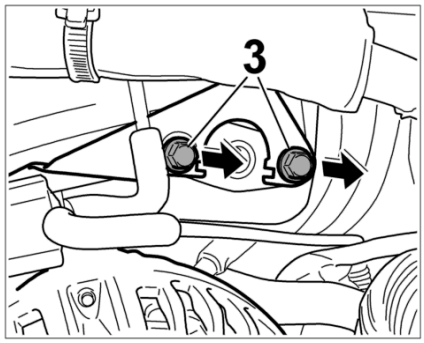
top of page

Preliminary work



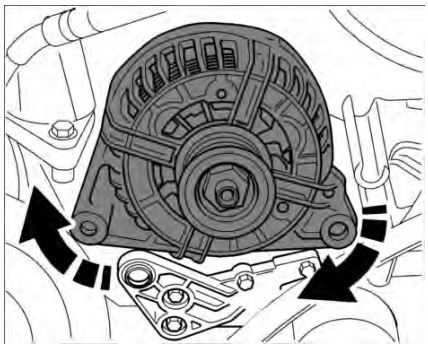
Preliminary work

1. Disconnect battery →2706IN IN -Work instructions after disconnecting the battery.



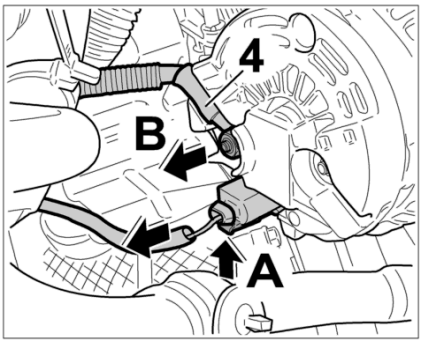
Oil filler neck on air cleaner housing

2. Remove air cleaner housing →242419 Removing and installing air cleaner element - chapter on "Removing". To do this, unclip the oil filler neck upwards out of the air cleaner housing **-arrow-** .
3. Release drive belt →137819 Removing and installing drive belt - chapter on "removing".



Three-phase generator

4. Detach fastening screws for generator **-arrows-** . Unscrew the longer screw **-1-** by approx. three turns, then undo the front pilot bushing by tapping lightly on the screw head (use a plastic hammer). Unscrew screw and remove with deflection roller.

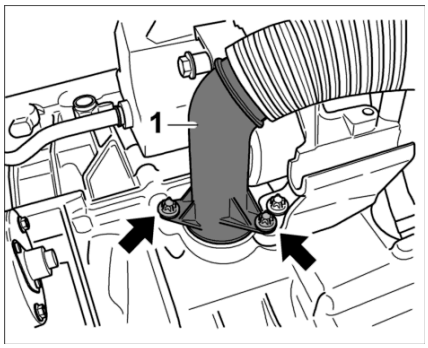


Fastening screws for securing vacuum modulator to intake system

5. Unscrew the fastening screws **-3-** for the vacuum modulator on the intake distributor.

Lifting generator out of mount

6. Remove generator →272219 Removing and installing three-phase generator - chapter on "Removing". Turn generator in a clockwise direction, tilt it in direction of travel and lift it out of the engine over the coolant cap.



Electrical connections on generator

7. Remove electrical connections.

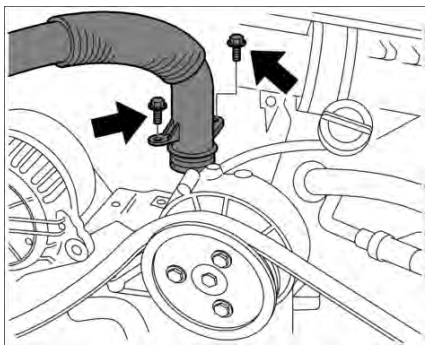
top of page

Removing oil filler neck

Removing oil filler neck

Oil filler neck

1. Unscrew two M6 x 16 Torx screws (micro-self-locking) **-arrows-** , remove oil filler neck **-1-** from crankcase.
2. Remove "old" O-ring on support.
3. Clean crankcase bore.

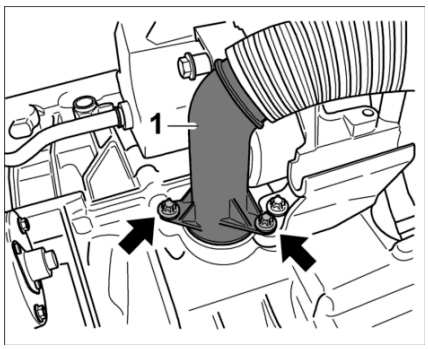


top of page

Installing oil filler neck

Installing oil filler neck

Note

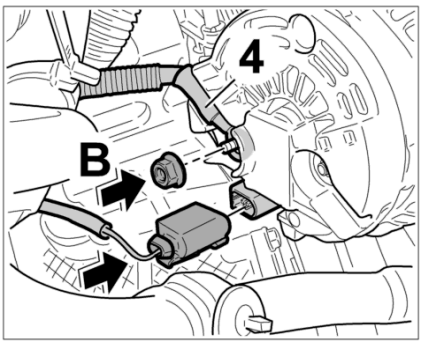


Replace the micro-self-locking screws and the O-ring for the filler neck.

Inserting oil filler neck

1.

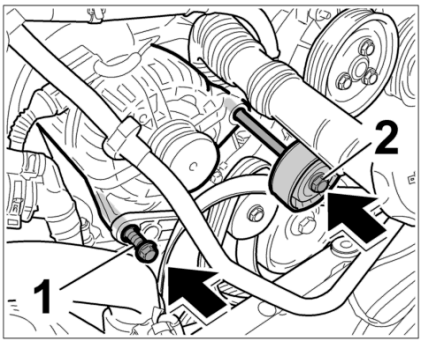
Grease the new O-ring with Optimol MP3 (available from Porsche Parts Service) and insert oil filler neck into crankcase bore.



Oil filler neck

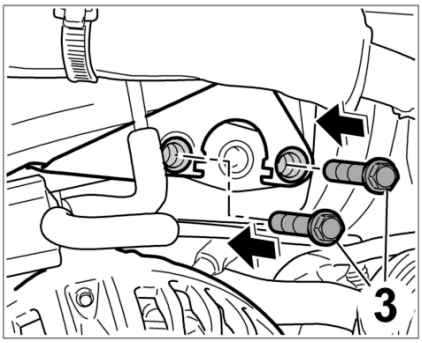
2. Insert and tighten two new M6 x 16 Torx screws (micro-self-locking) **-arrows-** . →**Tightening torque: 10 (7.5 ftlb.) Nm**

top of page



Subsequent work

Subsequent work



Electrical connections on generator

1. Fit electrical connections on generator. →**Tightening torque: 15 (11 ftlb.) Nm**

Fastening screws on generator

2. Insert generator, position fastening screw (screw on pivot bearing with deflection roller **-2-**), screw it in and tighten it. →**Tightening torque: 46 (34 ftlb.) Nm**

Securing vacuum unit

3. Position vacuum unit on intake distributor and fit using the fastening screws **-3-** . →**Tightening torque: 9 (6.5 ftlb.) Nm**
4. Fit drive belt →137819 Removing and installing drive belt - chapter on "Installing".
5. Install air cleaner housing →242419 Removing and installing air-cleaner element - chapter on "Installing".
6. Connect battery →2706IN IN -Work instructions after disconnecting the battery.

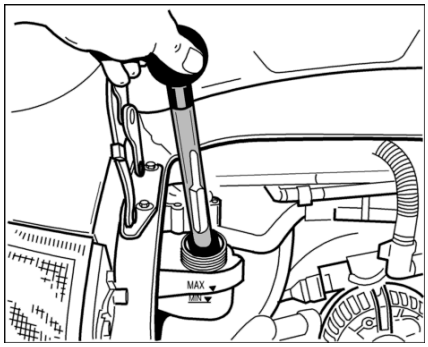
19 01 01 Checking cooling system - as of MY 2005

- checking

Tools

Designation	Type	Number	Explanation	
Vacuum cleaner nozzle, long crevice tool for cleaning cooling air inlet shafts	commercially available tool	NR.160		PORSCHE siehe Handbuch Werkstattausrüstung Voir le Manuel Equipement d´atelier Refer to the Workshop Equipment manual Vease Manual de Equipamiento de Taller Vedere il Manuale dell´attrezzatura d´officina ワークショップ・イクイップメント・マニュアルを参照



top of page

checking

Coolant - check antifreeze and fluid level

Note

- *The coolant filled in at the factory is intended for lifetime cooling and, thus, need not be changed.*

Use of the anti-freeze testing device

WARNING

Danger of scalding from hot pressurised coolant.

→ Only work on the coolant system when the engine is "cool".

→ Wear protective gloves and goggles.

WARNING

Coolant is corrosive and hazardous to health.

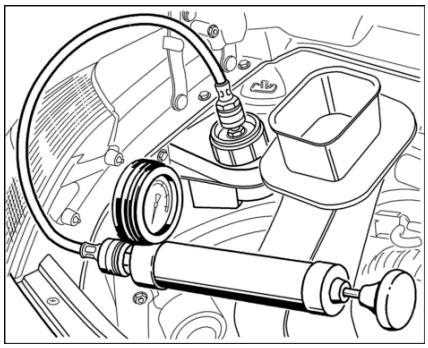
- **Skin and eye irritation**

→ Wear protective gloves and goggles.

→ If you come into contact with coolant, wash off immediately with plenty of warm water.

ATTENTION

Mixing coolant.



- **Corrosion of components and flocculation of coolant**

→ Do not mix Porsche coolant with other coolants.

→ When replacing or topping up coolant, use only original Porsche coolant (see Porsche Parts Catalogue).

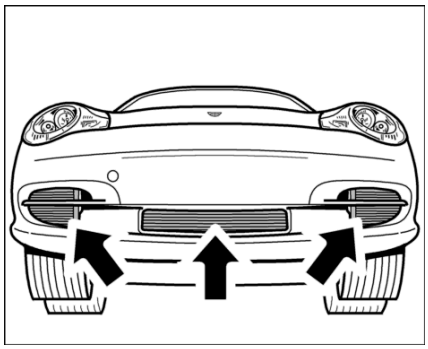
1. Check antifreeze content. To do this, open the lid on the coolant expansion tank and check with an anti-freeze testing device. If this is below - 35°C, correct the anti-freeze content by raising the proportion of pure coolant accordingly

Checking the cooling system for leaks

No leaks in the cooling system

WARNING

Danger of scalding from hot pressurised coolant.



→

Only work on the coolant system when the engine is "cool".

→ Wear protective gloves and goggles.

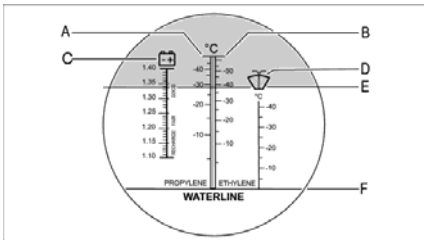
1. Check the cooling system for leaks. To do this, apply a test pressure of approx. 1 bar and check hose connections for leakage

Cleaning the cooling air guides

Cooling air openings

ATTENTION

Soiling and damage to radiator surface (vanes).



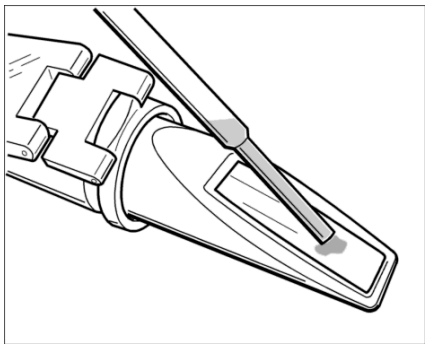
- **Engine overheating due to lack of cooling performance.**

→ Clean radiator surface regularly.

→ Do not use a high-pressure steam cleaner to clean it.

1. Check cooling air guides and radiator for foreign bodies such as leaves. If necessary, carefully clean the cooling air guides and radiator surfaces at the front using a vacuum cleaner with a single nozzle, see **Vacuum cleaner nozzle, long crevice tool for cleaning cooling air inlet shafts NR.160**. When using high-pressure steam cleaners, the steam jets can cause additional particles of dirt to attach to the radiator surfaces and the engine can overheat due to reduced cooling performance

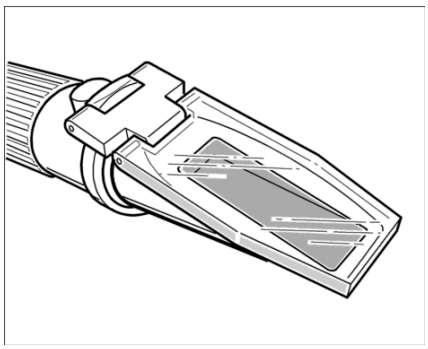
Checking the antifreeze content using a refractometer



Display scale refractometer

Note

- *The following diagram shows the scale used by Leitenberger*
- *The scales can vary, depending on the manufacturer, observe the operating instructions*
- *Use the "ETHYLENE" scale for Porsche coolant.*



1. The correct antifreeze content can be read off the ETHYLENE scale

Position	Designation	Explanation
-A-	Scale for propylene-based coolant	Do not use the scale for engine types M96/03, M96/05 und M97/01
-B-	Scale for ethylene-based coolant	Use scale for 997 engines
-C-	Scale for battery acid	The charge state of a battery can be checked here. The figures indicate the gravity of electrolyte. The battery must be recharged once the charge drops below 1.20.
-D-	Scale for alcohol-based windscreen cleaner	The freezing point of the windscreen cleaner can be read off here.
-E-	Light/dark limit	In conjunction with the points of intersection of the relevant scales, it specifies the value to be established
-F-	Waterline	The light/dark limit must be located here when sprinkled with distilled water

Coolant sample on refractometer

2. Using a pipette, take a sample from the coolant expansion tank. Sprinkle a few drops on the test surface of the refractometer.

Closed refractometer lens

3. Close the light-diffusing lens. A closed film of liquid must form.

Note

- *The following table specifies how much coolant must be replaced by pure coolant in order to adjust the freezing point to -37 °C.*

4. Hold the refractometer against a bright light source. A clear light/dark limit emerges. The point of intersection between this line and the display scale marks the freezing point of the coolant. A freezing point that is too low must be adjusted according to the following table

Measured antifreeze content in °C	Pure antifreeze quantity to be added (in litres)
- 5	9
- 10	8,5
- 15	7,5
- 20	7,0
- 25	5,0
- 30	3,5
- 35	1,5

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

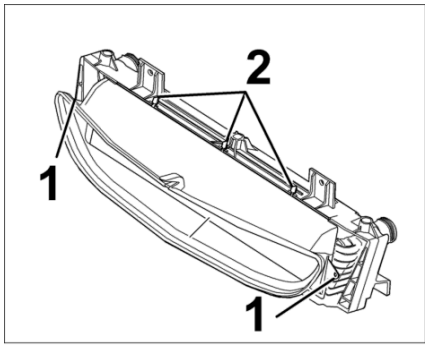
→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

19 24 19 Removing and installing air guide - as of MY 2005

- Preliminary work
- Removing air guide
- Installing air guide
- Subsequent work

top of page

Preliminary work

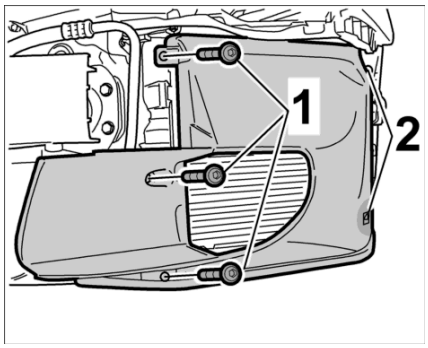


Preliminary work for removing air guide

→631519 Removing and installing front apron - chapter on "removing"

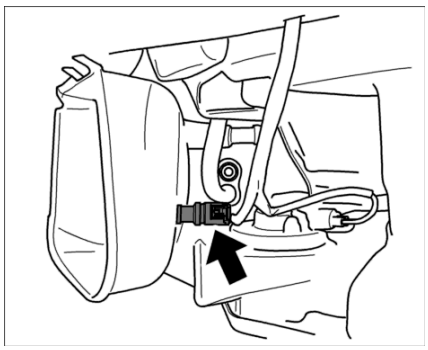
top of page

Removing air guide



Removing air guide for middle radiator

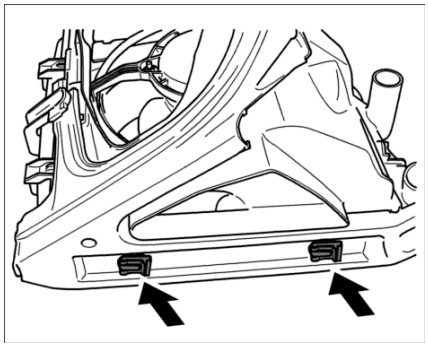
Air guide



1. Pull off the air guide for the middle radiator. To do this, pull the right and left rubber tabs for the air guide off the radiator **-1-** . Pull the top three rubber tabs up **-2-** and release them. Loosen the air guide around the radiator and remove it.

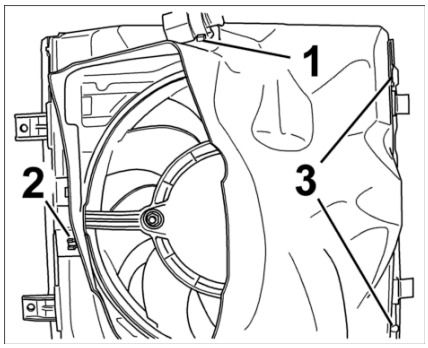
Removing air guide for side radiator

Air guide for side radiator



1. Remove the air guide at the left side. To do this, remove the three fastening screws **-1-** and pull the air guide sideways out of the plastic tabs **-2-** .

Temperature sensor

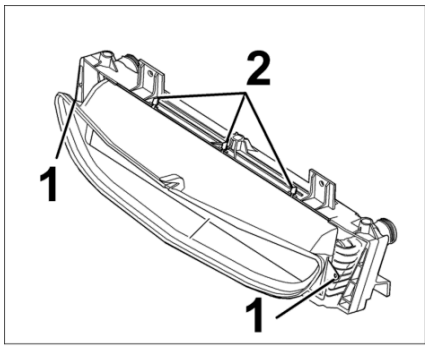


2. Remove the air guide on the right side in the same way as on the left. The temperature sensor must also be pulled out of the air guide from behind **-arrow-** .

The relevant radiator must be removed in order to remove the rear air guide. *→197019 21 Removing and installing radiator - section on "Removing"*

Bracket for side radiator

3. Remove the sheetmetal clips and washers under the radiator bracket **-arrows-** . To do this, release the sheetmetal clips using a suitable screwdriver and push them sideways out of the plastic pegs of the radiator. Pull the radiator from the bracket up out of the guide.

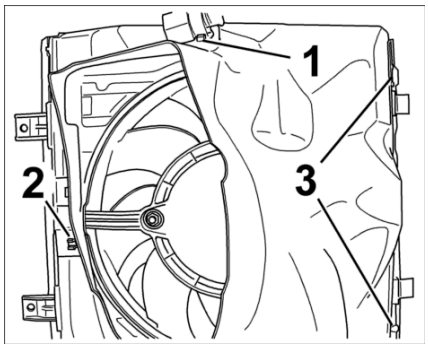


Air guide behind side radiator

4. Disengage the rear air guide from the cooling fan. To do this, disconnect the cable plug **-1-** and press the plastic lock together **-2-** . Then, lift the air guide out of the tabs **-3-** .

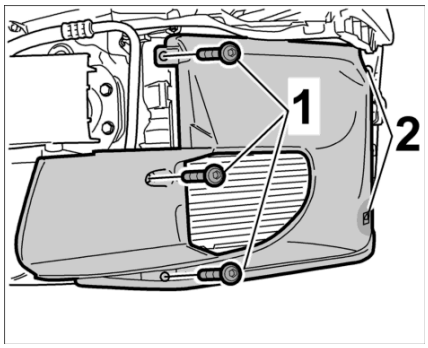
top of page

Installing air guide



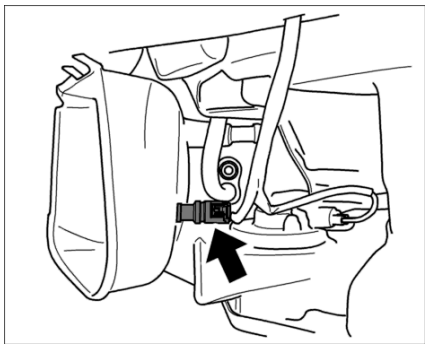
Installing air guide for middle radiator

Air guide



1. Fit air guide for middle radiator. Move air guide on radiator to installation position. To do this, press on the right and left rubber tabs for the air guide on the radiator **-1-** . Push in the top three rubber tabs **-2-** . Press the edge of the air guide around the radiator. Check that it is fitted correctly.

Installing air guide for side radiator



Air duct behind side radiator

1. Fit rear air guide on cooling fan. To do this, push air guide into the tabs **-3-** and press air guide into the lock **-2-** . Fit cable connector **-1-** .
2. Install side radiator *→197019 23 Removing and installing radiator - chapter on "installing"*.

Air guide for side radiator

3. Fit air guide. To do this, push radiator sideways into the plastic tabs **-2-** and screw in 3 fastening screws **-1-** .

Temperature sensor

4. Fit the air guide on the right side in the same way as on the left side. In addition, push the temperature sensor into the air guide from behind **-arrow-** .

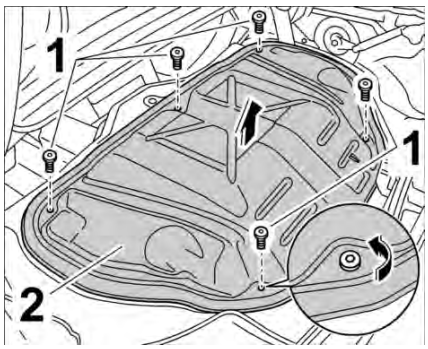
19 38 17 Draining and filling in coolant - as of MY 2005

- Preliminary work
- Draining coolant
- Filling with coolant
- Reworking

Tools

Designation	Type	Number	Explanation	
Radiator filling device	special tool	9696		



top of page

Preliminary work

Preliminary work

1. Removing rear underside panel →519419 Removing and installing rear underside panel - removing.

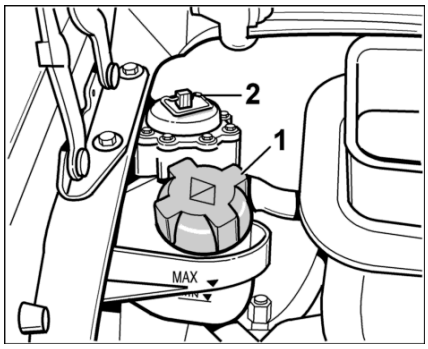
Cayman only:

Removing engine compartment lid

2. Remove engine cover *→557819 21 Remove and install engine compartment lid - chapter on "Removing"*.

top of page

Draining coolant



Draining coolant

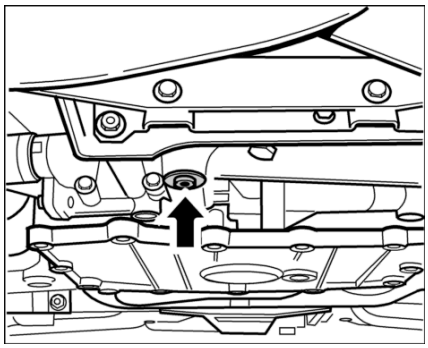
Note

In order to facilitate assembly of coolant pipes and hoses smear with Klüber Syntheso Glep or alternatively Klüberplus S06-100 assembly gel (available from the Porsche Parts catalogue)

Note

- *Check Henn coupling O-rings and replace if necessary.*
- *Clean push-in connector and coolant hoses before assembly.*

Reservoir cap for coolant expansion tank



WARNING

Danger of scalding from hot pressurised coolant.

→ Only work on the coolant system when the engine is "cool".

→ Wear protective gloves and goggles.

1. Open cap on expansion tank **-1-** and remove. Set steel chamber for bleeder valve to vertical **-2-** .

Coolant drain plug

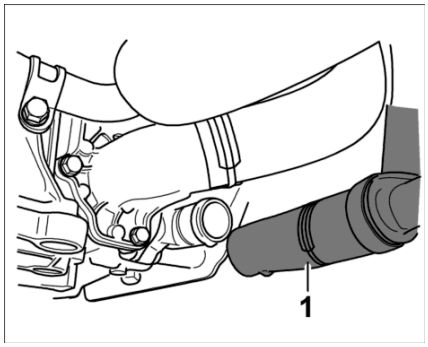
WARNING

Danger of scalding from hot pressurised coolant.

→ Only work on the coolant system when the engine is "cool".

→ Wear protective gloves and goggles.

WARNING



Coolant is corrosive and hazardous to health.

- **Skin and eye irritation**

→ Wear protective gloves and goggles.

→ If you come into contact with coolant, wash off immediately with plenty of warm water.

2. Undo internal hexagon socket drain screw from coolant inlet pipe. Open spring clamp on hose at inlet side of the water pump, remove the hose and unscrew the drain plug. Collect coolant in a clean container. Next reassemble the hose and screw the drain plug back with a new sealing ring. → **Tightening torque: 7.5 Ftlb +4 Ftlb**

Coolant inlet hose

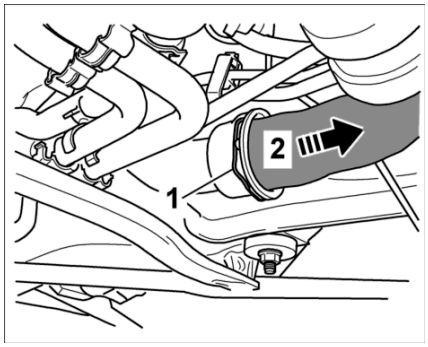
WARNING

Danger of scalding from hot pressurised coolant.

→ Only work on the coolant system when the engine is "cool".

→ Wear protective gloves and goggles.

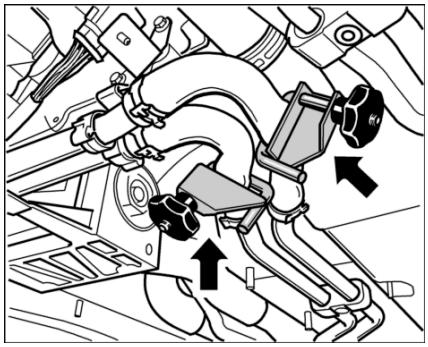
WARNING



Coolant is corrosive and hazardous to health.

- **Skin and eye irritation**

→ Wear protective gloves and goggles.



→ If you come into contact with coolant, wash off immediately with plenty of warm water.

3. Drain any remaining coolant by removing inlet hose to water pump **-1-** . Collect coolant in a clean container. Attach inlet hose again.

Henn coupling for coolant hose inlet

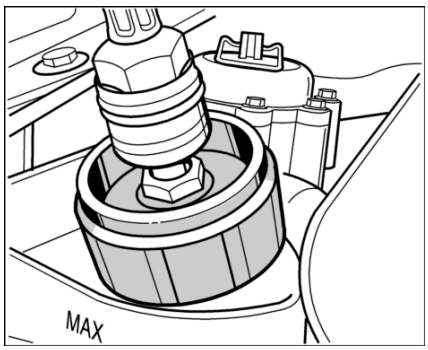
4. Remove inlet and outlet hoses from radiators Do this by pulling off the spring clips for the two Henn couplings **-1-** and pulling the hoses away from the coolant pipes **-2-** . Collect coolant in a clean container. Now reattach the clips in the right position in the couplings and insert the hoses The connection should audibly snap into place. Check correct positioning once again by pulling on the hoses.

Unclipping heating hoses

5. Remove heating hoses on underside of car. Secure the pipes with hose clips and then open the spring clips Remove both hoses and slowly open hose clips. Allow coolant to drain into a clean container. Clean hoses, stick them back and attach the clips. Check that the hoses are firmly in place.

top of page

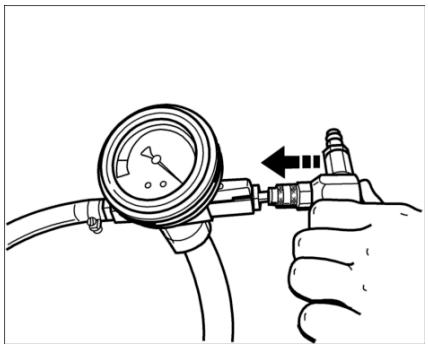
Filling with coolant



Filling coolant (includes bleeding)

Note

The process of filling and bleeding the cooling system continues to be performed using the special tool **Radiator filling device 9696**.

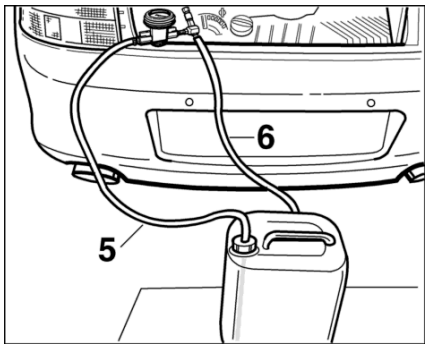


Note

- *If a vacuum does not build up, there is a leaking valve in the coolant circuit.*
- *Deformation of the rubber hoses of the cooling system is normal.*
- *When the pressure gauge pointer is in the green area of the display scale, a sufficient vacuum has been built up.*
- *After both shutoff valves on the vacuum pressure gauge have been closed and the compressed air supply has been disconnected, the vacuum must not drop. If the vacuum drops within approx. 30 seconds, there is a leak in the coolant circuit.*

Adapter K22 on coolant expansion tank

1. Screw cap adapter for coolant expansion tank (K22) onto the tank and attach flexible extension (Fz 100) to the cap.
2. Connect vacuum pressure gauge of bleeder tool to the flexible extension. When doing so, ensure that both shutoff valves are closed (positioned at 90° to flow direction).



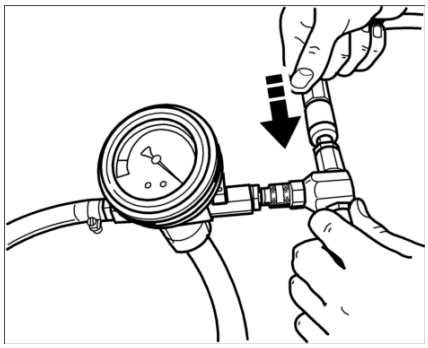
Venturi nozzle on vacuum pressure gauge

3. Connect the Venturi nozzle to the vacuum pressure gauge.

Note

- *The quantity of coolant available should exceed the amount required to fill the system by about two litres in order to prevent air being sucked in.*
- *An antifreeze content of -35 °C corresponds to a mixture of 50:50 (antifreeze: water).*

4. Place a canister with a sufficient amount of coolant and with an antifreeze content for -35 °C behind the vehicle near to the expansion tank

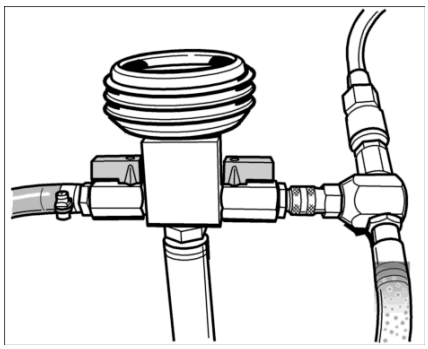


Special canister filling tool

Note

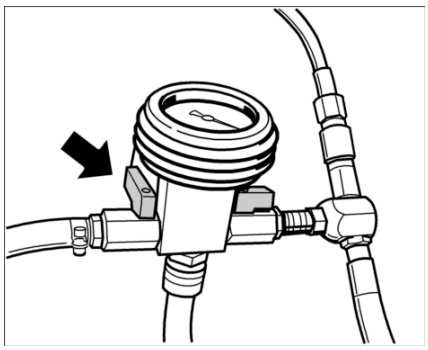
- *The bleeding process is completed more quickly if the canister is positioned at roughly the same height as the coolant expansion tank.*

5. Push the filler hose of the vacuum pressure gauge **-5-** onto the canister connection. Draw off the return line **-6-** of the Venturi nozzle into a second container.



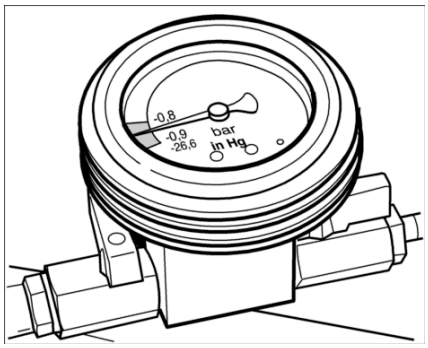
Compressed air supply on Venturi nozzle

Note



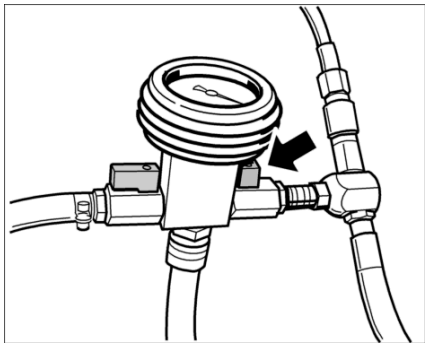
- *A hissing sound after connecting the compressed air supply is usual.*

6. Connect compressed air supply to Venturi nozzle



Shutoff valves open

7. Open both shutoff valves on the vacuum pressure gauge until the transparent filler hose has completely filled with coolant.



Left-hand shutoff valve closed

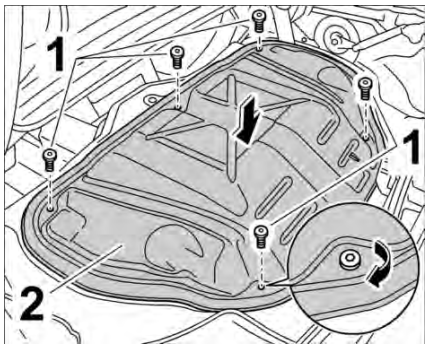
8. Close left shutoff valve on the vacuum pressure gauge and allow a vacuum to build up in the coolant circuit.

Vacuum established (pointer in green region)

9. When there is enough vacuum in the cooling system *→Vacuum established (pointer in green region)* , close right shutoff valve and subsequently unplug the compressed air supply.

Left-hand shutoff valve open - right-hand valve (arrow) closed

10. Open left-hand shutoff valve to the vacuum pressure gauge (right-hand valve closed **-arrow-**). The cooling system is then filled.
11. When the cooling system no longer contains a vacuum (vacuum pressure gauge shows zero), i.e. no more coolant is being sucked out of the canister, open right-hand shutoff valve.
12. Now remove the complete filling device **filling device 9696** (including cap K 22).
13. If necessary, fill the coolant expansion tank with coolant up to the maximum marking and screw on the cap of the expansion tank (do not tilt).



top of page

Reworking

Subsequent work

1. Check coolant line connections and hoses for leaks.
2. Completely install rear underside panel. →519419 Removing and installing rear underside panel - installing

Cayman:

Installing engine compartment lid

3. Install engine cover *→557819 23 Remove and install engine compartment lid - chapter on "Installing"*.
4. Perform a test drive with the vehicle. Following the test drive and when the engine is still at operating temperature, accelerate briefly to greater than 6,000 rpm a number of times at idle speed in order to fully ventilate the system.
5. Check the fluid level with the aid of the marks on the expansion tank. If necessary, correct the coolant level after the engine has cooled.

Preliminary work

DANGER

Fuel can escape when fuel line is disconnected.

- **Risk of fatal injury!**
- **Damage to skin**

→ Do not work on fuel system if engine is hot!
→ Do not smoke, avoid fire and naked flames!
→ Wear fuel-resistant protective gloves and goggles.
→ Attach warning sign to vehicle in a clearly visible position.

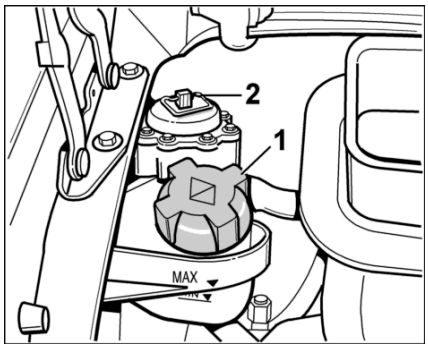
WARNING

Danger of injury from hot engine parts.

- **Risk of burns, damage to skin, injury to the eyes.**

→ Do not work on the engine while it is hot.

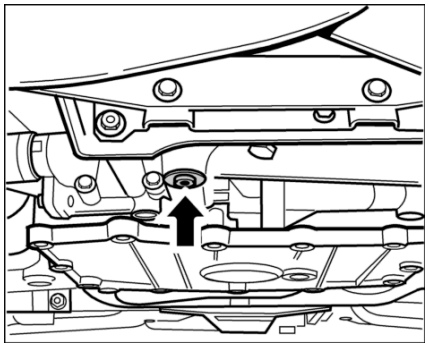
WARNING



Coolant is hazardous to health

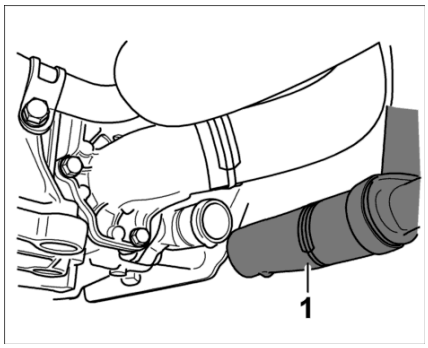
- **Irration of skin**

→ Wear protective gloves and goggles



→ In case of contact with the skin or eyes, wash immediately with plenty of water!

1. Remove air cleaner housing →242519 Removing and installing air cleaner housing - chapter on "Removing".



Cap and vent on coolant reservoir

2. Open cap **-1-** on coolant reservoir.
3. Place a clean container under the vehicle.

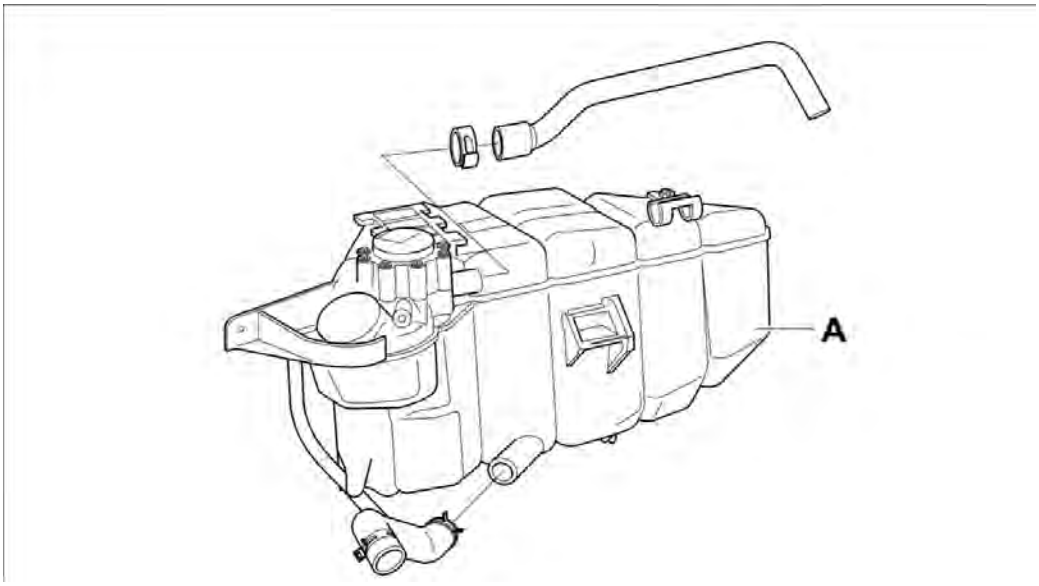
Draining coolant (plug)

4. Drain coolant. Unscrew coolant drain plug and collect emerging coolant.
5. Re-insert drain plug with a new seal and tighten. →**Tightening torque: 15 (11 ftlb.) Nm**

Coolant pump coolant feeder hose

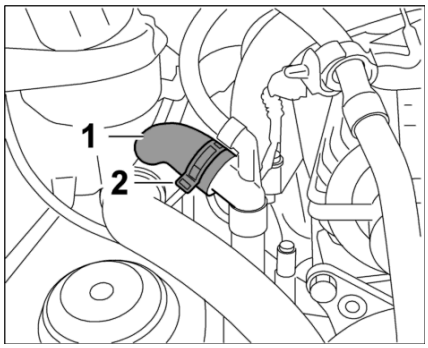
Note

In order to facilitate assembly of coolant pipes and hoses smear with Klüber Syntheso Glep or alternatively Klüberplus S06-100 assembly gel (available from the Porsche Parts catalogue)



6. Pull off coolant hose to coolant pump **-1-** and collect emerging coolant. Re-fit hose.

top of page



Removing reservoir for coolant

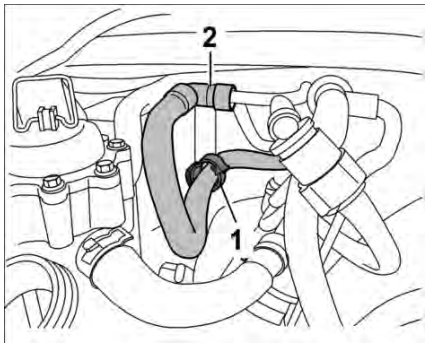
Removing reservoir for coolant

A - Reservoir

Reservoir

Coolant hose on supply tank

WARNING



Coolant is hazardous to health

- **Irration of skin**

→ Wear protective gloves and goggles

→ In case of contact with the skin or eyes, wash immediately with plenty of water!

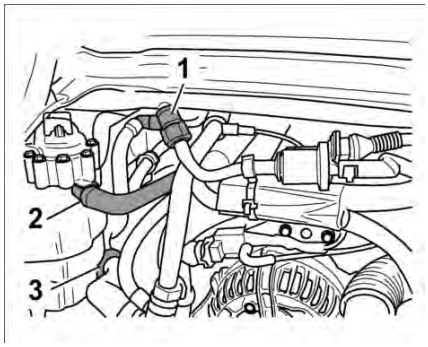
1. Pull off coolant hose **-1-** on plastic pipe. To do this, open spring band clamp **-2-** . Collect emerging coolant with a cloth.
2. Remove overflow hose and supply hose from radiator on coolant reservoir. Unclip supply hose from support.

Fuel pressure line

DANGER

Fuel can escape when fuel line is disconnected.

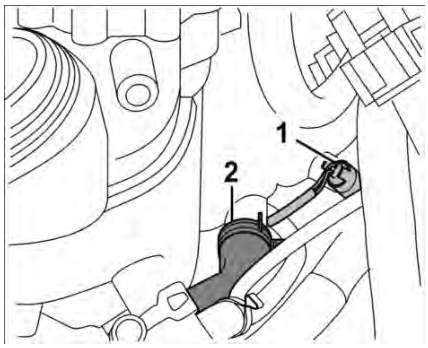
- **Risk of fatal injury!**
- **Damage to skin**



→ Do not work on fuel system if engine is hot!

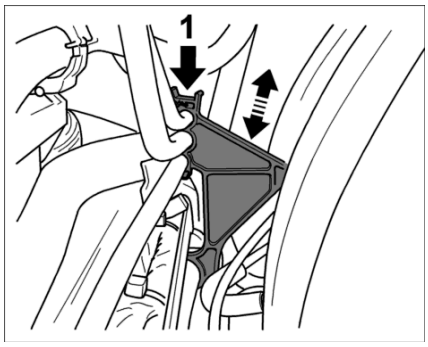
→ Do not smoke, avoid fire and naked flames!

→ Wear fuel-resistant protective gloves and goggles.



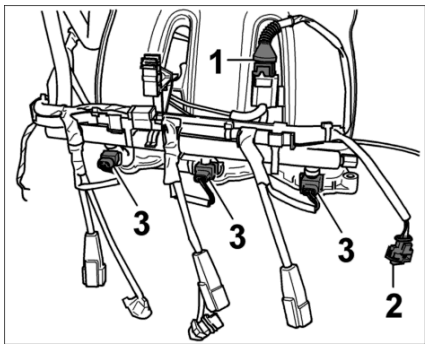
→ Attach warning sign to vehicle in a clearly visible position.

3. Unclip fuel line on plastic holder **-1-** and disconnect at the rapid-action coupling **-2-** . Absorb emerging fuel with a cloth. Remove plastic holder on coolant reservoir.



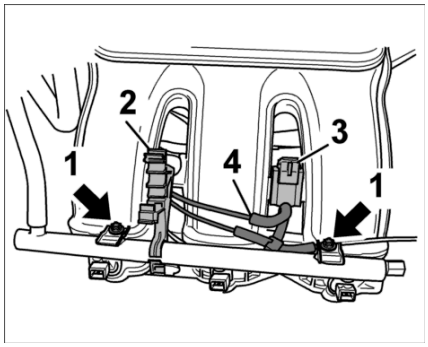
Vacuum line and coolant hoses

4. Disconnect line to carbon-canister line **-1-** . Remove coolant ventilation **-2-** on container.



Coolant hose and sensor

5. Remove coolant pump feeder hose on container **-2-** . Collect emerging coolant with a cloth, block flange. Disconnect cable plug for coolant-level indicator sensor, remove sensor carefully from container (bayonet lock).



Holder

6. Unclip lines on plastic holder **-1-** , remove holder on fuel collection pipe and intake distributor in an upward direction.

Cable plug for fuel injectors, hall sender, cycle valve

7. Unplug cable plug for cycle valve **-1-** on intake distributor 1-3, hall sender connector **-2-** and fuel injector connector **-3-** . Remove cable duct from fuel collection pipe and lay it down.

Fuel distributor pipe

8. Unscrew both M6 fastening screws **-1-** on fuel collection pipe and position collection pipe diagonally as close as possible on the intake distributor, securing it with tie-wraps if necessary.
9. Lower engine by approx. 40 mm; to do this, support the engine using a jack and **retainer plate P 9592**. Undo and unscrew collar nuts on engine mounting. Lower engine carefully with the jack; if necessary, have a second person assist with this task.
10. Unscrew M6 collar nut for coolant container fastening to body. Pull coolant container out of holder and engine guide until it can be released in a downward direction.
11. Guide container to the rear and at an angle out of the engine compartment.
12. Absorb emerging coolant with a cloth.

top of page

Installing reservoir for coolant

Installing reservoir for coolant

1. Insert container into engine compartment, secure it in holder and guide, position and tighten M6 collar nut. →**Tightening torque: 10 (7.5 ftlb.) Nm**
2. Raise engine in installation position with jack, position and tighten collar nuts on pins. Remove retainer plate. →**Tightening torque: 85 (63 ftlb.) Nm**
3. Insert sensor for coolant-level indicator in container and engage cable plug.

4. Fit fuel collection pipe, position and tighten two fastening screws. →**Tightening torque: 10 (7.5 ftlb.) Nm**
5. Reconnect cable plug for fuel injectors, hall sender and cycle valve. Position wiring harness on fuel collection pipe.
6. Clip holder into intake distributor and fuel collection pipe, secure lines.
7. Connect fuel line rapid-action coupling and clip line into holder on coolant container.
8. Connect rapid-action coupling for carbon-canister line.

Note

In order to facilitate assembly of coolant pipes and hoses smear with Klüber Syntheso Glep or alternatively Klüberplus S06-100 assembly gel (available from the Porsche Parts catalogue)

9. Fit coolant hoses and overflow hose.

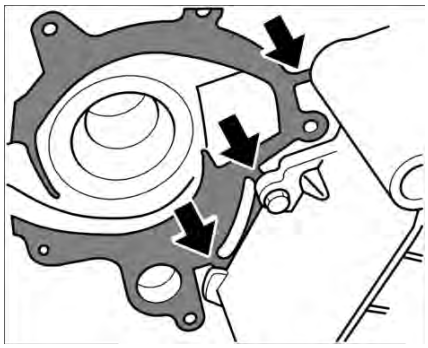
Removing coolant pump

Removing coolant pump

Screw arrangement for coolant pump

WARNING



Coolant is hazardous to health

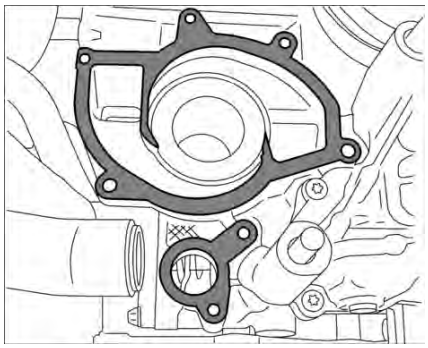
- **Irration of skin**

→ Wear protective gloves and goggles

→ In case of contact with the skin or eyes, wash immediately with plenty of water!

1. Unscrew seven fastening screws (two M6 x 30 **-2-** , five M6 x 25 **-1-**) to coolant pump, remove pump.

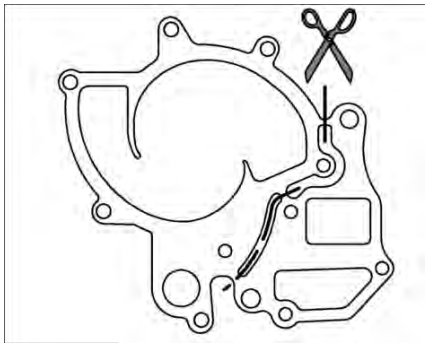
Connection points for coolant pump combination seal



2. Cut through seal webs **-arrows-** in the combination seal, remove old seal.

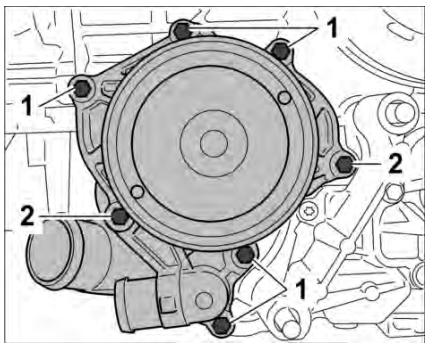
top of page

Installing coolant pump



Installing coolant pump

1. Clean sealing face of coolant pump with solvent naphtha or acetone, remove with emery cloth if necessary and then degrease.



Sealing faces on crankcase

2. Clean sealing face on crankcase with solvent naphtha or acetone. Remove any residues beforehand with an emery cloth.

Separating combination seal for coolant pump

3. Separate new combination seal at the dot-dash line.
4. Position coolant pump with new seal on crankcase using two screws, note position of dowel sleeves.

Screw arrangement for coolant pump

5. Position remaining screws. The longer screws (M6 x 30) **-2-** are installed at the dowel sleeve position.
6. Tighten all screws equally in diagonally opposite sequence. →**Tightening torque: 10 (7.5 ftlb.) Nm**
7. Position drive belt on pulley.

WARNUNG
Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

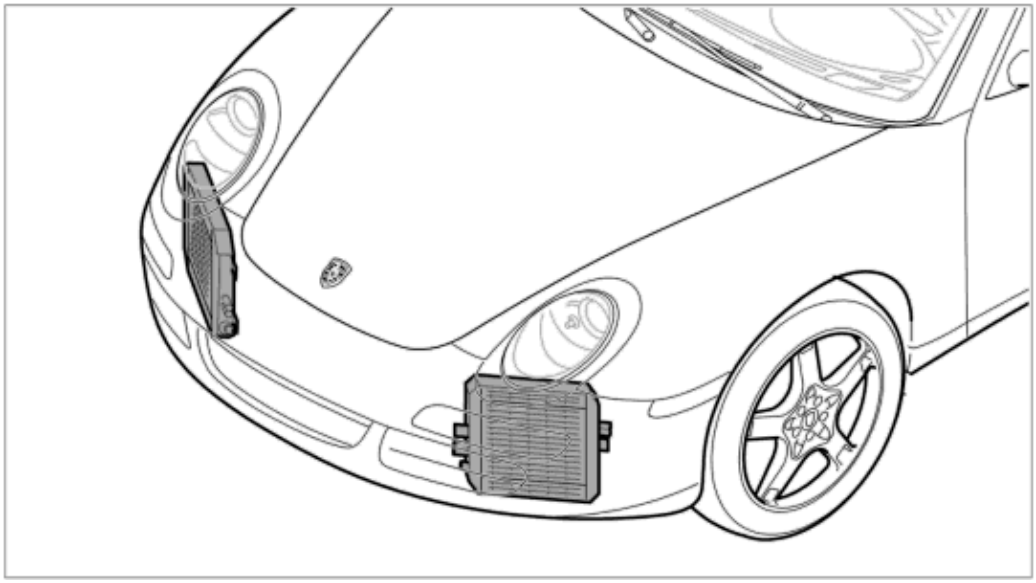
→631519 Removing and installing front apron - chapter on "removing"
→193817 Draining and topping up with coolant - chapter on "draining"

1. Remove air guides in front of radiator →192419 Removing and installing air guide - chapter on "removing".

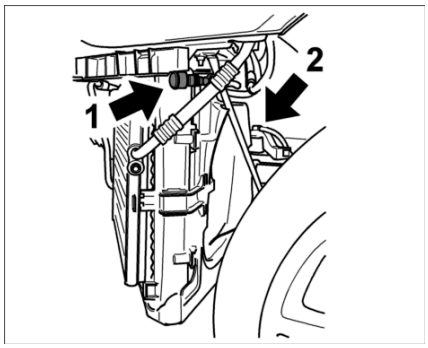
Note

The air-conditioning condenser remains in the vehicle. The air-conditioning system is not opened.



2. Detach air-conditioning condenser from side radiator and allow it to hang freely. To do this, remove hexagon-head sheetmetal screw between air-conditioning condenser and side radiator and pull air-conditioning condenser out of side brackets.

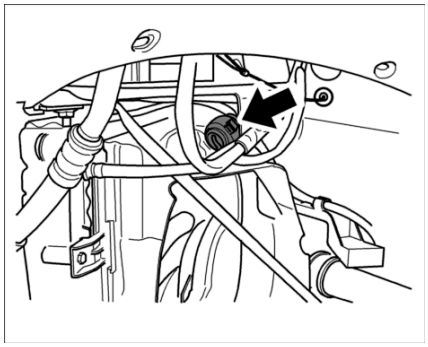
top of page



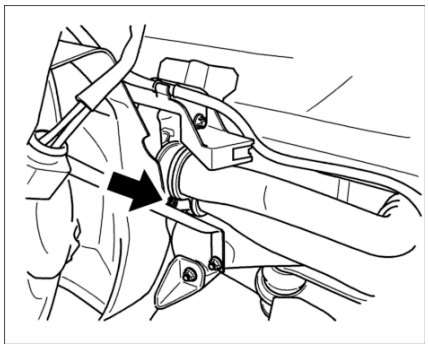
Removing radiator

Removing radiator

Installation Location:

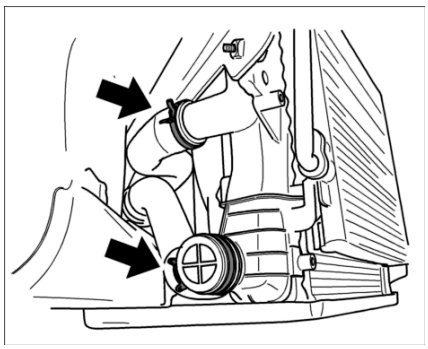


Installation position



Vent line

1. Remove the vent line at the top of the side radiator. To do this, press the lock and pull the line off the support **-1-** . Pull the vent line out of the holder **-2-** .



Cable plug

2. Remove cable plug from fan motor **-arrow-** . To do this, press cable plug together (relieve plug), open the release and disconnect the cable plug.

Attachment for hose holder

3. Remove M6 x 16 fastening screw (outer torx) on hose holder **-arrow-** .

Radiator connections

WARNING

Danger of scalding from hot pressurised coolant.

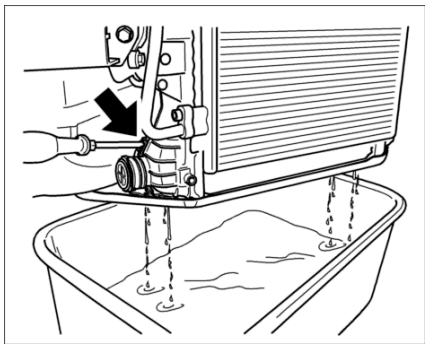
→ Only work on the coolant system when the engine is "cool".

→ Wear protective gloves and goggles.

WARNING

Coolant is corrosive and hazardous to health.

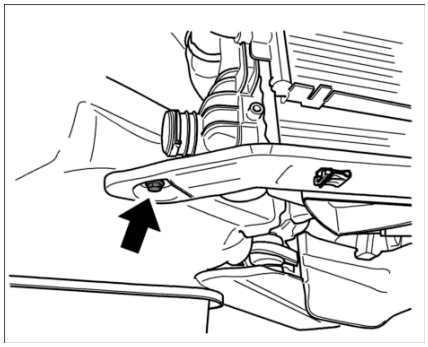
- **Skin and eye irritation**



→ Wear protective gloves and goggles.

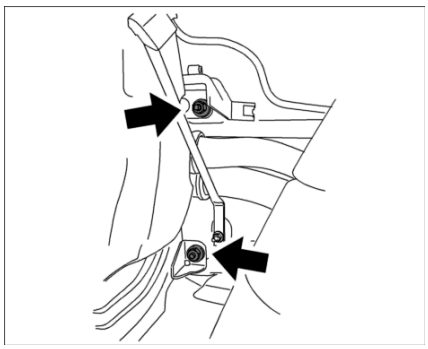
→ If you come into contact with coolant, wash off immediately with plenty of warm water.

Note



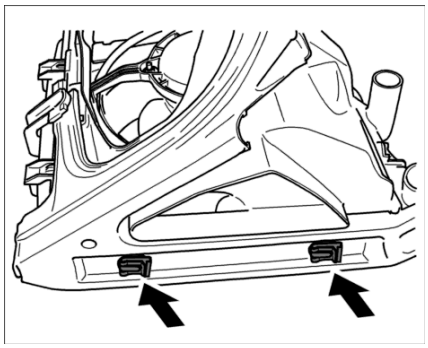
Despite the fact that the coolant has been drained, residual amounts of coolant can still emerge at the joints during removal. Have sufficient collecting containers and cloths to hand.

4. Disconnect the two coolant hoses from the supports for the side radiator **-arrows-** . To do this, loosen the spring-band clamps from the front and push them on to the supports.



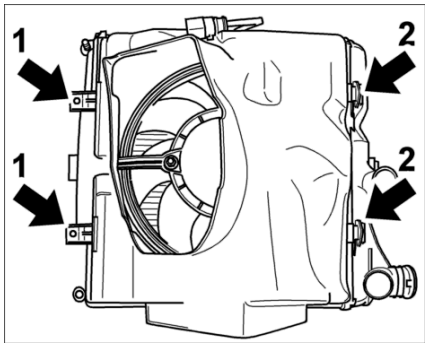
Draining coolant

5. Open up the coolant hoses at the supports using a screwdriver and allow the coolant hoses to drain **-arrow-** . Pull coolant hoses off the supports.



Lower fastening screw

6. Remove M8 x 25 fastening screw on bracket from below at the body **-arrow-** .



Fastening nuts

7. Undo two M8 fastening nuts on the bracket in the wheel housing at the side wall **-arrows-** . Carefully remove side radiator complete with bracket to the side. Collect remaining coolant from the hoses and side radiator. Air-conditioning condenser remains in installation position.

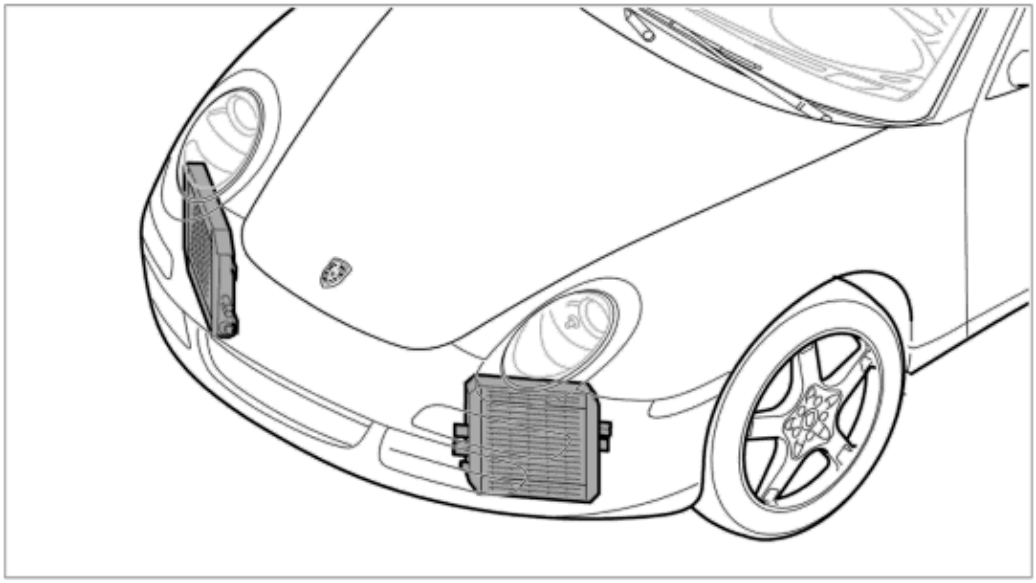
Bracket for side radiator

8. When the side radiator is removed, remove the sheetmetal clips and washers for the bracket **-arrows-** . Carefully pull the side radiator upwards out of the bracket.

Cooling fan

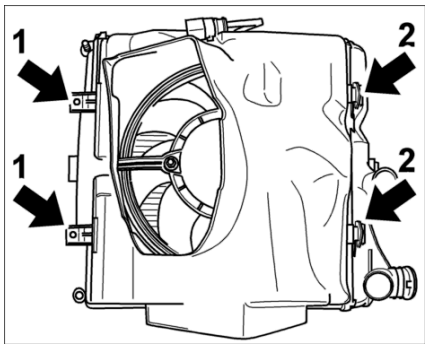
9. Remove two hexagon-head sheetmetal screws at the side **-1-** and lift cooling fan housing with rear air guide out of the tabs on the side radiator **-2-** .

top of page



Installing radiator

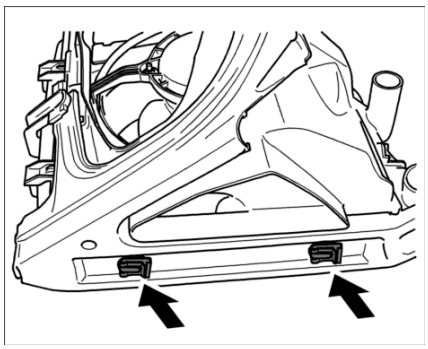
Installing radiator



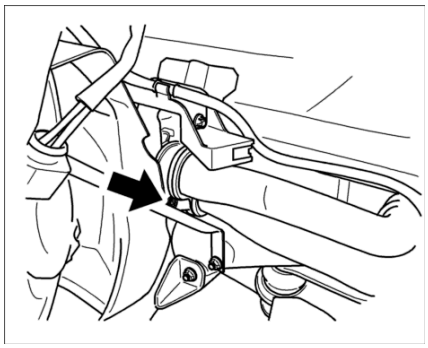
Note

The air-conditioning condenser remains in the vehicle. The air-conditioning system is not opened.

Installation Location:

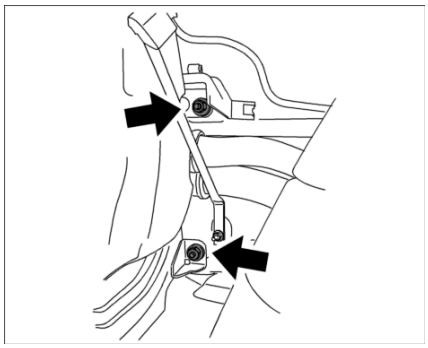


Installation position



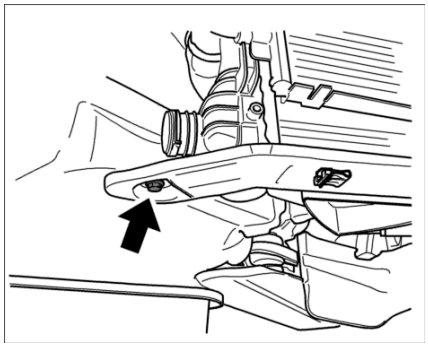
Cooling fan

1. Fit cooling fan housing with rear air guide on side radiator. To do this, push side tabs of cooling fan housing into the brackets for the side radiator **-2-** , move housing into installation position and fit with two fastening screws **-1-** .



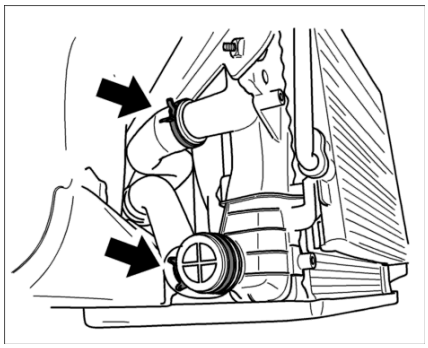
Bracket for side radiator

2. Push radiator module into the radiator bracket. Make sure that the radiator is positioned correctly in the side guide and in the lower bores. Fit washers and sheetmetal clips on the lower fastening pins of the radiator in such a way that the sheetmetal clips engage correctly into the pins **-arrows-** .



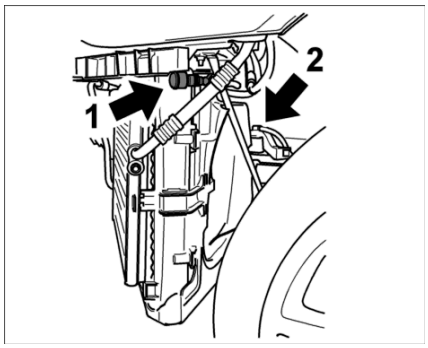
Securing hose holder

3. Move side radiator with bracket into installation position. Make sure that the hose holder for the coolant hoses is inserted correctly into the side bracket. Push side radiator with bracket on to the studs on the side member and insert fastening screw M6 x 16 (outer torx) for the hose holder **-arrow-** .



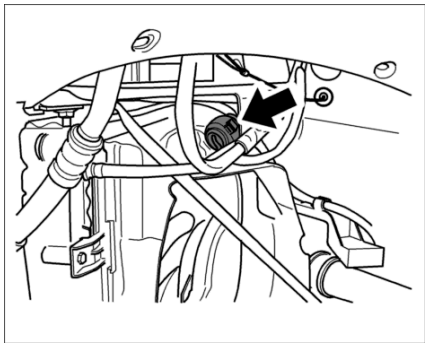
Fastening nuts

4. Position the M8 fastening nuts on the body studs **-arrows-** .



Lower fastening screw

5. Fit fastening screws to the body from below →**Tightening torque: 23 (17) Nm (ftlb.)** **-arrow-** .
6. Tighten the fastening nuts on the body studs →**Tightening torque: 23 (17) Nm (ftlb.)** . Tighten fastening screw M6 x 16 (outer torx) for hose holder →**Tightening torque: 10 (7.5) Nm (ftlb.)** .



Radiator connections

7. Push spring band clamps on to radiator flanges and fit radiator hoses to the flanges. Move engaged spring band clamps into installation position and loosen using a water-pump pliers (use a screwdriver as well, if necessary) and then fasten again **-arrows-** .

Vent line

8. Fit radiator vent line to the flange **-1-** and clip vent line into the plastic holder **-2-** .

Cable plug

9. Connect cable plug for fan motor **-arrow-** .

Removing middle radiator

Removing middle radiator

Attachment for middle radiator

WARNING

Danger of scalding from hot pressurised coolant.

→ Only work on the coolant system when the engine is "cool".

→ Wear protective gloves and goggles.

WARNING

Coolant is corrosive and hazardous to health.

- **Skin and eye irritation**

→ Wear protective gloves and goggles.

→ If you come into contact with coolant, wash off immediately with plenty of warm water.

Note

Despite the fact that the coolant has been drained, residual amounts of coolant can still emerge at the joints during removal. Have sufficient collecting containers and cloths to hand.

1. Open the Henn coupling for the side radiator at the left side **-1-** and drain coolant. Remove the safety clip on the Henn coupling and disconnect the connection. Refit the safety clips immediately.

Note

The help of a second person is required in order to remove and install the middle radiator.

2. Remove the two fastening screws at the top **-3-** and two fastening nuts at the bottom **-2-** of the radiator bracket. Get a second person to help you lift the radiator together with the bracket and remove the Henn coupling for the right side radiator. Refit wire clip immediately. Remove radiator, complete with bracket.
3. Remove the retaining plate under the bracket by unscrewing two fastening screws **-4-** and remove the middle radiator from the bracket.

top of page

Installing middle radiator

Installing middle radiator

1. Insert middle radiator into bracket. Make sure that the rubber sleeves of the radiator are inserted into the corresponding cutout on the bracket or retaining bracket. Screw in two fastening screws on retaining bracket →**Tightening torque: 10 (7.5) Nm (ftlb.)** .

Note

The help of a second person is required in order to remove and install the middle radiator.

2. Get a helper to assist in moving the middle radiator into installation position and connect the two side Henn couplings for the coolant hoses until they click into place. Check that the Henn couplings are engaged correctly. Screw two fastening screws at the top **-3-** and two fastening nuts at the bottom **-2-** of the radiator bracket hand-tight.
3. Tighten all fastening screws and fastening nuts on radiator bracket →**Tightening torque: 23 (17) Nm (ftlb.)** .
4. Check that middle radiator is in the correct installation position.

Checking fuel pressure

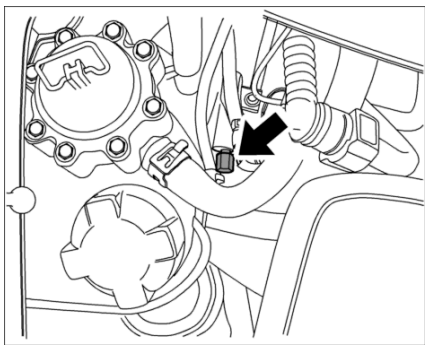
Checking fuel pressure

Note

- *The battery voltage must not fall below 12 volts during the fuel pressure check.*

1. Check the battery charging condition e.g. using a voltmeter or the Porsche PIWIS Tester. The battery voltage must not fall below 12 volts during the check.

Warning sign for naked flames



DANGER
Risk of fire from escaping fuel.

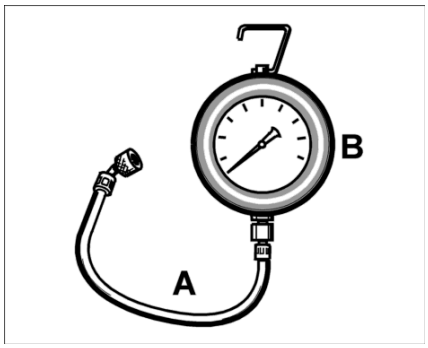
- **Danger of fatal injury and damage to property.**

→ Observe basic safety instruction when working on the fuel system, *→201000 Precautionary measures when working on fuel system.*

→ Secure working area.

2. Attach or mount a warning sign in a clearly visible position on the vehicle.
3. Relieve the fuel pressure →206601 Checking quantity delivered by fuel pump.

Cap on test connection

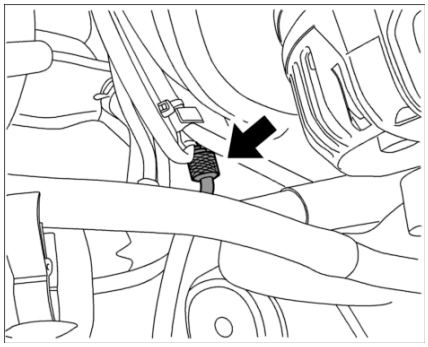


DANGER
Risk of fire from escaping fuel.

- **Danger of fatal injury and damage to property.**

→ Observe basic safety instruction when working on the fuel system, *→201000 Precautionary measures when working on fuel system.*

→ Secure working area.

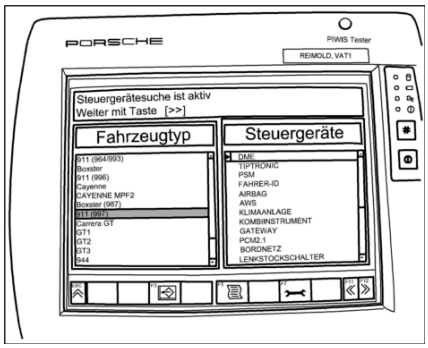


4. Release metal cap on test connection at fuel collection pipe and screw it off by hand (a/f 13 mm). Collect emerging fuel with a cloth.

Pressure gauge for checking fuel pressure

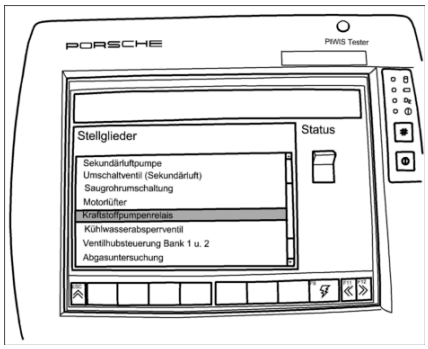
5. Join the **connecting cable 9559** using the **pressure gauge 378a** (union nut a/f 17).

   - A - Connecting cable (9559)
   - B - Pressure gauge (378a)



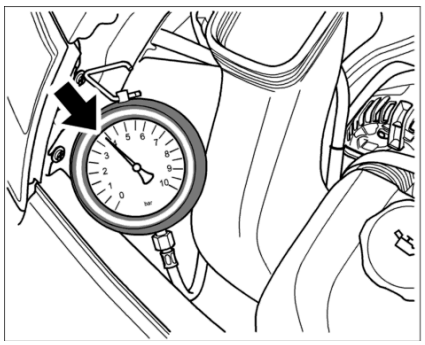
Connecting cable for fuel pressure

6. Tighten the knurled union nuts of the connecting cable by hand on the test connection of the fuel collection pipe **-arrow-** .



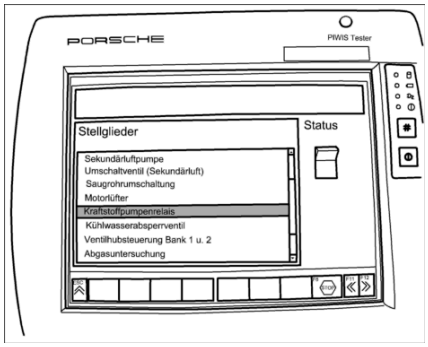
Procedure when engine is not running:

7. Connect the Porsche PIWIS Tester **PIWIS Tester 9718** to the input socket in the vehicle using the adapter lead and switch on the ignition. Switch on the Tester and select the vehicle (option: Diagnostics).



Control unit search on PIWIS Tester

8. Run the individual control unit search for DME using the Porsche PIWIS Tester. To do this, select DME with the tracer pen and press **F12 >>**.



Activating the fuel pump relay

9. Once the individual control unit search for DME is complete, select the Drive links item, then select the fuel pump relay and activate by pressing **F8 - Start**.

Pressure gauge in the vehicle

10. Read value on pressure gauge. →**Fuel pressure - engine not running: 3.8 bar +/-0.2 bar**

Deactivating the fuel pump relay

11. Deactivate the fuel pump relay on the PIWIS Tester by pressing **F8 - Stop**. Then, press **F11 <<** to return to the start screen and switch off the Tester.
12. Switch off the ignition and remove PIWIS Tester adapter lead in the vehicle.
13. **To check the engine at idle speed:** connect the **pressure gauge 378a** as described above and start the engine. Switch off the engine after reading the fuel pressure. →**Fuel pressure - idle speed: 3.8 bar +/-0.2 bar**
14. Loosen the union nut on the **connecting cable 9559** for the **pressure gauge 378a** on the test connection

and remove special tool. Collect emerging fuel with a cloth.

Note

- *Use the brass cap on the test connection of the fuel supply line only once as the sealing ring cannot be replaced. To avoid possible leaks, the cap must be replaced after removal.*

15. Position new closure cap on test connection and tighten (a/f 13 mm). →**Tightening torque: 1.7 ftlb. +/-0.5 ftlb.**

WARNING
Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

AVERTISSEMENT
Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

20 07 19 Removing and installing filler neck - as of MY 2005

- Preliminary work
- Removing filler neck
- Installing filler neck
- Subsequent work

Tools

Designation	Type	Number	Explanation	
socket wrench insert	special tool	P 300		

top of page

Preliminary work

Preliminary work

1. Place protective covers on the vehicle.
2. Remove right front wheel. Use special tool **socket wrench insert P 300** to avoid damage to the rim.
3. Remove rear part of right front wheel housing liner →505619 Removing and installing front wheel housing liner - section on "Removing" [997110 997111 997120 997121 997310 997311 997320 997321]→505619 Removing and installing front wheel housing liner - section on "Removing" [997621]→505619 Removing and installing front wheel housing liner - section on "Removing" [997410 997411 997430 997431 997610 997611 997620].

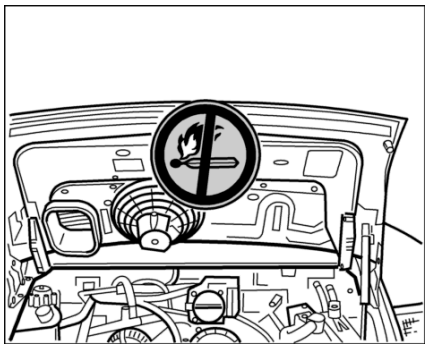
Removing filler neck

Removing filler neck

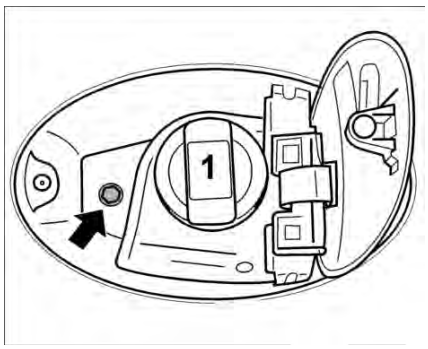


DANGER

Risk of fire from escaping fuel.

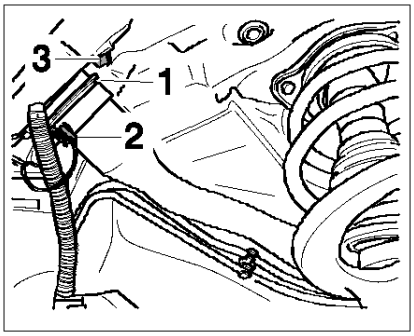
- **Danger of fatal injury and damage to property.**

→ Observe basic safety instruction when working on the fuel system, *→201000 Precautionary measures when working on fuel system.*



→ Secure working area.

Example of a warning sign

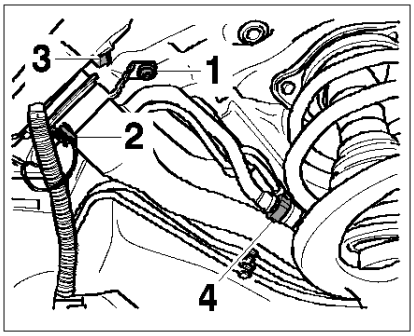


1. Place a warning sign in a clearly visible position in the work area or on the vehicle.

Carrera 2:

Filler neck attachment point on the Carrera 2

2. Unscrew M6 fastening screw for securing filler neck to tank tray **-Arrow-** and remove cap **-1-** .



Filler neck in wheel arch

3. Pull off ground strap **-2-** and unclip sleeve for filler neck **-3-** . Unclip overflow hose on sleeve and pull sleeve out of the tank tray.

Carrera 4:

4. Open cap on the filler neck and remove it.

C4 filler neck

5. Unscrew M6 Torx screw for filler neck in wheel arch **-1-** . Pull off ground strap **-2-** , unclip sleeve for filler neck **-3-** and open rapid-action coupling **-4-** .
6. Turn filler neck clockwise and remove it slowly underneath the edge of the wing.

top of page

Installing filler neck

Installing filler neck

Note

Replace seal on filler neck.

1. Coat filler neck lightly with new engine oil in the assembly area in front of the seal.
2. Insert filler neck with new seal into the opening of the tank. Then turn the filler neck anti-clockwise into installation position.

3. Fit sleeve for filler neck and clip overflow hose onto the holder.
4. Attach ground strap and also connect the rapid-action coupling on the Carrera 4.
5. Secure the filler neck at the relevant pick-up point using an M6 fastening screw (see Installation). → **Tightening torque: 10 (7.5 ftlb.) Nm** .
6. Close the cap.

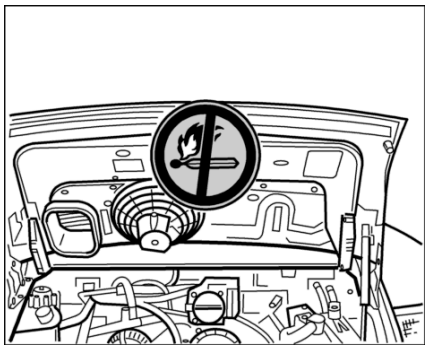
Preliminary work

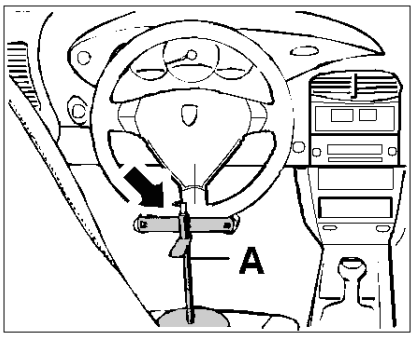
Preliminary work - Carrera 4



DANGER

Risk of fire from escaping fuel.

- **Danger of fatal injury and damage to property.**

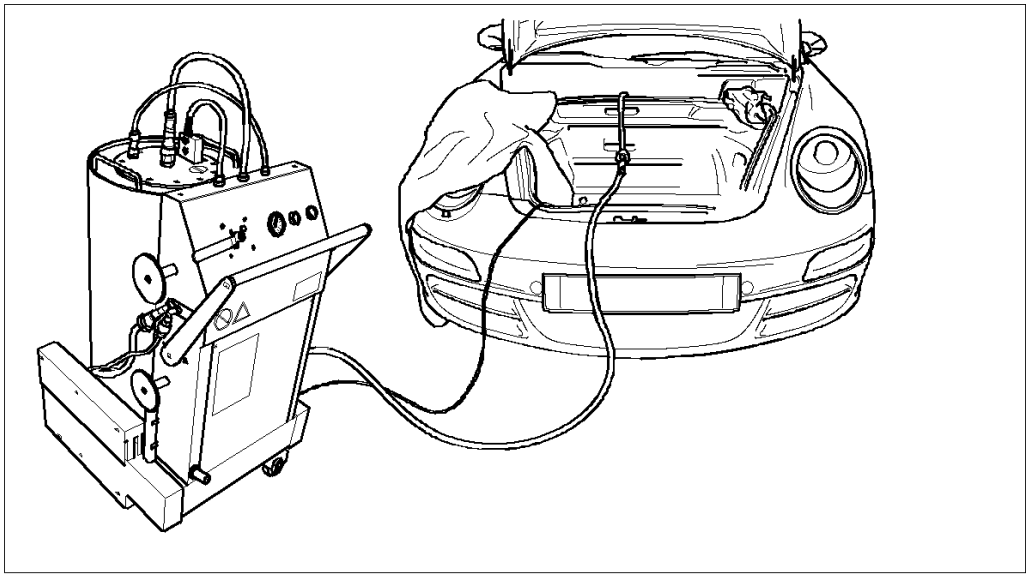


→ Observe basic safety instruction when working on the fuel system, *→201000 Precautionary measures when working on fuel system.*

→ Secure working area.

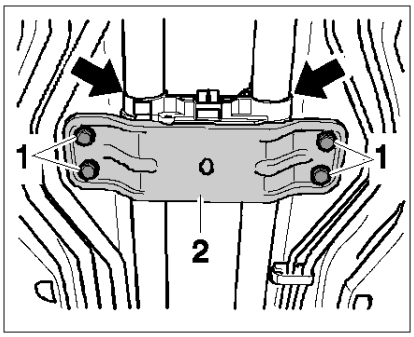
Example of warning sign for naked flames

1. Place a warning sign in a clearly visible position in the work area or on the vehicle.
2. Place protective covers on the vehicle.



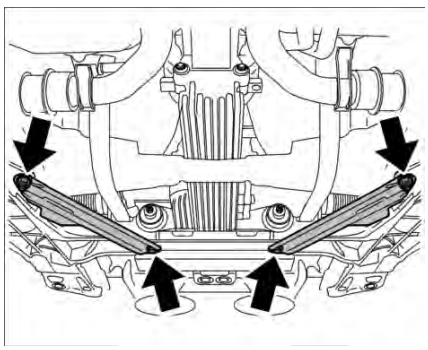
Locking steering wheel in centre position

Note



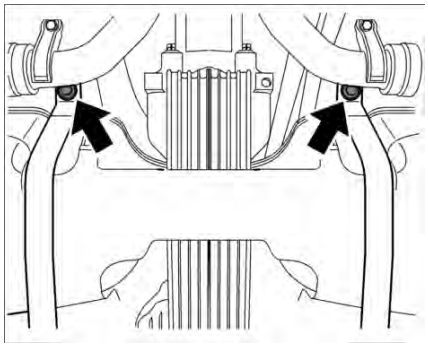
Set the steering wheel with the wheels in straight-ahead position. If this is not done, the airbag contact unit will have to be put in centre position after installation of the steering gear.

3. Move steering wheel to centre position (front wheels straight ahead) and lock it with the steering-wheel holder.
4. Remove the two front wheels. Use special tool **socket wrench insert P 300** to avoid damage to the rims.
5. Disconnect ground cable at the battery →2706IN Work instructions after disconnecting the battery.
6. Remove fuel level sensor *→201519 21 Removing and installing fuel level sensor - section on "Removing"*.
7. Empty the fuel tank. Use **fuel transfer unit WE1262** to do this →2010EN Emptying and filling the fuel tank.



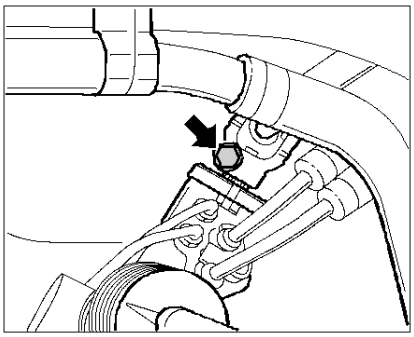
WE1262 fuel transfer unit

8. Remove rear part of right front wheel housing liner →505619 Removing and installing front wheel housing liner - section on "Removing" [997621]→505619 Removing and installing front wheel housing liner - section on "Removing" [997410 997411 997430 997431 997610 997611 997620].
9. Remove filler neck.
10. Remove front and centre underbody cover →519219 Removing and installing the front cover - section on "Removing" and →519319 Removing and installing the middle cover - section on "Removing".



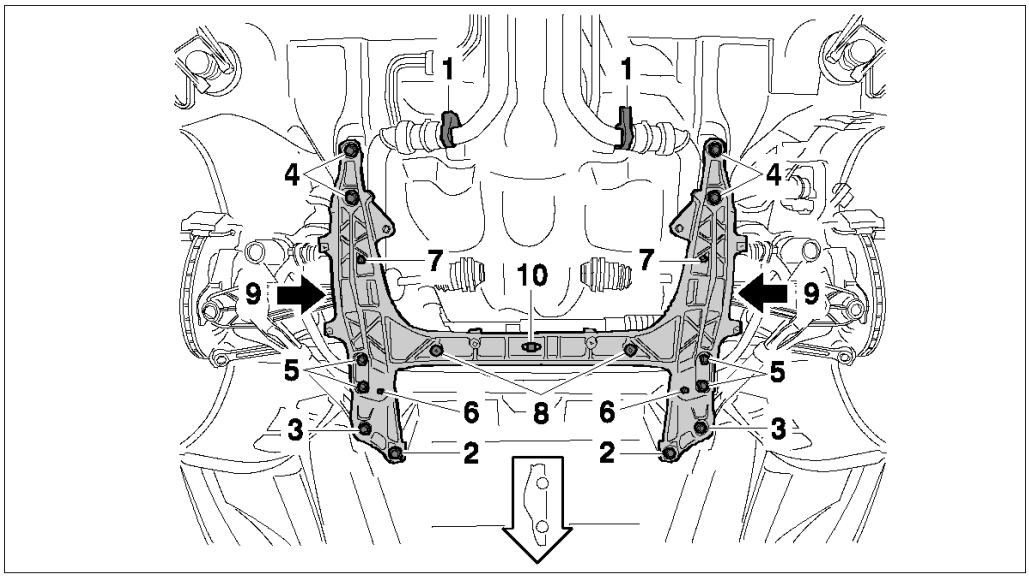
Support for coolant pipes

11. Remove sheetmetal support for coolant pipes **-2-** in the centre tunnel. Unscrew four hexagon-head bolts **-1-** and unclip plastic support on the coolant pipes and vent line **-Arrows-** .



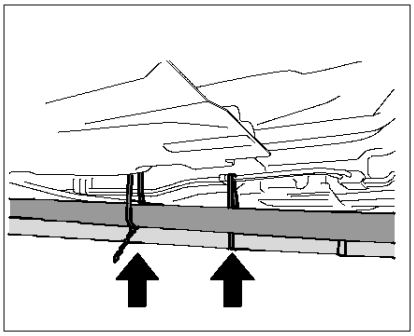
Diagonal braces (shown on Carrera 4)

12. Remove diagonal braces.



Cover of fuel tank (shown on Carrera 4)

13. Remove longitudinal restraining straps for securing tank and take off cover of fuel tank.
14. Remove front final drive →398819 Removing and installing front final drive - section on "Removing".



Universal joint

15. Loosen universal joint (steering shaft) at steering gear **-Arrow-** . To do this, take out the clamping screw and slide the joint upwards.
16. Remove front-axle cross member *→400919 21 Removing and installing front-axle cross member - section on "Removing"*.

Front-axle cross member

Item	Designation	Number	Bolts	Tightening torque [Nm] (ftlb.)
1	Plastic holder for coolant pipes	2	M6 x 12	10 Nm (7.5 ftlb.)
2	Hexagon-head bolt (carrier to front body)	2	M12 x 1.5 x 30	100 Nm (74 ftlb.)
3	Hexagon-head bolt (carrier to front body)	2	M14 x 1.5 x 120	160 Nm (118 ftlb.)
4	Hexagon-head bolt (carrier to rear body)	4	M14 x 1.5 x 50	160 Nm (118 ftlb.)
5	Hexagon-head bolt with collar nut (anti-roll bar)	4	M10 x 60	65 Nm (48 ftlb.)
6	Support for coolant pipe (sheetmetal)	2	M6 x 25	10 Nm (7.5 ftlb.)
7	Support for coolant pipe (plastic)	2	M6 x 12	10 Nm (7.5 ftlb.)
8	Hexagon-head bolt for steering gear	2	M10 x 45	70 Nm (52 ftlb.)
9	Hexagon-head bolt with collar nut (control arm to centre carrier)	2	M12 x 1.5 x 95	120 Nm (89 ftlb.)
10	Support for coolant pipes	1	is placed on the carrier	

Releasing coolant pipes

17. Secure coolant pipes with a tie-wrap.

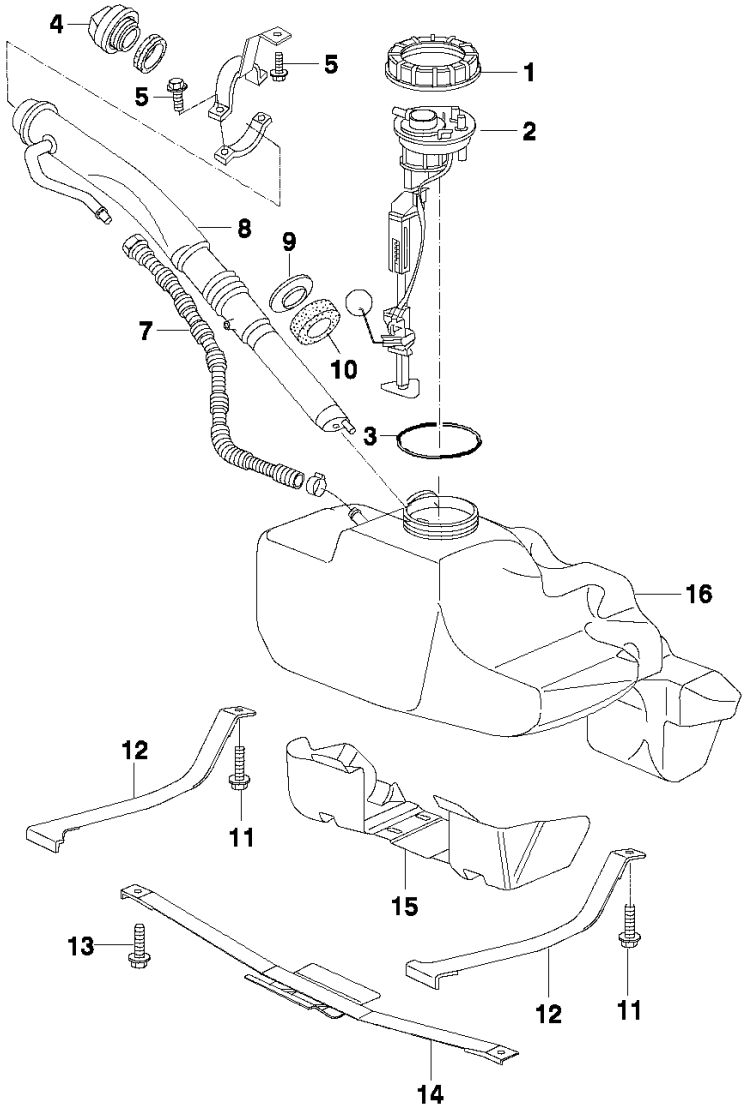
Removing fuel tank

Removing fuel tank - Carrera 4

DANGER

Risk of fire from escaping fuel.

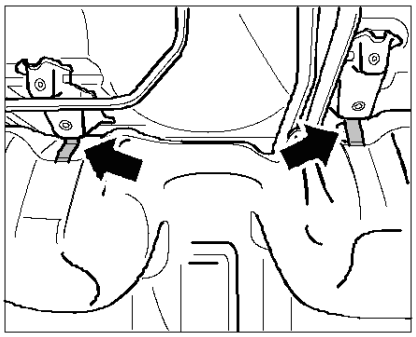
- **Danger of fatal injury and damage to property.**



→ Observe basic safety instruction when working on the fuel system, *→201000 Precautionary measures when working on fuel system.*

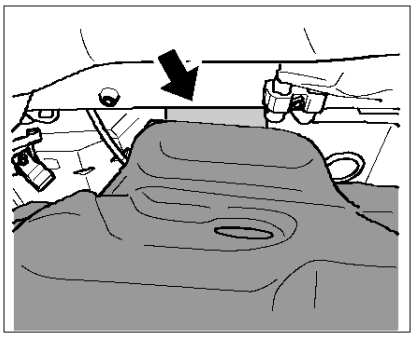
→ Secure working area.

Note



Get another person to help you remove and install the fuel tank.

Overview of the Carrera 4



Component overview: C4 fuel tank

1. Move steering gear towards the front (in direction of travel).
2. Unscrew two M8 screws for securing transverse restraining strap to the body at the left and right.

Clips on fuel tank

3. Unclip the two clips on the body **-Arrow-** .

Guiding fuel tank out of the body

ATTENTION
Damage to fuel-level sensor flange.

- **Material damage**

→ Be particularly careful with the fuel-level sensor flange when levering out or fitting the fuel tank.

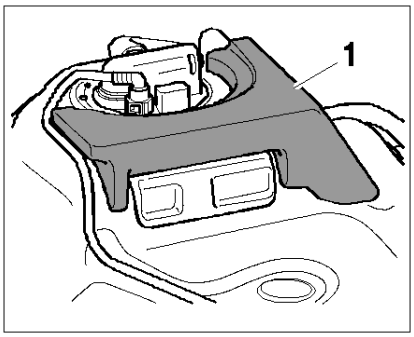
4. Get another person to help you lift the fuel tank out of the vehicle. To do this, first tilt the tank towards the rear and carefully guide the tank flange over the edge of the body **-Arrow-** .
5. Check foam parts for damage and replace them if necessary.

top of page

Installing fuel tank

Installing fuel tank - Carrera 4

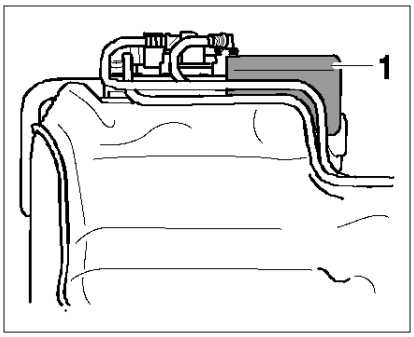
ATTENTION
Damage to fuel-level sensor flange.



- **Material damage**

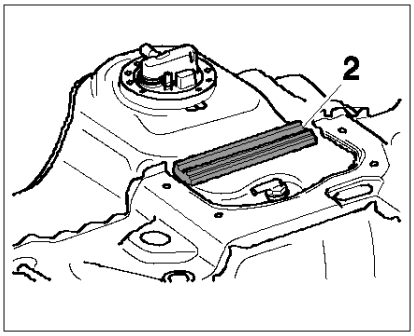
→ Be particularly careful with the fuel-level sensor flange when levering out or fitting the fuel tank.

Note
Get another person to help you remove and install the fuel tank.



Note

Foam parts must be fitted on the fuel tank. Affix new parts to the specified positions if necessary.



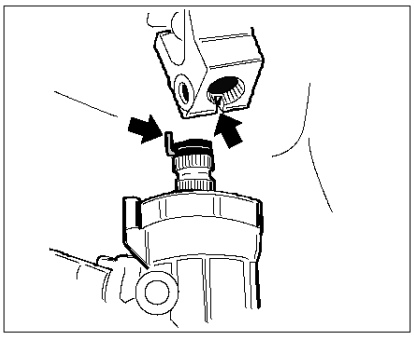
Position of foam part on tank flange

1. Stick foam part **-1-** to the fuel tank flange if necessary.

Side view of foam part on tank flange

Side
view

Foam part for bulkhead



2. Affix foam part for bulkhead if necessary **-2-** .
3. Get another person to help you fit the fuel tank into the body. Clip clips into the body take-up points.
4. Place transverse restraining strap at the correct position on the tank and secure with two M8 screws.
   →**Tightening torque: 23 (17 ftlb.) Nm**

top of page

Subsequent work

Subsequent work - Carrera 4

1. Install front-axle carrier *→400919 23 Removing and installing front-axle cross member - section on "Installing"*.

Universal joint for steering gear

2. Secure steering gear to front-axle carrier with two screws and connect universal joint to steering gear →489019 Removing and installing power-steering gear - section on "Installing".
3. Install front final drive →398819 Removing and installing front final drive - section on "Installing".
4. Insert tank guard (bottom) and secure using longitudinal restraining straps. Pay attention to the installation position (left-right). →**Tightening torque: 23 (17 ftlb.) Nm** .
5. Install diagonal braces. →**Tightening torque: 100 (74 ftlb.) Nm**
6. Fit coolant pipes in centre tunnel. Secure sheetmetal holder. →**Tightening torque: 65 (48 ftlb.) Nm**
7. Fit plastic holder for coolant pipes. →**Tightening torque: 10 (7.5 ftlb.) Nm**
8. Install filler neck →200719 Removing and installing filler neck - section on "Installing".
9. Install fuel level sensor *→201519 23 Removing and installing fuel level sensor - section on "Installing"*.
10. Slowly refuel vehicle using a canister containing 5 litres of fuel (lead-free according to Porsche specifications).
11. Connect the battery →2706IN Work instructions after disconnecting the battery.
12. Start the vehicle.
13. Check all lines and connections for leaks.
14. Refuel vehicle →2010EN Emptying and filling the fuel tank.
15. Install rear section of front right wheel housing liner →505619 Removing and installing front wheel housing liner - section on "Installing" [997621]→505619 Removing and installing front wheel housing liner - section on "Installing" [997410 997411 997430 997431 997610 997611 997620].
16. Install underbody panels →519319 Removing and installing the middle cover - section on "Installing" and →519219 Removing and installing the rear cover - section on "Installing".
17. Mount front wheels.
18. Remove steering-wheel holder.

19. Perform suspension alignment.
20. Perform a test drive.

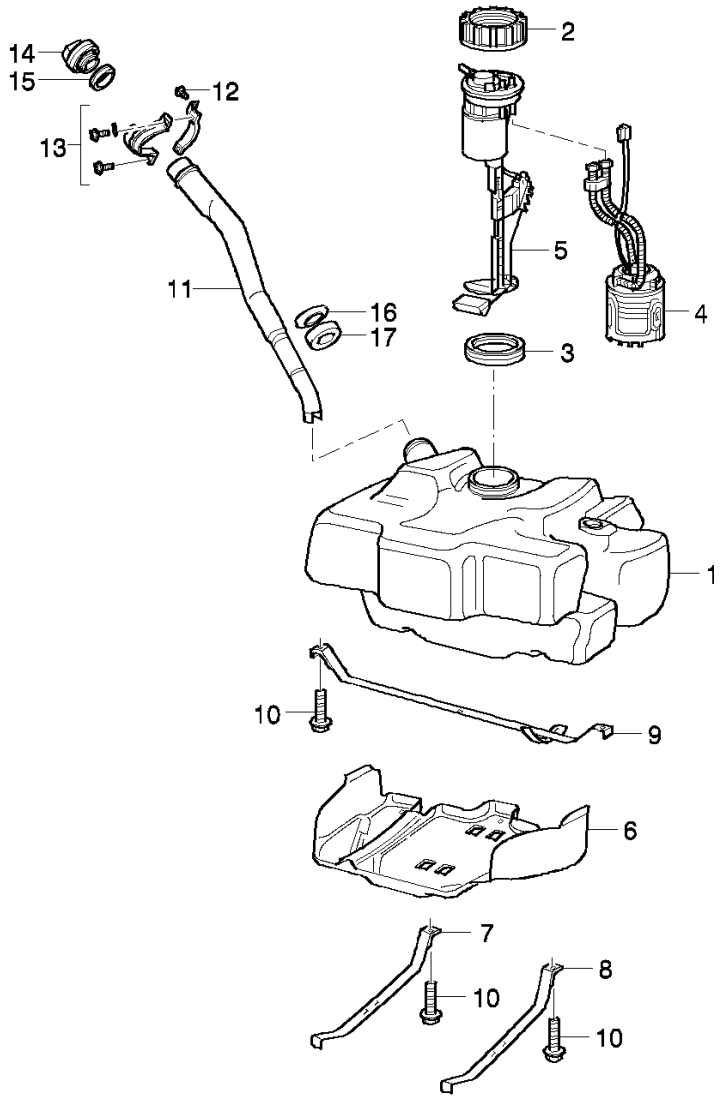
Removing fuel tank

Removing fuel tank - Carrera 2

DANGER



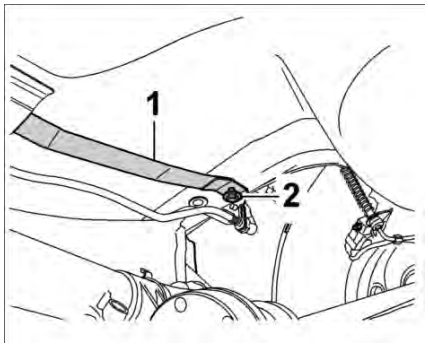
Risk of fire from escaping fuel.

- **Danger of fatal injury and damage to property.**

→ Observe basic safety instruction when working on the fuel system, *→201000 Precautionary measures when working on fuel system*.

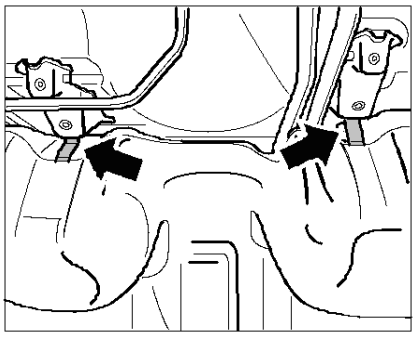
→ Secure working area.

Overview of the Carrera 2



Overview of C2 fuel tank

Item	Designation	Removal	Fitting
1	Fuel tank		
2	Union nut	Special tool **socket wrench 3217** or **lug wrench P 9731**	Special tool **socket wrench 3217** or **lug wrench P 9731**
3	Sealing ring		Replace
4	Electric fuel pump	Pay attention to the installation position	Pay attention to the installation position
5	Tank gauge		Check that linkage can move freely
6	Tank cover (protective plate)		
7	Restraining strap, right		Observe **R** marking
8	Restraining strap, left		Observe **L** marking



9	Restraining strap, transverse		Pay attention to the installation position
10	Combination screw, M8 x 40		Tightening torque: 23 Nm (17 ftlb.)
11	Filler neck		Apply a thin coat of engine oil in the fitting area (tank fitting)
12	Fastening screw, M6		Tightening torque: 10 Nm (7.5 ftlb.)
13	Holding clamp for filler neck		
14	Closure cap		Grease sealing ring with Vaseline
15	Sealing ring	Check for signs of damage	Replace if necessary
16	Washer		
17	Seal		Replace

1. Turn steering gear and move it towards the front (in direction of travel).

Restraining strap for fuel tank, transverse

2. Unscrew two M8 screws for securing transverse restraining strap to the body at the left and right.

Clips on fuel tank

ATTENTION

Damage to fuel-level sensor flange.

- **Material damage**

→ Be particularly careful with the fuel-level sensor flange when levering out or fitting the fuel tank.

Note

Get another person to help you remove and install the fuel tank.

3. Unclip both clips on the body and get another person to help you lift the fuel tank out of the vehicle. To do this, first tilt the tank towards the right. Pay attention to the tank flange. ,

WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

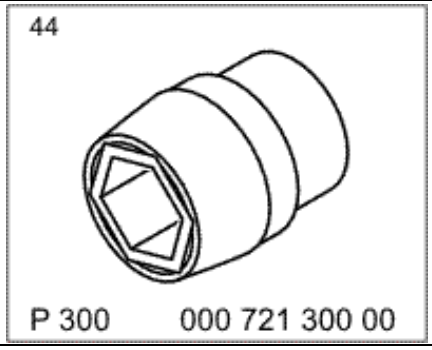
Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.



- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

Checking quantity delivered by fuel pump

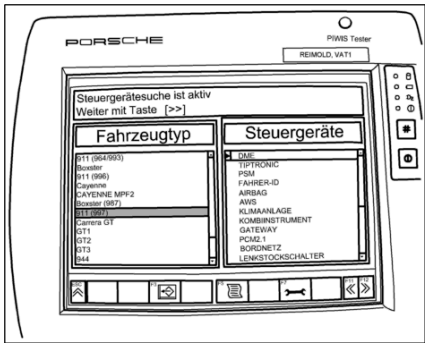
Note

- *The battery voltage must not fall below 12 volts during the fuel delivery rate check.*

Example of warning sign for naked flames

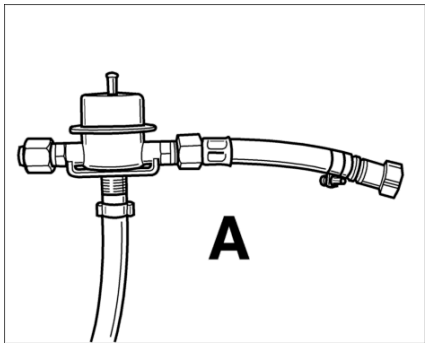
DANGER
Risk of fire from escaping fuel.



- **Danger of fatal injury and damage to property.**

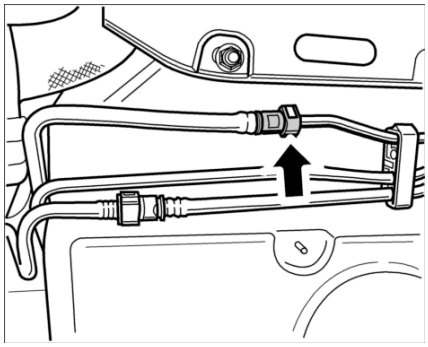
→ Observe basic safety instruction when working on the fuel system, *→201000 Precautionary measures when working on fuel system.*

→ Secure working area.



1. Attach or mount a warning sign in a clearly visible position on the vehicle.
2. Reduce fuel pump supply pressure. To do this, remove the cover of the fuse carrier in the left footwell and take out the fuse for the fuel pump **- level D, fuse F1 (1st from left) -**. Then start the engine for several seconds. This procedure does not cause an entry to be made in the fault memory. Insert the fuse again and replace the cover.
3. Connect the Porsche PIWIS Tester **PIWIS Tester 9718** to the input socket in the vehicle using the adapter lead, switch on the ignition and switch off all loads, such as the radio and air conditioning. Switch on the

Tester and select the vehicle (option: Diagnostics).



PIWIS Tester 1

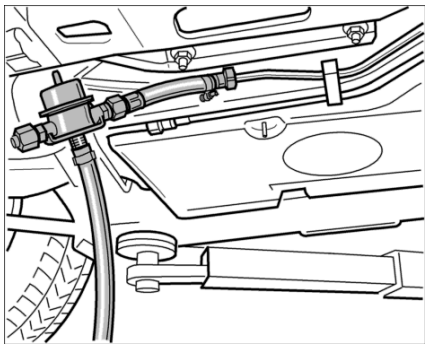
4. Run the individual control unit search for DME using the Porsche PIWIS Tester. To do this, select DME with the tracer pen and press **F12 >>**.
5. Select the Drive links item and then select the fuel pump relay.

Measurement adapter 9705

6. Have a **measurement adapter 9705**, a fuel-resistant container, a measuring cup and a stopwatch to hand for measuring.

Rapid-action coupling on fuel pressure line

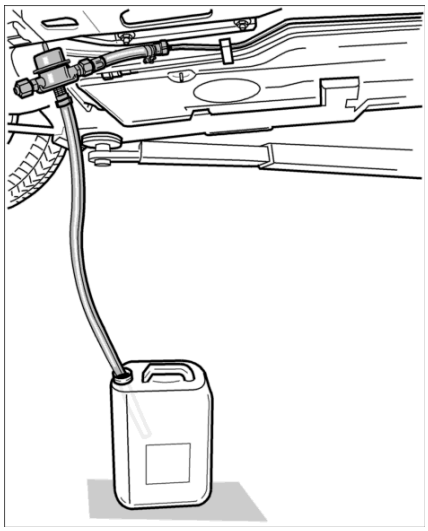
DANGER



Risk of fire from escaping fuel.

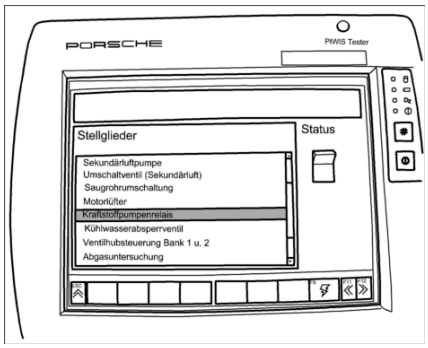
- **Danger of fatal injury and damage to property.**

→ Observe basic safety instruction when working on the fuel system, *→201000 Precautionary measures when working on fuel system.*



→ Secure working area.

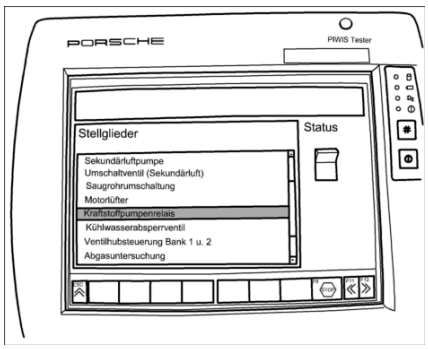
7. Disconnect rapid-action coupling on the fuel supply line **-arrow-** by pressing in the locking lug and pulling off the coupling. Collect emerging residual fuel with a cloth.



Connecting the measurement adapter

8. Connect the **measurement adapter 9705** to the rapid-action coupling on the fuel line. Make sure that the plug-in coupling is fitted correctly (must engage audibly) by pulling the line apart.

Container



9. Place the drainage hose after the pressure regulator into a petrol-resistant container. Make sure that the container does not tip over.

PIWIS Tester 2

10. Activate the fuel pump relay on the Porsche PIWIS Tester. Press **F8 - Start** until fuel emerges at the drainage hose. Deactivate the fuel pump relay by pressing **F8 - Stop** and pour any leaked fuel

from the container into a petrol-resistant container or into the fuel tank. Keep a stopwatch to hand for the following measurement.

PIWIS Tester 3

11. Then, activate the fuel pump relay again by pressing **F8 - Start** and keep it going for 60 seconds. Start the stopwatch at the same time. Collect emerging fuel in the container you have to hand. Deactivate the fuel pump relay after 60 seconds by pressing **F8 - Stop**.
12. Pour the collected fuel into the measuring cup and compare the quantity with the vehicle-specific nominal values listed below. →**Volume: 2.1 l/min** . →**Volume: 2.0 l/min** . →**Volume: 2.3 l/min** . →**Volume: 2.1 l/min**
13. Remove **measurement adapter 9705** and attach rapid-action coupling to fuel supply line. Collect escaping fuel. Make sure that the plug-in coupling is fitted correctly (must engage audibly) by pulling the line apart.
14. Switch off ignition, switch off the Porsche PIWIS Tester and disconnect adapter lead to the vehicle.

 WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

20 66 19 Removing and installing fuel pump - as of MY 2005

- Preliminary work
- Removing fuel pump
- Installing fuel pump
- Subsequent work

Preliminary work

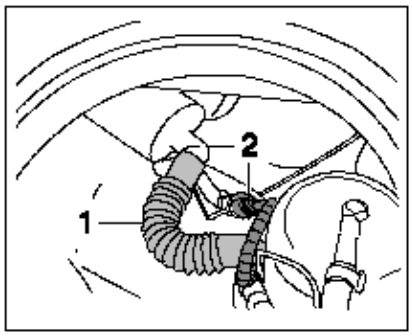
Preliminary work - Carrera 4

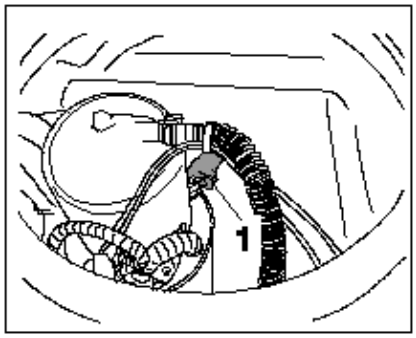
1. Place protective covers on the vehicle.
2. Disconnect the battery →2706IN Work instructions after disconnecting the battery.
3. Remove luggage compartment cover *→700519 21 Removing and installing trim panel for front luggage compartment - section on "Removing"*.



Cover for tank flange

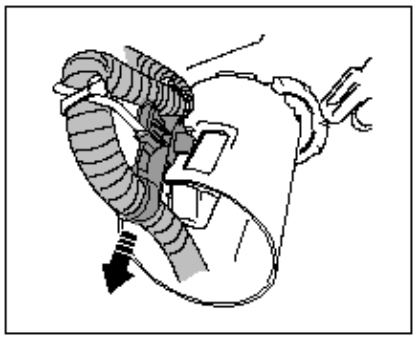
4. Remove cover for tank flange. Unscrew four M6 cap nuts **-2-** , remove the four washers and lift off the lid. Check seal for signs of damage.
5. Remove fuel level sensor *→201519 21 Removing and installing fuel level sensor - section on "Removing"*.
6. Empty the fuel tank until the fuel level is below the pump →2010EN Emptying and filling the fuel tank - section on "Emptying".

top of page



Removing fuel pump

Removing fuel pump - Carrera 4

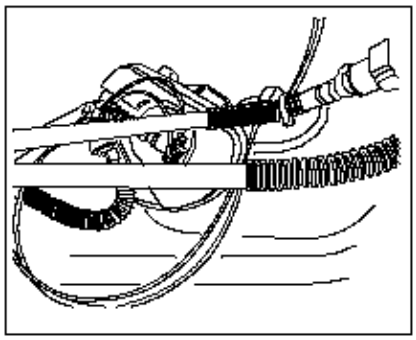


Connections for left fuel pump

1. Pull off flexible breather hose for the filler neck **-1-** and plug connection for left fuel line **-2-** .

Connection for right fuel line

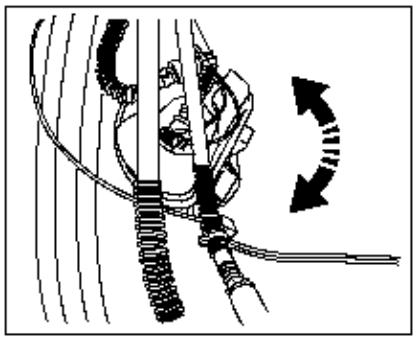
2. Release plug connection for fuel line at the right pump **-1-** and pull off line.
3. Turn fuel pump anti-clockwise (bayonet lock, pay attention to installation position!) and tilt slightly towards the front apron.



Connection for sucking jet pumps

4. Pull retaining claws of left and right sucking jet pump at the fuel pump **-in direction of arrow-** .

top of page

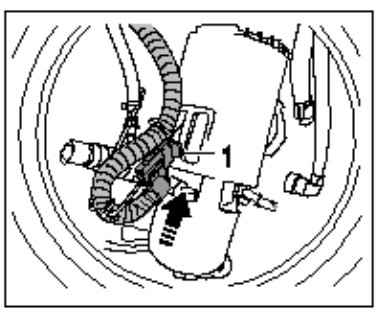


Installing fuel pump

Installing fuel pump - Carrera 2

Fitting fuel pump

1. Fit fuel pump at fuel tank mounting point.



C2 fuel pump

2. Turn fuel pump clockwise as far as it will go.

Installing fuel pump - Carrera 4

1. Insert fuel pump in fuel tank and place it on the floor of the tank for connecting the sucking jet pumps. The connecting grooves must be facing you.

Connecting sucking jet pumps to pump

2. Secure sucking jet pumps in the pump using the retaining claws.
3. Fit fuel pump at mounting point and turn it clockwise as far as it will go.
4. Attach line and hose connections to the pump's peripheral equipment.

top of page

Subsequent work

Subsequent work - Carrera 4

1. Install fuel level sensor →*201519 23 Removing and installing fuel level sensor - section on "Installing"*.
2. Install cover for tank flange. Position and tighten four cap nuts and washers. →**Tightening torque: 10 (7.5 ftlb.) Nm** .
3. Install luggage compartment cover. →*700519 23 Removing and installing trim panel for front luggage compartment - section on "Installing"*.
4. Connect ground lead at the battery →2706IN Work instructions after disconnecting the battery.
5. Fill the fuel that you removed back into the tank →2010EN Emptying and filling the fuel tank - section on "Filling".
6. Carry out a function test and check the system for leaks.
7. Remove protective covers.

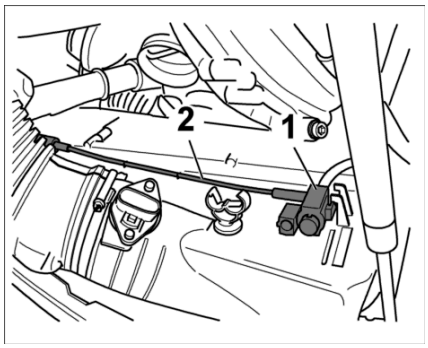
Removing air cleaner housing

Removing air cleaner housing

Cable plug for switch resonator

1. The 3.8 l engine has a switch resonator installed in the air cleaner housing. In order to remove the air cleaner housing, the cable plug must be disconnected from the electric switch-over valve **-1-** .
2. Unclip the tandem pump vacuum line from the air cleaner housing.

Air cleaner housing



3. Disconnect plug connection on the hot film mass air flow meter **-2-** . Press together the locking lever on the plug and pull the plug off the flange. Unclip the connection lead at the omega clips.

3.1. Undo the threaded sleeve for the rubber moulding of the air cleaner housing from the throttle body **-1-**

Note

- *Note the rubber sleeves for securing the air cleaner housing*

3.2. Unclip the oil filling pipe from the air cleaner housing **-3-** and then lift the air cleaner housing out of the fastening lug **-4-** .

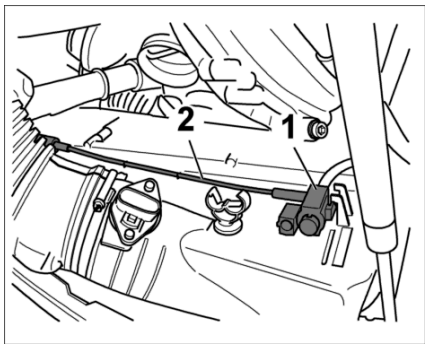
Vacuum line to switch resonator

4. Unclip the switch-over valve for the switch resonator from the housing bracket **-1-** detach the vacuum line from the housing **-2-** and disconnect from the resonator.

Note

The air cleaner housing should not be cleaned on the outside with strong cleaning agents.

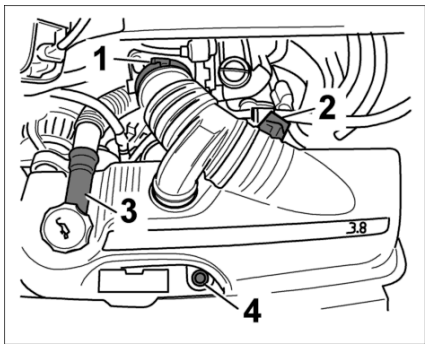
5. Lift the air cleaner housing completely out of the engine compartment. If necessary, the outside of the housing can be cleaned using a damp cloth and some washing-up liquid. Then, lay the housing on a soft surface to avoid scratching the painted surface.



top of page

Installing air cleaner housing

Installing air cleaner housing



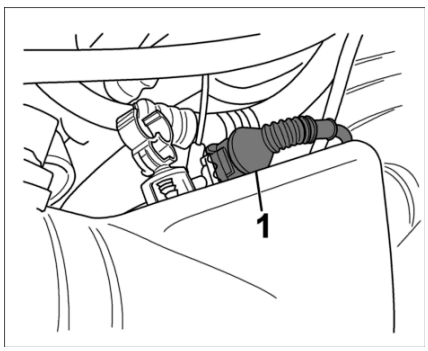
Note

- *Note the rubber sleeves for securing the air cleaner housing*

Vacuum line to switch resonator

1. Route the vacuum line on the housing of the 3.8 l's air cleaner **-2-** and connect it to the resonator. Connect the switch-over valve to the housing bracket **-1-** .

Air cleaner housing



2. Place the air cleaner housing in the engine compartment, placing it on the locating peg **-4-** . Pre-fit the rubber part of the air cleaner on the throttle body. Ensure that both rubber mounts of the air cleaner housing are located in the body.

2.1. Clip the oil filler pipe into the mounting point on the air cleaner housing **-3-** .

2.2. Tighten the hose clamp for the rubber part connecting the air cleaner to the throttle body **-1-** .

2.3. Insert the cable plug for the hot film mass air flow sensor **-2-** and clip the connecting cable into the omega clips on the air cleaner housing.

3. Clip the tandem pump vacuum line onto the air cleaner housing.

Cable plug for switch resonator

4. Connect cable plug for switch resonator to switch-over valve **-1-** .

24 40 19 Removing and installing injection valves - as of MY 2005

- Preliminary work
- General warning notes
- Removing injection valves
- Installing injection valves
- Subsequent work

top of page

Preliminary work

Preliminary work for removing injection valves

1. Disconnect the battery *→271000 A5 Work instructions after disconnecting the battery - chapter on "disconnecting"* .
2. Remove air cleaner housing →242519 Removing and installing air cleaner housing - chapter on "removing".

top of page

General warning notes

Danger from fuel

 DANGER

Fuel can escape when fuel line is disconnected.

- **Risk of fatal injury!**
- **Damage to skin**

→ Do not work on fuel system if engine is hot!

→ Do not smoke, avoid fire and naked flames!

→ Wear fuel-resistant protective gloves and goggles.

→ Attach warning sign to vehicle in a clearly visible position.

Hot engine components

 WARNING

Danger of injury from hot engine parts.

- **Risk of burns, damage to skin, injury to the eyes.**

→ Do not work on the engine while it is hot.

top of page

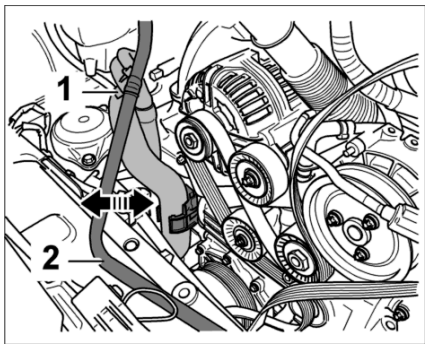
Removing injection valves

Removing injection valves of cylinder bank 1-3

 DANGER

Fuel can escape when fuel line is disconnected.

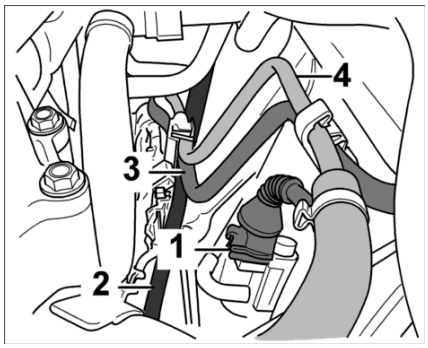
- **Risk of fatal injury!**
- **Damage to skin**



→ Do not work on fuel system if engine is hot!
→ Do not smoke, avoid fire and naked flames!
→ Wear fuel-resistant protective gloves and goggles.
→ Attach warning sign to vehicle in a clearly visible position.

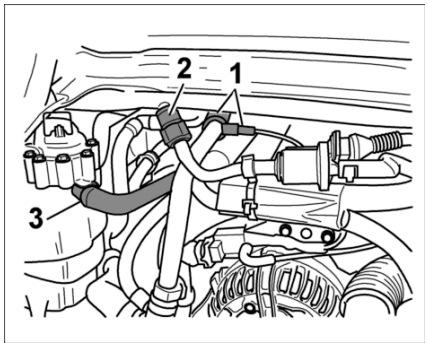
 WARNING

Danger of injury from hot engine parts.



- **Risk of burns, damage to skin, injury to the eyes.**

→ Do not work on the engine while it is hot.

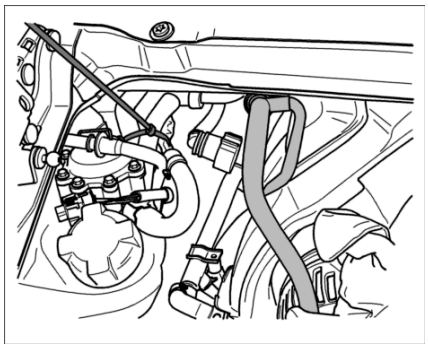


Removing hoses

1. Unclip the two coolant hoses **-1-** and aluminium pipe of the brake booster **-2-** from the holders on the transverse member and carefully lay to one side.

Removing plastic lines

2. Remove plastic lines from holder **-3 und 4-** and pull off cable plug from switch-over valve **-1-** .



Left engine compartment line connections

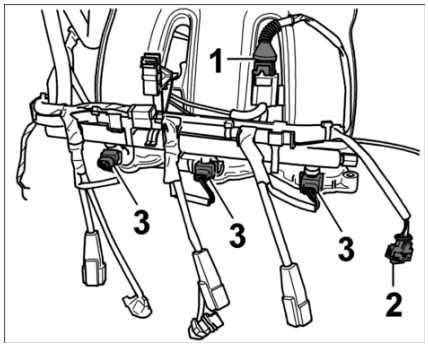
3. Open line connections in left of engine compartment.

3.1. Loosen the vacuum lines for the brake booster **-1-** . For the tandem pump feed line, remove the plastic protection, push the holder forward and pull off the line. Immediately put plastic protection back in place.

3.2. Disconnect tank vent line **-2-** . In order to do this, press the lugs of the rapid-action coupling and pull off the line (vent line remains fitted **-3-**).

Plastic lines

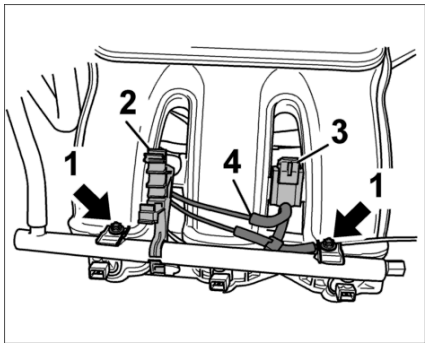
4. For better access, secure the lines and hoses to one side with a tie-wrap *→Plastic lines* .



ATTENTION

Material damage through lowering engine

- **Cables and coolant hoses can be stretched and torn**

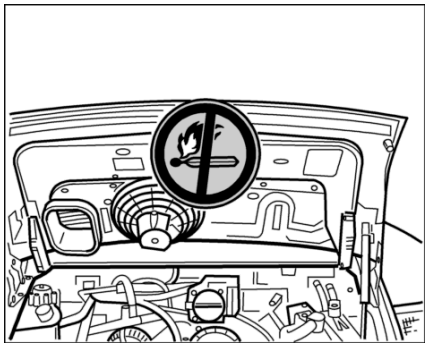


→ Lower the engine with a jack no more than 40 mm maximum

5. Support the engine with a jack. Unscrew the two collar nuts of the rear engine mounts. Lower the engine by 30 - 40 mm . Should the period between removal and installation be extended, the engine must be lifted back into position and temporarily secured with the collar nuts. Attach an appropriate warning notice.

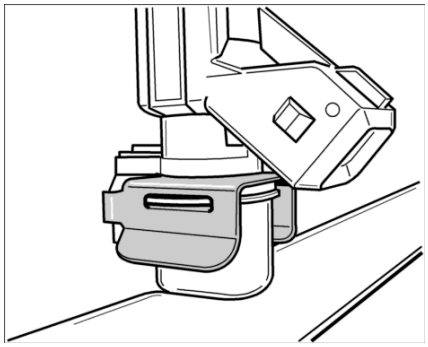
Cable plug for injection valves

6. Remove cable duct on the fuel distributor pipe. To do this, pull cable plug from camshaft position sensor **-2-** and lift up cable duct.



Fuel distributor pipe

7.



Remove cable holder **-2-** . Remove fastening screws for fuel distributor pipe **-1-** and pull fuel distributor pipe from the intake distributor.

8. Pull off cable plug for injection valves and release fuel distributor pipe. Push the cable duct to one side.

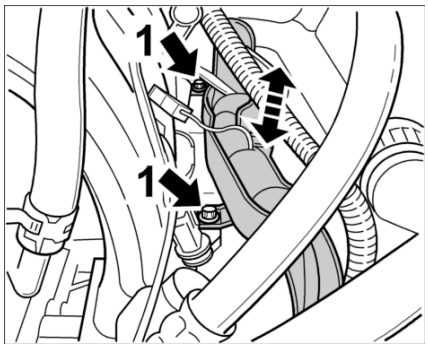
Warning sign

9. Before opening the fuel lines, put up or attach to vehicle a warning sign in a clearly visible position *→Warning sign* .

Fitting clip

10. Remove sheetmetal clips of the injection valves *→Fitting clip* and remove the injection valves from the fuel distributor pipe. Ensure that the sealing rings are present. Because of emerging fuel, place a cloth underneath.
11. Check sealing rings and replace if necessary.

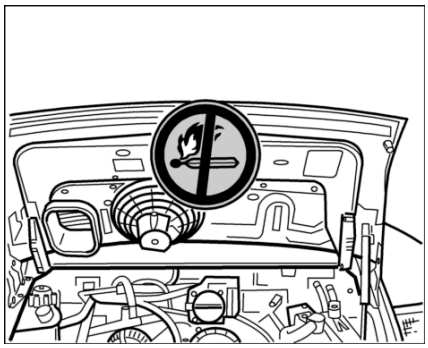
Removing injection valves of cylinder bank 4-6



WARNING

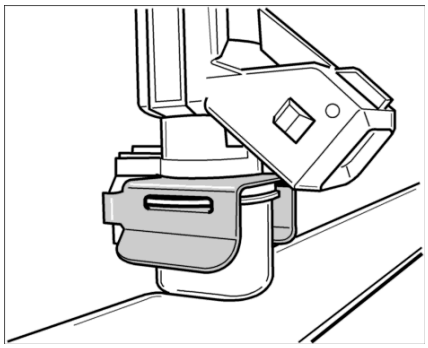
Danger of injury from hot engine parts.

- **Risk of burns, damage to skin, injury to the eyes.**



→ Do not work on the engine while it is hot.

1. Remove cable duct on the fuel distributor pipe. To do this, carefully lift up cable duct **-cable duct-** .
2. Pull off cable plug for injection valves and release fuel distributor pipe. Push the cable duct to one side.



Fuel distributor pipe

3. Remove fastening screws for fuel distributor pipe **-1-** and pull fuel distributor pipe together with fitted injection valves from the intake distributor. Check sealing rings of injection valves and replace if necessary.

Warning sign

4. Before opening the fuel lines, put up or attach to vehicle a warning sign in a clearly visible position *→Warning sign* .

Fitting clip

DANGER

Fuel can escape when fuel line is disconnected.

- **Risk of fatal injury!**
- **Damage to skin**

→ Do not work on fuel system if engine is hot!

→ Do not smoke, avoid fire and naked flames!

→ Wear fuel-resistant protective gloves and goggles.

→ Attach warning sign to vehicle in a clearly visible position.

5. Remove sheetmetal clips of the injection valves and remove the injection valves from the fuel distributor pipe. Ensure that the sealing rings are present. Because of emerging fuel, place a cloth underneath..
6. Check sealing rings and replace if necessary.

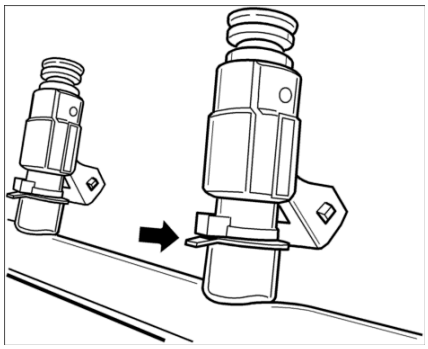
top of page

Installing injection valves

Installing injection valves of cylinder bank 1-3

DANGER

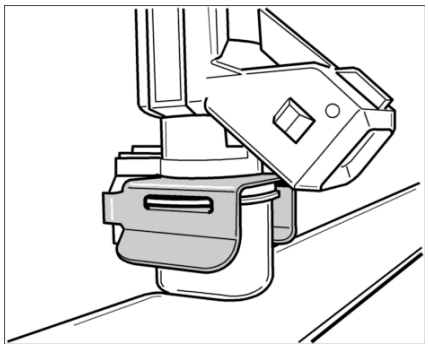
Fuel can escape when fuel line is disconnected.



- **Risk of fatal injury!**
- **Damage to skin**

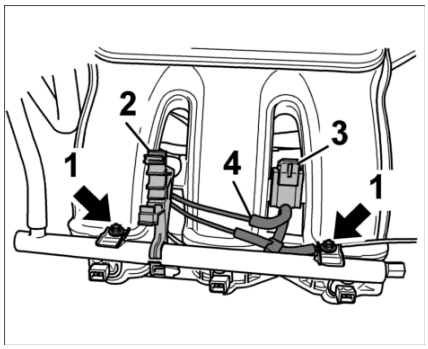
→ Do not work on fuel system if engine is hot!

→ Do not smoke, avoid fire and naked flames!



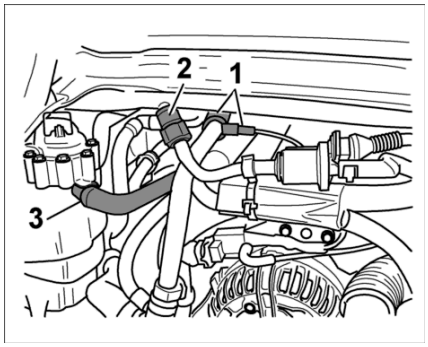
→ Wear fuel-resistant protective gloves and goggles.

→ Attach warning sign to vehicle in a clearly visible position.



Aligning injection valve

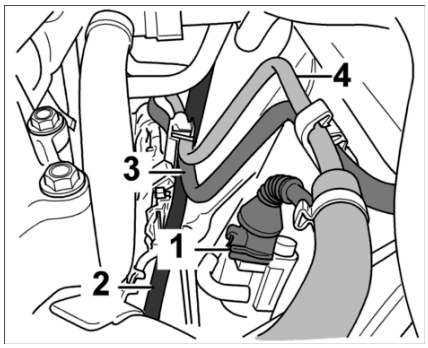
1. Check sealing rings and replace if necessary. Insert injection valves into fuel distributor pipe. Align lugs of injection valves with fuel distributor pipe (pressure pipe) **-arrow-** and fit the sheetmetal clips. Ensure that the sheetmetal clips engage correctly *→Fitting clip* .



Fitting clip

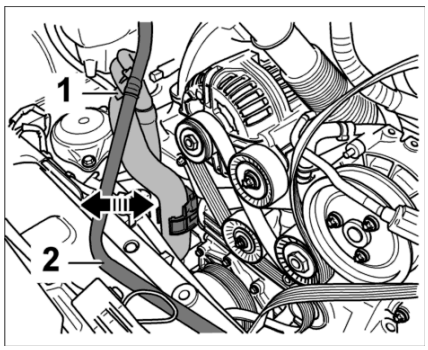
Fuel distributor pipe

2. Check sealing rings of injection valves, if necessary lubricating with silicone spray or similar to ease fitting. Insert fuel distributor pipe together with fitted injection valves into the appropriate openings of the intake distributor and screw in the fastening screws of the fuel distributor pipe to the intake distributor **-1-** . Tighten screws →**Tightening torque: 7.5 ftlb.** .
3. Fit cable holder **-2-** . Move cable duct into position on the fuel distributor pipe and clip in. Push on cable plug.



Left engine compartment line connections

4. Fit line connections in left of engine compartment.



4.1. Fit vacuum lines for the brake booster **-1-** . Press the tandem pump feed line into the holder.

4.2. Connect tank vent line **-2-** , pressing the rapid-action coupling onto the line (vent line fitted **-3-**).

Fitting plastic lines

5. Fit plastic lines into holder **-3 und 4-** and fit cable plug onto switch-over valve **-1-** .
6. Lift engine into position with the car jack and fasten →**Tightening torque: 63 ftlb.** .

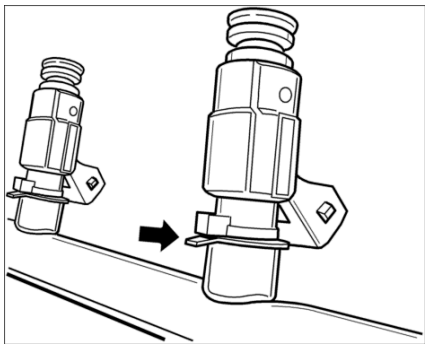
Fitting the hoses

7. Clip the two coolant hoses and aluminium pipe of the brake booster into the holder **-1 and 2-** .
8. Check that all connections and lines are fitted.

Installing injection valves of cylinder bank 4-6

DANGER

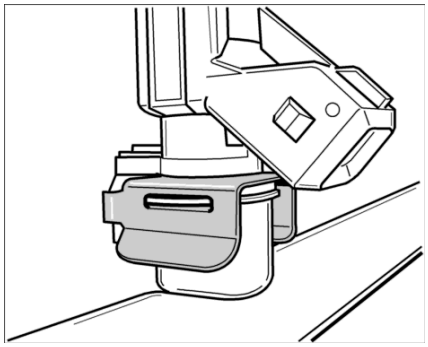
Fuel can escape when fuel line is disconnected.



- **Risk of fatal injury!**
- **Damage to skin**

→ Do not work on fuel system if engine is hot!

→ Do not smoke, avoid fire and naked flames!



→ Wear fuel-resistant protective gloves and goggles.

→ Attach warning sign to vehicle in a clearly visible position.

Aligning injection valve

1. Check sealing rings and replace if necessary. Insert injection valves into fuel distributor pipe. Align lugs of injection valves with fuel distributor pipe (pressure pipe) **-arrow-** and fit the sheetmetal clips. Ensure that the sheetmetal clips engage correctly *→Fitting clip* .

Fitting clip

2. Check sealing rings of injection valves, if necessary applying a thin coat of silicone spray or similar to ease fitting. Insert fuel distributor pipe together with fitted injection valves into the appropriate openings of the intake distributor and screw in the fastening screws of the fuel distributor pipe to the intake distributor. Tighten screws →**Tightening torque: 7.5 ftlb.** .
3. Move cable duct into position on the fuel distributor pipe and clip in. Push on cable plug.

top of page

Subsequent work

Work subsequent to installing injection valves

1. Install air cleaner housing →242519 Removing and installing air cleaner housing - chapter on "installing".
2. Connect the battery *→271000 A6 Work instructions after disconnecting the battery - chapter on "connecting"* .

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

24 42 19 Removing and installing throttle body - as of MY 2005

- Preliminary work

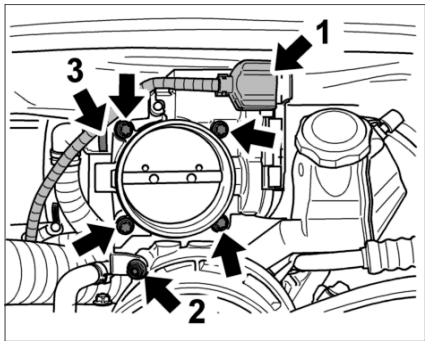
- Subsequent work

top of page

Preliminary work



Preliminary work for removing throttle body

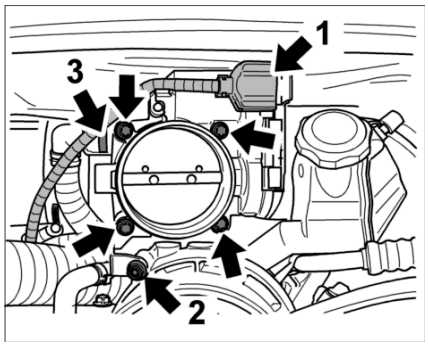
Remove air cleaner housing →242519 Removing and installing air cleaner housing - chapter on "removing".

top of page

Removing throttle body

Removing throttle body

Throttle body



1. Release cable plug on throttle body, and pull out and release cable **-1-** .
2. Unscrew fastening nut M6 on rubber mount of servo pump **-2-** .
3. Remove four M6 x 40 fastening screws (outer torx) and remove throttle body **-arrows without numbers-** .
4. Check moulded seal on flange of distributor pipe for damage, replace if necessary.

top of page

Installing throttle body

Installing throttle body

1. Check moulded seal on flange of distributor pipe for damage, replace if necessary.

Throttle body

2. Position throttle body in the installation position and screw in fastening screws. Make sure that the sheetmetal holder is in correct contact with the rubber mount of the servo pump. Screw on M6 fastening nut **-2-** and tighten →**Tightening torque: 7.5 ftlb.** .
3. fit the four fastening screws of the throttle body **-Pfeile ohne Nummern-** →**Tightening torque: 7.5 ftlb.** .
4. Connect cable plug to throttle body and clip cable into holder **-1-** .

top of page

Subsequent work

General warning notes

Danger from Pentosin

WARNING
Danger of injury and damage to material through Pentosin

- **Irritation and damage to skin**
- **Damage to hoses and wiring**

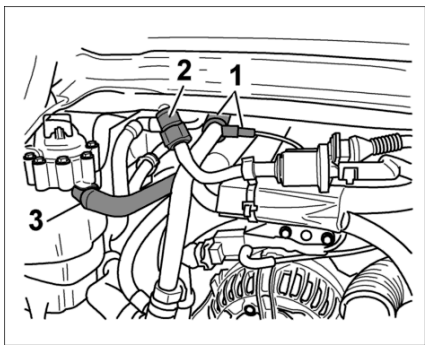
→ Wear protective gloves and goggles
→ If the eyes or skin come into contact with the fluid, wash immediately with water!
→ Collect escaping Pentosin
→ Use caps to protect the wiring against soiling and damage!
→ Immediately clean hoses and wiring thoroughly

top of page

Removing intake distributor, cylinder bank 1-3

Removing intake distributor, cylinder bank 1-3

WARNING
Danger of injury and damage to material through Pentosin



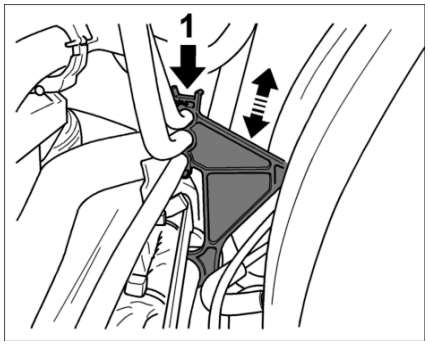
- **Irritation and damage to skin**
- **Damage to hoses and wiring**

→ Wear protective gloves and goggles
→ If the eyes or skin come into contact with the fluid, wash immediately with water!
→ Collect escaping Pentosin
→ Use caps to protect the wiring against soiling and damage!
→ Immediately clean hoses and wiring thoroughly

Note
For better accessibility when removing the intake distributor from cylinder bank 1-3, the three-phase generator should be removed.

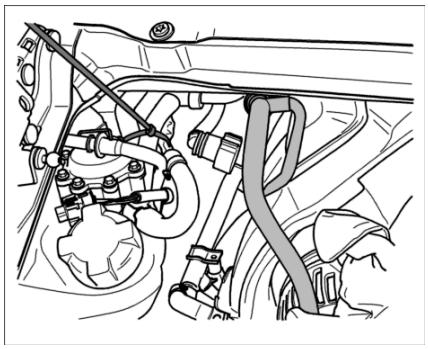
1.

Remove three-phase generator →272219 Removing and installing three-phase generator - chapter on "removing".



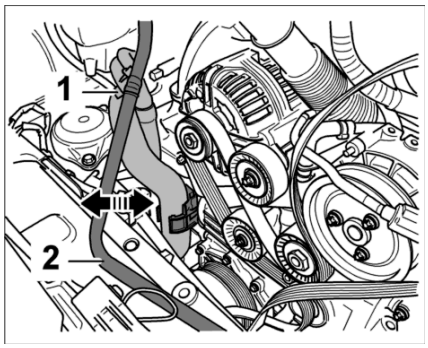
Left engine compartment line connections

2. Open line connections in left of engine compartment.



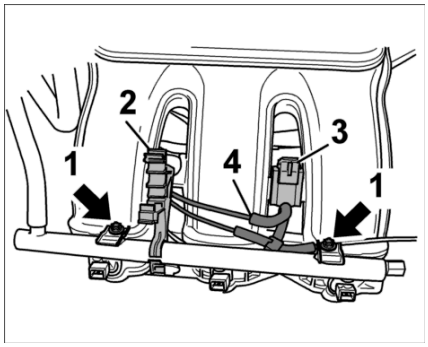
2.1. Loosen the vacuum lines for the brake booster **-1-** . For the tandem pump feed line, remove the plastic protection, push the holder forward and pull off the line. Immediately put plastic protection back in place.

2.2. Disconnect tank vent line **-2-** . In order to do this, press the lugs of the rapid-action coupling and pull off the line (vent line remains fitted **-3-**).



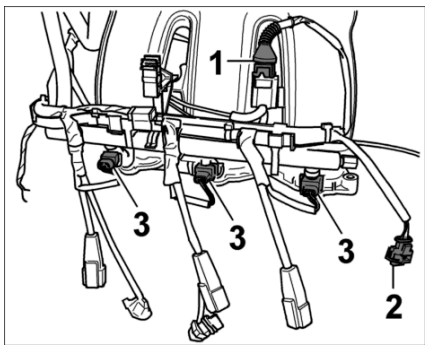
Cable holder

3. Remove plastic lines from cable holder over the fuel distributor pipe **-1-** and pull cable holder up and off *→Cable holder* .



Plastic lines

4. Release lines over the fuel distributor pipe (unclip lines from the holders and secure with a tie-wrap to the coolant expansion tank) *→Plastic lines* .



Removing hoses

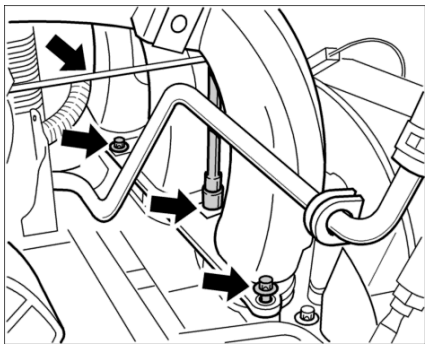
5. Unclip the two coolant hoses **-1-** and aluminium pipe of the brake booster **-2-** from the holders on the transverse member and carefully lay to one side.

Fuel distributor pipe

6. Remove cable plug from switch-over valve **-3-** . Pull vacuum pipes off the switch-over valve **-4-** .

Cable plug for injection valves

7. Remove cable duct on the fuel distributor pipe. To do this, pull cable plug from camshaft position sensor **-2-** and lift up cable duct.
8. Remove fastening screws for fuel distributor pipe **-1-** and pull fuel distributor pipe together with fitted injection valves from the intake distributor. Check sealing rings of injection valves and replace if necessary.



ATTENTION

Material damage through lowering engine

- **Cables and coolant hoses can be stretched and torn**

→ Lower the engine with a jack no more than 40 mm maximum

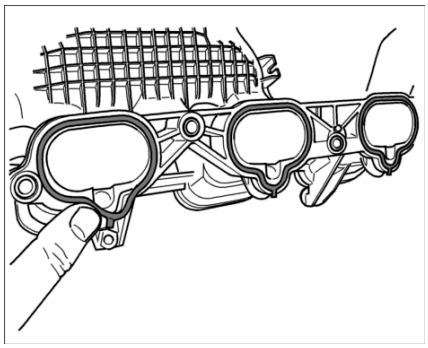
9. Support the engine with a jack. Unscrew the two collar nuts of the rear engine mounts. Lower the engine by 30 - 40 mm . Should the period between removal and installation be extended, the engine must be lifted back into position and temporarily secured with the collar nuts. Attach an appropriate warning notice.

Screws for intake distributor

10. Remove the four fastening screws of the intake distributor (illustration shows cylinder bank 4-6) **-arrows-** . If necessary, use a mirror to remove the front-most screw. When removing the intake distributor, leave the fore-most screw in its bore in the intake distributor. Carefully remove the intake distributor from the engine compartment (carefully release vacuum lines to the switch-over valve). Replace seals.

Note

Cover engine openings (e.g. intake openings, crankcase, oil lines, open reservoirs etc.) cover with a cloth to avoid dirt and foreign bodies falling in.



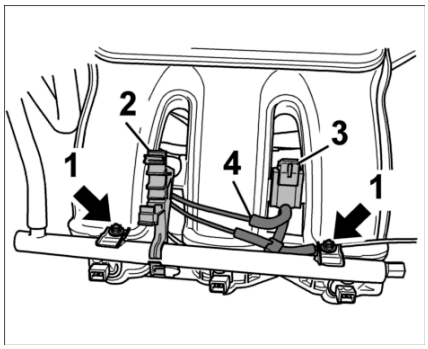
11. Cover engine openings with a cloth.

top of page

Removing intake distributor, cylinder bank 1-3

Installing intake distributor, cylinder bank 1-3

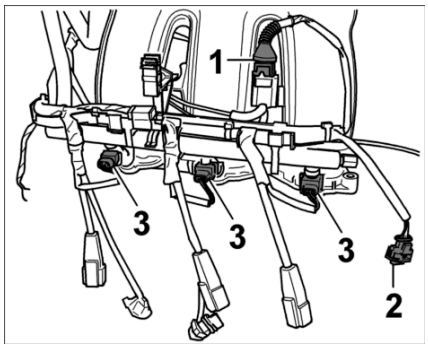
1. Clean the sealing surfaces of the intake distributor and crankcase.



Intake distributor seals

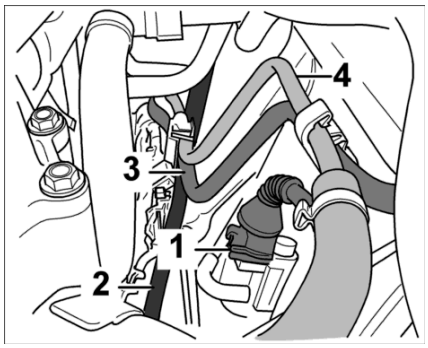
2. Replace the seals in the intake distributor and insert correctly into the grooves of the intake distributor *→Intake distributor seals* .
3. Place intake distributor in installation position. At the same time, pull through and lay the vacuum lines to the switch-over valve **-4-** .

Note



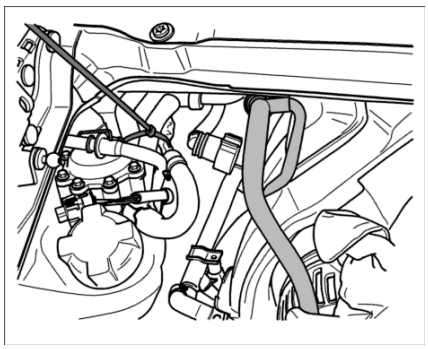
If necessary, to ease installation of the intake distributor, insert the rear fastening screw in its bore in the intake distributor before commencing installation.
The socket for tightening the fastening screws of the intake distributor should be secured with a strip of insulating tape to prevent them falling out.
If necessary, carry out the work using a small mirror.

4. Screw in and tighten fastening screws of the intake distributor, using a magnet if necessary →**Tightening torque: 7.5 ftlb.** .



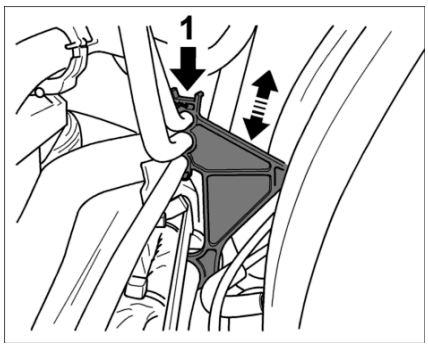
Fuel distributor pipe

5. Check sealing rings of injection valves and replace if necessary. Clean sealing surfaces with a lint-free cloth and apply a thin coat of silicone spray. Insert fuel distributor pipe together with fitted injection valves into the appropriate openings of the intake distributor and screw in the fastening screws of the fuel distributor pipe to the intake distributor **-1-** . Tighten screws →**Tightening torque: 7.5 ftlb.** .
6. Lift engine into position with the car jack and fasten →**Tightening torque: 63 ftlb.** .



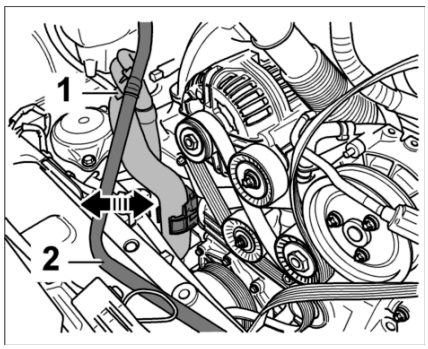
Cable plug for injection valves

7. Move cable duct into position on the fuel distributor pipe and clip in. Connect cable plugs for switch-over valve **-1-** and camshaft position sensor **-2-** .



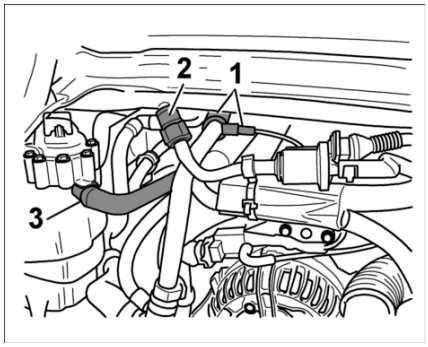
Switch-over valve connections

8. Fit cable plug to switch-over valve **-1-** . Fit vacuum pipes to the switch-over valve **-4-** .



Plastic lines

9. Separate the tie-wraps and move lines into the installation position.



Cable holder

10. Fit cable holders by pushing onto intake distributor and fuel distributor tube. Clip plastic lines into cable holders and connect and secure the remaining lines.

Removing hoses

11. Clip the two coolant hoses and aluminium pipe of the brake booster into the holders on the transverse member *→Removing hoses* .

Left engine compartment line connections

12. Fit line connections in left of engine compartment.

12.1. Fit vacuum lines for the brake booster **-1-** . Fit the tandem pump feed line into the holder (plastic protection must be fitted beforehand).

12.2. Connect tank vent line **-2-** , pressing the rapid-action coupling onto the line.

13. Install three-phase generator →272219 Removing and installing three-phase generator - chapter on "installing".

top of page

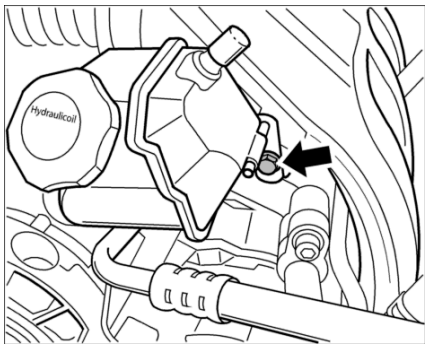
Removing intake distributor, cylinder bank 4-6

Removing intake distributor, cylinder bank 4-6

ATTENTION

Material damage through lowering engine

- **Cables and coolant hoses can be stretched and torn**



→ Lower the engine with a jack no more than 40 mm maximum

Note

Cover engine openings (e.g. intake openings, crankcase, oil lines, open reservoirs etc.) cover with a cloth to avoid dirt and foreign bodies falling in.

Note

- *After removal, place the air-conditioning compressor on a suitable protective support (e.g. foam, neoprene, etc.).*

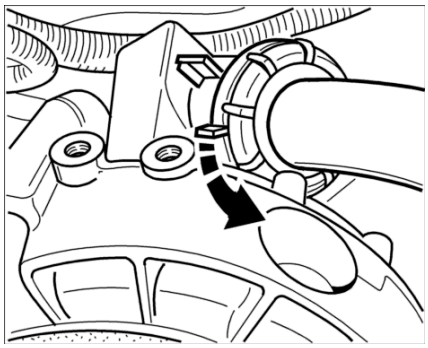
Servo-tank

WARNING

Danger of injury and damage to material through Pentosin

- **Irritation and damage to skin**
- **Damage to hoses and wiring**

→ Wear protective gloves and goggles



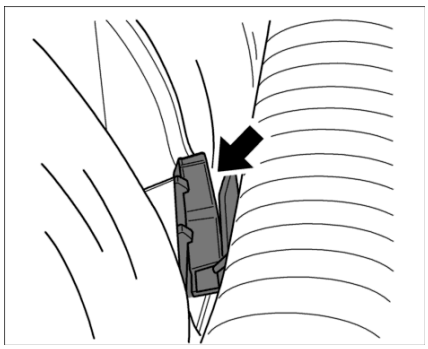
→ If the eyes or skin come into contact with the fluid, wash immediately with water!

→ Collect escaping Pentosin

→ Use caps to protect the wiring against soiling and damage!

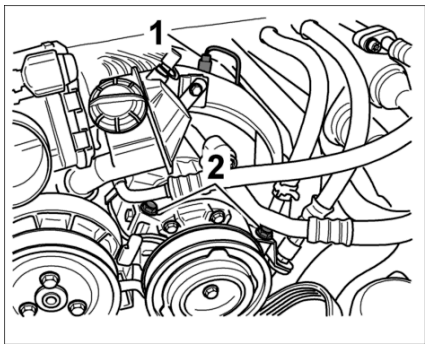
→ Immediately clean hoses and wiring thoroughly

1. Remove fastening screw of servo-tank from intake distributor **-arrow-** . Extract Pentosin fluid from the servo-tank with a pump. Dispose of extracted Pentosin according to the relevant regulations. Lay a cloth under the tank to collect any emerging Pentosin. Open the bayonet lock anti-clockwise and remove the tank *→Servo-tank bayonet lock* . Immediately seal the lower tank opening with a suitable plug.



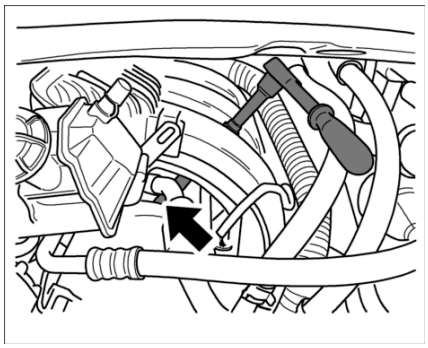
Servo-tank bayonet lock

Note



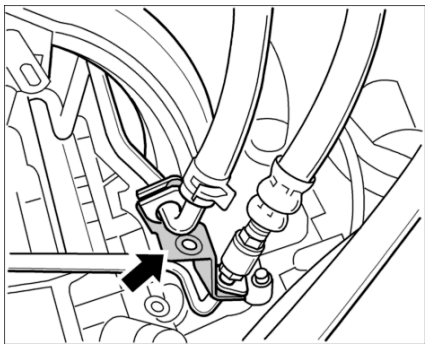
The air-conditioning lines on the compressor do not have to be disconnected in order to remove engine/transmission unit.

2. Detach air-conditioning compressor without disconnecting the air-conditioning lines *→873409 11 Detaching and fastening compressor - detaching*.



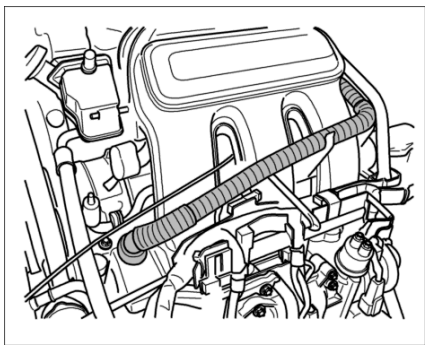
Air-conditioning compressor ground line

3. Disconnect ground connector from intake distributor side 4-6 **-arrow-** .



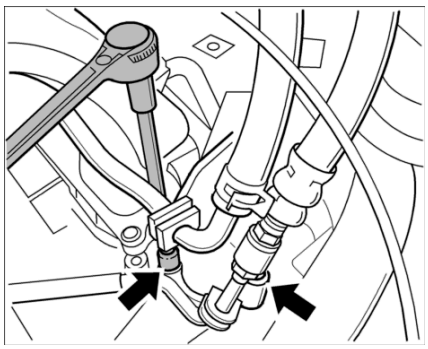
Rear fastening of the air-conditioning compressor

4. Pull the engine compartment temperature sensor out of the intake distributor 4-6 together with the rubber sleeve **-1-** and unscrew the rear fastening screws **-2-** of the air-conditioning compressor.



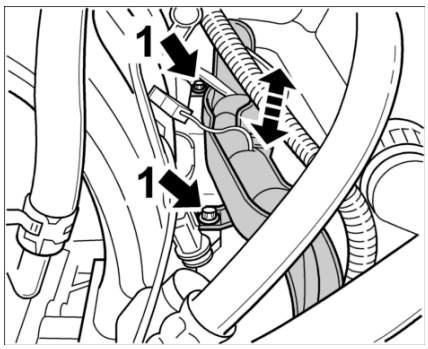
Front fastening screw of the air-conditioning compressor

5. Unscrew the front fastening screw **-arrow-** of the air-conditioning compressor. Due to the restricted accessibility, the use of a **3/8" extension, 16° movable NR.15** with a long Torx E10 socket wrench is recommended. To lift out the air-conditioning compressor, the screw must be pulled upwards and held in position.
6. Lift out the air-conditioning compressor with the leads connected and lay to one side on a protective support. Secure additionally with a tie-wrap.



Sheetmetal holder

7. Pull the sheetmetal holder between the servo oil lines out of the rubber mounts and remove **-arrow-** .



Oil mist line

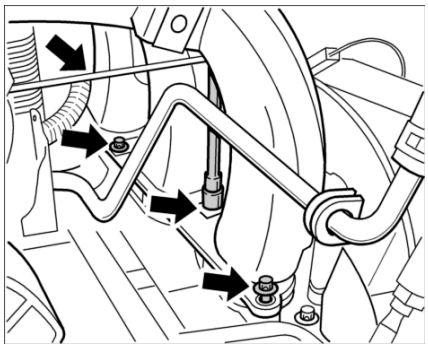
8. Remove plastic line between oil mist separator and oil flange and lay to one side *→Oil mist line* .

Oil flange

9. Unscrew the two fastening screws of the oil flange behind the servo oil lines and remove the oil flange **-arrows-** . Replace seal.

Fuel distributor pipe

10. Remove fastening screws for fuel distributor pipe **-1-** and pull fuel distributor pipe together with fitted injection valves from the intake distributor. Check sealing rings of injection valves and replace if necessary.



ATTENTION

Material damage through lowering engine

- **Cables and coolant hoses can be stretched and torn**

→ Lower the engine with a jack no more than 40 mm maximum

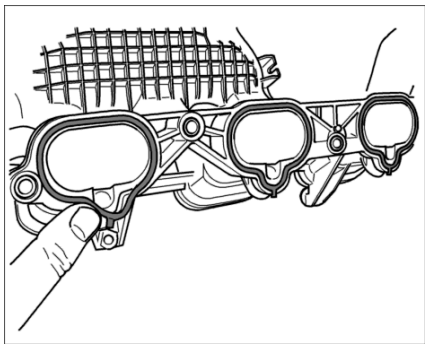
11. Support the engine with a jack. Unscrew the two collar nuts of the rear engine mounts. Lower the engine by 30 - 40 mm . Should the period between removal and installation be extended, the engine must be lifted back into position and temporarily secured with the collar nuts. Attach an appropriate warning notice.

Screws for intake distributor

12. Remove the four fastening screws of the intake distributor **-arrows-** . If necessary, use a mirror to remove the front-most screw. When removing the intake distributor, leave the fore-most screw in its bore in the intake distributor. Carefully remove the intake distributor from the engine compartment (carefully release vacuum lines to the switch-over valve). Replace seals.

Note

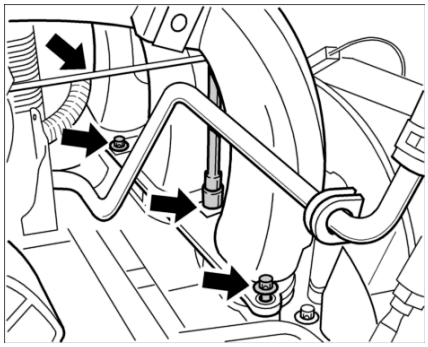
Cover engine openings (e.g. intake openings, crankcase, oil lines, open reservoirs etc.) cover with a cloth to avoid dirt and foreign bodies falling in.



13. Cover engine openings with a cloth.

top of page

Installing intake distributor, cylinder bank 4-6

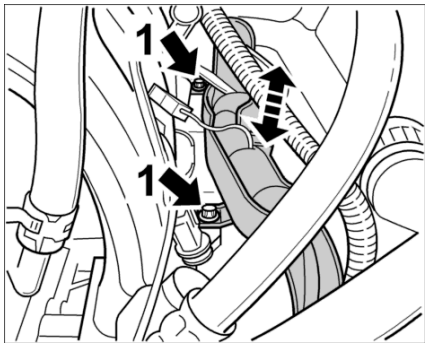


Installing intake distributor, cylinder bank 4-6

1. Clean the sealing surfaces of the intake distributor and crankcase.

Intake distributor seals

2. Replace the seals in the intake distributor and insert correctly into the grooves of the intake distributor →*Intake distributor seals* .
3. Place intake distributor in installation position. At the same time, pull through and lay the vacuum lines to the switch-over valve.

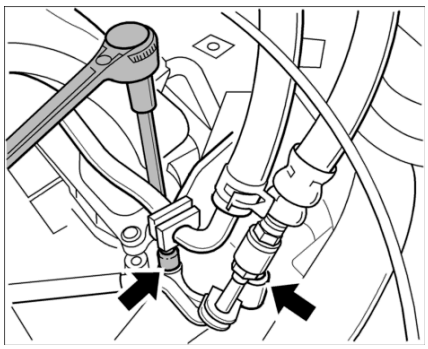


Screws for intake distributor

Note

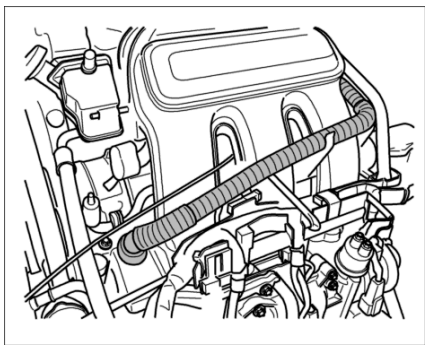
If necessary, to ease installation of the intake distributor, insert the rear fastening screw in its bore in the intake distributor before commencing installation.
The socket for tightening the fastening screws of the intake distributor should be secured with a strip of insulating tape to prevent them falling out.
If necessary, carry out the work using a small mirror.

4. Screw in and tighten fastening screws of the intake distributor, using a magnet if necessary →**Tightening torque: 7.5 ftlb.** .
5. Lift engine into position with the car jack and fasten →**Tightening torque: 63 ftlb.** .



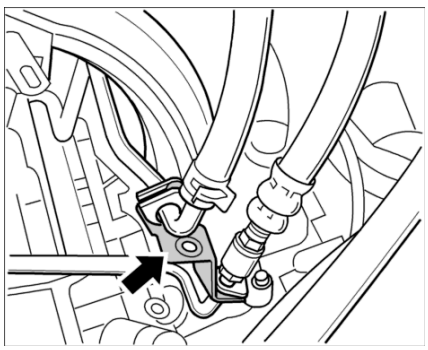
Fuel distributor pipe

6.



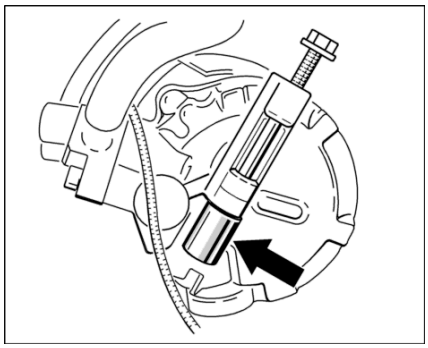
Check sealing rings of injection valves and replace if necessary. Clean sealing surfaces with a lint-free cloth and apply a thin coat of silicone spray. Insert fuel distributor pipe together with fitted injection valves into the appropriate openings of the intake distributor and screw in the fastening screws of the fuel distributor pipe to the intake distributor **-1-** . Tighten screws →**Tightening torque: 7.5 ftlb.** .

7. Move cable duct into position on the fuel distributor pipe and clip in *→Fuel distributor pipe* .



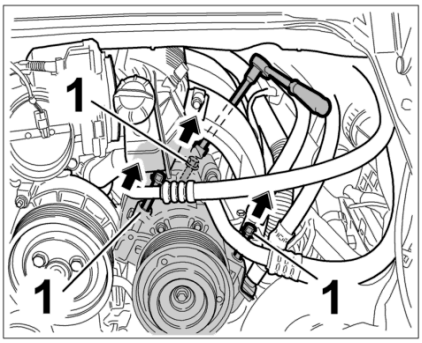
Oil flange

8. Replace oil flange seal. Place oil flange in installation position. Screw in the two fastening screws of the oil flange **-arrows-** and tighten →**Tightening torque: 7.5 ftlb.** .



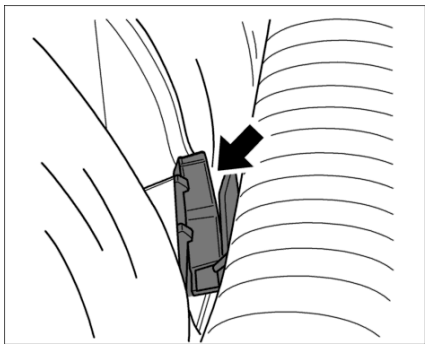
Oil mist line

9. Fit plastic line between oil mist separator and oil flange *→Oil mist line* .



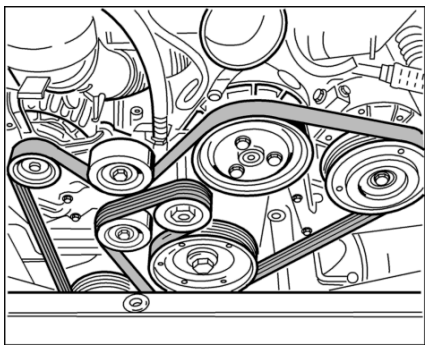
Sheetmetal holder

10. Fit sheetmetal holder between servo lines into rubber mounts **-arrow-** ..



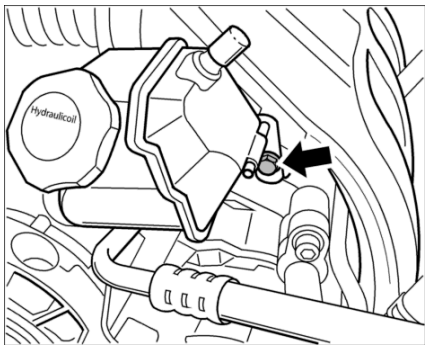
Front air-conditioning compressor fastening screw and sleeve

11. Fit air-conditioning compressor: before installing the compressor check whether the aluminium spacer sleeve **-arrow-** is inserted. Grease and fit sleeve. Also lay the ground cable before installation.



Fastening of the air-conditioning compressor

12. Fit air-conditioning compressor and fasten using three M8 Torx screws (two short ones at the rear, one long one at the front) **-1-** . See details and tightening torques →873419 Removing and installing compressor - chapter on "installing".



Air-conditioning compressor ground line

13. Connect ground connector to intake distributor side 4-6 **-arrow-** .

Drive belt

14. Fit drive belt. Pay attention to operating direction of used belts. Double-check that the position of the belt on the belt pulleys is correct.

Servo-tank

WARNING

Danger of injury and damage to material through Pentosin

- **Irritation and damage to skin**
- **Damage to hoses and wiring**

→ Wear protective gloves and goggles

→ If the eyes or skin come into contact with the fluid, wash immediately with water!

→ Collect escaping Pentosin

→ Use caps to protect the wiring against soiling and damage!

→ Immediately clean hoses and wiring thoroughly

15. Check sealing rings on servo-tank and replace if necessary. Fit servo-tank by carefully inserting the tank into the opening of the servo pump and fastening the bayonet lock in the clockwise direction. Fit fastening screw of servo-tank to intake distributor →**Tightening torque: 7.5 ftlb.** . Fill servo-tank with Pentosin fluid and check oil level.

top of page

Subsequent work

Subsequent work for installing intake distributor

1. Install tuning pipe →247419 Removing and installing tuning pipe - chapter on "installing".
2. Install air cleaner housing →242519 Removing and installing air cleaner housing - chapter on "installing".
3. Connect the battery →*271000 A6 Work instructions after disconnecting the battery - chapter on "connecting"* .

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

Preliminary work

Preliminary work for DME control module in Cabriolet

1. Removing cover over the motor

1.1. To loosen the carpet, pull out the plastic clips with the special tool 21 and take out the carpet.
Removal tool, universal NR.21

If a new DME control unit is installed, then read out the vehicle data from the DME control unit and transfer them to the new one.

2.

Connect the **PIWIS Tester 9718** to the vehicle and start the System Tester. Switch on ignition. Press >> to continue.

3. Select vehicle type and press >> to continue.
4. Carry out automatic search of control units.
5. Select **DME** with the cursor keys and press the >> key.
6. Select **Program control unit** with the cursor keys and press the >> key.
7. Select **Read out vehicle data** (Vehicle data) using the cursor keys and press >> .
8. The message **Reading vehicle data** will appear on the tester screen.
9. After replacement of the DME control unit, the vehicle data is uploaded from the **Program control unit** menu option.

top of page

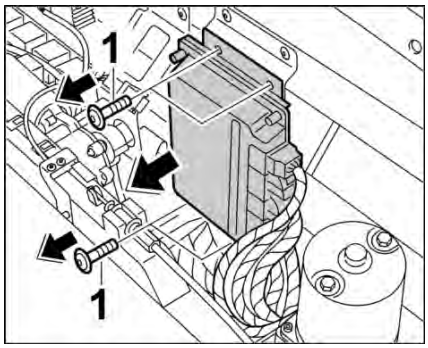
General warning notes

General warning notes for control units

 WARNING

Sudden voltage interruption of the power supply to the control module.

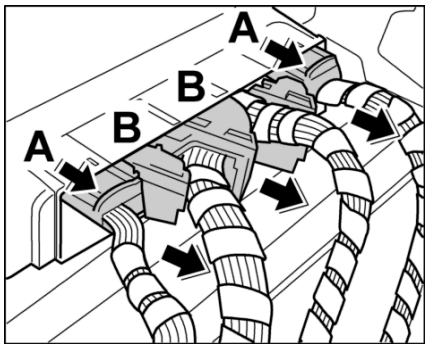
- **Destruction of the control module.**



→ During programming, it is essential to guarantee the power supply for the Porsche System tester. It is essential to connect a battery charger with a current rating of at least 40 A to the vehicle battery.

→ Prior to disconnecting the control module, switch off the ignition and remove the ignition key.

top of page



Removing DME control module

Removing DME control module in Cabriolet

Unscrewing fastening screws

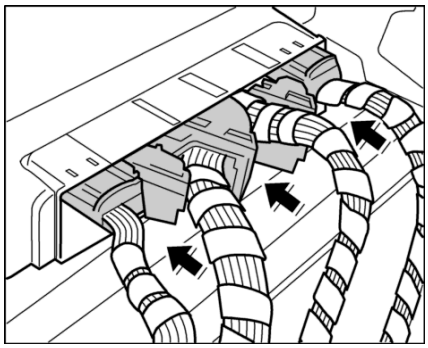
1. Unscrew the four fastening screws **-1-** for the control module and lift it out.

Releasing electric connector

WARNING

Risk of damage to electronic control modules.

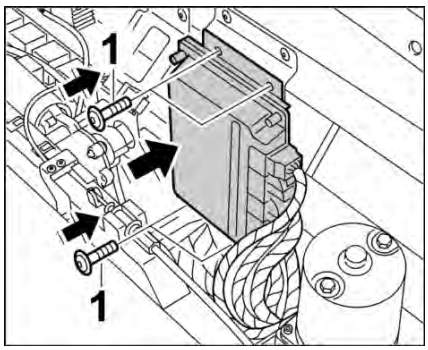
- **If care is not taken, electrical and electronic components may be destroyed.**



→ Before removing the control module, switch off the ignition and remove the ignition key.

2. Press in the connector and pull it off the control module **-A-** .
3. Press in connector **-B-** latch and actuate the latching lever.

top of page



Installing DME control module

Installing DME control module in cabriolet

Inserting the connectors

1. Push in connectors **-B-** for DME control module and lock with the latching lever.
2. Press in connectors **-A-** on the control module they engage.

Tightening fastening screws

3. Fasten control module with the four fastening screws **-1-** to the roll-over protection frame.

top of page

Subsequent work

Subsequent work on DME control unit

1. Place carpet lining in position, paying attention to the fitted shape.
2. The DME control unit can be programmed using the **PIWIS Tester 9718**.

Subsequent work for DME control module in Cabriolet

1. Reinstall the carpet over the motor.
2. The DME control unit can be programmed using the **PIWIS Tester 9718**.

top of page

Programming DME control module

Programming new DME control module

WARNING

Sudden voltage interruption of the power supply to the control module.

- **Destruction of the control module.**

→ During programming, it is essential to guarantee the power supply for the Porsche System tester. It is essential to connect a battery charger with a current rating of at least 40 A to the vehicle battery.

→ Prior to disconnecting the control module, switch off the ignition and remove the ignition key.

Note

If a new DME control module is to be installed in a vehicle, the DME code specified in IPAS and the immobiliser code must be entered in the DME control module.
The codes are available from IPAS or via the importer.
Follow the instructions on the Tester.
Later versions of the software may display slightly different text or require a slightly different procedure. The instructions you receive from the tester itself take precedence over this description.

Note

- *During programming, the electric radiator fans may start.*

Note

Depending on the software version of the PIWIS Tester, a new DME control module can be interrogated for the "old DME programming code". In this case, enter the code from IPAS which is also used for the "new DME programming code".

In some countries (currently USA, Canada) the Ready status must be obtained following a test drive or by using the Porsche System Tester after the DME control module has been programmed. If in doubt about this, contact the relevant importer.

1. Connect the **PIWIS Tester 9718** to the vehicle and start the System Tester. Switch on ignition. Press >> to continue.
2. Select vehicle type. Press >> to continue.

Read out vehicle data. →247019 Removing and installing DME control module - "Preliminary work" section

3. Switch to the **Special functions** menu and perform the **vehicle handover** using the F8 key.

4. In the **Special functions** menu, erase **All fault memories** by pressing >> .
5. Carry out automatic search of control units.
6. Select **DME** with the cursor keys and press the >> key.
7. Select **Program control unit** with the cursor keys and press the >> key.
8. Select **Program control module** with the cursor keys and press the >> key. Observe the information displayed by the Tester.
9. Enter **Vehicle Ident. No.**, >> confirm with F7 .
10. Enter the **DME programming code** (IPAS), >> confirm with F7 .
11. Enter the **new immobiliser code** (IPAS), >> confirm with F7 .
12. Specify **vehicle type** >> .
13. Specify **transmission type** >> .
14. Specify **exhaust standard** >> .
15. Start **Programming** with F8 . The data and programming status is then loaded on to the DME control module. Do not interrupt the programming sequence. Observe Tester instructions.
16. For the learning and adaptation routine of the throttle valve (electronic throttle), switch the ignition off, remove ignition key, insert ignition key and switch on ignition for at least 40 seconds without starting the engine. Do not actuate accelerator pedal. This completes the adaptation of the throttle adjusting unit and the programming sequence is complete.
17. In the **DME** menu go to **Coding**, code Cruise control present, not present.
18. Go to **Vehicle data** and, if necessary, enter the vehicle-specific data.
19. Read out the fault memories of all control units and delete the DME control module fault on every control unit connected to the CAN.
20. Start engine.
21. Carry out a test drive and read out fault memory again.

Programming DME control module

 WARNING

Sudden voltage interruption of the power supply to the control module.

- **Destruction of the control module.**

→ During programming, it is essential to guarantee the power supply for the Porsche System tester. It is essential to connect a battery charger with a current rating of at least 40 A to the vehicle battery.

→ Prior to disconnecting the control module, switch off the ignition and remove the ignition key.

 **Note**

If a new DME control module is to be installed in a vehicle, the DME code specified in IPAS and the immobiliser code must be entered in the DME control module.

The codes are available from IPAS or via the importer.
Follow the instructions on the Tester.
Later versions of the software may display slightly different text or require a slightly different procedure. The instructions you receive from the tester itself take precedence over this description.

Note

- *During programming, the electric radiator fans may start.*

If a DME control module from a different vehicle with ME 7.8 is being used, proceed as follows. As a check, the immobiliser code of the vehicle in which the control module is being installed (NEW) and of the vehicle from which the control module has been removed (OLD) is required.
In some countries (currently USA, Canada) the Ready status must be obtained following a test drive or by using the Porsche System Tester after the DME control module has been programmed. If in doubt about this, contact the relevant importer.

1. Connect the **PIWIS Tester 9718** to the vehicle and start the System Tester. Switch on ignition. Press >> to continue.
2. Select vehicle type. Press >> to continue.
3. Read out vehicle data. →247019 Removing and installing DME control module - "Preliminary work" section
4. Carry out automatic search of control units.
5. Select **DME** with the cursor keys and press the >> key.
6. Select **Program control unit** with the cursor keys and press the >> key.
7. Select **Program control modules** with the cursor keys and press the >> key. Observe the information displayed by the Tester.
8. Enter **Vehicle Ident. No.**, >> confirm with F7 .
9. Enter the **old DME programming code (IPAS)** , >> confirm with F7 .
10. Enter the **new DME programming code (IPAS)** , >> confirm with F7 .
11. Enter the **old immobiliser code (IPAS)** , >> confirm with F7 .
12. Enter the **new immobiliser code (IPAS)** , >> confirm with F7 .
13. Specify **vehicle type** >> .
14. Specify **transmission type** >> .
15. Specify **exhaust standard** >> .
16. Start **Programming** with F8 . The data and programming status is then loaded on to the DME control module. Do not interrupt the programming sequence. Observe Tester instructions.
17. For the learning and adaptation routine of the throttle valve (electronic throttle), switch the ignition off, remove ignition key, insert ignition key and switch on ignition for at least 40 seconds without starting the engine. Do not actuate accelerator pedal. This completes the adaptation of the throttle adjusting unit and the programming sequence is complete.
18. In the **DME** menu go to **Coding**, code Cruise control present, not present.
19. Go to **Vehicle data** and, if necessary, enter the vehicle-specific data.
20. Read out the fault memories of all control units and delete the DME control module fault on every control unit connected to the CAN.

21. Start engine.
22. Carry out a test drive and read out fault memory again.

7. Select **Program control unit** with the cursor keys and press the >> key.
8. Select **Program control module** with the cursor keys and press the >> key. Observe the information displayed by the Tester.
9. Enter **Vehicle Ident. No.**, >> confirm with F7 .
10. Enter the **DME programming code** (IPAS), >> confirm with F7 .
11. Enter the **new immobiliser code** (IPAS), >> confirm with F7 .
12. Specify **vehicle type** >> .
13. Specify **transmission type** >> .
14. Specify **exhaust standard** >> .
15. Start **Programming** with F8 . The data and programming status is then loaded on to the DME control module. Do not interrupt the programming sequence. Observe Tester instructions.
16. For the learning and adaptation routine of the throttle valve (electronic throttle), switch the ignition off, remove ignition key, insert ignition key and switch on ignition for at least 40 seconds without starting the engine. Do not actuate accelerator pedal. This completes the adaptation of the throttle adjusting unit and the programming sequence is complete.
17. In the **DME** menu go to **Coding**, code Cruise control present, not present.
18. Go to **Vehicle data** and, if necessary, enter the vehicle-specific data.
19. Read out the fault memories of all control units and delete the DME control module fault on every control unit connected to the CAN.
20. Start engine.
21. Carry out a test drive and read out fault memory again.

Programming DME control module

WARNING

Sudden voltage interruption of the power supply to the control module.

- **Destruction of the control module.**

→ During programming, it is essential to guarantee the power supply for the Porsche System tester. It is essential to connect a battery charger with a current rating of at least 40 A to the vehicle battery.

→ Prior to disconnecting the control module, switch off the ignition and remove the ignition key.

Note

If a new DME control module is to be installed in a vehicle, the DME code specified in IPAS and the immobiliser code must be entered in the DME control module.
The codes are available from IPAS or via the importer.
Follow the instructions on the Tester.
Later versions of the software may display slightly different text or require a slightly different procedure. The instructions you receive from the tester itself take precedence over this description.

Note

- *During programming, the electric radiator fans may start.*

If a DME control module from a different vehicle with ME 7.8 is being used, proceed as follows. As a check, the immobiliser code of the vehicle in which the control module is being installed (NEW) and of the vehicle from which the control module has been removed (OLD) is required.
In some countries (currently USA, Canada) the Ready status must be obtained following a test drive or by using the Porsche System Tester after the DME control module has been programmed. If in doubt about this, contact the relevant importer.

1. Connect the **PIWIS Tester 9718** to the vehicle and start the System Tester. Switch on ignition. Press >> to continue.
2. Select vehicle type. Press >> to continue.
3. Read out vehicle data. →247019 Removing and installing DME control module - "Preliminary work" section
4. Carry out automatic search of control units.
5. Select **DME** with the cursor keys and press the >> key.
6. Select **Program control unit** with the cursor keys and press the >> key.
7. Select **Program control modules** with the cursor keys and press the >> key. Observe the information displayed by the Tester.
8. Enter **Vehicle Ident. No.**, >> confirm with F7 .
9. Enter the **old DME programming code (IPAS)** , >> confirm with F7 .
10. Enter the **new DME programming code (IPAS)** , >> confirm with F7 .
11. Enter the **old immobiliser code (IPAS)** , >> confirm with F7 .
12. Enter the **new immobiliser code (IPAS)** , >> confirm with F7 .
13. Specify **vehicle type** >> .

14. Specify **transmission type** >> .
15. Specify **exhaust standard** >> .
16. Start **Programming** with F8 . The data and programming status is then loaded on to the DME control module. Do not interrupt the programming sequence. Observe Tester instructions.
17. For the learning and adaptation routine of the throttle valve (electronic throttle), switch the ignition off, remove ignition key, insert ignition key and switch on ignition for at least 40 seconds without starting the engine. Do not actuate accelerator pedal. This completes the adaptation of the throttle adjusting unit and the programming sequence is complete.
18. In the **DME** menu go to **Coding**, code Cruise control present, not present.
19. Go to **Vehicle data** and, if necessary, enter the vehicle-specific data.
20. Read out the fault memories of all control units and delete the DME control module fault on every control unit connected to the CAN.
21. Start engine.
22. Carry out a test drive and read out fault memory again.

 WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

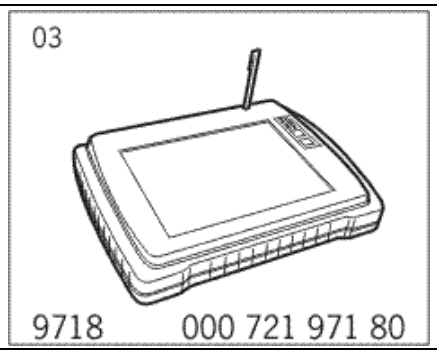
Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.



- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

Preliminary work

Subsequent work on DME control unit

Remove the cover above the heating/air-conditioning system and fluid tank.
If a new DME control unit is installed, then read out the vehicle data from the DME control unit and transfer them to the new one.

1. Connect the **PIWIS Tester 9718** to the vehicle and start the System Tester. Switch on ignition. Press >> to continue.
2. Select vehicle type. Press >> to continue.
3. Carry out automatic search of control units.
4. Select **DME** with the cursor keys and press the >> key.
5. Select **Program control unit** with the cursor keys and press the >> key.
6. Select **Read out vehicle data** (Vehicle data) with the cursor keys and press the >> key.
7. The message **Reading vehicle data** will appear on the tester screen.
8. After replacement of the DME control unit, the vehicle data is uploaded from the **Program control unit** menu option.

General warning notes

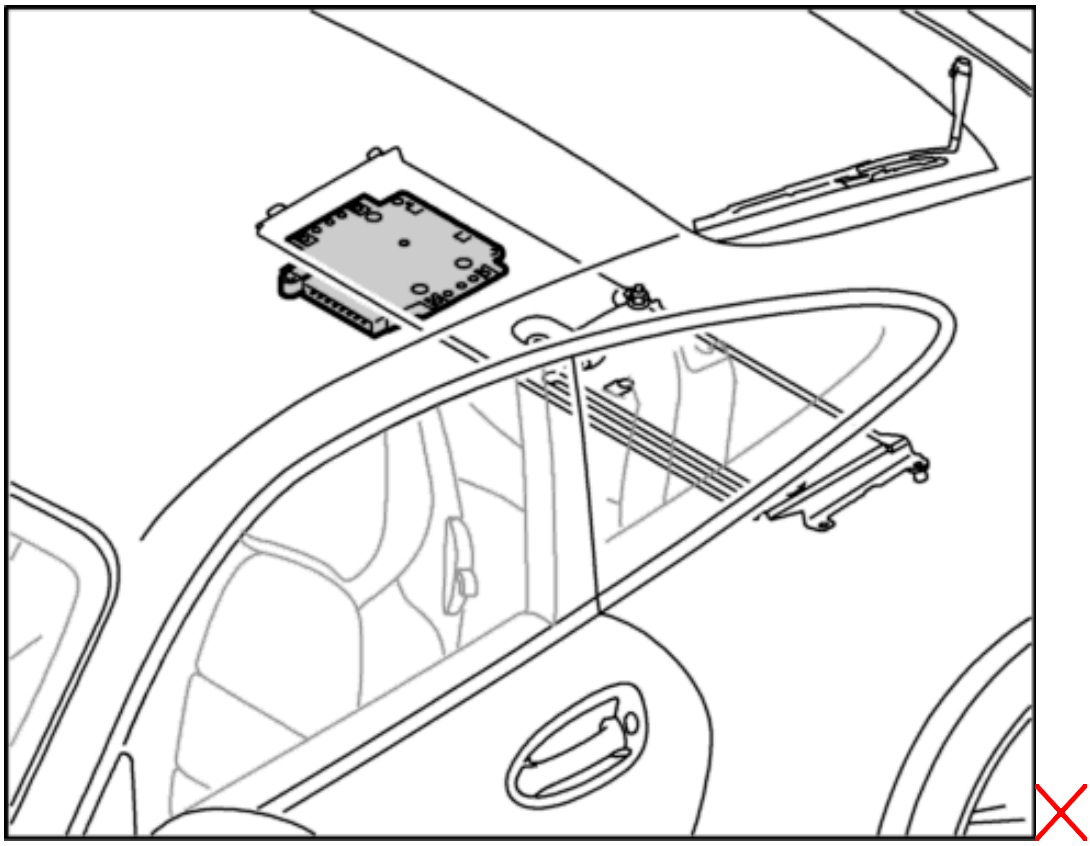
General warning notes for control units

 WARNING

Sudden voltage interruption of the power supply to the control module.

- **Destruction of the control module.**

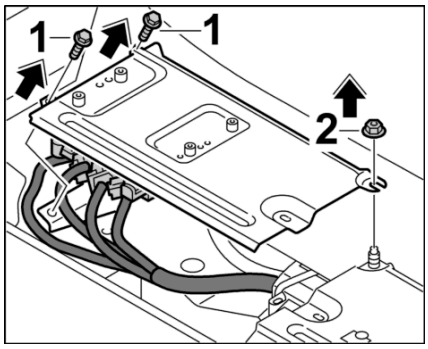
→ During programming, it is essential to guarantee the power supply for the Porsche System tester. It is essential to connect a battery charger with a current rating of at least 40 A to the vehicle battery.



→ Prior to disconnecting the control module, switch off the ignition and remove the ignition key.

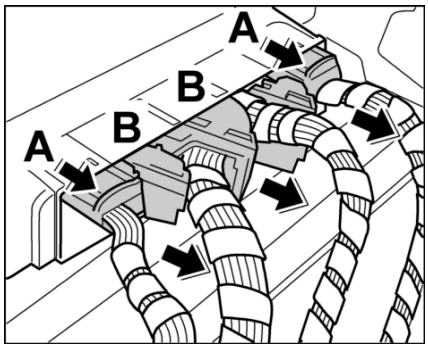
top of page

Removing DME control module



Removing DME control module

Installation Location:



Installation position 911

1. Fold the backrests of the rear seats forward.
2. Lift the carpet lining up and remove.

Unscrewing fastening screws

3. Unscrew fastening screw **-1-** and loosen fixing nut **-2-** .
4. Turn control module holder.

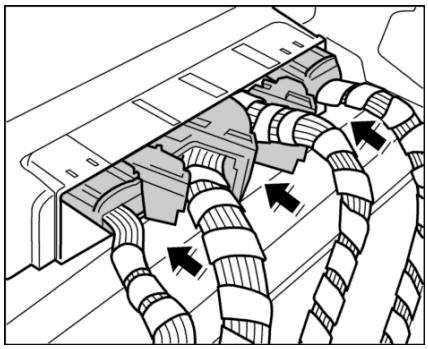
Releasing electric connector

WARNING

Risk of damage to electronic control modules.

- **If care is not taken, electrical and electronic components may be destroyed.**

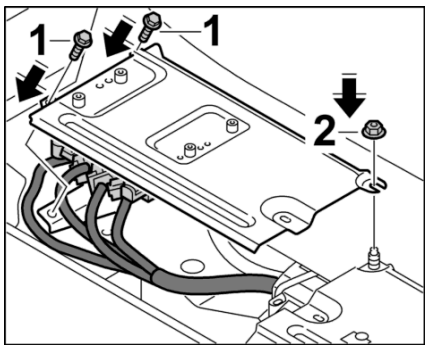
→ Before removing the control module, switch off the ignition and remove the ignition key.



5. Press in the plug and pull it off the control module **-A-** .
6. Push in plugs **-B-** lock and actuate the latching lever.
7. Unscrew the four fastening screws of the holder and remove the control module.

top of page

Installing DME control module



Installing DME control module

1. Fasten the control module to the holder with the four fastening screws. →**M6: 10 (7.5 ftlb.) Nm**

Inserting the connectors

2. Push in plug **-B-** for DME control module and secure with the locking bar.
3. Press in plugs **-A-** on the control module, until the connectors engage.

Tightening fastening screws

4. Turn the control module holder and push it in under the fastening nut **-2-** .
5. Tighten both fastening screws **-1-** and the fastening nut **-2-** . →**M6: 10 (7.5 ftlb.) Nm** →**M6: 10 (7.5 ftlb.) Nm**

top of page

Subsequent work

Subsequent work on DME control unit

1. Place carpet lining in position, paying attention to the fitted shape.
2. The DME control unit can be programmed using the **PIWIS Tester 9718**.

top of page

Programming DME control module

Programming new DME control module

WARNING

Sudden voltage interruption of the power supply to the control module.

- **Destruction of the control module.**

→ During programming, it is essential to guarantee the power supply for the Porsche System tester. It is essential to connect a battery charger with a current rating of at least 40 A to the vehicle battery.

→ Prior to disconnecting the control module, switch off the ignition and remove the ignition key.

Note

If a new DME control module is to be installed in a vehicle, the DME code specified in IPAS and the immobiliser code must be entered in the DME control module.
The codes are available from IPAS or via the importer.
Follow the instructions on the Tester.
Later versions of the software may display slightly different text or require a slightly different procedure. The instructions you receive from the tester itself take precedence over this description.

Note

- *During programming, the electric radiator fans may start.*

Note

Depending on the software version of the PIWIS Tester, a new DME control module can be interrogated for the "old DME programming code". In this case, enter the code from IPAS which is also used for the "new DME programming code".

In some countries (currently USA, Canada) the Ready status must be obtained following a test drive or by using the Porsche System Tester after the DME control module has been programmed. If in doubt about this, contact the relevant importer.

1. Connect the **PIWIS Tester 9718** to the vehicle and start the System Tester. Switch on ignition. Press >> to continue.
2. Select vehicle type. Press >> to continue.

Read out vehicle data. →247019 Removing and installing DME control module - "Preliminary work" section

3. Switch to the **Special functions** menu and perform the **vehicle handover** using the F8 key.
4. In the **Special functions** menu, erase **All fault memories** by pressing >> .
5. Carry out automatic search of control units.
6. Select **DME** with the cursor keys and press the >> key.
7. Select **Program control unit** with the cursor keys and press the >> key.
8. Select **Program control module** with the cursor keys and press the >> key. Observe the information displayed by the Tester.
9. Enter **Vehicle Ident. No.**, >> confirm with F7 .
10. Enter the **DME programming code** (IPAS), >> confirm with F7 .
11. Enter the **new immobiliser code** (IPAS), >> confirm with F7 .
12. Specify **vehicle type** >> .
13. Specify **transmission type** >> .
14. Specify **exhaust standard** >> .
15. Start **Programming** with F8 . The data and programming status is then loaded on to the DME control module. Do not interrupt the programming sequence. Observe Tester instructions.
16. For the learning and adaptation routine of the throttle valve (electronic throttle), switch the ignition off, remove ignition key, insert ignition key and switch on ignition for at least 40 seconds without starting the engine. Do not actuate accelerator pedal. This completes the adaptation of the throttle adjusting unit and

the programming sequence is complete.

17. In the **DME** menu go to **Coding**, code Cruise control present, not present.
18. Go to **Vehicle data** and, if necessary, enter the vehicle-specific data.
19. Read out the fault memories of all control units and delete the DME control module fault on every control unit connected to the CAN.
20. Start engine.
21. Carry out a test drive and read out fault memory again.

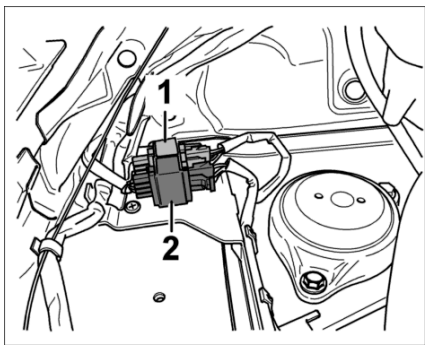
top of page

Preliminary work

Preliminary work for removing oxygen sensor behind the catalytic converter

1. Remove air cleaner housing →242519 Removing and installing air cleaner housing - chapter on "removing".

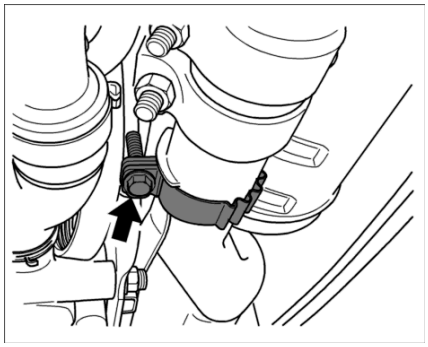
top of page



Removing oxygen sensor behind the catalytic converter

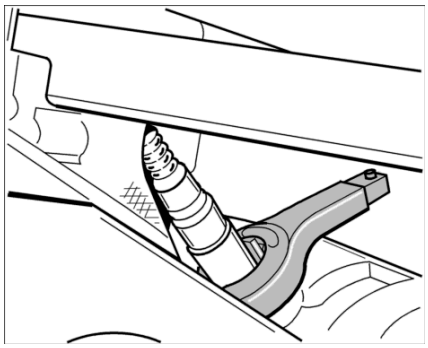
Removing oxygen sensor behind catalytic converter of cylinder bank 1-3

Note



- *Always expose oxygen sensor wire far enough for it to be able to turn when unscrewing the sensor.*

→241000 Precautionary measures when handling oxygen sensors



Plug connection for oxygen sensor

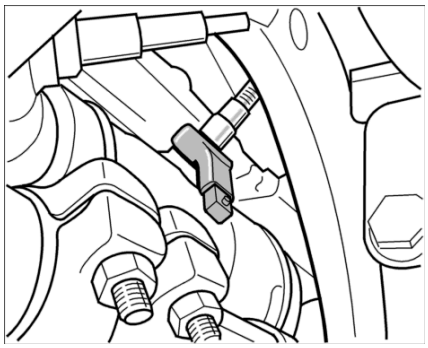
1. Disconnect plug connection in left of engine compartment for the oxygen sensor behind catalytic converter. To do this, first remove the grey connector from the holder and pull the red locking element upwards. Disconnect cable plug **-1-** .
2. Release the black cable from the cable guide.

Clamp for holder of catalytic converter

3. For better accessibility, undo the exhaust clamp by unscrewing the fastening screw **-arrow-** and remove the clamp.

Releasing oxygen sensor

4. Release oxygen sensor from the vehicle underside using an open-ended wrench or open ring wrench (a/f 22) and screw it out by hand *→Releasing oxygen sensor* .



Removing oxygen sensor behind catalytic converter of cylinder bank 4-6

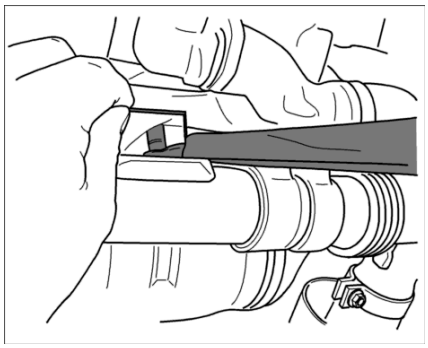
Note

- *Always expose oxygen sensor wire far enough for it to be able to turn when unscrewing the sensor.*

→241000 Precautionary measures when handling oxygen sensors

1. Disconnect plug connection in right of engine compartment for the oxygen sensor behind catalytic converter. To do this, first remove the grey connector from the holder and pull the red locking element upwards. Disconnect cable plug.
2. Release black cable of the oxygen sensor behind catalytic converter from the cable holder.

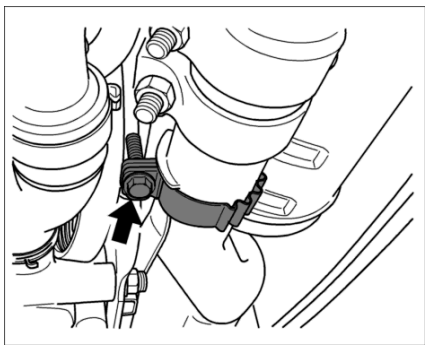
Releasing oxygen sensor



3. Undo oxygen sensor using an open-ended wrench or open ring wrench (a/f 22) and screw it out by hand.

top of page

Installing oxygen sensor behind the catalytic converter



Installing oxygen sensor behind catalytic converter of cylinder bank 1-3

1. Guide the oxygen sensor through so that the cable can be easily routed from the engine compartment side to the exhaust system.
2. Position the oxygen sensor by hand and screw in as far as possible.

Tool on oxygen sensor

3. Tighten oxygen sensor with commercially available open ring wrench **accessory for torque wrench. Open ring wrench angled NR.96-3** and torque wrench **Torque wrench, signal-transmitting with changeover ratchet NR.90** and tighten to the specified tightening torque →**Tightening torque: 41 ftlb. +/-3.5 ftlb.** . In order to disengage the torque wrench, actuate catch with a small wire or Allen key *→Tool on oxygen sensor* .

Clamp for holder of catalytic converter

4. Re-fit exhaust clamp and fit fastening screw to the specified tightening torque →**Tightening torque: 17 ftlb. -arrow-** .
5. Lay black oxygen sensor cable and fix in cable guide. Fit cable plug.

Installing oxygen sensor behind catalytic converter of cylinder bank 4-6

1. Guide the oxygen sensor through so that the cable can be easily routed from the engine compartment side to the exhaust system.
2. Position the oxygen sensor by hand and screw in as far as possible.
3. Tighten oxygen sensor with commercially available open ring wrench **accessory for torque wrench. Open ring wrench angled NR.96-3** and torque wrench **Torque wrench, signal-transmitting with changeover ratchet NR.90** and tighten to the specified tightening

torque →**Tightening torque: 41 ftlb. +/-3.5 ftlb.** .

4. Lay black oxygen sensor cable and fix in cable guide. Fit cable plug.

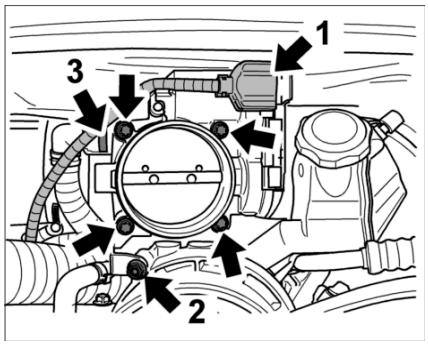
24 74 19 Removing and installing tuning pipe - as of MY 2005

- Preliminary work
- Removing tuning pipe
- Installing tuning pipe
- Subsequent work

top of page

Preliminary work

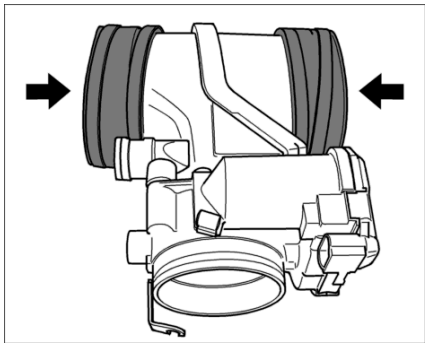


Preliminary work for removing tuning pipe

1. Disconnect the battery *→271000 A5 Work instructions after disconnecting the battery - chapter on "disconnecting"* .
2. Remove air cleaner housing →242519 Removing and installing air cleaner housing - chapter on "removing".

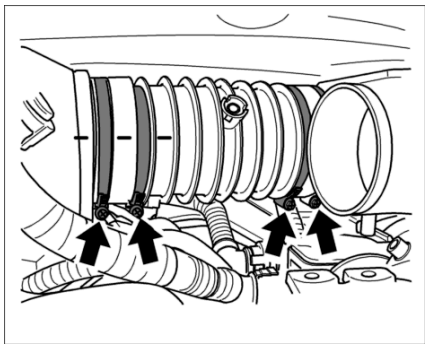
top of page

Removing tuning pipe



Removing tuning pipe

Throttle body

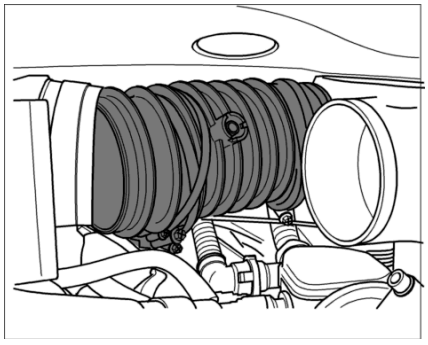


1. Remove distributor pipe. To do this, remove the fastening nut M6 of the throttle body from the rubber mount of the servo pump **-2-** .
2. Release cable plug on throttle body, and pull out and release cable **-1-** .

3. Release crankcase venting pipe connection from distributor pipe and remove **-3-** .

Distributor pipe

4. Loosen the four screw-type hose clamps on the rubber sleeves to the side intake distributors and push the rubber sleeves onto the distributor pipe **-arrows-** . Remove distributor pipe together with mounted throttle body. Remove distributor pipe from the engine compartment.



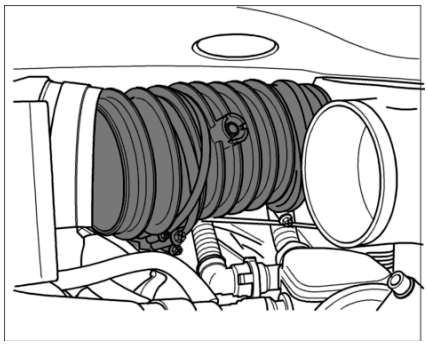
Tuning pipe

Note

Before removing tuning pipe, a mark should be made with a felt-tip pen on the intake distributor, rubber sleeve and tuning pipe so that the position for re-installation is correct.

5. Loosen the four screw-type hose clamps of the tuning pipe on the rubber sleeves to the side intake distributors **-arrows-** and push the rubber sleeves onto the intake distributor pipe as far to the side as possible.

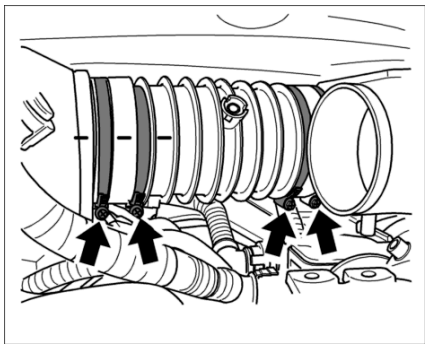
Removing tuning pipe



6. Pull tuning pipe out of the rubber sleeves and remove vacuum hose from the rear vacuum modulator of the resonance flap. Remove tuning pipe from the engine compartment.

top of page

Installing tuning pipe

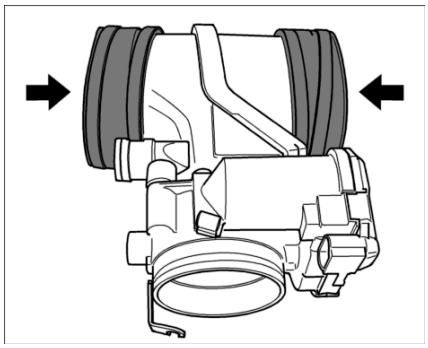


Installing tuning pipe

1. Wipe out engine oil residues in the intake manifolds and sleeves with a cloth.

Removing tuning pipe

2. Loosen the four screw-type hose clamps of the tuning pipe and push the rubber sleeves as far as possible onto the side intake distributors.
3. Guide tuning pipe between the intake distributors of both cylinder banks and connect vacuum line to the vacuum modulator of the tuning pipe. If necessary, clip vacuum line into the rear holder.



Tuning pipe

Note

Before removing tuning pipe, a mark should be made with a felt-tip pen on the intake distributor, rubber sleeve and tuning pipe so that the position for re-installation is correct.

4. Press tuning pipe between the side rubber sleeves and align with the marking. Make sure that the rubber sleeves and screw-type hose clamps are pushed equally onto the tuning pipe and intake distributors. Tighten screw-type hose clamps **-arrows-** .

Distributor pipe

5. Fit distributor pipe together with throttle body. To do this, push four screw-type hose clamps and the rubber sleeves onto the distributor pipe **-arrows-** . Guide distributor pipe together with mounted throttle body between the intake distributors. Align and tighten the rubber sleeves screw-type hose clamps.
6. Fit the crankcase ventilation line, cable plug and hexagon nut. →**Tightening torque: 7.5 ftlb.**

top of page

Subsequent work

Work subsequent to installing tuning pipe

1. Install air cleaner housing →242519 Removing and installing air cleaner housing - chapter on "installing".
2. Connect the battery *→271000 A6 Work instructions after disconnecting the battery - chapter on "connecting"* .

as of MY 2005
Country C00, C02, C05, C07, C08, C09, C10, C11, C12, C13, C14, C15, C16, C18, C19, C20, C21, C22, C23, C24, C25, C26, C27, C28, C32, C33, C34, C35, C36, C37, C38, C39, C45, C46, C98, C99

WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

26 10 19 Removing and installing exhaust manifold - as of MY 2005

- Removing exhaust manifold
- Installing exhaust manifold

top of page

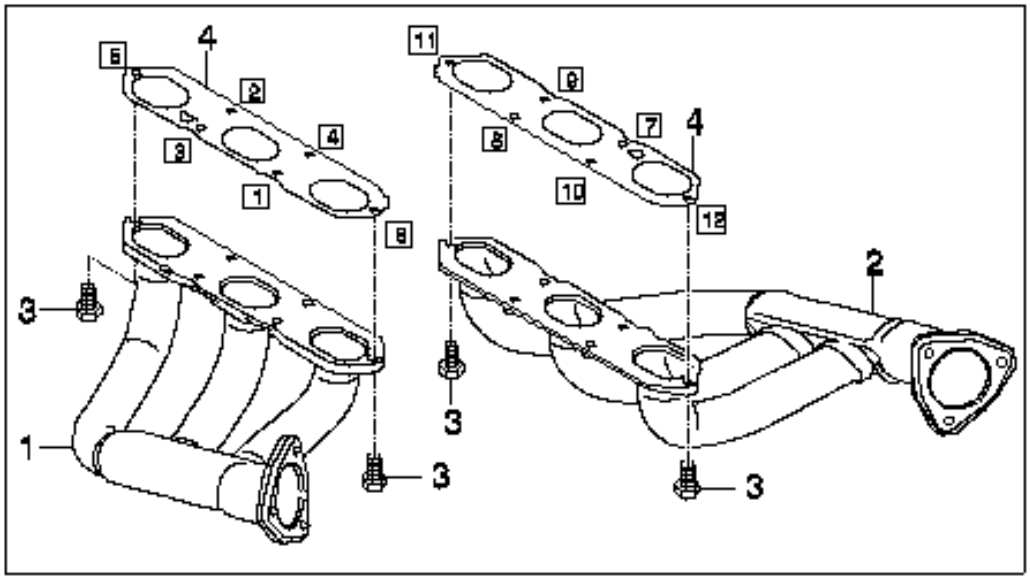
Removing exhaust manifold

Removing exhaust manifold

 DANGER

Parts of the exhaust system become extremely hot!

- **Danger of burns**
- **Permanent scarring of the skin**

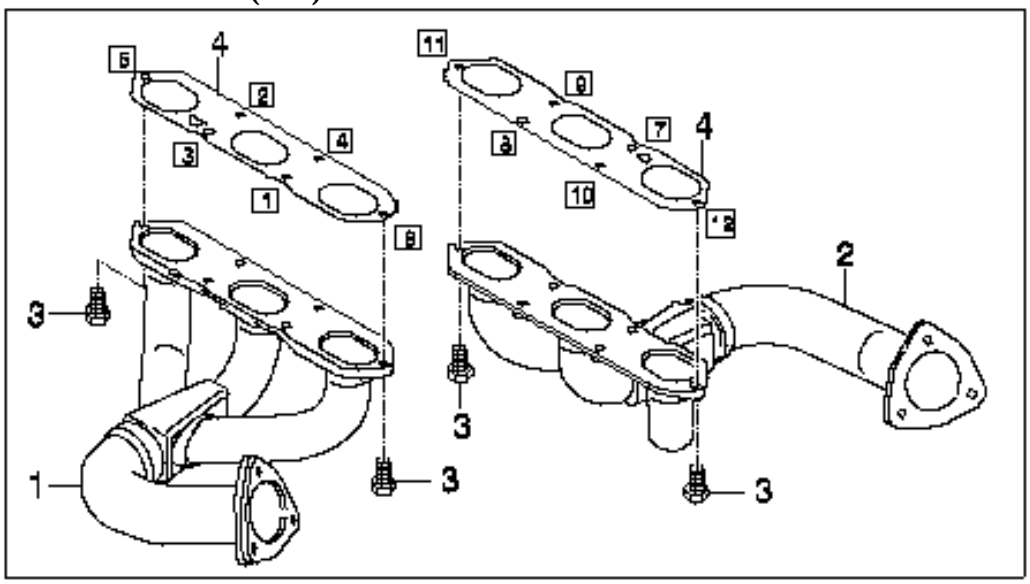


→ Do not begin work until the exhaust system has cooled down completely.

→ If it is imperative that you work on the hot exhaust system, ensure that you wear fire-resistant and heat-resistant protective gear.

 **Note**

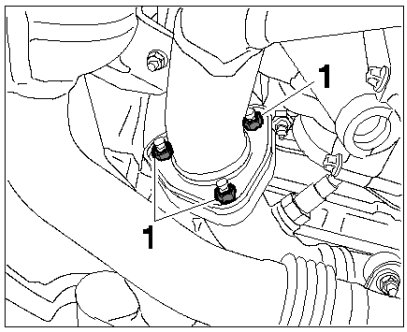
- *The numbers shown in boxes in the component overviews indicate the tightening sequence. Always follow the specified sequence.*



Component overview M 96/05 (3.6 l)

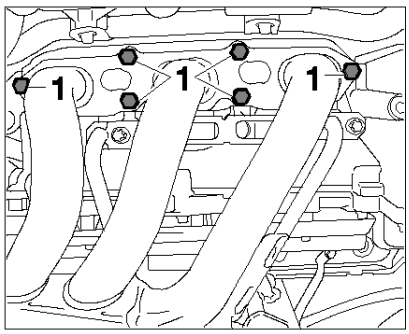
Exhaust manifold, 3.6 l

Item	Designation	Explanation
1	Exhaust manifold, cylinders 1 - 3	Engine M 96/05
2	Exhaust manifold, cylinders 4 - 6	Engine M 96/05
3	Screw, M8 x 26	Replace
4	Exhaust manifold seal	Replace; observe installation position!



Component overview M 97/01 (3.8 l)

Exhaust manifold, 3.8 l



Item	Designation	Explanation
1	Exhaust manifold, cylinders 1 - 3	Engine M 97/01
2	Exhaust manifold, cylinders 4 - 6	Engine M 97/01

3	Screw, M8 x 26	Replace
4	Exhaust manifold seal	Replace; observe installation position!

Catalytic converter flange joint

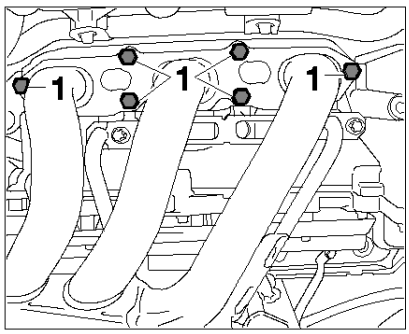
1. Loosen threaded flange joint to catalytic converter **-1-** . Replace lock nuts.

Manifold flange threaded joint

2. Unscrew hexagon-head bolts (M8 x 26) **-1-** on exhaust manifold and remove manifold. Replace bolts.
3. Remove exhaust manifold seal and carefully clean sealing surfaces on the cylinder head and manifold.
4. Check exhaust manifold for damage and cracks.

top of page

Installing exhaust manifold



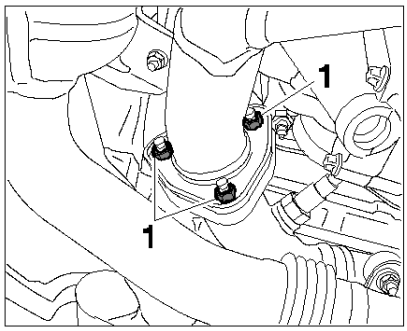
Installing exhaust manifold

1. Position new metal seal on cylinder head. The beading must point to the sealing surface of the cylinder head.

Note

- *Observe installation position of three-hole flange seal. The beading is facing the exhaust manifold and the edges must not project over the contour of the flange.*

2. Insert exhaust manifold on catalytic converter flange with a new seal and secure evenly to the cylinder head with two new screws. Then screw in the remaining (new) screws. Observe installation position of seal on catalytic converter flange .
3. Fit three new lock nuts on catalytic converter flange and screw on slightly.



Manifold flange threaded joint

Note

- *The numbers shown in boxes in the component overviews indicate the tightening sequence. Always follow the specified sequence.*

4. Tighten screws for exhaust manifold **-1-** in accordance with the tightening sequence (see relevant component overview). →**Tightening torque: 23 (17 ftlb.) Nm**

Catalytic converter flange joint

5. Tighten new lock nuts **-1-** on catalytic converter flange. →**Tightening torque: 23 (17 ftlb.) Nm**

Preliminary work

Preliminary work

1. Remove rear wheel. Use a **socket wrench insert P 300** to avoid damage to the wheel rims →440519 Removing and installing wheel - section on "Removing".

Rear spoiler support

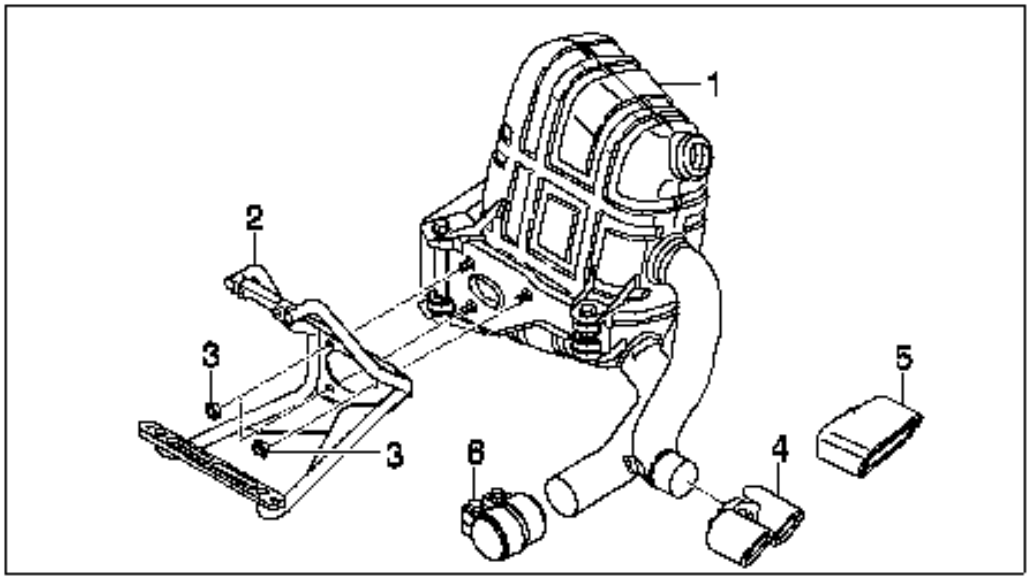
2. Remove strut for rear apron. Unscrew fastening screws **-1 and 2-** and remove strut.

top of page

Removing rear silencer

Removing rear silencer

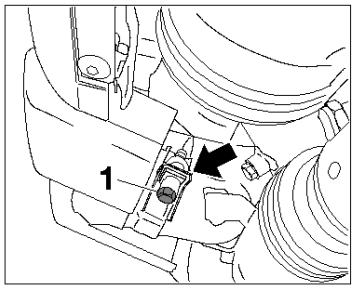
DANGER



Parts of the exhaust system become extremely hot!

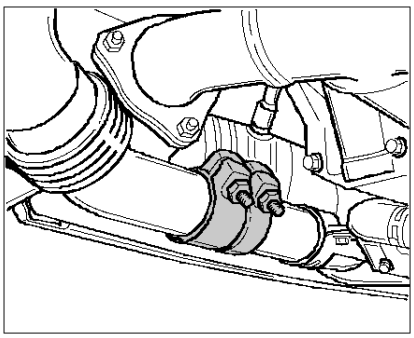
- **Danger of burns**
- **Permanent scarring of the skin**

→ Do not begin work until the exhaust system has cooled down completely.



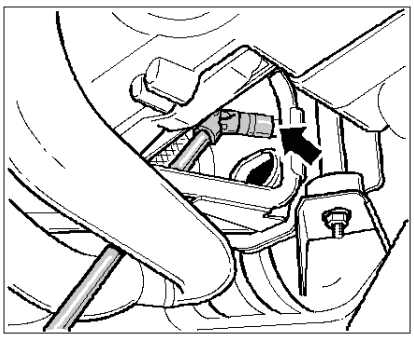
→ If it is imperative that you work on the hot exhaust system, ensure that you wear fire-resistant and heat-resistant protective gear.

Component overview of silencer



Component overview of rear silencer

Item	Designation	Explanation
1	Rear silencer	Check welding points for cracks
2	Holder	
3	Hexagon nut M8	Replace
4	Tailpipe M 97/01 (3.8 l)	Adjust following assembly
5	Tailpipe M 96/05 (3.6 l)	Adjust following assembly
6	Clamping sleeve	Replace



Tailpipe mount

1. Remove tailpipe. Unscrew M8 screw **-1-** on the ball clamp, widen ball clamp **-arrow-** and pull off tailpipe.

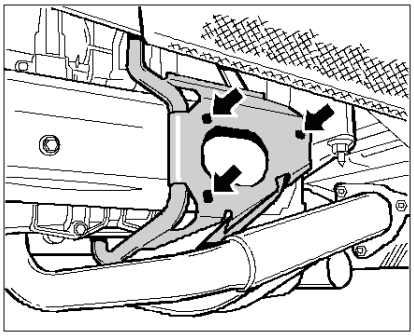
Clamping sleeve, rear silencer to catalytic converter

2. Screw off M8 fastening nuts on clamping sleeve. If corroded, spray sleeve with penetrating oil or heat it up.

Screw connection points on holder

3. Unscrew three M8 hexagon nuts on the rear silencer holder **-arrow-** . **Tool recommendation:** commercially available 3/8-inch ratchet wrench with extension, universal joint and socket wrench insert (a/f 13).
4. Push clamping sleeve towards the catalytic converter and lift silencer in the direction of the wheel housing and out of the vehicle.

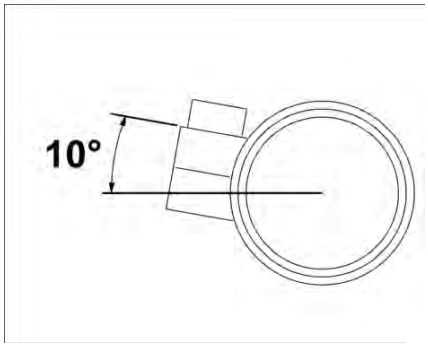
top of page



Installing rear silencer

Installing rear silencer

Note

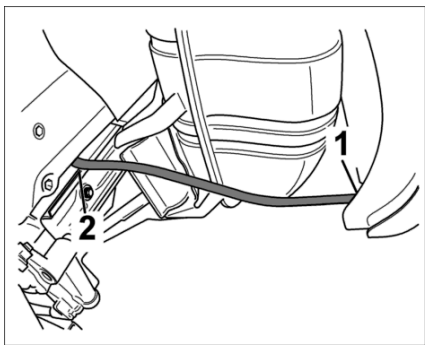


- *Replace clamping sleeve, seal and lock nuts. Apply a light coating of high-temperature grease on the sleeve before installation to facilitate fitting.*

1. Fit new clamping sleeve. To do this, slide the clamping sleeve onto the catalytic-converter pipe.

Position at which rear silencer is screwed to holder

2. Insert the silencer into the vehicle from the wheel side and move it to installation position. Then fit three new hexagon nuts on the screw connection points of the holder and tighten only slightly.



Installation position of clamping sleeve

3. Slide the clamping sleeve over the silencer pipe and move it to installation position *→Installation position of clamping sleeve* . Screw down both hexagon nuts and tighten to the prescribed torque. → **Tightening torque: 23 (17 ftlb.) Nm**
4. Tighten three hexagon nuts on the rear silencer holder. →**Tightening torque: 23 (17 ftlb.) Nm**
5. Fit and adjust tailpipe. →**Tightening torque: 30 (22 ftlb.) Nm** →263419 Removing and installing tailpipe - section on "Installing" [997110 997111 997310 997311 997410 997411 997610 997611]→263419 Removing and installing tailpipe - section on "Installing" [997120 997121 997320 997321 997430 997431 997620 997621].

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

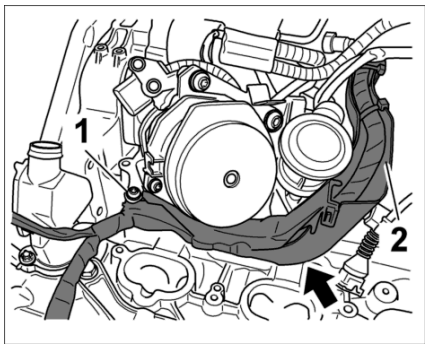
26 65 19 Removing and installing secondary air pump - as of MY 2005

- Preliminary work
- Removing secondary air pump
- Installing secondary air pump
- Subsequent work

top of page

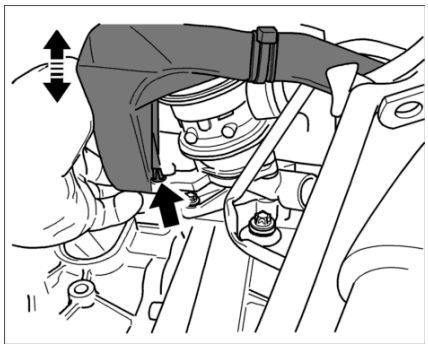
Preliminary work



Preliminary work for removing secondary air pump

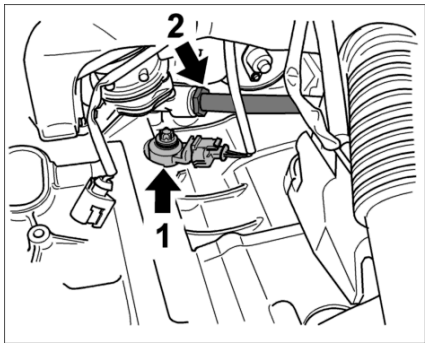
1. Remove intake distributor, cylinder bank 1-3 →244619 Removing and installing intake distributor - chapter on "removing".
2. Pull off cable plug from the knock sensor.

top of page



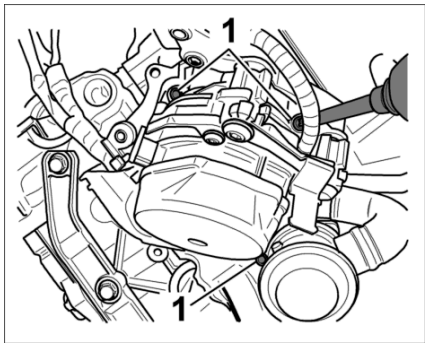
Removing secondary air pump

Removing secondary air pump



Wiring harness for secondary air pump

1. Remove cable duct from the secondary air pump **-2-** . To do this, remove a fastening screw behind the secondary air pump **-1-** .

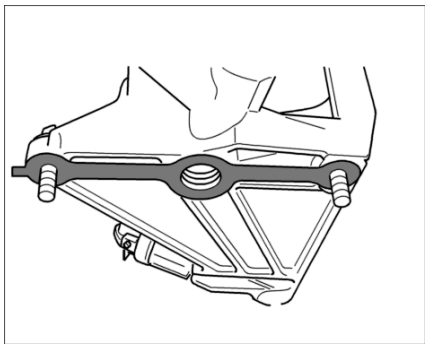


Cable duct for secondary air pump

2. Pull off and release front fastening of cable duct **-arrows-** .
3. Detach cable plug from secondary air pump.

Knock sensor and secondary air pump

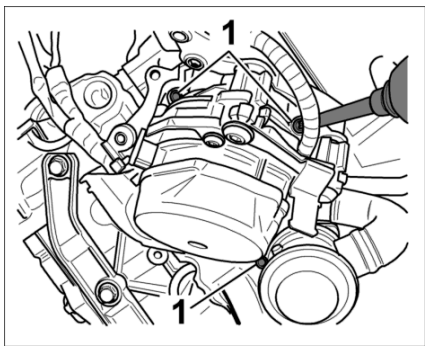
4. Remove cable plug from knock sensor **-1-** . Unscrew union nut of pressure line (a/f 22) **-2-** .



Secondary air pump with bracket

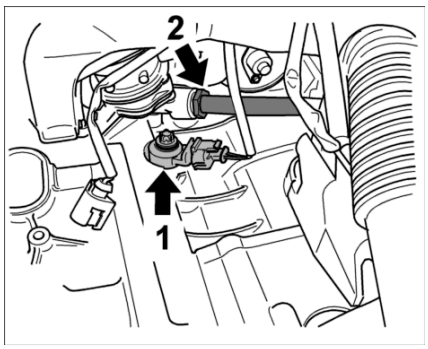
5. Remove fastening screws from the secondary air pump **-1-** .
6. Remove secondary air pump from crankcase and replace seal. Clean sealing surfaces and plug the opening with a cloth.

top of page



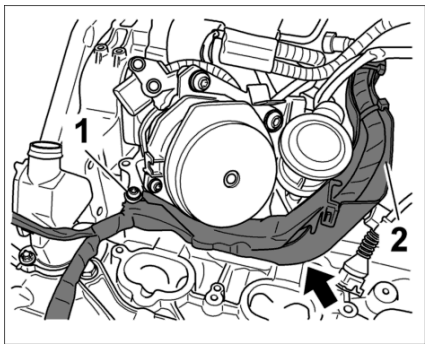
Installing secondary air pump

Installing secondary air pump



Secondary air pump seal

1. Replace seal between secondary air pump and crankcase, clean the surfaces and turn the seal to fit exactly on two pre-fitted fastening screws *→Secondary air pump seal* .



Secondary air pump with bracket

2. Place the secondary air pump with the prefitted screws and the seal in the installation position. Carefully insert the pressure line in the secondary air pump. Position the three fastening screws and tighten them. →**Tightening torque: 7.5 ftlb.** . Position and tighten pressure line union nut **-2-** .

Knock sensor and secondary air pump

3. Connect cable plug to knock sensor **-1-** .

Wiring harness for secondary air pump

4. Fit cable plug and cable duct *→Wiring harness for secondary air pump* →**Tightening torque: 7.5 ftlb.** .
5.

top of page

Subsequent work

Work subsequent to installing secondary air pump

1. Install intake distributor, cylinder bank 1-3 →244619 Removing and installing intake distributor - chapter on "installing".

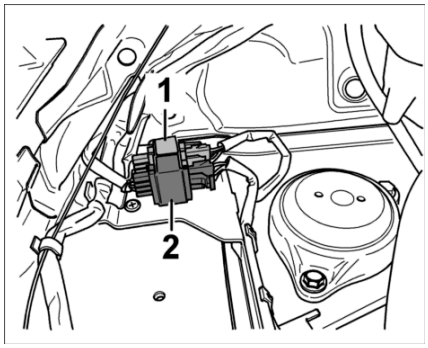
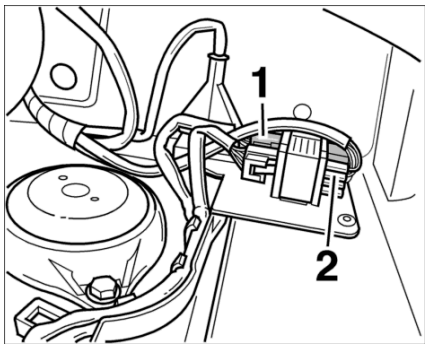
26 73 19 Removing and installing catalytic converter - as of MY 2005



- Preliminary work
- Removing catalytic converter
- Installing catalytic converter
- Subsequent work

top of page

Preliminary work



Preliminary work

1. Remove air cleaner housing →242519 Removing and installing air cleaner housing - section on "Removing".

Plug connections for oxygen sensors, page 1-3

2. Disconnect the relevant plug connections for the oxygen sensors in the engine compartment *→241000 Precautionary measures when handling oxygen sensors*.

Plug connections for oxygen sensors, page 4-6

Note

- *Always expose oxygen sensor wire far enough for it to be able to turn when unscrewing the sensor.*

3. Expose oxygen sensor cable.

Note

- *If a catalytic converter needs to be replaced, first remove the two oxygen sensors.*

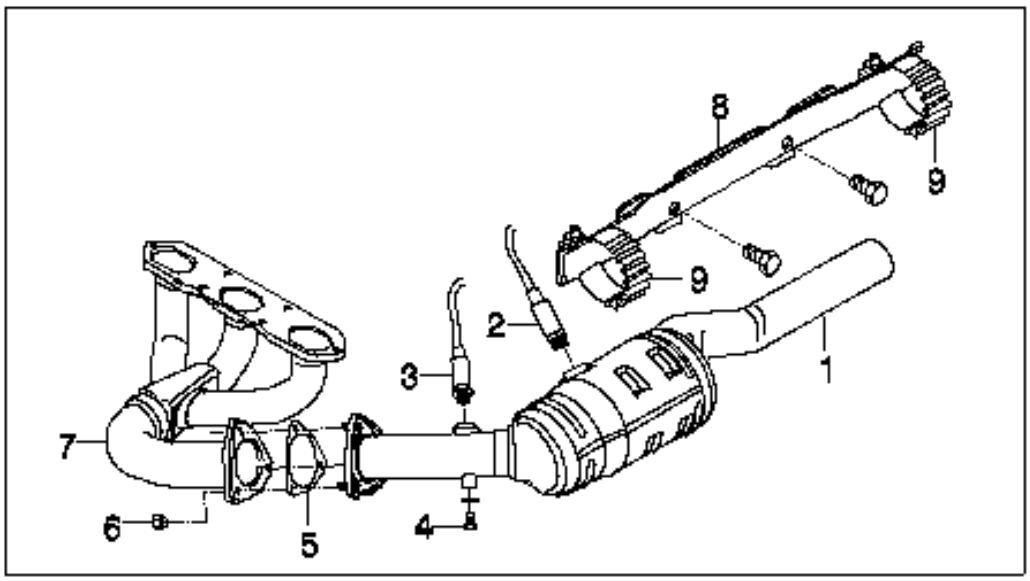
4. Remove oxygen sensor behind catalytic converter so that it is not damaged when you remove the catalytic converter.

top of page

Removing catalytic converter

Removing catalytic converter

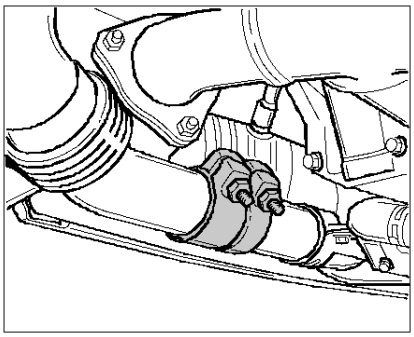
DANGER



Parts of the exhaust system become extremely hot!

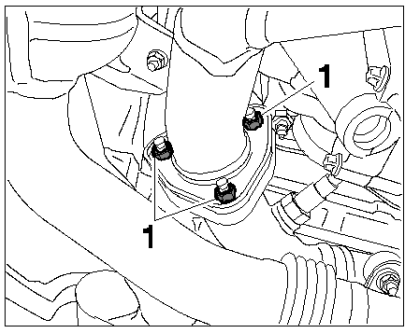
- **Danger of burns**
- **Permanent scarring of the skin**

→ Do not begin work until the exhaust system has cooled down completely.



→ If it is imperative that you work on the hot exhaust system, ensure that you wear fire-resistant and heat-resistant protective gear.

Component overview



Component overview

Item	Designation	Explanation
1	Catalytic converter	
2	Oxygen sensor behind catalytic converter	Grease threads for re-installation
3	Oxygen sensor ahead of catalytic converter	Grease threads for re-installation
4	CO removal position	Replace seal if opened
5	Flange seal	Replace; observe installation and beading position!
6	Hexagon nut, M8	Replace
7	Exhaust manifold	
8	Catalytic converter holder to engine carrier	
9	Clamps on catalytic converter holder	

Clamping sleeve, rear silencer to catalytic converter

1. Screw off M8 fastening nuts on clamping sleeve and slide sleeve onto the silencer pipe. If corroded, spray sleeve with penetrating oil or heat it up.
2. Loosen clamp on catalytic converter holder.

Catalytic converter flange joint

3. Loosen threaded flange joint to exhaust manifold **-1-** . Replace lock nuts.
4. Lift catalytic converter out of the vehicle.

top of page

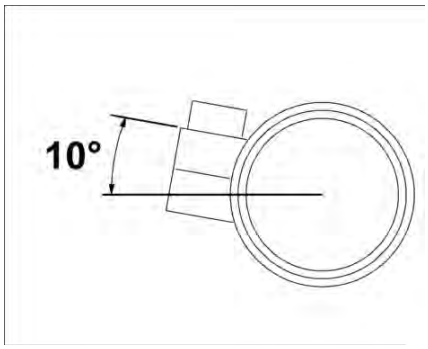
Installing catalytic converter

Installing catalytic converter

Note

- *Always expose oxygen sensor wire far enough for it to be able to turn when unscrewing the sensor.*

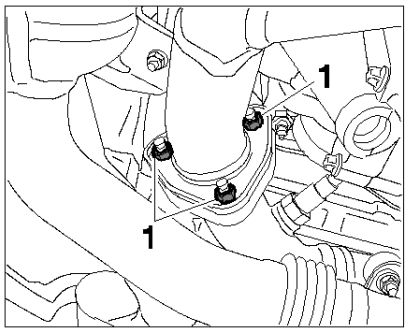
Note



- *Replace clamping sleeve, seal and lock nuts. Apply a light coating of high-temperature grease on the sleeve before installation to facilitate fitting.*

1. Grease new clamping sleeve with high-temperature paste and slide it onto the silencer pipe.
2. Insert catalytic converter into the vehicle. When doing so, watch out for the oxygen sensors and cable.

Note



- *Observe installation position of three-hole flange seal. The beading is facing the exhaust manifold and the edges must not project over the contour of the flange.*

3. Fit new seal and new lock nuts on the exhaust manifold flange and screw on slightly.

Installation position of clamping sleeve

4. Slide the clamping sleeve over the silencer pipe and move it to installation position *→Installation position of clamping sleeve* , then screw on the two hexagon nuts.

Catalytic converter flange joint

5. Tighten three lock nuts **-1-** on catalytic converter flange. →**Tightening torque: 23 (17 ftlb.) Nm**
6. Tighten fastening screws on clamping sleeve. →**Tightening torque: 23 (17 ftlb.) Nm**
7. Align clamp on catalytic converter holder and tighten M8 screw. →**Tightening torque: 23 (17 ftlb.) Nm**

top of page

Subsequent work

Subsequent work

Note

- *Grease the thread of the oxygen sensors that will be fitted again with Optimol* ***Optimoly Paste MF****.*
- *Replace sealing ring. If this is not possible, the "old" oxygen sensor must be tightened to* ***50 Nm (37 ftlb.)****.*

1. Install oxygen sensor behind catalytic converter. If the sensor ahead of the catalytic converter was also removed, install this as well. →247319 Removing and installing oxygen sensor behind catalytic converter - section on "Installing"; →246919 Removing and installing oxygen sensor ahead of catalytic converter - section on "Installing"; *→241000 Precautionary measures when handling oxygen sensors*.
2. Lay oxygen sensor cable carefully and connect cable plug.
3. Install air cleaner housing →242519 Removing and installing air cleaner housing - section on "Installing".

27 06 01 Battery trickle charge - as of MY 2005

Preliminary work

1. Remove battery cover. →270601 Checking battery - removing.
2. Connect rapid-start battery charger to the vehicle battery.
3. Follow the instructions for the rapid-start battery charger under: "Battery charging condition/operating status".

General warning notes

→ *General warning notes for battery*

Tools and materials

Check battery voltage using a rapid-start battery charger.
See Workshop Equipment Manual, Gr. 2.5

Checking battery charging condition with battery tester

1. Check the battery charging condition according to the operating instructions for the relevant rapid-start battery charger.

Evaluating the test results and further procedures:

Open-circuit voltage in volts	Battery charging condition in %	Evaluation and procedure
12.7 - 12.5	100 - 80	Battery charging condition OK
12.5 - 12.2	80 - 50	Battery charging condition reduced, recharge battery and observe an inactive period for two hours after charging. →270601 Checking battery
12.2 - 11.6	50 - 10	Battery flat; recharge battery and observe an inactive period for two hours after charging. →270601 Checking battery
below 11.6	below 10	Battery totally discharged; replace battery. →270619 Removing and installing battery

Reworking

1. Install battery cover. →270601 Checking battery - removing.

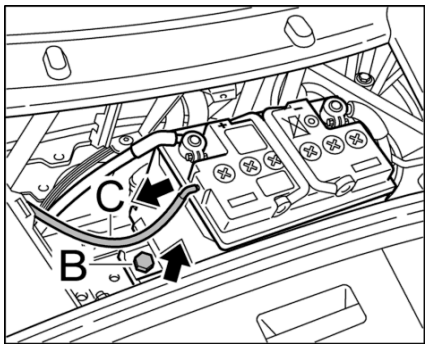
Removing battery

Removing battery

Note



For vehicles with a Vehicle Tracking System (VTS), please read the *→906323 Vehicle Tracking System (VTS)* TI!

The battery is located at the front in the radiator tank.
Observe the warning notes and safety regulations for lead-acid batteries. → *Safety instructions for handling batteries*

Battery cover

1. Open the turn-lock caps **-A-** of the battery cover and take off the plastic lid.

Disconnecting battery

 WARNING

Risk of explosion, injury, short circuit and damage to the generator and electronic control units.

- **Risk of acid burns as a result of emerging acid.**

→ Do not disconnect battery with engine running.
→ Switch off all loads and remove ignition key.
→ Disconnect and reconnect battery with extreme caution. Risk of short circuit and explosion.
→ Do not tilt battery when removing it. Risk of acid burns as a result of emerging acid.
→ Do not rub the battery with a dry cloth. Risk of explosion as a result of static charge.

2. First disconnect the negative then the positive leads from the battery.
3. Pull the vent hose **-C-** away from the battery.
4. Unscrew the fastening screw for the battery mount **-B-** and remove the battery mount.

 WARNING

Risk of explosion, injury, short circuit and damage to the generator and electronic control units.

- **Risk of acid burns as a result of emerging acid.**

→ Do not disconnect battery with engine running.
→ Switch off all loads and remove ignition key.
→ Disconnect and reconnect battery with extreme caution. Risk of short circuit and explosion.
→ Do not tilt battery when removing it. Risk of acid burns as a result of emerging acid.
→ Do not rub the battery with a dry cloth. Risk of explosion as a result of static charge.

5. Risk of contact with corrosive fluid Remove battery from battery case by the folding handles, if at all possible without tilting it.

top of page

Installing battery

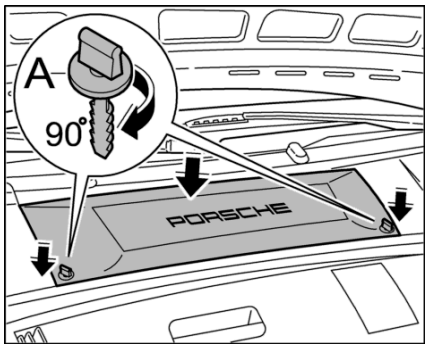
Installing battery

Make sure that the vent hose is in good condition. If the hose is deformed or damaged, replace it.

 WARNING

Risk of explosion, injury, short circuit and damage to the generator and electronic control units.

- **Risk of acid burns as a result of emerging acid.**



→ Do not disconnect battery with engine running.
→ Switch off all loads and remove ignition key.
→ Disconnect and reconnect battery with extreme caution. Risk of short circuit and explosion.
→ Do not tilt battery when removing it. Risk of acid burns as a result of emerging acid.
→ Do not rub the battery with a dry cloth. Risk of explosion as a result of static charge.

1. Risk of contact with corrosive fluid! Position the battery in the battery case below the stops, if at all possible without tilting it.

Battery mount

2. Position the battery mount and tighten with the fastening screw **-B-** . →**M8: 23 (17 ftlb.) Nm**
3. Insert the vent hose for the battery.
4. Risk of short circuit! First connect the positive cable then the negative cable. →**M6: 5 (3.5 ftlb.) Nm**

Battery cover

5. Position the battery cover and secure using the two twist locks **-A-** . →271219 Removing and installing battery cover - section on "Reworking"

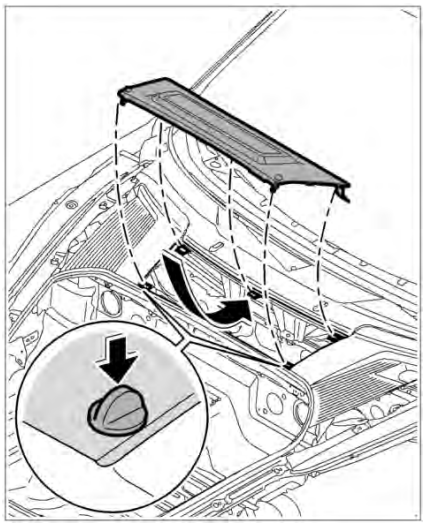
Removing battery cover

Removing battery cover

1. Open luggage compartment.



Opening turn-lock fasteners

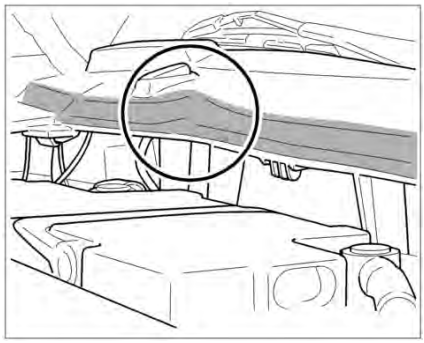
2. Twist turn-lock fasteners of cover 90° to the right, lift up with cover and disengage from cowl panel cover.
3. Place battery cover on a level surface.

top of page

Installing battery cover

Installing battery cover

Engaging battery cover



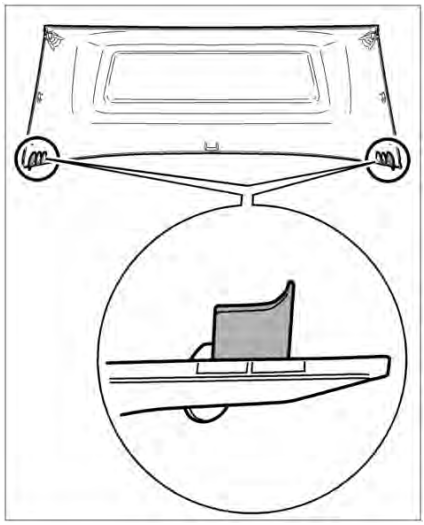
1. Engage battery cover with external hooks in left and right mounting points of cowl panel cover.
2. Insert battery cover as far as it will go by **pivoting it inward** and **applying simultaneous pressure** in direction of windscreen.
3. Align turn-lock fasteners fore-and-aft and engage by pressing down lightly.
4. Locate locking hooks at the connecting flanges with the plenum panel side covers by pressing down lightly.
5. Check gap dimension of battery cover; if necessary, rework the cowl panel covers or adjust the covers of battery, cowl panel, plenum panel so that they mate. →271219 Removing and installing battery cover - chapter on "Reworking"

top of page

Subsequent work

Reworking if cowl panel cover deformed

Possible causes for difficulty in fitting battery cover:



Deformation of cowl panel cover

– **A deformed connecting flange on the cowl panel cover or a cowl panel cover installed twisted.**

1. Loosen all threaded joints of cowl panel cover.

→508719 Removing and installing cowl panel cover - chapter on "Removing"

2. Loosen antenna holder fastening screws.
3. Mask off the Velcro connection for plenum panel cover on left and right using commercially available adhesive tape.

Greasing the hook of the battery cover

Note

Lightly grease the hook of the battery cover with the following grease, Part No. 000.043.204.68.

4. Fit the battery cover as follows:

4.1. Engage battery cover with external hooks in left and right mounting points of cowl panel cover.

4.2. Insert battery cover as far as it will go by **screwing in** and **applying simultaneous pressure** in direction of windscreen.

4.3. Do **not** engage turn-lock fasteners.

4.4. Release tension from the entire set of covers (covers: plenum panel, battery, cowl panel) by sideways shifting. **Make sure there is no warping in the area where the plenum panel adjoins the luggage compartment seal.**

4.5. Align turn-lock fasteners fore-and-aft and engage by pressing down lightly.

5. If the battery cover still protrudes at the sides then it is deformed and must be replaced.

6. If the gaps look correct, screw down the cowl panel cover at its three fastening points in the area of the windscreen to the specified tightening torque. →**Tightening torque: 4.0 (3.0 ftlb.) Nm** → **Tightening torque: 2.0 (1.5 ftlb.) Nm**
7. Remove battery cover and tighten the two fastening screws of the cowl panel cover (to rear of battery) to the specified tightening torque. →**Tightening torque: 2.0 (1.5 ftlb.) Nm**
8. Tighten fastening screws for telephone antenna holder.
9. Fit cowl panel cover and battery cover as described.

 WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

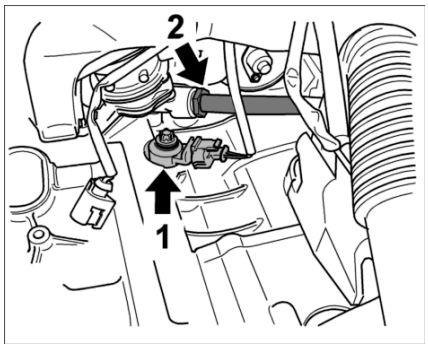
Knock sensor and secondary air pump

1. Mark and note the installation position of the knock sensor. Remove cable plug from knock sensor **-1-** . . Unscrew fastening screw and remove knock sensor.

Removing knock sensor, cylinder bank 4-6

Knock sensor

1. Mark and note the installation position of the knock sensor. Remove cable plug from knock sensor **-1-** . Unscrew fastening screw **-2-** and remove knock sensor.



top of page

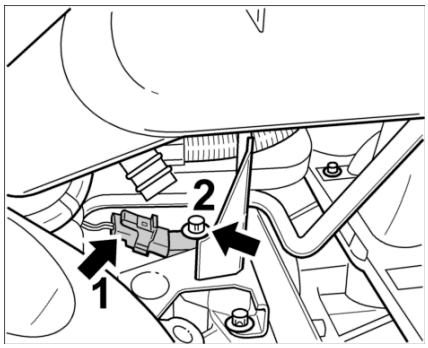
Installing knock sensor

Installing knock sensor, cylinder bank 1 -3

Note

The precise tightening torque for the knock-sensor screw must be observed, otherwise the knock sensor might not function properly.

Knock sensor and secondary air pump



1. Clean contact surface on crankcase and move knock sensor to the installation position, according to removal position. Position and tighten fastening screw **-1-** . →**Tightening torque: 17 ftlb.**

2. Push on cable plug.

Installing knock sensor, cylinder bank 4 -6

Note

The precise tightening torque for the knock-sensor screw must be observed, otherwise the knock sensor might not function properly.

Knock sensor

1. Clean contact surface on crankcase and move knock sensor to the installation position, according to removal position. Position and tighten fastening screw **-2-** . →**Tightening torque: 17 ftlb.**
2. Push on cable plug.

top of page

Subsequent work

Work subsequent to installing knock sensor

1. Install three-phase generator on cylinder bank 1-3→272219 Removing and installing three-phase generator - chapter on "installing".
2. Install oil separator on cylinder bank 4-6.. For details see →105519 Removing and installing oil separator - chapter on "installing".

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**

- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

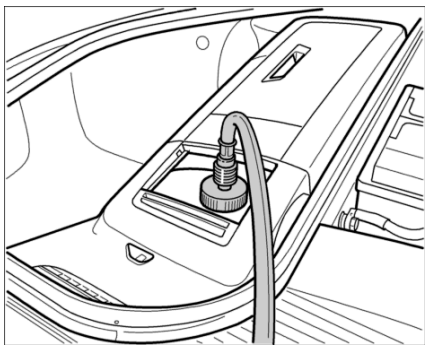
→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

30 01 07 Bleeding the clutch system - as of MY 2005

- Information

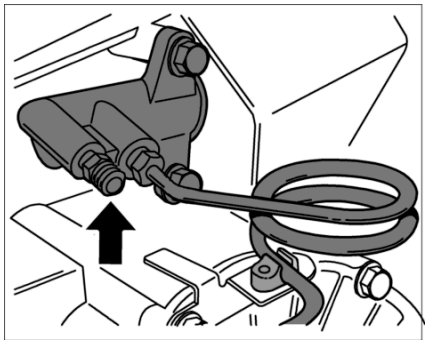
top of page

Information



Important notes on bleeding

The clutch hydraulics must always be filled or bled using a bleeding device. Furthermore, the bleeder valve must be opened sufficiently and the gauge pressure at the bleeding device must be approx. 1.3 bar.
Once the filling or bleeding process has started, the clutch pedal must be moved (extremely slowly) into the "Pedal fully depressed" position .
As there is no system pressure, servo kinematic effects will cause the clutch pedal to move forward abruptly. In order to avoid damage, the pedal must be guided manually.
In general, a minimum filling time of 90 seconds must be observed. Once this filling period has elapsed, check that no more bubbles appear at the bleeder valve (use a collecting bottle with transparent hose). Only then close the bleeder valve.



Filling/bleeding

Note
In general, a minimum filling time of 90 seconds must be observed.
Use only new Super DOT 4 class brake fluid. This brake fluid is available under the following part numbers:

- *Container quantity 1 litre = 000.043.203.66*
- *Container quantity 30 litres = 000.043.203.67*

1. Remove the cover over the brake fluid reservoir. Fill reservoir to its top edge with new brake fluid. Connect the bleeding device to the brake fluid reservoir. *→see figure*
2. Switch on the bleeding device and set an overpressure of approx. 1.3 bar.

3. Open the bleeder valve **-arrow-** on the clutch slave cylinder.
4. Move pedal extremely slowly to the "Pedal fully depressed" position. When doing so, guide the pedal by hand so that it does not move forward abruptly.
5. Allow the brake fluid to rinse through for 30 seconds.
6. Afterwards, activate complete pedal travel manually very slowly for a further 60 seconds. After about 10 to 15 pedal strokes, leave the pedal in its normal position. Once this filling period has elapsed, check that no more bubbles appear at the bleeder valve (use a collecting bottle with transparent hose). Then close the bleeder valve (tightening torque = 7 + 6 Nm (5 + 4.5 ftlb.).
7. Switch off and disconnect the bleeding device. Check the brake fluid level. It should not be above the MAX. mark.
8. Activate the clutch pedal slowly, five times.
9. Fit the cover over the brake fluid reservoir.

30 05 01 Checking clutch pedal (end position) - as of MY 2005

- Clutch pedal: checking play and pedal end position

top of page

Clutch pedal: checking play and pedal end position

Checking clutch free play

The clutch master cylinder has an inner stop. The push rod and the clutch pedal are always pressed against this stop by the clutch power spring. Due to the automatic hydraulic adjustment of the clutch, it is not possible to determine the clutch play by checking at the clutch pedal.

Clutch: Checking pedal end position (pedal return/return force)

Note

This work step only needs to be performed in the course of maintenance.
The pedal must not give way during the operation.
If it gives way, the fault is in the clutch power spring or in the pedals.

– Check that the pedal is in end position by pulling at the pedal (without the use of force) towards the driver's seat.

The clutch push rod and the clutch power spring are not adjustable. The clutch power spring has two functions, namely to provide pedal force assistance and to return the pedal. The following are some of the points which are requirements for perfect clutch operation:

- Correct bleeding of the clutch hydraulic system.
- No leaks in the hydraulic system
- Pedal return to the starting position
- Installation position of the pedals corresponds to the standard condition

Preliminary work

Side trim panels, left footwell (centre console)

1. Removing trim panel (lower part of dashboard). To do this, remove the centre console covers *→Side trim panels, left footwell (centre console)* →681419 Removing and installing centre console cover.

Removing trim panel (lower part of dashboard)

2. Unscrew the fastening screws **-1-** and swivel the trim panel under the dashboard on the driver's side **-2-** downwards **-arrow A-** →701919 Removing and installing trim under instrument panel.

top of page

General warning notes

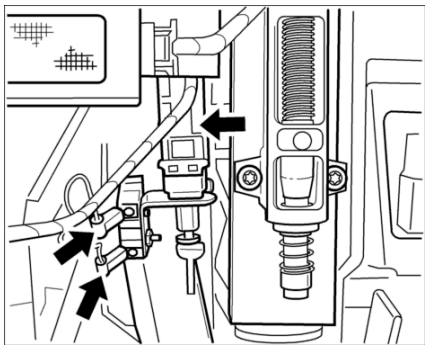
 ATTENTION

Increased risk of accidents when removing/installing the clutch boost spring.

- **Possible risk of damage and injury (e.g. crushing).**

→ The boost spring must be secured with a cotter pin when working near the clutch pedal (except for work on the clutch pedal switch and interlock switch).

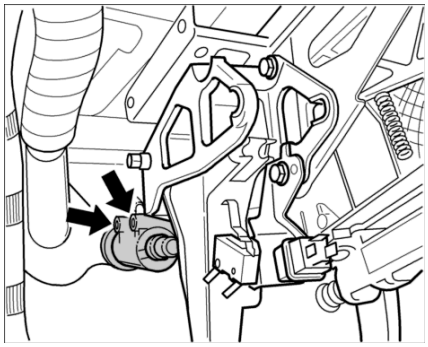
top of page



Technical values

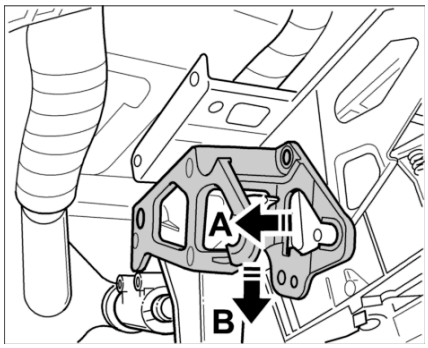
Location	Explanation	Type	Basic value	Tolerance 1	Tolerance 2
Master cylinder		Tightening torque	7.5 ftlb.		
Pedal bearing axle		Tightening torque	6 ftlb.	+1.5 ftlb.	
Pedal bearing axle: right lock nut (M8)		Tightening torque	7.5 ftlb.		
Pedal bearing axle: left lock nut (M14)		Tightening torque	34 ftlb.		
Bracket for clutch boost spring		Tightening torque	7.5 ftlb.		

top of page



Removing

1. Remove the cover and side trim panel for the fusebox in the left driver's footwell.



Clutch pedal switch

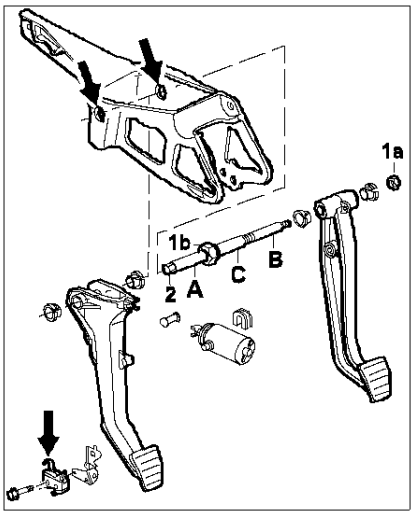
2. Carefully pull off the connector from the clutch pedal switch (and if necessary, interlock switch). **-arrows-**
3. Remove the relay carrier, vehicle electrical system control unit, and device support on the left above the clutch pedal.
4. Secure clutch power spring with a cotter pin, for example. Press the clutch pedal lightly, unclip the clutch power spring and remove.

Clutch master cylinder

5. Loosen the clutch master cylinder **-arrows-** (do not open the clutch system!) and remove the pin (master cylinder valve pushrod).

Bracket for clutch power spring

6. Loosen bracket for clutch power spring (support for clutch pedal switch and remove interlock switch, if necessary) *→Bracket for clutch power spring* . Carefully move bracket for clutch power spring approximately 2-4 mm to the left **-A-** . Carefully turn bracket for clutch power spring clockwise on the pedal bearing axle approximately 10-15 degrees **-B-** .



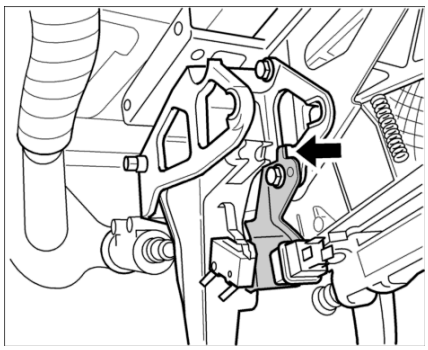
Note

When removing the bracket for the clutch power spring, carefully guide the master cylinder valve pushrod past at the clutch pedal.

7. Pull out bracket for clutch power spring to the left and take out the clutch pedal.

top of page

Installing

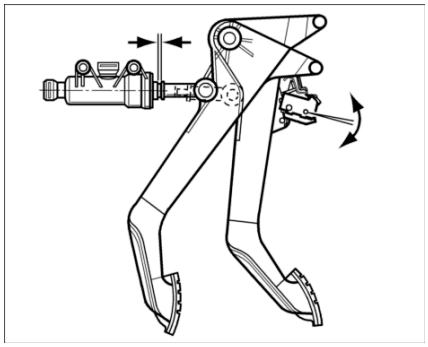


Grease specification

Note

Grease bracket in area of pedal bearing axle **-arrows-** with Renocal (Glissando VW 745). Part number 000.043.206.21 (10 g tube).
Please note: By contrast with previous models, do not grease the pedal bearing axle in the area of the clutch pedal **-A-** (due to plastic-coated bearing sleeves).
Also grease the clutch pedal switch system (interlock switch) **-arrow-** with Renocal (Glissando VW 745) (part number 000.043.206.21).
Observe correct tightening torques.
Use new lock for bolts.
When installing the bracket for clutch power spring, insert the valve pushrod for the master cylinder carefully into the specified position in the clutch pedal.

1. Insert bracket for clutch power spring with clutch pedal.



Clutch pedal switch support

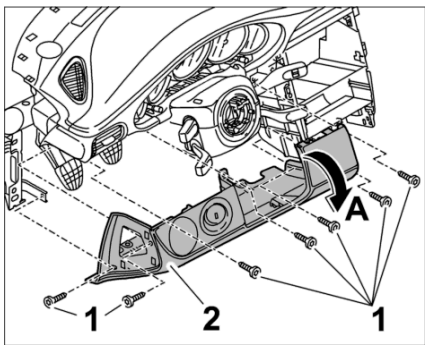
2. Position support for clutch pedal switch (and interlock switch, if necessary) in the correct position. Observe the auxiliary bar! **-arrow-** The auxiliary bar must be fitted in the correct position in the groove.
3. Install clutch power spring. Observe the installation position of the bolt for the clutch power spring (hexagon!). After installation, remove the clutch power spring cotter pin.

Note

Insert pin. Screw in the fastening screws slightly so that the master cylinder can still be moved. Have the clutch pedal not actuated at the limit stop. Press the clutch master cylinder in the direction of travel and tighten (make sure the return bore in the clutch master cylinder is not blocked!).

4. Mount the clutch master cylinder.

Adjustment for clutch pedal switch (interlock switch)



Note

If the clutch pedal switch adjustment (interlock switch) has been changed, the adjustment must be checked or adjusted. The switch must switch when the clutch pedal is actuated approx. 1-2 mm before the limit stop of the clutch master cylinder.

5. Check adjustment for clutch pedal switch (and interlock switch, if necessary). *→Adjustment for clutch pedal switch (interlock switch)* Plug in connector.
6. Install device support, vehicle electrical system control unit and relay carrier.
7. Install the side trim panel for the fusebox and cover in the left driver's footwell.

top of page

Subsequent work

Installing trim panel (lower part of dashboard)

1. Screw in the fastening screws **-1-** and swivel the trim panel under the dashboard on the driver's side **-2-** upwards **-arrow A-** →701919 Removing and installing trim under instrument panel.
2. Install covers for centre console →681419 Removing and installing centre console cover.

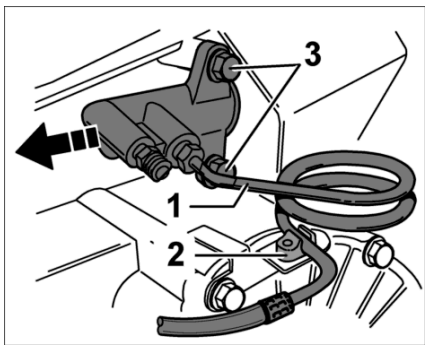
30 30 19 Removing and installing clutch slave cylinder - as of MY 2005

- Removing and installing

top of page



Removing and installing

Removing clutch slave cylinder

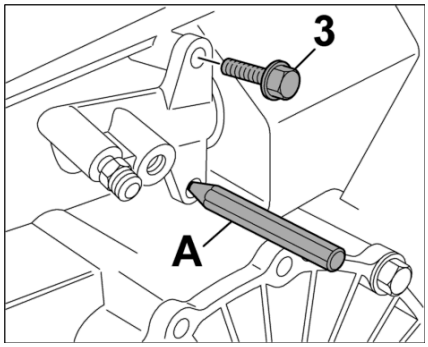
Note

The following tools can be used to undo and tighten the fastening screws:

- *For the lower screw, use a 3/8 inch changeover ratchet with an extension of approx. 100 mm and a 13 mm socket wrench insert.*
- *For the upper screw, use a 3/8 inch changeover ratchet with an extension of approx. 250 mm, a universal joint and a 13 mm socket wrench insert.*

Clutch slave cylinder

1. Detach hose **-1-** from the clutch slave cylinder and unclip hose from holder **-2-** . Block up hose **-1-** and the connection hole in the clutch slave cylinder.
2. Undo fastening screws **-3-** and remove the clutch slave cylinder from the transmission housing.



Installing clutch slave cylinder

Note

When inserting clutch slave cylinder, it is necessary to overcome the spring force acting on the push rod whilst fitting a fastening screw.
Observe assembly instructions for inserting the clutch slave cylinder

1. Grease end of the push rod of the clutch slave cylinder -in the area located in the ball socket when installed -with a thin coat of Olista Longtime 3 EP (available as a spare part)
2. Insert the clutch slave cylinder and tighten the fastening screws to 23 Nm (17 ftlb.).

Assembly instructions for inserting the clutch slave cylinder

Clutch slave cylinder in installation position

– Position the clutch slave cylinder and fix it in the installation position using a drift punch 5 x 120 x 10 mm **-A-** .
– Align clutch slave cylinder with the drift punch in place **-A-** so that the upper fastening screw **-3-** can be fitted. If necessary, also open the bleeder valve.
– Insert lower fastening screw. Then tighten the 2 fastening screws (tightening torque 23 Nm (17 ftlb.)).

3. Fit the clutch line to the clutch slave cylinder and clip it into the holder. Tightening torque for the line, 20 Nm (15 ftlb.).
4. Bleed the clutch hydraulic system →300107 Bleeding the clutch system.
5. Check operation of the clutch. Repeat the bleeding process if the clutch does not disengage correctly.

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

Preliminary work

1. Remove transmission. *→ 21 Removing and installing transmission - Removing*

top of page

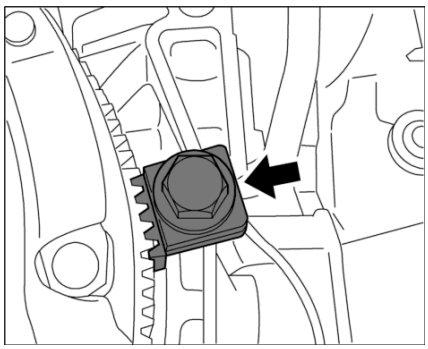
Removing clutch

Removing clutch

Toothed segment

Note

The **toothed segment 9538/1** must be bored to ø 15 mm to guarantee a perfect fit and to avoid damaging the thread in the crankcase.



1. Fasten **toothed segment 9538/1** to the crankcase with an M12 x 50 hexagon-head bolt.

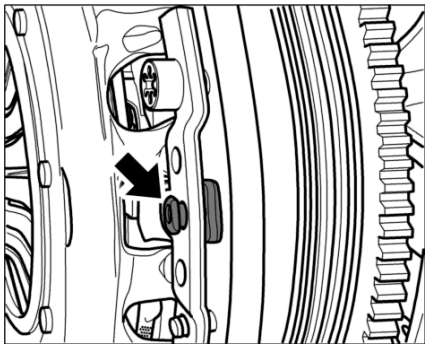
Note

To avoid deforming the clutch pressure plate, loosen and tighten the fastening screws in at least five steps in diagonally opposite sequence.

2. Detach thrust plate.
3. Remove thrust plate and drive plate.

Removing clutch

Toothed segment



Note

The **toothed segment 9538/1** must be bored to ø 15 mm to guarantee a perfect fit and to avoid damaging the thread in the crankcase.

1. Fasten **toothed segment 9538/1** to the crankcase with an M12 x 50 hexagon-head bolt.

Note

To avoid deforming the clutch pressure plate, loosen and tighten the fastening screws in at least five steps in diagonally opposite sequence.

Stop on adjustment mechanism

Note

When loosening the clutch pressure plate, ensure that the stop on the adjustment mechanism **-arrow-** is detached from the housing. The stop must dip loosely into the housing as far as the block. Press the stop towards the flywheel, if necessary.

2. Detach pressure plate.
3. Remove pressure plate and drive plate.

top of page

Installing clutch

Installing clutch

Note

- *Clean the friction surfaces of the flywheel and pressure plate prior to installation, e.g. with brake cleaner.*

- *Surfaces of friction linings must be free from contamination, especially oil and grease.*

1. Insert **centring mandrel 9102** with drive plate into the guide bearing (needle sleeve).

Note

To avoid deforming the clutch pressure plate, loosen and tighten the fastening screws in at least five steps in diagonally opposite sequence.

2. Fit pressure plate.

Location	Explanation	Type	Basic value	Tolerance 1	Tolerance 2
Clutch pressure plate	Fastening screws between pressure plate and flywheel	Tightening torque	23 (17 ftlb.) Nm		

3. Remove centring mandrel.
4. Remove **toothed segment 9538/1**.

top of page

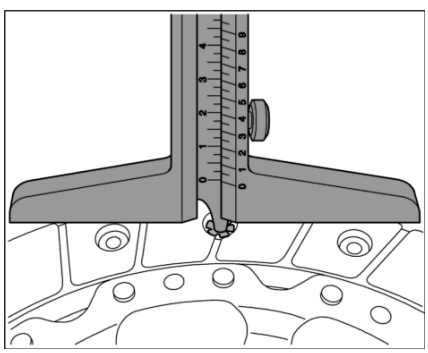
Preliminary work

Preliminary work

1. Remove clutch. →305019 Removing and installing clutch - chapter on "removing"



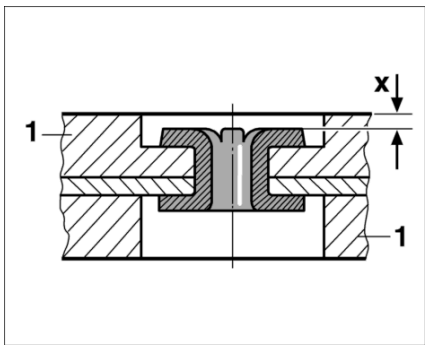
top of page

Checking clutch plate for wear

Checking clutch plate for wear

Note

It should be noted that the clutch lining does not wear linearly over the service life of the clutch. Due to the settling behaviour of the clutch lining, wear can be expected to be greater at the beginning. However, pad thickness wear will become less as mileage increases.



Measuring lining thickness

Note

Pad thickness measurement must only be done on the flanged side of the rivet head.

1. Place a commercially available depth gauge on the clutch lining **-1-** and measure the distance to the rivet head.

Sectional view

The wear dimension **-X-** measures 0.3 mm. If a smaller value is measured, the clutch drive plate must be replaced. When new the measured value is more than 1mm.

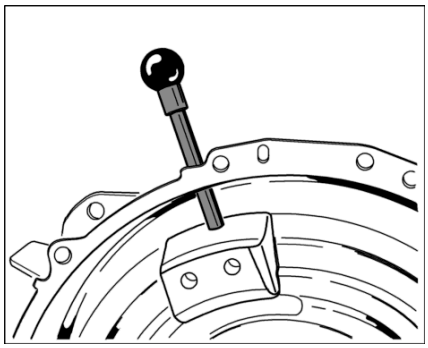
Information

Notes

Note
When pulling out, the torque converter must be kept horizontal, otherwise ATF can emerge.

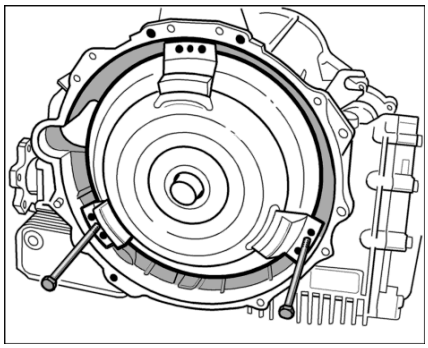
Note
Before installing the torque converter, check the hub for scoring. If damaged, the converter must be replaced.



top of page

Preliminary work

Preliminary work



1. Remove transmission →373527 Removing and refitting the automatic transmission - removing [997110 997111 997120 997121 997310 997311 997320 997321]→*373527 A3 Removing and refitting the automatic transmission - removing [997410 997411 997430 997431 997610 997611 997620 997621]*
2. Put transmission in horizontal position.

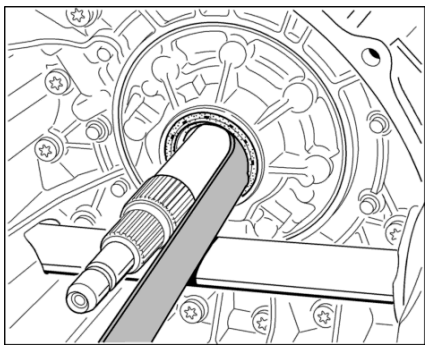
Removing the torque converter

Fixing the torque converter

1. Pull out **fixing pin 95951** (long) from transmission housing.

Pulling out torque converter

Note



When pulling out, the torque converter must be kept horizontal, otherwise ATF can emerge.

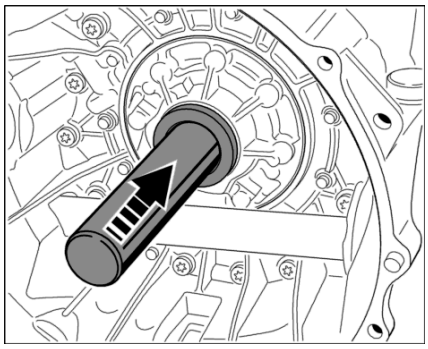
2. Screw two screws (M8) into torque converter and remove torque converter using the screws from transmission input shaft.

top of page

Removing the torque converter sealing ring

Removing the torque-converter sealing ring

Removing sealing ring



1. Remove sealing ring for torque converter with **hook VW 681**.

top of page

Installing the torque converter sealing ring

Installing the torque-converter sealing ring

1. Thinly coat sealing lip of new sealing ring with Vaseline.

Fitting sealing ring

2. Drive in sealing ring with **pressure piece 96700** as far as the mounting face.

top of page

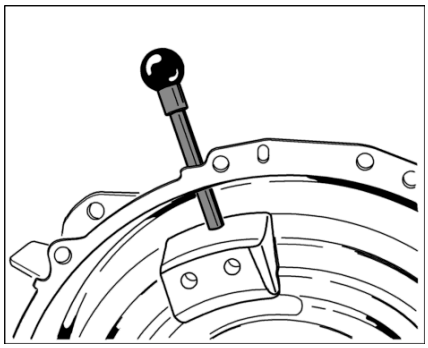
Subsequent work

Installing the torque converter

Note

Before installing the torque converter, check the hub for scoring. If damaged, the converter must be replaced.

1. Move torque converter up to stop on the transmission input shaft.



ATTENTION

The ATF pump can be damaged if the torque converter is incorrectly positioned during refitting.

→ Note the installation position of the torque converter.

→ Check installation position of torque converter.

2. Press torque converter by hand into the converter bell housing and turn until the cutout of the converter hub clicks into place in the driver of the impeller. The converter must slip inwards until it makes a noise.

Fixing the torque converter

3. Fix torque converter with **fixing pin 95951** (long) into installation position.

Reworking

1. Refit transmission →373527 Removing and refitting the automatic transmission - refitting [997110 997111 997120 997121 997310 997311 997320 997321] →*373527 AG Removing and refitting the automatic transmission - refitting [997410 997411 997430 997431 997610 997611 997620 997621]*

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

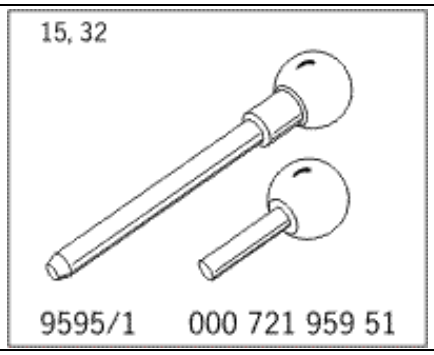
- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**



→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se

correspondan con el contenido de la imagen de la pantalla.

32 50 19 Removing and installing torque converter - as of MY 2005

- Information
- Preliminary work
- Removing torque converter
- Installing torque converter
- Subsequent work

Tools

Designation	Type	Number	Explanation	
fixing pin	special tool	95951		

top of page

Information

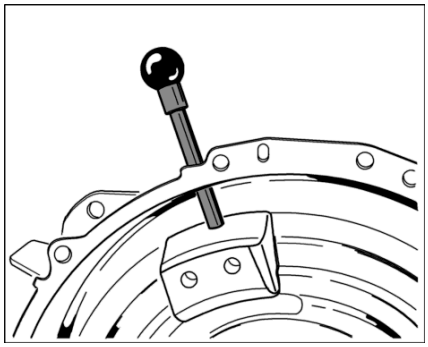
Notes

Note
When pulling out, the torque converter must be kept horizontal, otherwise ATF can emerge.

Note
Before installing the torque converter, check the hub for scoring. If damaged, the converter must be replaced.

top of page

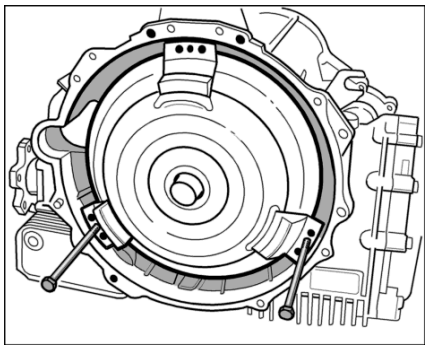
Preliminary work



Preliminary work

1. Remove transmission →373527 Removing and refitting the automatic transmission - removing [997110 997111 997120 997121 997310 997311 997320 997321] →*373527 A3 Removing and refitting the automatic transmission - removing [997410 997411 997430 997431 997610 997611 997620 997621]*
2. Put transmission in horizontal position.

top of page



Removing torque converter

Removing the torque converter

Fixing the torque converter

1. Pull out **fixing pin 95951** (long) from transmission housing.

Pulling out torque converter

Note

When pulling out, the torque converter must be kept horizontal, otherwise ATF can emerge.

2. Screw two screws (M8) into torque converter and remove torque converter using the screws from transmission input shaft.

top of page

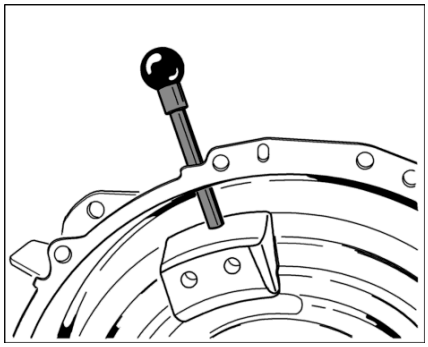
Installing torque converter

Installing the torque converter

Note

Before installing the torque converter, check the hub for scoring. If damaged, the converter must be replaced.

1. Move torque converter up to stop on the transmission input shaft.



ATTENTION

The ATF pump can be damaged if the torque converter is incorrectly positioned during refitting.

→ Note the installation position of the torque converter.

→ Check installation position of torque converter.

2. Press torque converter by hand into the converter bell housing and turn until the cutout of the converter hub clicks into place in the driver of the impeller. The converter must slip inwards until it makes a noise.

Fixing the torque converter

3. Fix torque converter with **fixing pin 95951** (long) into installation position.

top of page

Subsequent work

Reworking

1. Refit transmission →373527 Removing and refitting the automatic transmission - refitting [997110 997111 997120 997121 997310 997311 997320 997321] →*373527 AG Removing and refitting the automatic transmission - refitting [997410 997411 997430 997431 997610 997611 997620 997621]*
2. After installing the engine-transmission-unit, the ATF level is to be checked, and topped up as necessary. → *35 Checking and topping up ATF - checking and topping up*

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se

correspondan con el contenido de la imagen de la pantalla.

34 12 19 Removing and installing shift and selector cables - as of MY 2005

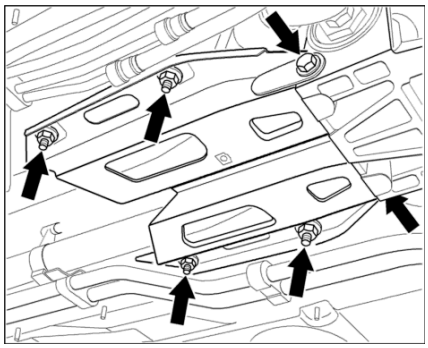
- Preliminary work
- Removing shift and selector cables
- Installing shift and selector cables
- Subsequent work

Tools

Designation	Type	Number	Explanation	
Locking bridge	special tool	P 9619/1		

top of page

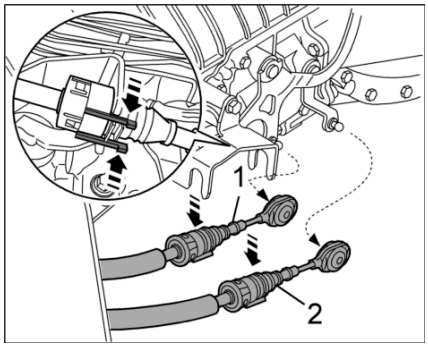
Preliminary work



Preliminary work

1. Raise the vehicle at the prescribed jacking points. → *Raising the vehicle*
2. Remove underbody panel. →519419 Removing and installing the rear cover - removing →*519320 21 Removing and installing the middle cover - removing*

top of page

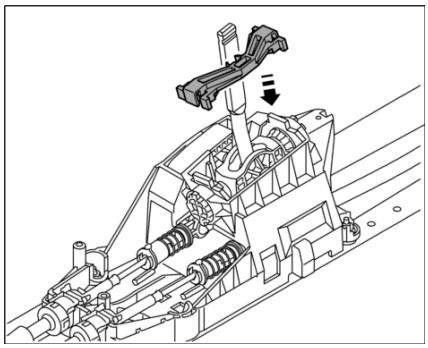


Removing shift and selector cables

Detaching shift and selector cables at transmission

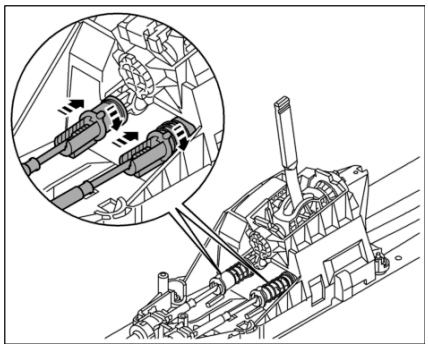
Transmission support

1. Remove transmission support.



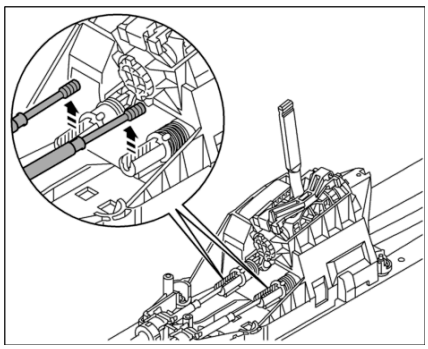
Removing shift and selector cables

2. Lever off shift cable **-1-** and selector cable **-2-** at the transmission external shift mechanism with a screwdriver and detach the shift and selector cables from the support bracket.



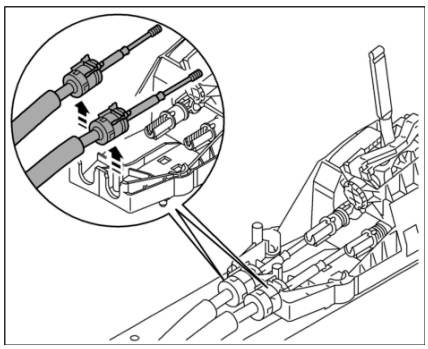
Detaching shift and selector cables inside vehicle

1. Remove shift lever knob. →340419 Removing and installing shift lever knob - section on "Removing"
2. Remove centre console. →681719 Removing and installing centre console - section on "Removing"
3. Loosen parking-brake lever. *→466119 21 Removing and installing parking-brake lever - section on "Removing"*



Fitting locking bridge

4. **Locking bridge P 9619/1** must be fitted on the gearshift bracket.



Opening bayonet lock

5. Open bayonet locks at preselector and shift connections.

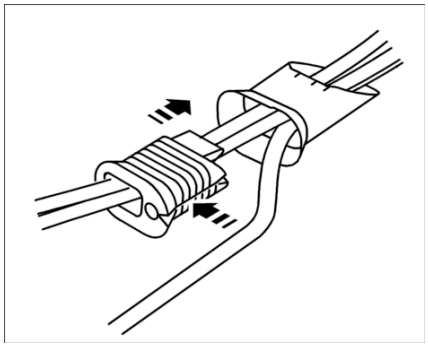
Detaching shift cables

6. Detach adjustment pins at preselector and shift connections.

Unclipping supports

7. Unclip supports on the gearshift bracket.
8. Push rubber sleeve out through the opening in the body.

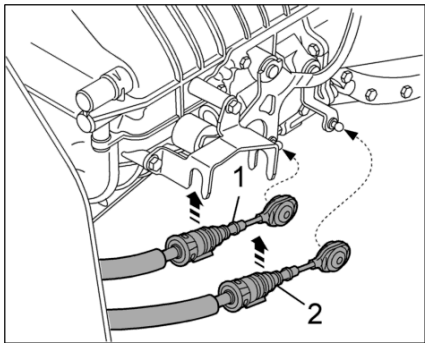
top of page



Installing shift and selector cables

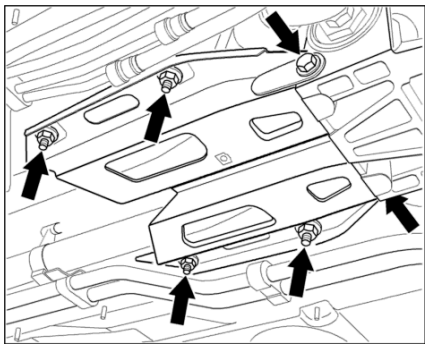
Fastening shift and select. cables to the transmission

Note



The shift and selector cables must be routed above the transmission support.

1. Press the shift and selector cables through the body opening from below.



Rubber sleeve in body opening

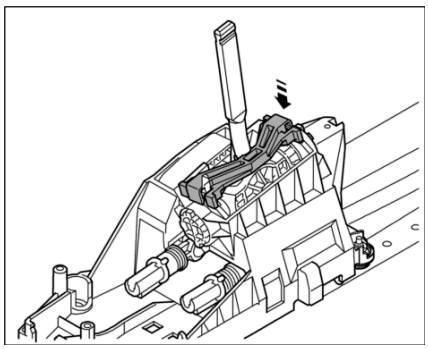
2. Apply a coating of lubricant (e.g. Contifix tyre mounting paste) on the rubber sleeve and B+ wire in the area of the body opening, insert the B+ wire in the rubber sleeve and press rubber sleeve into the body opening.

Connecting shift cable

3. Engage shift **-1-** (grey end piece) and selector cable **-2-** (blue end piece) into support bracket for transmission and press end pieces onto ball heads.

Transmission support

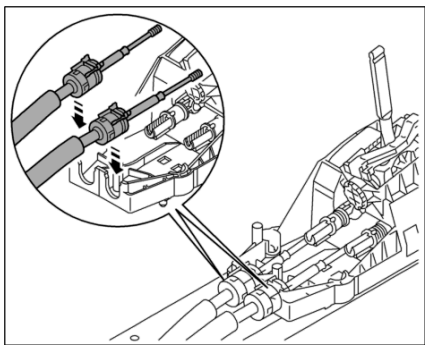
4. Fit transmission support.



Location	Explanation	Type	Basic value	Tolerance 1	Tolerance 2

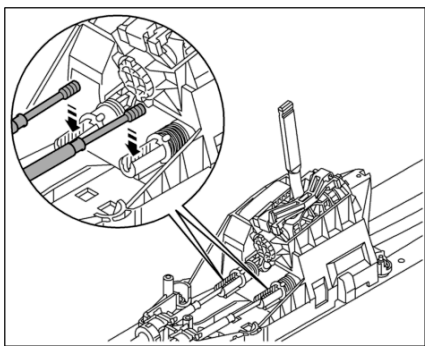
Transmission support		Tightening torque	48 ftlb.		

Securing shift and selector cables inside vehicle



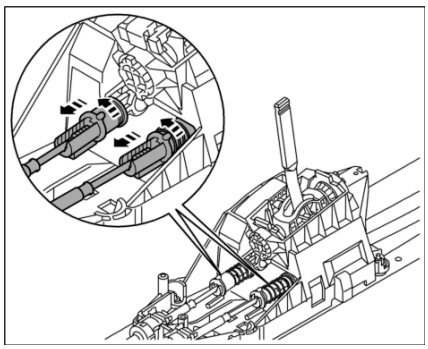
Note

During installation of the shift and selector cables, the transmission must be engaged in neutral.



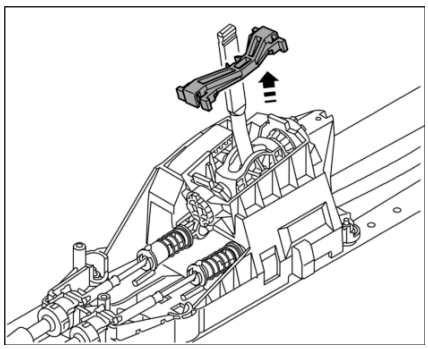
Fitting locking bridge

1. **Locking bridge P 9619/1** must be fitted on the gearshift bracket.



Clipping in supports

2. Clip in supports on the gearshift bracket. The support with the blue hinged tube must be fitted on the left and the support with the black hinged tube must be fitted on the right.



Engaging shift cables

3. Engage adjustment pins at preselector and shift connections.

Closing bayonet locks

4. Close bayonet locks at preselector and shift connections.

Removing locking bridge.

5. **Locking bridge P 9619/1** must be removed.

top of page

Subsequent work

Subsequent work

1. Fasten parking-brake lever. *→466119 23 Removing and installing parking-brake lever - chapter on "Installing"*
2. Install centre console. →681719 Removing and installing centre console - chapter on "installing"
3. Install shift lever knob. →340419 Removing and installing shift lever knob - chapter on "installing"
4. Install underbody panel. →519319 Removing and installing centre underbody panel - chapter on "installing" →519419 Removing and installing rear cover - chapter on "installing"
5. Lower the vehicle.
6. Shift through all gears.

997110, 997111, 997120, 997121, 997310, 997311, 997320, 997321, 997410, 997411, 997430, 997431, 997610, 997611, 997620, 997621

as of MY 2005
Country C00, C02, C05, C07, C08, C09, C10, C11, C12, C13, C14, C15, C16, C18, C19, C20, C21, C22, C23, C24, C25, C26, C27, C28, C32, C33, C34, C35, C36, C37, C38, C39, C45, C46, C98, C99

 WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

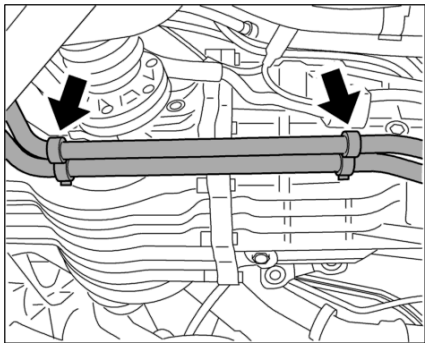
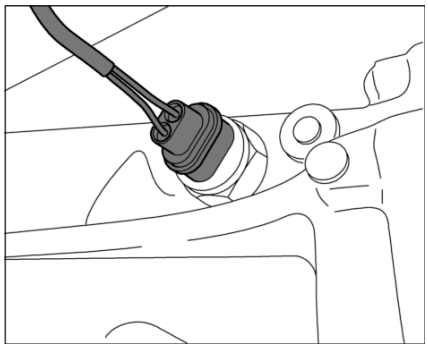
4. Remove cardan shaft. →390219 Removing and installing cardan shaft - chapter on "Removing"

top of page



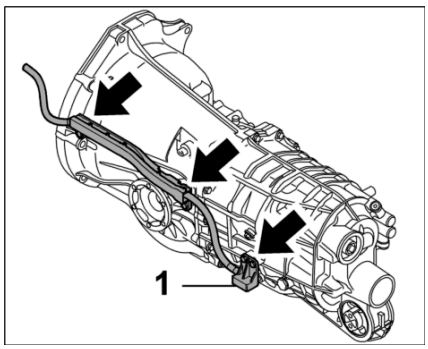
Removing transmission

Dismantling



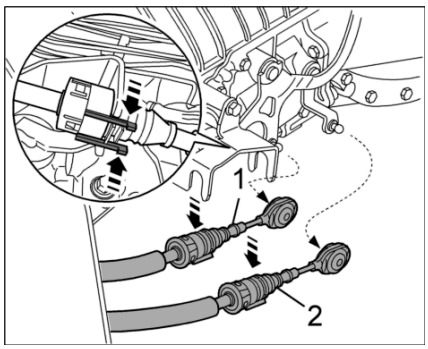
Cross member

1. Remove the cross member



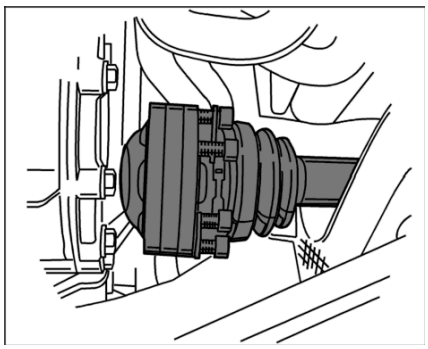
Coolant hose to the transmission

2. Dismantle the coolant hoses and container



Electric plug for reversing light switch

3. Disconnect the electrical connection for the reversing light switch.

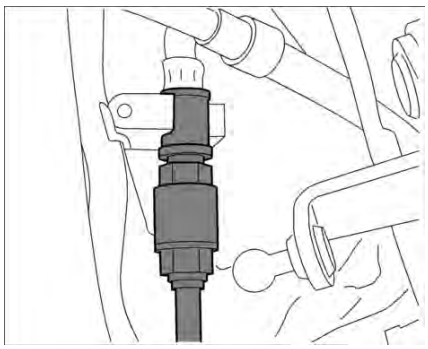


Connection of B+ to the transmission

4. Remove the electric cable (positive lead). Do this by removing the container from the transmission **-arrows-** and disconnecting the lead in the B-Plus box **-1-** .

Removing shift and selector cables

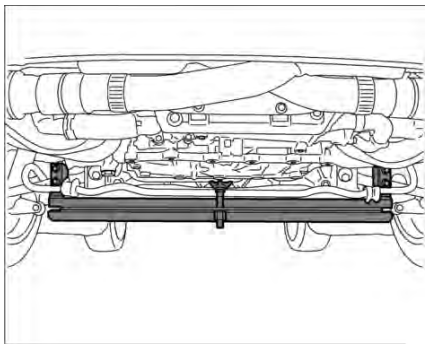
5. Disconnect shift **-1-** and selection cables **-2-** from the transmission.



Drive shaft

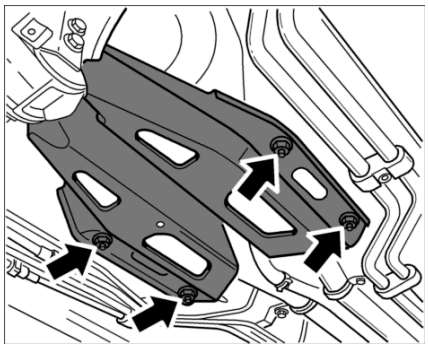
Note

Protect drive shafts against mechanical damage (e.g. with a rubber hose which has been cut open).



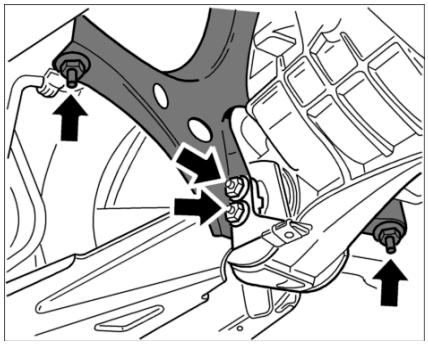
6. Remove drive shafts on transmission side. To do this, unscrew the six Allen screws joining each drive shaft and transmission flange. In order to stop the wheel being pulled round, it should be held still.

Clutch line



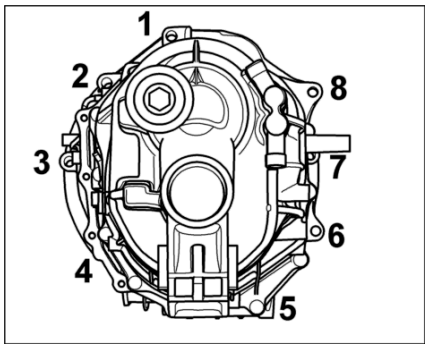
7. Disconnect hydraulic line for clutch control. Collect emerging brake fluid in a suitable container. Seal open lines with suitable plug.

Removing transmission



Retaining device

1. Unscrew fastening screws between stabiliser and engine mount, screw **holding device P 9624/2** to stabilizer-engine mount, turn spindle upwards and support engine.
2. Place transmission jack under transmission and fasten fixing strap.



Transmission container

3. Remove transmission container.

Transmission support

4. Remove transmission support.

Connecting screws

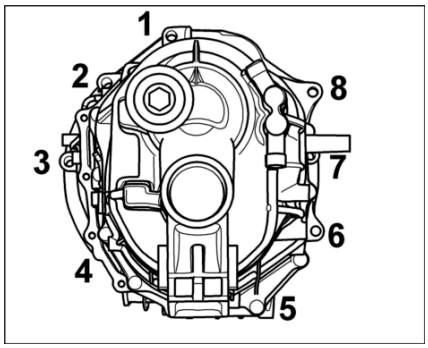
Note

The transmission can be lowered by a maximum of 25 mm to improve accessibility.

5. Unscrew fastening screws (8) between engine and transmission.
6. Move the transmission out downwards and towards the front by lowering the transmission jack step by step.

top of page

Installing transmission

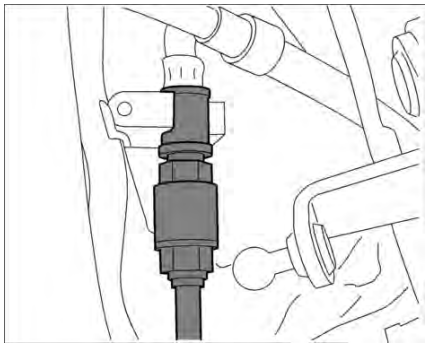


Installing transmission

Note

Before installing the transmission, clean splines of transmission input shaft and grease lightly, e.g. with Olista Longtime 3 EP.

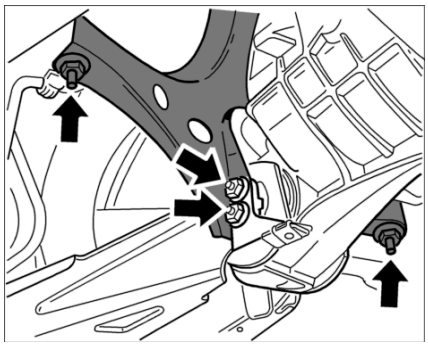
Note



When positioning the transmission, make sure that the dowel sleeves are in the correct position in the crankcase.

Connecting screws

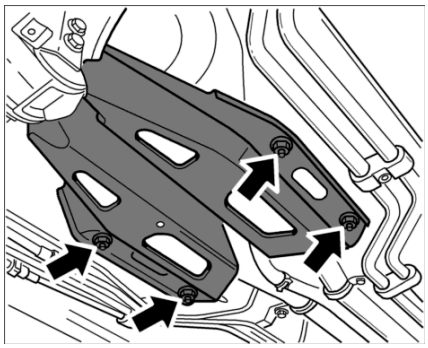
1. Guide in the transmission, and screw in and tighten the fastening screws.



Location	Explanation	Type	Basic value	Tolerance 1	Tolerance 2
Transmission/engine connection	Hexagon-head bolt no. 1 in figure, M12 x 70	Tightening torque	85 (63 ftlb.) Nm		
Transmission/engine connection	Hexagon-head bolt no. 2 in figure, M12 x 100	Tightening torque	85 (63 ftlb.) Nm		
Transmission/engine connection	Hexagon-head bolt no. 3 in figure, M12 x 100	Tightening torque	85 (63 ftlb.) Nm		
Transmission/engine connection	Internal serration screw no. 4 in figure, M10 x 50	Tightening torque	46 (34 ftlb.) Nm		
Transmission/engine connection	Hexagon-head bolt no. 5 in figure, M10 x 50	Tightening torque	46 (34 ftlb.) Nm		
Transmission/engine connection	Hexagon-head bolt no. 6 in figure, M12 x 50	Tightening torque	85 (63 ftlb.) Nm		
Transmission/engine connection	Hexagon-head bolt no. 7 in figure, M12 x 70	Tightening torque	85 (63 ftlb.) Nm		
Transmission/engine connection	Hexagon-head bolt no. 8 in figure, M12 x 70	Tightening torque	85 (63 ftlb.) Nm		

Clutch line

2. Remove plug from hydraulic line of clutch control and fit the line.

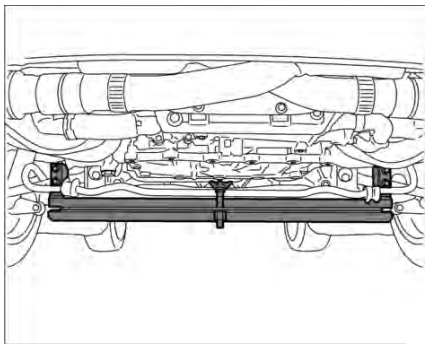


Location	Explanation	Type	Basic value	Tolerance 1	Tolerance 2
Hydraulic line of clutch control		Tightening torque	30 (22 ftlb.) Nm		

Transmission support

3. Fit transmission support.

Location	Explanation	Type	Basic value	Tolerance 1	Tolerance 2
Transmission support		Tightening torque	65 (48 ftlb.) Nm		

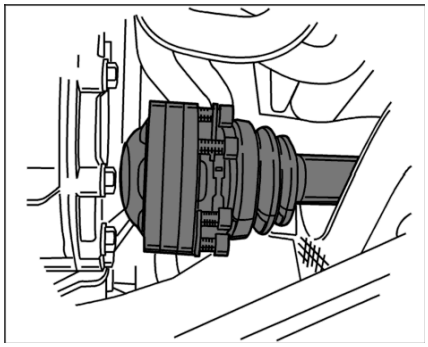


Transmission holder

4. Install transmission holder.

Location	Explanation	Type	Basic value	Tolerance 1	Tolerance 2
Transmission holder		Tightening torque	65 (48 ftlb.) Nm		

5. Release retaining strap and remove transmission jack.

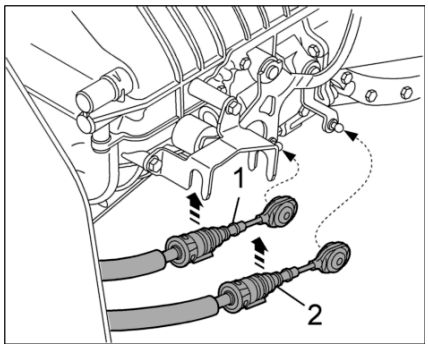


Retaining device

6. **Holding device P 9624/2** is to be removed from stabilizer-engine mount and screw stabilizer onto engine mount.

Location	Explanation	Type	Basic value	Tolerance 1	Tolerance 2
Stabiliser onto stabilizer engine mount		Tightening torque	23 (17 ftlb.) Nm		

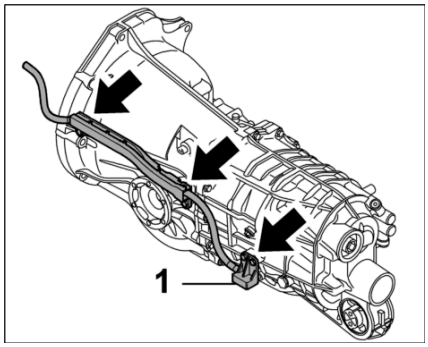
Assembly work



Drive shaft

Note

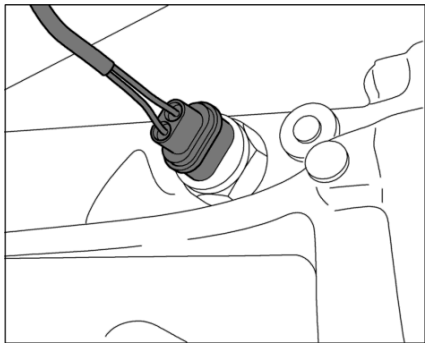
Protect drive shafts against mechanical damage (e.g. with a rubber hose which has been cut open).



1. Fit drive shafts on the transmission side. To do this, screw in the six Allen screws joining each drive shaft and transmission flange and tighten screws. In order to stop the wheel being pulled round, it should be held still.

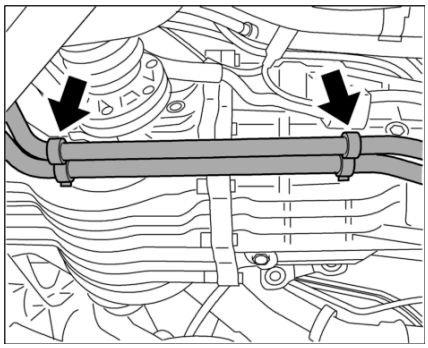
Location	Explanation	Type	Basic value	Tolerance 1	Tolerance 2
Drive shafts	Fastening screws between drive shaft and transmission flange	Tightening torque	81 (60 ftlb.) Nm		

Connecting shift cable



2. Engage shift **-1-** (grey end piece) and selector cable **-2-** (blue end piece) into support bracket for transmission and press end pieces onto ball heads.

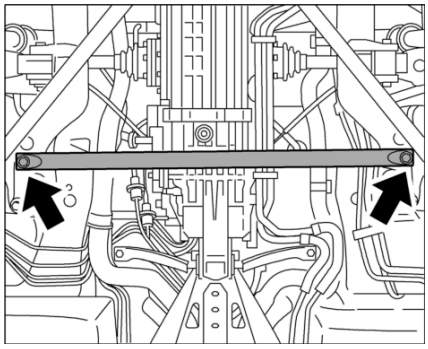
Connection of B+ to the transmission



3. Fit the electric cable (positive lead). Do this by fitting the holder on the transmission **-arrows-** and connecting cables in the B-Plus box **-1-** .

Location	Explanation	Type	Basic value	Tolerance 1	Tolerance 2
Cable duct	Fastening screws between cable duct and transmission	Tightening torque	10 (7.5 ftlb.) Nm		
B+ cable	Fastening screws for B+ cable	Tightening torque	10 (7.5 ftlb.) Nm		

Electric plug for reversing light switch



4. Establish electrical connection to the reversing light switch.

Coolant hose to the transmission

5. Fit the coolant hoses and container.

Location	Explanation	Type	Basic value	Tolerance 1	Tolerance 2
Container for coolant hoses	Fastening screws between container and transmission	Tightening torque	10 (7.5 ftlb.) Nm		

Cross member

6. Remove the cross member

Location	Explanation	Type	Basic value	Tolerance 1	Tolerance 2
Cross member	Fastening screws between cross member and carrier side section	Tightening torque	65 (48 ftlb.) Nm		

top of page

Refitting transmission

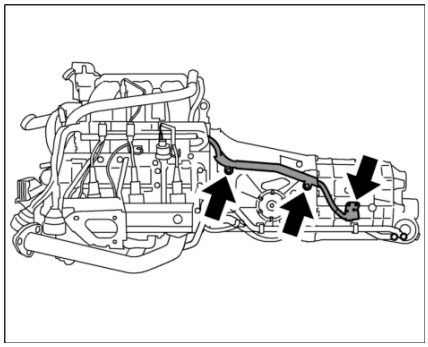
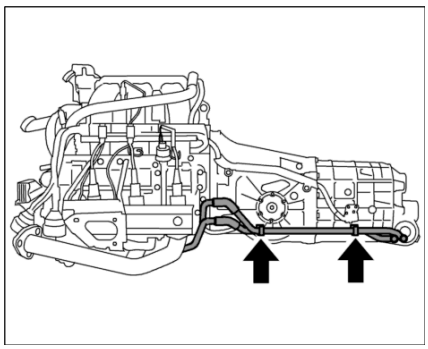
1. Attach transmission to workshop crane.



Connecting screws

2. Refit transmission and screw in connecting bolts.

Location	Explanation	Type	Basic value	Tolerance 1	Tolerance 2
Transmission/engine connection	Hexagon-head bolt no. 1 in figure, M12 x 70	Tightening torque	85 (63) Nm (ftlb.)		
Transmission/engine connection	Hexagon-head bolt no. 2 in figure, M12 x 100	Tightening torque	85 (63) Nm (ftlb.)		
Transmission/engine connection	Hexagon-head bolt no. 3 in figure, M12 x 100	Tightening torque	85 (63) Nm (ftlb.)		



Transmission/engine connection	Internal serration screw no. 4 in figure, M10 x 50	Tightening torque	46 (34) Nm (ftlb.)		
Transmission/engine connection	Hexagon-head bolt no. 5 in figure, M10 x 50	Tightening torque	46 (34) Nm (ftlb.)		
Transmission/engine connection	Hexagon-head bolt no. 6 in figure, M12 x 50	Tightening torque	85 (63) Nm (ftlb.)		
Transmission/engine connection	Hexagon-head bolt no. 7 in figure, M12 x 70	Tightening torque	85 (63) Nm (ftlb.)		
Transmission/engine connection	Hexagon-head bolt no. 8 in figure, M12 x 70	Tightening torque	85 (63) Nm (ftlb.)		

Cable duct

3. Fit cable duct.

Location	Explanation	Type	Basic value	Tolerance 1	Tolerance 2
Cable duct	Fastening screws between cable duct and transmission	Tightening torque	10 (7.5) Nm (ftlb.)		

Coolant lines

4. Engage coolant lines in holder.

 WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

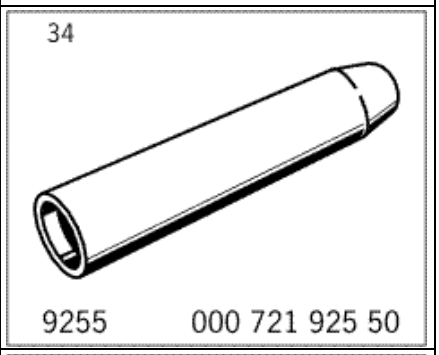
Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

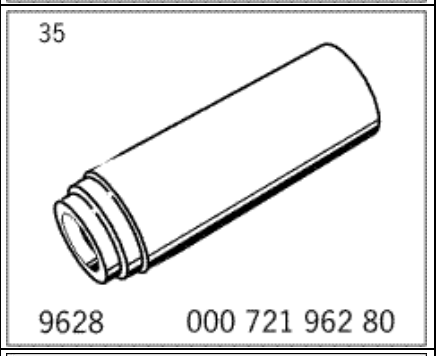
- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.





- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

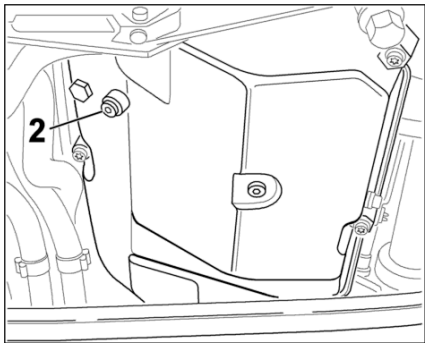
Information

Notes

Note
Fill only with ATF approved by Porsche. See Spare Parts Catalogue.

Note
Hot vehicles should cool down before beginning the activity.

Note



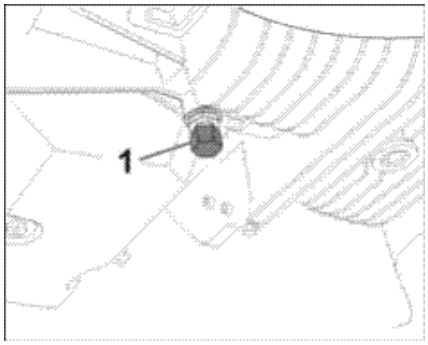
Vehicle must be horizontal in order to be filled and checked.

top of page

Preliminary work

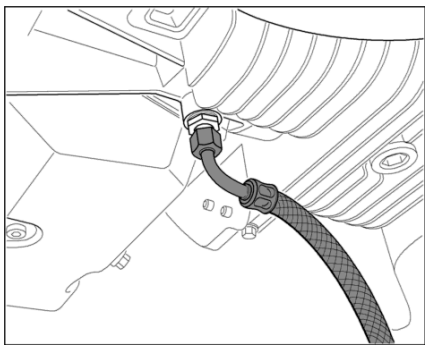
Preliminary work

1. Raise the vehicle at the prescribed jacking points. → *Lifting the vehicle*
2. Place oil collection pan under the transmission.
3. Remove the underbody panels. →519419 Removing and installing rear trim - removing



ATF - control screw

4. Unscrew control screw
   -2- .



Note

To undo and tighten the cap nut for the charging valve, counter with a ring wrench!

Cap nut for ATF - charging valve

5. Screw off cap nut **-1-** for the charging valve.

Connection hose onto ATF - charging valve

6. **Screw connection hose 95071** onto charging valve.

top of page

Checking and topping up the ATF

Checking and topping up the ATF

Checking and topping up the ATF

The transmission must not be in the reduced driving program. The ATF temperature must be between →**ATF temperature: 30 degrees Celsius** and →**ATF temperature: 40 degrees Celsius** . An ATF inspection when the temperature is too high causes insufficient filling, while an inspection when the temperature is too low causes over-filling. The selector lever must be in position "P" and the engine must be idling. The air conditioning must be switched off. The vehicle must stand horizontally.

Note

The ATF temperature at the start of testing must not be higher than →**ATF temperature: 40 gradCelsius** .

1. Connect the **PIWIS Tester 97180** and call up the ATF temperature.
2. Put selector lever in position "P", start vehicle, and allow engine to idle.
3. Top up ATF via the charging valve until ATF runs out at the control bore.
4. With the brake pedal pressed, change through all selector lever positions, remaining in each position for approximately →**Time: 10 s** .

WARNING

Danger of scalding and chemical burns from hot ATF

→ Allow ATF to cool down

→ Wear personal protective gear (goggles, gloves)

5. Top up with ATF again via the charging valve until ATF runs out at the control bore.

top of page

Reworking

Reworking

1. **Unscrew connection hose 95071** from ATF - charging valve.
2. Replace sealing ring for cap nut and screw on cap nut. →**Tightening torque: 30 ftlb.**
3. Replace sealing ring for ATF control screw and screw in ATF control screw. →**Tightening torque: 16 ftlb.**
4. Fit underbody panels. →519419 Removing and installing rear trim - installing
5. Lower the vehicle.

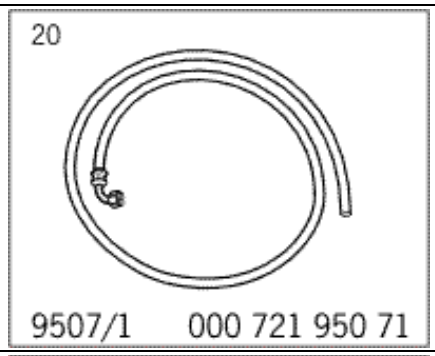
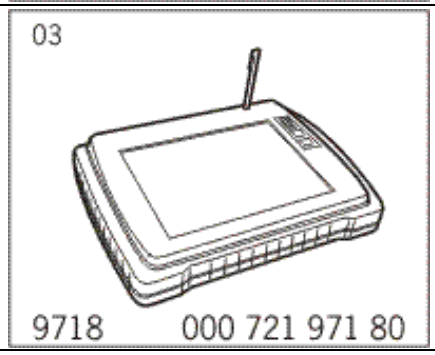
 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.





- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

as of MY 2005
Country C00, C02, C05, C07, C08, C09, C10, C11, C12, C13, C14, C15, C16, C18, C19, C20, C21, C22, C23, C24, C25, C26, C27, C28, C32, C33, C34, C35, C36, C37, C38, C39, C45, C46, C98, C99

WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

General warning notes

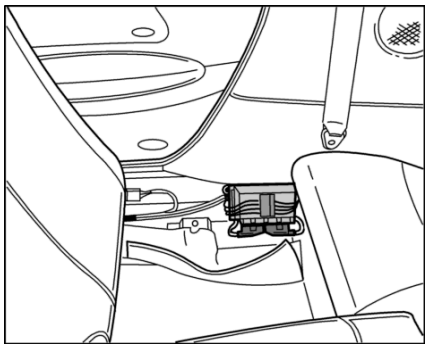
General warning notes for control units

 WARNING
Sudden voltage interruption of the power supply to the control module.

- **Destruction of the control module.**

→ During programming, it is essential to guarantee the power supply for the Porsche System tester. It is essential to connect a battery charger with a current rating of at least 40 A to the vehicle battery.
→ Prior to disconnecting the control module, switch off the ignition and remove the ignition key.

top of page



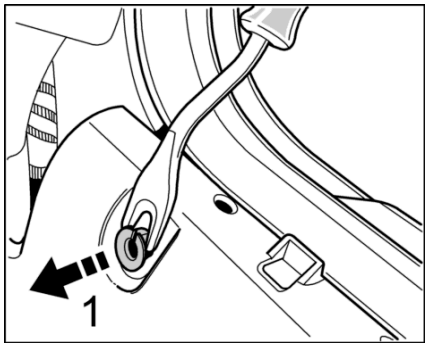
Removing Tiptronic control module

Removing Tiptronic control module (also referred to generally as control unit below)

 WARNING
Sudden voltage interruption of the power supply to the control module.

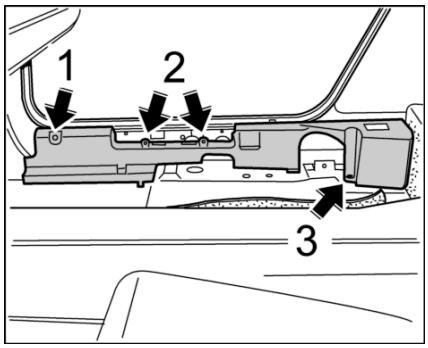
- **Destruction of the control module.**

→ During programming, it is essential to guarantee the power supply for the Porsche System tester. It is essential to connect a battery charger with a current rating of at least 40 A to the vehicle battery.
→ Prior to disconnecting the control module, switch off the ignition and remove the ignition key.



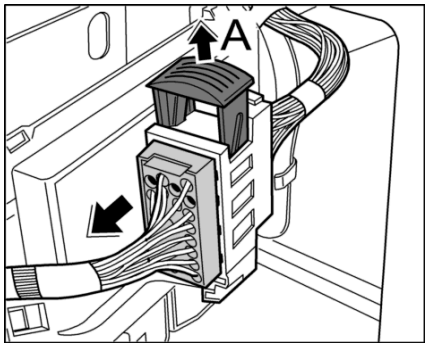
Installation position

Note



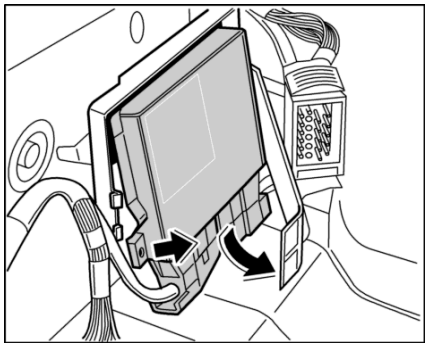
- *The control unit is located in the passenger compartment on the right at the B-pillar in front of the rear seat well.*
- *The ignition key must be removed before starting the assembly work.*
- *If the Tiptronic control module is replaced, observe the points under programming/coding the control unit. →373019 Removing and installing transmission control module - chapter on "programming", →373019 Removing and installing transmission control module - chapter on "coding"*

1. Unscrew lower fastening screw for the seat belt.
2. Disengage floor covering at the support and lay it in the vehicle interior.



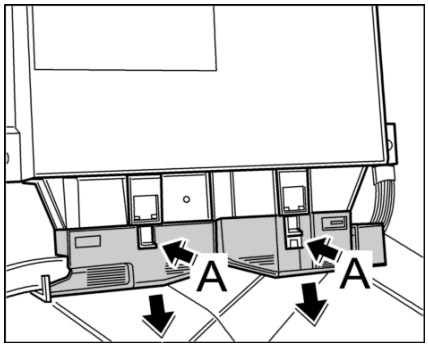
Unlocking locating peg using the removal tool

3. Unlock locating peg **-1-** of the support using the commercially available removal tool **Disassembly tool, universal NR.21**.



Unscrewing fastening screws

4. Unscrew fastening screws **-2-** and nuts **-3-** and carefully pull the support up and out of the retaining points.



Releasing electrical plug connection

5. Unlock and disconnect the electrical plug connection.

Disengaging retaining clip

6. Disengage retaining clip **-4-** .
7. Pull control unit out of the support and pull it down and out at an angle.

Releasing electrical connector

8. Press locking tabs **-A-** and disconnect plug connections from the control unit.

Programming Tiptronic control module

Reading out from and writing in to the Tiptronic control unit (also referred to generally as control unit below)

WARNING
Sudden voltage interruption of the power supply to the control module.

- **Destruction of the control module.**

→ During programming, it is essential to guarantee the power supply for the Porsche System tester. It is essential to connect a battery charger with a current rating of at least 40 A to the vehicle battery.
→ Prior to disconnecting the control module, switch off the ignition and remove the ignition key.

Note
The **PIWIS tester 9718** instructions take precedence and in the event of a discrepancy these are the instructions that must be followed. Deviations may occur with later software versions.
The procedure described here has been structured in general terms; different text or additions may appear in the **PIWIS tester 9718**.

1. Connect the Porsche System Tester to the vehicle and start the System Tester. Switch on ignition. >> Continue.

2. Select vehicle type using the cursor keys.
3. Switch from the vehicle type to the list of control units.
4. Select **Tiptronic** with the cursor keys and press the >> key.
5. Select **Control unit replacement** with the cursor keys and press the >> key.
6. Select **Read out values** (codings) with the cursor keys and press >> .
7. The message **Codes successfully read out** appears on the screen of the Porsche System Tester. Press >> .
8. Switch off ignition and replace control module. →373019 Removing and installing transmission control module - chapter on "Removing"
9. Switch on ignition. Switch to the **Special functions** menu and perform the **vehicle handover** using the F8 key.
10. In the **Special functions** menu, erase **All fault memories** by pressing >> .

In the menu **Write in data** >> the data read-out are installed.

11. System Tester displays **Coding write-in complete** >> .
12. If the control module has been installed in another vehicle it will be necessary, as of tester software 8.0, to **Reset adaption values**:

12.1. In the menu **Tiptronic**, select the menu **Reset adaption values** and continue with >> .

12.2. Confirm with F7 for Yes, F8 for No and continue with >> .

12.3. Follow the instructions on the tester.

13. Exit the menu, carry out a test drive and afterwards read out the fault memory.

top of page

Coding Tiptronic control module

Coding Tiptronic control unit

Note

The procedure described must be applied when a control unit has to be replaced and the tester function **Control unit replacement** cannot be used.

Note

- *When the transmission is renewed/replaced, the adaptation values must be reset using the **PIWIS tester 9718**. It is expected that this function will not be implemented until tester software V8.0 is available:*
- ***Resetting adaptation values:***

Reading out from and writing in to the Tiptronic control unit (also referred togenerally as control unit below)

- *In the Tiptronic control module, select menu item **Reset adaptation values** and continue with >> .*
- *Confirm with F7 for Yes, F8 for No and continue with >> .*
- *Follow the instructions on the Tester.*
- *If a new control unit is installed, it must adapt first. Poor shifting quality can therefore be expected in the adaptation phase.*
- *After the test drive, let the engine run for 10 minutes at idle speed. This ensures that all adaptation values are stored in the control unit.*
- *The instructions of the Porsche System Tester have highest priority.*
- *The procedure listed has been structured generally; changes or additions may occur.*

 WARNING

Sudden voltage interruption of the power supply to the control module.

- **Destruction of the control module.**

→ During programming, it is essential to guarantee the power supply for the Porsche System tester. It is essential to connect a battery charger with a current rating of at least 40 A to the vehicle battery.

→ Prior to disconnecting the control module, switch off the ignition and remove the ignition key.

1. Connect the **PIWIS tester 9718** to the vehicle and start it. Switch on the ignition. >> Continue.
2. Select the **vehicle type**.
3. Switch to the **Special functions** menu and perform the **vehicle handover** using the F8 key.
4. In the **Special functions** menu, erase **All fault memories** by pressing >> .
5. Carry out automatic search of control units.
6. Select **Tiptronic** with the cursor keys and press the >> key.
7. Select **Coding** with the cursor keys and press the >> key.
8. Select Vehicle version and code with the F8 key.

South East Asia
Japan
RoW/USA

9. Tester confirms: "Coding has been changed" .
10. If the control module has been installed in another vehicle it will be necessary, as of tester software 8.0, to **Reset adaption values**:

10.1. In the menu **Tiptronic**, select the menu **Reset adaption values** and continue with >> .

10.2. Confirm with F7 for Yes, F8 for No and continue with >> .

10.3. Follow the instructions on the tester.

11. Quit menu, perform test drive and check fault memory with the system tester.

as of MY 2005
Country C00, C02, C05, C07, C08, C09, C10, C11, C12, C13, C14, C15, C16, C18, C19, C20, C21, C22, C23, C24, C25, C26, C27, C28, C32, C33, C34, C35, C36, C37, C38, C39, C45, C46, C98, C99

 WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

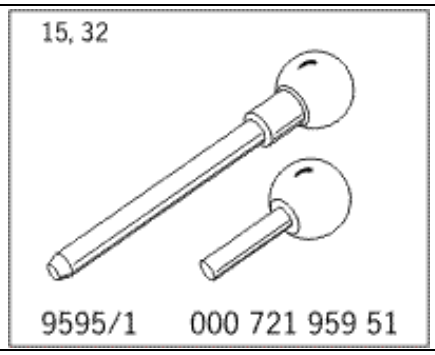
Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

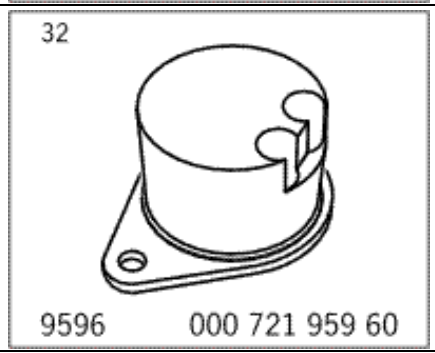
- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

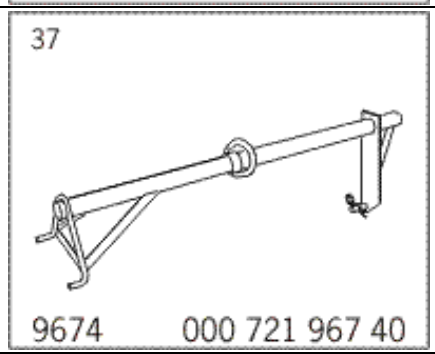
→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

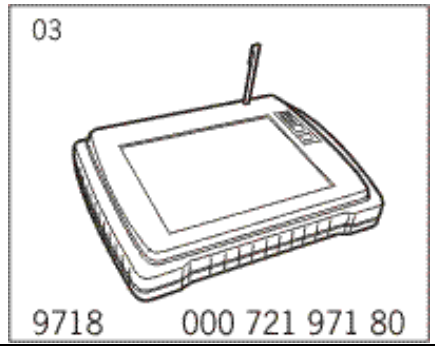
Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.







- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**



→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

Information

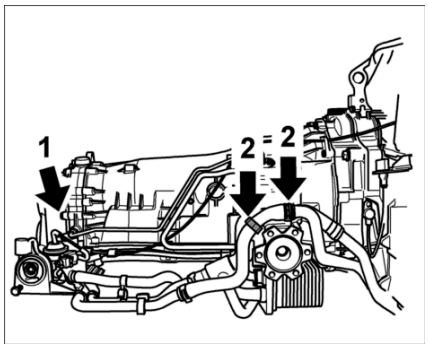
Notes

Note

When installing a new or replacement transmission, the adaptation values must be reset with the **PIWIS Tester 97180**. The shifting quality can be affected during the adaptation phase of the transmission control module.

top of page

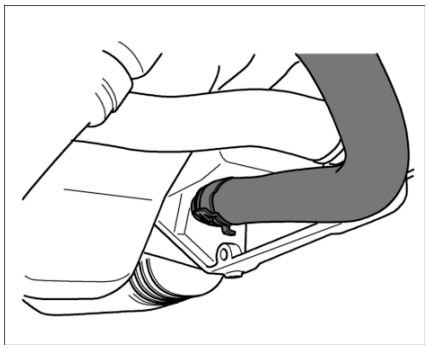
Preliminary work



Preliminary work

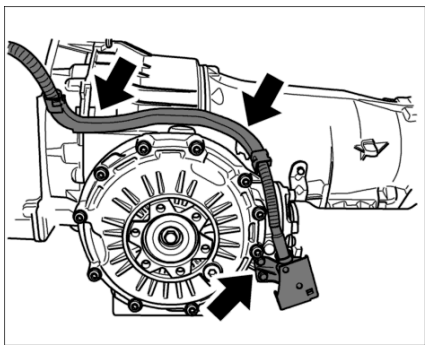
Remove engine-transmission unit. →100119 Removing and installing engine - "Removing" section
Remove the starter. →276019 Removing and installing starter - removing

top of page



Removing the automatic transmission

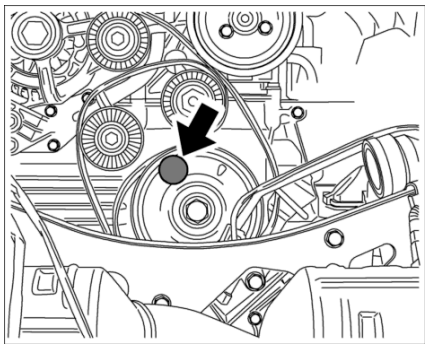
Disassembly work



Vacuum and coolant lines

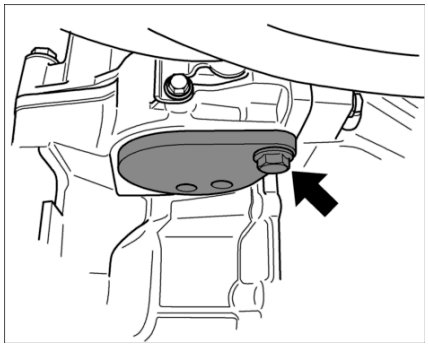
1. Pull off vacuum line from flat-seat valve **-1-** and pull out vacuum line from guides on transmission.
2. Unclip coolant lines from holders **-2-** on transmission.

Coolant hose on ATF cooler



3. Loosen hose clamp and pull off coolant hose from supports on ATF cooler.

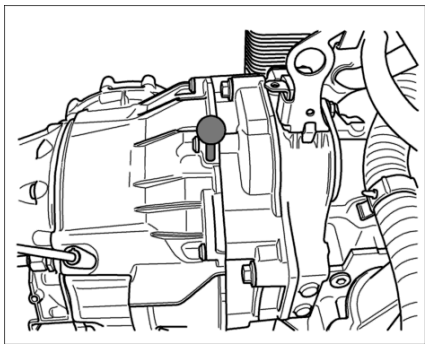
Electric cable in cable guide



4. Unscrew fastening screws and loosen cable guide from transmission.

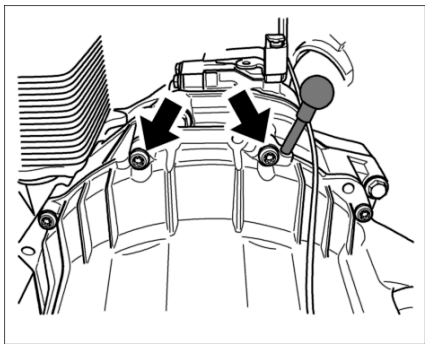
Releasing torque converter

Fixing pin for crankshaft



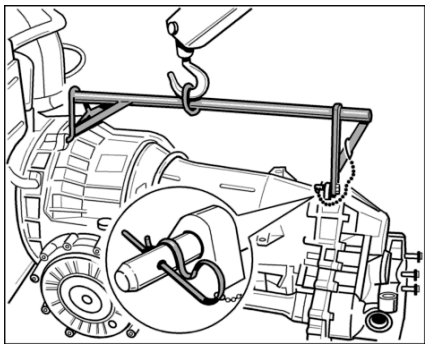
1. Turn engine clockwise until one of the bores (U4, U5, or U6, marked on belt pulley) in the belt pulley is aligned with the centring bore in the crankcase and **fixing pin 95951** (short) can be inserted.

Assembly aid for converter screw



2. Insert **assembly aid 95960** in starter opening and fix with screw.
3. Unscrew 2 screws (hexagon socket 6 mm) of converter screw through openings in **assembly aid 95960**.
4. Remove **fixing pins 95951** (short), continue to turn engine clockwise 120° and insert **fixing pins 95951** (short) again.
5. Unscrew 2 screws (hexagon socket 6 mm) of converter screw through openings in **assembly aid 95960**.
6. Remove **fixing pins 95951** (short), continue to turn engine clockwise 120° and insert **fixing pins 95951** (short) again.
7. Unscrew 2 screws (hexagon socket 6 mm) of converter screw through openings in **assembly aid 95960**.
8. Remove **fixing pins 95951** (short).
9. Remove **assembly aid 95960**.

Removing the automatic transmission

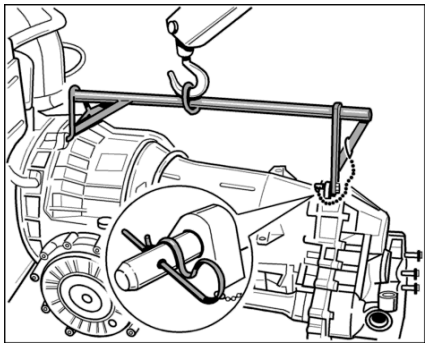


Fixing pin for converter screw

1. Insert **fixing pins 95951** (long) through converter bell housing, fixing converter in its position.

Transmission screws for holder

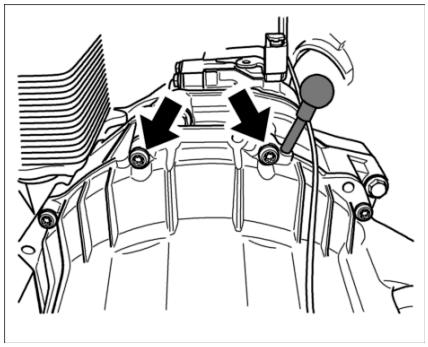
2. Unscrew 2 fastening screws.



Transmission on holder

3. Fit **holder 96740** on transmission, secure with cotter pin and suspend transmission on workshop crane.
4. Unscrew remaining 6 connecting bolts between transmission and converter housing and remove transmission.

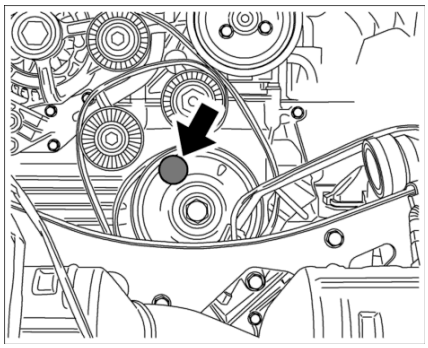
top of page



Refitting the automatic transmission

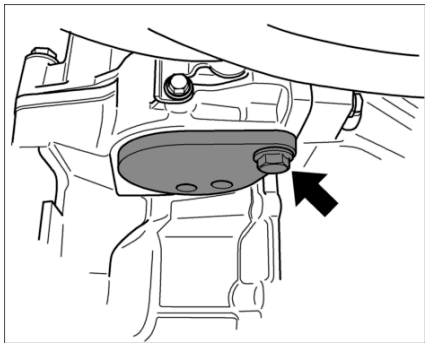
Refitting the automatic transmission

Transmission on holder



1. Fit **holder 96740** on transmission, secure with cotter pin and suspend transmission on workshop crane.
2. Refit transmission and screw in 6 connecting bolts. →**Tightening torque: 17 ftlb.**
3. Disengage **holder 96740** from workshop crane and remove from transmission.

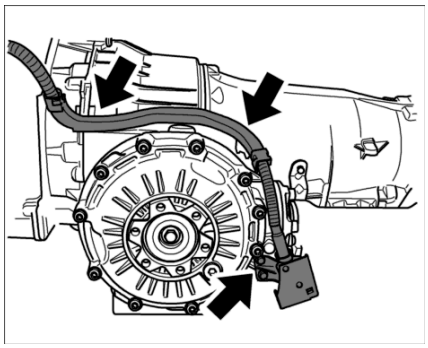
Transmission screws for holder



4. Screw in remaining 2 fastening screws. →**Tightening torque: 17 ftlb.**
5. Remove **fixing pins 95951** (long) from converter bell housing.

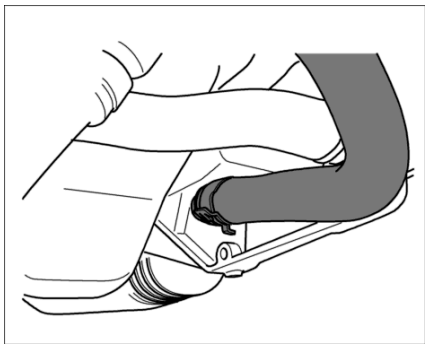
Fastening torque converter

Fixing pin for crankshaft



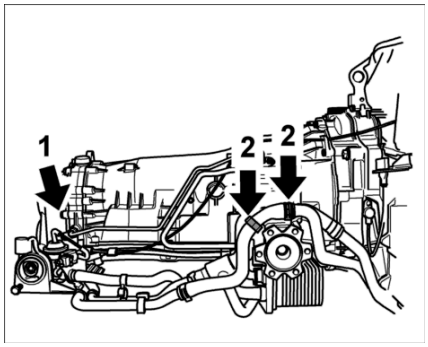
1. Turn engine clockwise until one of the bores (U4, U5, or U6, marked on belt pulley) in the belt pulley is aligned with the centring bore in the crankcase and **fixing pin 95951** (short) can be inserted.

Assembly aid for converter screw



2. Insert **assembly aid 95960** in starter opening and fix with screw.
3. Screw in 2 screws of converter screw through openings in **assembly aid 95960**. Insert →**Tightening torque : 29 ftlb.**
4. Remove **fixing pins 95951** (short), continue to turn engine clockwise 120° and insert **fixing pins 95951** (short) again.
5. Screw in 2 screws of converter screw through openings in **assembly aid 95960**. Insert →**Tightening torque : 29 ftlb.**
6. Remove **fixing pins 95951** (short), continue to turn engine clockwise 120° and insert **fixing pins 95951** (short) again.
7. Screw in 2 screws of converter screw through openings in **assembly aid 95960**. Insert →**Tightening torque : 29 ftlb.**
8. Remove **fixing pins 95951** (short).
9. Remove **assembly aid 95960**.

Assembly work



Electric cable in cable guide

1. Screw in fastening screws and clip in cable guide in transmission. →**Tightening torque: 7.5 ftlb.**

Coolant hose on ATF cooler

2. Position coolant hose on flanges of ATF cooler and fit hose clamp.

Vacuum and coolant lines

3. Insert vacuum line in guides on transmission and connect vacuum line to flat-seat valve **-1-** .
4. Clip coolant lines in holders **-2-** to transmission.

Reworking

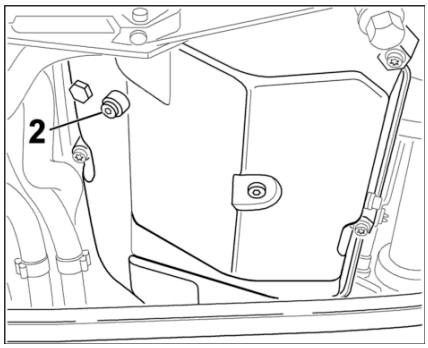
Topping up ATF

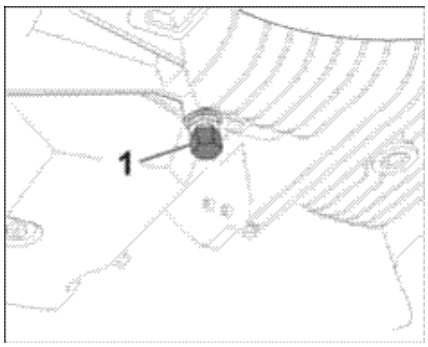
ATTENTION



Transmission cannot be filled, or only insufficiently with ATF.

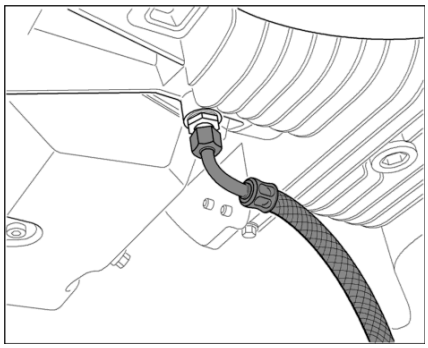
→ Do not start engine

→ Do not tow vehicle



Note

To undo and tighten the cap nut for the charging valve, counter with a ring wrench!



ATF - control screw

1. Unscrew control screw **-2-** .

Cap nut

2. Screw off cap nut **-1-** for the charging valve.

Connection hose onto ATF - charging valve

3. **Screw connection hose 95071** onto charging valve.

WARNING

Danger of scalding and chemical burns from hot ATF

→ Allow ATF to cool down

→ Wear personal protective gear (goggles, gloves)

4. Top up ATF via the charging valve until ATF runs out at the control bore.

Checking and topping up the ATF

The transmission must not be in the reduced driving program. The ATF temperature must be between →**ATF temperature: 30 degrees Celsius** and →**ATF temperature: 40 degrees Celsius** . An ATF inspection when the temperature is too high causes insufficient filling, while an inspection when the temperature is too low causes over-filling. The selector lever must be in position "P" and the engine must be idling. The air conditioning must be switched off. The vehicle must stand horizontally.

Note

The ATF temperature at the start of testing must not be higher than →**ATF temperature: 40 gradCelsius** .

1. Connect the **PIWIS Tester 97180** and call up the ATF temperature.
2. Put selector lever in position "P", start vehicle, and allow engine to idle.
3. Top up ATF via the charging valve until ATF runs out at the control bore.
4. With the brake pedal pressed, change through all selector lever positions, remaining in each position for approximately →**Time: 10 s** .

WARNING

Danger of scalding and chemical burns from hot ATF

→ Allow ATF to cool down

→ Wear personal protective gear (goggles, gloves)

5. Top up with ATF again via the charging valve until ATF runs out at the control bore.

Reworking

1. **Unscrew connection hose 95071** from ATF - charging valve.
2. Replace sealing ring for cap nut and screw on cap nut. →**Tightening torque: 30 ftlb.**
3. Replace sealing ring for ATF control screw and screw in ATF control screw. →**Tightening torque: 16 ftlb.**
4. Fit underbody panels. →519419 Removing and installing rear trim - installing
5. Lower the vehicle.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

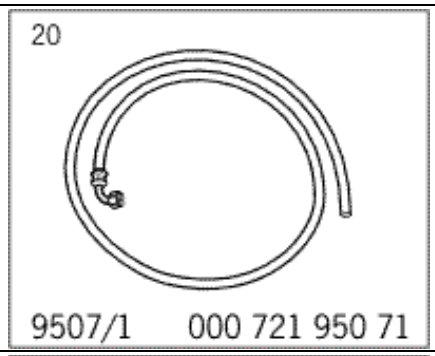
Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

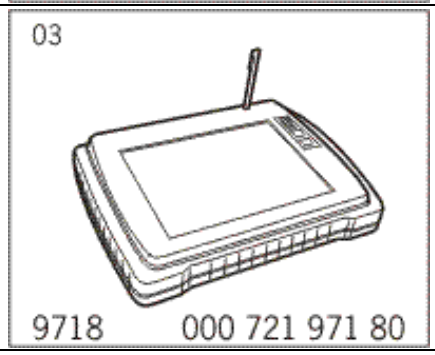
- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.





- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

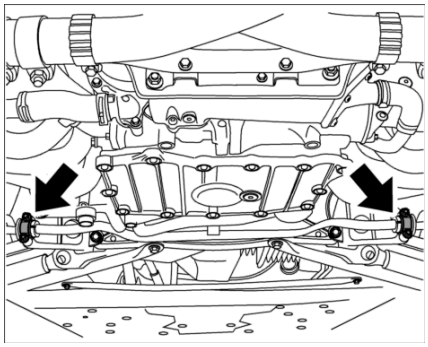
38 60 19 Removing and installing ATF cooler - as of MY 2005

- Preliminary work
- Removing ATF cooler
- Installing ATF cooler
- Subsequent work

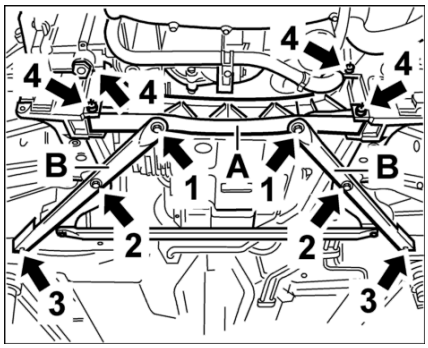
Tools



Designation	Type	Number	Explanation	
hose clamps	VW-tool	3094		

top of page

Preliminary work

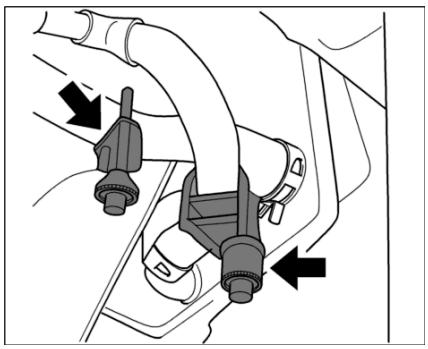


Preliminary work

1. Raise the vehicle at the prescribed jacking points. → *Raising the vehicle*
2. Remove the underbody panels. →519419 Removing and installing rear trim - removing

Stabiliser

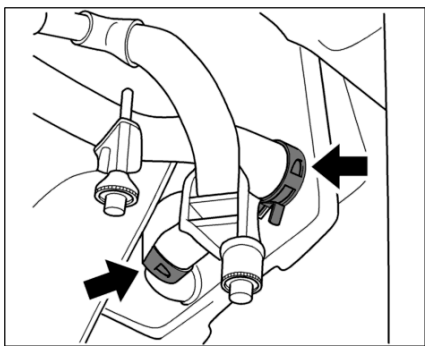
3. Loosen stabilizer and swivel it downward.



Running gear

4. Remove diagonal braces **-B-** and cross member **-A-** .

top of page



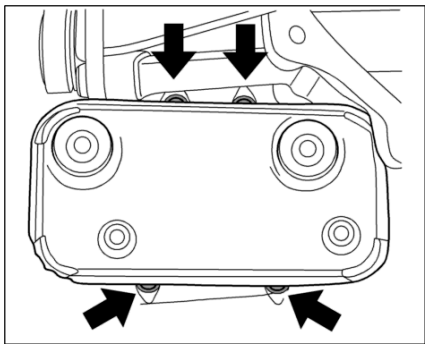
Removing ATF cooler

Removing ATF cooler

Hose clamp

1. Disconnect coolant hoses on ATF cooler using **hose clamps 3094**.

Coolant hoses



WARNING

Scalding from hot coolant

→ Let the coolant cool down.

→ Wear personal protective equipment (goggles, gloves)

2. Loosen hose clamps, pull off coolant hoses from ATF cooler and plug the flanges.

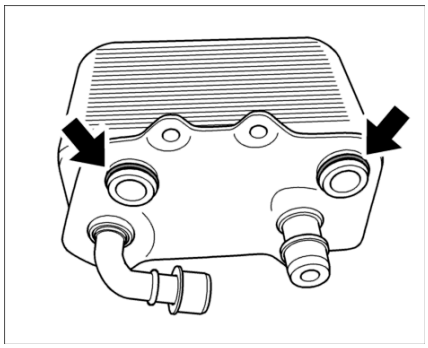
ATF cooler

3. Unscrew fastening screws **-arrows-** between ATF cooler and port plate.

WARNING

Danger of scalding and chemical burns from hot ATF

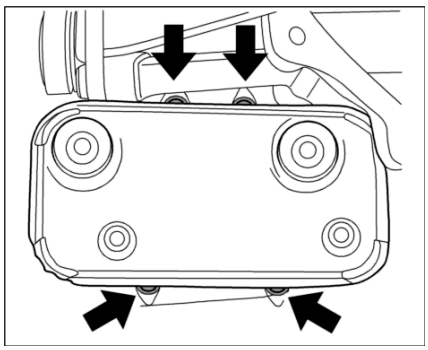
→ Allow ATF to cool down



→ Wear personal protective gear (goggles, gloves)

4. Pull ATF cooler to the rear away from the port plate.

top of page



Installing ATF cooler

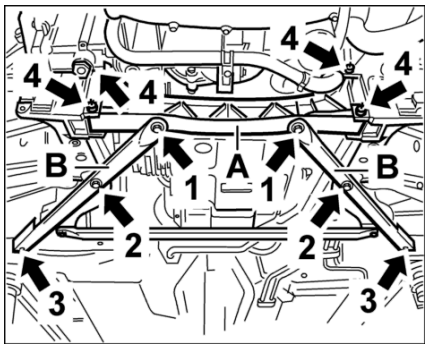
Installing ATF cooler

O-rings on ATF cooler

1. Always replace O-rings **-arrows-** on the ATF cooler.
2. Position ATF cooler on port plate from behind.

ATF cooler

3. Screw in and tighten fastening screws **-arrows-** between ATF cooler and port plate.

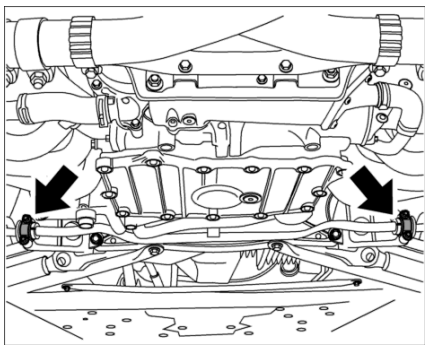


Location	Explanation	Type	Basic value	Tolerance 1	Tolerance 2
ATF cooler		Tightening torque	10 (7.5) Nm (ftlb.)		

4. Remove plugs, connect coolant hoses to flanges and fit hose clamps.
5. Remove **hose clamp 3094**.

top of page

Subsequent work



Subsequent work

Running gear

1. Install cross member **-A-** and diagonal braces **-B-** .

Location	Explanation	Type	Basic value	Tolerance 1	Tolerance 2
Diagonal brace to cross member	In Figure 1	Tightening torque	110 (81.5) Nm (ftlb.)		
Diagonal brace to side section	In Figure 2	Tightening torque	23 (17) Nm (ftlb.)		
Diagonal brace to body	In Figure 3	Tightening torque	65 (48) Nm (ftlb.)		
Cross member to side section	In Figure 4	Tightening torque	110 (81.5) Nm (ftlb.)		

Stabiliser

2. Fit stabiliser.

Location	Explanation	Type	Basic value	Tolerance 1	Tolerance 2
Stabiliser to side section		Tightening torque	23 (17) Nm (ftlb.)		

3. Bleed the cooling system. *→190107 Bleeding the cooling system*
4. Check and if necessary, top up the ATF. →370235 Checking and topping up the ATF
5. Fit the underbody panel. →519419 Removing and installing rear cover - chapter on "installing"

6. Lower the vehicle.

997110, 997111, 997120, 997121, 997310, 997311, 997320, 997321, 997410, 997411, 997430, 997431, 997610, 997611, 997620, 997621

as of MY 2005
Country C00, C02, C05, C07, C08, C09, C10, C11, C12, C13, C14, C15, C16, C18, C19, C20, C21, C22, C23, C24, C25, C26, C27, C28, C32, C33, C34, C35, C36, C37, C38, C39, C45, C46, C98, C99

 WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

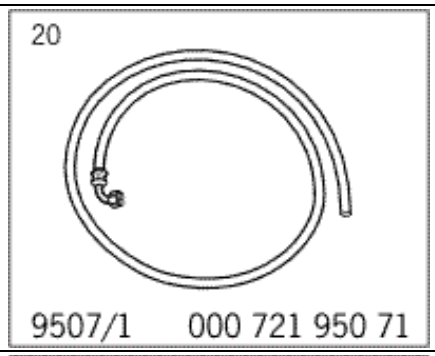
Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

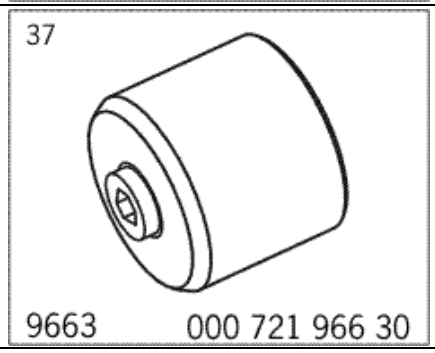
- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

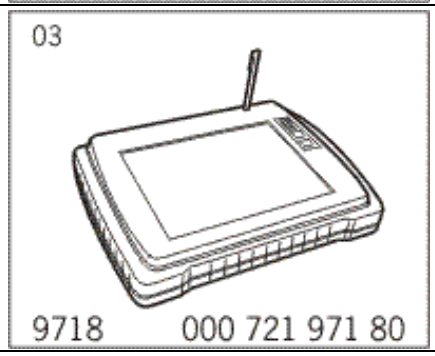
→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.







- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

38 77 19 Removing and installing electrohydraulic control unit - as of MY 2005

- Information
- Technical values
- Preliminary work
- Removing the electrohydraulic control unit
- Installing the electrohydraulic control unit
- Subsequent work

Tools

Designation	Type	Number	Explanation	
Screw connection hose	special tool	95071		
assembly aid	special tool	9663		
PIWIS Tester	special tool	97180		

top of page

Information

Notes

Note
Fill only with ATF approved by Porsche. See Spare Parts Catalogue.

Note
Hot vehicles should cool down before beginning the activity.

Note
Vehicle must be horizontal in order to be filled and checked.

top of page

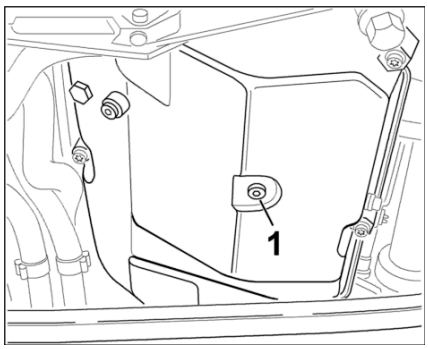
Technical values

Filling capacities

Location	Explanation	Type	Basic value	Tolerance 1	Tolerance 2
Automatic transmission		total capacity	9 litre		
Automatic transmission		change quantity	4.5 litre		

top of page

Preliminary work



Preliminary work

1. Move selector lever to position P.
2. Raise the vehicle at the prescribed jacking points. → *Lifting the vehicle*
3. Remove the underbody panels. →519419 Removing and installing rear trim - removing
4. Place oil collection pan under the transmission.

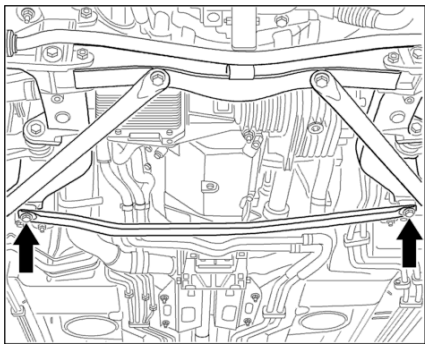
Draining ATF

ATTENTION
Transmission cannot be filled, or only insufficiently with ATF.

→ Do not start engine
→ Do not tow vehicle

ATF - ATF drain screw

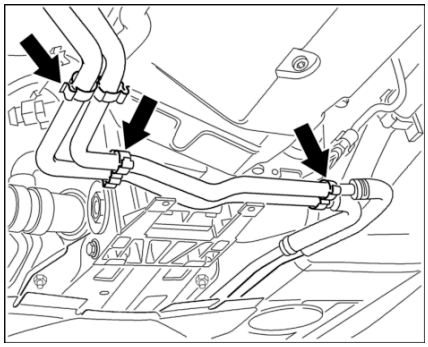
WARNING
Danger of scalding and chemical burns from hot ATF



→ Allow ATF to cool down
→ Wear personal protective gear (goggles, gloves)

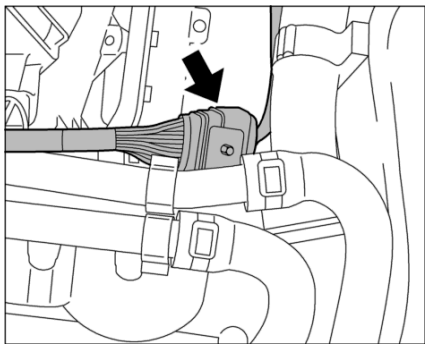
1. Unscrew the drain plug **-1-** and drain the ATF.
2. Replace sealing ring for drain plug and tighten screw. →**Tightening torque: 22 (16 ftlb.) Nm** .

top of page



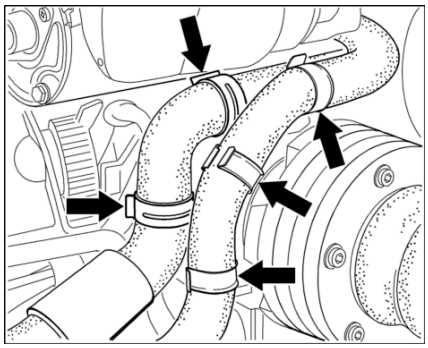
Removing the electrohydraulic control unit

Dismantling



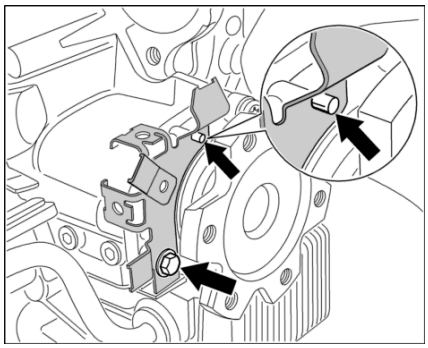
Cross member

1. Remove cross member.



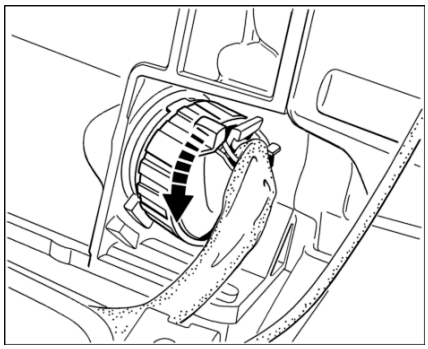
Bracket for the coolant lines

2. Disengage the coolant lines at the fastening points.



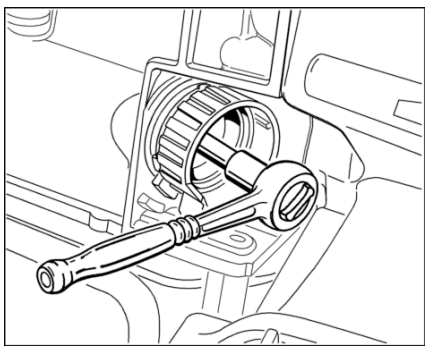
Electric plug

3. Remove electric plug.
4. Disengage cable and vacuum line from the retaining clips of the ATF pan.



Coolant lines

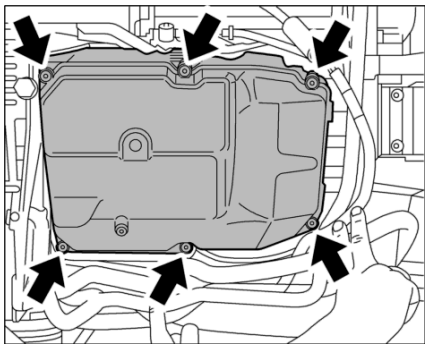
5. Disengage the coolant hoses in the area of the left drive shaft.
6. Pull vacuum line off the switch-over valve.
7. Undo the left drive shaft on the transmission side.



Holder for coolant lines

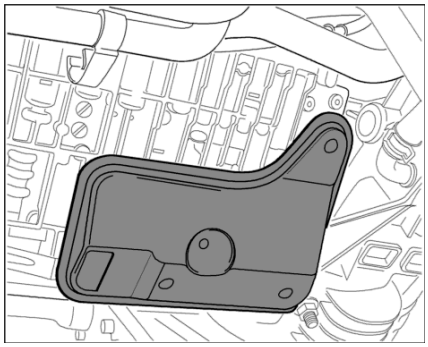
8. Remove the holder for the coolant hoses.

Disengaging plug connection



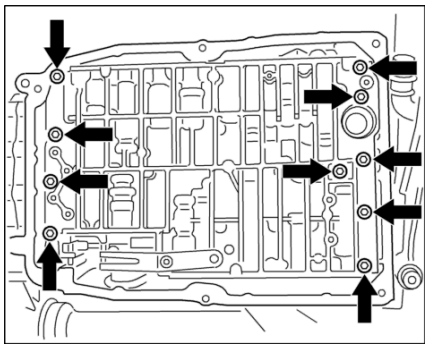
9. Unlock electrical plug connection by turning it counter-clockwise and pull out electrical plug.

Removing bush



10. Unscrew guide bush fastening screw with **assembly aid 9663** and pull out bush.

Removing the electrohydraulic control unit

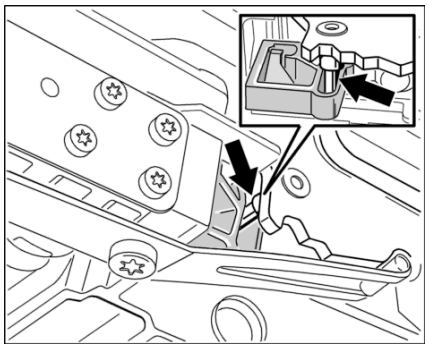


Removing ATF pan

1. Loosen screws crosswise and remove ATF pan.

ATF filter

2. Disconnect ATF filter downwards from electromagnetic control unit.



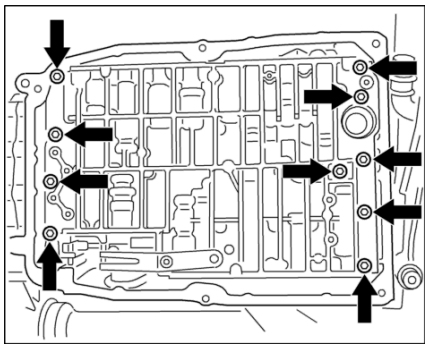
Removing control unit

3. Unscrew fastening screws **-Pfeil-** for electromagnetic control unit and remove control unit.

top of page

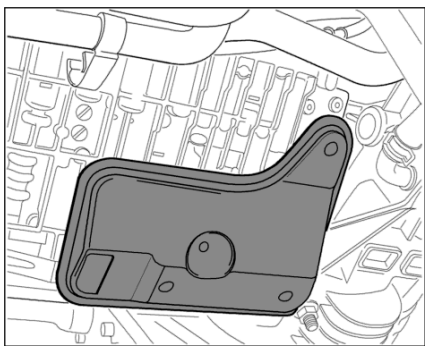
Installing the electrohydraulic control unit

Installing the electrohydraulic control unit



Selector valve and driver

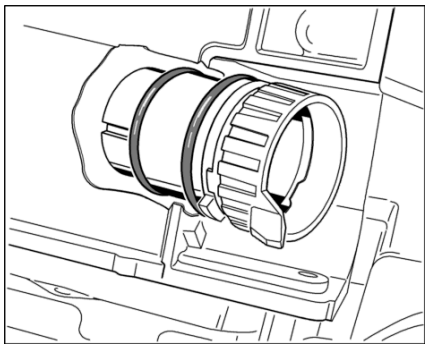
Note



The selector lever must be in position P in order to fit the electrohydraulic control unit.

1. Insert electrohydraulic control unit into the transmission from below. The selector valve must engage in the driver of the notched plate.

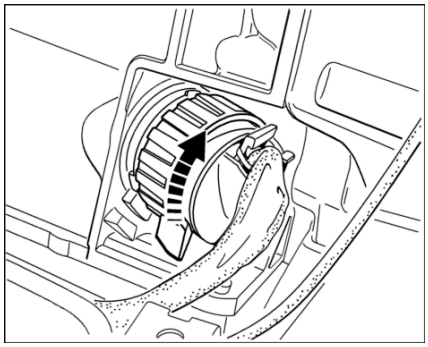
2. Screw in fastening screws and tighten hand tight.
3. Tighten fastening screws.



Location	Explanation	Type	Basic value	Tolerance 1	Tolerance 2
Electrohydraulic control unit		Tightening torque	8 (6.0 ftlb.) Nm		

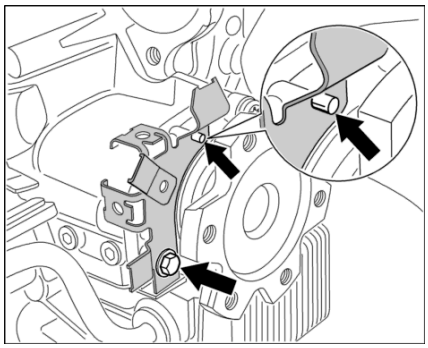
ATF filter

4. Thinly coat gasket on the suction collar of the ATF filter with Vaseline and insert filter from below into electromagnetic control unit.
5. Clean ATF pan and place on transmission with new seal.
6. Screw in screws and tighten them crosswise. →**Tightening torque: 8 (6.0 ftlb.) Nm**



Assembly work

Sealing rings



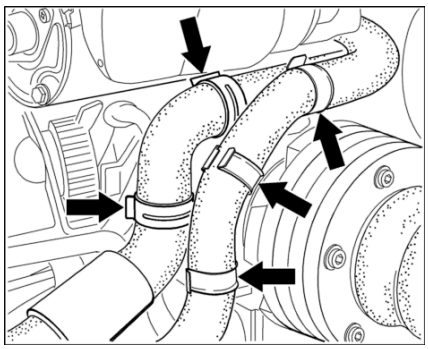
1. Insert the socket with new seals in the correct position and tighten the fastening screw.

Location	Explanation	Type	Basic value	Tolerance 1	Tolerance 2
Socket		Tightening torque	2.0 ftlb.		

Fit plug connection

2. Insert electrical plug into socket and lock by turning clockwise.

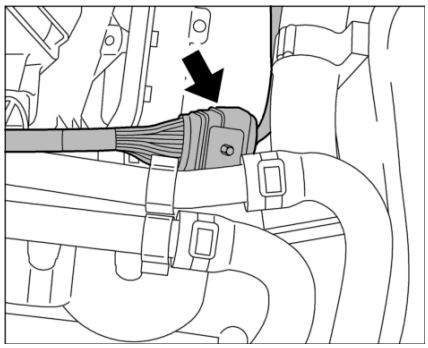
Holder for coolant lines



3. Fit the holder for the coolant hoses.

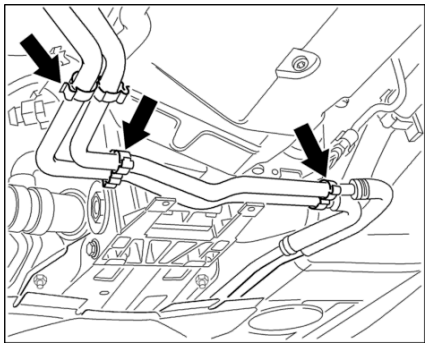
Location	Explanation	Type	Basic value	Tolerance 1	Tolerance 2
Holder for coolant hoses		tightening torque	7.5 ftlb.		

4. Fit left drive shaft on transmission side.



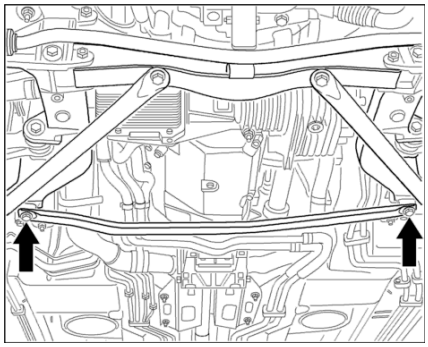
Location	Explanation	Type	Basic value	Tolerance 1	Tolerance 2
Drive shaft		tightening torque	81 ftlb.		

5. Push vacuum line onto switch-over valve.



Coolant lines

6. Engage the coolant hoses in the area of the left drive shaft.
7. Engage cable and vacuum line in the retaining clips of the ATF pan.



Electric plug

8. Fit electric plugs.

Holder for coolant lines

9. Engage the coolant lines at the fastening points.

Cross member

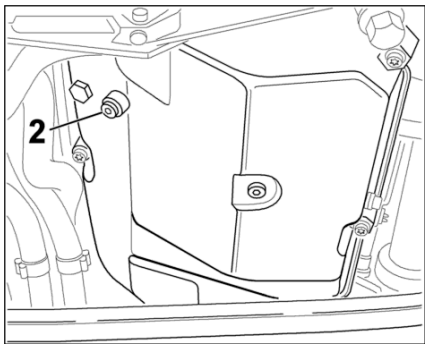
10. Install cross member.

top of page

Subsequent work

Topping up ATF

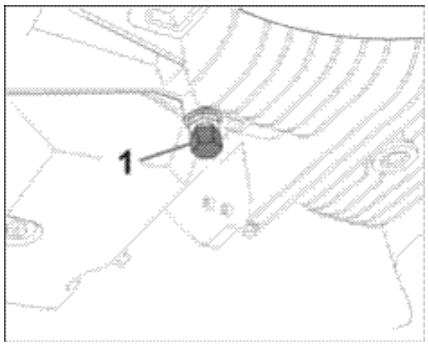
ATTENTION



Transmission cannot be filled, or only insufficiently with ATF.

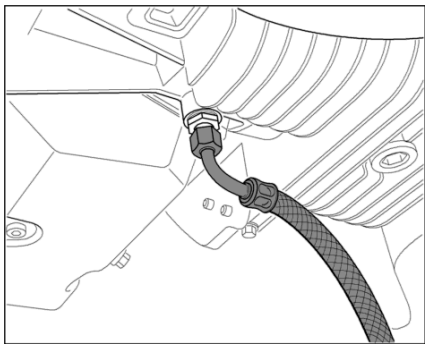
→ Do not start engine

→ Do not tow vehicle



Note

To undo and tighten the cap nut for the charging valve, counter with a ring wrench!



ATF - control screw

1. Unscrew control screw **-2-** .

Cap nut

2. Screw off cap nut **-1-** for the charging valve.

Connection hose onto ATF - charging valve

3. **Screw connection hose 95071** onto charging valve.

WARNING

Danger of scalding and chemical burns from hot ATF

→ Allow ATF to cool down

→ Wear personal protective gear (goggles, gloves)

4. Top up ATF via the charging valve until ATF runs out at the control bore.

Checking and topping up the ATF

The transmission must not be in the reduced driving program. The ATF temperature must be between →**ATF temperature: 30 degrees Celsius** and →**ATF temperature: 40 degrees Celsius** . An ATF inspection when the temperature is too high causes insufficient filling, while an inspection when the temperature is too low causes over-filling. The selector lever must be in position "P" and the engine must be idling. The air conditioning must be switched off. The vehicle must stand horizontally.

Note

The ATF temperature at the start of testing must not be higher than →**ATF temperature: 40 gradCelsius** .

1. Connect the **PIWIS Tester 97180** and call up the ATF temperature.
2. Put selector lever in position "P", start vehicle, and allow engine to idle.
3. Top up ATF via the charging valve until ATF runs out at the control bore.
4. With the brake pedal pressed, change through all selector lever positions, remaining in each position for approximately →**Time: 10 s** .

WARNING

Danger of scalding and chemical burns from hot ATF

→ Allow ATF to cool down

→ Wear personal protective gear (goggles, gloves)

5. Top up with ATF again via the charging valve until ATF runs out at the control bore.

Reworking

1. **Unscrew connection hose 95071** from ATF - charging valve.
2. Replace sealing ring for cap nut and screw on cap nut. →**Tightening torque: 30 ftlb.**
3. Replace sealing ring for ATF control screw and screw in ATF control screw. →**Tightening torque: 16 ftlb.**
4. Fit underbody panels. →519419 Removing and installing rear trim - installing
5. Lower the vehicle.

997110, 997111, 997120, 997121, 997310, 997311, 997320, 997321, 997410, 997411, 997430, 997431, 997610, 997611, 997620, 997621

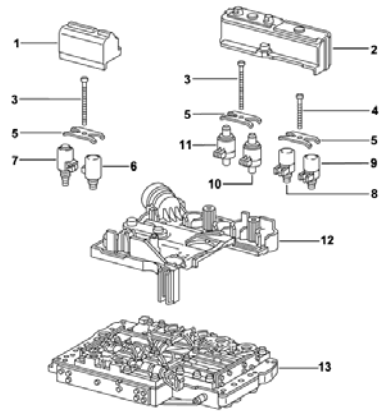
- Subsequent work

top of page

Preliminary work



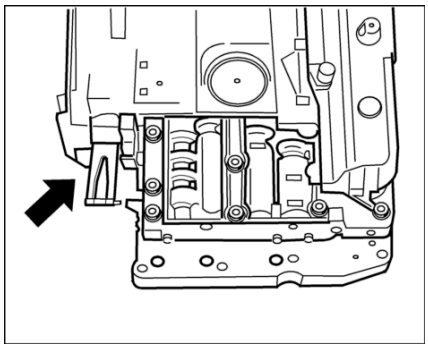
Preliminary work

1. Remove electrohydraulic control unit. →387719 Removing and installing hydraulic control unit - chapter on "removing"

top of page

Disassembling electrohydraulic control unit

Overview



Explosion

1 - Cover

2 - Cover

3 - Screw (6x80)
4 - Screw (6x55)
5 - Leaf springs
6 - Solenoid valve, 2-3 gearshift
7 - Control solenoid valve, converter jumper
8 - Solenoid valve, 1-2 and 4-5 gearshift
9 - Solenoid valve, 3-4 gearshift
10 - Control solenoid valve, shifting pressure
11 - Control solenoid valve, modulating pressure
12 - Electrical control unit
13 - Hydraulic control unit

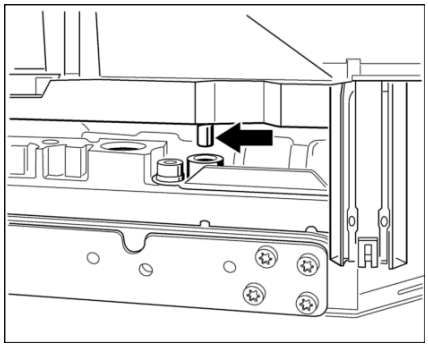
Disconnecting hydraulic and electrical control unit

Disconnecting control units

1. Remove electrical control unit. To do so, bend back the retaining lug **-arrow-** at the strengthening rib on the oil temperature sensor and remove electrical control unit from hydraulic control unit by pulling it upwards.

Removing solenoid and control valve

1. Pull off plastic cover.
2. Remove
   screw.
3. Remove leaf spring.
4. Pull solenoid and control valve out using pullers, if necessary.



Installing solenoid and control valve

1. Press solenoid and control valve in fully. Ensure that valve sits correctly into position.
2. Position leaf spring and screw in screw.

Location	Explanation	Type	Basic value	Tolerance 1	Tolerance 2
Leaf spring		Tightening torque	8 (6) Nm (ftlb.)		

3. Fit plastic cover.

Reassembling the hydraulic and electrical control unit

Pin and bore

1. Position electrical control unit on hydraulic control unit. The guide pin on the electrical control unit must engage in the guide bore of the hydraulic control unit.

top of page

Subsequent work

Reworking

1. Install electrohydraulic control unit. →387719 Removing and installing hydraulic control unit - chapter on "installing"

- Removing cardan shaft
- Installing cardan shaft
- Subsequent work

Tools

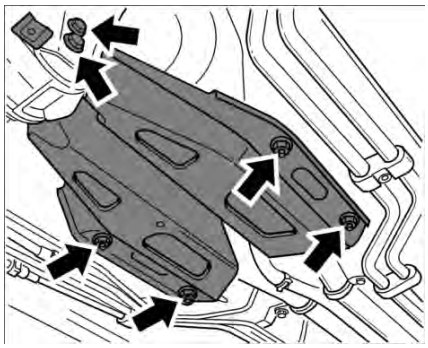
Designation	Type	Number	Explanation	
Assembly sleeve	special tool	P 9255		

top of page

Preliminary work

Preliminary work

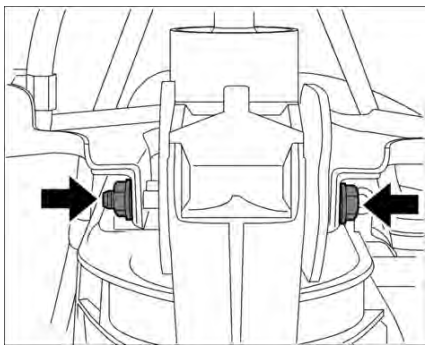
1. Raise the vehicle at the specified jacking points. *→401000 Lifting the vehicle*
2. Remove underbody panel. →519419 Removing and installing rear cover - removing *→519320 21 Removing and installing middle cover - removing*



top of page

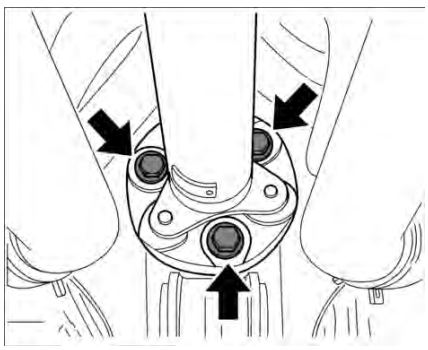
Removing cardan shaft

Removing cardan shaft



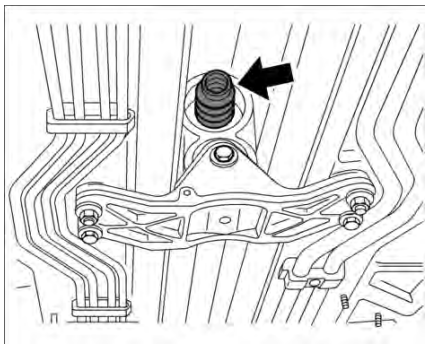
Note

- *Observe max. joint angle of 20° when removing and fitting. Furthermore, the cardan joint must not be loaded at max. deflection (stop).*



Transmission bracket

1. Support transmission in installation position with the transmission jack and remove transmission bracket.



Gear support

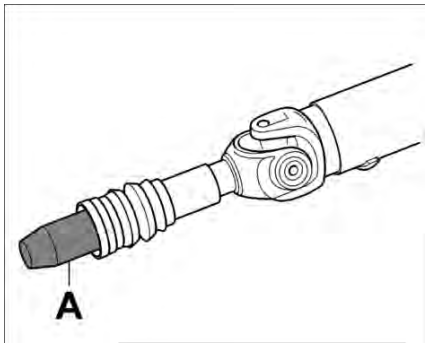
2. Secure transmission to gear support with the two fastening screws.
3. Remove transmission jack.

Cardan shaft threaded joint

4. Remove cardan shaft from transmission. Counter at wheel with gear engaged or put on handbrake to prevent it from turning.
5. Press cardan shaft off the transmission flange with two mounting levers if necessary.
6. Pull cardan shaft out of the splines of the central shaft and remove it.

Bellows

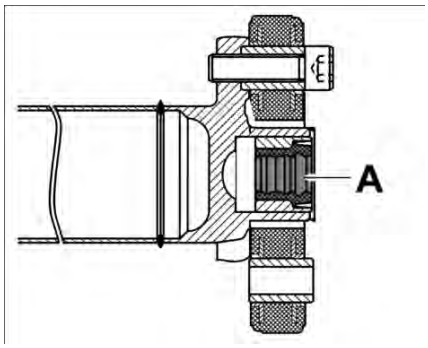
7. Remove bellows from the central shaft.



top of page

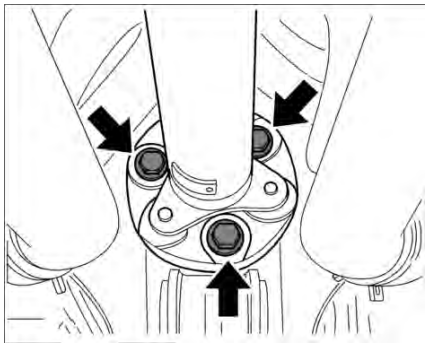
Installing cardan shaft

Installing cardan shaft



Note

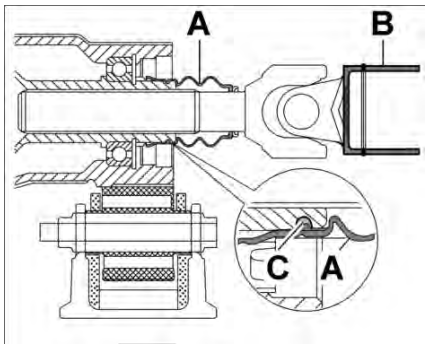
Always replace bellows.



Fitting bellows

1. Slide **Assembly sleeve P 9255** **-A-** over the shaft splines, lightly lubricate sleeve with Vaseline and push on bellows as far as it will go.

Bushing



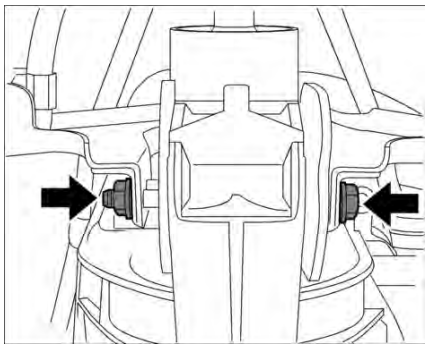
2. Grease bushing **-A-** with approx. 3 g of Olysta Longtime 3EP.
3. Grease splines of the cardan shaft with Olysta Longtime 3EP.
4. Slide cardan shaft into the splines of the central shaft.

Cardan shaft threaded joint

5. Fit cardan shaft on transmission side.

Location	Explanation	Type	Basic value	Tolerance 1	Tolerance 2
Cardan shaft to transmission flange		Tightening torque	45 (33 ftlb.) Nm		

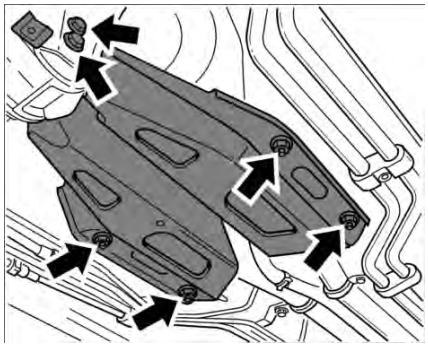
Bellows in central shaft



6. Push bellows forward until it engages in the groove of the central shaft.

A - Bellows

B - Cardan shaft



C - Central shaft groove

7. Check that the bellows is seated properly by pulling on it.
8. Support transmission in installation position with transmission jack.

Gear support

9. Unscrew fastening screws on gear support.

Transmission bracket

10. Fit transmission bracket.

Location	Explanation	Type	Basic value	Tolerance 1	Tolerance 2
Transmission bracket to body		Tightening torque	65 (48 ftlb.) Nm		
Transmission bracket/support to transmission mount		Tightening torque	65 (48 ftlb.) Nm		

11. Remove transmission jack.

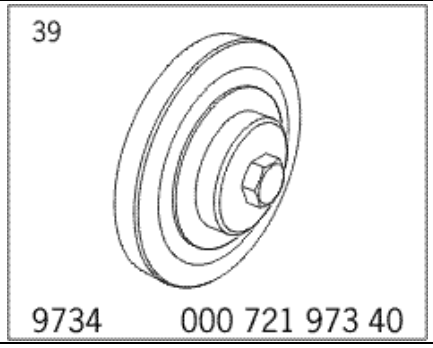
 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.



- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

39 22 19 Removing and installing sealing ring for right-hand halfshaft flange - as of MY 2005

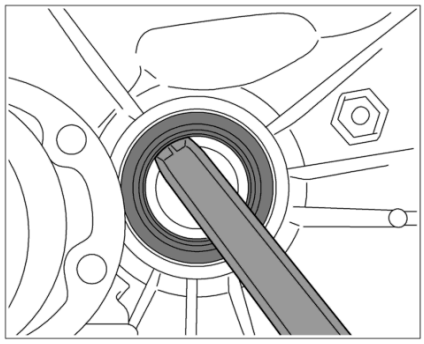
- Preliminary work
- Removing sealing ring for halfshaft flange
- Installing sealing ring for halfshaft flange
- Subsequent work

Tools

Designation	Type	Number	Explanation	
Pressure piece	special tool	9734		

top of page

Preliminary work



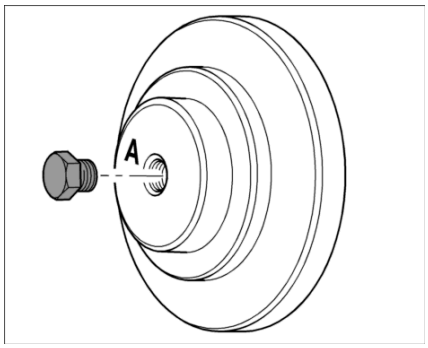
Preliminary work

1. Raise the vehicle at the prescribed jacking points. → *Raising the vehicle*
2. Remove the underbody panel. →519419 Removing and installing rear cover - chapter on "removing"
3. Remove right halfshaft flange. → *21 Removing and installing halfshaft flange - "Removing" chapter*

top of page

Removing sealing ring for halfshaft flange

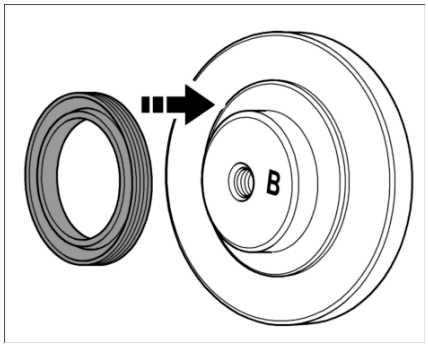
Removing sealing ring for halfshaft flange



Levering out the sealing ring

1. Lever the sealing ring out of the transmission.

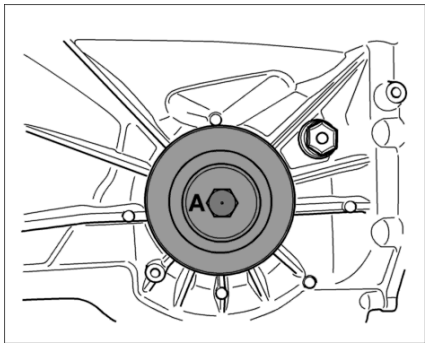
top of page



Installing sealing ring for halfshaft flange

Installing sealing ring for halfshaft flange

Screw in special tool



1. Screw M10 x 30 hexagon-head bolt into side A of **Pressure piece 9734**.

Sealing ring on special tool

2.

Thinly coat sealing lip and outer circumference of sealing ring with Vaseline and place the sealing ring on side B of **pressure piece 9734** .

Tapping in sealing ring

3. Hammer the sealing ring along with **pressure piece 9734** completely into the transmission by hitting the hexagon-head bolt.

top of page

Subsequent work

Subsequent work

1. Install the right halfshaft flange. → *23 Removing and installing halfshaft flange - "Installing" chapter*
2. Check transmission oil level. →*340101 Checking transmission oil*
3. Fit the underbody panel. →519419 Removing and installing rear cover - chapter on "installing"
4. Lower the vehicle.

as of MY 2005
Country C00, C02, C05, C07, C08, C09, C10, C11, C12, C13, C14, C15, C16, C18, C19, C20, C21, C22, C23, C24, C25, C26, C27, C28, C32, C33, C34, C35, C36, C37, C38, C39, C45, C46, C98, C99

WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**

- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

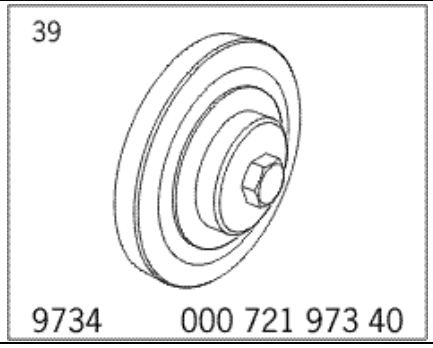
Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.



- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

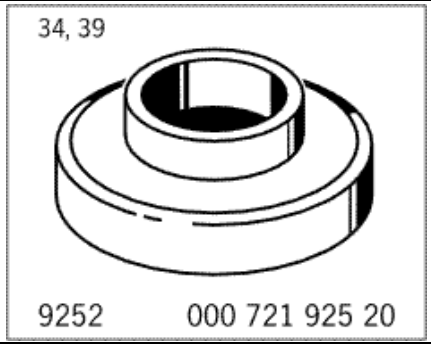
Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

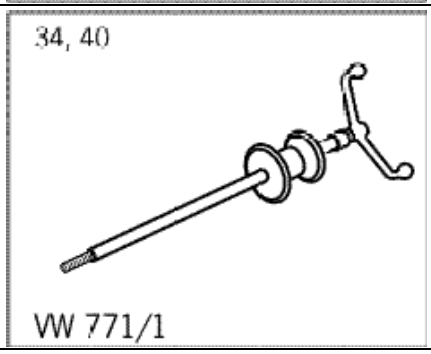
- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

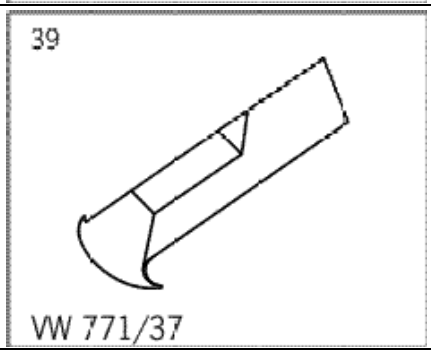
→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.







- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

Checking operation of the viscous clutch

Information

Diagram

v - Driving speed on front axle

F - Traction of front wheels

Checking operation of the viscous clutch

The viscous clutch must be at room temperature.The test duration cannot exceed 45 seconds, whereby the measurement is taken after approx. 20 seconds.The measurement can only be repeated after the clutch is allowed to cool down for 60 minutes.

1. Connect the **PIWIS tester P 9718** and check the speed on the front wheels in the "PSM actual values" menu.
2. Drive front wheels of the vehicle onto the roller brake tester.
3. Switch off the engine, put on the handbrake and shift the transmission to idle speed or neutral.

Note

To calculate the traction on the front wheels, the values measured for the individual wheels must be added.

- *The speed on the front axle cannot exceed 8 km/h when the measurement is taken.*
- *To calculate the traction on the front wheels, the values measured for the individual wheels must be added.*

4. Drive front wheels via the rollers on the brake tester and read off the traction and speed on the front wheels after about 20 seconds.

The viscous clutch is working properly if the point of intersection between traction and speed lies within the limit curves in the diagram.
Example: At a speed of 5 km/h, the traction must be between 600 N and 1450 N.

WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

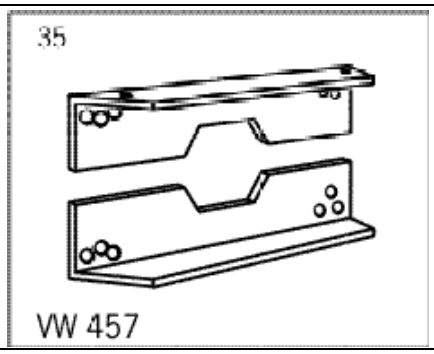
Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.



- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

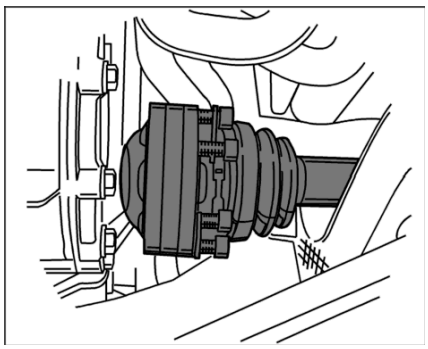
Removing front final drive

Removing front final drive

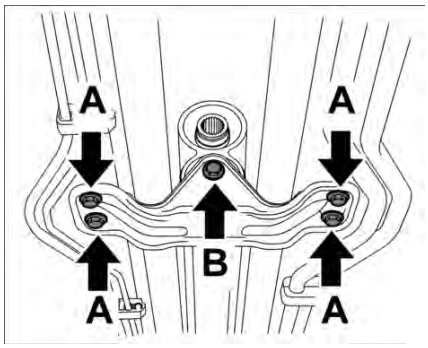


Diagonal braces

1. Remove front diagonal braces.

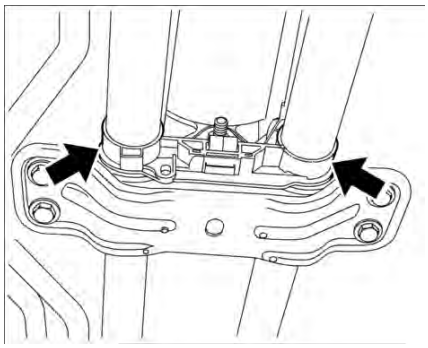
Cover

2. Remove front cover.



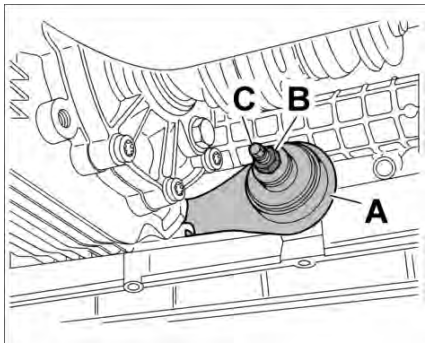
Drive shaft

Note



Protect drive shafts against mechanical damage (e.g. with a rubber hose which has been cut open).

3. Remove front drive shafts on transmission side. To do this, unscrew the six hexagon socket head bolts joining each drive shaft and transmission flange. Counter at the wheel to stop it from turning.
4. Place transmission jack under the final drive and fasten retaining strap.



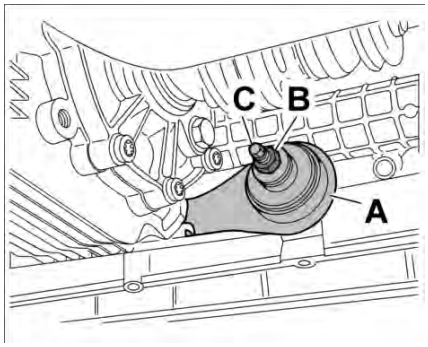
Fastening screws for pipe holder

5. Unscrew fastening screws for pipe holder **-A-** . Never loosen screw between pipe holder and transmission mount **-B-** .

Pipe holder

6. Disengage pipe holder from lines and remove it.

Final drive mount



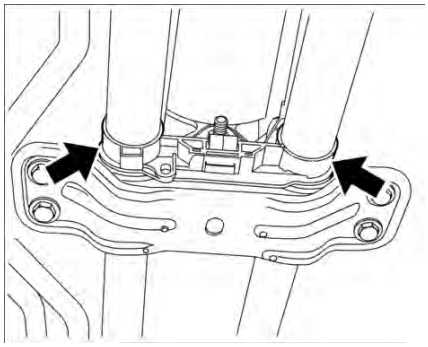
7. Undo fastening nuts **-B-** for front bracket **-A-** and unscrew the studs **-C-** .
8. Carefully lower the final drive out. When doing so, avoid damaging the coolant pipes.

top of page

Installing front final drive

Installing front final drive

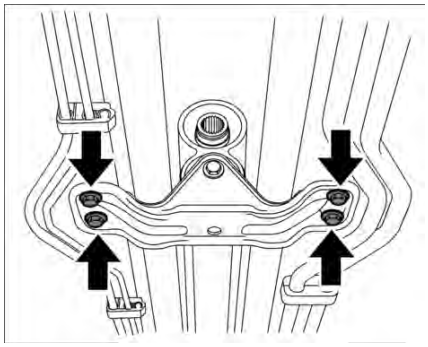
1. Carefully guide the final drive into position from below. When doing so, avoid damaging the coolant pipes.



Final drive mount

2. Screw studs **-C-** through the transmission support **-A-** and into the front-axle cross member.

Location	Explanation	Type	Basic value	Tolerance 1	Tolerance 2
Stud on front-axle cross member		Tightening torque	20 (15 ftlb.) Nm		

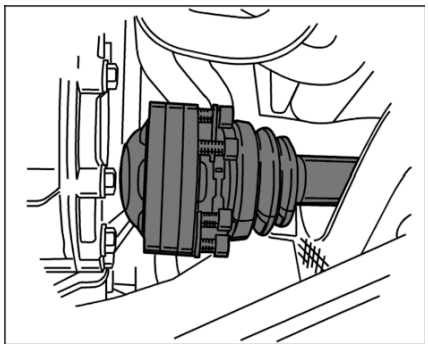


3. Screw fastening nuts **-B-** onto studs and tighten.

Location	Explanation	Type	Basic value	Tolerance 1	Tolerance 2
Fastening nut on stud		Tightening torque	65 (48 ftlb.) Nm		

Pipe holder

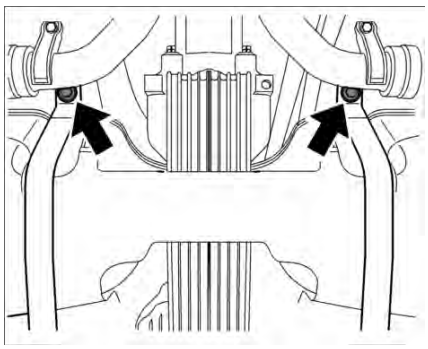
4. Engage pipe holder on lines.



Pipe holder

5. Screw in fastening screws for pipe holder.

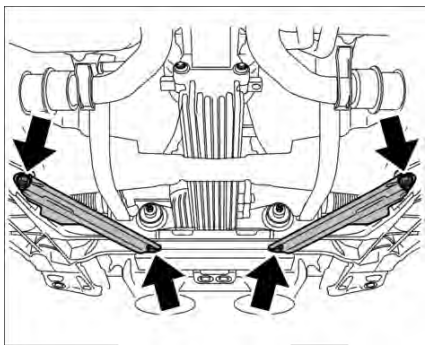
Location	Explanation	Type	Basic value	Tolerance 1	Tolerance 2
Fastening screws securing pipe holder to body		Tightening torque	65 (48 ftlb.) Nm		



6. Remove transmission jack.

Drive shaft

7. Fit front drive shafts on transmission side. To do this, screw in six hexagon socket head bolts between each drive shaft and the transmission flange and tighten bolts. Counter at the wheel to stop it from turning.



Location	Explanation	Type	Basic value	Tolerance 1	Tolerance 2
Drive shafts	Fastening screws between drive shaft and transmission flange	Tightening torque	39 (29 ftlb.) Nm		

Cover

8. Install front cover.

Location	Explanation	Type	Basic value	Tolerance 1	Tolerance 2
Retaining strap securing cover to body		Tightening torque	23 (17 ftlb.) Nm		

Diagonal braces

9. Install front diagonal braces.

Location	Explanation	Type	Basic value	Tolerance 1	Tolerance 2
Diagonal brace to body		Tightening torque	100 (74 ftlb.) Nm

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

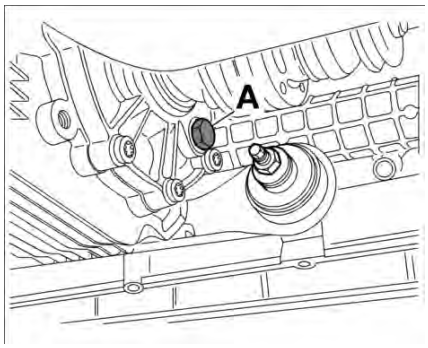
Preliminary work



Preliminary work

1. Raise the vehicle at the specified jacking points. *→401000 Lifting the vehicle*
2. Remove front underbody panel. →519219 Removing and installing front cover - section on "Removing"
3. Place oil collection pan under the transmission.

top of page

Checking and topping up oil for front final drive

Checking and topping up oil for front-axle final drive

Oil filler screw

1. Unscrew oil filler screw **-A-** .

WARNING

Risk of scalding from hot oil

→ Let the oil cool down

→ Wear personal protective gear (goggles, gloves)

The oil level is correct if transmission oil emerges. Continue with step 3.
If transmission oil does not flow out, the oil level in the final drive is too low. Continue with step 2.

2. Fill in transmission oil up to the bottom edge of the filler opening.
3. Clean oil filler plug and screw in with a new sealing ring.

Location	Explanation	Type	Basic value	Tolerance 1	Tolerance 2
Oil filler screw on front-axle final drive		Tightening torque	28 (21 ftlb.) Nm

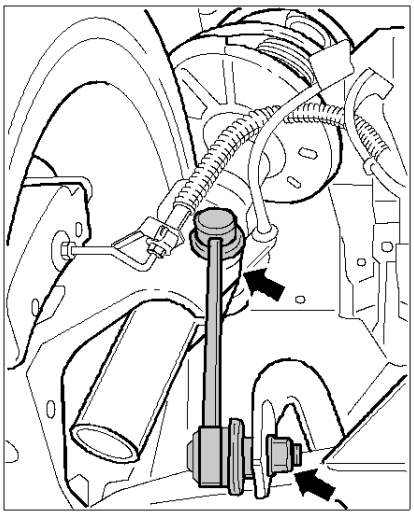
40 78 19 Removing and installing connecting link (suspension/stabiliser) - as of MY 2005

-
-

top of page

Removing front connecting link (suspension/stabiliser)

Connecting link (suspension/stabiliser)



1. Remove wheel. →440519 Removing and installing wheel Then loosen the lock nuts **-arrows-** on the suspension/stabiliser. When loosening, counter with Torx T30 or open-ended wrench.
2. Support wheel suspension on wheel carrier with suitable jack, and remove suspension/stabiliser.

top of page

Installing front connecting link (suspension/stabiliser)

Up to approx. the middle of April 2005 (the exact date can be taken from the Technical Information if necessary), the lock nut can become loose on the threaded connection of the stabilizer/suspension/stabiliser on the front and rear axle due to a loss in preload.Suspension/stabilisers are therefore installed with a pin extended by 10 mm and an appropriately extended hexagon nut on the front and rear axle as of the time mentioned.Suspension/stabilisers with extended pins (extended threads) of the fastening bolt can be installed retroactively.In the event of a claim (noise problem caused by the stabiliser), all 4 suspension/stabilisers are to be replaced by the modified version. On assembly work in the stabiliser area or on the wheel suspension, install the modified version on the right and left side.

1. Install connecting link (suspension/stabiliser).

Connecting link (suspension/stabiliser)

Note

- *Use the new fastening nuts, which are 10 mm longer (Part No. 999.084.123.09), to secure the modified connecting links.*
- *Use the old fastening nuts (Part No. 999.084.643.09) to secure the old connecting links.*
- *The old connecting link (short threaded pin) must not be used together with the new lock nut because the threaded pin is not long enough for the lock nut. If this incorrect combination is used, the safety effect could not be assured or would only be provided conditionally.*

2. Use new fastening nuts. Fit the assigned lock nut **-lower arrow-** to the connection from the suspension/stabiliser to the stabiliser depending on the version (longer or shorter pin).
3. Observe prescribed tightening torques. Tighten the lower lock nut (M10) in a 3-stage tightening procedure *→401000 Tightening torques for front axle*.
4. Fit wheel →440519 Removing and installing wheel.

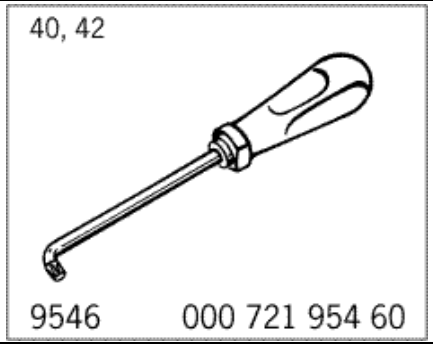
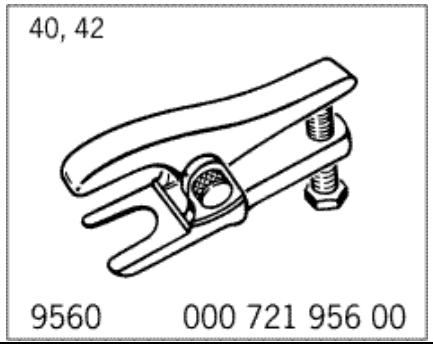
risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.





- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

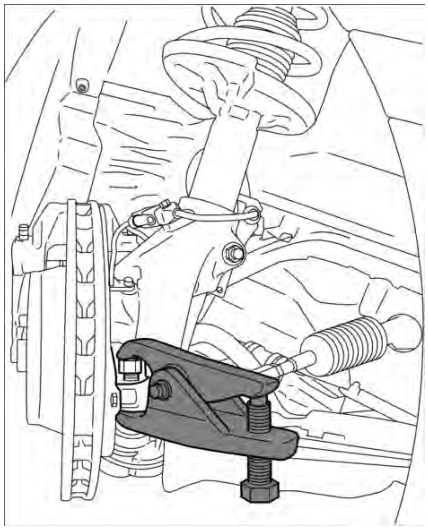
40 85 19 Removing and installing front spring strut - as of MY 2005

-
-
-
-

Tools

Designation	Type	Number	Explanation	
screwdriver	special tool	9546		
press-out tool	special tool	9560		

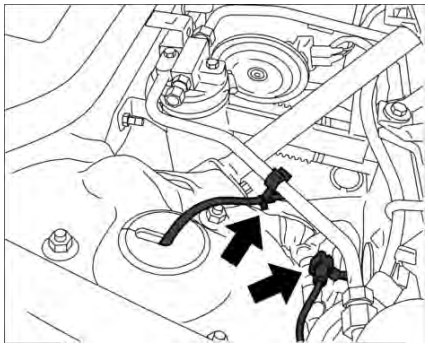
top of page



Removing and installing spring strut - preliminary work

1. Raise the vehicle *→401000 Lifting the vehicle* and remove front wheel →440519 Removing and installing wheel.

top of page



Removing front spring strut

1. Loosen stabiliser mount at stabiliser (counter with Torx T30).

Loosening tie rod

2. Loosen tie rod and control arm at wheel carriers and press off the ball joints with special tool **press-out tool 9560**. When loosening the lock nuts, counter at the ball-joint pins with special tool **screwdriver 9546** (Torx screwdriver).
3. Disconnect plug connection at wheel carrier and pull out plugs. Undo plug connection at wheel carrier and unclip electric wires at the spring strut.
4. Loosen holder for brake line/brake hose at wheel carrier. Loosen brake calliper from wheel carrier and attach in wheel arch.
5. Open luggage compartment and remove the relevant design cover over the spring strut.

PASM bracket and connector

6. Loosen cover over piston rod (at spring strut). For PASM spring struts, carefully disconnect connecting cable at the connector and unclip it from the bracket **-Arrows-** .
7. Mark the installation position of the spring-strut mount (position of the three collar nuts). Loosen fastening nuts (3 ea. M8) at spring-strut mount.
8. Pull out spring strut with wheel carrier.

9. Loosen clamped connection between spring strut/wheel carrier (ball joint of stabiliser mount). Counter with open-ended wrench. Pull spring strut out of wheel carrier.

top of page

Installing front spring strut

Note

- *If assembly work was performed or parts replaced that affect the vehicle height, a complete wheel alignment is necessary.*

1. Install in reverse order. Before installing, do a visual check on the parts. Replace brake calliper fastening screws.
2. Do not grease threaded connections in Dacromet finish - aluminium colour. Observe correct tightening torques.
3. Place the spring-strut/wheel-carrier assembly into the vehicle. Note installation position of the spring-strut mount. The arrow markings must point to the outer side of the vehicle. The shock-absorber piston rod is thereby shifted outwards. Use new lock nuts. Before tightening the lock nuts, align spring-strut mount in accordance with the applied marking (position of the three collar nuts).

top of page

Removing and installing spring strut - subsequent work

1. Fit front wheel →440519 Removing and installing wheel.
2. Check wheel alignment values on front axle and adjust if necessary →449503 Performing front and rear suspension alignment.

as of MY 2005
Country C00, C02, C05, C07, C08, C09, C10, C11, C12, C13, C14, C15, C16, C18, C19, C20, C21, C22, C23, C24, C25, C26, C27, C28, C32, C33, C34, C35, C36, C37, C38, C39, C45, C46, C98, C99

 WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

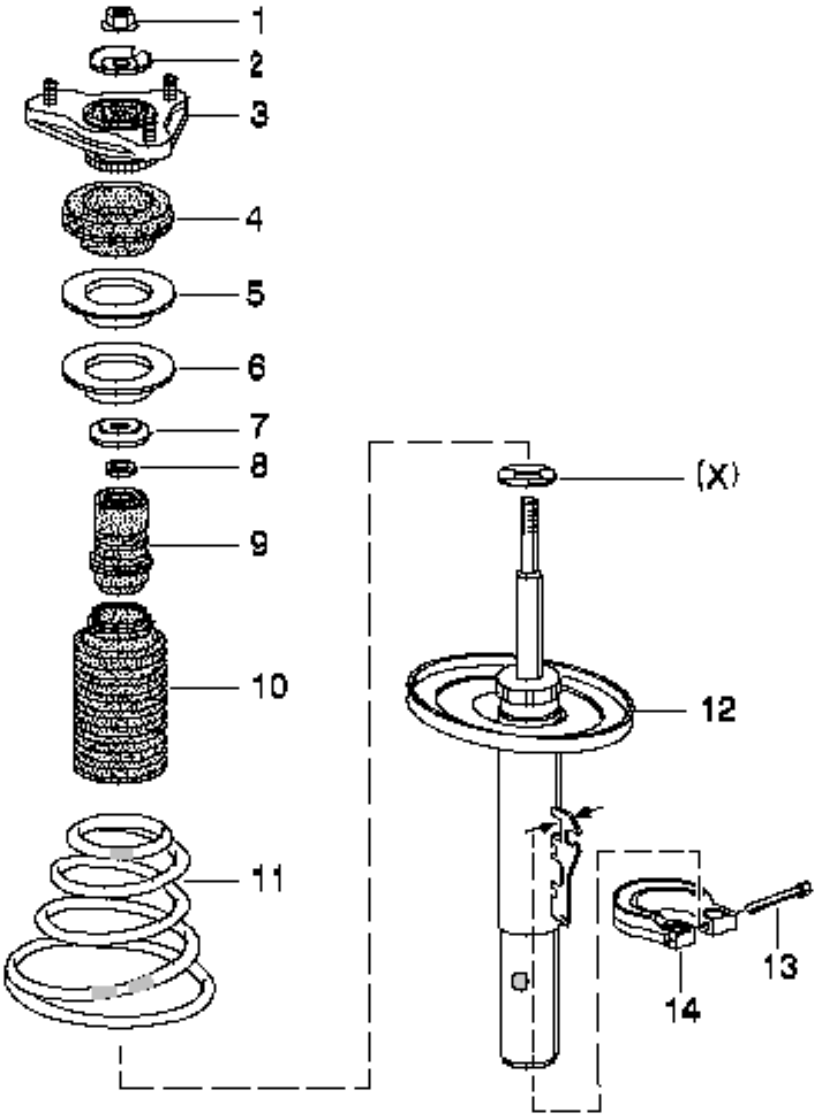
- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

40 85 37 Disassembling and assembling front spring strut - with and without PASM - as of MY 2005

- Information
- Disassembling and assembling spring strut

Tools



Designation	Type	Number	Explanation	
spring clamp for spring struts	commercially available tool	NR.121		
arm bracket	special tool	P 9630		
retaining tool	special tool	P 9630/1		
socket-wrench insert	special tool	P 9630/2		

top of page

Information

Component and assembly overview (with and without PASM)

There are three different types of running gear: standard running gear, sport-type running gear (Performance) and PASM chassis.
The 911 Carrera S comes with the PASM chassis as standard.

Front spring strut, exploded view

No.	Designation	Qty.	Removal	Installation
-1-	Lock nut M14 x 1.5	1	Tension the coil springs using spring clamp.	Use a new fastening nut. Tighten to 80 Nm (59 ftlb.).

			Then loosen the lock nut using the **socket-wrench insert P 9630/2** . Counter when loosening at the piston rod or stop plate **-2-** . To do this for PASM spring struts, use **retaining tool P 9630/1** and for conventional spring struts **arm bracket P 9630**.	On PASM spring struts, first align the stop plate **-2-** with the supporting mount **-3-** (offset 45° from direction of travel marking).
-2-	Stop plate (2 versions). PASM version: With two grooves (two cut-outs), for countering when loosening and tightening lock nut **-1-** .	1		Fit dome upwards, towards lock nut. On PASM spring struts, align (position) the stop plate with the supporting mount.
-3-	Spring strut mount	1		
-4-	Bearing with housing	1		Make sure it is seated properly in the spring strut mount
-5-	Support ring	1		
-6-	Spring plate (compensating plate)	1		Observe allocation according to the coil spring tolerance range.
-7-	Stop plate	1		Fit dome downwards.
-8-	Cone washer	1		Mount in correct position.
-9-	Additional spring (rubber stop)	1		Observe allocation as per Spare Parts Catalogue. Sport-type running gear (Performance): approx. 52 mm long. Standard and PASM running gear: approx. 80 mm long.
-10-	Bellows	1		If necessary, replace. Fit on additional spring **-9-** .
-11-	Coil spring	1		Observe allocation as per Spare Parts Catalogue. Replace coil springs only in pairs.
-X-	Washer (only present on Performance running gear)	1	Remove from damper tube (not always present).	Only install on sport-type running gear (Performance) (conventional spring struts with -20 mm). Installation position: Ventilation grooves must point to the additional spring **-9-** .
-12-	Vibration damper	1		Observe allocation as per Spare Parts Catalogue. The item number is shown on the

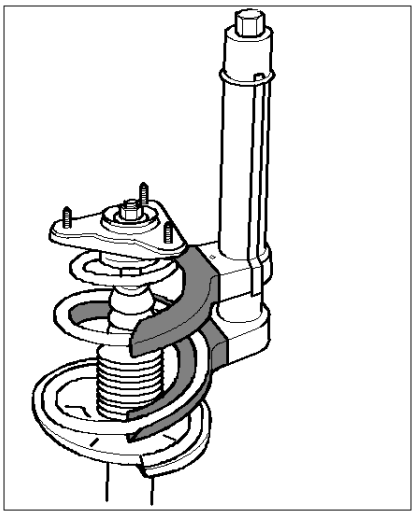
				damper tube.
-13-	Mount for clip (vibration balancer)	1		
-14-	Clip (vibration balancer). Not always present.	1		

top of page

Disassembling and assembling spring strut

Disassembling spring strut

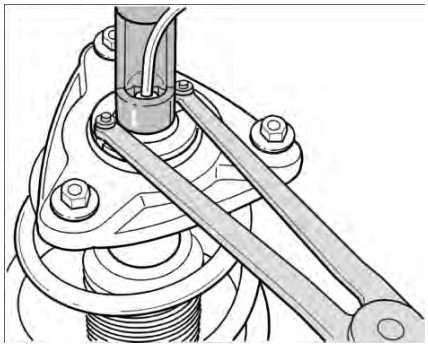
ATTENTION



Increased risk of accidents due to spring tensioning.

- **Danger of injury and damage from springs jumping out.**

→ Never use an impact bolter to loosen or tighten the fastening nut.

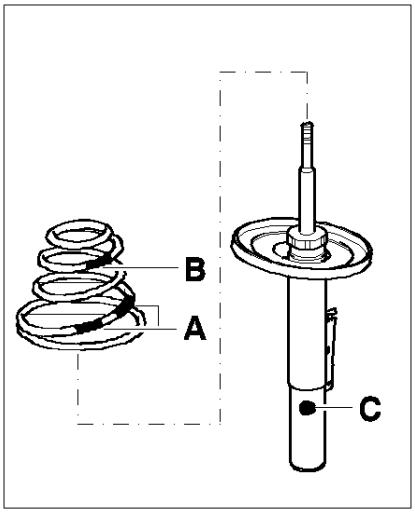


→ Use a commercially available changeover ratchet.

1. To prevent damage (deformation), clamp the spring strut in a suitable clamping block (tensioning device for MacPherson spring struts). Alternatively, the spring clamp can also be held in a retaining device.

Tensioning front spring

2. Pre-tension the coil spring using **spring clamp for spring struts NR.121** until the piston rod is relieved. The appropriate forks must be inserted into the spring clamp.



Spring strut supporting mount (PASM version)

3. To loosen the lock nut (piston rod to spring-strut mount) use **socket-wrench insert P 9630/2**.

   When loosening the nut, counter it at the piston rod (for conventional spring struts) or at the two grooves (cut-outs) of the stop plate (for PASM spring struts). Tools required: **retaining tool P 9630/1** and for conventional spring struts **arm bracket P 9630**.
4. Remove all parts from the piston rod.

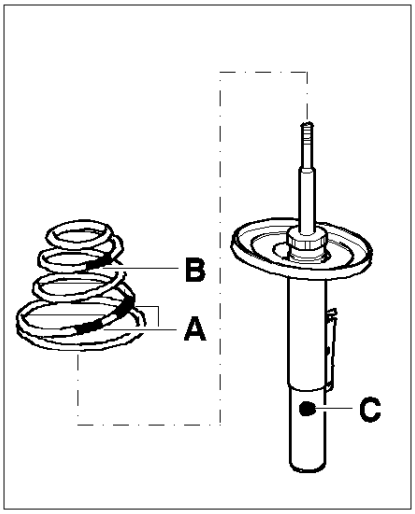
Coil spring/compensating plate allocation

Colour identification of spring/damper

Identification marking **-A-** comprising two coloured lines is for the spring constant and spring length (depending on vehicle version and equipment).
Identification marking **-B-** comprising one coloured line (white or green) is for the coil spring tolerance range (load group) and determines the thickness of the spring plate (compensating plate).

Spring plate (compensating plate)

The spring plate (compensating plate) comes in two thicknesses **-arrows-** .



Colour identification A of coil spring	Vehicle version and equipment
Example violet/red	Standard running gear C2 RoW/USA - Coupe with manual transmission
Example red/yellow	PASM running gear C2/C2S RoW/USA - Cabriolet with manual transmission and Tiptronic

Colour identification B of coil spring	Spring plate (compensating plate) 1)
One white line (colour identification B)	Thickness 3.5 mm 2)
One green line (colour identification B)	Thickness 6.5 mm 2)

1) If you are installing new coil springs, then order the 3.5 mm and 6.5 mm spring plates (compensating plate) at the same time. As coil springs of load group 1 or 2 will be supplied, the correct spring plates (compensating plates) will then be present for installation.
2) In production there have been deviations from the general allocation of spring plates (thickness of compensating plate), in some cases different spring plates (compensating plates) have been installed. This was necessary due to the tolerances of the coil springs. This means that in the event of replacement: If the coil spring is to be re-used, then install the spring plate (compensating plate) with the same thickness. If the coil springs are to be replaced (only replace in pairs) then the allocation given above applies.

Allocation of vibration dampers

See allocation in Spare Parts Catalogue.

Colour marking of spring/damper

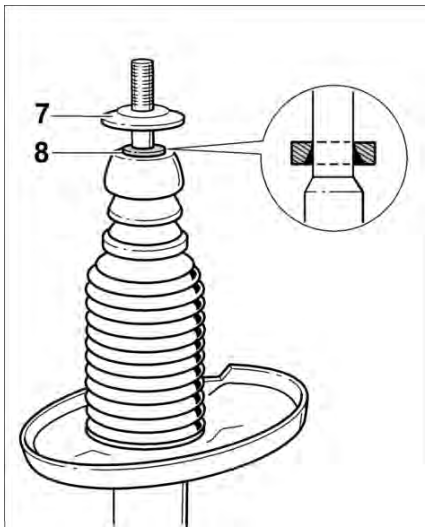
The marking, item number and colour dot coding **-C-** are shown on the damper tube.

Assembling spring strut

ATTENTION

Increased risk of accidents due to spring tensioning.

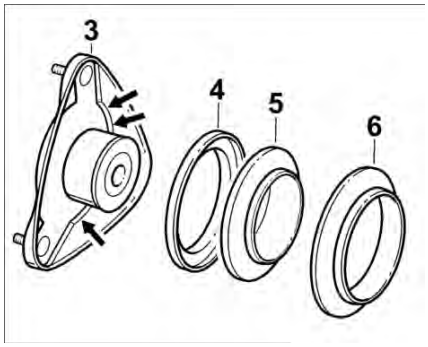
- **Danger of injury and damage from springs jumping out.**



→ Never use an impact bolter to loosen or tighten the fastening nut.

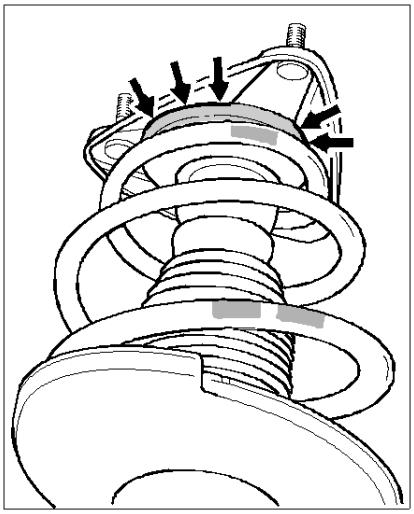
→ Use a commercially available changeover ratchet.

Note



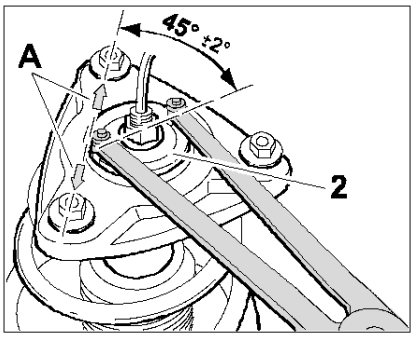
- *Observe the correct allocation (vehicle version and equipment) when installing new coil springs and/or shock absorbers.*
- *Observe allocation of compensating plate according to the coil spring tolerance range.*
- *Coil springs are only available in pairs.*

1. Clamp the spring strut in a suitable clamping block (tensioning device for MacPherson spring struts). Alternatively, the spring clamp can also be held in a retaining device.
2. Slide the bellows/additional spring assembly onto the piston rod.



Cone washer

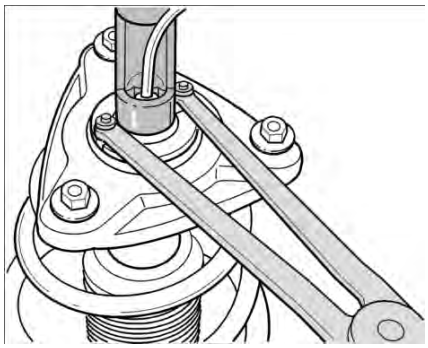
3. Mount cone washer **-8-** and stop plate **-7-** in correct position.
4. Push the pretensioned coil spring onto the vibration damper so that the end of the coil spring rests against the stop of the spring plate.



Supporting mount assembly

5. Completely assemble the spring plate (compensating plate) **-6-** , support ring **-5-** and bearing with its housing **-4-** with the spring strut supporting mount **-3-** . Then slide the assembly onto the piston rod.
6. Place spring strut supporting mount assembly onto the piston rod so that the end of the coil spring is located inside the spring plate.

Supporting mount (correct seat)



7. Fit stop plate in the correct position (domed side upwards) and screw a new fastening nut onto the piston rod. Important: For PASM spring struts, place the lug of the stop plate (in area of spring strut mount) in the groove of the piston rod (twist lock of piston rod opposite the supporting mount). Make sure that the plastic part of the bearing sits correctly in the recess of the supporting mount **-arrows-** .

Stop plate position (PASM only)

8. On PASM spring struts, before tightening the lock nut, align the stop plate **-2-** offset 45° from direction of travel marking **-Arrows A-** of the supporting mount.

The value: 45° + - 2° is necessary so that the two grooves of the stop plate (cut-outs for countering) are positioned over or between the recesses (pockets in the rubber part) which lie below.

Spring strut mount

9. Tighten fastening nut to the specified tightening torque. For PASM spring struts, counter at the stop plate using **retaining tool P 9630/1**. For conventional spring struts, counter at the hexagon socket of the piston rod using **special tool P 9630**.
10. If present, push on clip (vibration balancer) at damper tube of vibration damper. Final assembly (tightening) only on completion of wheel carrier.

42 21 19 Removing and installing drive shaft - as of MY 2005

- Preliminary work
- Removing
- Installing
- Subsequent work

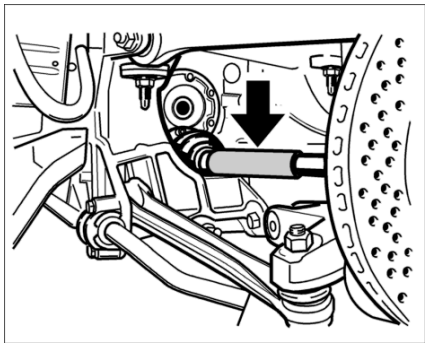
Tools

Designation	Type	Number	Explanation	
protective tube (shop-made)	commercially available tool	00000		
universal drive shaft/wheel hub extractor as of model '86	commercially available tool	NR.87-1		

top of page

Preliminary work

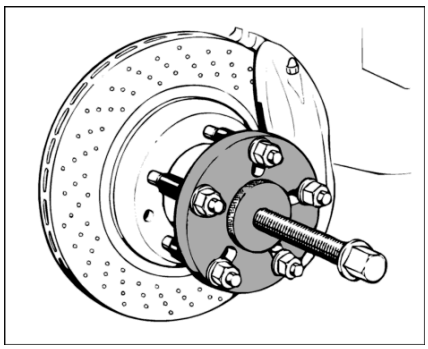
1. Release axle nut (vehicle on ground) whilst operating the brake (2 fitters required).
Remove and install wheel. →440519 Removing and installing wheel



top of page

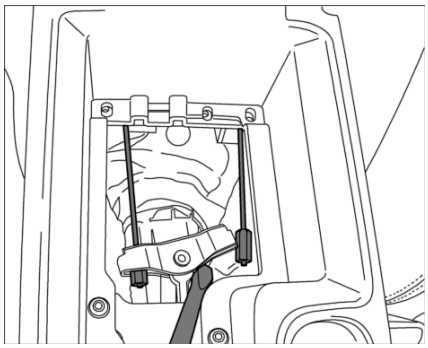
Removing

Removing rear drive shaft



Note

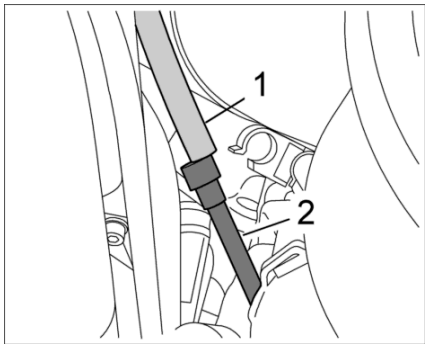
- *To prevent damage to the drive shaft, rear axle support side member or transmission flange, a* ***protective tube (shop-made) 00000*** *must be pushed over the drive shaft or the drive shaft must be secured.*
- *During removal of the drive shaft, the wheel bearing housing remains in the vehicle and is swivelled outwards at the top side.*



Protection of the drive shaft

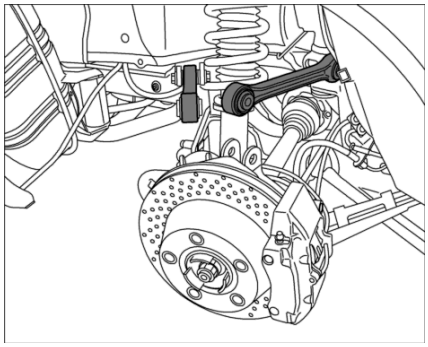
1. Fit protection **-arrow-** for drive shaft. Release inner end of drive shaft from the transmission.

Pressing out drive shaft



2. Using **universal drive shaft/wheel hub extractor as of model '86 NR.87-1** carefully press out the pin of the drive shaft until the shaft can be moved by hand. *→Pressing out drive shaft*

Removing/fitting parking brake cable



The parking brake cable must be disengaged from the parking brake lever in the passenger compartment before the drive shaft can be removed. *→Removing/fitting parking brake cable* Disengaging the parking brake cable includes:

- Undo parking brake lever (do not operate until after fitting! Self-adjusting!)
- Open cover of oddments tray in centre console.
- Remove bottom of oddments tray in centre console.
- Disengage the relevant parking brake cable to the side of the turnbuckle.
