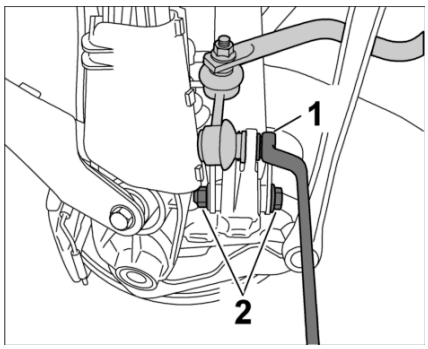
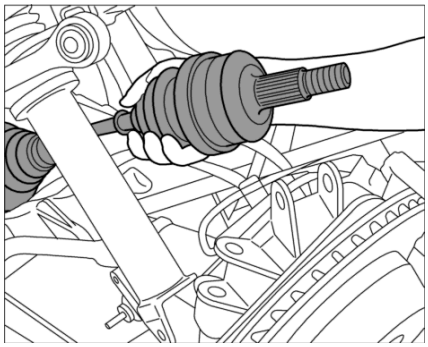
Pulling off protective sleeve

3. Pull protective sleeve of parking brake cable **-2-** from guide tube on underbody **-1-** .



Upper axle struts detached

4. Detach both upper axle struts from the outside of the wheel bearing housing. *→Upper axle struts detached*



Holder for the brake hose/wear indicator

5. Undo the holder for the brake hose/wear indicator **-arrow-** .

Removing/fitting connecting rod

6. Release connecting rod for stabilizer at bottom **-1-** and spring strut **-2-** .

Removing drive shaft

7. Carefully pull wheel bearing housing outwards. Guide the parking brake cable and remove the drive shaft (assistance of second fitter required). *→Removing drive shaft*

top of page

Installing

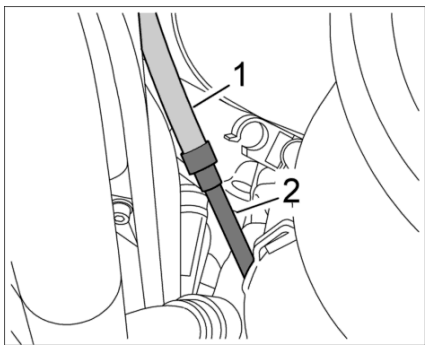
Installing rear drive shaft

ATTENTION

Increased risk of accidents if the wheel carrier is raised improperly!

- **Injuries and material damage are possible.**

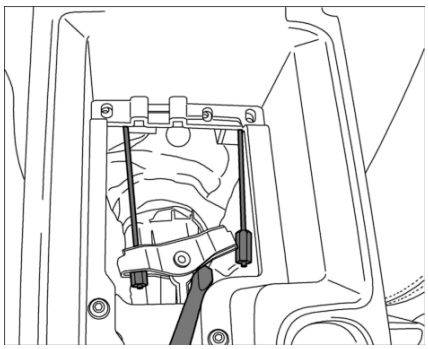
→ Do not raise the wheel suspension higher than the normal vehicle position (vehicle resting on wheels).



→ When raising the suspension, use a suitable intermediate layer (hard rubber) .

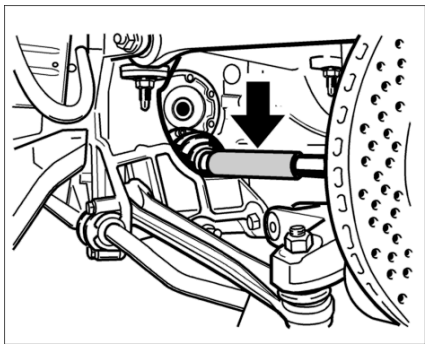
→ Do not damage the brake cover plate.

Note



- *Screws are Dacromet-coated and must not be greased.*
- *Grease the thread of the axle nut with Optimoly HT.*
- *Grease the toothing of the drive shaft lightly with Optimoly HT.*
- *To prevent damage to the drive shaft, wheel bearing housing or transmission flange, slide a **protective tube (shop-made) 00000** over the drive shaft.*
- *Use new screws and lock nuts.*
- *Observe correct tightening torques. After tightening, loosen the connecting link for the stabilizer by 90 degrees and retighten (settling behaviour of the ball joint!). →42 Tightening torques for rear axle*
- *The parking brake is self-adjusting. If the basic setting of the parking brake is correct, further adjustment operations on the parking brake lever or on the turnbuckle are not necessary.*
- *Always check the bellows for damage and if necessary, replace them, if continuing to use the drive shaft.*

1. Pull out the wheel bearing housing carefully outwards and run in the drive shaft (2 fitters required). Screw on axle nuts. Use protection for drive shaft.
2. Fit both upper control arms on the external wheel bearing housing.



Push on protective sleeve

3. Slide the protective sleeve of the parking brake cable **-2-** on the underbody onto the guide tube **-1-** . Ensure it is seated correctly!

Removing/fitting the parking brake cable

4. Engage brake cable in the turnbuckle at sides. *→Removing/fitting the parking brake cable* Fit floor in oddments tray of the centre console.
5. Fit lower spring strut, connecting rod for stabilizer, inner drive shaft on transmission and mount for brake hose/wear indicator.

Protection for drive shaft

6. Remove protection for drive shaft **-arrow-** .
7. Check parking brake adjustment and adjust if necessary. →468316 Adjusting the brake shoe

top of page

Subsequent work

Remove and install wheel. →440519 Removing and installing wheel
Tighten axle nut (vehicle on ground) whilst operating the brake (2 fitters required).

Checking wheel-alignment values

Check wheel alignment values and adjust if necessary. →449503 Performing front and rear suspension alignment

 WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

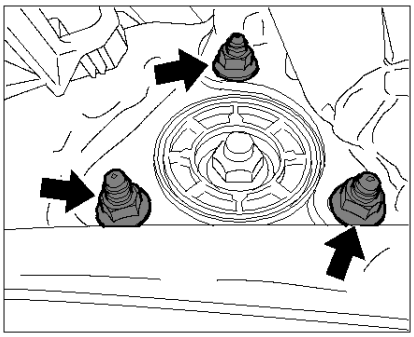
Removing spring strut

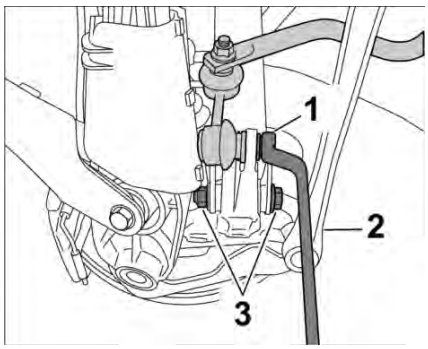
 ATTENTION



Danger of crushing (damaging) electric lines (cables) at point of exit from piston rod on PASM spring struts.

- **PASM (damping force adjustment) does not function.**

→ Protect electric lines (cables) when removing and installing the spring strut.



→ Do not damage electric lines (cables) during transport, unpacking, storage or when disassembling or assembling spring strut.

1. Vehicles with PASM: With ignition switched off, carefully disconnect electric line from the PASM spring strut at the connector and unclip it from the bracket.

Lock nuts on spring-strut mount

2. Loosen M10 lock nuts on the spring-strut mount **-arrows-** (in the vehicle interior).

Anti-roll bar/spring strut/toe control arm

3. Remove anti-roll bar together with the suspension/stabilisers.

   To do this, remove the right **-1-** and left suspension/stabiliser at the wheel carriers and loosen the anti-roll bar at the rear-axle side sections (four M8 screws).

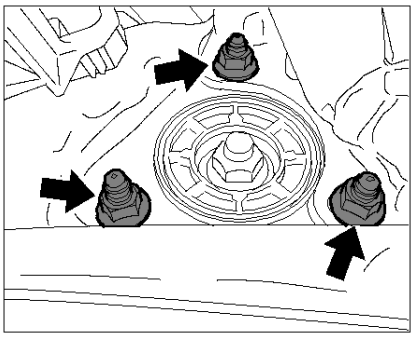
   When loosening the suspension/stabiliser (1), counter with a Torx screwdriver.
4. Loosen toe control arm **-2-** at the wheel carrier.
5. Remove spring strut/wheel carrier threaded connection **-3-** and pull spring strut up (over the upper trailing arms) to remove it.

top of page

Installing spring strut

ATTENTION

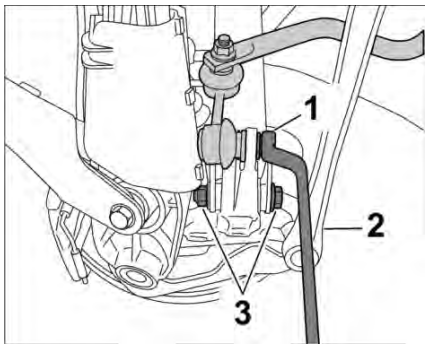
Danger of crushing (damaging) electric lines (cables) at point of exit from piston rod on PASM spring struts.



- **PASM (damping force adjustment) does not function.**

→ Protect electric lines (cables) when removing and installing the spring strut.

→ Do not damage electric lines (cables) during transport, unpacking, storage or when disassembling or assembling spring strut.



Installation is in reverse order. Before installing, check the various parts carefully. Replace lock nuts. Do not grease threaded connections in Dacromet finish - aluminium colour. Observe correct tightening torques.

1. Insert spring strut into the vehicle from above (over the upper trailing arms).

Lock nuts on spring-strut mount

2. Fit M10 lock nuts (three nuts) **-arrows-** onto the spring strut mount (in the vehicle interior). Tightening torque: 46 Nm (34 ftlb.).
3. Vehicles with PASM: Connect electric line for the PASM spring strut (connector must engage) and clip it into the bracket.

Anti-roll bar/spring strut/toe control arm

4. Fit spring strut to wheel carrier. Tightening torque of fastening screw **-3-** = 110 Nm (81 ftlb.).
5. Fit toe control arm to wheel carrier **-2-** . Tightening torque of lock nut = 75 Nm (56 ftlb.).
6. Install anti-roll bar together with the suspension/stabilisers.

   Tightening torque: Anti-roll bar to rear-axle side section (four M8 screws) = 23 Nm (17 ftlb.).

   Suspension/stabiliser to wheel carriers **-1-** = 65 Nm (48 ftlb.). Please note: Tighten in three steps (step 1: tighten to 50 Nm (37 ftlb.) / step 2: loosen by 90° / step 3: tighten to 65 Nm (48

ftlb.).

top of page

Removing and installing spring strut - subsequent work

Note

If assembly work was performed or parts replaced that affect the vehicle height, the suspension must be aligned (check and adjust wheel alignment values) →449503 Performing front and rear suspension alignment.

1. Fit rear wheel →440519 Removing and installing wheel.
2. Carry out suspension alignment, if necessary.

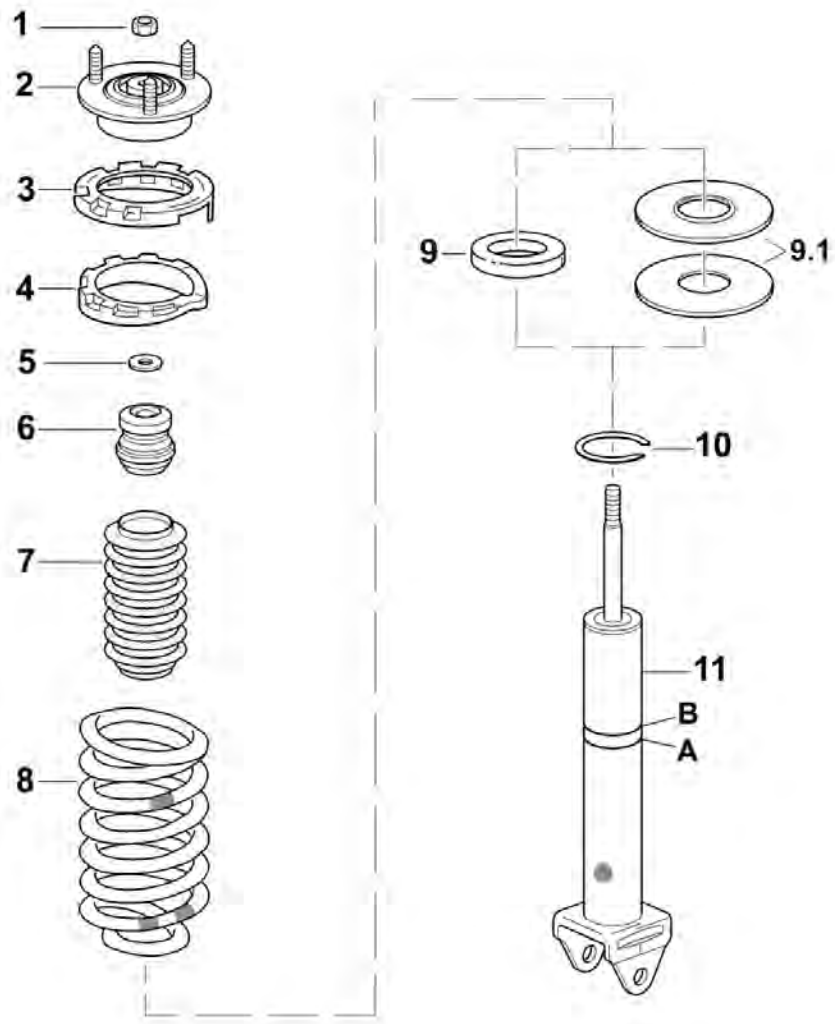
42 71 37 Disassembling and assembling rear spring strut - with and without PASM - as of MY 2005

- Information

Tools

Designation	Type	Number	Explanation	
spring clamp for spring struts	commercially available tool	NR.121		
socket wrench insert for ATF temp. switch assembly	commercially available tool	NR.18		
snap-ring pliers	VW-tool	VW 161 A		



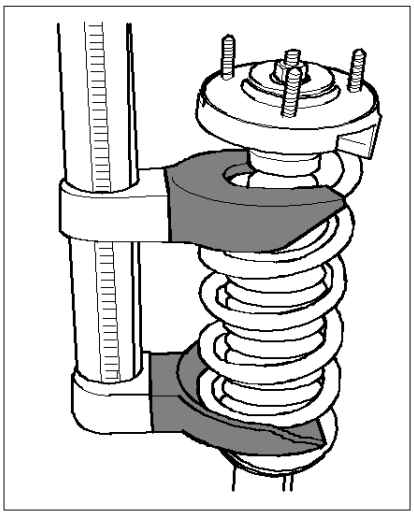
top of page

Information

Component and assembly overview (with and without PASM)

There are three different types of running gear: standard running gear, sport-type running gear (Performance) and PASM chassis.

The 911 Carrera S comes with the PASM chassis as standard.



Exploded view of rear spring strut

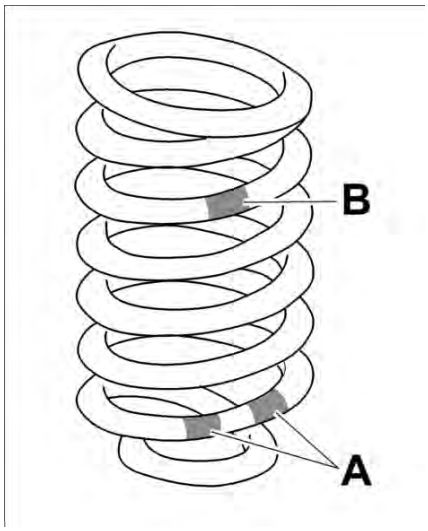
No.	Designation	Qty.	Removal	Fitting
-1-	Lock nut M12 x 1	1	Pre-tension coil spring using a spring clamp. Then loosen the lock nut. To loosen the lock nut on vehicles with PASM, use a socket wrench insert, e.g. **socket wrench insert for ATF temp. switch assembly NR.18**. Counter with a suitable lever at two bolts (of the three M8 bolts) on the supporting mount. Screw hexagon nuts onto the bolts to avoid damaging the thread.	Use new lock nuts. Position the supporting mount **-2-** and tighten the hexagon nuts to 32 Nm (24 ftlb.). Counter with a suitable lever at two bolts (of the three M8 bolts) on the supporting mount. The tightening torque of 32 Nm (24 ftlb.) applies - even contrary to previously published specifications - for all 997 rear-axle spring struts (conventional and with PASM).

-2-	Spring strut mount	1		Observe allocation as per Spare Parts Catalogue. During fitting, place the lug in the groove on the piston rod (twist lock of piston rod opposite the supporting mount).
-3-	Compensating plate (intermediate part)	1		Observe allocation, depending on coil spring tolerance range (see assembly instructions). Join to spring plate at the correct position **-4-** .
-4-	Spring plate	1		Replace if necessary.
-5-	Washer	1		
-6-	Additional spring	1		Observe allocation as per Spare Parts Catalogue. PASM and sport-type running gear: approx. 53 mm long. Standard running gear: approx. 67 mm long.
-7-	Bellows	1		Replace if necessary. Before installation, assemble with the additional spring **-6-** .
-8-	Coil spring	1		Observe allocation as per Spare Parts Catalogue. Always replace both coil springs at the same time (coil springs are only available in pairs).
-9- or **-9.1-**	Concave washer Variant **-9-** = 78 mm diameter or Variant **-9.1-** = 134 mm diameter (consisting of concave washer and rubber support)	1		Fit groove downwards facing snap ring. Ensure perfect fit on snap ring **-10-** . Observe allocation. Variant **-9-** for standard running gear and PASM chassis. Variant **-9.1-** for sport-type running gear (Performance).
-10-	Snap ring	1	Use snap-ring pliers VW 161a for removal and installation.	Replace. Fit in the specified groove using snap-ring pliers VW 161a **-A or B-** (observe table during assembly). Make sure it fits perfectly in the groove!
-11-	Vibration damper	1		Observe allocation as per Spare Parts Catalogue. The item number is shown on the damper tube.

Disassembling rear spring strut

Tensioning rear spring

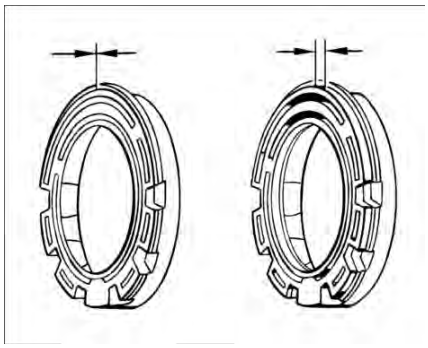
1. Pre-tension coil spring using **spring clamp for spring struts NR.121** until the piston rod is relieved. The appropriate forks must be inserted into the spring clamp.



Spring strut mount

2. To loosen the connection between piston rod and spring-strut mount, counter at the bolts on the spring-strut mount (screw hexagon nuts onto the bolts and use a suitable lever).

On PASM spring struts, use a suitable socket wrench insert, e.g. **socket wrench insert for ATF temp. switch assembly NR.18**.



3. Remove all parts from the piston rod.

Coil spring/compensating plate allocation

Colour marking on coil spring

Identification marking **-A-** comprising two coloured lines is for the spring constant and spring length (depending on vehicle version and equipment).

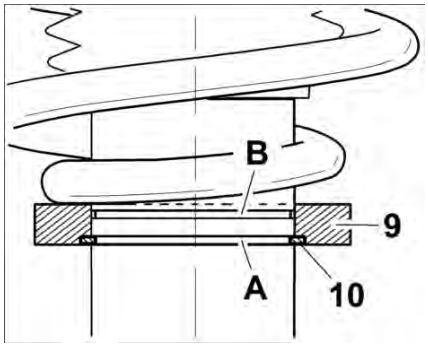
Compensating plate

Identification marking **-B-** comprising one coloured line (white or green) is for the coil spring tolerance range (load group) and determines the thickness of the compensating plate.

Coil spring colour coding **-A-**	Vehicle version and equipment
Example violet/white	Standard running gear RoW/USA - Coupe
Example red/white	PASM RoW - Coupe/Cabriolet with manual transmission

Coil spring colour coding **-B-**	Compensating plate
1 white line **-B-**	Thickness: 0.5 mm Colour: natural
1 green line **-B-**	Thickness: 4.0 mm Colour: black

Rear vibration damper allocation



See allocation in Spare Parts Catalogue.
The item number and colour dot coding is shown on the damper tube.

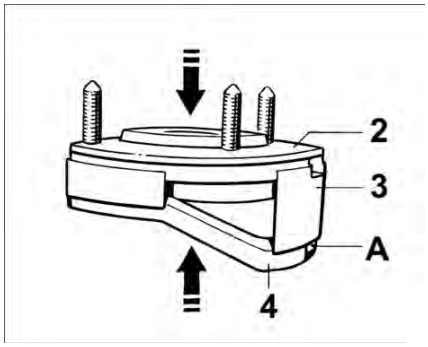
Assembling spring strut

Note

- *Observe the correct allocation (vehicle version and equipment) when installing new coil springs and/or shock absorbers.*
- *Observe allocation of compensating plate according to the coil spring tolerance range.*
- *Coil springs are only available in pairs.*

1. Clamp the spring strut at a suitable place in the vice (use jaw liners).

Snap ring position

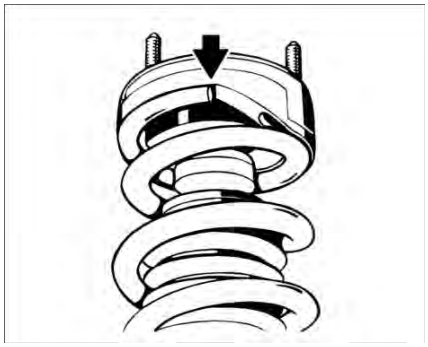


2. When replacing the vibration damper, fit a new snap ring **-10-** - using **snap-ring pliers VW 161 A** - in the relevant groove **-A or B-** (see allocation in next table).

   Fit bottom concave washer **-9-** with the groove downwards facing the snap ring **-10-** . Ensure that the snap ring **-10-** and concave washer **-9-** are seated correctly.

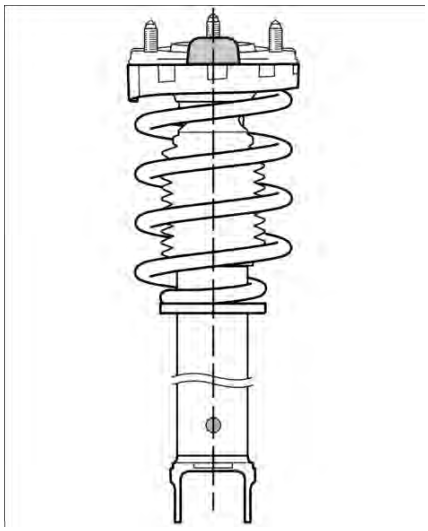
Vehicle version and equipment	System	Snap ring in position
C2 Coupe RoW/USA, manual transmission	Conventional	Groove A

C2 Coupe RoW/USA, Tiptronic	Conventional	Groove B
C2 RoW, manual transmission	Conventional	Groove B
C2 Cabriolet RoW, Tiptronic	Conventional	Groove A
C2 Cabriolet USA, manual transmission	Conventional	Groove A
C2 Cabriolet USA, Tiptronic	Conventional	Groove A
C2 Coupe RoW, manual transmission, Performance (sport-type running gear)	Conventional	Groove A
C2/C2S Coupe RoW/USA, manual transmission	PASM	Groove A
C2/C2S Coupe RoW/USA, Tiptronic	PASM	Groove B
C2/C2S Cabriolet RoW/USA, manual transmission	PASM	Groove B
C2/C2S Cabriolet RoW/USA, Tiptronic	PASM	Groove A



3. Place pre-tensioned coil spring (with the tighter end of the spring) on the vibration damper.
4. Slide the bellows/additional spring assembly onto the piston rod.
5. Fit
   washer.

Supporting mount assembly



6. Position spring strut mount **-2-** onto the piston rod (with supporting mount **-2-** , compensating part **-3-** and spring support **-4-** assembly in correct position).

   Place the lug on the spring strut mount in the groove of the piston rod (twist lock of piston rod opposite the supporting mount).

Coil spring

7. Fit new lock nuts on the piston rod. Place the end of the coil spring on the concave washer stop **-arrow-** .

Positioning spring strut mount

8. Align the spring strut mount with the vibration damper. **-Lug-** of spring strut mount must line up with the middle fork of the lower vibration damper.

Spring strut mount

9. Tighten lock nut to 32 Nm (24 ftlb.). Counter at the bolts (M8) on the spring strut mount at the same time.

   There is no need to counter at the piston rod because there is a strong grip between the spring strut mount and piston rod.

   On PASM spring struts, use a suitable socket wrench insert, e.g. **socket wrench insert for ATF temp. switch assembly NR.18**.

   Tightening torque for all 997 rear-axle spring struts: 32 Nm (24 ftlb.).

   The tightening torque of 32 Nm (24 ftlb.) applies - even contrary to previously published specifications - for all 997 rear-axle spring struts (conventional and with PASM)!

42 91 19 Removing and installing connecting link (suspension/stabiliser) - as of MY 2005

-

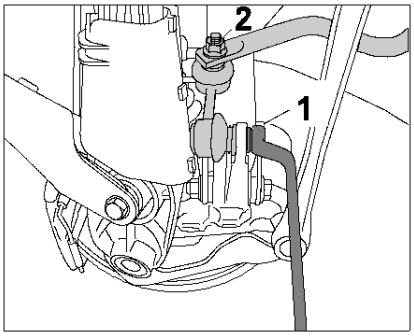
top of page

Removing rear connecting link (suspension/stabiliser)

Connecting link (suspension/stabiliser)

1. With the vehicle raised, loosen the lock nuts **-1 and 2-** and remove the suspension/stabiliser.

Installing rear connecting link (suspension/stabiliser)



Up to approx. the middle of April 2005 (the exact date can be taken from the Technical Information if necessary), the lock nut can become loose on the threaded connection of the stabilizer/suspension/stabiliser on the front and rear axle due to a loss in preload.Suspension/stabilisers are therefore installed with a pin extended by 10 mm and an appropriately extended hexagon nut on the front and rear axle as of the time mentioned.Suspension/stabilisers with extended pins (extended threads) of the fastening bolt can be installed retroactively.In the event of a claim (noise problem caused by the stabiliser), all 4 suspension/stabilisers are to be replaced by the modified version. On assembly work in the stabiliser area or on the wheel suspension, install the modified version on the right and left side.

Note

- *Use the new fastening nuts, which are 10 mm longer (Part No. 999.084.123.09), to secure the modified connecting links.*
- *Use the old fastening nuts (Part No. 999.084.643.09) to secure the old connecting links.*

- *The old connecting link (short threaded pin) must not be used together with the new lock nut because the threaded pin is not long enough for the lock nut. If this incorrect combination is used, the safety effect could not be assured or would only be provided conditionally.*

1. Install connecting link (suspension/stabiliser).

Connecting link to anti-roll bar

2. Use new lock nuts **-1 and 2-** . Depending on the version, (long or short pin), fasten the assigned lock nuts.
3. Observe prescribed tightening torque. Tighten the lock nuts in a 3-stage tightening procedure *→421000 Tightening torques for rear axle*.

997110, 997111, 997120, 997121, 997310, 997311, 997320, 997321, 997410, 997411, 997430, 997431, 997610, 997611, 997620, 997621

Programming PASM control unit

Reading out and writing values for PASM control unit

Note

- *During coding, there should be a guaranteed power supply for the **PIWIS tester 9718**. It is essential to connect a battery charger with a current rating of at least 40 A to the vehicle battery.*
- *The **PIWIS tester 9718** instructions take precedence and in the event of a discrepancy these are the instructions that must be followed. Deviations may occur with later software versions.*
- *The procedure described here has been structured in general terms; different text or additions may appear in the **PIWIS tester 9718**.*

1. Connect the **PIWIS tester 9718** to the vehicle and start it. Switch on the ignition. >> Continue.
2. Select the vehicle type.
3. Using the >> key, move from the vehicle type to the list of control units.
4. Select **PASM** and press >> .
5. In the **PASM** menu, select **Control unit replacement** and press >> .
6. Select **Read codes** and press >> .
7. On the screen of the PIWIS tester appears the message **Coding read-out complete** >> .
8. Switch off ignition and replace control unit.
9. Switch to the **Special functions** menu and perform the **vehicle handover** using the F8 key.
10. In the **Special functions** menu, erase **All fault memories** by pressing >> .
11. Switch on ignition. Once the control unit has been replaced, the vehicle data is uploaded under the **Write in data** menu (see Section 7). Press >> .
12. PIWIS tester displays **Coding write-in complete** >> .
13. Carry out a test drive and read out fault memory.

- Installing wheel

top of page

Information

Wheel mounting

The wheels of the 911 Carrera (997) are tightened using the same standard wheel bolts **-A-** (M14 x 1.5) as are used on the 911 Carrera (996). Length: Dimension **-X-** →**Screw length: approximately 45 mm** .

Wheel bolt length

The longer wheel bolts **-B-** dimension **-X-** →**Screw length: approximately 50 mm** will be used for the 911 GT3 (996) - up to model year 2003. Designation with GT or red colour **-arrow-** .

top of page

Removing wheel

Removing wheel

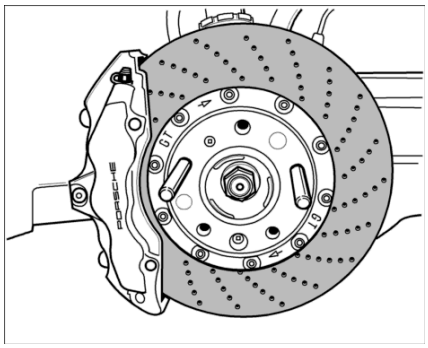
Note

- *Use suitable commercially available tools (wrench size 19 mm)! Never use an impact bolter to tighten the wheel bolts.*

- *Before the wheel is placed on the wheel hub, re-grease the centring surface of the wheel hub (if required) as necessary with a very thin coat of Optimoly TA (aluminium paste).*

- *The wheel bolt consists of two parts that are permanently joined together. Other wheel bolts must not be used.*

Note



- *The assembly pins for removing / mounting the wheel for vehicles with PCCB can be ordered separately as a spare part. Part No.: 999 571 074 30.*

ATTENTION

Removing/fitting the wheels for vehicles with PCCB (Porsche Ceramic Composite Brake).

- **Risk of damage to the brake discs.**

→ Use assembly aids (assembly pins) in order to exclude any possibility of heavy contact of the wheel with the brake disc. The assembly aids (2 assembly pins) are located in the luggage compartment.

Assembly pins for vehicle with PCCB brakes

– In the case of vehicles with PCCB (Porsche Ceramic Composite Brake), screw the 2 assembly aids (assembly pins), instead of 2 wheel bolts, into the wheel hub before wheel removal. Only then remove the three remaining wheel bolts and remove the wheel carefully, without touching the brake discs.

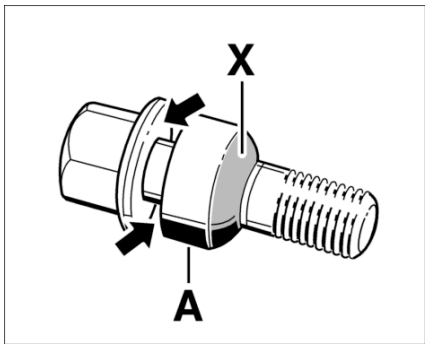
Removing/fitting the wheels for vehicles with PCCB (Porsche Ceramic Composite Brake).



- **Risk of damage to the brake discs.**

→ Use assembly aids (assembly pins) in order to exclude any possibility of heavy contact of the wheel with the brake disc. The assembly aids (2 assembly pins) are located in the luggage compartment.

Assembly pins for vehicle with PCCB brakes

1. In the case of vehicles with PCCB (Porsche Ceramic Composite Brake), screw the 2 assembly aids (assembly pins) into the wheel hub before mounting wheel.
2. In the case of heavy soiling, clean the wheel bolts and the concavities in the wheel with a lint-free cloth.

Wheel bolt

3. Always apply a thin coat of Optimoly TA (aluminium paste) on the thread of the wheel bolts, on the shank and between the bolt head bearing surface and spherical cap ring (under the head) **-arrows-** . Do not grease the spherical cap bearing surface **-X-** of the wheel bolts that face the wheel.

-A- - Spherical cap ring (permanently connected with the wheel bolt)

-X- - Spherical cap bearing surface facing the wheel (do not grease)

Note

- *Rework on wheel bolts is impermissible.*

4. Always replace damaged wheel bolts.

This damage includes mechanical damage to the thread, the spherical cap and damage resulting from seizure of the bolt head bearing surface and spherical cap ring. It must be possible to rotate the spherical cap ring on the bolt shank and to move it in axial direction.

Note

- *Always observe the specified tightening torque of 130 Nm (96 ftlb.).*

5. Screw in wheel bolts by hand and then tighten evenly. Start at the top when tightening.

44 05 94 Balancing/optimising wheels - as of MY 2005

- Balancing/optimising wheels

Tools

Designation	Type	Number	Explanation	
measuring gauge	commercially available tool	NR.136		

top of page

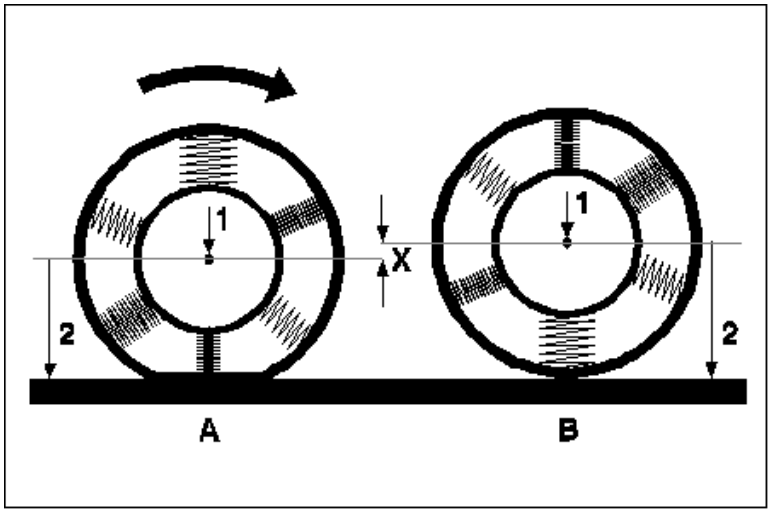
Balancing/optimising wheels

General

Excessive wheel imbalance not only produces vibrations and causes the steering wheel to shake, but also results in increased wear on various parts of the running gear.
Even if the wheels are correctly balanced, excessive geometry errors (radial and axial runout) and misshapen tyres, e.g. accumulation of material at one point in the tyre structure (spring action of tyre changes as the tyre rolls), can cause rolling and steering imbalance.

Note

- *Achieving a good result requires utmost care, observance of the instructions and procedure, and attempting to eliminate even the very last gram of imbalance.*



Recommendations/requirements

- Wheel suspension elements must be in good technical order.
- The wheels must be clean with no foreign objects in the tyre.
- Use a tyre measuring gauge, e.g. **measuring gauge NR.136** to check radial and lateral runout values on wheels without flat spots. Values of less than 1.0 mm are desirable - around 0.5 mm would be better.
- To limit the number of radial runout errors and to optimise smoothness of rolling, it is a good idea - and even necessary in individual cases - to match the tyre (i.e. to fit it in a favourable position with respect to the wheel). Follow tips and fitting instructions as well as information on tyre mounting paste for tyres.

- If the rims (wheels without tyres) are perfect but the complete wheels have large axial and radial runout values (due to ply breakage or other damage), it may be necessary to replace the tyre.
- Balance used wheels only after they have been warmed up by driving, otherwise flat spots will simulate imbalance. Never perform matching in the case of flat spots.
- Correct tyre pressure is an important prerequisite.
- Place the balancing weights at the prescribed position.

Explanation of terms

Geometry error (radial and lateral runout)
Radial and lateral runout of the rim and/or rim/tyre assembly.
Flat spots
Flat spots can occur on the tyres if the vehicle is idle for extended periods.
Radial force variations

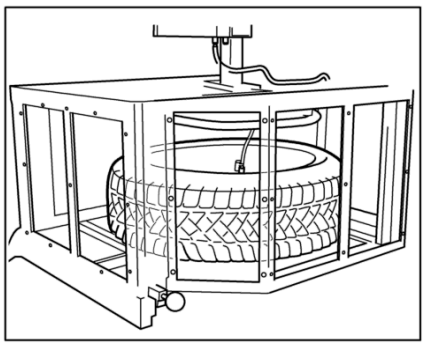
The radial force is a force that compresses a tyre. Based on its size, a tyre has softer (**-item A-**) and more rigid areas (**-item B-**) due to design and production-related factors. Given this, the tyre compresses to various extents at a constant wheel load (**-arrows 1-**) and a constant tyre pressure (**-arrows 2-**). This varying spring action (**-X-**) in the tyre can cause vibrations in the chassis on even road surfaces and the driver may notice this as shaking in the steering wheel, for example. Measuring the radial force variation involves running the tyre on a wheel balancer that measures radial force variation while applying a constant load to the tyre. This simulates the rolling of the tyre on a driving surface. Variations in radial force occur independently of the direction of rotation of the tyre and are measured as the difference between the maximum and minimum radial force ("peak to peak" value).
1st Harmonic
The changes in radial force variation can be broken down mathematically into individual variations. Porsche uses the value of the 1st Harmonic Variation (basic variation) to assess the tyre from the point of view of rigidity. The 1st Harmonic Variation relates to the changes in radial force that cause the strongest vibrations. Other harmonic variations (2nd - 4th Harmonic) can also be seen in the changes in radial force. These relate to the changes in radial force that cause weaker vibrations.
Uncontrolled matching
Turn the tyre on the wheel by 90° or 180° if necessary in order to achieve an acceptable value with regard to rolling smoothness (true running, imbalance and distribution of balance weights).
Controlled matching

With a balancing machine with matching program. In most cases, this produces an even better result with regard to the rolling smoothness (true running, imbalance and distribution of the balance weights) than can be achieved with uncontrolled matching.

Tyre seating pressure

This is the filling pressure after the tyre has been fitted on the rim at which the tyre bead, coming out of the deep bed, must pop over the hump of the rim bead.

Balancing/optimising wheels



The entire process is divided into three operations.

1. Fitting the tyre on the rim.
2. A - Measure radial force variations and optimise the wheels if necessary. Afterwards, balance the wheels.

   B - As an alternative to item 2 A, if there is no device available to measure radial force variations: Stationary balancing of the wheel (eliminating static and dynamic imbalance) with optimisation of rolling smoothness.
3. Fitting the wheel on the vehicle.

Further to 1: Fitting the tyre on the rim

- Remove rubber residues and dried-on tyre paste from the rim, especially from the rim bead and the hump.
- Examine rim for damage; remove old balancing weights.
- Use the prescribed tyre mounting paste (only TIP TOP Universal, order no. 593 0601, 3.5 kg bucket, or Contifix) so that the tyre does not turn on the rim the first time the car is driven, thereby counteracting all your careful work. If the tyre turns by as little as 20 mm with respect to the rim, this can worsen an optimum balancing result.
- Fit tyre on the rim. When doing so, it is a good idea - and even necessary in individual cases - to fit the tyre in a favourable position with respect to the wheel (matching). Compare Controlled and Uncontrolled matching below.

Tyre filling cage

WARNING

If the tyre seating pressure is too high (max. 4.0 bar permissible), personal injuries are possible in the event of tyre or wheel destruction.

→ Maximum tyre seating pressure 4 bar! This value must not be exceeded.

→ For tyre seating pressure over 3.3 bar (possible in the event that several unfavourable factors should occur simultaneously / max. 4.0 bar permissible) use a tyre filling cage.

– Fill tyre. Important: At the latest when the pressure reaches 3.3 bar (max. 4.0 bar in tyre filling cage), the tyre beads (coming out of the deep bed) must pop over the hump of the rim bead in order to avoid fractures of the bead core. If necessary, interrupt the process and generously coat all necessary surfaces with recommended lubricant (tyre mounting paste). Then repeat the process.

  - Important: Damage to the bead core resulting from incorrect tyre assembly/disassembly will cause an increase in fluctuations in power (radial/lateral fluctuation in power). This is apparent when you roll the tyre on the driving surface.

– Uncontrolled matching: Turn the tyre on the wheel by 90° or 180° if necessary in order to achieve an acceptable value with regard to rolling smoothness (true running, imbalance and distribution of balance weights).
– Controlled matching: With a balancing machine with matching program. In most cases, this produces an even better result with regard to the rolling smoothness (true running, imbalance and distribution of the balance weights) than can be achieved with uncontrolled matching.
– Check the fit of the tyre on the rim using the bead centring line.
– Set the prescribed tyre pressure.

Further to 2A: Measuring radial force variations

– Tension wheel on balancing machine with radial force variation measurement (vibration monitoring system).
– Observe the operating instructions of the balancing machine (adjust the machine from time to time).
– The contact surfaces of the wheel on the balancing flange (levelling surface) and the centring surface must be clean.
– The display disabling function must be switched off.
– Adjust tyre air pressure to 2.6 bar (best test pressure) when balancing and measuring radial force variations.
– Particular attention must be paid to the wheel mounting when measuring radial force variations and when balancing. Using the special pressure pieces provided by the manufacturer of the balancing machine will ensure that wheels are balanced accurately and there is the highest possible repeat accuracy. Observe the operating instructions.

Maximum deviations permitted in radial force variation results:

	Front wheels	Rear wheels
Radial force variation (peak to peak vibrations)	max. 170 N	max. 170 N
1st Harmonic (variation)	max. 125 N	max. 150 N

If these values are exceeded, the tyre must be matched on the rim.
If these values are not reached, the wheel must be balanced.

Note

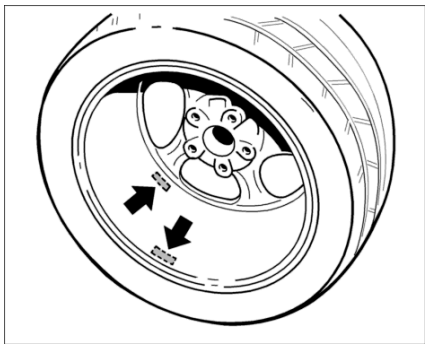
A new tyre must be fitted if the radial force variation cannot be reduced to the values listed in the table.

Further to 2B: Stationary balancing with optimisation of rolling smoothness

- Clamp wheel on stationary balancing machine.
- Observe the operating instructions for the balancing machine. Adjust the machine according to the manufacturer's instructions (if necessary).
- The contact surfaces of the wheel on the balancing flange (levelling surface) and the centring surface must be clean.
- Centre (clamp) the wheel from the inside with centring clamping device - see Workshop Equipment Manual, Chapter 3. This centring clamping device fits all wheel-balancing machines approved by Porsche.

Check radial and lateral runout during the first measuring run. Values of less than 1.0 mm are desirable - around 0.5 mm would be better.
Consider the size of the measured balancing weights and their distribution on the inner and outer planes (inner and outer rim flanges) critically.
A uniform distribution with low values (e.g. 25/35 g) means that the tyre was fitted correctly and the quality of the tyre and rim is good.
A value of 80g/80g (90g/90g using the tyre pressure monitoring system) should not be exceeded with interior balancing behind wheel centre. A considerably different distribution, e.g. 35/90 g is very unfavourable; this usually indicates incorrect fitting. Problem wheels of this kind often have pronounced radial and axial runout values.
This can be remedied by matching (use correct mounting paste). This can be improved with uncontrolled matching (manual); significant improvement is possible in almost all cases using the rolling smoothness optimisation program (controlled matching).
Tyre pressure during balancing at required pressure.
Permissible residual imbalance of less than 3 g, or max. 3 g per plane.

Further to 3: Fitting the wheel on the vehicle



Note

- *Never use an impact bolter.*
- *Observe information on the two-piece wheel bolt. This is described in the chapter on wheel removal and installation (fitting wheel on vehicle) →440519 Removing and installing wheel.*

- Fit wheel using a suitable commercially available tool.
- Screw in wheel bolts by hand and then tighten evenly. Start at the top when tightening. Always observe the specified tightening torque of 130 Nm (96 ftlb.).
- Tyre pressure according to the specifications.

Balancing weights

Balancing weights: Balance stick-on weights (current version is a fine zinc alloy), see Spare Parts Catalogue.

Attach both weights to the inner side.

Note

- *Observe program selection and operating instructions of the balancing machine.*

Attaching the balance stick-on weights

Note

- *Remove the protective film just before sticking on the weight, as prolonged exposure to the air will reduce the bonding strength.*
- *Pay attention to cleanliness.*

– Determine exact position of the balancing weights (if necessary, temporarily stick on the balancing weights with a strip of adhesive tape until the correct position is determined).
– Prepare bonding surface on the rim. The bonding surface must be perfectly clean and free of grease.
– Remove protective paper from the bonding surface of the weight and press the weight firmly into place.
– The balance stick-on weight must be in uniform contact over the entire surface.
– Check the balancing weight is seated firmly. A weight freshly affixed weight must not detach itself from the rim under application of a shear load at right angles to its longitudinal axis.

- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

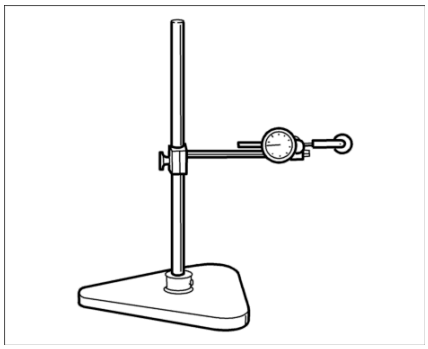
 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

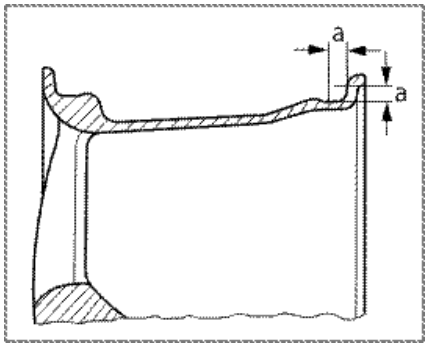
44 12 02 Checking disc wheels - as of MY 2005



- Checking the radial and lateral runout

top of page

Checking the radial and lateral runout



Note

- *Straightening and welding work on light alloy wheels is not permissible.*
- *The work is carried out initially with the wheel mounted on the vehicle.*

- *To measure wheels with tyres and wheels without tyres, use a tyre measuring gauge, e.g. VAG. 1435, see Workshop Equipment Manual, Chapter 3.4.2.*

Maximum permissible radial runout and lateral runout of the wheel with tyre = 1.25 mm. Values less than 1.0 mm - better around 0.5 mm - are desirable. For this purpose, match the tyre (turn the tyre on the rim) if necessary.).

Maximum permissible radial runout and lateral runout **-a-** of the light alloy wheels = 0.7 mm.
If in isolated cases further measurements are necessary, carry out the following procedure.

1.

To measure wheels without tyres, remove the wheel from the vehicle. →440519 Removing and installing wheel

2. Remove tyre from the alloy wheel. →*44 Mounting tyres for vehicles with and without tyre pressure monitoring system (RDK)*
3. Clamp the wheel on the balancing machine and measure at the points **-a-** .

997110, 997111, 997120, 997121, 997310, 997311, 997320, 997321, 997410, 997411, 997430, 997431, 997610, 997611, 997620, 997621

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

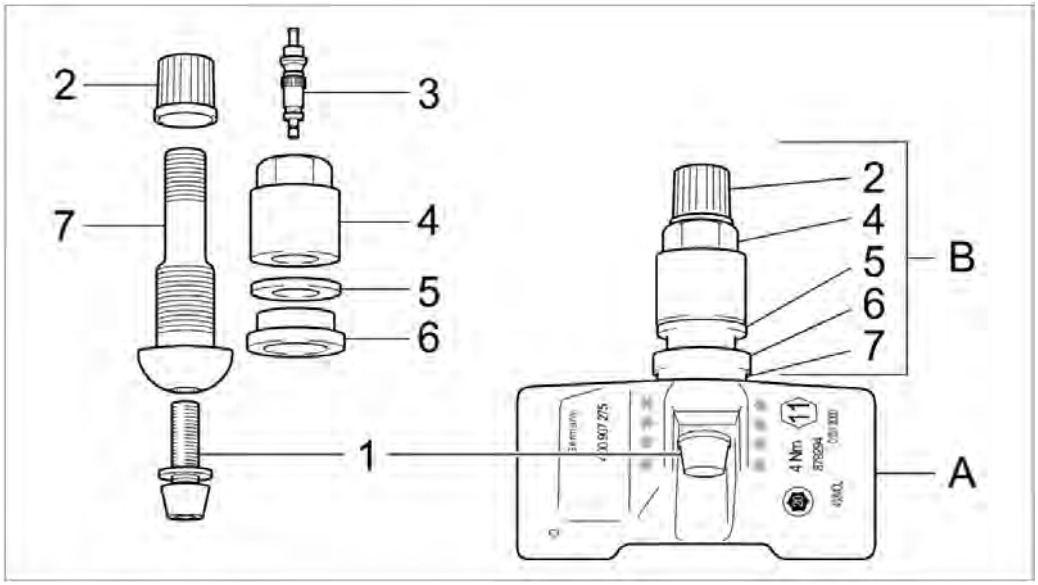
→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

44 32 19 Removing and installing wheel electronics - as of MY 2005

- Removing wheel electronics
- Installing wheel electronics

top of page

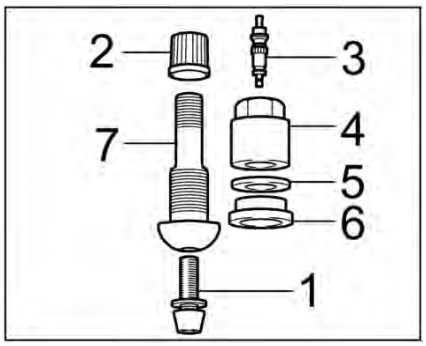
Removing wheel electronics



General information on wheel electronics

The tyre pressure monitoring system (RDK) is designed to constantly monitor the tyre pressure during driving and when stationary. One set of electronics **-A-** per tyre is mounted in the rim well base. These measure tyre pressure and temperature at regular intervals and transfer the values to a central control unit via a high-frequency route. The control unit evaluates the information and transfers the data to the instrument cluster if required. In this way, the driver is warned and informed if the tyre pressure has to be corrected. There are two versions of the wheel electronics **-A-** . The standard version, including normal transmission power, is used in the 911 Carrera (997) (in the Cayenne, an amplified transmission power is deployed). These transmit on a high frequency range of:

- 433 MHz or 315 MHz (special wheel electronics with 315 MHz have been developed for the Japanese market).

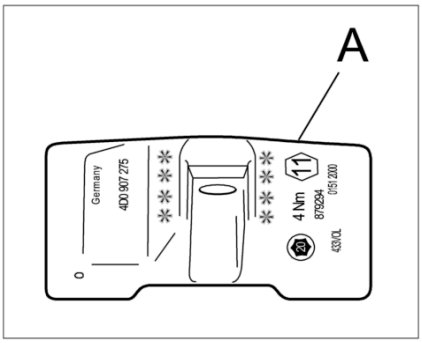


The following points can be used as distinguishing characteristics:

- The labelling, 433 MHz or 315 MHz
- The part number
- Without 8 stars (the illustration shows 8 stars, 4 each to the left and right of the slot, wheel electronics with amplified transmission power from the Cayenne)
- Special 315 MHz wheel electronics for Japan: identification with 14 oblique strokes (slashes)
- And/or the colour (black 433 MHz/grey 315 MHz)

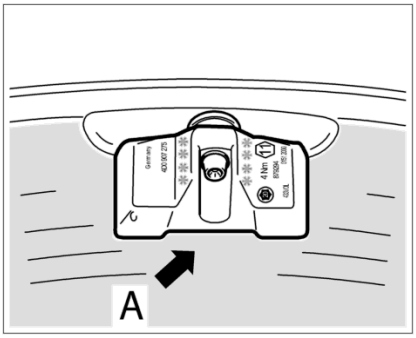
-A- - Wheel electronics
-B- - Valve complete (No. 2 to No. 7)
-1- - Self-locking (Torx) fastening screw
-2- - Valve cap (plastic)
-3- - Valve insert
-4- - Union nut
-5- - Washer chamfered on both sides
-6- - Bead seat sealing ring
-7- - Valve

Removing wheel electronics



Note

- *For vehicles with a tyre pressure monitoring system, the valve and wheel electronics are only replaced in exceptional cases! The following points can make replacement necessary!*



Valve complete with screw **-1 to 7-** has to be replaced if:

- The wheel electronics are removed
- The self-locking **-1-** fastening screw is loose
- The bead seat sealing ring **-6-** is porous or damaged
- The valve body **-7-** is bent
- The union nut **-4-** is loose.

The wheel electronics **-A-** must be replaced if:

- The housing is visibly deformed
- The filter surface (square, porous section on back of wheel electronics) is so badly soiled that it can no longer be cleaned by wiping
- Tyre sealant (tyre sealing liquid) has been used
- The service life of the battery has expired
- There is a fault within the wheel electronics.

After removal of the tyre, the wheel electronics **-A-** can be seen at the valve in the outer rim well base.

1. Release wheel electronics from valve using a Torx socket screwdriver T 20 (if necessary, counter with a suitable assembly pin, e.g. steel pin Ø approx. 1.8 mm in bore at valve foot) and remove.
2. Then unscrew union nut and remove valve.

top of page

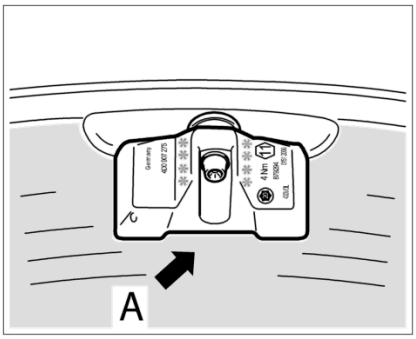
Installing wheel electronics

ATTENTION

The wheel electronics must not come into contact with the tyre fitting paste or solvent.

→ Do not apply compressed air, mounting paste, soap, solvents or any other cleaners to the wheel electronics when fitting/removing tyres.

When replacing the wheel electronics, always use a completely new valve and a new fastening screw!
The tightening torque for wheel electronics/valve is 4 Nm (3 ftlb.)(± 0.5 Nm/0.4 ftlb.)!
Every tyre set or wheel change must be communicated to the control unit. In particular, this includes the case where wheel positions have been interchanged. For this purpose, always select the tyre type and tyre size under Main menu > Tyre pressure > Adjustments in the instrument cluster. The control unit then learns the wheel positions again once the vehicle starts driving.



1. Install wheel electronics loosely at valve (do not tighten) and position in valve bore together with valve and bead seat sealing ring.

ATTENTION

Remove assembly pin after installing valve (required to counter). Otherwise the tyre will be damaged during installation.

→ Carry out the tightening procedure for the valve in one step (tighten without interruption the prescribed tightening torque is reached).

2. Position washer, chamfered on both sides, and screw union nut on as far as the mounting face. Visibly twist bore at valve foot. If necessary, block with suitable assembly pin. The tightening torque is 4 Nm (± 0,5 Nm) (3 ftlb. ± (0.4 ftlb.)).

3. Push wheel electronics **-A-** slightly into rim well (this adjusts the angle of inclination of valve to wheel electronics).
4. Carefully tighten self-locking (Torx) fastening screw T 20 to tightening torque 4 Nm (± 0.5 Nm (3 ftlb. (± 0.4 ftlb.)). The wheel electronics should now be lying evenly against the rim.

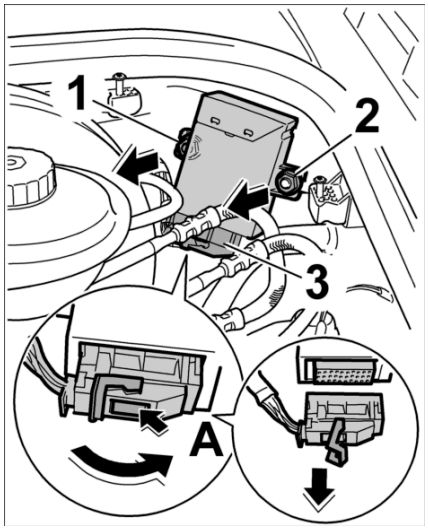
Removing tyre pressure monitoring system (RDK) control unit

Removing tyre pressure monitoring system (RDK) control module



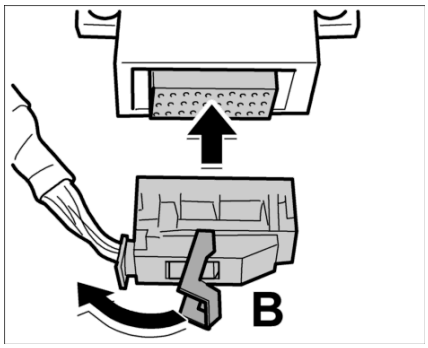
WARNING

Risk of damage to electronic control modules.

- **If care is not taken, electrical and electronic components may be destroyed.**

→ Before removing the control module, switch off the ignition and remove the ignition key.

The control module is located beside the brake booster in the luggage compartment.



Unscrew fastening nut -1-, loosen fastening nut -2-, release plug -3- and remove it.

1. Unscrew fastening nuts **-1-** .
2. Loosen fastening nut **-2-** and remove the control module.
3. Release the electrical plug **-A-** and fold up lock.
4. Remove control module.

Programming tyre pressure monitoring system (RDK) control unit

Control units - reading and writing replacement values

Note

Follow the instructions on the Tester.
Later versions of the software may display slightly different text or require a slightly different procedure. The instructions you receive from the tester itself take precedence over this description.

If the control module for the tyre pressure monitoring system is replaced, it must be programmed using the **PIWIS Tester 9718**. This will ensure that the control module is taught for the relevant vehicle, country version and equipment.

WARNING

Sudden voltage interruption of the power supply to the control module.

- **Destruction of the control module.**

→ During programming, it is essential to guarantee the power supply for the Porsche System tester. It is essential to connect a battery charger with a current rating of at least 40 A to the vehicle battery.

→ Prior to disconnecting the control module, switch off the ignition and remove the ignition key.

1. Connect the Porsche System Tester to the vehicle and start the System Tester. Switch on the ignition. Press >> to continue.
2. Select the vehicle type.
3. Switch from the vehicle type to the list of control units.
4. Select **RDK** with the cursor keys and press the >> key.
5. Select **Control unit replacement** with the cursor keys and press the >> key.
6. Select **Read out values** (codings) with the cursor keys and press >> .
7. The message **Codes successfully read out** appears on the screen of the Porsche System Tester. Press >> .
8. Switch off ignition and replace control unit. →443419 Removing and installing control unit for the tyre pressure monitoring system - chapter on "Removing"
9. Switch to the **Special functions** menu and perform the **vehicle handover** using the F8 key.
10. In the **Special functions** menu, erase **All fault memories** by pressing >> .
11. Carry out automatic search of control units.
12. In the menu **Write in data** >> , the data read-out is installed.
13. System Tester displays **Coding write-in complete** >> .
14. Quit menu, carry out a test drive, and read out fault memory.

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

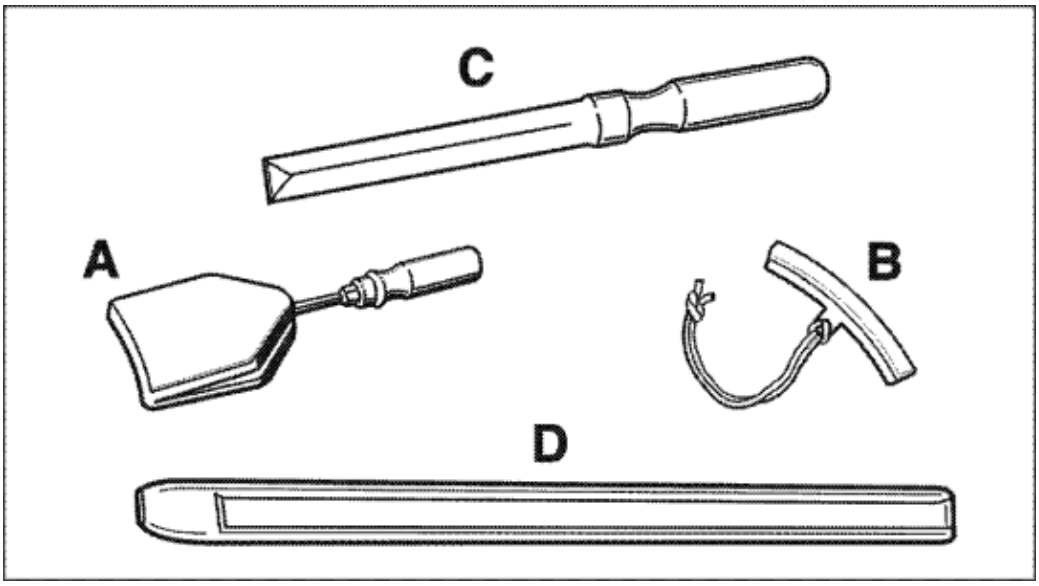
44 40 19 Tyre mounting (removing and installing tyres) - for vehicle with and without tyre pressure monitoring system - as of MY 2005

- Notes on removing/mounting tyres



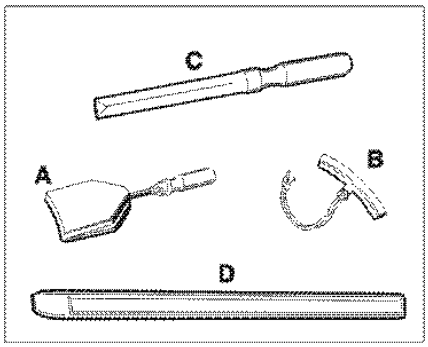
top of page

Notes on removing/mounting tyres

Note

- *Before fitting, it should be established whether a tyre pressure monitoring system is present! The tyre valve serves as the distinguishing characteristic. Without tyre pressure control system: rubber valve, with tyre pressure control system: aluminium valve. If an RDK is present, observe the special notes for the tyre pressure monitoring system. →44 Mounting tyres for vehicles with and without tyre pressure monitoring system (RDK) - see section on "Special notes for tyre pressure monitoring system (RDK)"*
- *The mounting machine described here is particularly suitable for large tyre combinations, such as those used by Porsche.*
- *All parts in contact with the wheel and the tyres are made of plastic.*
- *No large point load for wheel and tyres.*

Tools



A - Holding-down device 9539 - For holding down tyre bead, see Workshop Equipment Manual, Chapter Special Tools

B - Assembly aid - commercially available; refer to Workshop Equipment Manual, Chapter 2.5

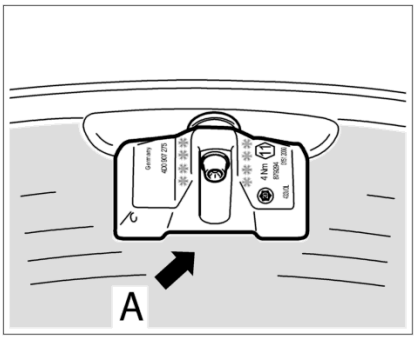
C - Adhesive weight remover - commercially available

D - Mounting lever - commercially available

Notes on removing/mounting tyres

Note

- *When fitting tyres, the direction of rotation and the inner and outer sides should be noted.*
- *Use only TIP TOP Universal, order No. 593 0601 (3.5 kg bucket) or Contifix as the mounting paste.*
- *Ensure that no damage (scoring, soiling) is caused to the assembly head of the fitting machine during fitting. Such damage may result in paint damage and pressure marks on the rim flange.*



– Avoid slipping on to the rim flange. Use rim flange protection (assembly aid) **-B-** .
– Adhesive tape can be used to protect the rim flange in individual cases, in order to prevent any paint damage during fitting. The mounting lever can also be covered with adhesive tape in order to avoid damaging the area around the spokes during removal.
– The valve must always be replaced when changing a tyre.
– Check the wheel for damage.

Special notes for tyre pressure monitoring system (RDK)

Note

- *If the previous wheels are still in the vicinity after assembly work (for example changing winter tyres and/or wheels from another vehicle with tyre pressure monitoring system), they might still be recognised by the system. If one or more of these wheels has a minimum pressure of more than 0.4 bar below the required pressure, this can trigger a warning in the instrument cluster. In this case, remove the other wheels or use the PIWIS Tester to tune the vehicle to be outside the radio range of these wheels.*

- *The remaining life span can be read out with the PIWIS Tester. Where a tyre change is about to be made, it is advisable to read out the remaining life span of the wheel electronics (based on the battery capacity).*

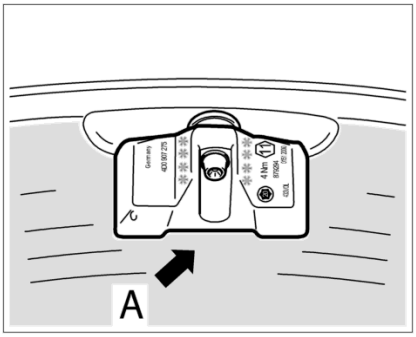
- *For vehicles with a tyre pressure monitoring system, the valve and wheel electronics **-A-** are only replaced in exceptional cases. The following points can make replacement necessary.*

The valve must be replaced if:

- The wheel electronics are removed
- The self-locking fastening screw is loose
- The union nut is loose
- The valve leaks at valve seat
- And the valve body is bent or broken.

The wheel electronics must be replaced if:

- The housing is visibly deformed
- The filter surface is so soiled that it cannot be cleaned by wiping
- Tyre sealant (tyre sealing liquid) has been used.

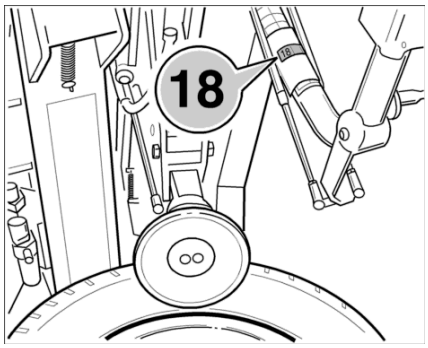


1. Install wheel electronics loosely at valve (do not tighten) and position in valve bore together with valve and bead seat sealing ring.

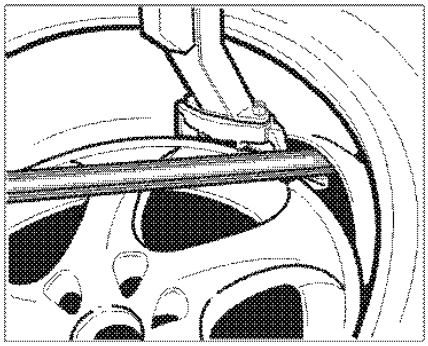
ATTENTION

Remove assembly pin after installing valve (required to counter). Otherwise the tyre will be damaged during installation.

→ Carry out the tightening procedure for the valve in one work step (tighten without interruption up to attaining the prescribed tightening torque).



2. Fit washer, chamfered on both sides, and screw on union nut until it seats. Visibly twist bore at valve foot. If necessary, block with suitable assembly pin. The tightening torque is 4 Nm (3 ftlb.) (± 0.5 Nm (0.4 ftlb.)).



3. Push wheel electronics **-A-** slightly into rim well (this adjusts the angle of inclination of valve to wheel electronics).
4. Carefully tighten self-locking Torx fastening screw T 20 with tightening torque 3 ftlb. (± 0.4 ftlb.). The wheel electronics should now be lying evenly against the rim.

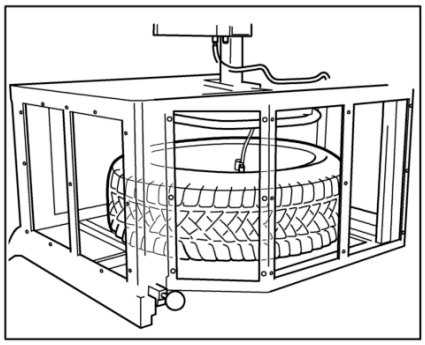
Removal

1. Clamp wheel.

2. When pushing off the tyre, ensure that the bead press-off tool is set to the exact inch graduation. If this is not the case, the rim flange may be damaged by the press-off rollers.
3. The wheel must be turned anti-clockwise when pressing the tyre off the rim. Otherwise, excessive forces occur on the fastening bolts of the machine which can lead to bolt breakage. The tyre beads can be pressed off at the same time or individually.
4. Before removing the tyre, coat the tyre beads with mounting paste to facilitate removal.

Note

- *The mounting lever must be kept at a safe distance from the rim. This prevents damage (scratches, pressure marks) to the rim spokes.*
- *In the case of vehicles with RDK, for the upper tyre bead the mounting head must be positioned about 15 cm behind the valve in order to prevent damage to the wheel electronics.*
- *In the case of vehicles with RDK, for the lower tyre bead the mounting head must be positioned about 5 cm behind the valve.*



5. Put the assembly head on the rim flange. Position the assembly aid. The mounting lever is pushed into the deep bed underneath the first tyre bead, and then guided over the assembly shoe and pushed down .
6. Lift the tyre bead out of the rim bed by turning the wheel to the right.
7. Position the assembly aid for the second tyre bead approximately 5 - 10 cm to the right of the valve. Pull the tyre upwards and push it into the rim bed underneath the second tyre bead using the mounting lever. Make sure that the mounting lever is guided correctly (see Item 5). Turn the wheel to the right and remove the tyre.

Installation

Note

- *Check the mounting head adjustment (must correspond with rim size).*
- *The wheel electronics must not be treated with compressed air, mounting paste, cleaning agents or any other solvents.*
- *Rims must not be cleaned with high pressure before tyres have been fitted.*
- *Do not scratch filter surface of wheel electronics clear! Remove soiling with a lint-free cloth. The wheel electronics must be free of tyre mounting paste (observe when applying tyre mounting paste to the rim).*
- *During fitting, ensure that the tyre bead is not pressed against the wheel electronics.*

1. Free the wheel from the abraded rubber particles and check for damage .
2. A new valve must always be fitted.
3. Coat the wheel and tyre with tyre mounting paste - TIP TOP Universal, order No. 593 0601 - or Contifix. Make sure that the wheel electronics are free of tyre mounting paste.
4. Place the tyre in the correct position on the wheel. Push in mounting arm and position on top of the rim flange. The assembly head must be offset from valve by 180°.
5. Push the first part of tyre bead (lower tyre bead) partly over rim flange. Adjust mounting head on rim flange and pull lower tyre bead onto the rim.
6. Position mounting head approx. 15 cm to the right of valve and pull the second tyre bead (upper tyre bead) onto rim.

Tyre filling cage

WARNING

If the tyre seating pressure is too high (max. 4 bar permissible), personal injuries due to possible tyre or wheel destruction are possible.

→ Maximum tyre seating pressure 4 bar! This value must not be exceeded!

→ For tyre seating pressure over 3.3 bar (possible in the event that several unfavourable factors should occur simultaneously / max. 4.0 bar permissible) use a tyre filling cage.

7. Remove entire wheel from tyre fitting unit. Without valve insert, fill tyre with air until tyre beads slide over hump (to a maximum of 4.0 bar).
8. Screw in new valve insert and fill tyre to specified tyre pressure. Screw on valve cap.

44 95 03 Suspension alignment, complete - as of MY 2005

- Information
- Measuring vehicle at front and rear

Tools

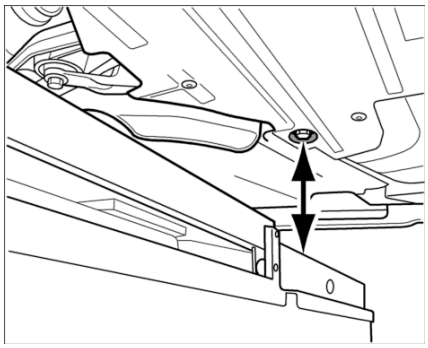
Designation	Type	Number	Explanation	
Insert for torque wrench	special tool	96260		
socket wrench insert	special tool	P 9730		

top of page

Information

General procedure for wheel alignment

Performing wheel alignment using an electronic wheel alignment tester. Measurement procedures should be taken from the operating instructions for the wheel alignment tester involved.
In order to exclude erroneous measurements, the following preconditions must be met before alignment and the following points should be given special attention:
Empty weight of vehicle according to DIN 70020, i.e. vehicle in ready-to-drive condition with full tank and including tools but without driver or additional weights.
Ball-joint and wheel-bearing play in order (wheel-bearing play cannot be adjusted).
Tyre pressure in accordance with regulations, fairly uniform tyre tread.
Quick-clamping holder with adapter (for the measured-value pickups) correctly secured to the wheels.
Receiving surfaces for the quick-clamping holder on the wheels and the adapter surfaces must be clean and flat. Always check the levelling surface on the wheels precisely in particular before fitting the quick-clamping

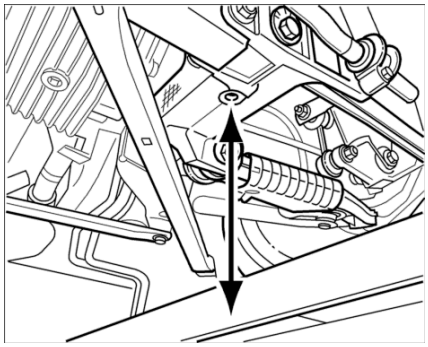


holders.
Strictly comply with maintenance intervals for measuring equipment and measuring platform. If the levelling of the measuring platform or measuring station is done in-house, levelling equipment is required. A hose level gauge is not adequate.
Skilled handling of measuring equipment and measuring platform.
Sliding plates with transverse motion (rotary motion) at the rear axle are advisable.
Observe the Technical Literature of PAG, the manufacturer of the measuring equipment and the manufacturer of the measuring platform.
Do not treat measured values as a whole, but very critically in regard to driving dynamics, high-speed strength of the tyres, tyre wear and cost/benefit effects (time required for correction of insubstantial deviations). The toe values are of decisive significance for driving dynamics and tyre wear.
If the vehicle is measured front and rear, check and adjust the wheel alignment values at the rear axle first.
Camber values at the front axle apply for the straight-ahead position of the wheels. Steering wheel and steering gear in centre position when toe is being adjusted.
Before wheel alignment values are adjusted at front and rear axles, it is recommended that the vehicle height be checked at the DIN empty weight. Conclusions can then be drawn about wheel alignment values in the event of any suspension alignment that becomes necessary later.

top of page

Measuring vehicle at front and rear

Vehicle height (height check)



General
The vehicle height at front and rear axle is not adjustable.
Preliminary work
For the height check, place the vehicle on a level surface or on the measuring platform (ready to drive, with a full tank and tools but without driver or additional weights). Compress (push down) vehicle at front and rear axles 2-3 times and allow it to spring back freely.
Front axle

Measuring height of front axle (left-hand side)

From road contact surface to hexagon-head bolt of cross-member screw connection to the body.
Nominal value for front and rear axles → Adjustment values for wheel alignment [997110 997111 997120 997121 997310 997311 997320 997321] →*Adjustment values for wheel alignment [997410 997411 997430 997431 997610 997611 997620 997621].*

Rear axle

Measuring the height of the rear axle (right-hand side)

Measure from wheel contact surface to the locating bore in the rear-axle side section (between toe and camber eccentrics).

Wheel alignment

WARNING

Risk of accident due to incorrect functioning of steering angle sensor if it is uncalibrated or incorrectly calibrated.

- **There is a risk of accidents causing physical damage to persons or objects in the PSM testing area.**

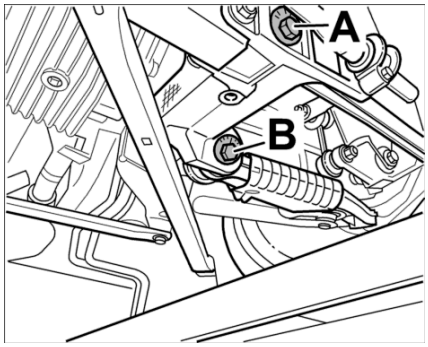
→ After working on wheel suspension parts, when replacing the steering-angle sensor and after changing the wheel alignment values, calibrate the steering angle sensor with the front wheels in straight-ahead position using the PIWIS tester.

→ Check the actual value of the steering angle sensor after a suspension alignment where no changes were made to the wheel alignment values.

Notes

Only check or adjust wheel-alignment values when prescribed preconditions are met. →449503 Suspension alignment complete - chapter on "Information"

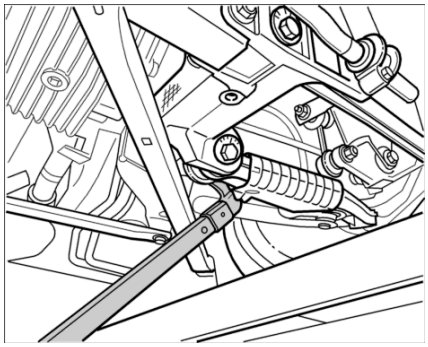
If the vehicle is measured front and rear, check and adjust the rear axle first. After adjustment, tighten the appropriate threaded connections with the prescribed tightening torque. See tables in Repair Group 40 →*401000 Tightening torques for front axle* and Repair Group 42 →*421000 Tightening torques for rear axle*.



The steering-angle sensor must be calibrated if the previous wheel alignment values (on rear and/or front axle) were changed!

Rear axle

Preliminary work

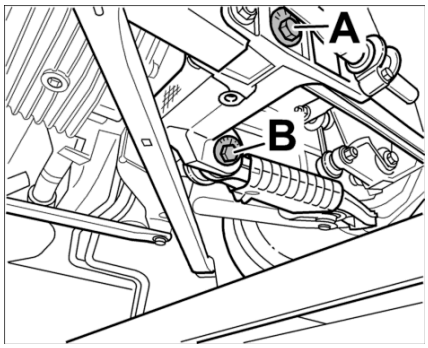


Prepare vehicle for checking and/or adjustment of wheel alignment values. Place front wheels on rotary table and rear wheels on rotary / sliding plates. Compress vehicle at front and rear axles by approximately 25 mm 2-3 times and allow it to spring back freely.

Adjusting camber

Toe and camber eccentrics

Turn the eccentric accordingly **-B-** after releasing the fastening nut using special tool **Insert for torque wrench 96260**.



Special tool 96260 (Insert for torque wrench)

Note

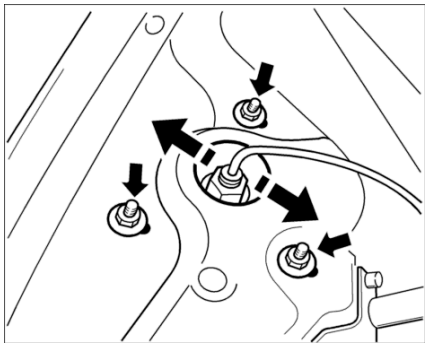
- *Use special tool 9626 in combination with a torque wrench to undo and tighten the fastening nuts of the toe and camber eccentrics. The prescribed lock-nut tightening torque of 100 Nm (74 ftlb.) also corresponds to a setting on the torque wrench of approx. 100 Nm (74 ftlb.).*

Tighten fastening nut for camber eccentric to 74 ftlbs using special tool **Insert for torque wrench 96260**, in combination with a torque wrench.

Adjusting toe

Toe and camber eccentrics

Turn the eccentric accordingly **-A-** after releasing the fastening nut using special tool **Insert for torque wrench 96260**.



Note

- *Use special tool 9626 in combination with a torque wrench to undo and tighten the fastening nuts of the toe and camber eccentrics. The prescribed lock-nut tightening torque of 100 Nm (74 ftlb.) also corresponds to a setting on the torque wrench of approx. 100 Nm (74 ftlb.).*

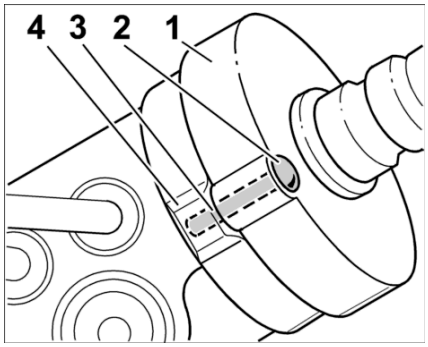
Tighten fastening nut for toe eccentric to 74 ftlbs using special tool **Insert for torque wrench 96260**, with a torque wrench.

Front axle

Adjusting camber

Adjusting camber

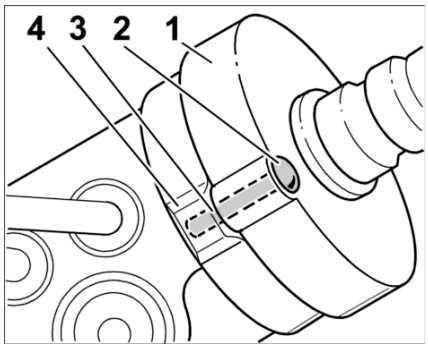
The camber is adjusted by moving the spring strut transversely. For this purpose, undo the three fastening nuts on the spring-strut mount and, to move the spring strut, remove the covering cap on the piston rod.



Adjusting caster

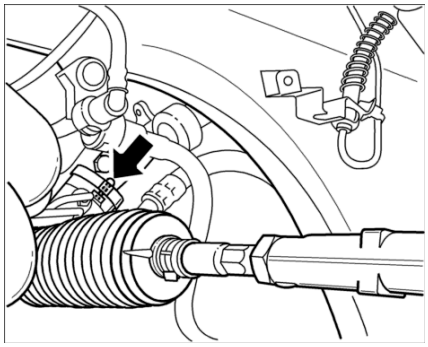
The caster is not adjustable on standard vehicles.

Adjusting toe



Preliminary work: Check whether the steering wheel is displaced with respect to the steering gear. To do this, centre the steering gear as described below.

Turn wheels to the straight-ahead position.



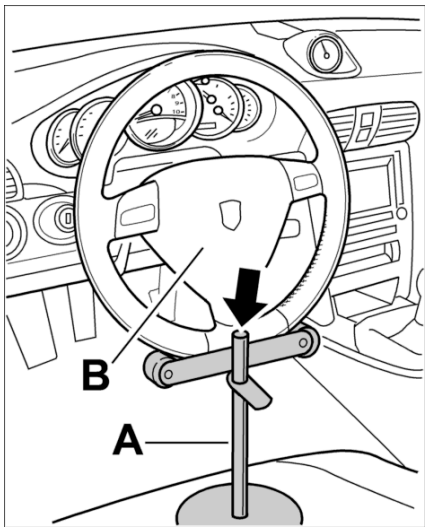
Steering in centre position

Then readjust the front wheel alignment, if necessary, until pin **-2-** in driver **-1-** and lug on steering gear housing **-4-** , line up.

Steering in centre position

No. 3 is the desired breaking point for pins in new steering gears. The (new) pin **-2-** is inserted into driver **-1-** and its underside sits in lug **-4-** . This locks the steering gear in the centre position. After installation of a new steering gear, the lower part of the pin is sheared off at desired breaking point **-3-**) by turning the steering wheel. The upper part of the pin **-2-** remains in the driver.

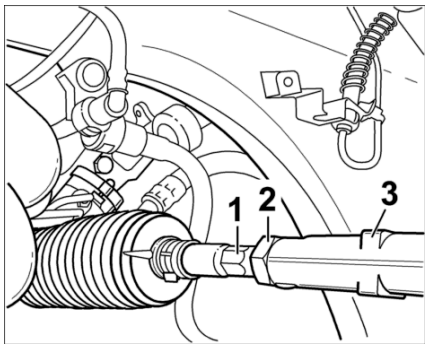
Mark for the centre steering position



If necessary, reposition the steering wheel. When doing this, seek the best position.

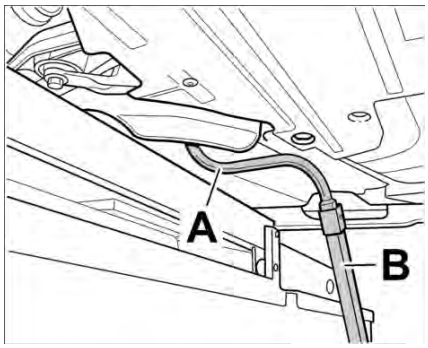
WARNING

A triggering of the airbag (malfunction in the airbag system) caused by improper work on airbag components cannot be ruled out. In the case of such a malfunction, an unsuitable steering wheel holder could cause injury or damage.



→ Use only steering wheel holders that do not project into the area of the airbag unit!

→ Observe safety regulations when working with airbag vehicles (see in Repair Group 69)!



Steering wheel holder

Clamp steering wheel in centre position with steering wheel holder **-A-** . Use only steering wheel holders that do not project into the area of the airbag unit **-B-** . If necessary, shorten guide rod of steering wheel holder at top **-arrow-** .

Adjusting toe

Release tie rod locking nut(s) **-2-** . When undoing or tightening tie rod locking nuts on the square part of the tie rod **-3-** , with a spanner, apply counter-pressure. Next, adjust toe at the hexagonal part **-1-** of the tie rod(s). Then tighten tie rod locking nuts **-2-** with the specified tightening torque.

Loosening and tightening the tie rod-lock nut

To loosen and tighten the tie rod-lock nut(s), use special tool (socket wrench insert) P 9730 **-A-** together with a torque wrench **-B-** . The tightening torque for the tie rod-lock nut(s) of 50 Nm (37 ftlb.), when using a **socket wrench insert P 9730**, corresponds to a value of approx. 32.5 Nm (24 ftlb.) on the torque wrench.

Toe-difference angle

The toe-difference angle is not adjustable.

The steering angle sensor must be calibrated if the previous wheel alignment values (on rear and/or front axle) were changed.

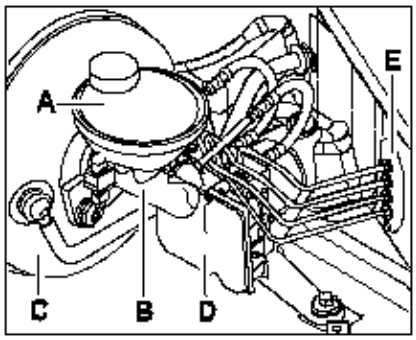
45 01 01 PSM/ABS check using the PIWIS Tester - as of MY 2005

-

Tools

Designation	Type	Number	Explanation	
PIWIS Tester	special tool	P 9718		

top of page



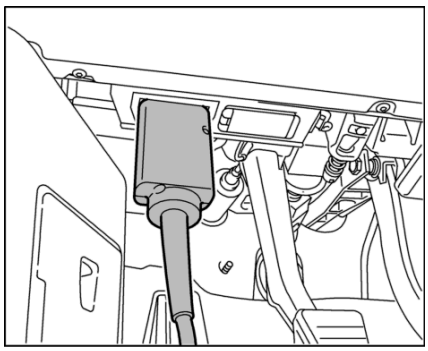
Test overview

Note

- *PSM is installed as standard.*
- *PSM comprises the functions ABS (anti-lock braking system), ABD (automatic brake differential), ASR (anti-slip regulation), EDTC (engine drag torque control), EBD (electronic brake-force distribution) and vehicle dynamic control.*

The ABS/PSM test includes:

- Reading out fault memory.
- Static test.
- Swap testing hydraulics in the Checks/Tests menu. The swap test is menu-driven. Once you start the test, follow the instructions on the PIWIS Tester.
- Checking function and correct allocation of speed sensor in the Actual values menu. Turn all four wheels individually during the test. The speed assigned to the wheel in question must be displayed when you turn the wheel. The non-tested wheel must be held (by a second person) when the test is performed on the driven axle.



Hydraulic unit

Procedure:
If work has been done on the hydraulic unit **-D-** , the speed sensors and the wire harness or if the hydraulic unit **-D-** is replaced, an ABS/PSM test (system check) must be performed using the PIWIS Tester! This is the case, for example, after accident repairs! This prevents any confusion of electrical or hydraulic lines and ensures faultless operation of the system!
If certain brake lines are replaced, e.g. at the intermediate piece in the front left wheel housing **-E-** , a swap test must also be performed (in the Checks/Tests menu)! Unintentional bending of the brake lines could lead to incorrect hydraulic allocation despite the markings (FL = front left, FR = front right, RL = rear left, RR = rear right)!
If a fault is displayed during operation (when no assembly work was carried out beforehand), diagnosis and fault finding are also carried out using the PIWIS Tester! To do this, select the PSM system and read out the fault memory there! The fault can then be located using the appropriate menus (Drive links, Actual values, Checks/Tests)!

PSM check using the PIWIS Tester

1. **PIWIS Tester P 9718** must be connected to the vehicle, then start it. Switch on ignition and press >> to continue.

Diagnostic socket

   The PIWIS Tester 9718 is connected to the vehicle via a diagnostic socket. The diagnosis socket is located inside the vehicle in the vicinity of the driver's A-pillar below the instrument panel.
2. Select the vehicle type and call up the PSM system.
3. Carry out ABS/PSM test (see Test overview).

- Test

top of page

Test

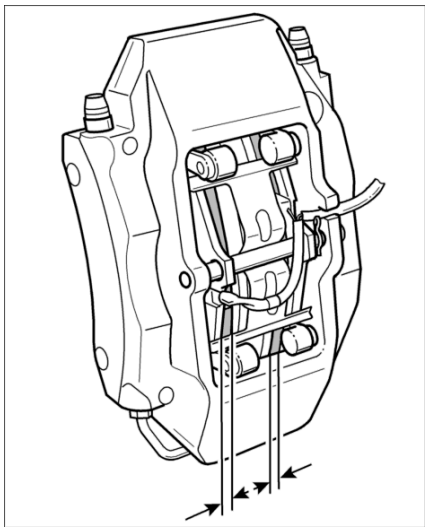
 WARNING

Risk of accidents if brake pads and/or brake discs are not replaced in time.

- **Danger of injury and damage to vehicle if braking effect is impaired.**

→ The brake pads must be replaced when the brake pad warning indicator lights up, but no later than when there is a residual pad thickness of 2 mm.

 ATTENTION



Increased risk of damage to brake discs when mounting/removing wheels.

- **The brake discs can be damaged.**

→ Use assembly aid (assembly pins) in order to exclude any possibility of heavy contact of the wheel with the brake disc.

 **Note**

- *If brake pad wear is indicated by the warning light, the warning contact (sender including wire and plug connection) must also be replaced.*

Checking brake pads

- *Replacing the warning contact can be avoided by replacing the brake pads no later than when the pad thickness is 2.5 mm* ***-arrows-*** .
- *Warning contacts must be replaced if the core of the wire is worn.*
- *However, if only the plastic part of the warning contact is worn, there is no need to replace it.*

Visually inspect the brake pads for wear.

Preliminary work

→440519 Removing and installing wheel

top of page

General warning notes

Danger of accidents

 WARNING

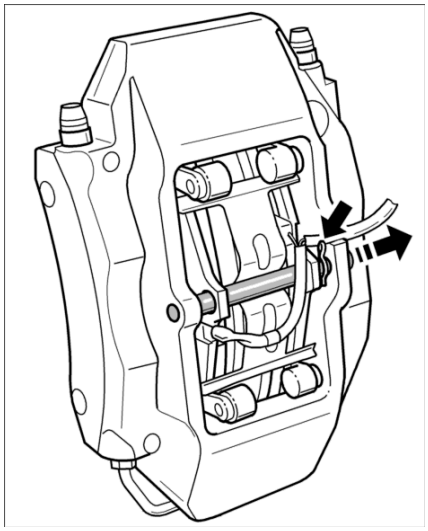
Risk of accidents if brake pads with the wrong brake pad quality are installed.

- **This can result in longer braking distances and more wear.**

→ Use only the type-specific brake pads specified in the Porsche Spare Parts Catalogue.

 ATTENTION

Increased risk of accidents if old parts are fitted on brake calliper.



- **This can cause malfunctions.**

→ Fit new expanding spring, new retainer pin and new retainer on the brake calliper.

top of page

Removal

Removing front disc brake pads

Removing retainer pin

1. Remove the safety bracket and extract the retainer pin inwards.
2. Pull out the warning contact wire on the brake calliper and remove the warning contacts from the brake pad plates.
3. Remove brake pads using the brake pad puller. Always observe the following important points:

Press the brake pads back as far as possible using the piston resetting fixture.
Pull out brake pads together with the vibration dampers. If this is not possible (depending on the amount of wear on the brake pads), use a spatula to detach the vibration dampers from the brake pad backing plate before removing the pads.

top of page

Installing

Installing front disc brake pads

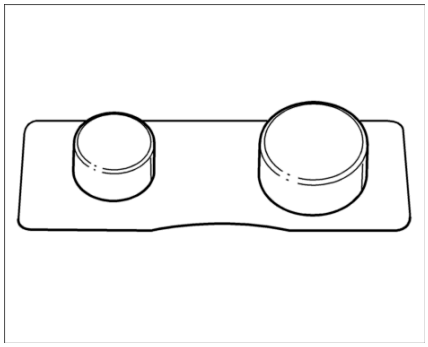
WARNING
Risk of accidents if brake pads with the wrong brake pad quality are installed.

- **This can result in longer braking distances and more wear.**

→ Use only the type-specific brake pads specified in the Porsche Spare Parts Catalogue.

ATTENTION

Increased risk of accidents if old parts are fitted on brake calliper.



- **This can cause malfunctions.**

→ Fit new expanding spring, new retainer pin and new retainer on the brake calliper.

Note

The brake pad backing plates (rear side) must not be greased.
Replace vibration dampers each time the pads are changed.
The vibration dampers have an adhesive protective film. The protective film must be removed before installation.
Replace warning contacts if the core of the wire is worn.
The warning contact can still be used if there are only scrape marks on the plastic part of the warning contact.
Remove some brake fluid from the brake fluid reservoir by suction if necessary.

1. Before installing the brake pads, check the amount of wear on the brake discs. For details of the minimum thickness of the brake discs, see Technical data/Brake wear limit in Repair Group 46.
2. If necessary, reset the brake pistons using the piston resetting fixture.

Vibration damper

3. Fit new vibration dampers in the pistons. Remove protective film from the vibration dampers before installation.
4. Insert the brake pads.
5. Fit new expanding spring, new retainer pin and new retainer. These parts are available as a repair set and must be replaced each time the pads are changed.
6. Insert the warning contact wire and the warning contacts.
7. Press the brake pedal several times to position the brake pads on the brake discs.
8. Check and, if necessary, correct the brake fluid level.

Bedding in the brake pads

New brake pads require a bedding-in period of approx. 200 km. Only then do they achieve their best friction and wear coefficient. During this period, the brakes should be subjected to full stress when travelling at high speed only in emergencies.

General warning notes

WARNING

Risk of accidents if brake pads and/or brake discs are not replaced in time.

- **Danger of injury and damage to vehicle if braking effect is impaired.**

→ The brake pads must be replaced when the brake pad warning indicator lights up, but no later than when there is a residual pad thickness of 2 mm.

ATTENTION

Increased risk of damage to brake discs when mounting/removing wheels.

- **The brake discs can be damaged.**

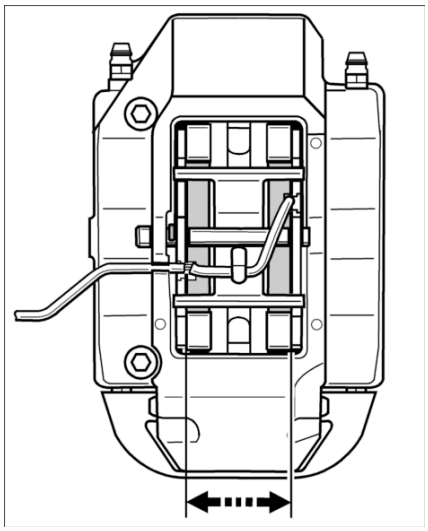
→ Use assembly aid (assembly pins) in order to exclude any possibility of heavy contact of the wheel with the brake disc.

top of page

Removing front brake disc

WARNING

Risk of accidents if brake pads and/or brake discs are not replaced in time.



- **Danger of injury and damage to vehicle if braking effect is impaired.**

→ The brake pads must be replaced when the brake pad warning indicator lights up, but no later than when there is a residual pad thickness of 2 mm.

Note

- *In order to gain better access for removal of the brake calliper, it is beneficial to turn the wheels fully either to the right or the left.*

1. Release retainer for plug of wear indicator on wheel carrier.
2. Disconnect the speed sensor on the ABS sensor.

Pushing back brake pad

3. Push brake pads back slightly and evenly using **piston resetting fixture NR.144**, see Workshop Equipment Manual, Chapter 2.4 **-direction arrow-** . Make sure that no brake fluid runs out of the supply tank - if necessary, remove by suction.
4. Undo brake calliper on wheel carrier and hang it in a suitable place in the wheel well (do not open the brake hydraulics!).
5. Remove brake disc after unscrewing the fastening screw. If necessary, remove the brake disc by tapping it gently with a rubber hammer.

top of page

Installing

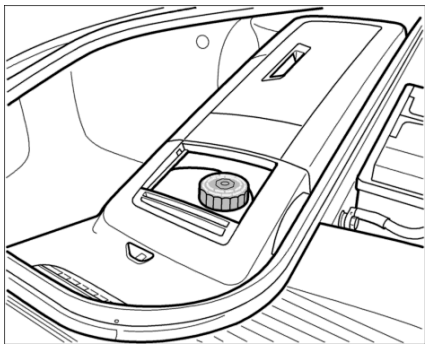
 WARNING

Risk of accidents if brake pads and/or brake discs are not replaced in time.

- **Danger of injury and damage to vehicle if braking effect is impaired.**

→ The brake pads must be replaced when the brake pad warning indicator lights up, but no later than when there is a residual pad thickness of 2 mm.

 ATTENTION



Increased risk of damage to brake discs when mounting/removing wheels.

- **The brake discs can be damaged.**

→ Use assembly aid (assembly pins) in order to exclude any possibility of heavy contact of the wheel with the brake disc.

Do not confuse right and left brake discs during assembly!
Distinguishing characteristic: Part No.! The flat surface of the brake discs is marked with R = right or L = left.

1. Check that all parts are in perfect condition and replace them if necessary.
2. Clean the levelling and centring surfaces on the brake disc and wheel hub. Then apply a very thin coat of Optimoly TA to the centring surface on the wheel hub.
3. Fit the brake disc. Observe specified tightening torque. *→46 TW Tightening torques for brake mechanics - Technical values*
4. Fit the brake calliper. Replace the brake calliper fastening screws each time they are removed. Observe specified tightening torque. *→46 TW Tightening torques for brake mechanics - Technical values*
5. Install retainer for plug of wear indicator on wheel carrier.
6. Connect the speed sensor on the ABS sensor.
7. Position disc brake pads by operating the brake several times.

Brake system: checking fluid level

8. Check brake fluid level and correct if necessary. The brake fluid level must be between the MAX-MIN marking. . *→Brake system: checking fluid level* →470801 Checking brake fluid level

WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though**

the display on the screen is correct.
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

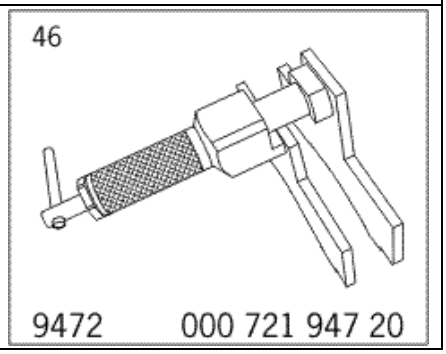
Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.



- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

General warning notes

WARNING

Risk of accidents if brake pads and/or brake discs are not replaced in time.

- **Danger of injury and damage to vehicle if braking effect is impaired.**

→ The brake pads must be replaced when the brake pad warning indicator lights up, but no later than when there is a residual pad thickness of 2 mm.

ATTENTION

Increased risk of damage to brake discs when mounting/removing wheels.

- **The brake discs can be damaged.**

→ Use assembly aid (assembly pins) in order to exclude any possibility of heavy contact of the wheel with the brake disc.

Removing front brake disc

 WARNING

Risk of accidents if brake pads and/or brake discs are not replaced in time.

- **Danger of injury and damage to vehicle if braking effect is impaired.**

→ The brake pads must be replaced when the brake pad warning indicator lights up, but no later than when there is a residual pad thickness of 2 mm.

 ATTENTION

Increased risk of damage to brake discs when mounting/removing wheels.

- **The brake discs can be damaged.**

→ Use assembly aid (assembly pins) in order to exclude any possibility of heavy contact of the wheel with the brake disc.

 **Note**

- *In order to gain better access for removal of the brake calliper, it is beneficial to turn the wheels fully either to the right or the left.*

1. Release retainer for plug of wear indicator on wheel carrier.
2. Disconnect the speed sensor on the ABS sensor.
3. Push brake pads back slightly and evenly using **brake piston resetting fixture 9472**.
4. Undo brake calliper on wheel carrier and hang it in a suitable place in the wheel well (do not open the brake hydraulics!).
5. Remove brake disc after unscrewing the fastening screw. If necessary, remove the brake disc by tapping it gently with a rubber hammer.

top of page

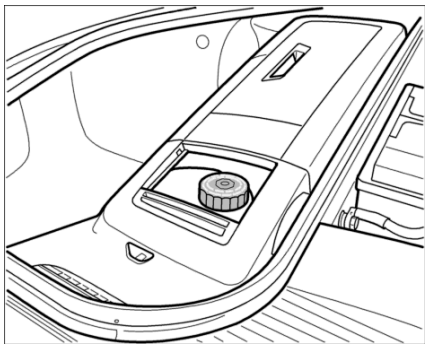
Installing

WARNING
Risk of accidents if brake pads and/or brake discs are not replaced in time.

- **Danger of injury and damage to vehicle if braking effect is impaired.**

→ The brake pads must be replaced when the brake pad warning indicator lights up, but no later than when there is a residual pad thickness of 2 mm.

ATTENTION
Increased risk of damage to brake discs when mounting/removing wheels.



- **The brake discs can be damaged.**

→ Use assembly aid (assembly pins) in order to exclude any possibility of heavy contact of the wheel with the brake disc.

Do not confuse right and left brake discs during assembly!
Distinguishing characteristic: Part No.! The flat surface of the brake discs is marked with R = right or L = left.

Note
When replacing the brake discs due to wear, the brake discs on one axle must always be replaced. Irrespective of wear, a brake disc change can be necessary on the brake disc friction surfaces due to edge damage. In this case, only one brake disc can be replaced if the friction area surface of the other brake disc is OK.

1. Check that all parts are in perfect condition and replace them if necessary.
2. Clean the levelling and centring surfaces on the brake disc and wheel hub. Then apply a very thin coat of Optimoly TA to the centring surface on the wheel hub.
3. Fit the brake disc. Observe specified tightening torque. *→46 TW Tightening torques for brake mechanics - Technical values*
4. Fit the brake calliper. Replace the brake calliper fastening screws each time they are removed. Observe specified tightening torque. *→46 TW Tightening torques for brake mechanics - Technical values*
5. Install retainer for plug of wear indicator on wheel carrier.
6. Connect the speed sensor on the ABS sensor.
7. Position disc brake pads by operating the brake several times.

Brake system: checking fluid level

8. Check the brake fluid level and correct if necessary. The brake fluid level must be between the MAX-MIN marking. *→Brake system: checking fluid level* →470801 Checking brake fluid level

Subsequent work

→440519 Removing and installing wheel

Bedding in the brake pads

New brake pads require a slightly longer bedding-in period for PCCB brake discs than cast iron brake discs. In general, the following applies: New brake pads must be worn in (bedding-in period), their optimum braking effect is therefore not reached until after a few hundred kilometres. The slightly reduced braking effect must be compensated for by increased pressure on the brake pedal. The same also applies after a brake disc change.

997110, 997111, 997120, 997121, 997310, 997311, 997320, 997321, 997410, 997411, 997430, 997431, 997610, 997611, 997620, 997621

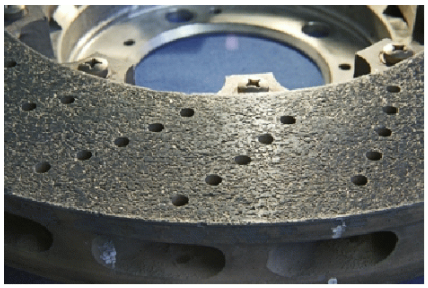
46 51 02 Checking front PCCB brake discs (wear assessment) - as of MY 2005

- Checking information on PCCB brake discs
- Checking PCCB brake discs (wear assessment)

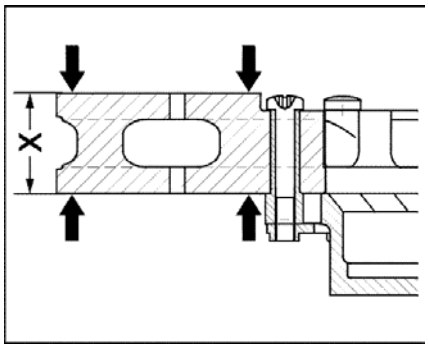
top of page

Checking information on PCCB brake discs



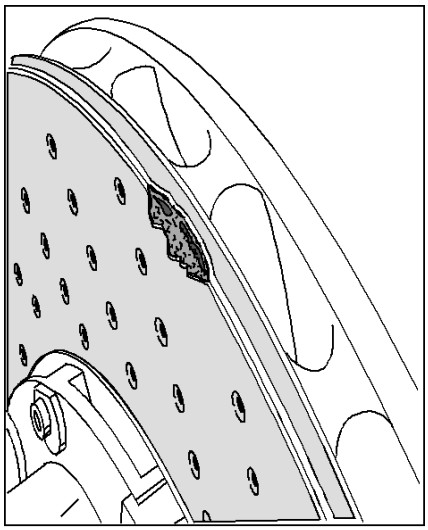
Basic information

Checking involves the following:



Associated surface fracture

1. Visual inspection for any surface changes to the brake disc friction surfaces Indication of wear: Associated surface fracture > 1 cm^2 **-arrow-** , but no accumulation of smaller fractures → Visual inspection of the surfaces of the brake disc friction surfaces (indication of wear) .



Surface roughness of PCCB brake disc

2. Assess the surface roughness (Sr) of the brake discs (max. 80 µm permitted), since this affects smoothness of braking (noise), braking performance/pedal pressure and brake pad idle time → Evaluating surface roughness (Sr) (max. 80 micrometre permitted).

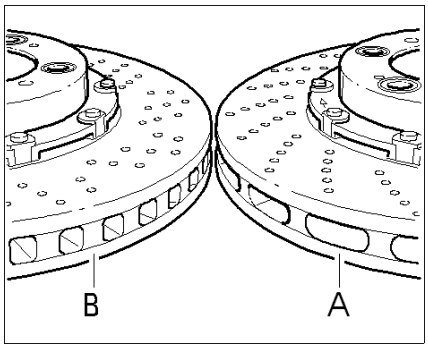
Minimum thickness (x) of the PCCB brake disc

3. Check brake discs for minimum thickness **-x-** . The minimum thickness of the brake disc (example: Min. Th. 33.7 mm) is stamped on the brake disc chamber → Checking brake discs for minimum thickness.

Edge damage on PCCB brake disc

4. Check brake discs for edge damage **-see illustration-** (damage caused as a result of improper use) → Checking brake discs for edge damage.

General information on replacing worn PCCB brake discs



Three criteria governing the condition of the parts can make replacement necessary depending on the wear of PCCB brake discs:

1. Surface changes in the brake disc friction surfaces (material fatigue/wear) at an advanced stage (indication of wear: associated friction surface damage > 1 cm^2).
2. Surface roughness of the brake disc friction surfaces too great (roughness depends on mileage and load).
3. Brake disc minimum thickness is not attained due to wear (material erosion due to friction).

- In practice, all three forms of brake disc erosion usually occur.
- Only in rare cases (in the case of long-term race driving brake loads/very high temperatures on the friction surfaces) does the surface change so quickly that a premature brake disc change has to be performed.
- Blue discs on the brake disc chamber and/or strongly coloured brake calipers indicate a long-term, sustained high load, on a racing circuit, for example.

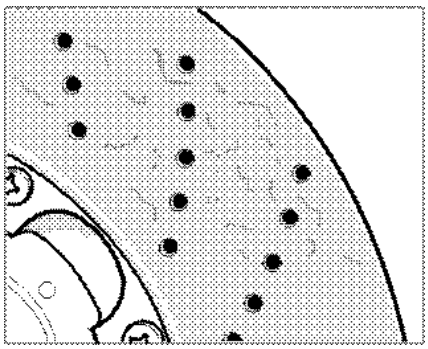
Replacing brake discs (notes/decision-making aid)

When replacing brake discs as a result of wear (see wear assessment) both brake discs must be replaced on an axle!
Irrespective of wear, a brake disc change can be necessary on the brake disc friction surfaces due to edge damage! In such cases, only one brake disc may need to be replaced if the friction area surface of the other PCCB brake disc is still completely OK → Checking brake discs for edge damage.

Original (A) and new (B) technology in brake discs

Ensure that brake discs manufactured using the modified technology **-B-** (used in the 911 Carrera 997 since production began) are not interchanged with the brake discs manufactured using the original technology **-A-** (911 Carrera 4S, 911 Turbo, 911 GT2, 911 GT3 - before model 2005). Distinguishing characteristic: Double the number of ribs between the friction surfaces in brake discs in which the modified technology is used **-B-** and modified perforated bore layout.
In addition, the new technology **-B-** features little wear indicator plates on the friction surfaces (at three points, each arranged at 120° with respect to one another) and the wear limit (brake disc minimum thickness) has also been modified. The brake disc minimum thickness is stamped on the brake disc chamber (example: Min. Th. 33.7 mm).
Install only brake discs that have been manufactured using the new technology in the **-B-** 911 Carrera (997).
In general, the following applies to PCCB brake discs: A combination of the two technologies **-A and B-** on one axle is not permitted! A front axle/rear axle mix of the two technologies **-A and B-** is possible.

Cracks (stress-relief microstructure) in the brake disc friction surface



Stress-relief microstructure in PCCB brake disc friction surfaces

Cracks in the brake disc friction surfaces are viewed differently to cracks in cast iron brake discs. Cracks in PCCB brake discs do not constitute a wear criterion but exist already in new brake discs because of the way in which they are manufactured.

Note

- *Due to the composition of different materials in the friction layer and support body, the friction surfaces (even when new) are coated with an uncritical crack pattern (stress-relief microstructure). Individual relaxation cracks sometimes run along the perforated bores.*
- *The stress-relief microstructure results from the way in which the brake disc surface is manufactured and does not pose a risk to safety. There is also no danger of the friction layers flaking off from the support body, since the friction layers are almost free of internal stresses as a result of the stress-relief microstructure.*
- *The stress-relief microstructure is sometimes clearly visible in new brake discs and the brake disc chamber side and the side that is opposite to the chamber can differ significantly from one another.*

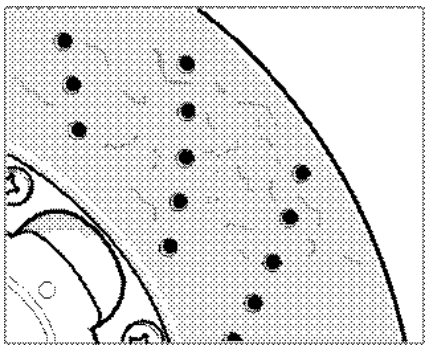
Note concerning bores (perforations) in the brake disc friction surface

Cracks (stress-relief microstructure) in the brake disc friction surface

Bores (perforations) in brake disc friction surface

Observe the following warning when cleaning or exposing the bores in the brake disc friction surface!

ATTENTION



PCCB (Porsche Ceramic Composite Brake): Risk of damage to the brake discs as a result of impermissible work on the bores in the brake disc friction surface.

- **Damage to brake discs**

→ Clean the bores on PCCB brake discs with high-pressure cleaning equipment (only if necessary). In doing so, observe environmental and safety regulations.

→ Do not machine (boring or countersinking is not permissible).

Coating on the PCCB brake discs (potential causes)

Bores (perforations) in brake disc friction surface

The coating on the PCCB brake discs arises as a result of a high load and high temperatures, for example on a racing circuit. Check the following in such cases:

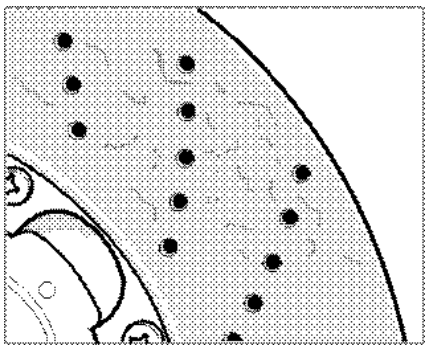
- Ventilation (brake cooling): all components are present, secured correctly and undamaged.
- Brake pad quality: use the appropriate brake pads if the vehicle is being used on a racing circuit.
- Perforated bores **-see illustration-** in the brake discs must be free. Expose them if necessary → Notes on bores (perforations) in the brake disc friction surface.
- The brake discs can still be used even if there is a coating on them provided that they are OK with respect to all wear criteria → General information on replacing worn PCCB brake discs. The perforated bores **-see illustration-** must be free.

Note on bedding in the new brake pads

New brake pads require a slightly longer bedding-in period for PCCB brake discs than cast iron brake discs. In general, the following applies: New brake pads must be broken in (bedding-in period), their optimum braking effect is therefore not reached until after a few hundred kilometres. The slightly reduced braking effect must be compensated for by increased pressure on the brake pedal. The same also applies after a brake

disc change.

top of page

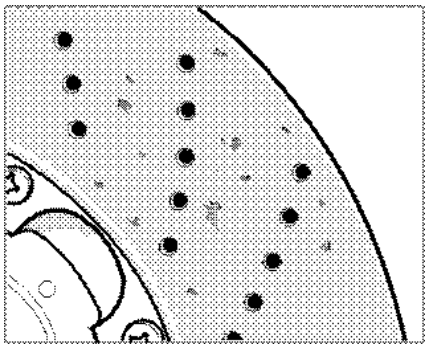


Checking PCCB brake discs (wear assessment)

Visual inspection of the surfaces of the brake disc friction surfaces (indication of wear)

Note

- *The friction surface changes occur due to material fatigue as a result of extremely high thermal load. These disc temperatures, which occur above all in racing conditions, cause a progressive material fatigue.*
- *Effects on driving: The surface change worsens the smoothness of braking, decreases the disc strength and increases the brake pad wear and therefore makes a precautionary parts replacement necessary.*



The following illustrations (PCCB brake disc wear appearance) are to be used for damage assessment.
PCCB brake disc wear appearance

PCCB brake discs without surface fractures

1. Friction area surface after normal brake load in road use. No surface fractures.

   No replacement necessary!

PCCB surface fractures

2. Friction area surfaces after a long run and occasional higher load. Isolated surface fractures smaller than 1 cm^2 **-arrow-** .

   No replacement necessary as the associated surface fractures are < 1 cm^2!

PCCB friction surface damage

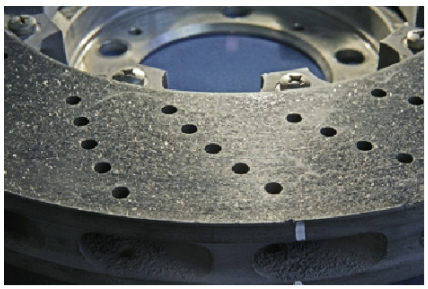
3. End of service life of friction area surface or after highest load on a racing circuit.

   Replace brake discs if there is associated friction surface damage > 1 cm^2 **-arrow-** . To do this, please observe the relevant information → Replacing brake discs (notes/decision-making aid).

Evaluating surface roughness (Sr) (max. 80 micrometre permitted)

Note

- *An increase in surface roughness impairs smoothness of braking (rubbing, shaking in steering wheel, scraping noises) and increases brake pad wear.*
- *With a roughness (Sr) value of > 80 µm (> 80 micrometre), a precautionary parts replacement is required.*



The assessment is carried out visually, based on the diagram. Two illustrations of the same peak-to valley surface roughness (views 1 and 2) help to make a better assessment.

1. **Brake discs that are OK:**

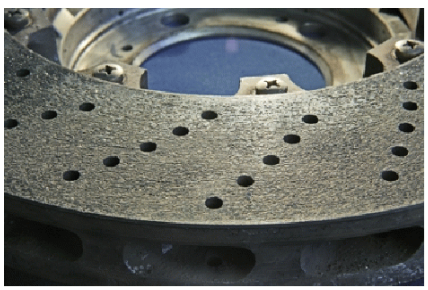
PCCB surface roughness (Sr) = 6 micrometre (view 1)

1.1. Surface roughness (Sr) = 6 µm **-see illustration-** (view 1)

PCCB surface roughness (Sr) = 6 micrometre (view 2)

Surface roughness (Sr) = 6 µm **-see illustration-** (view 2)

New brake disc. Illustration is used to enable better classification.



The early stages of roughness are indicated by burnt-out carbon fibres on the surface of an otherwise intact, semi-matt surface.

The surface feels smooth.

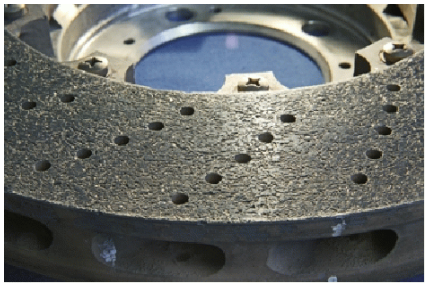
PCCB surface roughness (Sr) = 56 micrometre (view 1)

1.2. Surface roughness (Sr) = 56 µm **-see illustration-** (view 1)

PCCB surface roughness (Sr) = 56 micrometre (view 2)

Surface roughness (Sr) = 56 µm **-see illustration-** (view 2)

In the advanced stages of fibre burn-out and the initial destruction of the Si and SiC 'matrix', the depressions have become more pronounced. Large sections of the surface are still intact, the depressions form an even, fine-grained pattern.



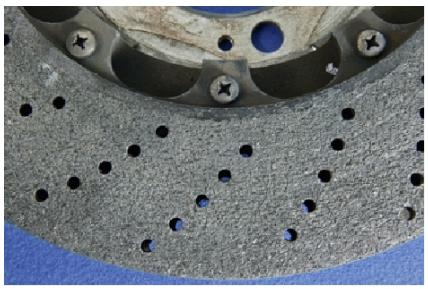
The surface still feels matt, however, and the roughness is not yet pronounced.

No replacement necessary!

PCCB surface roughness (Sr) = 72 micrometre (view 1)

1.3. Surface roughness (Sr) = 72 µm **-see illustration-** (view 1)

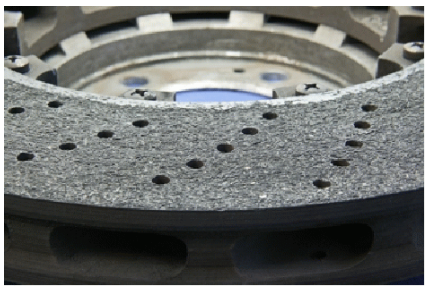
PCCB surface roughness (Sr) = 72 micrometre (view 2)



Surface roughness (Sr) = 72 µm **-see arrow-** (view 2)

Borderline disc, which can still just be evaluated as OK. As a result of more advanced damage to the surface, the depressions are larger, and above all deeper, compared with the previous surface condition.

On the one hand, the more extensive roughness is noticeable (only when a comparison is made); on the other hand, however, like before, "only" depressions are observed.



Replacement not yet necessary!

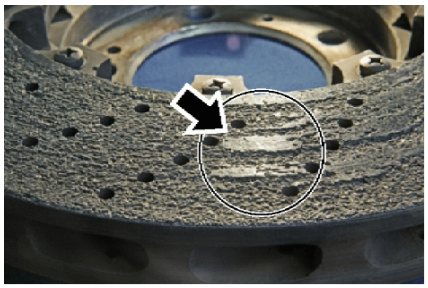
2. **Worn brake discs:**

PCCB surface roughness (Sr) = 108 micrometre (view 1)

2.1. Surface roughness (Sr) = 108 µm **-see illustration-** (view 1)

PCCB surface roughness (Sr) = 108 micrometre (view 2)

Surface roughness (Sr) = 108 µm **-see illustration-** (view 2)



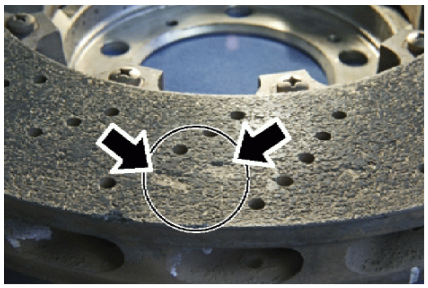
Worn surface. Advanced wear has led to a situation where only the remains of the original surface are left.

It is clear that the roughness is caused not only by depressions but also by bumps.

Replace brake discs! To do this, please observe the relevant information → Replacing brake discs (notes/decision-making aid).

In general, the following applies: Brake discs must be replaced if the surface roughness (Sr) is > 80 µm!

3. **Worn brake discs (special cases):**

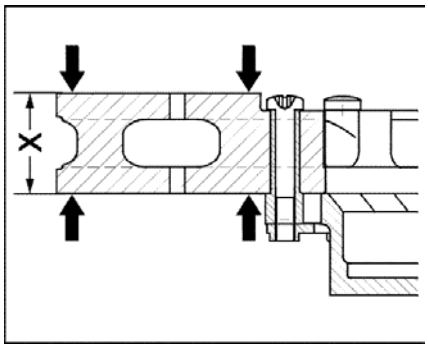


PCCB surface roughness (Sr) = 108 micrometre

3.1. Surface roughness (Sr) = 108 µm, as in the case of the previous disc, but with the remainder of the original friction surface **-arrow-** .

Replace brake discs! To do this, please observe the relevant information → Replacing brake discs (notes/decision-making aid).

In general, the following applies: Brake discs must be replaced if the surface roughness (Sr) is > 80 µm!



PCCB brake disc

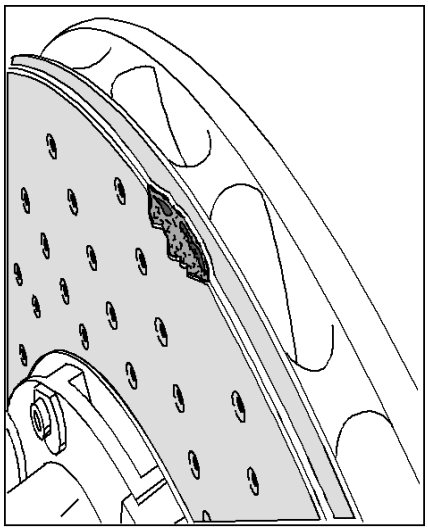
3.2. Surface roughness (Sr) = 72 µm. Borderline disc, identified by the roughness, but also by the indication of wear and associated surface fractures **-arrows-** , > 1 cm^2.

Replace brake discs! To do this, please observe the relevant information → Replacing brake discs (notes/decision-making aid).

Checking brake discs for minimum thickness

Minimum thickness of PCCB brake disc

Note



- *For perforated brake discs, the minimum thickness **-x-** must always be measured on the inner or outer friction surface track **-arrows-** .*
- *Wear limit: The brake disc minimum thickness is stamped on the brake disc chamber (example: Min. Th. 33.7 mm).*

– Measure the brake thickness **-x-** with a suitable micrometre screw or a brake disc gauge around the inner or outer friction surface tracks **-arrows-** .

Checking brake discs for edge damage

Note

- *Irrespective of wear, a brake disc change can be necessary on the brake disc friction surfaces due to edge damage.*
- *In such cases, only one brake disc may need to be replaced if the friction area surface of the other PCCB brake disc is still completely OK.*

Edge damage on PCCB brake disc

The following criteria apply to edge damage assessment:

- Max. permissible width/depth = 2 mm
- Max. permissible length = 10mm
- Max. 3 damaged edge areas permissible

997110, 997111, 997120, 997121, 997310, 997311, 997320, 997321, 997410, 997411, 997430, 997431, 997610, 997611, 997620, 997621

 WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo**

risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

General warning notes

WARNING

Risk of accidents if brake pads and/or brake discs are not replaced in time.

- **Danger of injury and damage to vehicle if braking effect is impaired.**

→ The brake pads must be replaced when the brake pad warning indicator lights up, but no later than when there is a residual pad thickness of 2 mm.

ATTENTION

Increased risk of damage to brake discs when mounting/removing wheels.

- **The brake discs can be damaged.**

→ Use assembly aid (assembly pins) in order to exclude any possibility of heavy contact of the wheel with the brake disc.

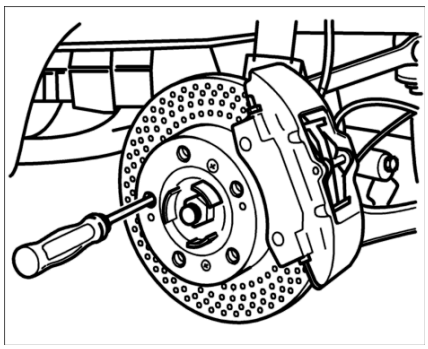
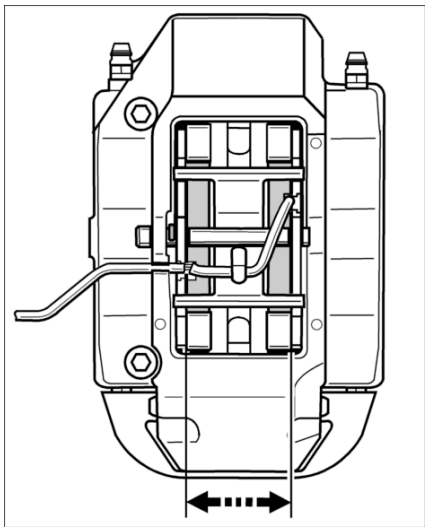
Removing rear brake disc



WARNING

Risk of accidents if brake pads and/or brake discs are not replaced in time.

- **Danger of injury and damage to vehicle if braking effect is impaired.**



→ The brake pads must be replaced when the brake pad warning indicator lights up, but no later than when there is a residual pad thickness of 2 mm.

1. The adjustment fixture can be twisted through the bores in the wheel mounting.

Adjusting the parking brake

2. Turn the brake disc in such a way that the adjustment fixture becomes visible. Using a **-screwdriver-** , turn the adjustment fixture towards "release" through the bore. *→Adjusting the parking brake*

Pushing back brake pad

3. Push brake pads back slightly and evenly using **piston resetting fixture (replaces P83) NR.144**, see Workshop Equipment Manual, Chapter 2.4 **-arrow-** .
4. Undo brake calliper on wheel carrier and hang it in a suitable place in the wheel well (do not open the brake hydraulics). To do this, separate the holder for the brake hose/wear indicator at the body side.
5. Remove brake disc after unscrewing the fastening screws. If necessary, remove the brake disc by tapping it gently with a rubber hammer.

→ Use assembly aid (assembly pins) in order to exclude any possibility of heavy contact of the wheel with the brake disc.

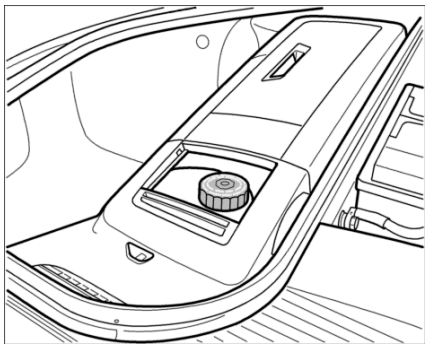
Do not confuse right and left brake discs during assembly!
Distinguishing characteristic: Part No.! The flat surface of the brake discs is marked with R = right or L = left.

Note



When replacing the brake discs due to wear, the brake discs on one axle must always be replaced. Irrespective of wear, a brake disc change can be necessary on the brake disc friction surfaces due to edge damage. In this case, only one brake disc can be replaced if the friction area surface of the other brake disc is OK.

1. Check that all parts are in perfect condition and replace them if necessary.
2. Clean the levelling and centring surfaces on the brake disc and wheel hub. Then apply a very thin coat of Optimoly TA to the centring surface on the wheel hub.

Bedding in the brake pads

New brake pads require a slightly longer bedding-in period for PCCB brake discs than cast iron brake discs. In general, the following applies: New brake pads must be worn in (bedding-in period), their optimum braking effect is therefore not reached until after a few hundred kilometres. The slightly reduced braking effect must be compensated for by increased pressure on the brake pedal. The same also applies after a brake disc change.

997110, 997111, 997120, 997121, 997310, 997311, 997320, 997321, 997410, 997411, 997430, 997431, 997610, 997611, 997620, 997621

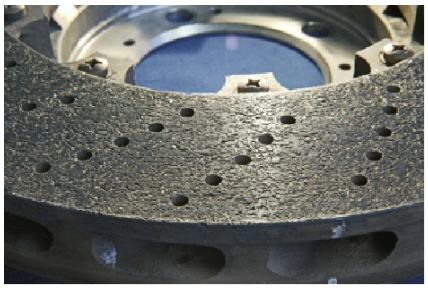
46 54 02 Checking rear PCCB brake discs (wear assessment) - as of MY 2005

- Checking information on PCCB brake discs
- Checking PCCB brake discs (wear assessment)

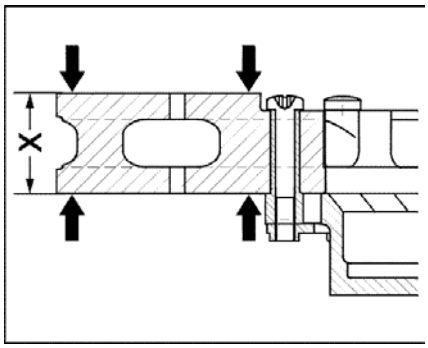
top of page

Checking information on PCCB brake discs



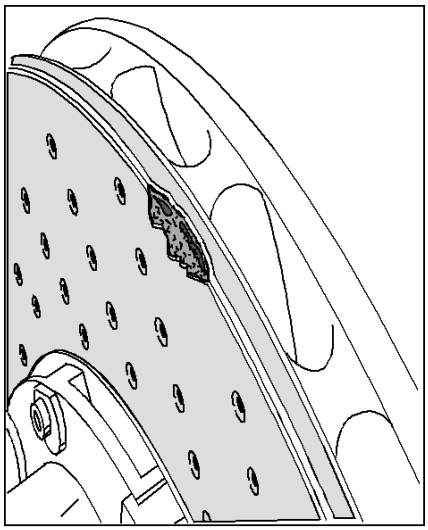
Basic information

Checking involves the following:



Associated surface fracture

1. Visual inspection for any surface changes to the brake disc friction surfaces Indication of wear: Associated surface fracture > 1 cm^2 **-arrow-** , but no accumulation of smaller fractures → Visual inspection of the surfaces of the brake disc friction surfaces (indication of wear) .



Surface roughness of PCCB brake disc

2. Assess the surface roughness (Sr) of the brake discs (max. 80 µm permitted), since this affects smoothness of braking (noise), braking performance/pedal pressure and brake pad idle time → Evaluating surface roughness (Sr) (max. 80 micrometre permitted).

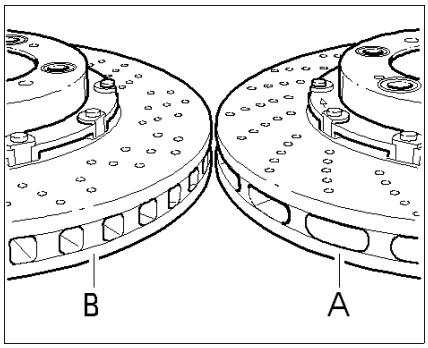
Minimum thickness (x) of the PCCB brake disc

3. Check brake discs for minimum thickness **-x-** . The minimum thickness of the brake disc (example: Min. Th. 33.7 mm) is stamped on the brake disc chamber → Checking brake discs for minimum thickness.

Edge damage on PCCB brake disc

4. Check brake discs for edge damage **-see illustration-** (damage caused as a result of improper use) → Checking brake discs for edge damage.

General information on replacing worn PCCB brake discs



Three criteria governing the condition of the parts can make replacement necessary depending on the wear of PCCB brake discs:

1. Surface changes in the brake disc friction surfaces (material fatigue/wear) at an advanced stage (indication of wear: associated friction surface damage > 1 cm^2).
2. Surface roughness of the brake disc friction surfaces too great (roughness depends on mileage and load).
3. Brake disc minimum thickness is not attained due to wear (material erosion due to friction).

- In practice, all three forms of brake disc erosion usually occur.
- Only in rare cases (in the case of long-term race driving brake loads/very high temperatures on the friction surfaces) does the surface change so quickly that a premature brake disc change has to be performed.
- Blue discs on the brake disc chamber and/or strongly coloured brake calipers indicate a long-term, sustained high load, on a racing circuit, for example.

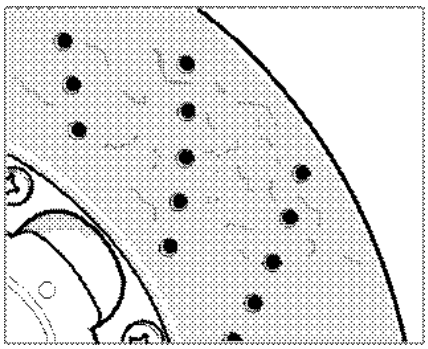
Replacing brake discs (notes/decision-making aid)

When replacing brake discs as a result of wear (see wear assessment) both brake discs must be replaced on an axle!
Irrespective of wear, a brake disc change can be necessary on the brake disc friction surfaces due to edge damage! In such cases, only one brake disc may need to be replaced if the friction area surface of the other PCCB brake disc is still completely OK → Checking brake discs for edge damage.

Original (A) and new (B) technology in brake discs

Ensure that brake discs manufactured using the modified technology **-B-** (used in the 911 Carrera 997 since production began) are not interchanged with the brake discs manufactured using the original technology **-A-** (911 Carrera 4S, 911 Turbo, 911 GT2, 911 GT3 - before model 2005). Distinguishing characteristic: Double the number of ribs between the friction surfaces in brake discs in which the modified technology is used **-B-** and modified perforated bore layout.
In addition, the new technology **-B-** features little wear indicator plates on the friction surfaces (at three points, each arranged at 120° with respect to one another) and the wear limit (brake disc minimum thickness) has also been modified. The brake disc minimum thickness is stamped on the brake disc chamber (example: Min. Th. 33.7 mm).
Install only brake discs that have been manufactured using the new technology in the **-B-** 911 Carrera (997).
In general, the following applies to PCCB brake discs: A combination of the two technologies **-A and B-** on one axle is not permitted! A front axle/rear axle mix of the two technologies **-A and B-** is possible.

Cracks (stress-relief microstructure) in the brake disc friction surface



Stress-relief microstructure in PCCB brake disc friction surfaces

Cracks in the brake disc friction surfaces are viewed differently to cracks in cast iron brake discs. Cracks in PCCB brake discs do not constitute a wear criterion but exist already in new brake discs because of the way in which they are manufactured.

Note

- *Due to the composition of different materials in the friction layer and support body, the friction surfaces (even when new) are coated with an uncritical crack pattern (stress-relief microstructure). Individual relaxation cracks sometimes run along the perforated bores.*
- *The stress-relief microstructure results from the way in which the brake disc surface is manufactured and does not pose a risk to safety. There is also no danger of the friction layers flaking off from the support body, since the friction layers are almost free of internal stresses as a result of the stress-relief microstructure.*
- *The stress-relief microstructure is sometimes clearly visible in new brake discs and the brake disc chamber side and the side that is opposite to the chamber can differ significantly from one another.*

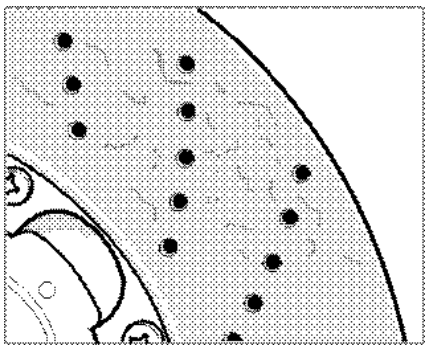
Note concerning bores (perforations) in the brake disc friction surface

Cracks (stress-relief microstructure) in the brake disc friction surface

Bores (perforations) in brake disc friction surface

Observe the following warning when cleaning or exposing the bores in the brake disc friction surface!

ATTENTION



PCCB (Porsche Ceramic Composite Brake): Risk of damage to the brake discs as a result of impermissible work on the bores in the brake disc friction surface.

- **Damage to brake discs**

→ Clean the bores on PCCB brake discs with high-pressure cleaning equipment (only if necessary). In doing so, observe environmental and safety regulations.

→ Do not machine (boring or countersinking is not permissible).

Coating on the PCCB brake discs (potential causes)

Bores (perforations) in brake disc friction surface

The coating on the PCCB brake discs arises as a result of a high load and high temperatures, for example on a racing circuit. Check the following in such cases:

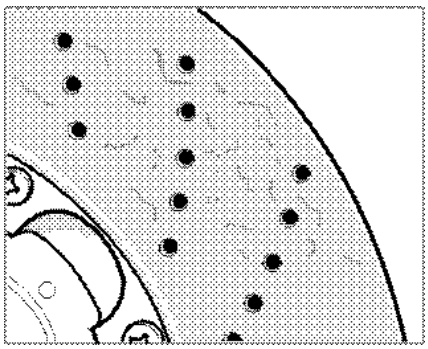
- Ventilation (brake cooling): all components are present, secured correctly and undamaged.
- Brake pad quality: use the appropriate brake pads if the vehicle is being used on a racing circuit.
- Perforated bores **-see illustration-** in the brake discs must be free. Expose them if necessary → Notes on bores (perforations) in the brake disc friction surface.
- The brake discs can still be used even if there is a coating on them provided that they are OK with respect to all wear criteria → General information on replacing worn PCCB brake discs. The perforated bores **-see illustration-** must be free.

Note on bedding in the new brake pads

New brake pads require a slightly longer bedding-in period for PCCB brake discs than cast iron brake discs. In general, the following applies: New brake pads must be broken in (bedding-in period), their optimum braking effect is therefore not reached until after a few hundred kilometres. The slightly reduced braking effect must be compensated for by increased pressure on the brake pedal. The same also applies after a brake

disc change.

top of page

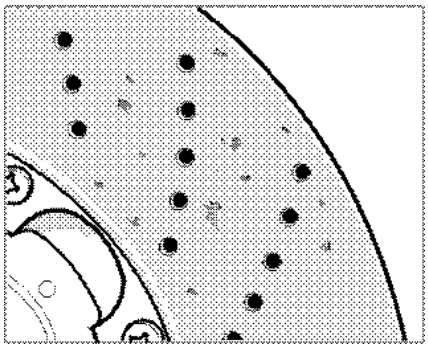


Checking PCCB brake discs (wear assessment)

Visual inspection of the surfaces of the brake disc friction surfaces (indication of wear)

Note

- *The friction surface changes occur due to material fatigue as a result of extremely high thermal load. These disc temperatures, which occur above all in racing conditions, cause a progressive material fatigue.*
- *Effects on driving: The surface change worsens the smoothness of braking, decreases the disc strength and increases the brake pad wear and therefore makes a precautionary parts replacement necessary.*



The following illustrations (PCCB brake disc wear appearance) are to be used for damage assessment.
PCCB brake disc wear appearance

PCCB brake discs without surface fractures

1. Friction area surface after normal brake load in road use. No surface fractures.

   No replacement necessary!

PCCB surface fractures

2. Friction area surfaces after a long run and occasional higher load. Isolated surface fractures smaller than 1 cm^2 **-arrow-** .

   No replacement necessary as the associated surface fractures are < 1 cm^2!

PCCB friction surface damage

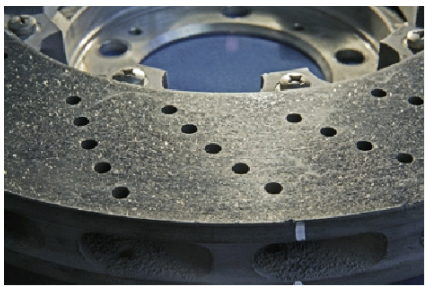
3. End of service life of friction area surface or after highest load on a racing circuit.

   Replace brake discs if there is associated friction surface damage > 1 cm^2 **-arrow-** . To do this, please observe the relevant information → Replacing brake discs (notes/decision-making aid).

Evaluating surface roughness (Sr) (max. 80 micrometre permitted)

Note

- *An increase in surface roughness impairs smoothness of braking (rubbing, shaking in steering wheel, scraping noises) and increases brake pad wear.*
- *With a roughness (Sr) value of > 80 µm (> 80 micrometre), a precautionary parts replacement is required.*



The assessment is carried out visually, based on the diagram. Two illustrations of the same peak-to valley surface roughness (views 1 and 2) help to make a better assessment.

1. **Brake discs that are OK:**

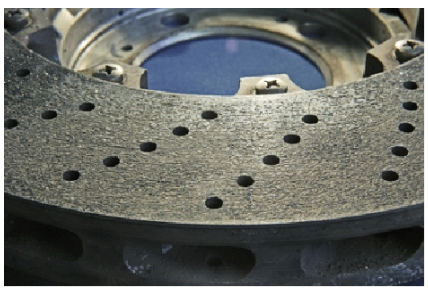
PCCB surface roughness (Sr) = 6 micrometre (view 1)

1.1. Surface roughness (Sr) = 6 µm **-see illustration-** (view 1)

PCCB surface roughness (Sr) = 6 micrometre (view 2)

Surface roughness (Sr) = 6 µm **-see illustration-** (view 2)

New brake disc. Illustration is used to enable better classification.



The early stages of roughness are indicated by burnt-out carbon fibres on the surface of an otherwise intact, semi-matt surface.

The surface feels smooth.

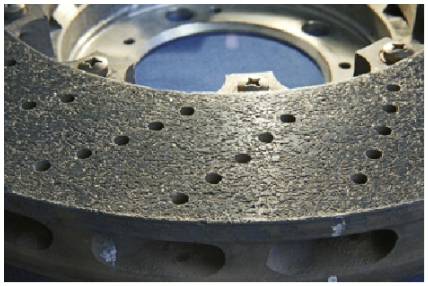
PCCB surface roughness (Sr) = 56 micrometre (view 1)

1.2. Surface roughness (Sr) = 56 µm **-see illustration-** (view 1)

PCCB surface roughness (Sr) = 56 micrometre (view 2)

Surface roughness (Sr) = 56 µm **-see illustration-** (view 2)

In the advanced stages of fibre burn-out and the initial destruction of the Si and SiC 'matrix', the depressions have become more pronounced. Large sections of the surface are still intact, the depressions form an even, fine-grained pattern.



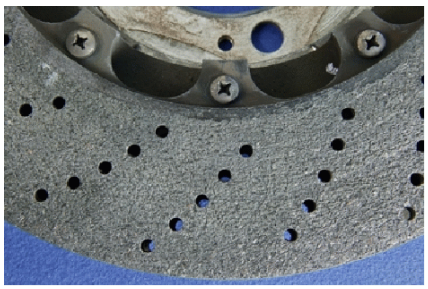
The surface still feels matt, however, and the roughness is not yet pronounced.

No replacement necessary!

PCCB surface roughness (Sr) = 72 micrometre (view 1)

1.3. Surface roughness (Sr) = 72 µm **-see illustration-** (view 1)

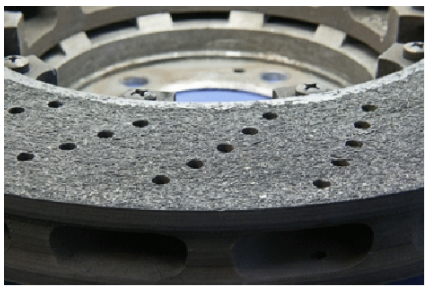
PCCB surface roughness (Sr) = 72 micrometre (view 2)



Surface roughness (Sr) = 72 µm **-see arrow-** (view 2)

Borderline disc, which can still just be evaluated as OK. As a result of more advanced damage to the surface, the depressions are larger, and above all deeper, compared with the previous surface condition.

On the one hand, the more extensive roughness is noticeable (only when a comparison is made); on the other hand, however, like before, "only" depressions are observed.



Replacement not yet necessary!

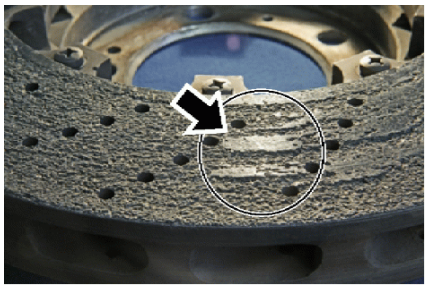
2. **Worn brake discs:**

PCCB surface roughness (Sr) = 108 micrometre (view 1)

2.1. Surface roughness (Sr) = 108 µm **-see illustration-** (view 1)

PCCB surface roughness (Sr) = 108 micrometre (view 2)

Surface roughness (Sr) = 108 µm **-see illustration-** (view 2)



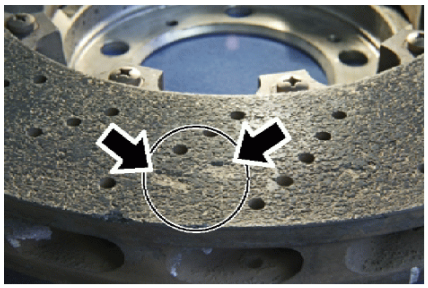
Worn surface. Advanced wear has led to a situation where only the remains of the original surface are left.

It is clear that the roughness is caused not only by depressions but also by bumps.

Replace brake discs! To do this, please observe the relevant information → Replacing brake discs (notes/decision-making aid).

In general, the following applies: Brake discs must be replaced if the surface roughness (Sr) is > 80 µm!

3. **Worn brake discs (special cases):**

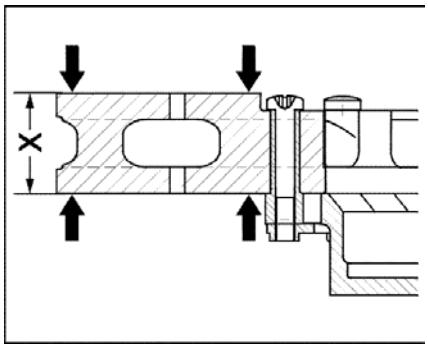


PCCB surface roughness (Sr) = 108 micrometre

3.1. Surface roughness (Sr) = 108 µm, as in the case of the previous disc, but with the remainder of the original friction surface **-arrow-** .

Replace brake discs! To do this, please observe the relevant information → Replacing brake discs (notes/decision-making aid).

In general, the following applies: Brake discs must be replaced if the surface roughness (Sr) is > 80 µm!



PCCB brake disc

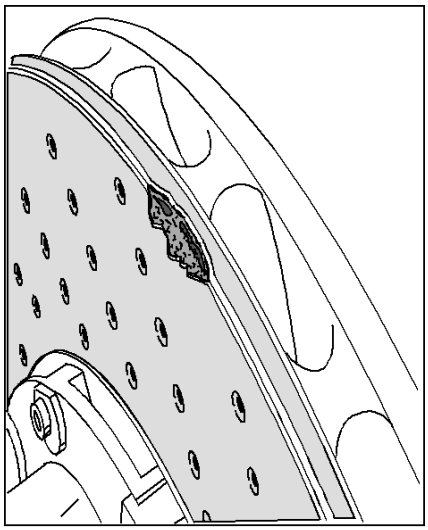
3.2. Surface roughness (Sr) = 72 µm. Borderline disc, identified by the roughness, but also by the indication of wear and associated surface fractures **-arrows-** , > 1 cm^2.

Replace brake discs! To do this, please observe the relevant information → Replacing brake discs (notes/decision-making aid).

Checking brake discs for minimum thickness

Minimum thickness of PCCB brake disc

Note



- *For perforated brake discs, the minimum thickness **-x-** must always be measured on the inner or outer friction surface track **-arrows-** .*
- *Wear limit: The brake disc minimum thickness is stamped on the brake disc chamber (example: Min. Th. 33.7 mm).*

– Measure the brake thickness **-x-** with a suitable micrometre screw or a brake disc gauge around the inner or outer friction surface tracks **-arrows-** .

Checking brake discs for edge damage

Note

- *Irrespective of wear, a brake disc change can be necessary on the brake disc friction surfaces due to edge damage.*
- *In such cases, only one brake disc may need to be replaced if the friction area surface of the other PCCB brake disc is still completely OK.*

Edge damage on PCCB brake disc

The following criteria apply to edge damage assessment:

- Max. permissible width/depth = 2 mm
- Max. permissible length = 10mm
- Max. 3 damaged edge areas permissible

WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

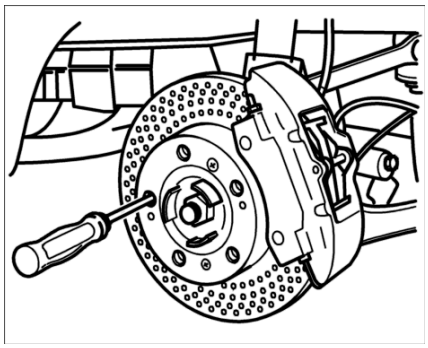
→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se



correspondan con el contenido de la imagen de la pantalla.

46 83 16 Adjusting the parking brake shoes - as of MY 2005

Adjusting the parking brake shoes

This includes: Checking the free play of the handbrake lever and adjusting the parking brake shoes. The parking brake cable cannot be adjusted (automatic cable adjustment).
Checking free play of parking brake lever
The parking brake shoes must be adjusted if the parking brake lever can be pulled up by more than 5 teeth through application of medium force without producing a braking effect.
Adjusting the parking brake shoes

1. Remove the rear wheels.
2. Undo the parking brake lever and push back the disc brake pads of the rear axle until the brake disc can rotate freely.
3. The adjustment fixture can be twisted through the bores in the wheel mounting.

Adjusting the parking brake

4. Turn the brake disc in such a way that the adjustment fixture becomes visible. Using a **-screwdriver-** inserted through the bore, move the adjustment device until the wheel can no longer be turned. To be specific, this means: Put transmission in neutral. Further torque of the brake disc between 50 Nm and 150 Nm (37 ftlb. and 111 ftlb.) (test with torque click wrench on the drive shaft lock nut clockwise). Next, turn the adjustment fixture back again through 4 notches (release approx. 3 notches until the wheel can be turned freely, then release another 1 notch). Repeat the procedure on the other wheel. *→Adjusting the parking brake*
5. Pull up the parking brake lever (check free play). If 2 to 4 teeth are engaged, it must be possible to turn both wheels by hand with considerable difficulty.
6. Release the parking brake lever and check whether both wheels can be turned freely.

47 01 07 Bleeding brake system - as of MY 2005

- Notes
- Bleeding the brake system

top of page

Notes

Note

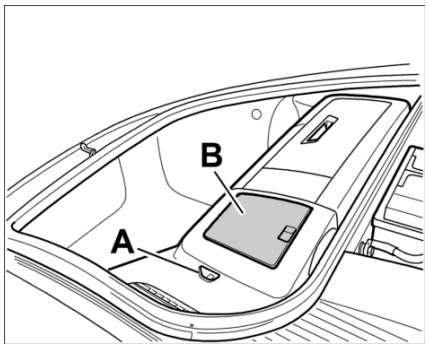
- *Observe brake-fluid quality! Use only new DOT 4 brake fluid!*
- *The Super DOT 4 brake fluid must be changed every two years!*
- *This brake fluid is available under the following part numbers: Container quantity 1 litre = 000.043.203.66 Container quantity 30 litres = 000.043.203.67*

top of page

Bleeding the brake system

Procedure for bleeding

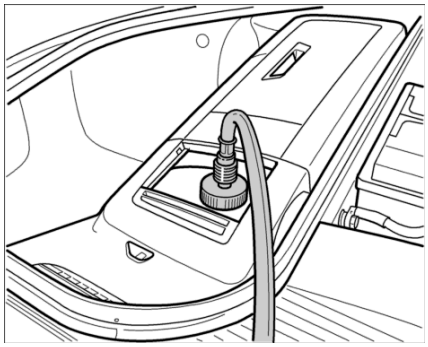
1st. Step: Bleed brakes in the normal way (in combination with bleeding device at the brake fluid reservoir and 2.0 bar pressure) (primary circuit).
2nd. Step: In addition, use the Piwis Tester to bleed the brakes (secondary circuit). Only necessary if the hydraulic unit has been replaced and, after bleeding in the normal way (primary circuit), the brake pedal travel is excessive.



1. Step: Bleeding (primary circuit)

Note

- *Always bleed both bleeder valves on brake caliper!*
- *Bleed the outer bleeder valve first!*

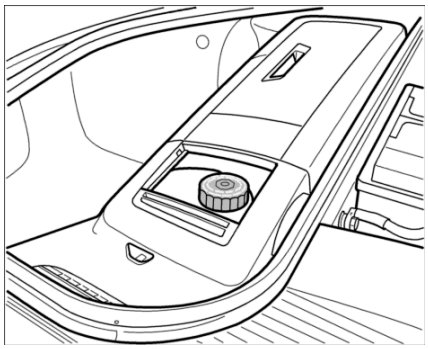


Note

- *If the pedal travel is too long or the pedal feels too soft when applied, carry out bleeding again. Operate (pump) the brake pedal at the same time. A second person is required for this.*
- *Also carry out this procedure if the brake hydraulic system was largely empty.*

Cover over brake fluid reservoir

1. Disengage and remove cover over brake fluid reservoir **-B-** .
2. Open expansion tank.



Bleeding brakes

3. Connect a bleeding device to the brake fluid reservoir. Switch on the bleeding device. Bleeding pressure is approx. 2.0 bar.
4. Continue the bleeding procedure at the brake calipers. Do so in the following sequence: rear right/rear left/front right/front left. Bleed the outer bleeder valve first.
5. Use a transparent hose and a collecting bottle to check the escaping brake fluid is clean and free of air bubbles and to determine the amount of brake fluid used.
6. Open each bleeder valve until clear, bubble-free brake fluid emerges.
7. Tighten the bleeder valves to the stipulated tightening torque and remove the bleeder hoses.
8. Generate vacuum in brake booster by starting engine. Check brake-pedal travel and pedal feel.

Check the brake system for residual air by the amount of brake pedal travel. Repeat the bleeding procedure if necessary. Operate (pump) the brake pedal at the same time as described below. This will remove the remaining air bubbles from the primary circuit.

- Open the rear right bleeder valves, then fully rapidly depress the brake pedal hard several times. Hold the brake pedal for 2 to 3 seconds after each depression, then release slowly. Continue bleeding until the brake fluid emerging into the collection bottle is free of bubbles and foam.
- Repeat this procedure in the sequence rear left/front right/front left.

9. If necessary, continue bleeding the secondary circuit (using the Piwis Tester). Only necessary if the hydraulic unit has been replaced and, after bleeding in the normal way (primary circuit), the brake pedal travel is excessive.

Brake fluid level

10. Remove bleeding device from brake fluid reservoir and screw cap on. The brake fluid level in the brake fluid reservoir must be between the MIN and MAX markings once the vehicle has been filled and bled. Adjust the brake fluid level if necessary.

2nd Step: Bleeding (secondary circuit)

Bleeding of the secondary circuit is only necessary if the hydraulic unit has been replaced and, after bleeding in the normal way (primary circuit), the brake pedal travel is excessive.
First bleed brakes as usual (primary circuit). Only then can you carry out bleeding of the secondary circuit with the Piwis Tester. The process is menu-driven. You must observe the specified sequence rear left, front left, front right, rear right.
To bleed the secondary circuit, the bleeding device remains connected to the brake fluid reservoir. Bleeding pressure is approx. 2.0 bar.
Throughout the entire bleeding process, the brake pedal must be operated cyclically (hold depressed for 2 to 3 seconds, then release slowly). After operating pedal for the last time, hold the brake pedal down and close bleeder valve.

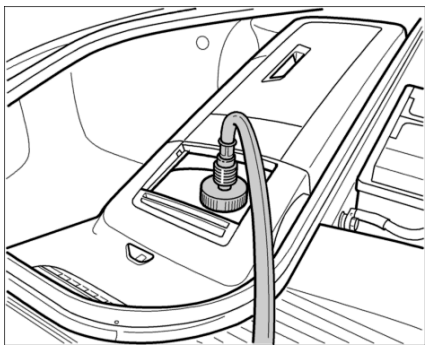
47 08 55 Replacing brake fluid - as of MY 2005

- Replacing brake fluid

top of page



Replacing brake fluid

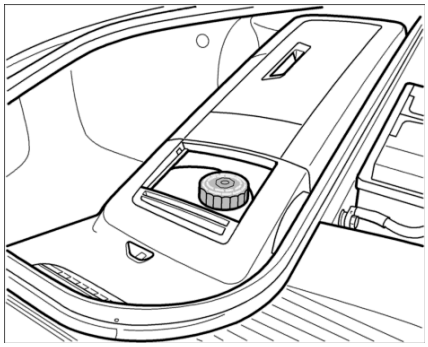
Changing brake fluid

Cover over brake fluid reservoir

1. Disengage and remove cover over brake fluid reservoir **-B-** .
2. Fill reservoir up to the edge with new brake fluid.

Brakes: changing/bleeding brake fluid

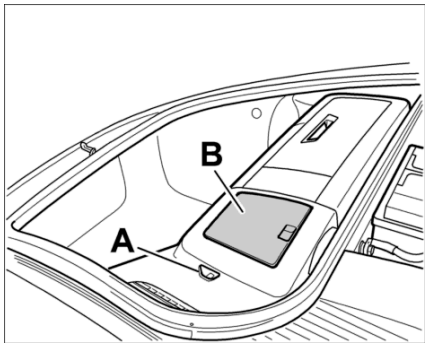
3. Connect a bleeding device to the brake fluid reservoir. Switch on the bleeding device. Bleeding pressure → **Changing/bleeding brake fluid: approx. 2.0 bar** .
4. Continue changing the brake fluid at the brake callipers. Do so in the following sequence: rear right/rear left/front right/front left.



Use a transparent hose and a collecting bottle to check the escaping brake fluid accurately for cleanliness, lack of air bubbles and to determine the brake fluid used.

5. Open every bleeder valve until clear, bubble-free brake fluid emerges and until the corresponding change quantity per brake calliper is reached. Per brake calliper →**Changing brake fluid (per**

wheel): approx. 250 cm3 .



Drain brake fluid on every brake calliper at both bleeder valves.

6. Tighten the bleeder valves to the stipulated tightening torque and remove the bleeder hoses.
7. Also drain off some brake fluid at the bleeder valve of the clutch slave cylinder.

Brake fluid level

8. Remove bleeding device from brake fluid reservoir and screw cap on. The brake fluid level in the brake fluid reservoir must be between the MIN and MAX markings once the vehicle has been filled and bled. Adjust the brake fluid level if necessary.

Cover over brake fluid reservoir

9. Place cover over brake fluid reservoir **-B-** .

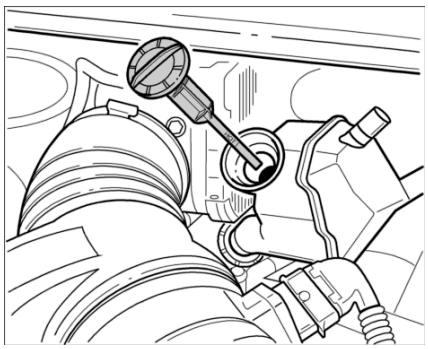
48 02 01 Checking the fluid level for the power-assisted steering - as of MY 2005

- Checking the fluid level for the power-assisted steering

top of page

Checking the fluid level for the power-assisted steering



Notes on power-steering fluid

Damage to the power-assisted steering is caused by a shortage of oil in the hydraulic system. Even small leaks can cause the fluid to escape and damage the servo pump as a result of the high oil pressure occurring in the hydraulic circuit.
Grunt-like noises that can be heard when the steering is locked, or foam formation in the reservoir indicate a shortage of oil and/or that air has also been sucked in. Before filling the reservoir, any existing leaks must be eliminated on the suction side. Alternatively, the defective part on the pressure side should be replaced.
Only Pentosin CHF 11 S may be used in the reservoir. Pentosin CHF 11 S can be ordered under the following part number:
Quantity supplied 1 litre = 000.043.203.33.

Checking fluid level for power-assisted steering

Installation Location:

The reservoir is located in the engine compartment.

Checking the level of steering fluid

There are two marks on the dipstick attached to the reservoir cap. One area is marked "Cold" for when the engine is cold →**"Cold" mark: approx. 20 °C** and the other is marked "Hot" for when the engine is warmed up →**"Hot" mark: approx. 80 °C** .
Check the level of fluid (Pentosin CHF 11 S) when the engine is idling and cold →**"Cold" mark: approx. 20 °C** .

1.

Start the engine and let it run for →**Period: approx. 20 s** . Switch off engine.

2. Open engine cover. Open reservoir cap.
3. Wipe off the dipstick. Close and then reopen cap. The fluid level should lie in the hatched area beneath the "Cold" mark (mark = maximum level) at →**"Cold" mark: approx. 20 °C** . Top up with Pentosin if necessary. The higher mark "Hot" is for a fluid temperature of →**"Hot" mark: approx. 80 °C** .

Do not add too much Pentosin! The respective marks are for the maximum fluid level at the "COLD" or "HOT" temperature.
If assembly work was performed previously, check fluid level with the engine idling and without operating the steering.
Multiple steering movements (manoeuvring) with the engine switched off change the fluid level in the reservoir - fluid level rises. In this case, the engine must be run for at least 20 seconds immediately prior to the fluid level check.
When topping up or filling in Pentosin, make sure that it does not come into contact with the coolant hoses! If coolant hoses come into contact with Pentosin, thoroughly clean them with water IMMEDIATELY! Replace visibly swollen coolant hoses!

Checking the steering system for leaks (visual check)

With engine idling, turn steering wheel as far as the stop and hold still. The maximum possible line pressure results in this way.
In this position, check all pipe connections for leaks.
Carry out testing for a maximum of →**Period: 10 s** . A longer check should always be interrupted by a brief pause after approximately →**Period: 10 s** .

Bleeding the steering system

1. To fill the whole system after the installation of new steering components or lines or after a substantial loss of hydraulic fluid, briefly start the engine a few times and, when it fires, switch it off again immediately. This procedure causes the fluid level in the reservoir to fall rapidly, so constantly add Pentosin CHF 11 S. The reservoir must not be sucked dry.
2. If the fluid level in the reservoir does not fall any further when the engine is briefly turned over, start the engine and let it run at idling speed.
3. Rapidly turn the steering wheel from full-lock to full-lock several times so that the air can escape from the cylinders. At the end positions of the piston, do not pull the steering wheel with more force than is necessary in order to turn the steering (to prevent unnecessary build-up of pressure initially).
4. Observe fluid level during this procedure. If it continues to fall, add fluid until the level in the reservoir remains constant and no more air bubbles rise in the reservoir when the steering wheel is turned.
5. Correct the fluid level with the engine at idling speed and without moving the steering.

 WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo**

risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

48 10 19 Removing and installing steering wheel - as of MY 2005

- Preliminary work
- Removal
- Installation

top of page

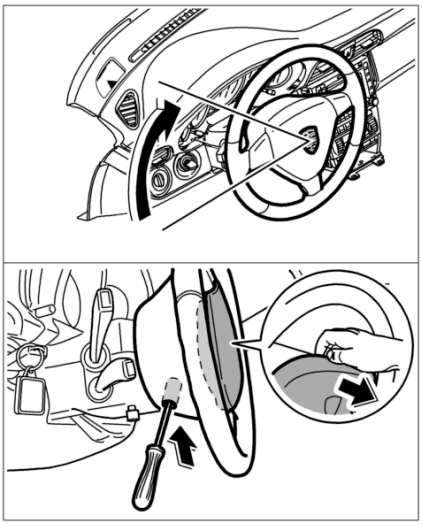
Preliminary work

→ *A5 Work instructions after disconnecting the battery - Disconnecting*
→ *21 Removing and installing driver's airbag unit - Removing*

Warning notes for removing and installing steering wheel

 WARNING

Danger of injury and material damage as a result of incorrect handling of airbag units! Always observe the safety regulations for handling airbag units → *Safety regulations for airbag and belt tensioner units*.



- **In the case of incorrect handling, system faults may occur resulting in the triggering of the airbag or failure to do so.**

→ The airbag unit must always be placed so that the airbag opening faces upwards.
→ If removed for an extended period, the airbag unit must be kept in a locked place.
→ Switch off ignition and leave ignition key inserted (steering must not be locked). Disconnect battery . Route or isolate the ground strap so that all contact with a ground carrier (e.g. body, seat frame) is avoided. → *Work instructions after disconnecting the battery*.
→ After the battery is disconnected, always wait for 1 minute before disconnecting the airbag connectors.

top of page

Removal

1. Disconnect battery . →"Rep. Gr. 9 Work instructions after disconnecting the battery."

Releasing driver's airbag unit

2. Remove steering wheel airbag unit →"Rep.-Gr. 695819 Removing and installing steering wheel airbag unit.".
3. Turn wheels to straight-ahead position. Before removing steering wheel, put a mark (e.g. colour marking) on steering wheel and steering column (centring of airbag spiral spring).
4. Remove steering wheel by releasing multiple-tooth screw.

top of page

Installation

Note

- *The steering wheel is made of magnesium alloy. The tightening torques must be strictly observed.*
- *Wheels straight ahead and observe the previously-applied marking.*
- *Replace multiple-tooth screw after each removal (micro-encapsulated thread).*
- *Observe tightening torque.* →***Tightening torque: 50 (37 ftlb.) Nm***
- *Airbag unit must lock with an audible click! Check by pulling at airbag unit.*

Installation of the steering wheel takes place in reverse order.

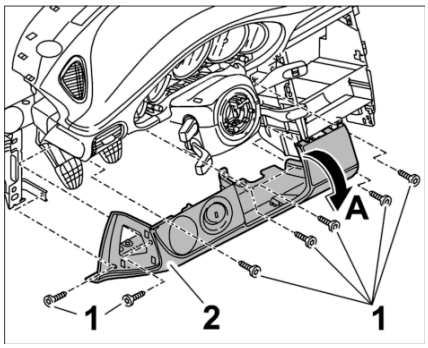
48 15 19 Removing and installing steering column - as of MY 2005

- Preliminary work
- Removing the steering column
- Installing the steering column
- Subsequent work

top of page

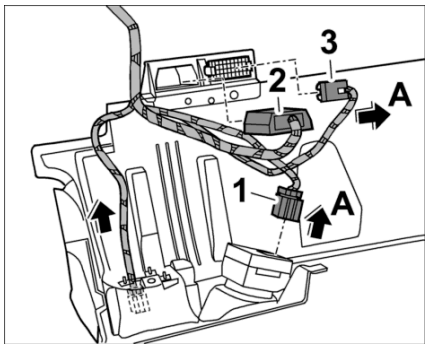
Preliminary work



Preliminary work

1. Ignition key in position 1. Then ignition key in position 0 = (switch ignition off but do not remove key so that electronic steering wheel locking does not lock). Then disconnect battery.
2. Remove airbag unit for driver →695819 Removing and installing driver's airbag unit
3. Turn steering wheel to a straight-ahead position and remove it →481019 Removing and installing steering wheel.

Note



- *For better accessibility, move the height adjustment (steering wheel) of the steering column to the appropriate position and close the locking lever.*

4. Remove main headlight switch. To do this, press in rotary knob on the light switch (not to the stop) and turn the switch clockwise. Pull out the light switch in this position. Release and remove connector.

Removing trim panel (lower part of dashboard)

5. Remove trim panel (lower part of dashboard) *→7019 19 Removing and installing trim panel under dashboard*. Unscrew the fastening screws **-1-** and swivel the cover under the dashboard on the driver's side **-2-** downwards **-Arrow A-** .

Disconnecting the electrical plug connections

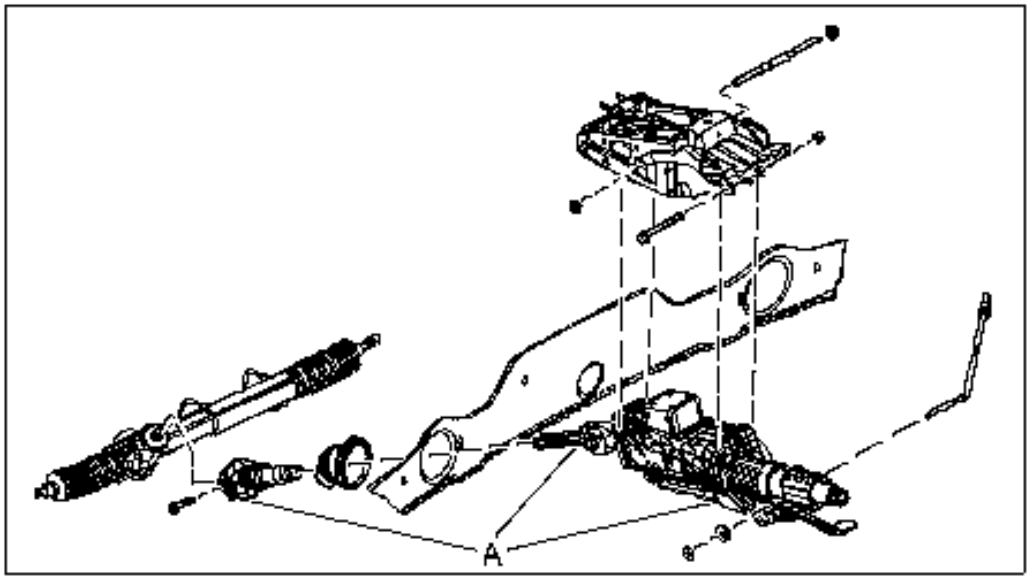
6. Release plug connections **-1, 2, 3-** and remove **-Arrows A-** .
7. Remove clutch pedal on vehicles with manual transmission →300519 Removing and installing the clutch pedal.

top of page

Removing the steering column

ATTENTION

Increase risk when handling airbag modules.

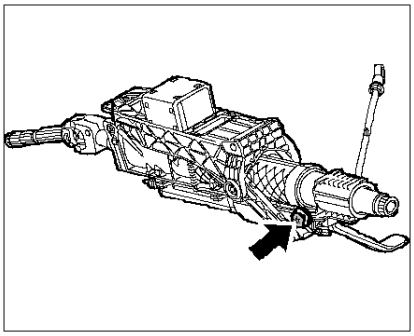


- **Injuries and material damage due to incorrect handling of airbag units are possible →*69 AW Safety regulations for handling vehicles with airbag and belt tensioner - Chapter "General warning notes"*.**

→ Observe safety regulations for handling airbag modules.

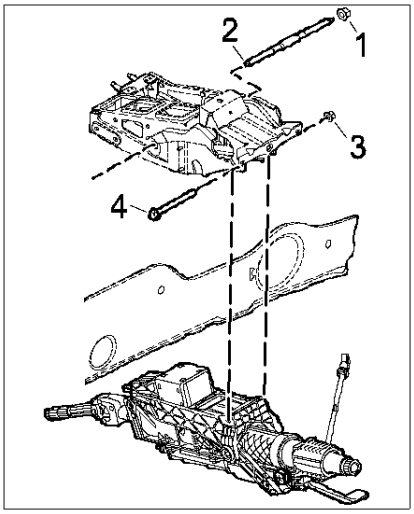
Note

- *The height adjustment (steering wheel) of the steering column must be in the lower stop and the locking lever closed.*
- *The electronic locking unit (ELV) must be open (ignition key plugged in, then disconnect battery).*



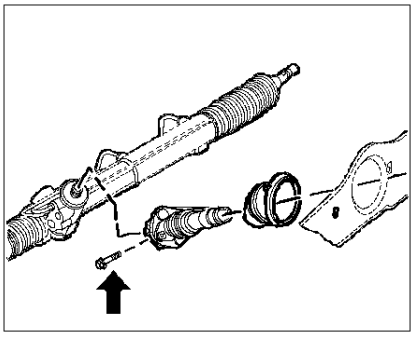
As a spare part, the steering column **-A-** is delivered complete with steering shaft.

Overview, steering column



A - Steering column with steering shaft

1. Remove trim panel of steering column switch and remove steering column switch *→9450 19 Removing and installing steering column switch.*



Strut on steering column

2. Loosen strut on retaining frame (arrow shows mount on steering column). *→Strut on steering column*
3. Remove KESSY/PAS control unit.

Steering column mounting

4. Loosen lower steering column mount. To do this, loosen the lock nut **-1-** approx. 3 turns. Then unscrew the pedal bearing axle on the hexagon **-2-** approx. 2 turns (anti-clockwise).
5. Loosen upper steering column mount (loosen lock nut **-3-** /remove hexagon-head bolt **-4-**) and extend the steering column.
6. Remove front underbody panel.

Steering shaft to steering gear

7. Loosen fastening screw **-arrow-** and pull off steering shaft (universal joint) on the steering gear.

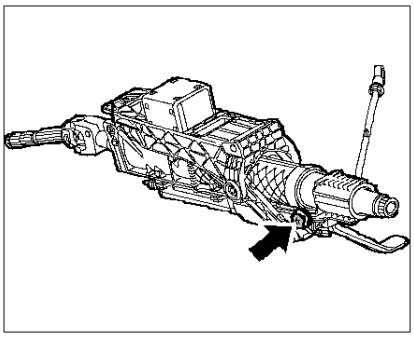
top of page

Installing the steering column

ATTENTION

Increase risk when handling airbag modules.

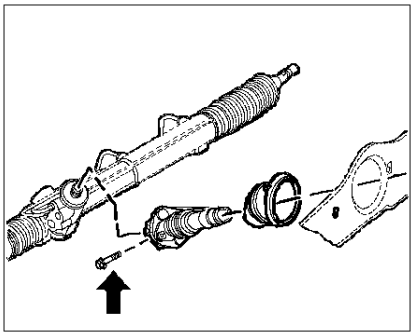
- **Injuries and material damage due to incorrect handling of airbag units are possible** ***→69 AW Safety regulations for handling vehicles with airbag and belt tensioner - Chapter "General warning notes".***



→

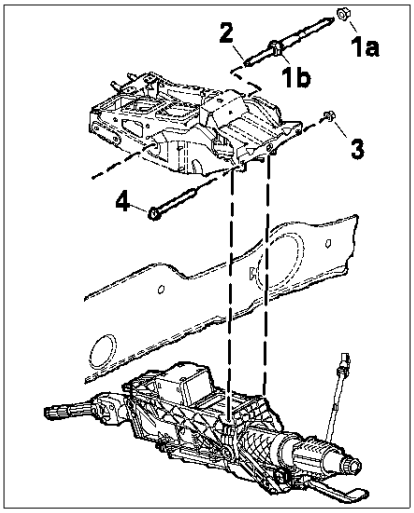
Observe safety regulations for handling airbag modules.

Note



- *Observe the tightening sequence on the mounting bracket.*
- *Once the battery is disconnected, perform the relevant work required to fully restore driving →9 Work instructions after disconnecting the battery.*
- *Calibrate steering-angle sensor →456000 Initialising and calibrating steering-angle sensor - chapter on "Calibrating".*
- *If the steering column is replaced (new steering column), the electric steering column locking mechanism (ELV) must be taught with the Piwis Tester in the PAS system, menu Learning functions >> **Teach ELV** <<. You can get the necessary Teach Enable Code (TEC code) from IPAS or from your importer using the vehicle identification number.*
- *Always replace the fastening screw for the universal joint of the steering column.*
- *Replace locking screws and nuts.*
- *Replace the clamping washer (strut mount to steering column).*
- *Carry out a visual inspection of all parts.*
- *Observe correct tightening torques →48 Tightening torques for steering.*

Individual components cannot be disassembled and/or replaced.



Strut to steering column

1. Before installing the steering column, mount the strut **-arrow-** without play on the steering column.

Steering shaft to steering gear

2. Put steering gear in centre position. Make sure that the clip for steering gear pinion is present (steering shaft assembly aid). Mount the steering shaft (universal joint) to the steering gear in the correct position using new hexagon-head bolt **-arrow-** .

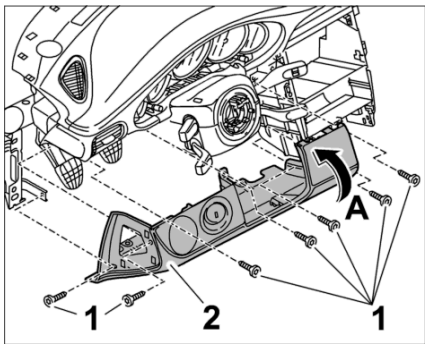
Steering column tightening sequence

3. Insert the steering column and pay attention to the block teeth of the steering shaft (the steering shaft can only paired be in one position! 2. worker required). Tightening sequence for mounting:

1. - Pedal bearing axle on a/f 10 mm hexagon **-2-** (tightening torque 8 + 2 Nm (6 + 1.5 ftlb.))

2. - Lock nut right **-1a-** (tightening torque 10 Nm (7.5 ftlb.)). Then lock nut for steering column **-1b-** (tightening torque 46 Nm (34 ftlb.)).

3. - Lock nut of upper mount **-3-** (tightening torque 46 Nm (34 ftlb.))



4. Install front underbody panel.
5. Install KESSY/PAS control unit.
6. Put steering column in the lowermost adjustment position and close the locking lever again. In this position, fasten the strut to the structure (this allows the adjustment range to move smoothly in all positions).
7. Install the steering-column switch and the trim panel from the steering-column switch *→9450 19 Removing and installing steering-column switch*.

top of page

Subsequent work

Subsequent work

1. Install clutch pedal on vehicles with manual transmission →300519 Removing and installing the clutch pedal.

Installing lining

2. Mount linings under dashboard →*7019 19 Removing and installing trim panel under dashboard*.
3. Install main headlight switch. To do this, insert the connector until it is felt to engage. Push in the light switch to the stop and turn the rotary switch anti-clockwise.
4. Install steering wheel →*4810 19 Removing and installing the steering wheel*.
5. Install airbag unit for driver →*6958 19 Removing and installing driver's airbag unit*
6. Connect the battery →*9 Work instructions after disconnecting the battery*.

Note

If the steering column is replaced (new steering column), the electric steering column locking mechanism (ELV) must be taught with the Piwis Tester **in the PAS system**, menu Learning functions >> **Teach ELV** <<. You can get the necessary Teach Enable Code (TEC code) from IPAS or from your importer using the vehicle identification number.

7. Read out all fault memories and delete them, if necessary.
8. Carry out suspension alignment.
9. After the suspension alignment, with the position of the wheels >> straight ahead << calibrate the steering-angle sensor on the measuring platform.
10. Carry out a test drive and check the operation (continuous easy steering movements, steering column adjustment, electronic steering column lock).

3. Remove front underbody panel →519219 Removing and installing front cover.

top of page

General warning notes

General warning notes

General warning notes

 ATTENTION

Increased risk of accidents if too much Pentosin is used or if Pentosin comes into contact with the coolant hoses when filling or topping up.

- **Possible danger of injury or damage.**

→ Multiple steering operations (manoeuvring) with the engine switched off change the fluid level in the reservoir. In this case, the engine must be running immediately prior to the fluid level check.

→ If coolant hoses come into contact with Pentosin, clean them thoroughly with water IMMEDIATELY.

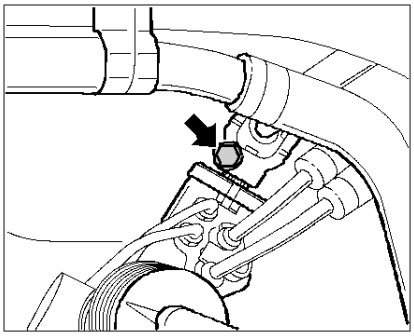
→ Replace visibly swollen coolant hoses.

 **Note**

- *Before the feed and return lines are loosened, place a suitable container underneath to collect steering fluid.*

- *Wear protective goggles and gloves.*

top of page



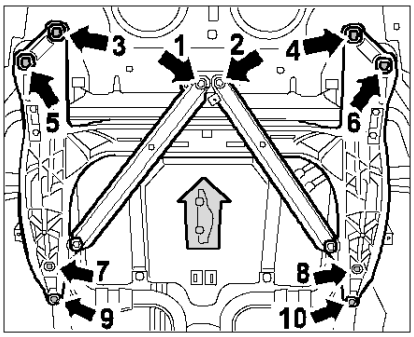
Removal

Removing

Removing

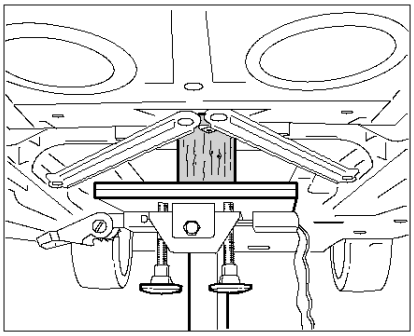
 **Note**

Fix the steering wheel with the wheels in straight-ahead position or remove the steering wheel with the wheels in straight-ahead position. If this is not done, the airbag contact unit will have to be put in centre position after installation of the steering gear.



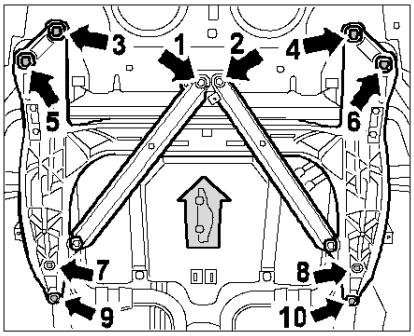
Universal joint

1. Loosen universal joint (steering shaft) at steering gear **-Arrow-** . For this purpose, take out the clamping screw and slide the joint upwards.
2. Press tie-rod end out of steering arm. Use **press-out tool P 9560** (ball-joint extractor). When loosening the lock nut, counter with a **screwdriver P 9546** (Torx screwdriver).
3. Repeat procedure on the other side.



Retainer plate

4. Loosen feed and return lines at the steering gear. To do this, loosen the hexagon socket-head bolt **-Arrow-** and remove the retainer plate. Plug lines or use collecting container. Cover lines if necessary (danger of soiling).
5. Loosen the two steering-gear fastening screws (on the underside of the cross member).

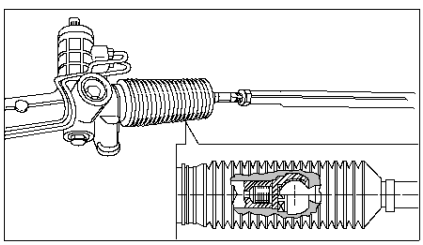


Cross member with diagonal brace to body

6. Loosen screws **-1+2-** on the two (front) diagonal braces.

Supporting cross member

7. Lower vehicle to working height (lower platform lift) and support cross member with a hydraulic lift (use hard rubber base or wooden block: **-see Figure-**).



Cross member with diagonal brace to body

8. Loosen threaded connections **-3+4-** securing cross member to body (front) and threaded connections **-5+6-** securing cross member with diagonal arm to body (front) (screws **-1+2-** have already been removed).
9. Loosen threaded connections securing cross member to body (rear) **-7+8-** and screw out **-9+10-** by approx. 10 mm.
10. Lower front cross member slightly (approx. 50 to 60 mm).
11. Pull out steering gear to the left (to the right for right-hand drive vehicles).

Note

Ensure that no damage (scoring) is caused to the steering rack. To loosen and tighten the tie rods, secure the steering gear on a suitable plate.

Tie rod on steering gear

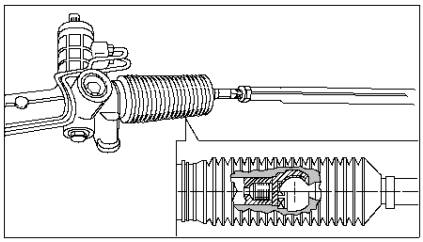
12. If necessary, loosen and remove right and left tie rods at steering gear.

top of page

Installation

Installing

Note



When topping up or filling in Pentosin, make sure that it does not come into contact with the coolant hoses. Observe the specifications in order to avoid overfilling, and thus overflowing.

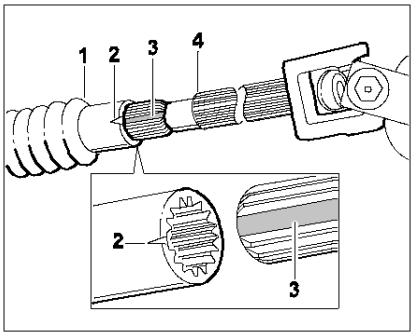
- *If coolant hoses come into contact with Pentosin, clean them thoroughly with water IMMEDIATELY.*
- *Replace visibly swollen coolant hoses.*
- *Tighten all threaded connections to the specified tightening torque.*

Install in reverse order. It is essential to observe the following points while doing so:

– Replace steering-gear fastening screws, the fit bolt of the steering shaft and the steering-wheel fastening screw whenever they have been removed. Screw threads must be clean and free of grease.

– Ensure that no damage (scoring) is caused to the steering rack.

Tie rod on steering gear

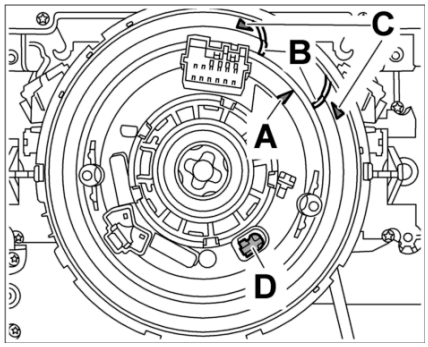


– Mount the tie rods on the steering gear. Then secure the respective bellows with new clamping rings *→Tie rod on steering gear* .

– Position red plastic clip on steering-gear pinion. The plastic clip ensures that the fastening screw between the universal joint and steering pinion sits into the groove on the steering pinion.

– Push on universal joint (steering shaft) with the steering gear and steering wheel or airbag contact unit (spring) in centre position. For ease of assembly, just insert steering-gear fastening screws.

– Observe following notes for sliding piece and airbag contact unit!



Notes for sliding piece and airbag contact unit

Sliding piece

1. If sliding piece **-1-** was pulled off the steering shaft **-4-** , the notch **-2-** must point towards the tooth gap **-3-** during assembly.
2. If the steering wheel was not fixed before the steering gear was removed, the position of the contact unit (spring) may no longer be correct. In this case, remove steering wheel and move contact unit to centre position because otherwise the spring will be damaged.

Contact unit in centre position

Contact unit

- To position the airbag contact unit in centre position, press the latch **-D-** and turn the rotor **-A-** carefully to the left as far as it will go.
- Then (from the furthest left position) turn the rotor **-A-** carefully to the right, approx. 3.5 to 3.75 turns, until the band printed on one side is visible in the window.

3. Turn front wheels to straight-ahead position before fitting the steering wheel (steering shaft mounted on steering gear).

top of page

Subsequent work

Subsequent work

1. After fitting the pressure lines, fill steering hydraulics with Pentosin and bleed the steering system.
2. Fit front underbody panel →519219 Removing and installing front cover.
3. Fit front wheels →440519 Removing and installing wheel.

4. Adjust toe →449503 Performing front and rear suspension alignment. Calibrate steering-angle sensor if necessary.

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

Preliminary work for body repairs with alignment bench

Preliminary work for body repairs with alignment bench

1. Removing accessories in the repair area
1.1. Remove accessories in the repair area according to the extent of damage to the vehicle.
2. Equipping alignment bench with straightening kit
2.1. Equip alignment bench with the basic straightening attachments according to the plans included with the straightening attachments.
3. Placing vehicle on the alignment bench
3.1. Position vehicle on alignment bench, align according to the reference holes and bolt firmly to the attachment set.
4. Covering accessories adjacent to the vehicle repair area
4.1. Cover all accessories remaining on the vehicle and the neighbouring areas with fire-proof, protective covers.
5. Reshaping connection area of the sheetmetal parts to be replaced
6. Exposing welding areas
6.1. Remove undersealing, paint, etc. from the welding areas of the body with a hot-air gun or rotary brush.

top of page

Preliminary work for body repairs

Preliminary work for body repairs

Note

- *If it can be ensured there has been no deformation of the vehicle structure, the following repair can be carried out without the need of a straightening bench. In this case, the vehicle must not be raised when welding the component; it must stand on its wheels on an even surface.*

1. Removing add-on parts in the repair area

1.1. Remove add-on parts in the repair area according to the extent of damage to the vehicle.

2. Equipping straightening bench with straightening attachments

2.1. Equip straightening bench with the straightening attachments according to the plans included with the straightening attachments.

3. Placing vehicle on the straightening bench

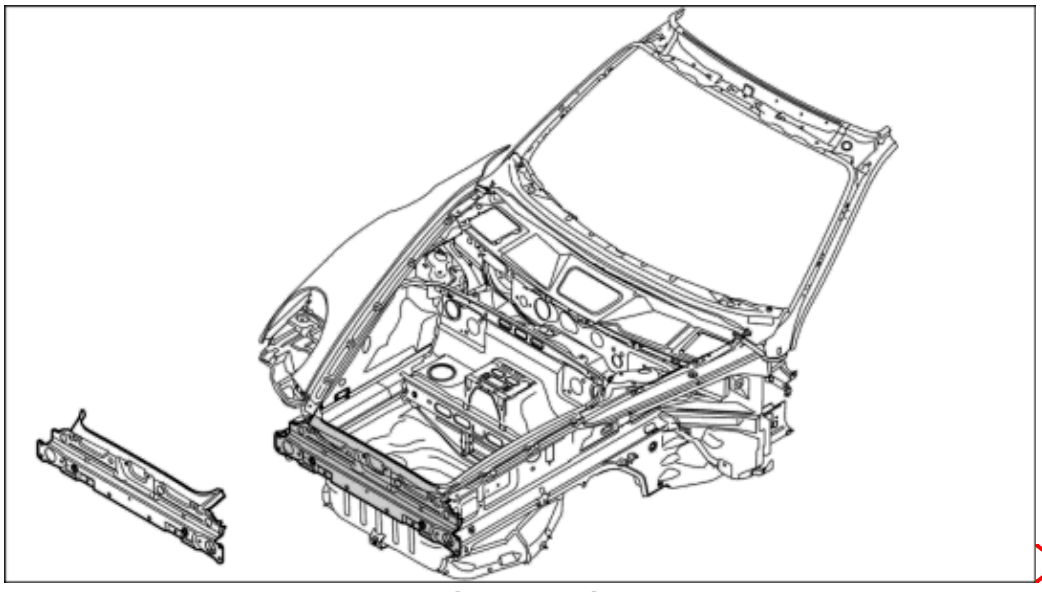
3.1. Position vehicle on the straightening bench, align according to the reference holes and bolt firmly to the attachment set.

4. Covering add-on parts adjacent to the vehicle repair area

4.1. Cover all add-on parts remaining on the vehicle and the neighbouring areas with fire-proof, protective covers.

5. Reshaping connection area of the sheetmetal parts to be replaced

6. Exposing welding areas



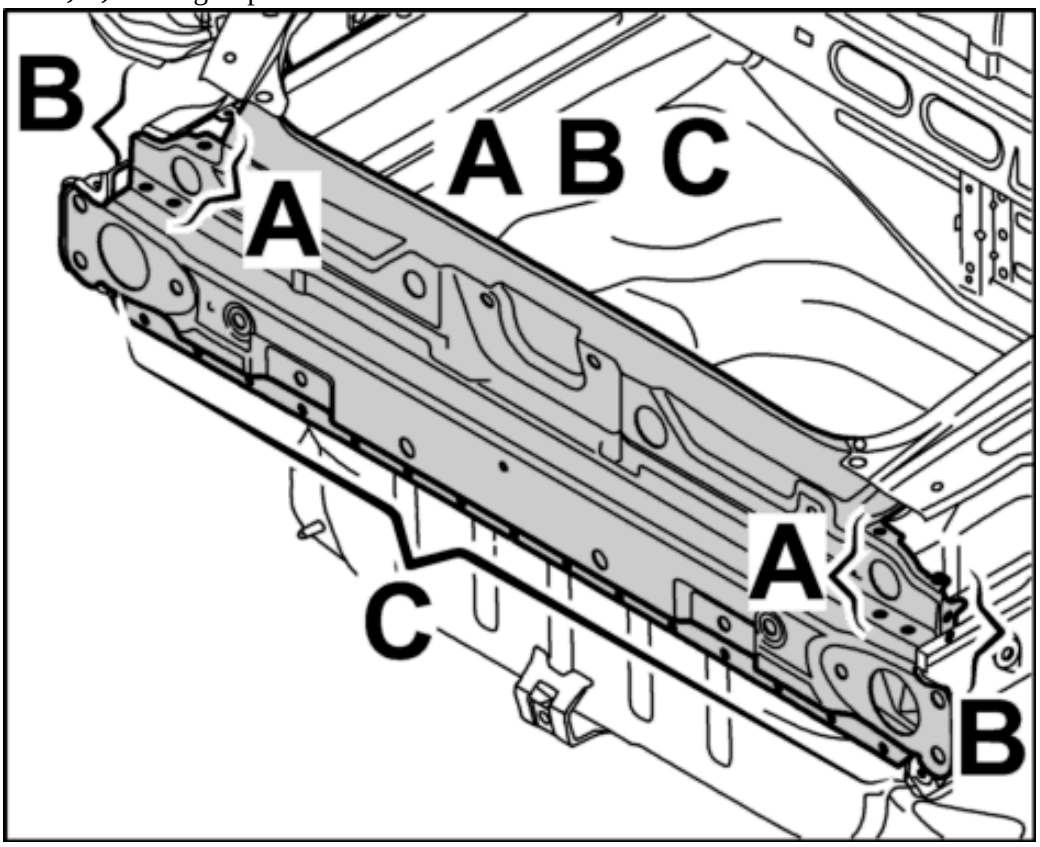
6.1. Remove undersealing, paint, etc. from the welding areas of the body with a hot-air gun or rotary brush.

top of page

Removing closing panel

Removing end plate

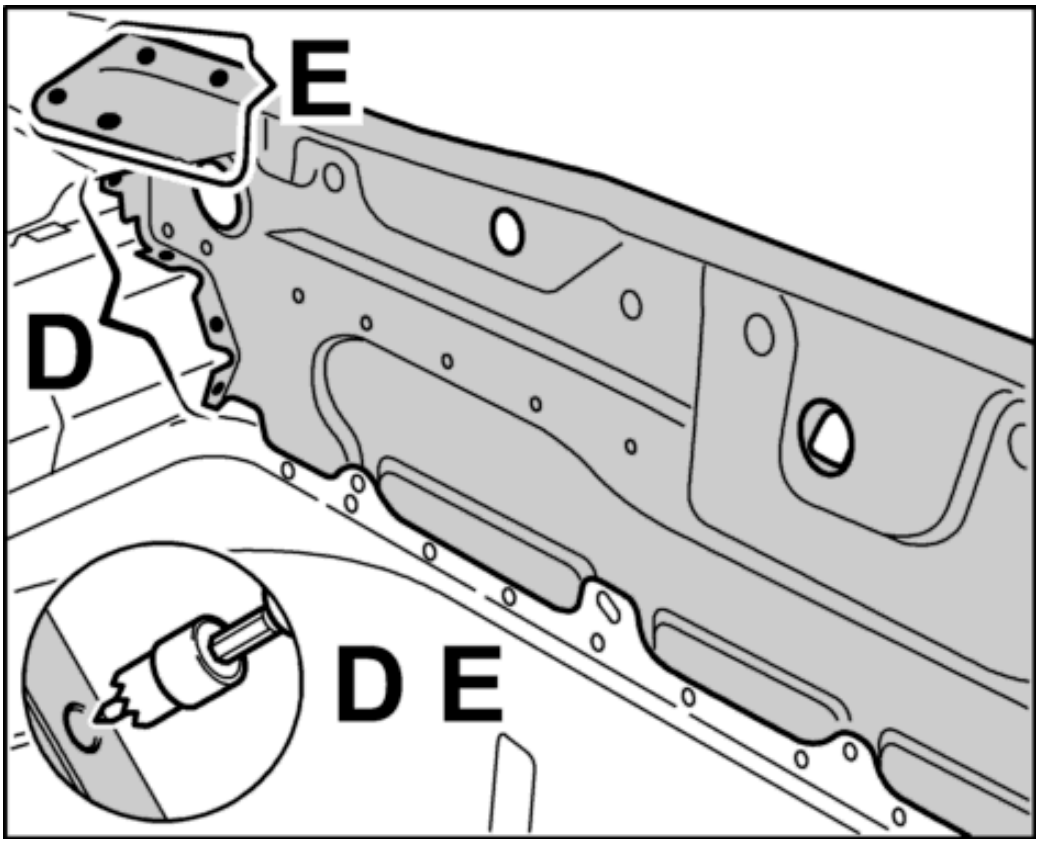
Installation Location:



Front closing panel spare part

1. Mill off spotweld in the area of the outer front closing panel using a spotweld cutter.

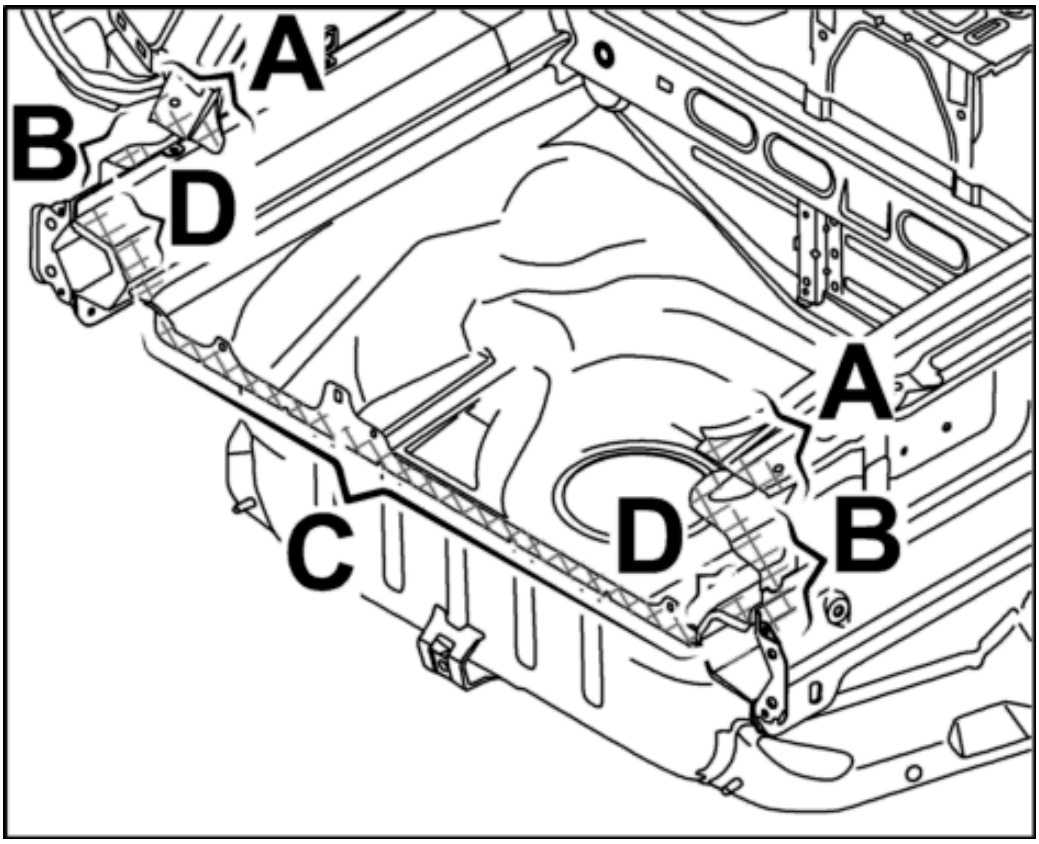
1.1.



Mill off spotweld in the area where the front closing panel meets the floor front section and side members **A, B, C** using a spotweld cutter.

Milling off spotweld in the area of the outer front closing panel

2. Mill off spotweld in the area of the front closing panel using a spotweld cutter.



2.1. Mill off spotweld in the area where the front closing panel meets the wheel housings **D** using a spotweld cutter.

Milling off spotweld in the area of the inner front closing panel

Preparing connection areas of body for installing end plate

1. Clean the body connecting flanges of undersealing, adhesive residue and paint in the marked areas using a hot-air gun or rotary brush. Grind the connecting flanges until they are bare. **A, B, C, D**

Preparing connection areas of body for installing end plate

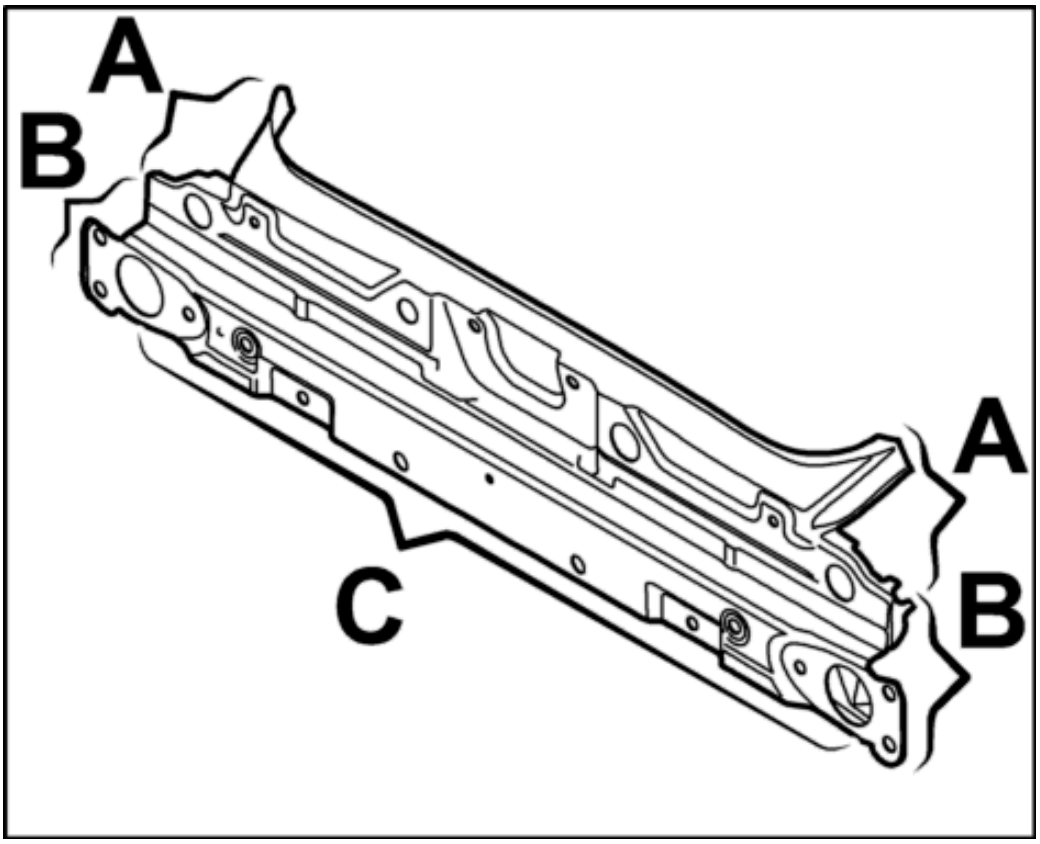
Fitting front closing panel and preparing for installation

Safety instructions for sharp-edged body and unit parts

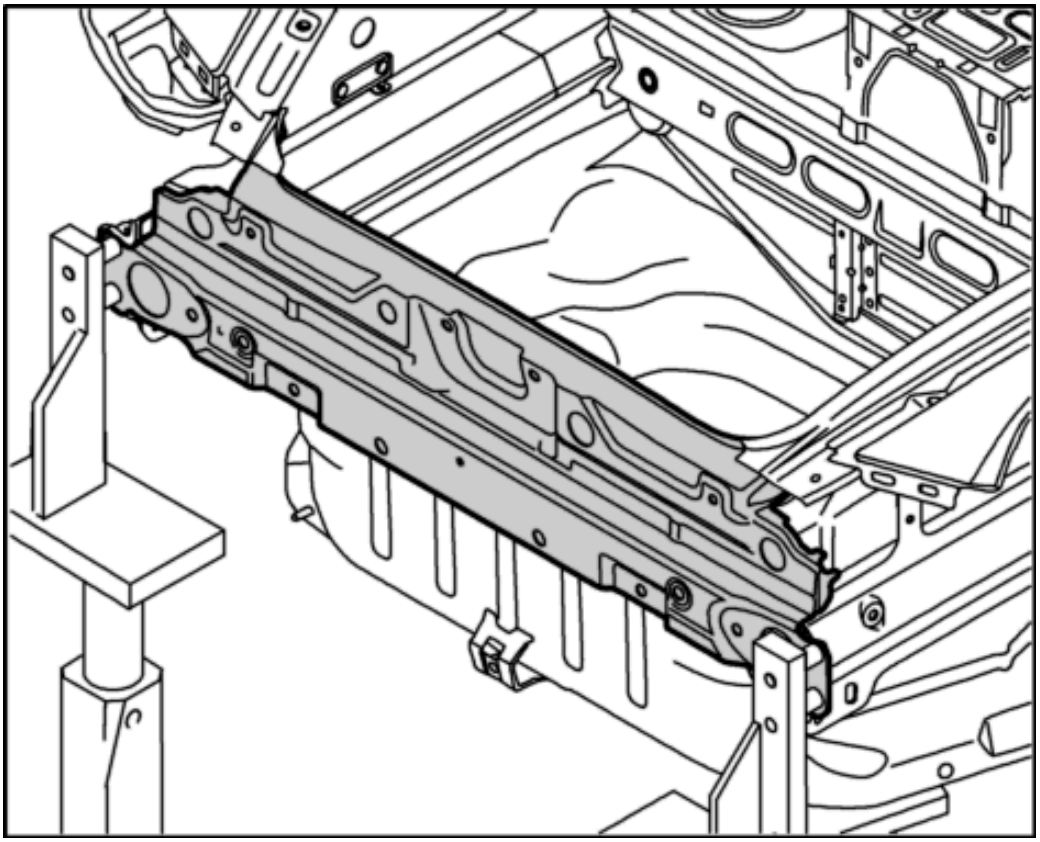
ATTENTION



Danger of injury! Sharp-edge burrs on body and unit parts!

- **Injuries from sharp edges on body and unit parts.**

→ Wear protective gloves when working in the area of sharp-edged body and unit parts!



Fitting front closing panel and preparing for installation

1. Remove the factory-applied primer on the welding areas of the spare parts **A, B, C** using the rotary brush.

Preparing front closing panel for installation

2. Fasten front closing panel spare parts to the straightening set for the impact absorbers and adjust as required.

top of page

Installing front closing panel

Danger of injury when welding

 DANGER

Risk of fatal injury from high voltage during electric welding!

- **Danger of explosion and fire when welding in the area of highly inflammable materials.**
- **Irritation to respiratory tracts from toxic zinc oxide emitted when welding galvanised steel!**
- **Danger of injury from unintentional triggering of pyrotechnical safety components!**
- **Danger of injury from weld spatters and UV light when welding!**

→ Do not perform welding work in a damp environment or on wet ground; there is a risk of fatal injury from the voltage being conducted through the human body. Persons with heart pacemakers should not perform welding work. Use insulating underlays.

→ Remove highly flammable materials from the work area; if necessary, remove units with fuel-carrying parts and protect work areas in the vehicle that are at risk of catching fire using fire-proof covers.

→ Ventilate the work area well.

→ Remove smoke gases with a suitable extraction system (refer to Workshop Equipment Manual).

→ Wear suitable protective equipment, such as protective clothing, gloves, a welding shield and, if necessary, a protective mask.

→ For welding work, always disconnect both terminals on the battery. In the case of welding work in the immediate vicinity of the control modules for pyrotechnical safety systems, remove the control modules before beginning work.

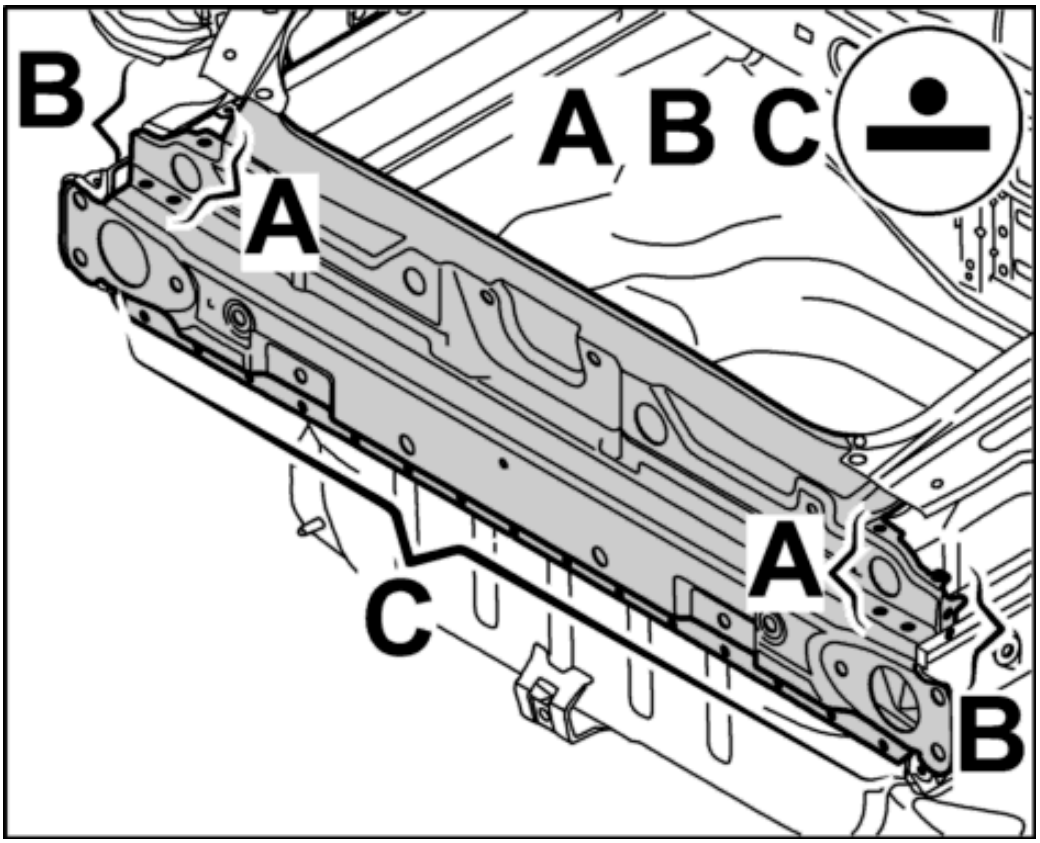
→ In addition, the guidelines of the welding equipment manufacturer and the legal accident prevention regulations and those of the mutual indemnity association (BGV D1) must be observed.

Safety instructions for flying sparks during grinding and welding work

 ATTENTION

Danger of explosion and fire from flying sparks during grinding and welding work!

- **Danger of injury and danger of damage to vehicle parts and other vehicles due to flying sparks**

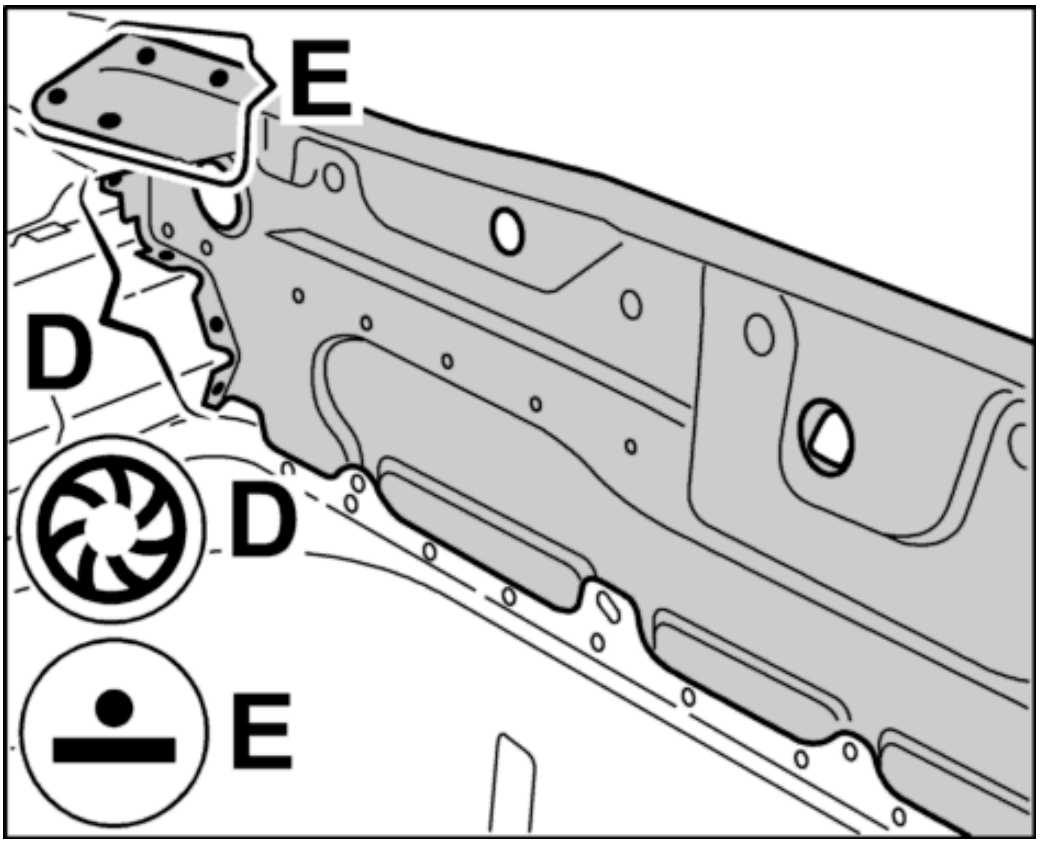


→ Cover vehicle parts such as battery, fuel system, paintwork, glass and passenger compartment parts with fire-proof covers and, if necessary, remove batteries and fuel-carrying components.

→ No other vehicles may be left unprotected in areas used for body repair!

Installing front closing panel

1. Spot-welding outer front closing panel



1.1. Spot-weld the front closing panel to the floor front section **C**, side members and wheel housings **A, B**.

Spot-welding outer front closing panel

2. Welding inner front closing panel using inert gas and spot-welding

2.1. Weld the front closing panel to the floor front section **D**, and spot-weld to the wheel housings **E**.

Welding inner front closing panel using inert gas and spot-welding

top of page

Reworking

Subsequent work for body repairs

1. Remove vehicle from the alignment bench.
2. Clean welded joints and sheetmetal flanges with a wire brush.
3. Prime flange areas with 2K primer.
4. Restore standard sealing with body sealant.
   →5 Seam sealing
5. Restore standard undersealing with underbody sealant.
   →5 Underbody protection
6. Paint repair area and adjacent surfaces, if necessary.
7. Install removed accessories in the repair area.
8. Apply cavity preservation.

as of MY 2005
Country C00, C02, C05, C07, C08, C09, C10, C11, C12, C13, C14, C15, C16, C18, C19, C20, C21, C22, C23, C24, C25, C26, C27, C28, C32, C33, C34, C35, C36, C37, C38, C39, C45, C46, C98, C99

 WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

Preliminary work for body repairs

Preliminary work for body repairs with alignment bench

1. Removing accessories in the repair area
1.1. Remove accessories in the repair area according to the extent of damage to the vehicle.
2. Equipping alignment bench with straightening kit
2.1. Equip alignment bench with the basic straightening attachments according to the plans included with the straightening attachments.
3. Placing vehicle on the alignment bench
3.1. Position vehicle on alignment bench, align according to the reference holes and bolt firmly to the attachment set.
4. Covering accessories adjacent to the vehicle repair area
4.1. Cover all accessories remaining on the vehicle and the neighbouring areas with fire-proof, protective covers.
5. Reshaping connection area of the sheetmetal parts to be replaced
6. Exposing welding areas
6.1. Remove undersealing, paint, etc. from the welding areas of the body with a hot-air gun or rotary brush.

Preliminary work for body repairs

Note

- *If it can be ensured there has been no deformation of the vehicle structure, the following repair can be carried out without the need of a straightening bench. In this case, the vehicle must not be raised when welding the component; it must stand on its wheels on an even surface.*

1. Removing add-on parts in the repair area
1.1. Remove add-on parts in the repair area according to the extent of damage to the vehicle.
2. Equipping straightening bench with straightening attachments
2.1. Equip straightening bench with the straightening attachments according to the plans included with the straightening attachments.

3. Placing vehicle on the straightening bench

3.1. Position vehicle on the straightening bench, align according to the reference holes and bolt firmly to the attachment set.

4. Covering add-on parts adjacent to the vehicle repair area

4.1. Cover all add-on parts remaining on the vehicle and the neighbouring areas with fire-proof, protective covers.

5. Reshaping connection area of the sheetmetal parts to be replaced

6. Exposing welding areas

6.1. Remove undersealing, paint, etc. from the welding areas of the body with a hot-air gun or rotary brush.

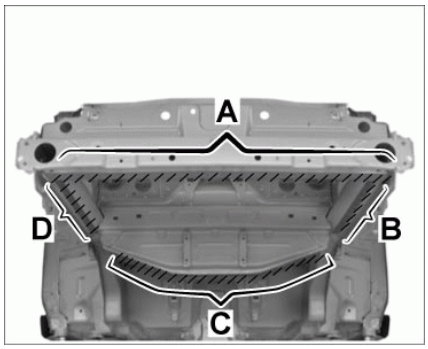
Preparing connection areas of the body for installing front floor panel

Safety instructions for flying sparks during grinding and welding work

ATTENTION



Danger of explosion and fire from flying sparks during grinding and welding work!

- **Danger of injury and danger of damage to vehicle parts and other vehicles due to flying sparks**

→ Cover vehicle parts such as battery, fuel system, paintwork, glass and passenger compartment parts with fire-proof covers and, if necessary, remove batteries and fuel-carrying components.

→ No other vehicles may be left unprotected in areas used for body repair!

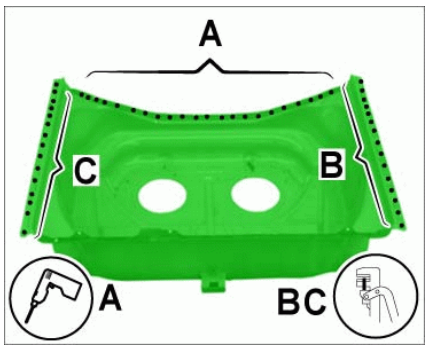
Preparing connection areas of body for installing floor front section

Cleaning the welding areas

1. Clean undersealing, adhesive residue and paint off the body connecting flanges in the marked areas **-A, B, C, D-** using a hot-air gun or rotary brush. Grind the connecting flanges until bare.
2. Coat spot-weld flange areas with zinc powder paint.

2.1. Coat all spot-weld flange areas with zinc powder paint.

Safety instructions for sharp-edged body and unit parts



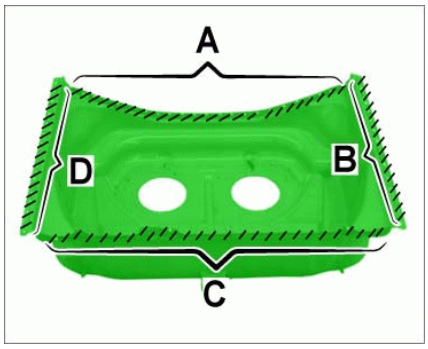
ATTENTION

Danger of injury! Sharp-edge burrs on body and unit parts!

- **Injuries from sharp edges on body and unit parts.**

→ Wear protective gloves when working in the area of sharp-edged body and unit parts!

Adjusting floor front section and preparing for installation



Drilling and punching holes for plug welding using inert gas

1. Drill and punch holes for plug welding using inert gas.

1.1.

Drill holes (Ø = 7 mm) on the fastening flange in area **-A-** for plug welding using inert gas.

1.2. Punch holes (Ø = 7 mm) on the fastening flange in areas **-B-** and **-C-** for plug welding using inert gas.

Cleaning the welding areas

2. Cleaning the welding areas

2.1. Grind both sides of the connecting flanges of the floor front section in the marked areas **-A, B, C, D-** until bare using a rotary brush.

3. Coat spot-weld flange areas with zinc powder paint.

3.1. Coat all spot-weld flange areas with zinc powder paint.

top of page

Installing front floor panel

Danger of injury when welding

DANGER

Risk of fatal injury from high voltage during electric welding!

- **Danger of explosion and fire when welding in the area of highly inflammable materials.**
- **Irritation to respiratory tracts from toxic zinc oxide emitted when welding galvanised steel!**
- **Danger of injury from unintentional triggering of pyrotechnical safety components!**
- **Danger of injury from weld spatters and UV light when welding!**

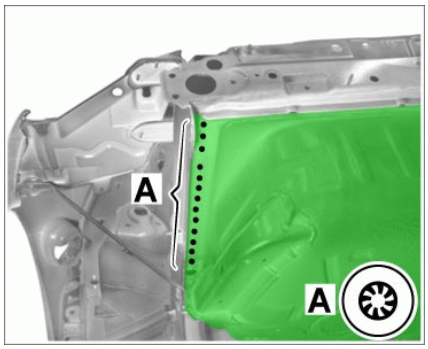
→ Do not perform welding work in a damp environment or on wet ground; there is a risk of fatal injury from the voltage being conducted through the human body. Persons with heart pacemakers should not perform welding work. Use insulating underlays.

→ Remove highly flammable materials from the work area; if necessary, remove units with fuel-carrying parts and protect work areas in the vehicle that are at risk of catching fire using fire-proof covers.

→ Ventilate the work area well.

→ Remove smoke gases with a suitable extraction system (refer to Workshop Equipment Manual).

→ Wear suitable protective equipment, such as protective clothing, gloves, a welding shield and, if necessary, a protective mask.



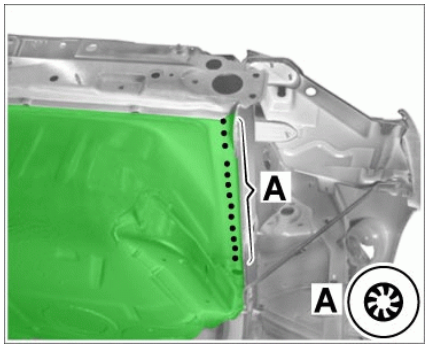
→ For welding work, always disconnect both terminals on the battery. In the case of welding work in the immediate vicinity of the control modules for pyrotechnical safety systems, remove the control modules before beginning work.

→ In addition, the guidelines of the welding equipment manufacturer and the legal accident prevention regulations and those of the mutual indemnity association (BGV D1) must be observed.

Installing floor front section

1. Fit the floor front section to the body.

1.1. Place the floor front section against the body and secure to the straightening set.

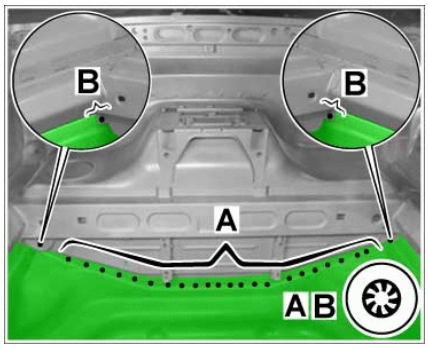


Welding in floor front section

Note

Determine the position of the new part and secure with tensioning clamps.
When butt welding body sheet panels with a sheet thickness of > 1.5 mm, there must be a welding slit width s = 1 x sheet thickness to guarantee the required welding quality (welding through).

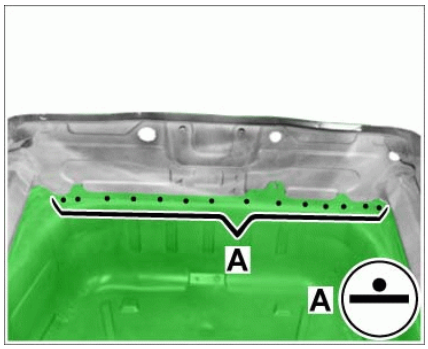
2. Weld in floor front section.



2.1. Plug-weld the floor front section in area **-A-** to the right side member using inert gas.

Welding in floor front section

3. Weld in floor front section.



3.1. Plug-weld the floor front section in area **-A-** to the left side member using inert gas.

Welding in floor front section

4. Weld in floor front section.

4.1. Plug-weld the floor front section in areas **-A-** and **-B-** to the front panel using inert gas.

Welding in floor front section

5. Weld in floor front section.

5.1. Resistance spot-weld floor front section in area **-A-** to the front closing panel.

top of page

Subsequent work

Subsequent work for body repairs

1. Remove vehicle from the alignment bench.
2. Clean welded joints and sheetmetal flanges with a wire brush.
3. Prime flange areas with 2K primer.
4. Restore standard sealing with body sealant.
   →5 Seam sealing

5. Restore standard undersealing with underbody sealant.
   →*5 Underbody protection*
6. Paint repair area and adjacent surfaces, if necessary.
7. Install removed accessories in the repair area.
8. Apply cavity preservation.

Country C00, C02, C05, C07, C08, C09, C10, C11, C12, C13, C14, C15, C16, C18, C19, C20, C21, C22, C23, C24, C25, C26, C27, C28, C32, C33, C34, C35, C36, C37, C38, C39, C45, C46, C98, C99

 WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**

- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

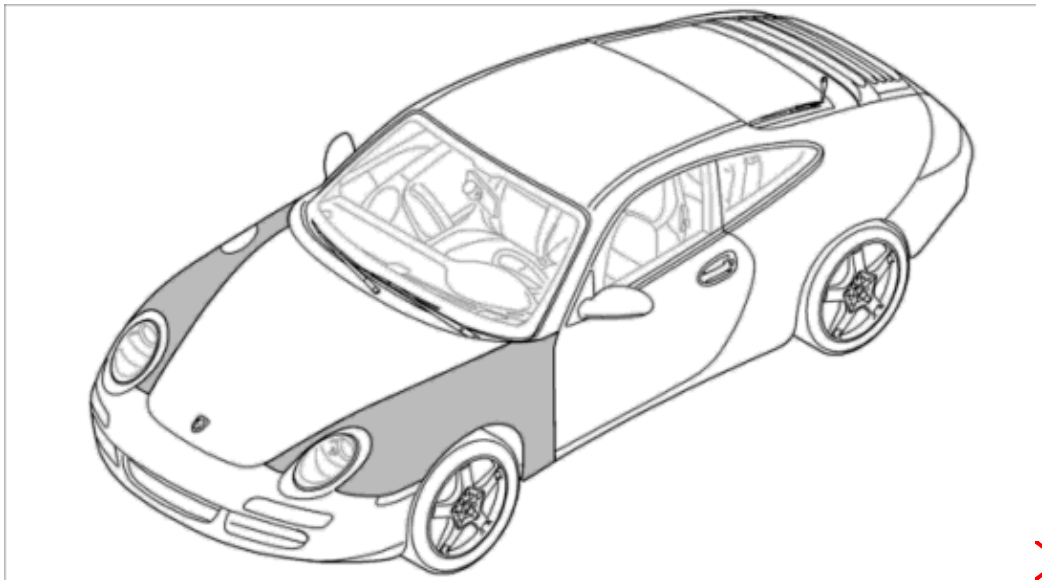
Removing the wing

Removing fuel tank cap

Installation Location:

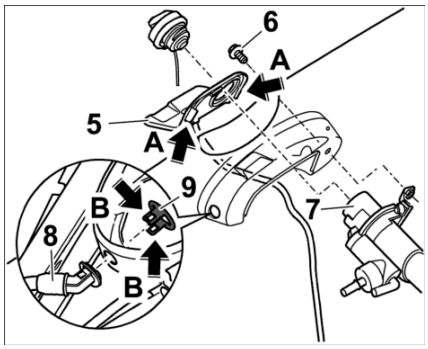
Main illustration for removing and installing wing

Removing fuel tank cap



Note

- *The following points apply only to the right wing.*



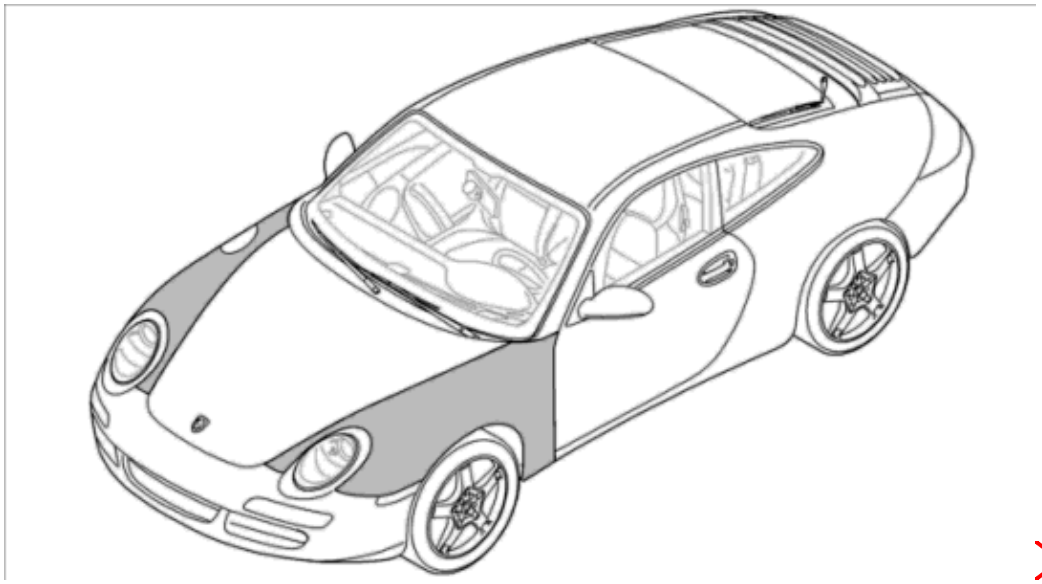
1. Press out plastic pin in centre of rivet head **-1-** and remove fuel tank cap **-2-** . Then unclip rubber stop **-3-** and rubber sleeve **-4-** .

Releasing tank filler neck

Installation Location:

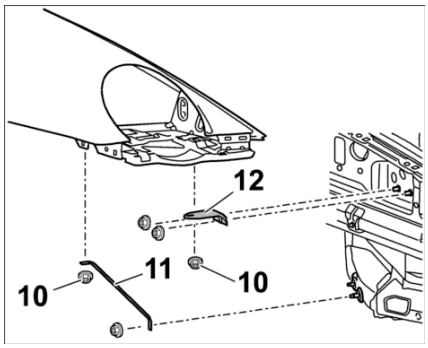
Main illustration for removing and installing wing

Releasing tank filler neck



Note

- *The following points apply only to the right wing.*

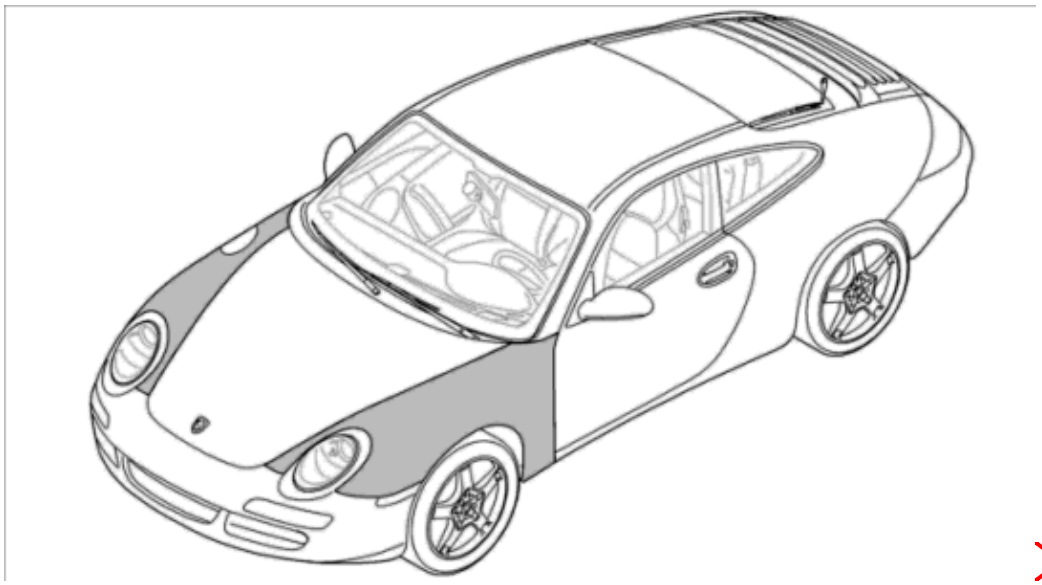


1. Press locking tabs of sleeve **-A-** and unclip **-5-** .
2. Unscrew fastening screw **-6-** of tank filler neck **-7-** .
3. Remove angled pipe **-8-** . To do this, press apart locking tabs **-B-** of plastic clip **-9-** and remove.

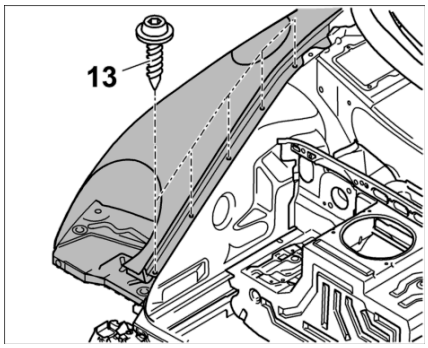
Releasing bottom of wing

Installation Location:

Main illustration for removing and installing wing



Releasing bottom of wing

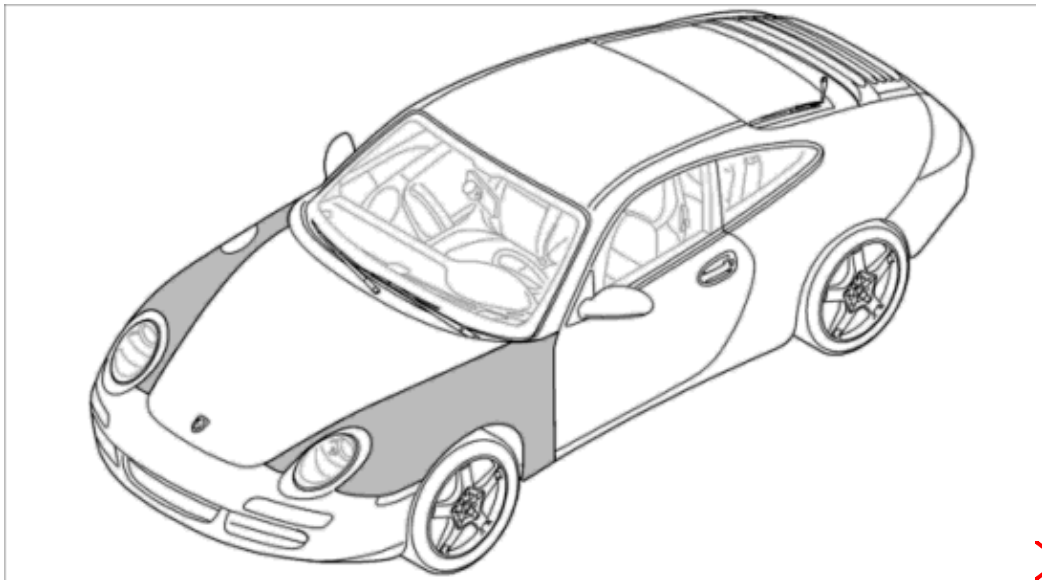


1. Release fastening nut **-10-** from wing strut **-11-** and unscrew bracket **-12-** .

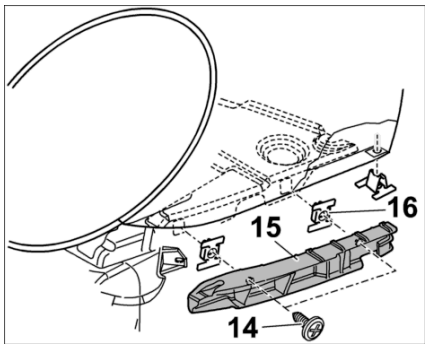
Releasing top of wing

Installation Location:

Main illustration for removing and installing wing



Releasing top of wing

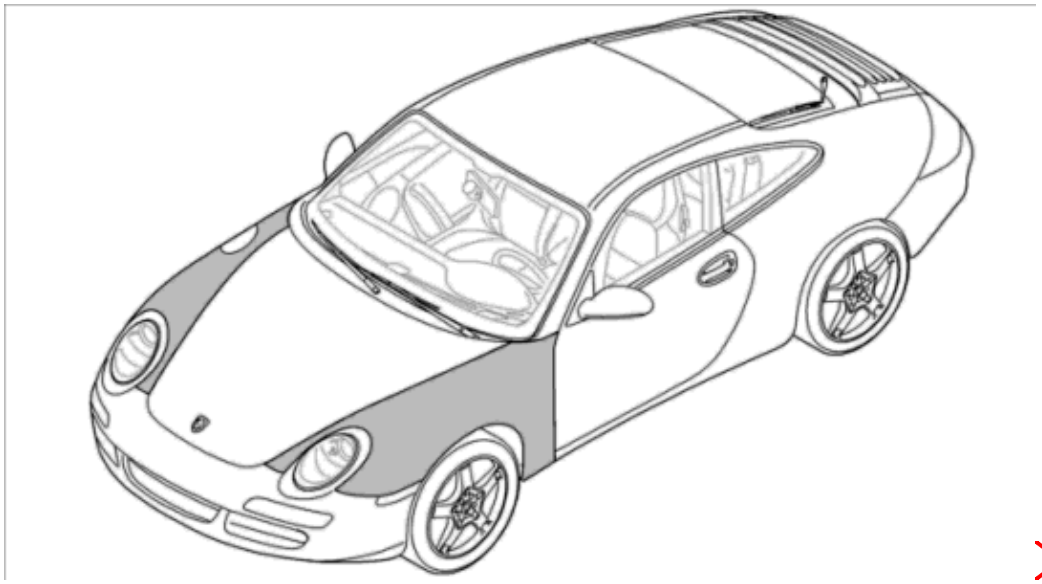


1. Undo fastening screws **-13-** on top flange.

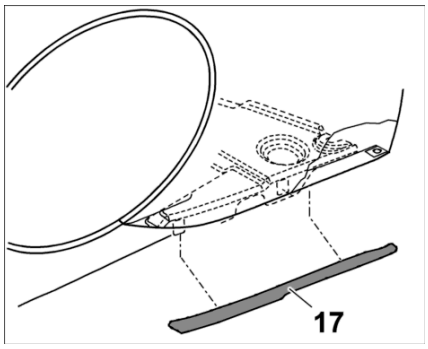
Removing retaining strip

Installation Location:

Main illustration for removing and installing wing



Removing retaining strip

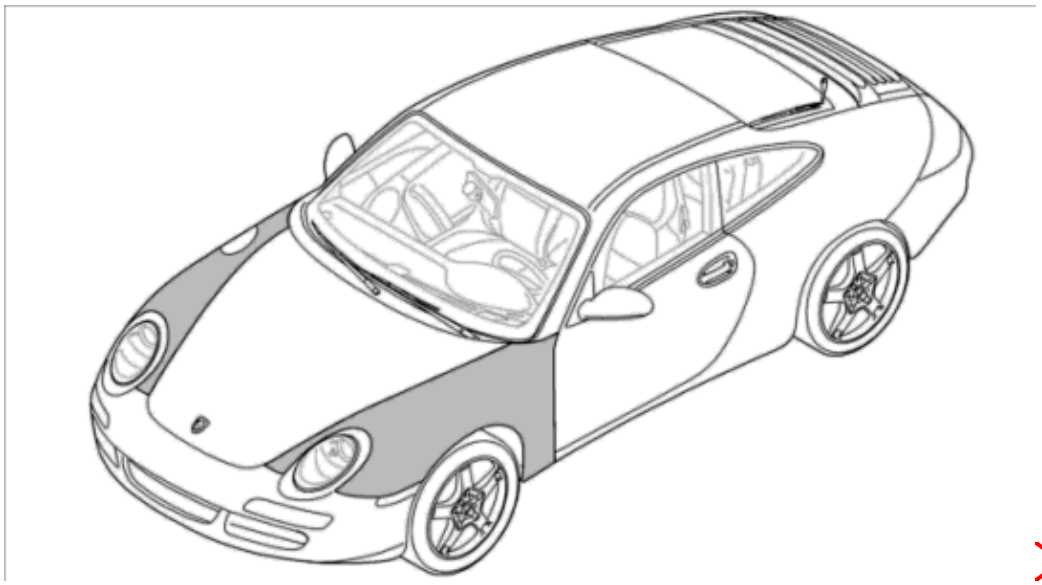


1. Unscrew fastening screw **-14-** from retaining strip **-15-** and remove retaining strip.
2. Unclip fastening nut **-16-** .

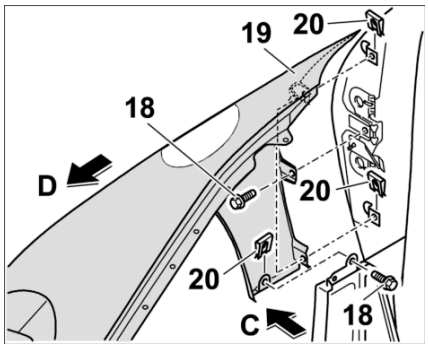
Removing protective film

Installation Location:

Main illustration for removing and installing wing



Removing protective film

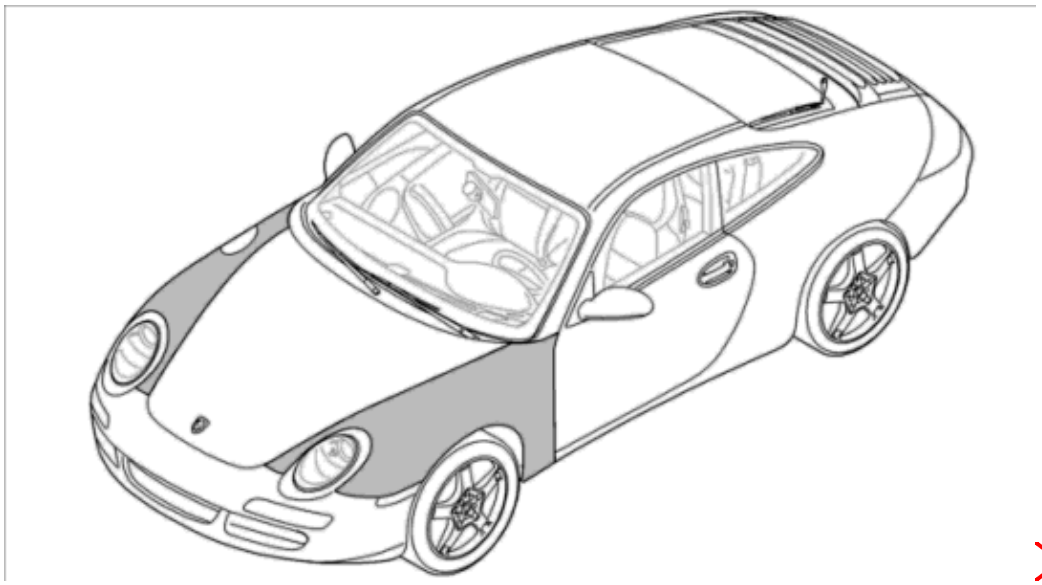


1. Remove protective film **-17-**

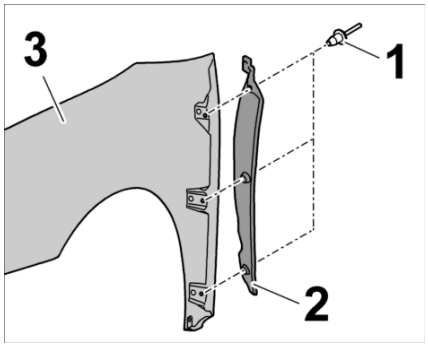
Releasing wing from A-pillar

Installation Location:

Main illustration for removing and installing wing



Releasing wing from A-pillar



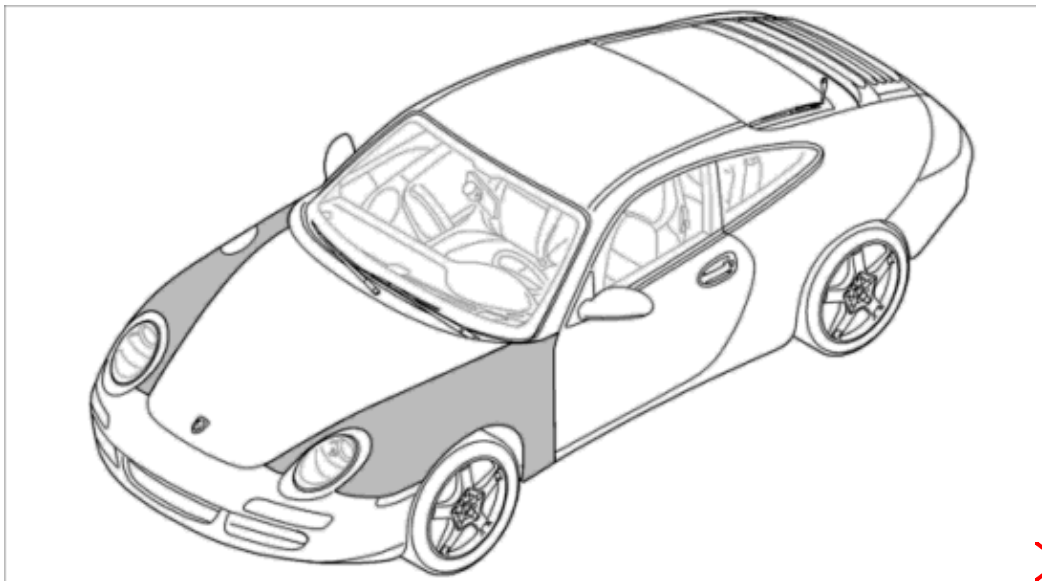
1. Unscrew fastening screws **-18-** at A-pillar and pull wing out **-19-** downwards **-C-** and forwards **-D-** .
2. Check fastening nut **-20-** , replacing if necessary.
3. Remove switching element for filler flap. →553819 Removing and installing switching element for filler flap - chapter on "Removing"

Removing masking panel

Installation Location:

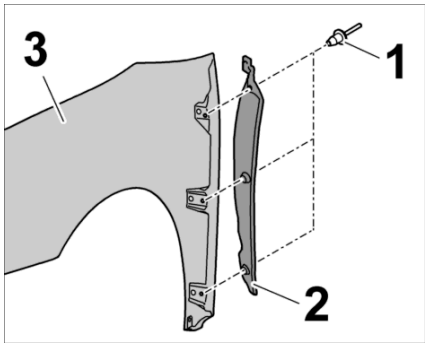
Main illustration for removing and installing wing

Removing masking panel



1. Press out pin from plastic expansion rivet **-1-** and remove masking panel **-2-** from wing **-3-** .

top of page

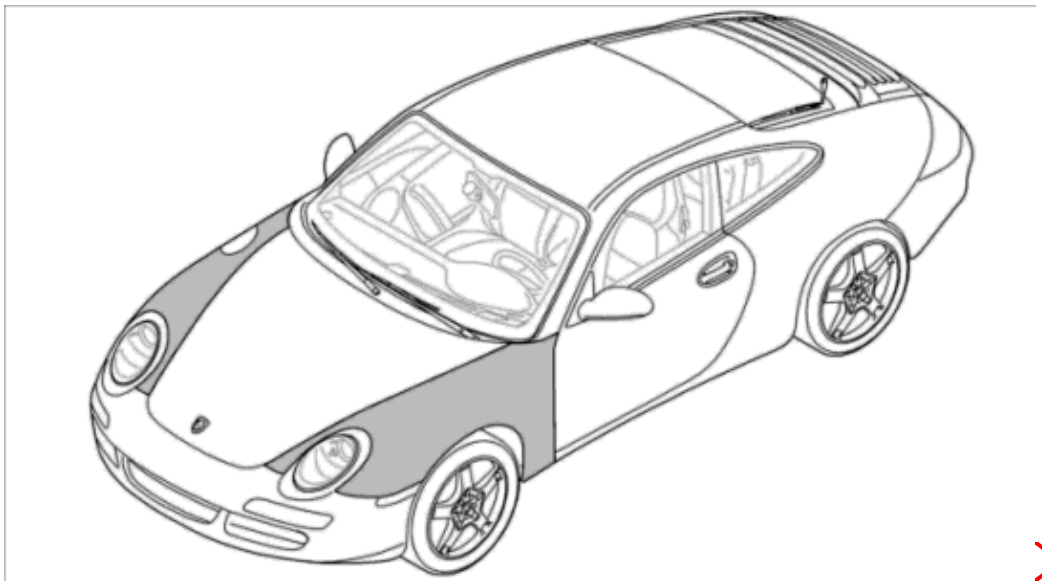


Installing the wing

Installing masking panel

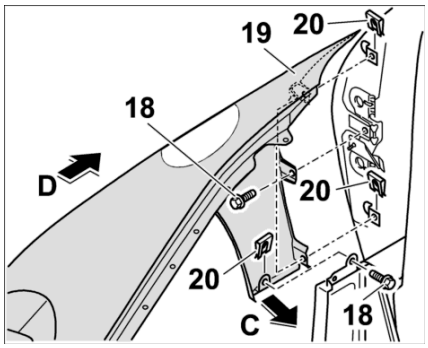
Installation Location:

Main illustration for removing and installing wing



Installing masking panel

1. Position masking panel **-2-** on wing **-3-** .
2. Press in plastic expansion rivet **-1-** and secure with pin.

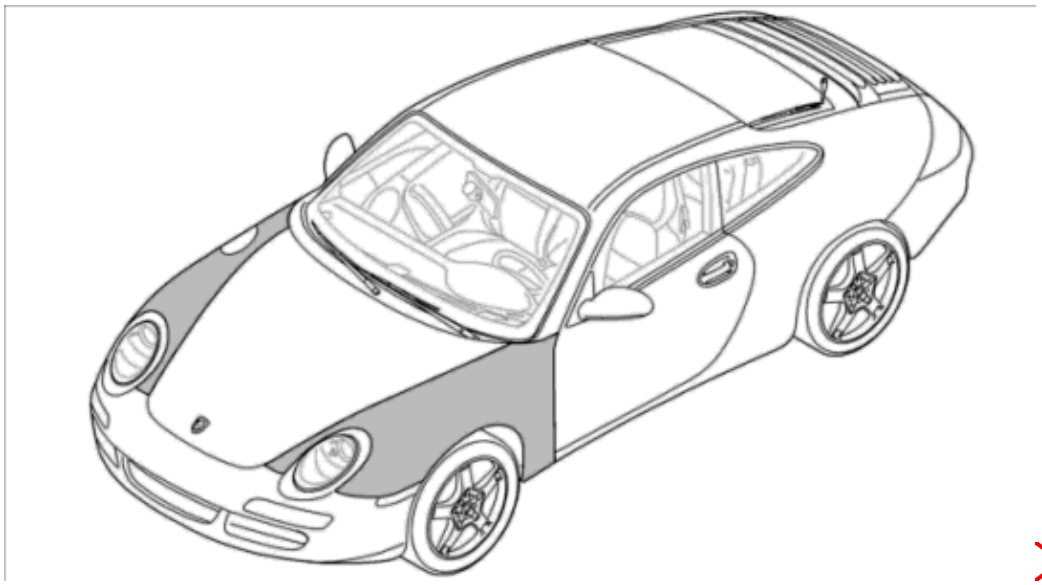


Fastening wing to A-pillar

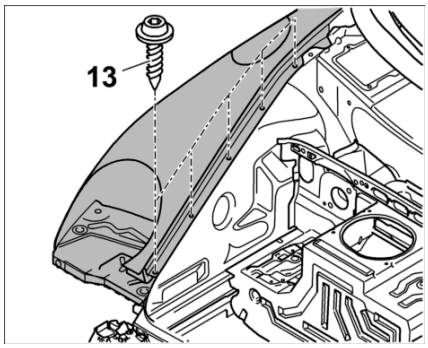
Installation Location:

Main illustration for removing and installing wing

1. Install switching element for filler flap. →553819 Removing and installing switching element for filler flap - chapter on "Installing"



Fastening wing to A-pillar

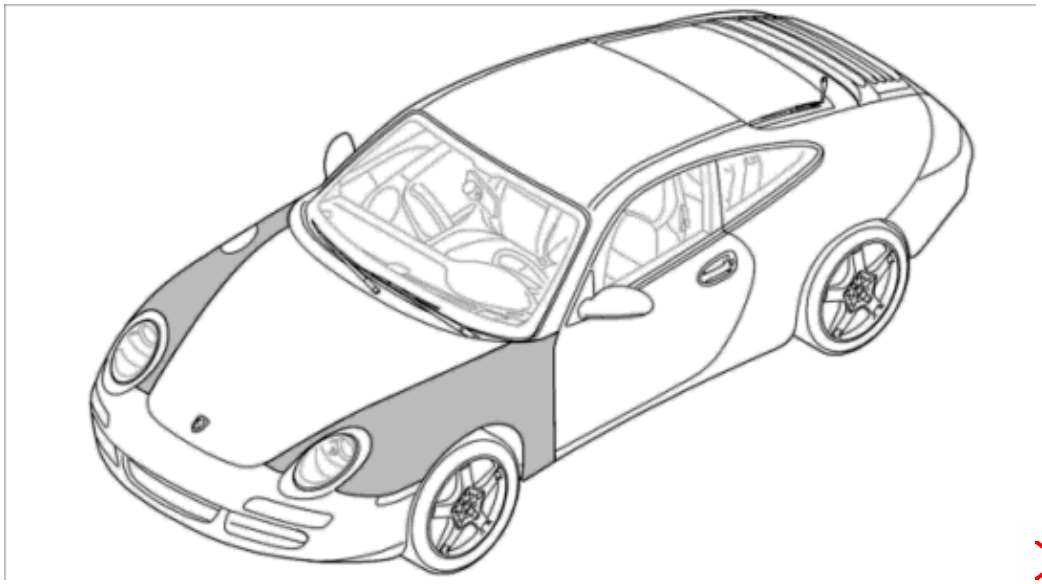


2. Press in fastening nut **-20-** .
3. Position wing **-19-** on the body **-C-** and slide towards A-pillar **-D-** . Screw in fastening screws **-18-** into the A-pillar and tighten lightly.

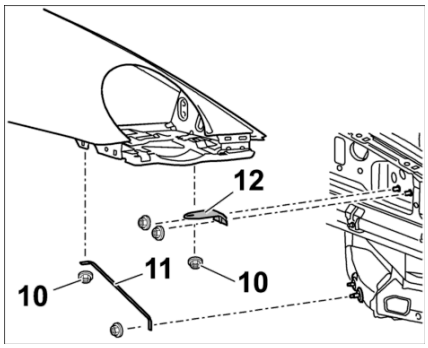
Fastening top of wing

Installation Location:

Main illustration for removing and installing wing



Fastening top of wing

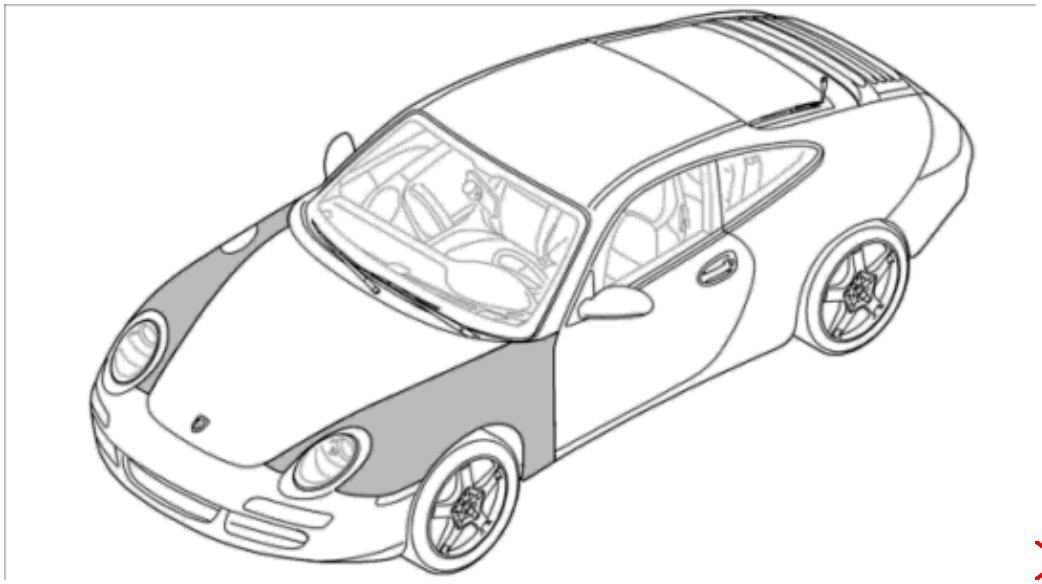


1. Screw in fastening screws **-13-** on top flange and tighten lightly.
2. Adjust the contour and gap dimensions relative to the front door and front lid. →*501000 Diagram - body gap dimensions*
3. Tighten fastening screws **-13-** with specified tightening torque →**Tightening torque: 3.5 ftlb.** .
4. Tighten fastening screws M6 **-18-** with tightening torque →**Tightening torque: 7.0 ftlb.** .

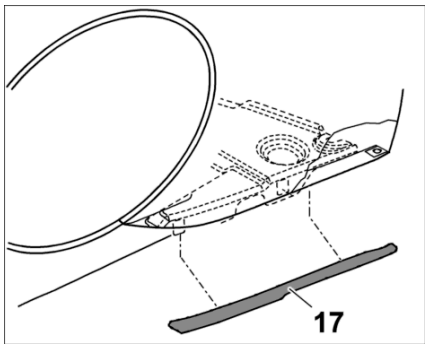
Fastening bottom of wing

Installation Location:

Main illustration for removing and installing wing



Fastening bottom of wing

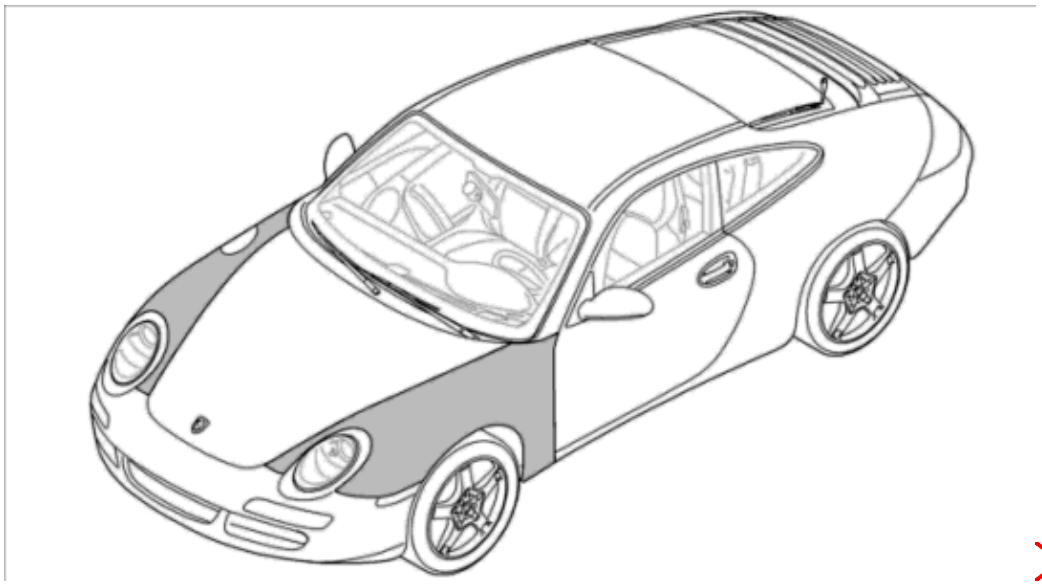


1. Position wing strut **-11-** and bracket **-12-** on the body and tighten with fastening nuts **-10-** . Tightening torque →**Tightening torque: 7.0 ftlb.**

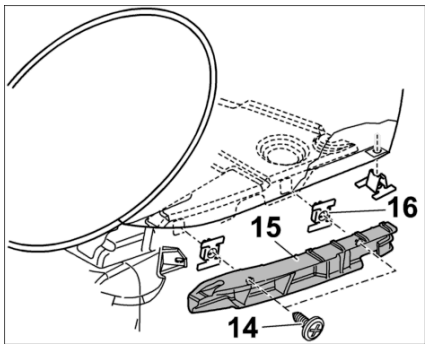
Sticking in the protective film

Installation Location:

Main illustration for removing and installing wing



Sticking in the protective film

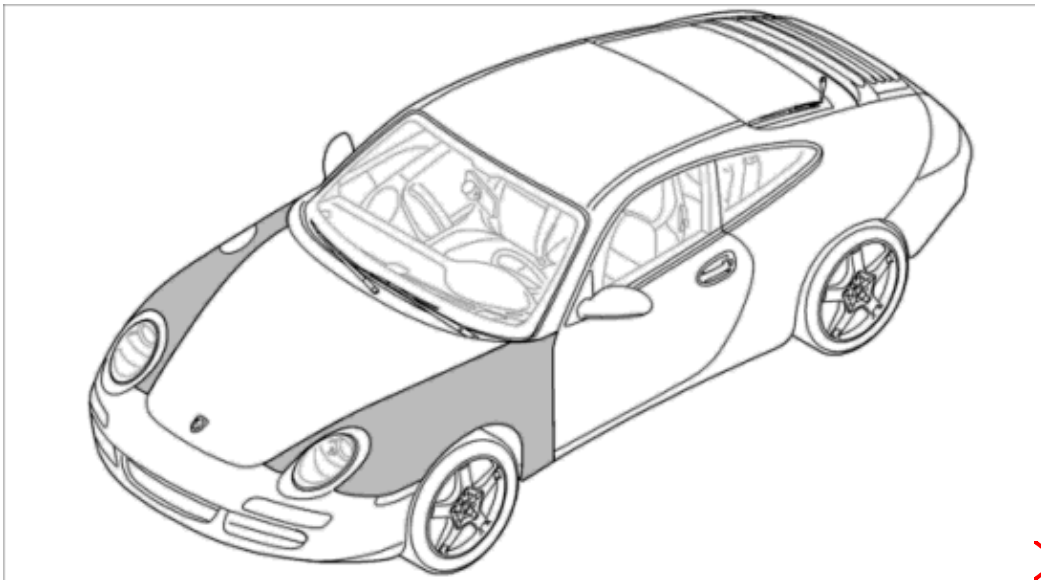


1. Stick in the protective film **-17-** .

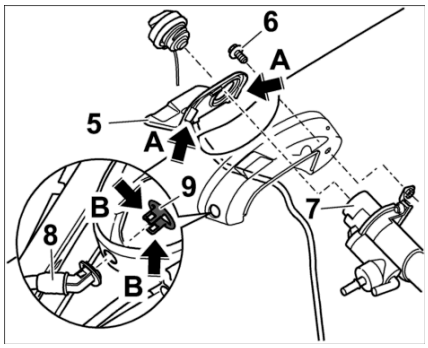
Installing retaining strip

Installation Location:

Main illustration for removing and installing wing



Installing retaining strip



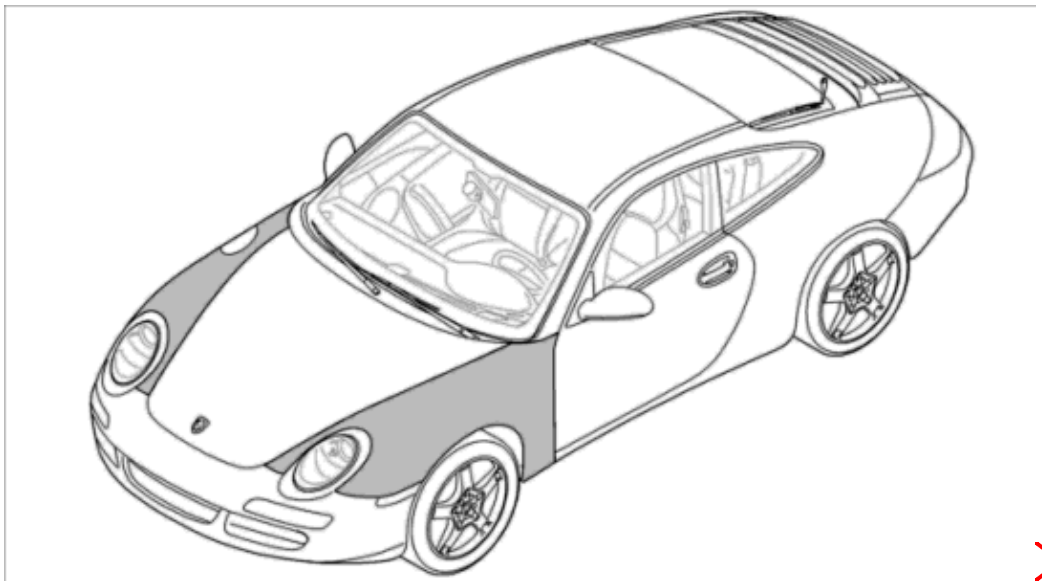
1. Clip fastening nuts **-16-** into place. Fix retaining strip **-15-** on the wing up against the stop and tighten with the fastening nuts **-14-** . Tightening torque →**Tightening torque: 2.0 ftlb.**

Fastening tank filler neck

Installation Location:

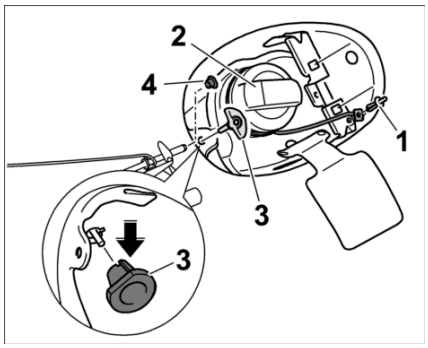
Main illustration for removing and installing wing

Fastening tank filler neck



Note

- *The following points apply only to the right wing.*



1. Install angled pipe **-8-** . Press in the plastic clip **-9-** until the locking tabs **-B-** engage audibly.
2. Tighten fastening screw **-6-** on tank filler neck **-7-** . Tightening torque →**Tightening torque: 7.5 ftlb.**
3. Press in the locking tabs **-A-** of the sleeve **-5-** until they engage audibly.

Installing fuel tank cap

Installation Location:

Main illustration for removing and installing wing

Installing fuel tank cap

Note

- *The following points apply only to the right wing.*

1. Press in plastic expansion rivet **-1-** on fuel tank cap **-2-** . Then clip in rubber stop **-3-** and rubber sleeve **-4-** .

Removing front wheel housing liner

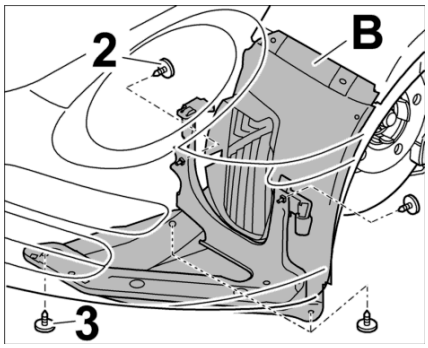
Remove front wheel housing liner - front section



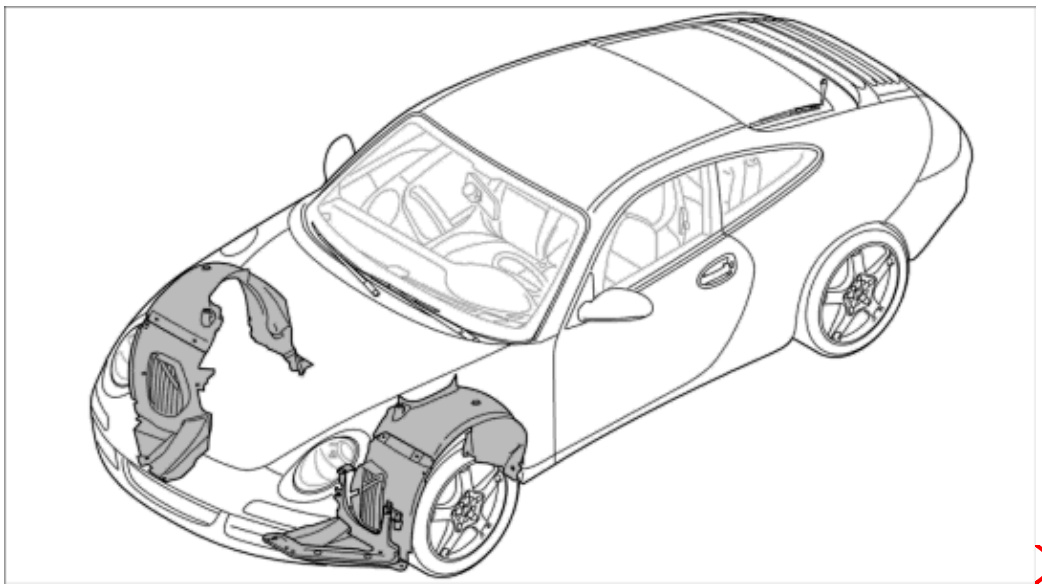
Installation Location:

Installation position of front wheel housing liner

Note

The front part of the wheel housing liner can also be removed without disassembling the front wheels.

Removing wheel housing liner part B

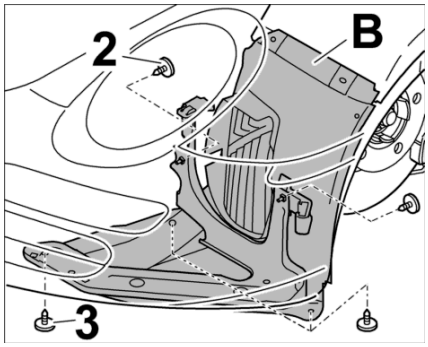


1. Unscrew fastening screws **-2, 3-** and remove wheel housing liner **-B-** .

top of page

Installing front wheel housing liner

Install front wheel housing liner - front section

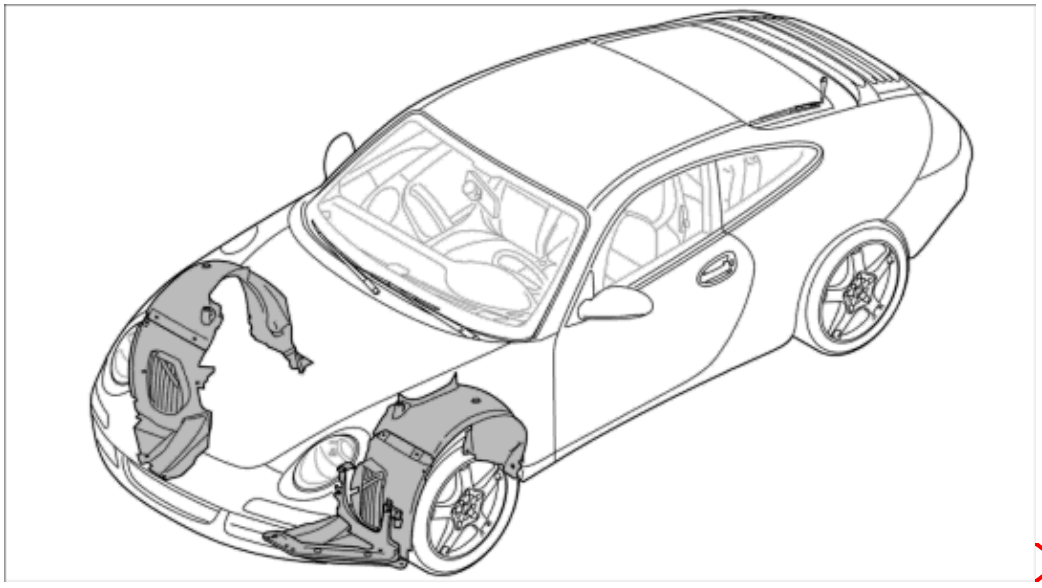


Installation Location:

Installation position of front wheel housing liner

Note

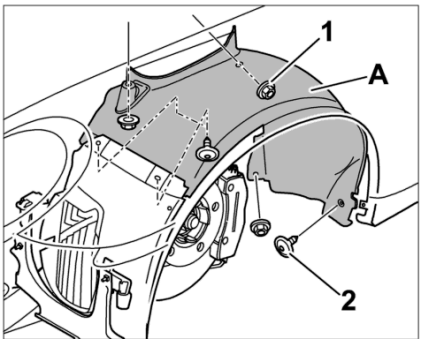
- *Push in wheel housing liner toward the outside up to contact in wing stop position.*
- *Ensure that the right wheel housing liner is guided through the opening on the wheel well.*



Fasten wheel housing liner part B

1. Insert wheel housing liner **-B-** .
2. Screw in fastening screws **-2-** and tighten →**Final tightening: 2 (1.5) Nm (ftlb.)** .
3. Screw in fastening screws **-3-** and tighten →**Final tightening: 2.8 (1.8) Nm (ftlb.)** .

Installing front wheel housing liner - rear section



Installation Location:

Installation position of front wheel housing liner

Note

- *Push in wheel housing liner toward the outside up to contact in wing stop position.*
- *Ensure that the right wheel housing liner is guided through the opening on the wheel well.*

Removing front wheel housing liner - rear section

1. Insert wheel housing liner **-A-** .
2. Screw on fastening nuts **-1-** and tighten to the specified tightening torque →**Final tightening: 1.5 (1.0 ftlb.) Nm** .
3. Screw in fastening screws **-2-** and tighten to the specified tightening torque →**Final tightening: 2 (1.5 ftlb.) Nm** .

WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**

- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

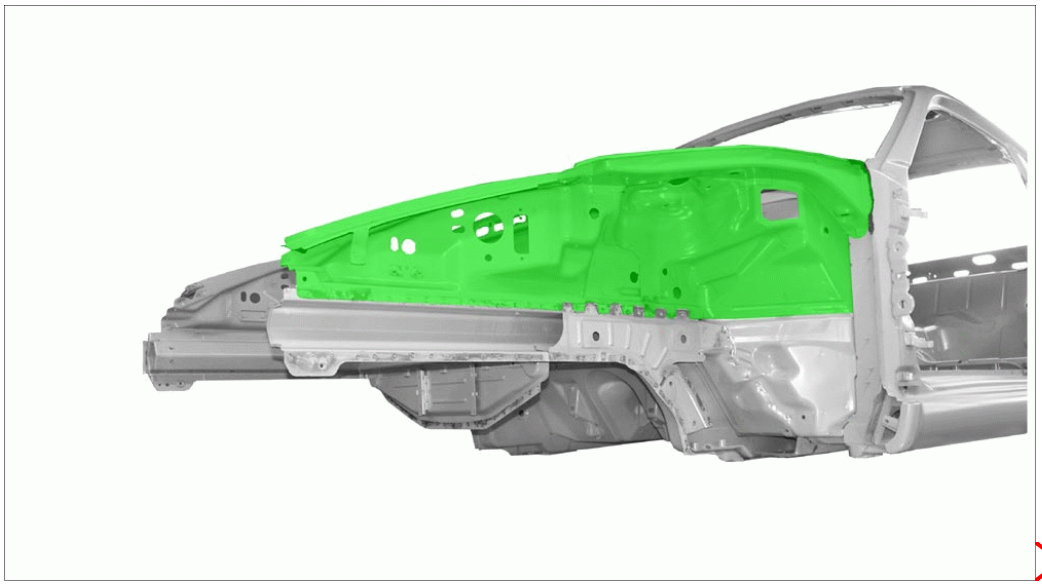
Preliminary work for body repairs with alignment bench

Preliminary work for body repairs with alignment bench



1. Removing accessories in the repair area
1.1. Remove accessories in the repair area according to the extent of damage to the vehicle.
2. Equipping alignment bench with straightening kit
2.1. Equip alignment bench with the basic straightening attachments according to the plans included with the straightening attachments.
3. Placing vehicle on the alignment bench
3.1. Position vehicle on alignment bench, align according to the reference holes and bolt firmly to the attachment set.
4. Covering accessories adjacent to the vehicle repair area
4.1. Cover all accessories remaining on the vehicle and the neighbouring areas with fire-proof, protective covers.
5. Reshaping connection area of the sheetmetal parts to be replaced
6. Exposing welding areas
6.1. Remove undersealing, paint, etc. from the welding areas of the body with a hot-air gun or rotary brush.

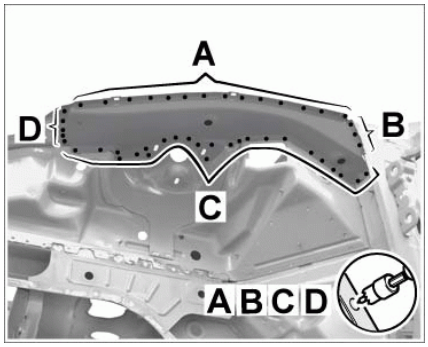
Removing front wheel housing

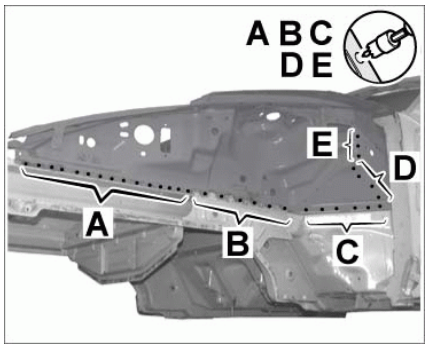


Removing reinforcement for front wheel housing

Installation Location:

Installation position of front wheel housing

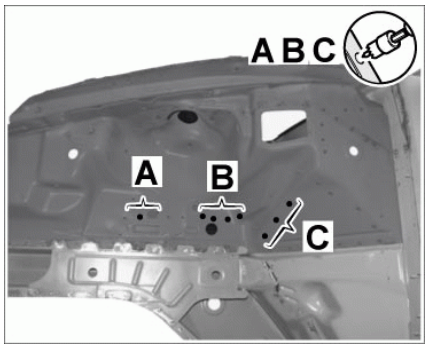
1. Remove outer front side member. →507755 Replacing outer front side member - section on "Removing"



Removing reinforcement for front wheel housing

2. Mill off spotwelds.

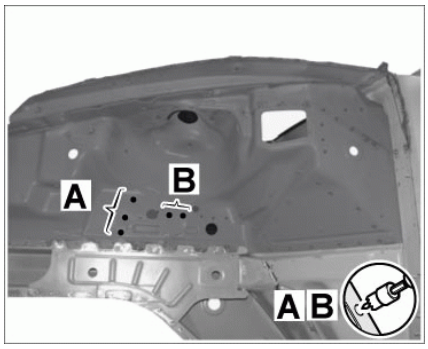
2.1. Mill off spotwelds in areas **-A, B, C, D-** using a spotweld cutter.



Removing front wheel housing

Cutting the spotwelds

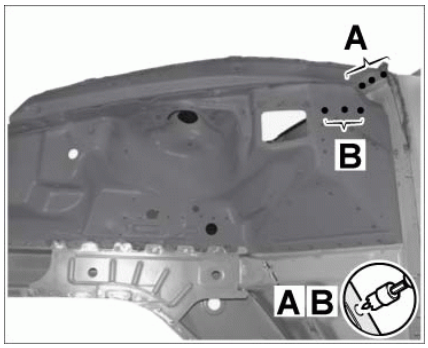
1. Mill off spotwelds.



1.1. Mill off spotwelds in areas **-A, B, C, D, E-** using a spotweld cutter.

Cutting the spotwelds

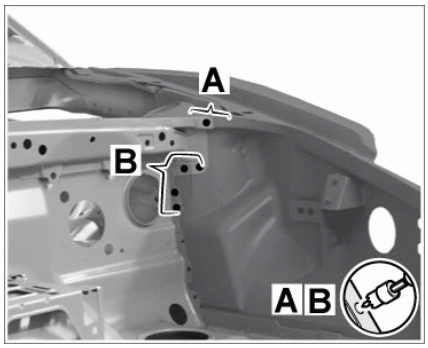
2. Mill off spotwelds.



2.1. Mill off spotwelds in areas **-A, B, C-** using a spotweld cutter.

Cutting the spotwelds

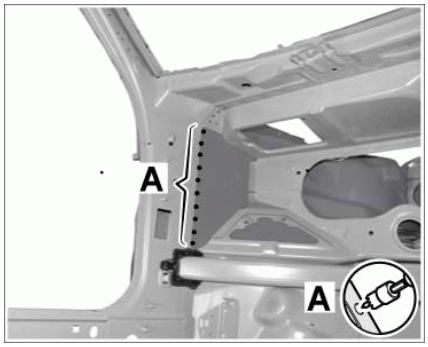
3. Mill off spotwelds.



3.1. Mill off spotwelds in areas **-A-** and **-B-** using a spotweld cutter (2 plate thicknesses).

Cutting the spotwelds

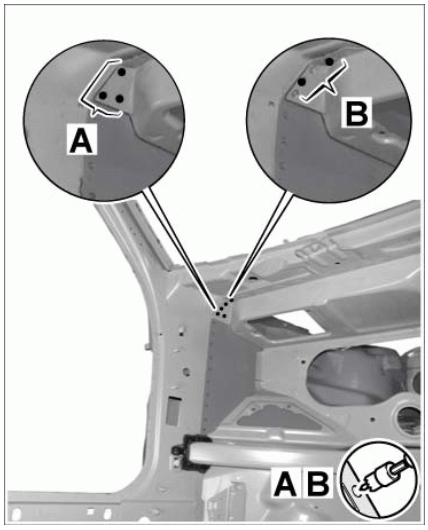
4. Mill off spotwelds.



4.1. Mill off spotwelds on reinforcement for wheel housing in areas **-A-** and **-B-** using a spotweld cutter.

Cutting the spotwelds

5. Mill off spotwelds.



5.1. Mill off spotwelds in areas **-A-** and **-B-** using a spotweld cutter.

Cutting the spotwelds

6. Mill off spotwelds.

6.1. Mill off spot welds in area **-A-** for the hinge pillar using a spotweld cutter.

Cutting the spotwelds

7. Mill off spotwelds.

7.1. Mill off spotwelds in area **-A-** using a spotweld cutter (1 plate thickness).

7.2. Mill off spotwelds in area **-B-** using a spotweld cutter (2 plate thicknesses).

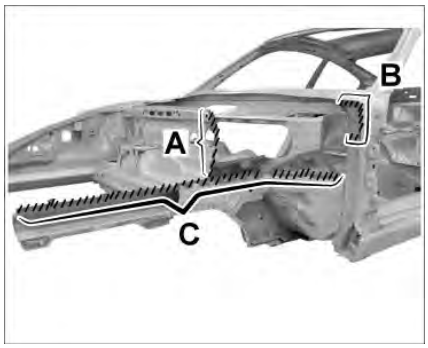
Preparing connection areas of body for installation of front wheel housing

Safety instructions for flying sparks during grinding and welding work

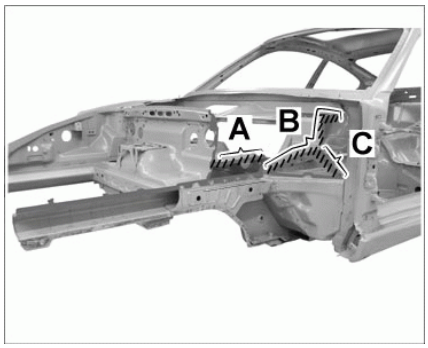
ATTENTION



Danger of explosion and fire from flying sparks during grinding and welding work!

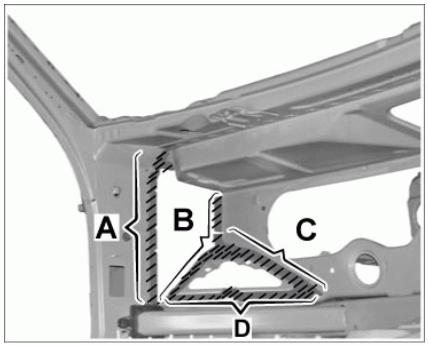
- **Danger of injury and danger of damage to vehicle parts and other vehicles due to flying sparks**

→ Cover vehicle parts such as battery, fuel system, paintwork, glass and passenger compartment parts with fire-proof covers and, if necessary, remove batteries and fuel-carrying components.



→ No other vehicles may be left unprotected in areas used for body repair!

Preparing connection areas of body for installing front wheel housing



Cleaning connection areas

1. Clean undersealing, adhesive residue and paint off the body connecting flanges in the marked areas **-A, B, C-** using a hot-air gun or rotary brush. Grind the connecting flanges until bare.

Cleaning connection areas

2. Clean undersealing, adhesive residue and paint off the body connecting flanges in the marked areas **-A, B, C-** using a hot-air gun or rotary brush. Grind the connecting flanges until bare.

Cleaning connection areas

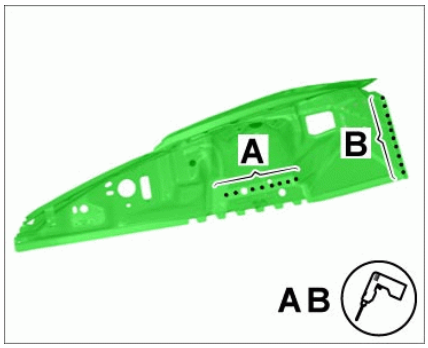
3. Clean undersealing, adhesive residue and paint off the body connecting flanges in the marked areas **-A, B, C, D-** using a hot-air gun or rotary brush. Grind the connecting flanges until bare.
4. Coat spot-weld flange areas with zinc powder paint.

4.1. Coat all spot-weld flange areas with zinc powder paint.

top of page

Fitting front wheel housing and preparing for installation

Safety instructions for sharp-edged body and unit parts

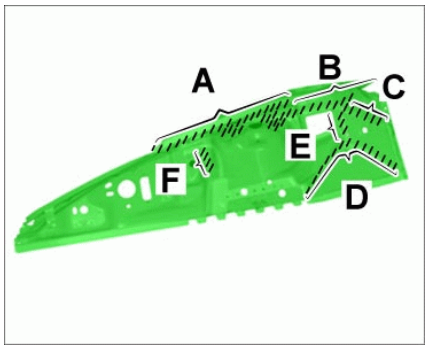


ATTENTION

Danger of injury! Sharp-edge burrs on body and unit parts!

- **Injuries from sharp edges on body and unit parts.**

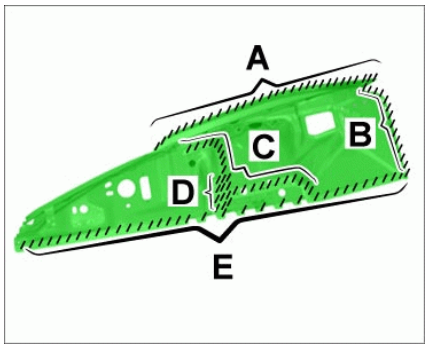
→ Wear protective gloves when working in the area of sharp-edged body and unit parts!



Fitting front wheel housing and preparing for installation

Drilling holes for plug welding using inert gas

1. Drill holes for plug welding using inert gas.



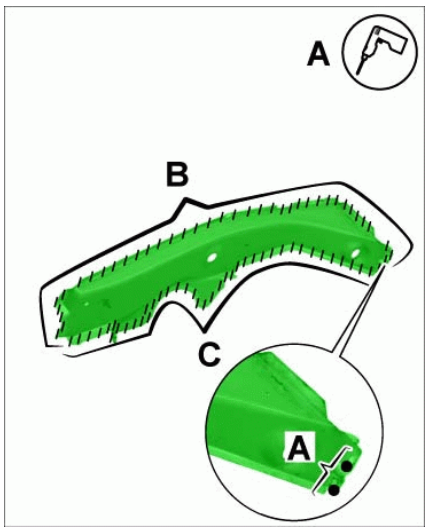
1.1. Drill holes (Ø = 7 mm) in areas **-A-** and **-B-** for plug welding using inert gas. Maintain spacing between the bores as on the old part.

Cleaning the welding areas

2. Clean the welding areas

2.1. Grind both sides of the connecting flanges of the front wheel housing in the marked areas **-A, B, C, D, E, F-** until bare using a rotary brush.

Cleaning the welding areas



3. Cleaning the welding areas

3.1. Grind both sides of the connecting flanges of the front wheel housing in the marked areas **-A, B, C, D ,E-** until bare using a rotary brush.

4. Coat spot-weld flange areas with zinc powder paint.

4.1. Coat all spot-weld flange areas with zinc powder paint.

Preparing reinforcement for front wheel housing for installation

Preparing reinforcement for front wheel housing

1. Prepare reinforcement for front wheel housing.

1.1. Drill holes (Ø = 7 mm) in area **-A-** for plug welding using inert gas. Maintain spacing between the bores as on the old part.

1.2. Grind both sides of the connecting flanges of the front wheel housing in the marked areas **-B-** and **-C-** until bare using a rotary brush.

2. Coat spot-weld flange areas with zinc powder paint.

2.1. Coat all spot-weld flange areas with zinc powder paint.

top of page

Installing front wheel housing

Danger of injury when welding

DANGER

Risk of fatal injury from high voltage during electric welding!

- **Danger of explosion and fire when welding in the area of highly inflammable materials.**
- **Irritation to respiratory tracts from toxic zinc oxide emitted when welding galvanised steel!**
- **Danger of injury from unintentional triggering of pyrotechnical safety components!**
- **Danger of injury from weld spatters and UV light when welding!**

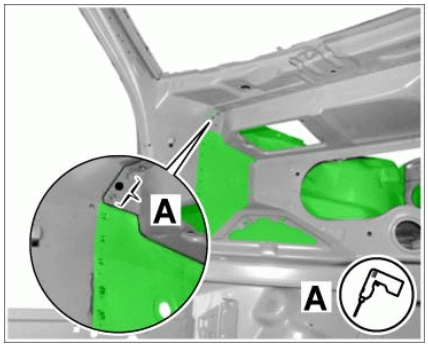
→ Do not perform welding work in a damp environment or on wet ground; there is a risk of fatal injury from the voltage being conducted through the human body. Persons with heart pacemakers should not perform welding work. Use insulating underlays.

→ Remove highly flammable materials from the work area; if necessary, remove units with fuel-carrying parts and protect work areas in the vehicle that are at risk of catching fire using fire-proof covers.

→ Ventilate the work area well.

→ Remove smoke gases with a suitable extraction system (refer to Workshop Equipment Manual).

→ Wear suitable protective equipment, such as protective clothing, gloves, a welding shield and, if necessary, a protective mask.

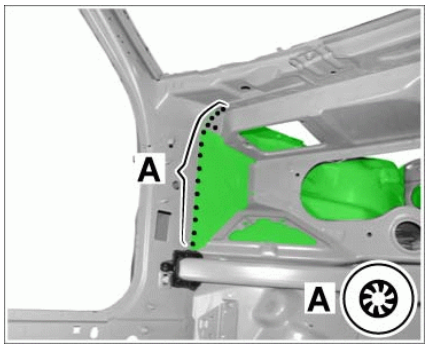


→ For welding work, always disconnect both terminals on the battery. In the case of welding work in the immediate vicinity of the control modules for pyrotechnical safety systems, remove the control modules before beginning work.

→ In addition, the guidelines of the welding equipment manufacturer and the legal accident prevention regulations and those of the mutual indemnity association (BGV D1) must be observed.

Installing front wheel housing

1. Fit the front wheel housing to the body.

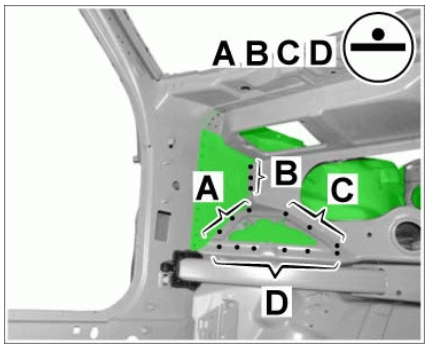


1.1. Place the front wheel housing against the body and secure to the straightening set.

Drilling holes for plug welding using inert gas

2. Drill hole for plug welding using inert gas.

2.1. After fitting in the new part, drill hole in area **-A-** by a further plate thickness.

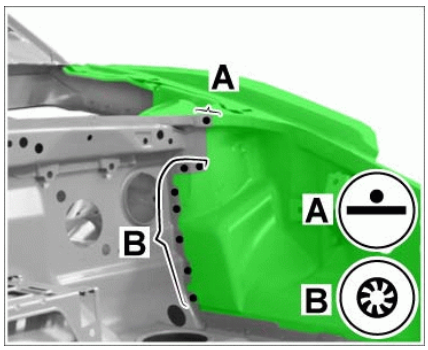


Welding in front wheel housing

Note

Determine the position of the new part and secure with tensioning clamps.
When butt welding body sheet panels with a sheet thickness of > 1.5 mm, there must be a welding slit width s = 1 x sheet thickness to guarantee the required welding quality (welding through).

3. Weld in front wheel housing.

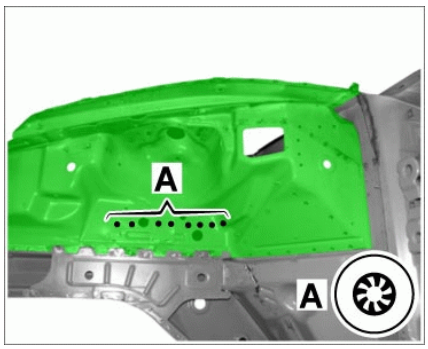


3.1. Plug-weld front wheel housing in area **-A-** using inert gas.

Welding in front wheel housing

4. Weld in front wheel housing.

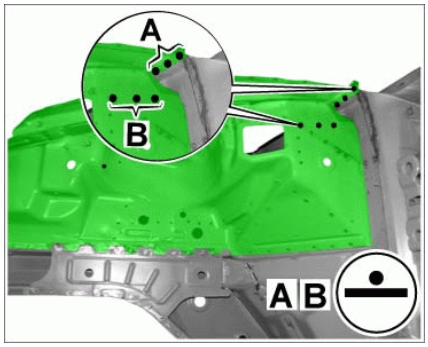
4.1. Resistance spot-weld front wheel housing in areas **-A, B, C, D-** .



Welding in front wheel housing

5. Weld in front wheel housing.

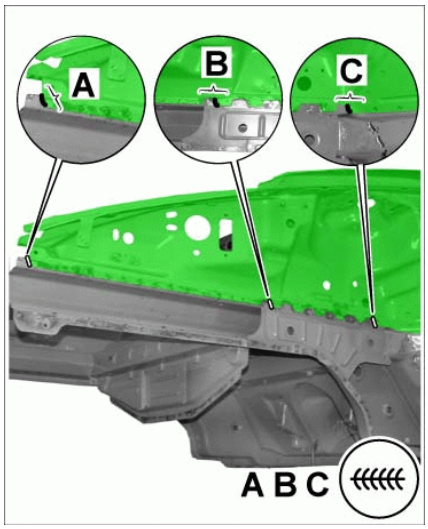
5.1. Resistance spot-weld front wheel housing in area **-A-** .



5.2. Plug-weld front wheel housing in area **-B-** using inert gas.

Welding in front wheel housing

6. Weld in front wheel housing.

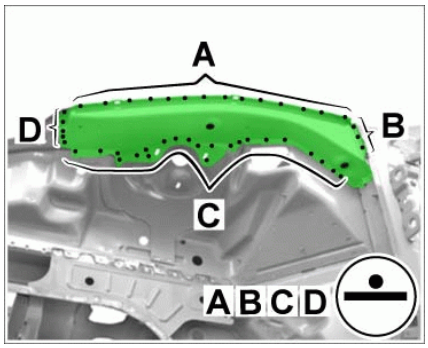


6.1. Plug-weld front wheel housing in area **-A-** using inert gas.

Welding in front wheel housing

7. Weld in front wheel housing.

7.1. Resistance spot-weld front wheel housing in areas **-A-** and **-B-** .

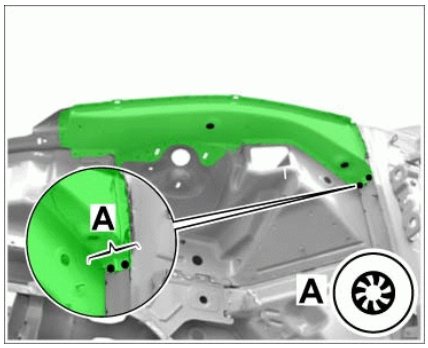


Welding in front wheel housing

8. Weld in front wheel housing.

8.1. Apply a full weld to the front wheel housing in areas **-A, B, C-** using inert gas.

Installing reinforcement for front wheel housing



Welding in reinforcement for front wheel housing

Note

Determine the position of the new part and secure with tensioning clamps.
When butt welding body sheet panels with a sheet thickness of > 1.5 mm, there must be a welding slit width s = 1 x sheet thickness to guarantee the required welding quality (welding through).

1. Weld in reinforcement for front wheel housing.

1.1. Resistance spot-weld reinforcement for front wheel housing in areas **-A, B, C, D-** .

Welding in reinforcement for front wheel housing

2. Weld in reinforcement for front wheel housing.

2.1. Plug-weld reinforcement for front wheel housing in area **-A-** using inert gas.

3. Install front outer side member. →507755 Replacing outer front side member - section on "Installing"

top of page

Subsequent work

Subsequent work for body repairs

1. Removing vehicle from straightening bench
2. Cleaning spot-welded joints and sheetmetal flanges with a wire brush
3. Priming flange areas with 2K primer
4. Restore standard sealing with body sealant
   →*501000 Seam seal*
5. Restore standard undersealing with underbody sealant
   →*501000 Undersealing*
6. Painting repair area and adjacent surfaces, if necessary
7. Install removed add-on parts in the repair area
8. Apply cavity preservation.

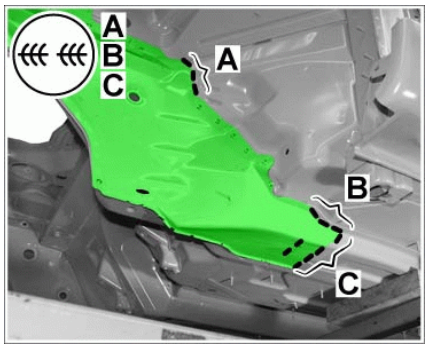
Note

Determine the position of the new part and secure with tensioning clamps.
When butt welding body sheet panels with a sheet thickness of > 1.5 mm, there must be a welding slit width s = 1 x sheet thickness to guarantee the required welding quality (welding through).

2. Weld in the outer front side member.

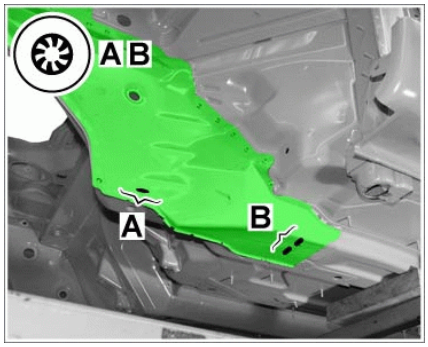
2.1. Plug-weld the outer front side member in area **-A-** using inert gas.



Welding in outer front side member

3. Weld in the outer front side member.

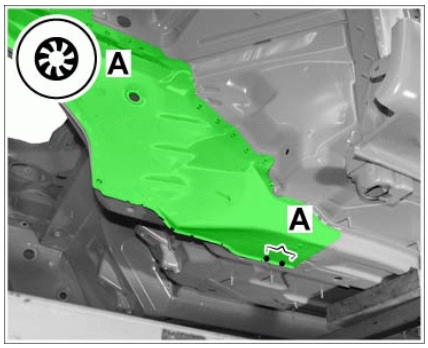
3.1. Apply a full weld to the outer front side member in area **-A-** using inert gas (interrupted).



3.2. Apply a full weld to the outer front side member in area **-B-** using inert gas.

Welding in outer front side member

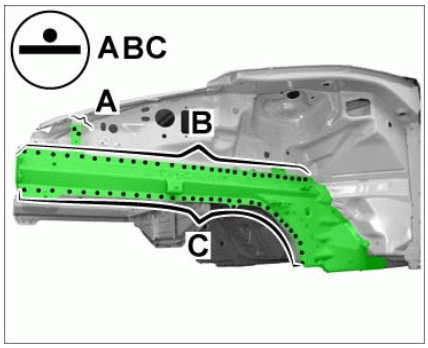
4. Weld in the outer front side member.



4.1. Apply a full weld to the outer front side member in area **-A, B, C-** using inert gas (interrupted).

Welding in outer front side member

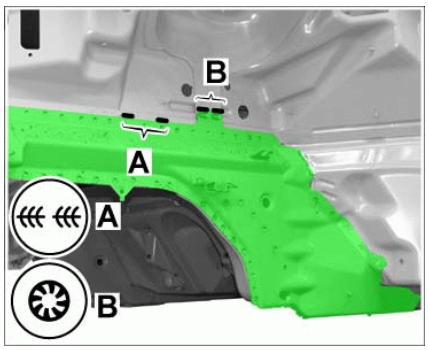
5. Weld in the outer front side member.



5.1. Plug-weld the outer front side member in areas **-A-** and **-B-** using inert gas (through existing slots).

Welding in outer front side member

6. Weld in the outer front side member.



6.1. Plug-weld the outer front side member in area **-A-** using inert gas.

Welding in outer front side member

7. Weld in the outer front side member.

7.1. Resistance spot-weld outer front side member in area **-A, B, C-** using **inverter-welding equipment ATL Inverterspot WE1194**.

Welding in outer front side member

8. Weld in outer front side member.

8.1. Apply a full weld to the outer front side member in area **-A-** using inert gas (interrupted).

8.2. Plug-weld the outer front side member in area **-B-** using inert gas.

9. Install floor front section. →502055 Replacing floor front section - section on "Installing"

10. Install end plate. →501055 Replacing end plate - section on "Installing"

997110, 997111, 997120, 997121, 997310, 997311, 997320, 997321, 997410, 997411, 997430, 997431, 997610, 997611, 997620, 997621

as of MY 2005
Country C00, C02, C05, C07, C08, C09, C10, C11, C12, C13, C14, C15, C16, C18, C19, C20, C21, C22, C23, C24, C25, C26, C27, C28, C32, C33, C34, C35, C36, C37, C38, C39, C45, C46, C98, C99

WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**

- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

Preliminary work for body repairs with alignment bench

Preliminary work for body repairs with alignment bench

1. Removing accessories in the repair area

1.1. Remove accessories in the repair area according to the extent of damage to the vehicle.

2. Equipping alignment bench with straightening kit

2.1. Equip alignment bench with the basic straightening attachments according to the plans included with the straightening attachments.

3. Placing vehicle on the alignment bench

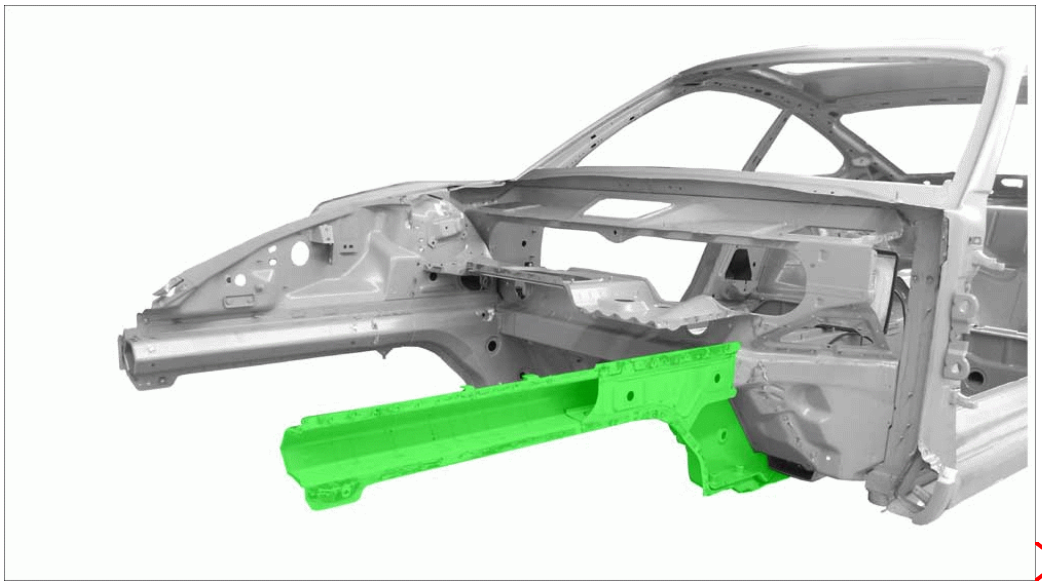
3.1. Position vehicle on alignment bench, align according to the reference holes and bolt firmly to the attachment set.

4. Covering accessories adjacent to the vehicle repair area

4.1. Cover all accessories remaining on the vehicle and the neighbouring areas with fire-proof, protective covers.

5. Reshaping connection area of the sheetmetal parts to be replaced

6. Exposing welding areas



6.1. Remove undersealing, paint, etc. from the welding areas of the body with a hot-air gun or rotary brush.

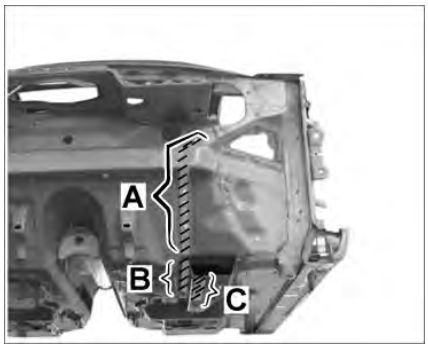
Preparing connection areas of body for installation of inner front side member

Safety instructions for flying sparks during grinding and welding work

ATTENTION



Danger of explosion and fire from flying sparks during grinding and welding work!

- **Danger of injury and danger of damage to vehicle parts and other vehicles due to flying sparks**

→ Cover vehicle parts such as battery, fuel system, paintwork, glass and passenger compartment parts with fire-proof covers and, if necessary, remove batteries and fuel-carrying components.

→ No other vehicles may be left unprotected in areas used for body repair!

Preparing connection areas of body for installing inner front side member

Cleaning the welding areas

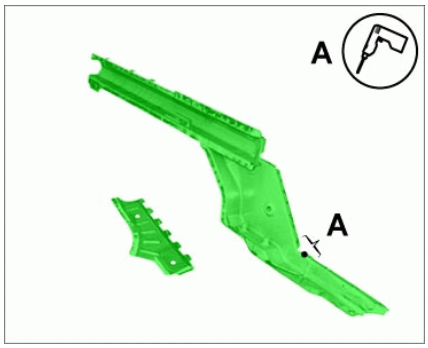
1. Clean undersealing, adhesive residue and paint off the body connecting flanges in the marked areas **-A, B, C-** using a hot-air gun or rotary brush. Grind the connecting flanges until bare.
2. Coat spot-weld flange areas with zinc powder paint.

2.1. Coat all spot-weld flange areas with zinc powder paint.

top of page

Fitting inner front side member and preparing for installation

Safety instructions for sharp-edged body and unit parts

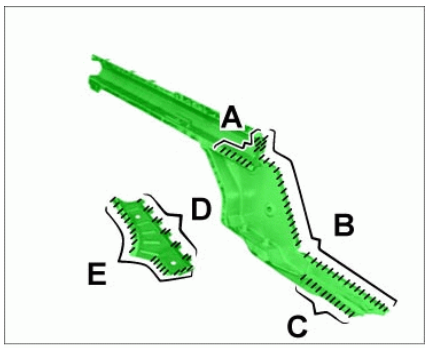


ATTENTION

Danger of injury! Sharp-edge burrs on body and unit parts!

- **Injuries from sharp edges on body and unit parts.**

→ Wear protective gloves when working in the area of sharp-edged body and unit parts!



Fitting inner front side member and preparing for installation

Drilling holes for plug welding using inert gas

1. Drill holes for plug welding using inert gas.

1.1. Drill holes (Ø = 7 mm) in the area for plug welding using inert gas.

Cleaning the welding areas

2. Cleaning the welding areas

2.1. Grind both sides of the connecting flanges of the inner side member and the reinforcement plate in the marked areas **-A, B, C, D-** until bare using a rotary brush.

3. Coat spot-weld flange areas with zinc powder paint.

3.1. Coat all spot-weld flange areas with zinc powder paint.

top of page

Installing inner front side member

Danger of injury when welding

 DANGER

Risk of fatal injury from high voltage during electric welding!

- **Danger of explosion and fire when welding in the area of highly inflammable materials.**
- **Irritation to respiratory tracts from toxic zinc oxide emitted when welding galvanised steel!**
- **Danger of injury from unintentional triggering of pyrotechnical safety components!**
- **Danger of injury from weld spatters and UV light when welding!**

→ Do not perform welding work in a damp environment or on wet ground; there is a risk of fatal injury from the voltage being conducted through the human body. Persons with heart pacemakers should not perform welding work. Use insulating underlays.

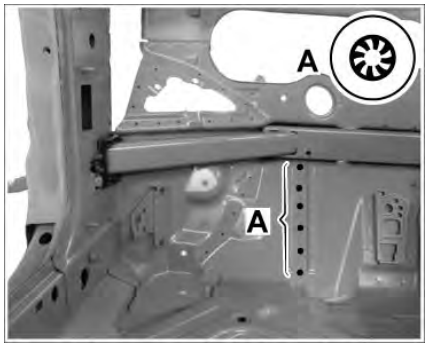
→ Remove highly flammable materials from the work area; if necessary, remove units with fuel-carrying parts and protect work areas in the vehicle that are at risk of catching fire using fire-proof covers.

→ Ventilate the work area well.

→ Remove smoke gases with a suitable extraction system (refer to Workshop Equipment Manual).

→ Wear suitable protective equipment, such as protective clothing, gloves, a welding shield and, if necessary, a protective mask.

→ For welding work, always disconnect both terminals on the battery. In the case of welding work in the immediate vicinity of the control modules for pyrotechnical safety systems, remove the control modules before beginning work.



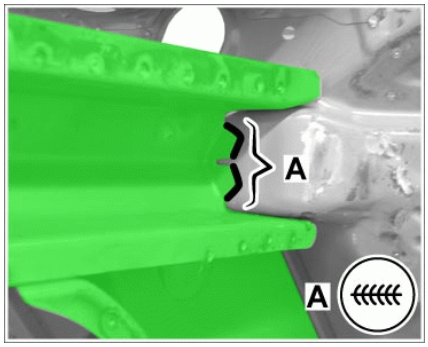
→ In addition, the guidelines of the welding equipment manufacturer and the legal accident prevention regulations and those of the mutual indemnity association (BGV D1) must be observed.

Installing inner front side member

1. Fit outer front side member to the body.

1.1. Place the outer front side member on the body and secure to the straightening

set.

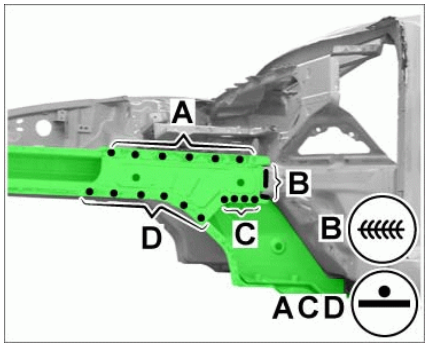


Welding in inner front side member

Note

Determine the position of the new part and secure with tensioning clamps.
When butt welding body sheet panels with a sheet thickness of > 1.5 mm, there must be a welding slit width s = 1 x sheet thickness to guarantee the required welding quality (welding through).

2. Weld in inner front side member.

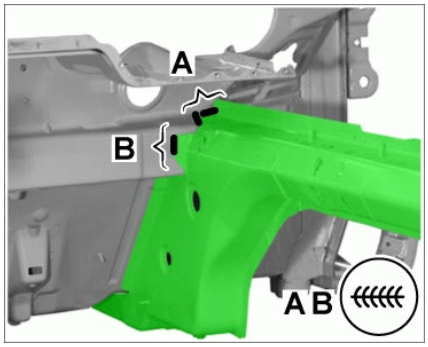


2.1. Plug-weld the inner front side member in area **-A-** using inert gas.

Welding in inner front side member

3. Weld in inner front side member.

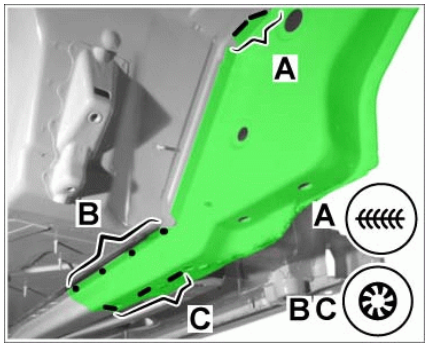
3.1. Apply a full weld to the outer front side member in area **-A-** using inert gas.



Welding in reinforcement plate

4. Weld in the reinforcement plate.

4.1. Resistance spot-weld the reinforcement plate in areas **-A, C, D-** .



4.2. Apply a full weld to the reinforcement plate in area **-B-** using inert gas.

Welding in inner front side member

5. Weld in inner front side member.

5.1. Apply a full weld to the inner front side member in area **-A, B-** using inert gas.

Welding in inner front side member

6. Weld in inner front side member.

6.1. Apply a full weld to the inner front side member in area **-A-** using inert gas.

6.2. Plug-weld the inner front side member in area **-B-** using inert gas.

6.3. Plug-weld the inner front side member in area **-C-** using inert gas (through existing slots).

7. Install front wheel housing. →507455 Replacing wheel housings and side members - section on "Installing"

8. Install floor front section. →502055 Replacing floor front section - section on "Installing"

9. Install end plate. →501055 Replacing end plate - section on "Installing"

top of page

Subsequent work

Subsequent work for body repairs

1. Remove vehicle from the alignment bench.

2. Clean welded joints and sheetmetal flanges with a wire brush.
3. Prime flange areas with 2K primer.
4. Restore standard sealing with body sealant.
   →*5 Seam sealing*
5. Restore standard undersealing with underbody sealant.
   →*5 Underbody protection*
6. Paint repair area and adjacent surfaces, if necessary.
7. Install removed accessories in the repair area.
8. Apply cavity preservation.

Preliminary work for body repairs with alignment bench

1. Removing accessories in the repair area

1.1. Remove accessories in the repair area according to the extent of damage to the vehicle.

2. Equipping alignment bench with straightening kit

2.1. Equip alignment bench with the basic straightening attachments according to the plans included with the straightening attachments.

3. Placing vehicle on the alignment bench

3.1. Position vehicle on alignment bench, align according to the reference holes and bolt firmly to the attachment set.

4. Covering accessories adjacent to the vehicle repair area

4.1. Cover all accessories remaining on the vehicle and the neighbouring areas with fire-proof, protective covers.

5. Reshaping connection area of the sheetmetal parts to be replaced

6. Exposing welding areas

6.1. Remove undersealing, paint, etc. from the welding areas of the body with a hot-air gun or rotary brush.

Preliminary work for body repairs

Note

- *If it can be ensured there has been no deformation of the vehicle structure, the following repair can be carried out without the need of a straightening bench. In this case, the vehicle must not be raised when welding the component; it must stand on its wheels on an even surface.*

1. Removing add-on parts in the repair area

1.1. Remove add-on parts in the repair area according to the extent of damage to the vehicle.

2. Equipping straightening bench with straightening attachments

2.1. Equip straightening bench with the straightening attachments according to the plans included with the straightening attachments.

3. Placing vehicle on the straightening bench

3.1. Position vehicle on the straightening bench, align according to the reference holes and bolt firmly to the attachment set.

4. Covering add-on parts adjacent to the vehicle repair area

4.1. Cover all add-on parts remaining on the vehicle and the neighbouring areas with fire-proof, protective covers.

5. Reshaping connection area of the sheetmetal parts to be replaced

6. Exposing welding areas

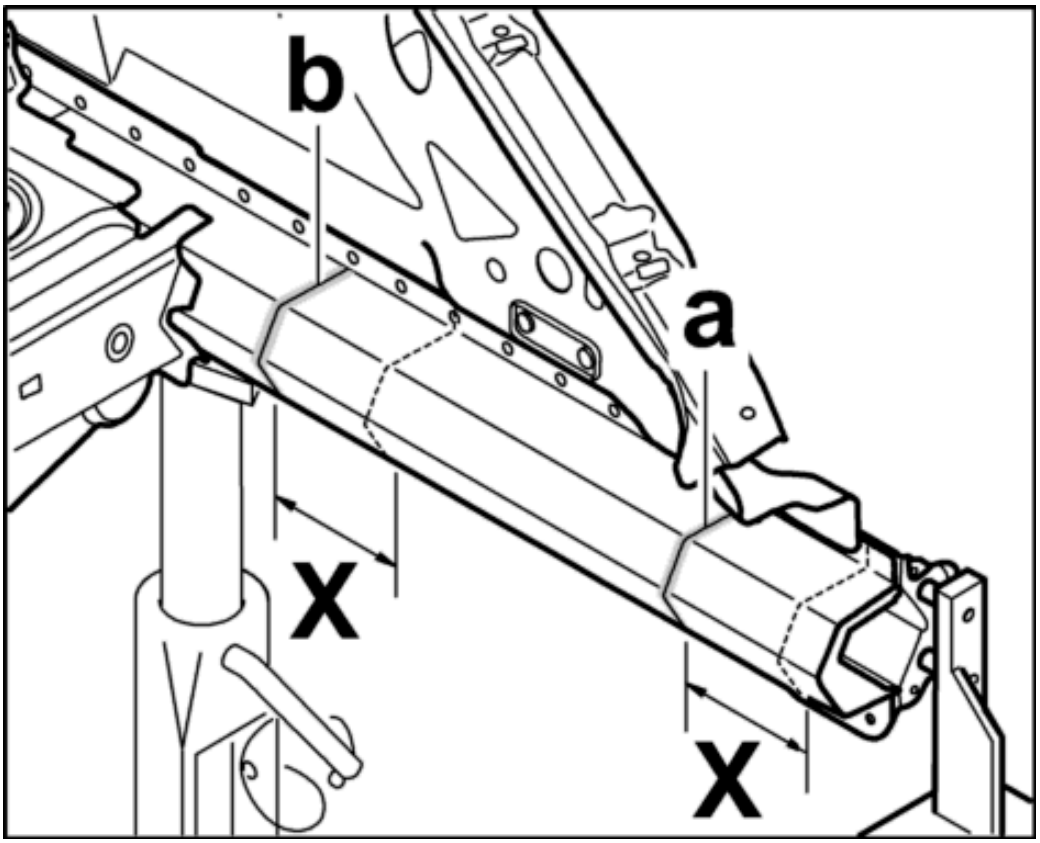
6.1. Remove undersealing, paint, etc. from the welding areas of the body with a hot-air gun or rotary brush.

Possible separation points

WARNING

Possible separation points on inner side member

- **Danger of material damage and injury**



→

The possible separation points on the inner side member are **30 mm in front of the tailored blanks (laser weld) against the direction of travel.**

1. Possible separation points

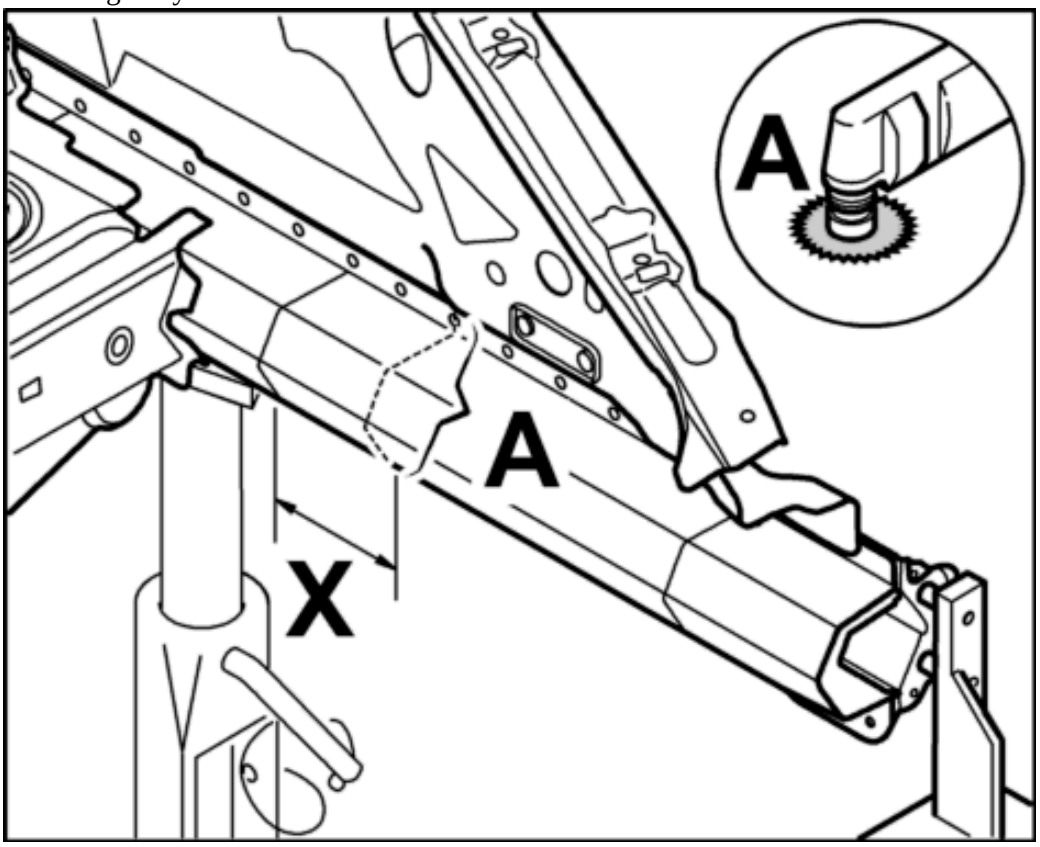
1.1. On front side member

1.2. The separation point on the inner side member must be in front of the tailored blank weld (laser weld) in area **a or b** at **dimension X = 30 mm**.

Possible separation points

Removing front side member (section)

1. Remove wheel housing if necessary. *→507441 21 Repairing front wheel housing - removing*
2. Remove end plate. *→501019 21 Removing and installing front closing panel - removing*
3. Remove floor front section if necessary. →502055 Replacing floor front section - removing
4. Cutting off inner side member



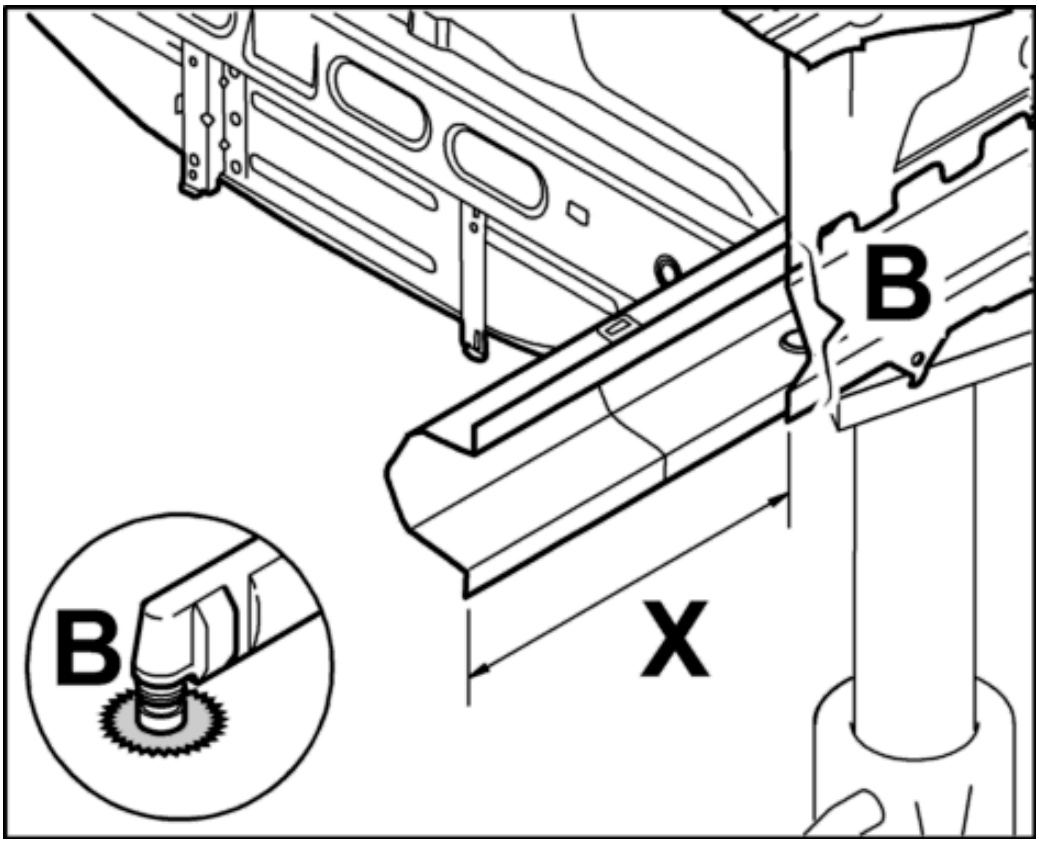
WARNING

Possible separation points on inner side member

- **Danger of material damage and injury**

→ The possible separation points on the inner side member are **30 mm in front of the tailored blanks (laser weld) against the direction of travel.**

4.1. In damaged area of inner side member **dimension X = 30 mm** in front of tailored blank (laser weld), cut off area **A** using body saw.



Cutting off inner side member

5. Cut off outer side member.

5.1.

Use the body saw to shorten outer side member in area **B** until there is an offset of **dimension X = 50 mm** between the inner/outer side members.

Cutting off outer side member

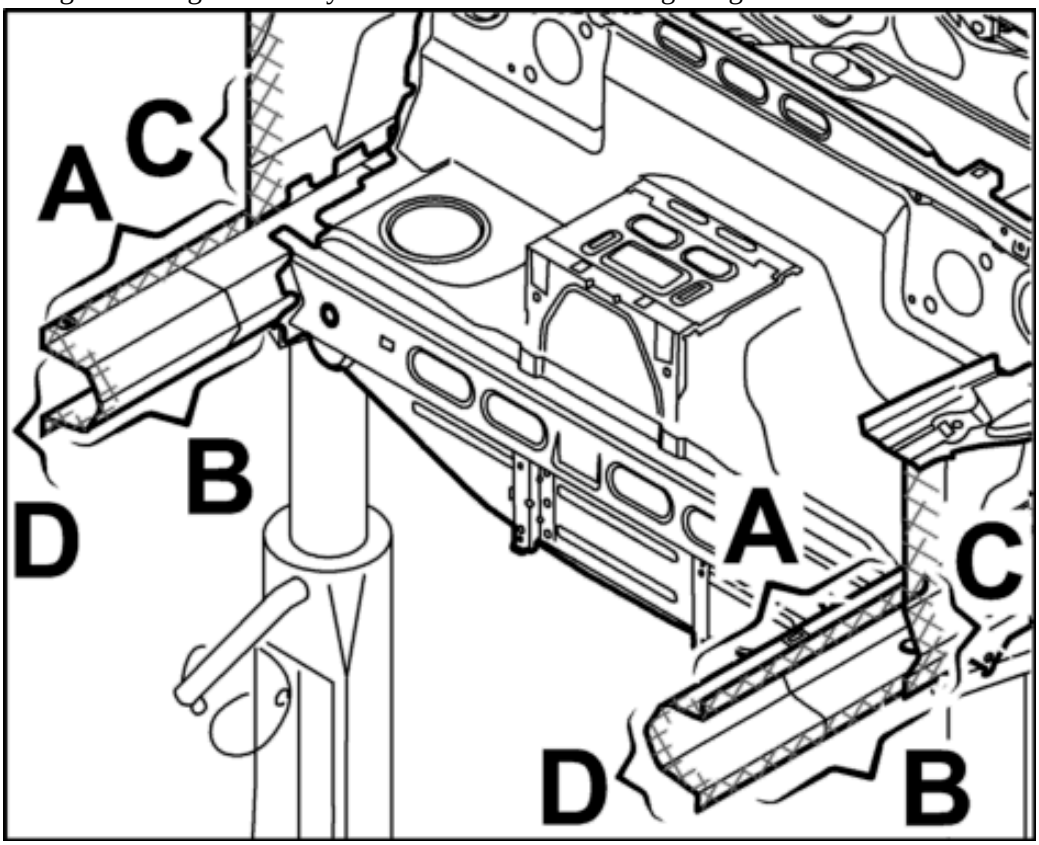
Preparing connection areas of body for installing front side members

Safety instructions for flying sparks during grinding and welding work

ATTENTION

Danger of explosion and fire from flying sparks during grinding and welding work!



- **Danger of injury and danger of damage to vehicle parts and other vehicles due to flying sparks**

→ Cover vehicle parts such as battery, fuel system, paintwork, glass and passenger compartment parts with fire-proof covers and, if necessary, remove batteries and fuel-carrying components.

→ No other vehicles may be left unprotected in areas used for body repair!

Preparing connection areas of body for installing front side members

1. Clean undersealing, adhesive residue and paint off body connecting flanges in the marked areas **A, B, C, D** using a hot-air gun or rotary brush. Grind the connecting flanges until bare.

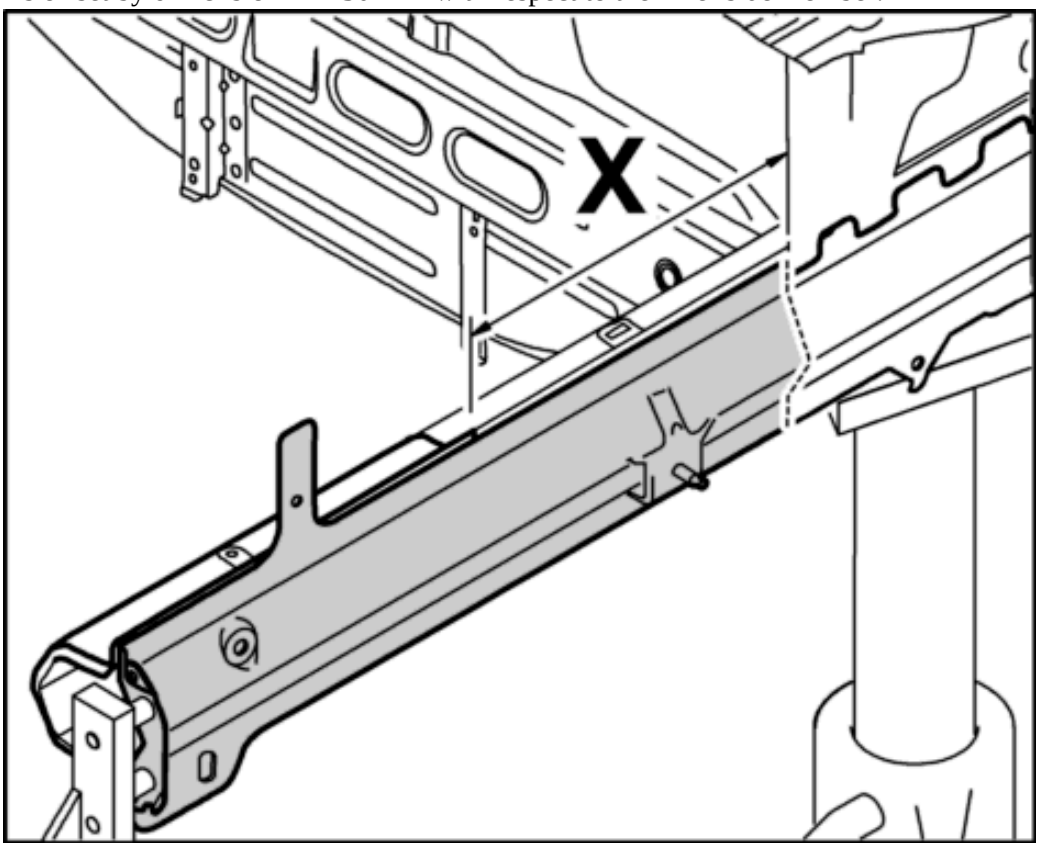
Grinding the body connecting flanges until bare

top of page

Fitting front side member and preparing for installation

Safety instructions for sharp-edged body and unit parts

ATTENTION



Danger of injury! Sharp-edge burrs on body and unit parts!

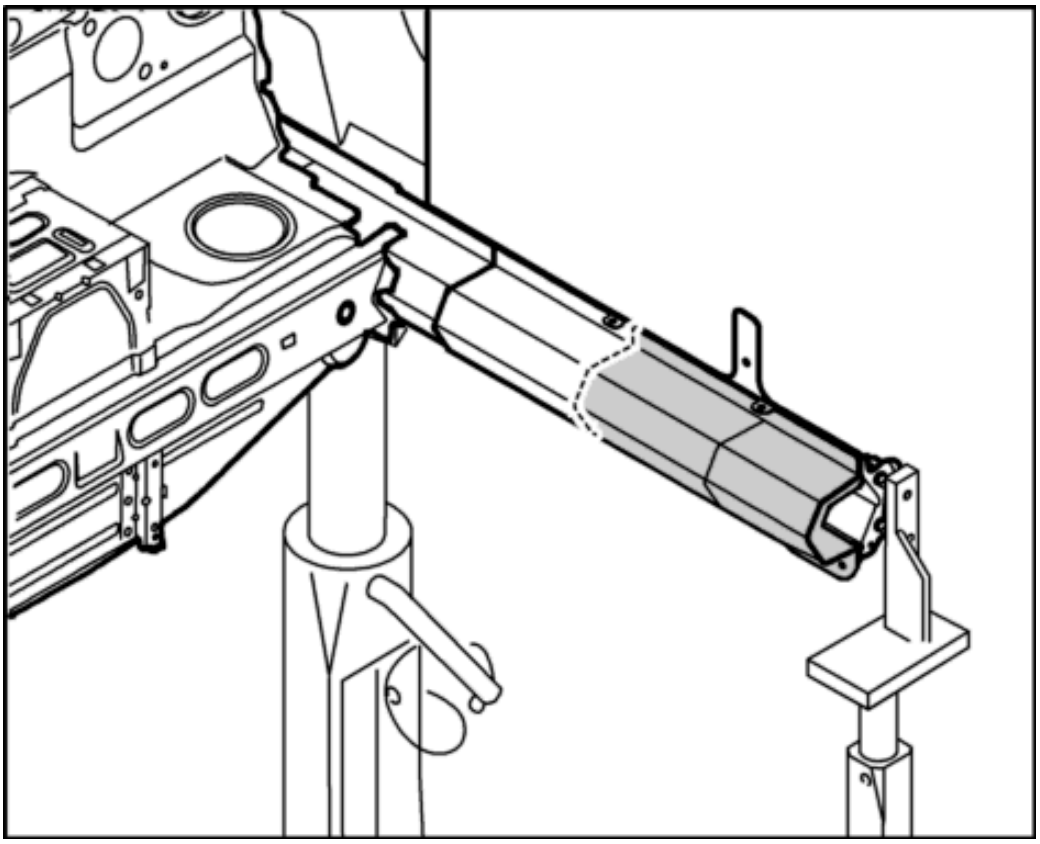
- **Injuries from sharp edges on body and unit parts.**

→ Wear protective gloves when working in the area of sharp-edged body and unit parts!

Fitting front side members and preparing for installation

1. Transfer cut to the front inner side members. Fasten the side member spare parts to the straightening attachments for the impact absorbers and adjust as required. Ensure that the outer side member is offset by **dimension X = 50 mm** with respect to the inner side member.

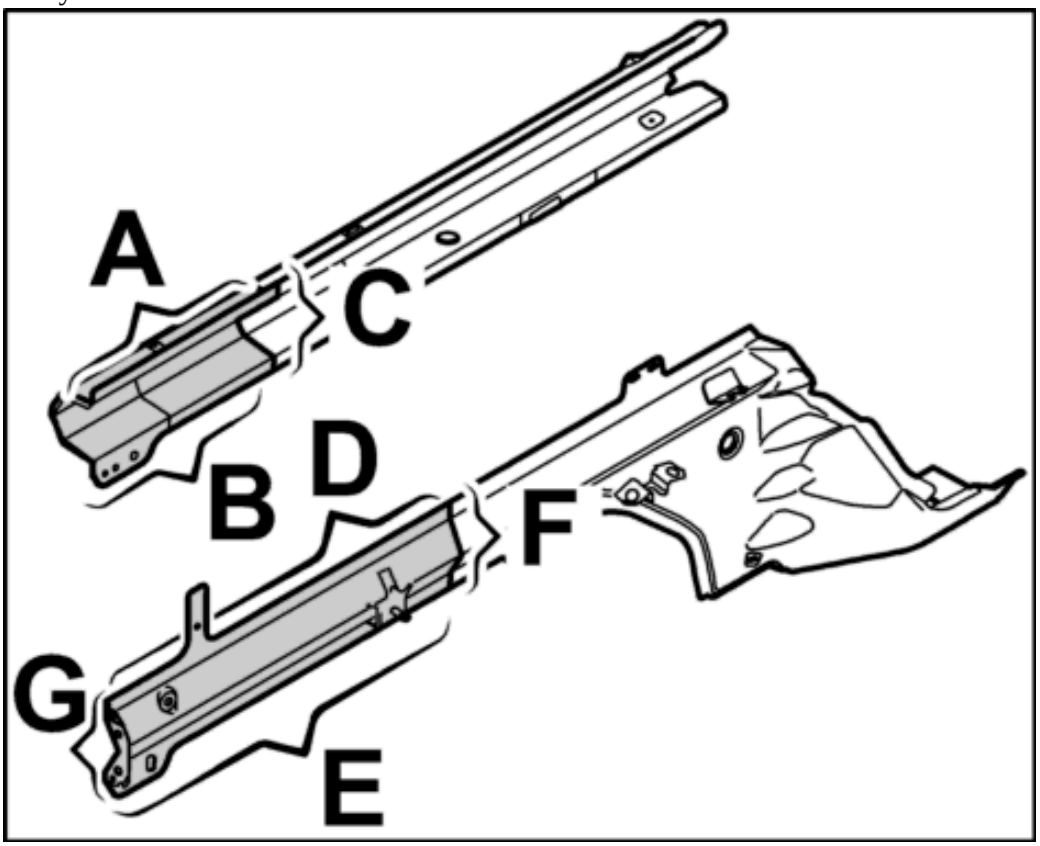
Adjusting front outer side members



WARNING

Possible separation points on inner side member

- **Danger of material damage and injury**



→ The possible separation points on the inner side member are **30 mm in front of the tailored blanks (laser weld) against the direction of travel.**

2. Transfer cut to the front inner side members.

Adjusting front inner side members

3. Remove the factory-applied primer on the welding areas of the spare parts in areas **A, B, C, D, E, F, G** using a rotary brush.

Danger of injury when welding

 DANGER

Risk of fatal injury from high voltage during electric welding!

- **Danger of explosion and fire when welding in the area of highly inflammable materials.**
- **Irritation to respiratory tracts from toxic zinc oxide emitted when welding galvanised steel!**
- **Danger of injury from unintentional triggering of pyrotechnical safety components!**
- **Danger of injury from weld spatters and UV light when welding!**

→ Do not perform welding work in a damp environment or on wet ground; there is a risk of fatal injury from the voltage being conducted through the human body. Persons with heart pacemakers should not perform welding work. Use insulating underlays.

→ Remove highly flammable materials from the work area; if necessary, remove units with fuel-carrying parts and protect work areas in the vehicle that are at risk of catching fire using fire-proof covers.

→ Ventilate the work area well.

→ Remove smoke gases with a suitable extraction system (refer to Workshop Equipment Manual).

→ Wear suitable protective equipment, such as protective clothing, gloves, a welding shield and, if necessary, a protective mask.

→ For welding work, always disconnect both terminals on the battery. In the case of welding work in the immediate vicinity of the control modules for pyrotechnical safety systems, remove the control modules before beginning work.

→ In addition, the guidelines of the welding equipment manufacturer and the legal accident prevention regulations and those of the mutual indemnity association (BGV D1) must be observed.

Safety instructions for flying sparks during grinding and welding work

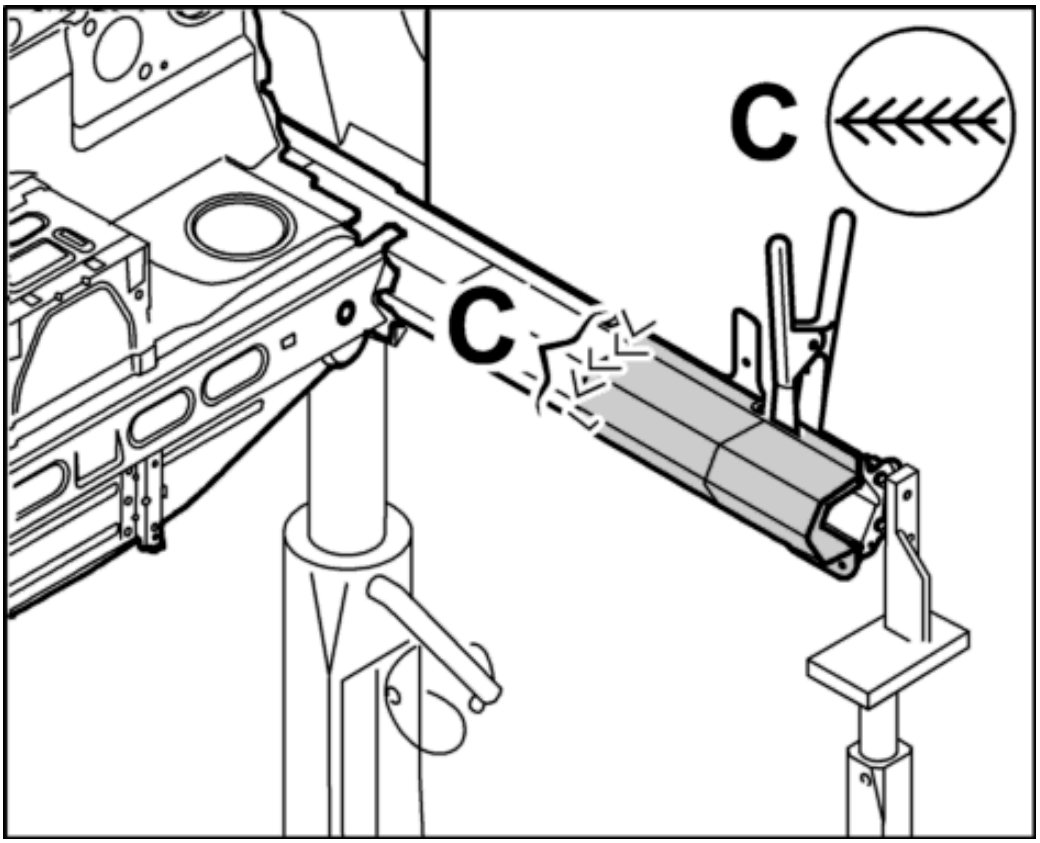
 ATTENTION

Danger of explosion and fire from flying sparks during grinding and welding work!

- **Danger of injury and danger of damage to vehicle parts and other vehicles due to flying sparks**

→ Cover vehicle parts such as battery, fuel system, paintwork, glass and passenger compartment parts with fire-proof covers and, if necessary, remove batteries and fuel-carrying components.

→ No other vehicles may be left unprotected in areas used for body repair!

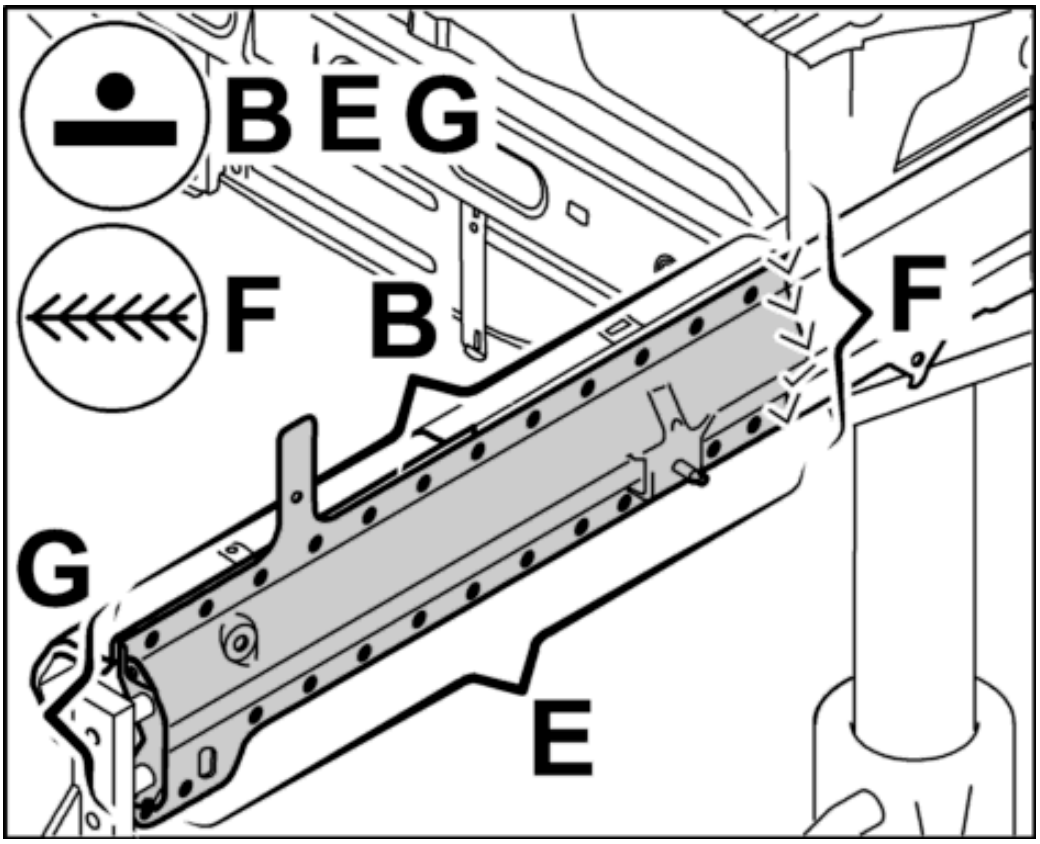


Installing front side members

Note

When butt welding body sheet panels with a sheet thickness of > 1.5 mm, there must be a welding slit width s = 1 x sheet thickness to guarantee the required welding quality (welding through).

1. Weld in the inner side member.



1.1. Weld the inner side member with a full butt weld in area **C** under shielding gas.

Welding in inner side member

2. Weld in outer side member.

2.1. Spot-weld outer side member to inner side member in areas **B, E, G**. Weld the outer side member with a full butt weld in area **F** under shielding gas.

Welding in outer side member

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

50 87 19 Removing and installing cowl panel cover - as of MY 2005

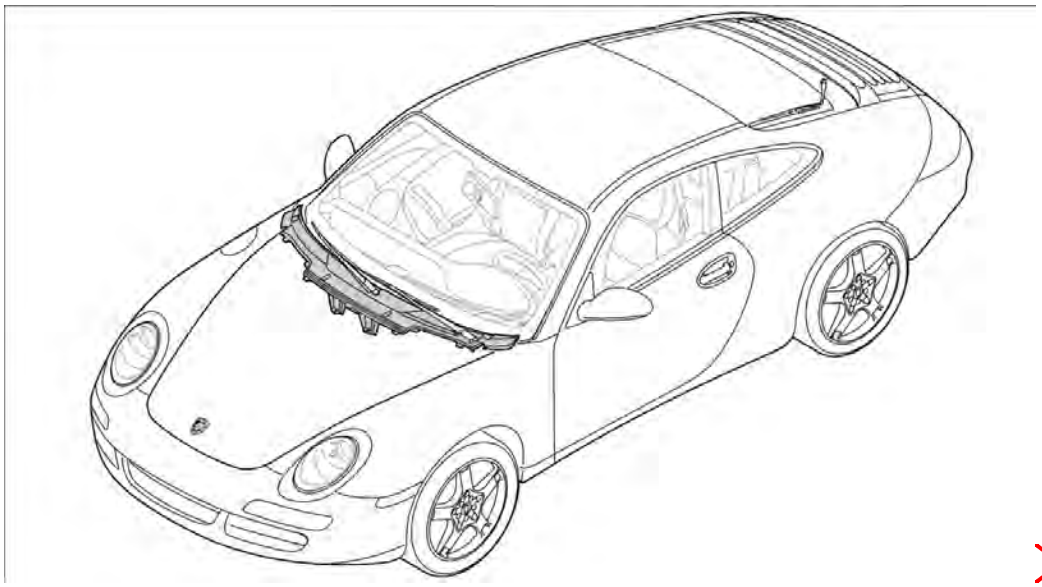
Removing cowl panel cover

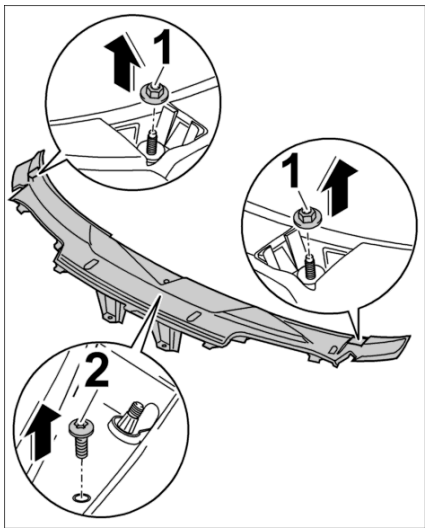
Removing lateral cap

Installation Location:

Main illustration for cowl panel cover



Removing cover cap

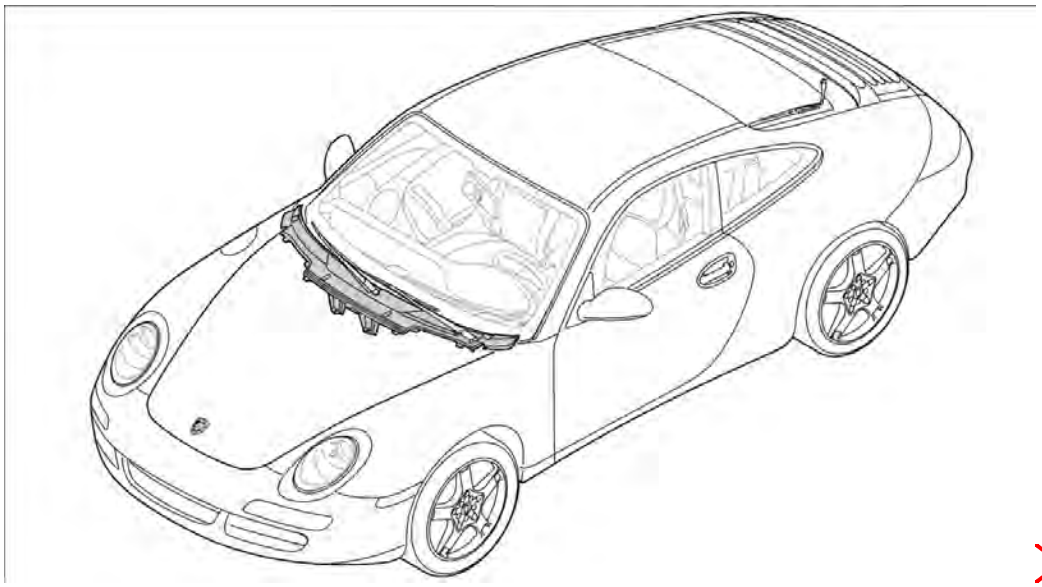


1. Unclip lateral cap.

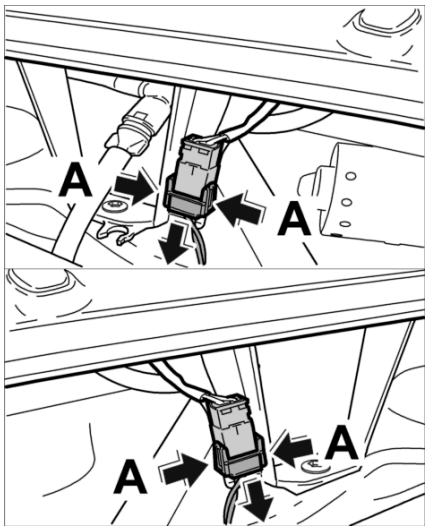
Removing upper cowl panel cover

Installation Location:

Main illustration for cowl panel cover



Removing upper cowl panel cover

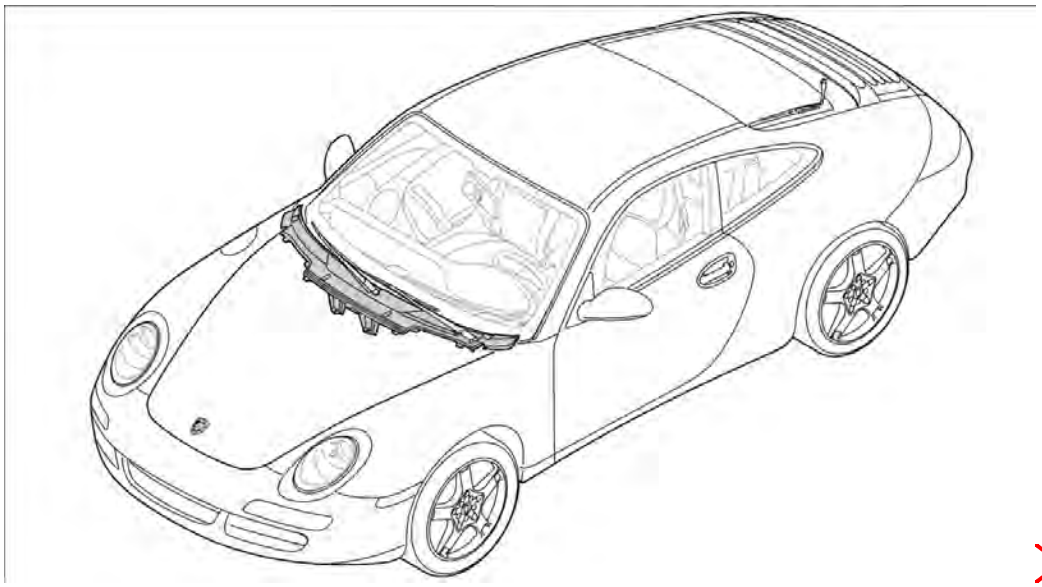


1. Unscrew fastening nuts **-1-** .
2. Unscrew fastening screw **-2-** in the centre.

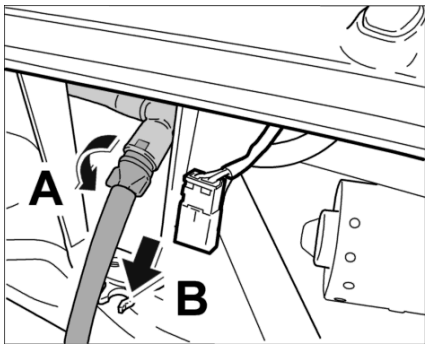
Disconnecting plug connection of spray nozzle for windscreen washer system

Installation Location:

Main illustration for cowl panel cover



Disconnecting plug connection of spray nozzle

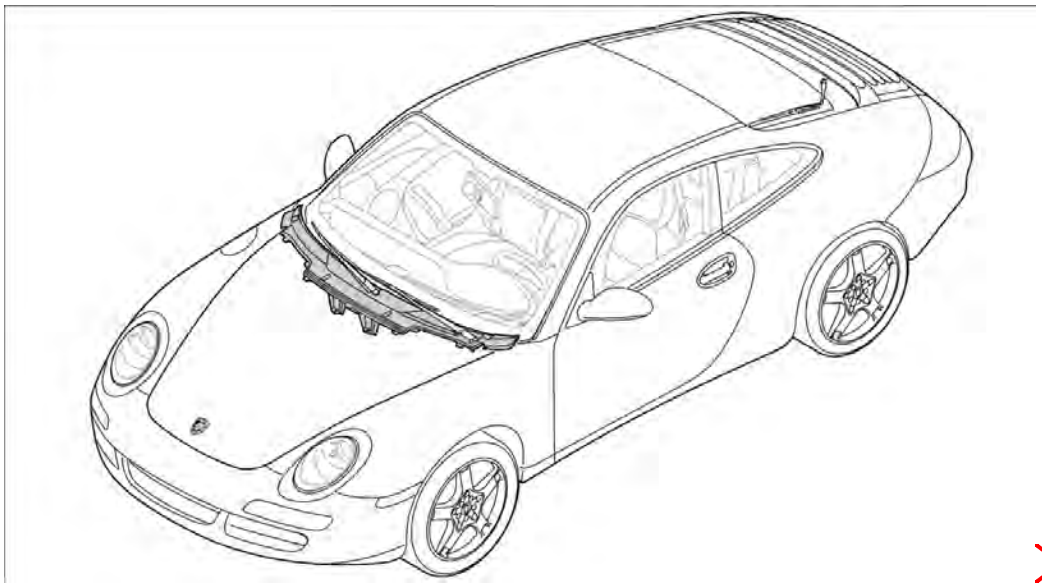


1. Release electric plug connection for right and left spray nozzle **-Arrow A-** and pull apart.

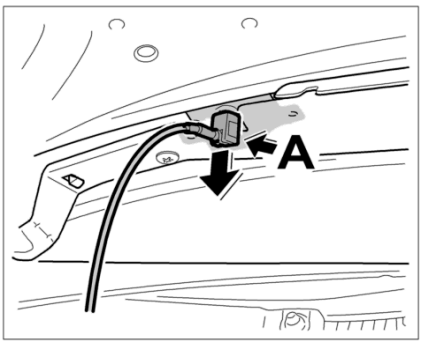
Disconnecting water line for windscreen washer system

Installation Location:

Main illustration for cowl panel cover



Disconnecting water line for windscreen washer system



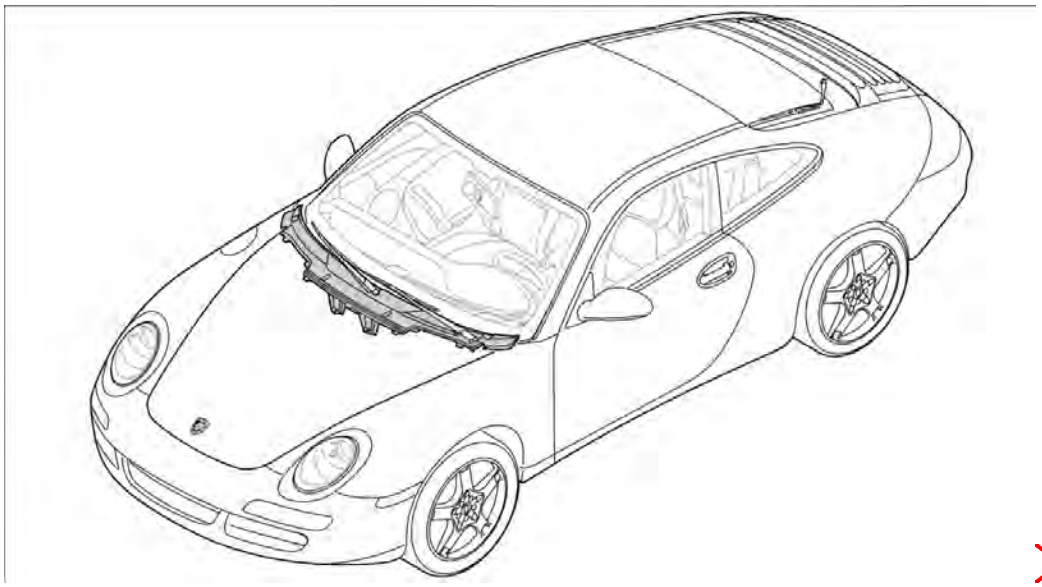
1. Rotate water line in **-direction of arrow A-** and pull off **-Arrow B-** .

Disconnecting plug connection for GPS antenna

Installation Location:

Main illustration for cowl panel cover

GPS plug connection.



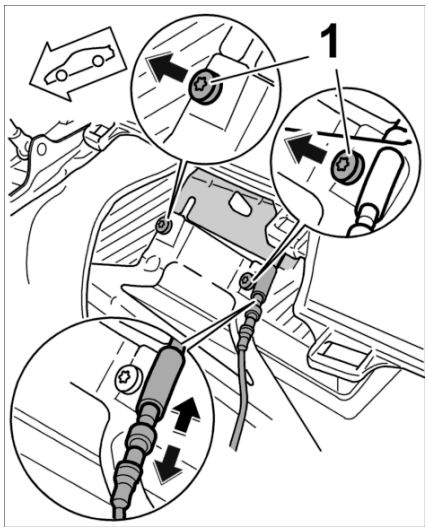
Note

Only for vehicles with GPS antenna.

1. Under the cover for the cowl panel, release the electric plug connection **-A-** and remove.

Disconnecting plug connection for radio antenna

Installation Location:



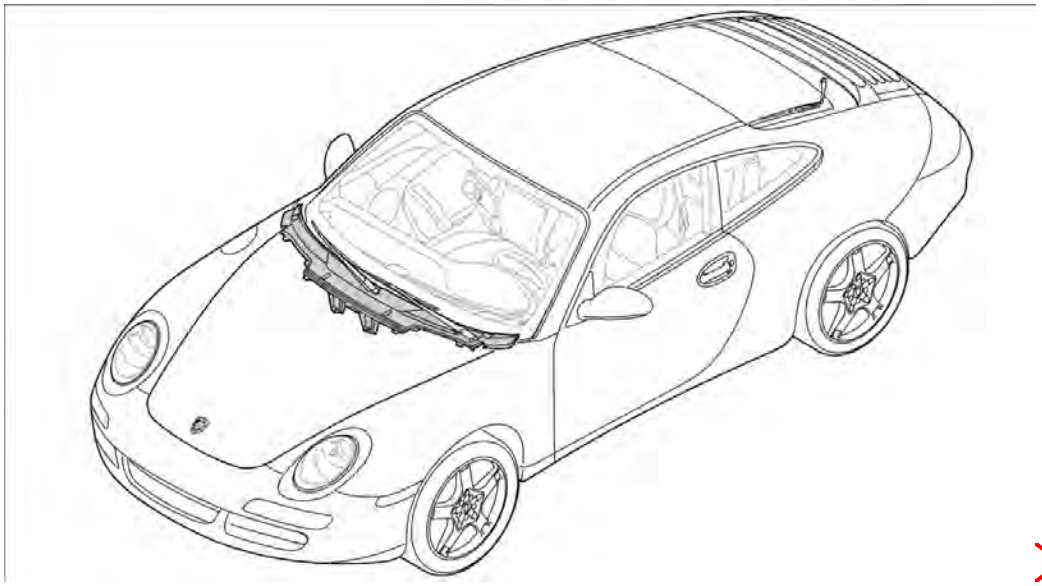
Main illustration for cowl panel cover

ATTENTION

Voltage peaks can damage the audio system.

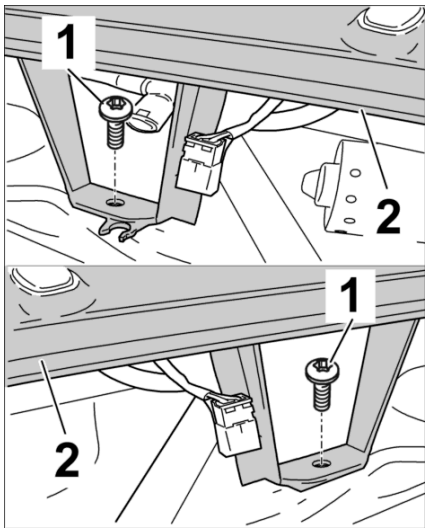
→ Before unplugging/removing audio components, remove ignition key and switch off audio system.

Disconnecting plug connection for radio antenna



Note

Only for vehicles with radio antenna.



1. Unclip the retaining clamps for the antenna line. Disconnect antenna line and undo the fastening screws **-1-** .

Removing lower cowl panel cover

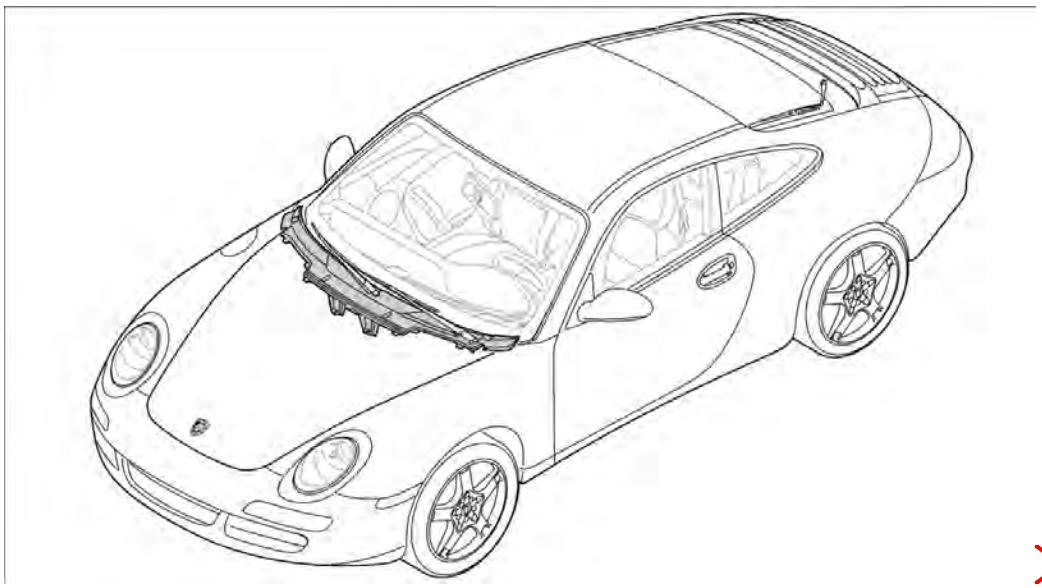
Installation Location:

Main illustration for cowl panel cover

Removing lower cowl panel cover

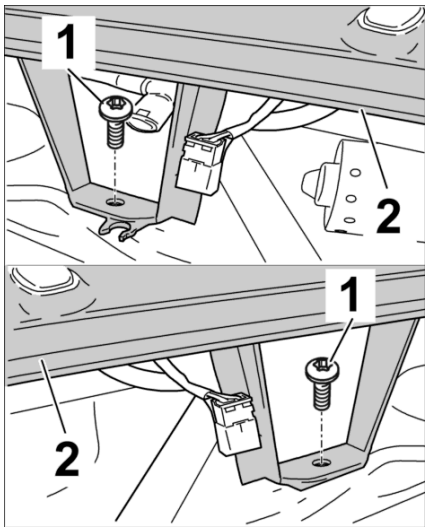
Note

Two persons are needed to remove the cowl panel cover!



1. Unscrew fastening screws **-1-** and carefully remove cowl panel cover **-2-** upwards.

top of page



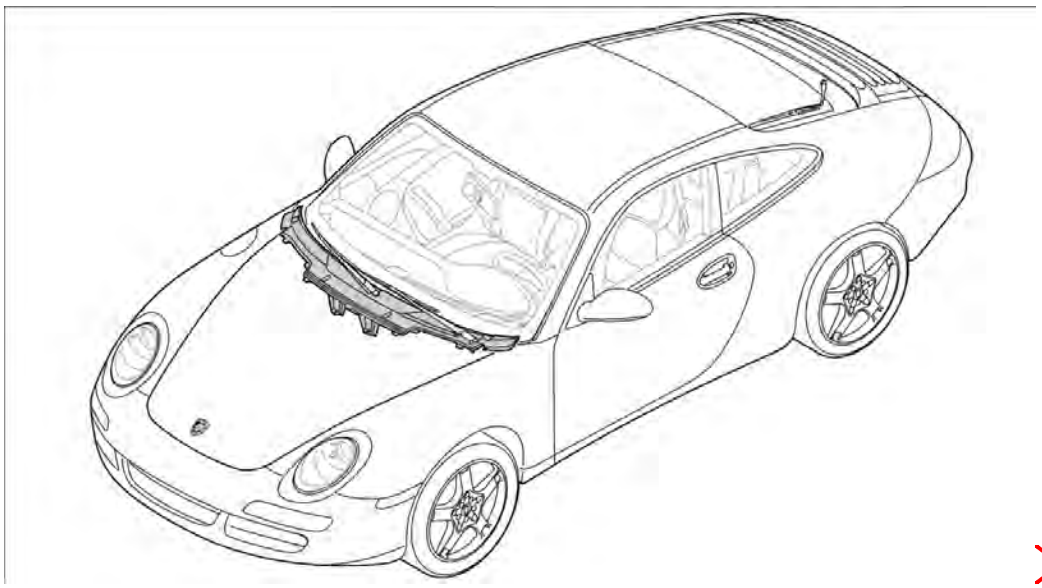
Installing cowl panel cover

Installing cowl panel cover

Installation Location:

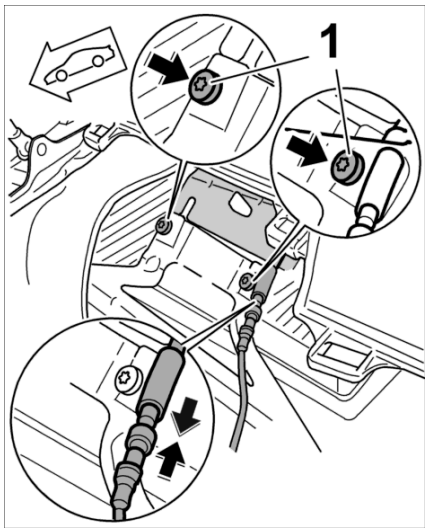
Main illustration for cowl panel cover

Installing cowl panel cover



Note

Two persons are needed to remove the cowl panel cover!



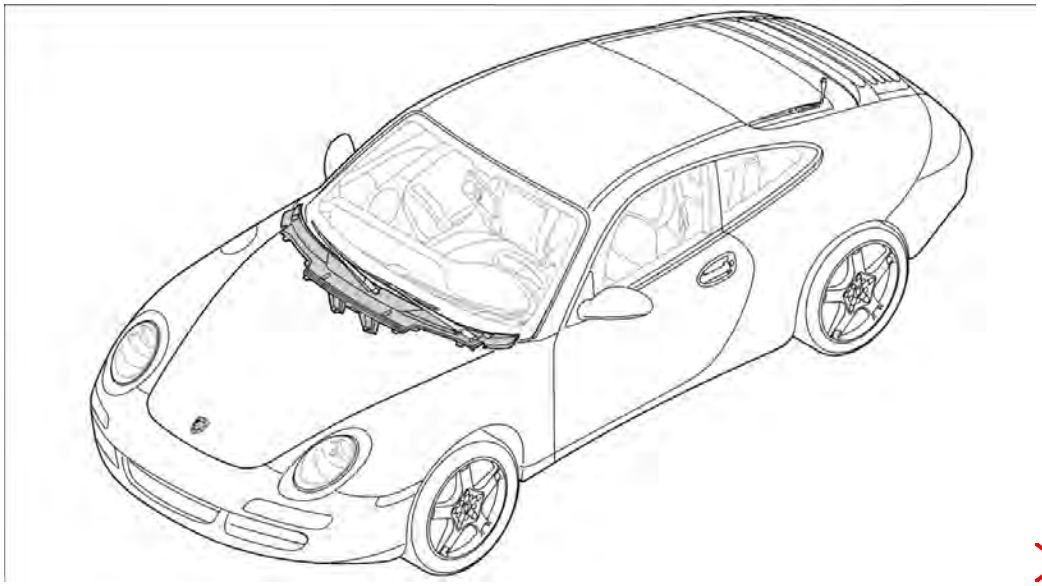
1. Insert cowl panel cover **-2-** in the plenum panel and align.
2. Tighten fastening screws **-1-** . Tightening torque →**Tightening torque: 1.5 ftlb.**

Locking plug connection for radio antenna

Installation Location:

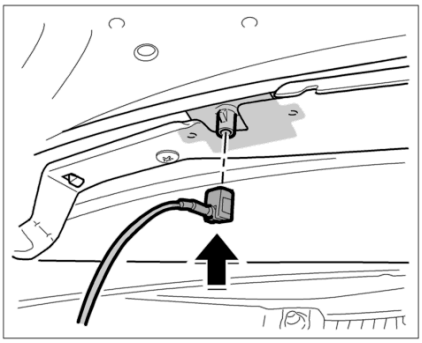
Main illustration for cowl panel cover

Disconnecting plug connection for radio antenna



Note

Only for vehicles with radio antenna.



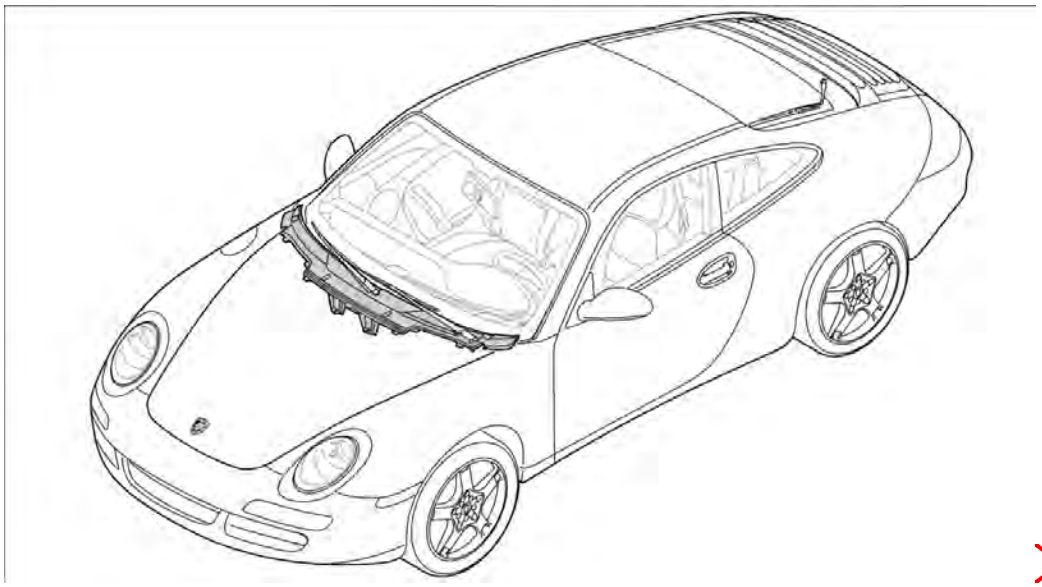
1. Connect the antenna line and clip on the fuse.
2. Slide antenna onto its support and screw it down with the fastening screws **-1-** .

Locking plug connection for GPS antenna

Installation Location:

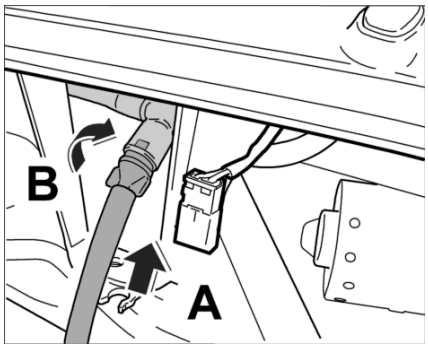
Main illustration for cowl panel cover

Locking plug connection for GPS



Note

Only for vehicles with GPS antenna.

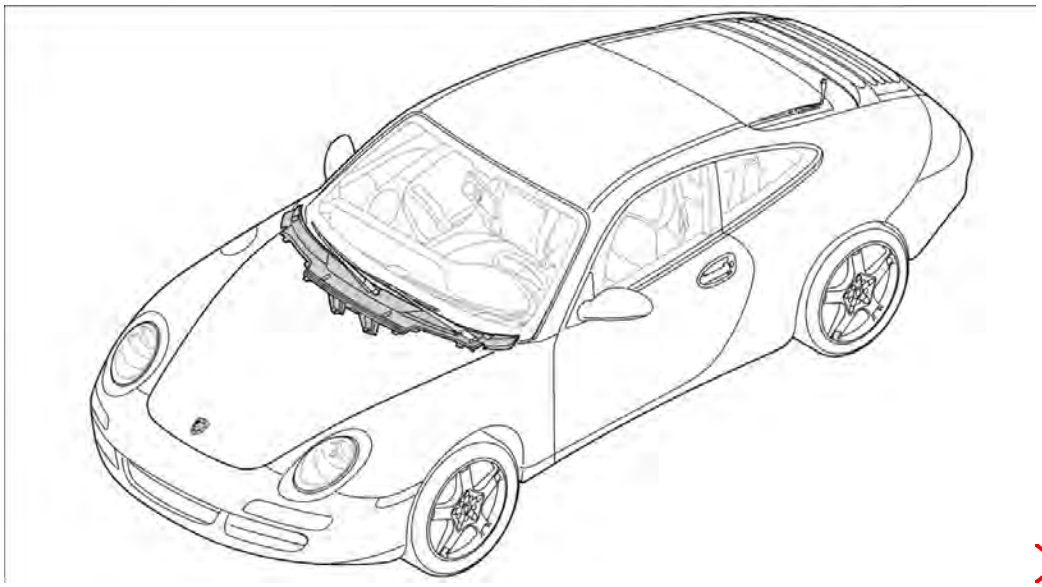


1. Push on the electric plug until it clicks into place.

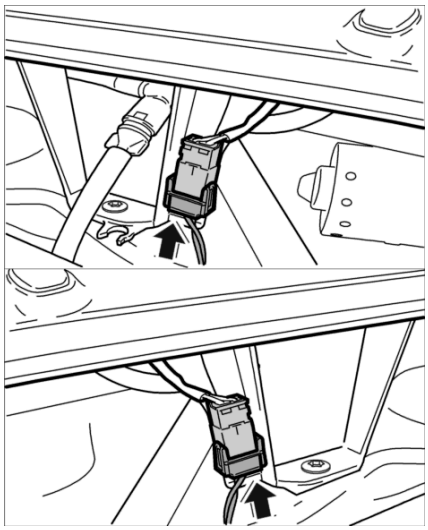
Locking water line for windscreen washer system

Installation Location:

Main illustration for cowl panel cover



Locking water line for windscreen washer system

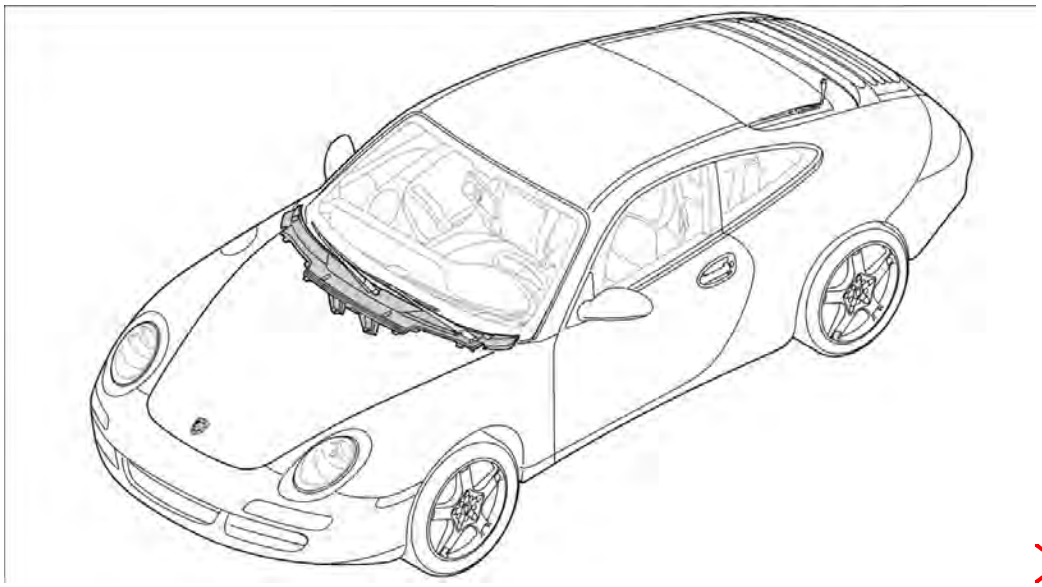


1. Connect water line **-Arrow A-** and rotate in **-direction of arrow B-** .

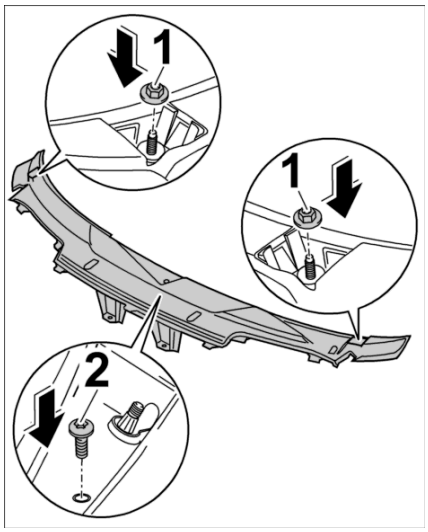
Locking plug connection of spray nozzle for windscreen washer system

Installation Location:

Main illustration for cowl panel cover



Locking plug connection of spray nozzle for windscreen washer system

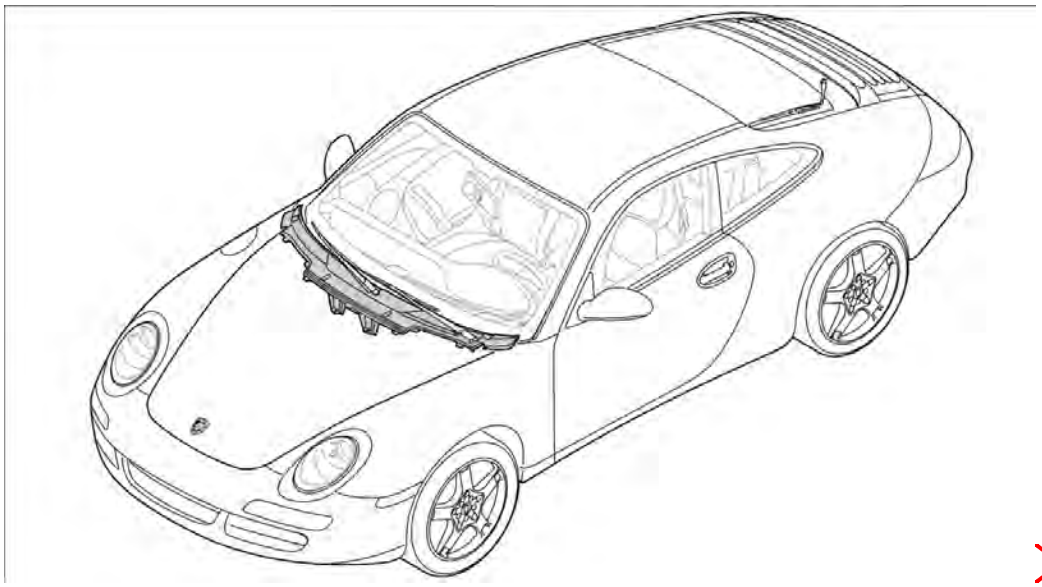


1. Push on electric connector for spray nozzle until it clicks into place.

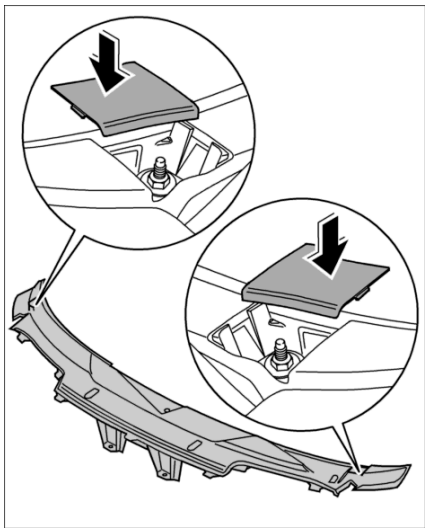
Fastening upper cowl panel cover

Installation Location:

Main illustration for cowl panel cover



Fastening upper cowl panel cover



1. Tighten fastening nut **-2-** .
2. Tighten fastening screw **-1-** .

Installing lateral cover cap

Installation Location:

Main illustration for cowl panel cover

Clipping lateral cap into place

1. Clip lateral cap into place.

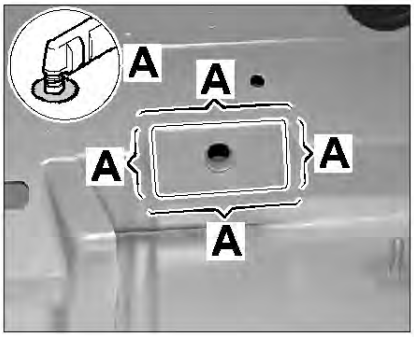
Repairing threaded bushing for belt connection

Removing thread for belt fastening

Installation Location:



Installation location of threaded bushing for belt fastening: inner lower side member

Marking the cut

1. Mark the cut.

1.1. Mark cut for removal of the threaded bushing on the inner lower side member. To do this, cut out a viewing window measuring 60 x 35 mm in the lower side member.

Cutting out viewing window with the body saw

2. Cut out the viewing window with the body saw

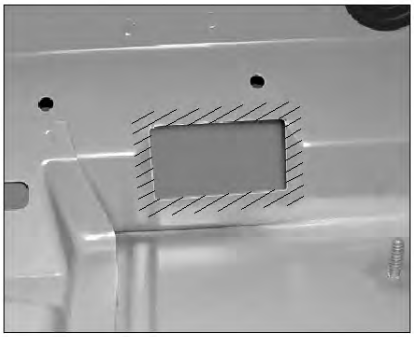
2.1. Cut the marked area **A** out of the inner lower side member using the body saw.

top of page

Preparing connection areas of the body for installation of the threaded bushing

Safety instructions for flying sparks during grinding and welding work

ATTENTION



Danger of explosion and fire from flying sparks during grinding and welding work!

- **Danger of injury and danger of damage to vehicle parts and other vehicles due to flying sparks**

→ Cover vehicle parts such as battery, fuel system, paintwork, glass and passenger compartment parts with fire-proof covers and, if necessary, remove batteries and fuel-carrying components.

→ No other vehicles may be left unprotected in areas used for body repair!

Preparing connection areas of the body for installation of the threaded bushing

Preparing connection areas of the body for installation of the threaded bushing

1. Clean the body connection flanges of undersealing, adhesive residue and paint in the marked areas using a hot-air gun or rotary brush. Grind the connection flanges until bare.

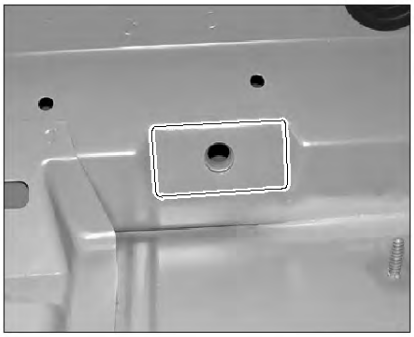
top of page

Fitting in threaded bushing and preparing for installation

Safety instructions for sharp-edged body and unit parts

ATTENTION

Danger of injury! Sharp-edge burrs on body and unit parts!

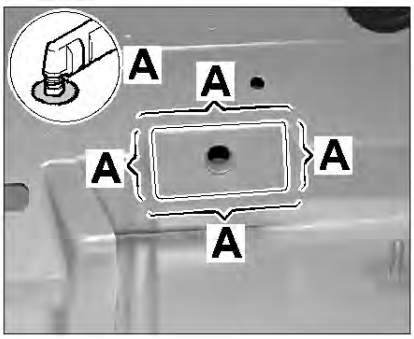


- **Injuries from sharp edges on body and unit parts.**

→ Wear protective gloves when working in the area of sharp-edged body and unit parts!

Fitting in threaded bushing and preparing for installation

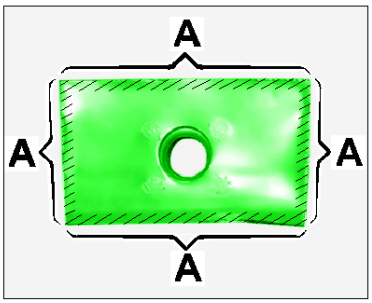
Note



The replacement threaded bushing for belt fastening is cut out of the replacement inner lower side member as a viewing window measuring 60 x 35 mm.

Marking the cut

1. Mark the cut.



1.1. Mark the cut for removal of the threaded bushing on the inner lower side member. Cut out a viewing window measuring 60 x 35 mm in the lower side member.

Cutting out viewing window with the body saw

2. Cut out viewing window with the body saw

2.1. Cut the marked area **A** out of the inner lower side member using the body saw.

Removing primer on welding areas of the replacement part using a rotary brush

3. Remove the factory-applied primer in area **A** of the replacement parts using the rotary brush.

top of page

Installing thread for belt fastening

Danger of injury when welding

 DANGER

Risk of fatal injury from high voltage during electric welding!

- **Danger of explosion and fire when welding in the area of highly inflammable materials.**
- **Irritation to respiratory tracts from toxic zinc oxide emitted when welding galvanised steel!**
- **Danger of injury from unintentional triggering of pyrotechnical safety components!**
- **Danger of injury from weld spatters and UV light when welding!**

→ Do not perform welding work in a damp environment or on wet ground; there is a risk of fatal injury from the voltage being conducted through the human body. Persons with heart pacemakers should not perform welding work. Use insulating underlays.

→ Remove highly flammable materials from the work area; if necessary, remove units with fuel-carrying parts and protect work areas in the vehicle that are at risk of catching fire using fire-proof covers.

→ Ventilate the work area well.

→ Remove smoke gases with a suitable extraction system (refer to Workshop Equipment Manual).

→ Wear suitable protective equipment, such as protective clothing, gloves, a welding shield and, if necessary, a protective mask.

→ For welding work, always disconnect both terminals on the battery. In the case of welding work in the immediate vicinity of the control modules for pyrotechnical safety systems, remove the control modules before beginning work.

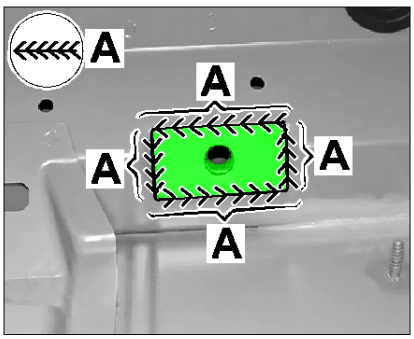
→ In addition, the guidelines of the welding equipment manufacturer and the legal accident prevention regulations and those of the mutual indemnity association (BGV D1) must be observed.

Safety instructions for flying sparks during grinding and welding work

 ATTENTION

Danger of explosion and fire from flying sparks during grinding and welding work!

- **Danger of injury and danger of damage to vehicle parts and other vehicles due to flying sparks**



→ Cover vehicle parts such as battery, fuel system, paintwork, glass and passenger compartment parts with fire-proof covers and, if necessary, remove batteries and fuel-carrying components.

→ No other vehicles may be left unprotected in areas used for body repair!

Installing thread for belt fastening

Note

When butt welding body sheet panels with a sheet thickness of > 1.5 mm, there must be a welding slit width s = 1 x sheet thickness to guarantee the required welding quality (welding through).

Welding in viewing window

1. Weld in viewing window

1.1. Weld the replacement viewing window into the inner lower side member in area **A** with a continuous butt weld under shielding gas.

top of page

Subsequent work

Subsequent work after repair of threaded bushing for belt fastening

1. Cleaning spot-welded joints and sheetmetal flanges with a wire brush
2. Priming flange areas with 2K primer
3. Painting repair area and adjacent surfaces, if necessary
4. Apply cavity preservation.
5. Install removed accessories in the repair area

Pneumatic spotweld remover, Vario Drill No. WS 90, see Gr. 3.5; Workshop Equipment Manual 00000

Preliminary work for body repairs

Note

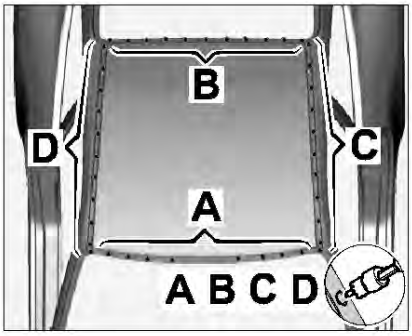
- *If it can be ensured there has been no deformation of the vehicle structure, the following repair can be carried out without the need of a straightening bench. In this case, the vehicle must not be raised when welding the component; it must stand on its wheels on an even surface.*

1. Removing add-on parts in the repair area
1.1. Remove add-on parts in the repair area according to the extent of damage to the vehicle.
2. Equipping straightening bench with straightening attachments
2.1. Equip straightening bench with the straightening attachments according to the plans included with the straightening attachments.
3. Placing vehicle on the straightening bench
3.1. Position vehicle on the straightening bench, align according to the reference holes and bolt firmly to the attachment set.
4. Covering add-on parts adjacent to the vehicle repair area
4.1. Cover all add-on parts remaining on the vehicle and the neighbouring areas with fire-proof, protective covers.
5. Reshaping connection area of the sheetmetal parts to be replaced
6. Exposing welding areas
6.1. Remove undersealing, paint, etc. from the welding areas of the body with a hot-air gun or rotary brush.

Preliminary work for body repairs with alignment bench

1. Removing accessories in the repair area
1.1. Remove accessories in the repair area according to the extent of damage to the vehicle.
2. Equipping alignment bench with straightening kit
2.1. Equip alignment bench with the basic straightening attachments according to the plans included with the straightening attachments.
3. Placing vehicle on the alignment bench
3.1. Position vehicle on alignment bench, align according to the reference holes and bolt firmly to the attachment set.
4. Covering accessories adjacent to the vehicle repair area
4.1. Cover all accessories remaining on the vehicle and the neighbouring areas with fire-proof, protective covers.
5. Reshaping connection area of the sheetmetal parts to be replaced
6. Exposing welding areas
6.1. Remove undersealing, paint, etc. from the welding areas of the body with a hot-air gun or rotary brush.

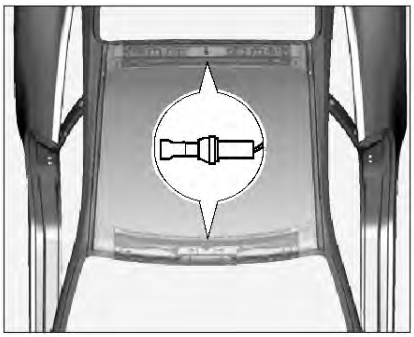
top of page



Removing roof

Removing roof

Installation Location:



Installation position of roof

Cutting the spotwelds

1. Mill off spotwelds.

1.1. Using a spotweld cutter, mill off spotwelds in areas **A, B, C, D**.

Loosening bonded joint

2. Loosening bonded joint

2.1. Heat up the bonded joint between the roof and the cowl panel frame or the rear roof frame with the hot-air gun. Insert a metal spatula between the bonded joint and separate it. Lift the roof upwards out of the body.

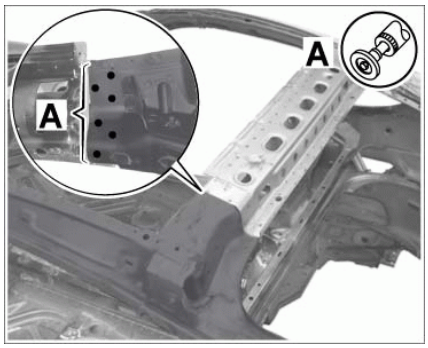
top of page

Preparing connection areas of the body for installation of the roof

Safety instructions for flying sparks during grinding and welding work

ATTENTION

Danger of explosion and fire from flying sparks during grinding and welding work!



- **Danger of injury and danger of damage to vehicle parts and other vehicles due to flying sparks**

→

Cover vehicle parts such as battery, fuel system, paintwork, glass and passenger compartment parts with fire-proof covers and, if necessary, remove batteries and fuel-carrying components.

→ No other vehicles may be left unprotected in areas used for body repair!

Preparing connection areas of the body for installation of the roof

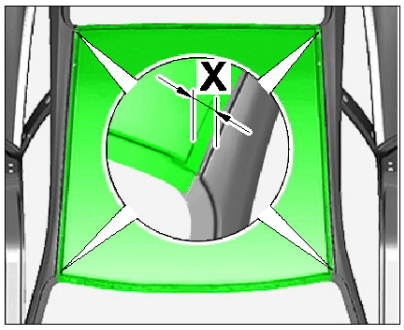
Preparing connection areas of the body for installation of the roof

1. Clean the body connection flanges of undersealing, adhesive residue and paint in the marked areas using a hot-air gun or rotary brush. Grind the connection flanges until bare.

top of page

Fitting roof and preparing for installation

Safety instructions for sharp-edged body and unit parts



ATTENTION

Danger of injury! Sharp-edge burrs on body and unit parts!

- **Injuries from sharp edges on body and unit parts.**

→ Wear protective gloves when working in the area of sharp-edged body and unit parts!

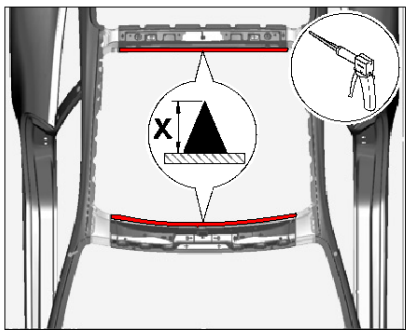
Fitting roof and preparing for installation

Fitting the roof to the body

1. Fitting the roof to the body

1.1. Position roof channel on left and right to the dimension **X = 25.2 mm** and secure with tensioning clamps.

1.2. It is important to measure in the dimension **X = 25.2 mm** at the four corner points of the roof where it joins the side panel.



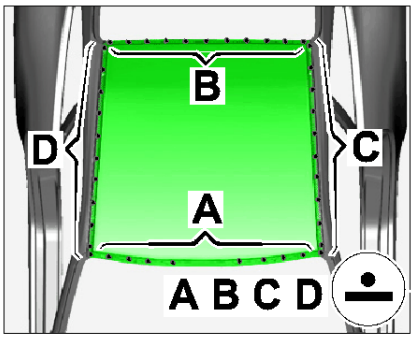
2. Fitting roof joint cover strips

2.1. The roof joint cover strips must be fitted at the left and right. →663619 Removing and installing roof joint cover strip

top of page

Installing roof

Installing roof



Applying adhesive

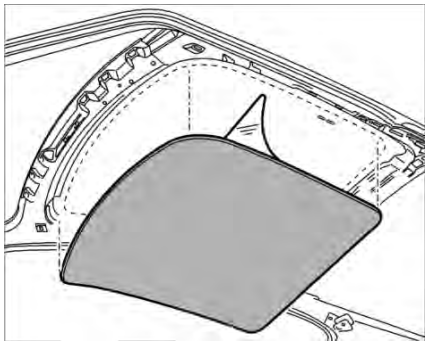
1. Applying adhesive

1.1. Apply adhesive evenly to the inside of the cowl panel frame in the form of a triangular bead **Dimension X = 8 mm**. Adhesive from "Würth Klebt und Dichtet" - see Parts Catalogue.

1.2. Apply adhesive evenly to the inside of the roof frame in the form of a triangular bead **Dimension X = 8 mm**. Adhesive from "Würth Klebt und Dichtet" - see Parts Catalogue.

Welding in roof

2. Welding in roof



2.1. Secure the roof with tensioning clamps.

2.2. Spot-weld areas **A, B, C, D** of the roof.

Affixing the roof sound absorber

Note

When positioning the sound absorber, the attachment points must be accessible.

Affixing the roof sound absorber

1. Pull of the protective film and affix the roof sound absorber in the marked area.

top of page

Subsequent work

Subsequent work for body repairs

1. Removing vehicle from straightening bench
2. Cleaning spot-welded joints and sheetmetal flanges with a wire brush
3. Priming flange areas with 2K primer
4. Restore standard sealing with body sealant
   →501000 Seam seal
5. Restore standard undersealing with underbody sealant
   →501000 Undersealing
6. Painting repair area and adjacent surfaces, if necessary
7. Install removed add-on parts in the repair area
8. Apply cavity preservation.

997110, 997111, 997120, 997121

as of MY 2004

 WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**

Preliminary work for body repairs with alignment bench

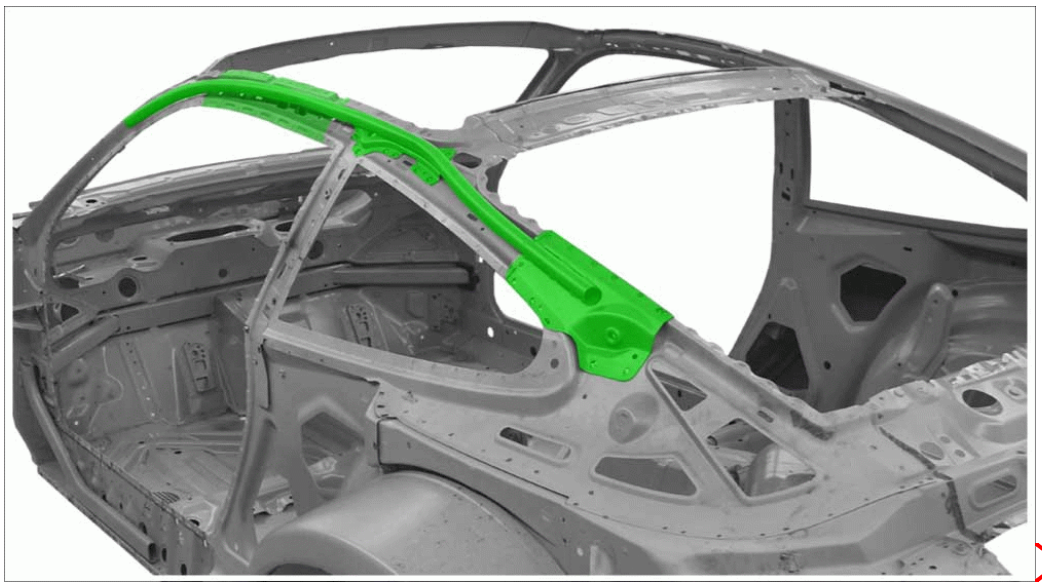
Preliminary work for body repairs with alignment bench

 WARNING

This affects torsion resistance, resistance to bending and crash safety

- **Danger of injury and material damage**

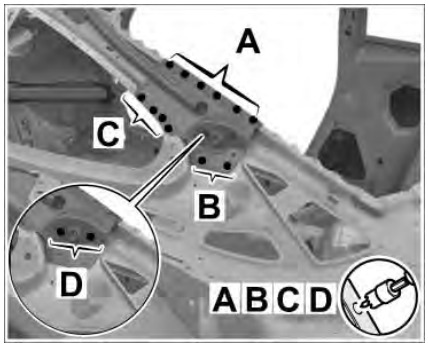
→ The roof pillar (pipe), which is made of highest-strength steel plate, cannot be reshaped.
→ The roof pillar (pipe) cannot be straightened or reshaped.
→ In the event of damage or deformation, the roof pillar (pipe) must be replaced.



1. Removing accessories in the repair area
1.1. Remove accessories in the repair area according to the extent of damage on the vehicle.
2. Equipping alignment bench with straightening kit
2.1. Set up straightening bench with the straightening set according to the set-up drawings included with the straightening set.
3. Placing vehicle on the alignment bench
3.1. Position vehicle on alignment bench, align according to the reference holes and bolt firmly to the attachment set.
4. Covering accessories adjacent to the vehicle repair area
4.1. Cover all accessories remaining on the vehicle and the neighbouring areas with fire-proof, protective covers.
5. Exposing welding areas
5.1. Remove undersealing, paint, etc. from the welding areas of the body with a hot-air gun or rotary brush.

top of page

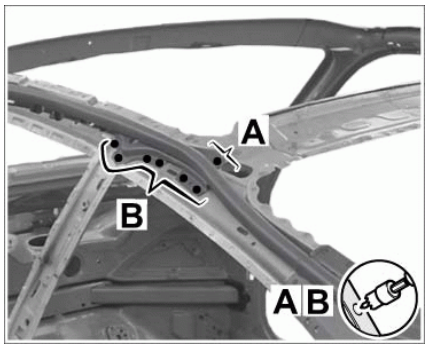
Removing roof pillar (pipe) and roof frame reinforcement



Removing roof pillar (pipe)

Installation Location:

Installation position of roof pillar (pipe)

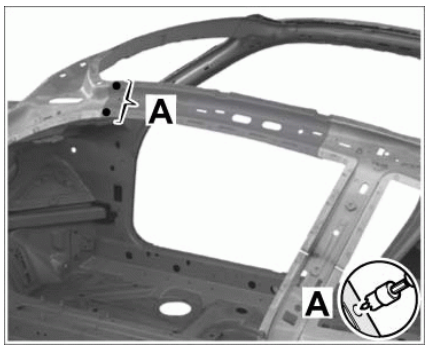


1. Remove hinge pillar reinforcement. *→516255 21 Replacing hinge pillar reinforcement - section on "Removing"*
2. Remove side panel. →535555 Replacing side panel - section on "Removing"

Cutting the spotwelds

3. Cutting the spotwelds

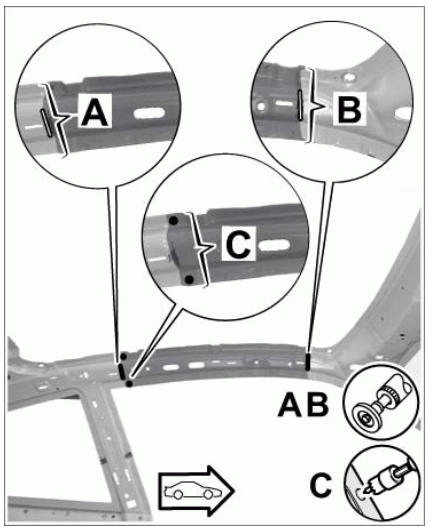
3.1. Mill off spotwelds in areas **-A, B, C, D-** using a spotweld cutter.



Cutting the spotwelds

4. Cutting the spotwelds

4.1. Mill off spotwelds in areas **-A-** and **-B-** using a spotweld cutter.



Removing roof frame reinforcement

Cutting the spotwelds

1. Cutting the spotwelds

1.1. Mill off spotwelds in area **-A-** using a spotweld cutter.

Separating welded joints

2. Separating and milling off welded joints

2.1. Separate inert-gas welded seams in areas **-A-** and **-B-** from the inside using a parting grinder.

2.2. Mill off spotwelds in area **-C-** using a spotweld cutter.

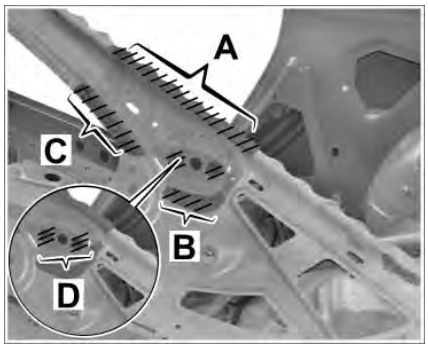
Preparing connection areas of the body for installing the roof pillar (pipe) and roof frame reinforcement

Safety instructions for flying sparks during grinding and welding work

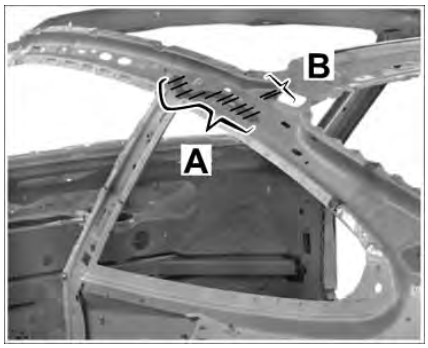
ATTENTION



Danger of explosion and fire from flying sparks during grinding and welding work!

- **Danger of injury and danger of damage to vehicle parts and other vehicles due to flying sparks**

→ Cover vehicle parts such as battery, fuel system, paintwork, glass and passenger compartment parts with fire-proof covers and, if necessary, remove batteries and fuel-carrying components.

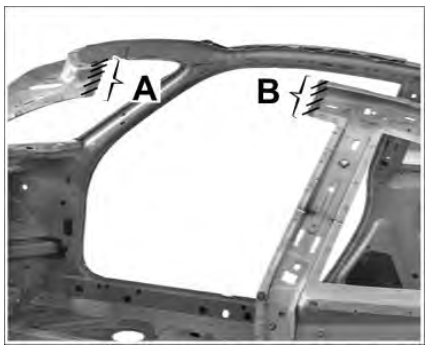


→ No other vehicles may be left unprotected in areas used for body repair!

Preparing connection areas of body for installing roof pillar (pipe)

Preparing connection areas of body for installing roof pillar (pipe)

1. Clean undersealing, adhesive residue and paint off the body connecting flanges in the marked areas **-A, B, C, D-** using a hot-air gun or rotary brush. Grind the connecting flanges until bare.



Preparing connection areas of body for installing roof pillar (pipe)

2. Clean undersealing, adhesive residue and paint off the body connecting flanges in the marked areas **-A-** and **-B-** using a hot-air gun or rotary brush. Grind the connecting flanges until bare.
3. Coat spot-weld flange areas with zinc powder paint.

3.1. Coat all spot-weld flange areas with zinc powder paint.

Preparing connection areas of body for installing roof frame reinforcement

Preparing connection areas of body for installing roof frame reinforcement

1. Clean undersealing, adhesive residue and paint off the body connecting flanges for the roof frame in the marked areas **-A-** and **-B-** using a hot-air gun or rotary brush. Grind the connecting flanges until bare.
2. Coat spot-weld flange areas with zinc powder paint.

2.1. Coat all spot-weld flange areas with zinc powder paint.

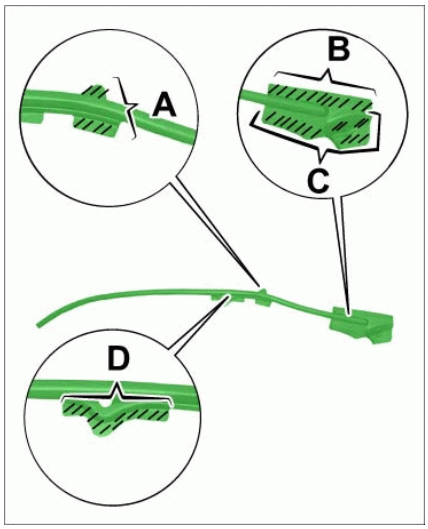
Fitting roof pillar (pipe) and roof frame reinforcement and preparing for installation

Safety instructions for sharp-edged body and unit parts



ATTENTION

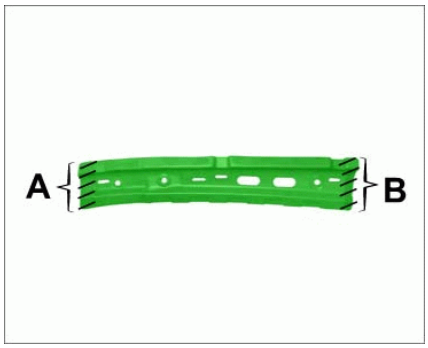
Danger of injury! Sharp-edge burrs on body and unit parts!

- **Injuries from sharp edges on body and unit parts.**

→ Wear protective gloves when working in the area of sharp-edged body and unit parts!

Fitting roof pillar (pipe) and preparing for installation

Cleaning the welding areas



1. Cleaning the welding areas

1.1. Grind both sides of the connecting flanges of the roof pillar (pipe) in the marked areas **-A, B, C, D-** until bare using a rotary brush.

2. Coat spot-weld flange areas with zinc powder paint.

2.1. Coat all spot-weld flange areas with zinc powder paint.

Fitting roof frame reinforcement and preparing for installation

Cleaning the welding areas

1. Cleaning the welding areas

1.1. Grind both sides of the connecting flange of the roof frame reinforcement in the marked areas **-A-** and **-B-** until bare using a rotary brush.

2. Coat spot-weld flange areas with zinc powder paint.

2.1. Coat all spot-weld flange areas with zinc powder paint.

Installing roof frame reinforcement and roof pillar (pipe)

Danger of injury when welding

DANGER

Risk of fatal injury from high voltage during electric welding!

- **Danger of explosion and fire when welding in the area of highly inflammable materials.**
- **Irritation to respiratory tracts from toxic zinc oxide emitted when welding galvanised steel!**
- **Danger of injury from unintentional triggering of pyrotechnical safety components!**
- **Danger of injury from weld spatters and UV light when welding!**

→ Do not perform welding work in a damp environment or on wet ground; there is a risk of fatal injury from the voltage being conducted through the human body. Persons with heart pacemakers should not perform welding work. Use insulating underlays.

→ Remove highly flammable materials from the work area; if necessary, remove units with fuel-carrying parts and protect work areas in the vehicle that are at risk of catching fire using fire-proof covers.

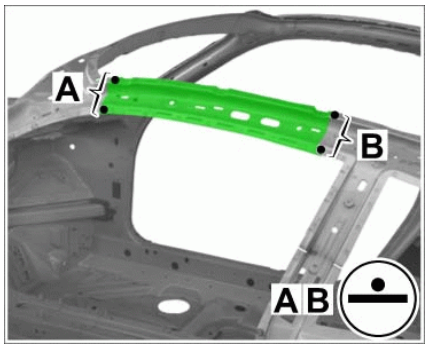
→ Ventilate the work area well.

→ Remove smoke gases with a suitable extraction system (refer to Workshop Equipment Manual).

→ Wear suitable protective equipment, such as protective clothing, gloves, a welding shield and, if necessary, a protective mask.

→ For welding work, always disconnect both terminals on the battery. In the case of welding work in the immediate vicinity of the control modules for pyrotechnical safety systems, remove the control modules before beginning work.

→ In addition, the guidelines of the welding equipment manufacturer and the legal accident prevention regulations and those of the mutual indemnity association (BGV D1) must be observed.

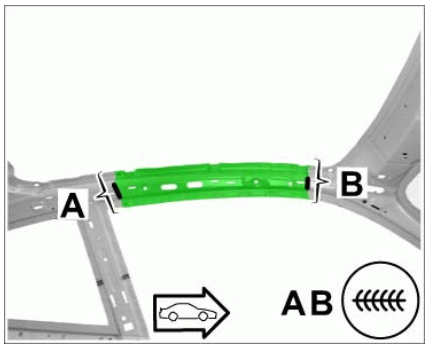


Installing roof frame reinforcement

Note

Determine the position of the new part and secure with tensioning clamps.
When butt welding body sheet panels with a sheet thickness of > 1.5 mm, there must be a welding slit width s = 1 x sheet thickness to guarantee the required welding quality (welding through).

1. Fitting roof frame reinforcement to the body



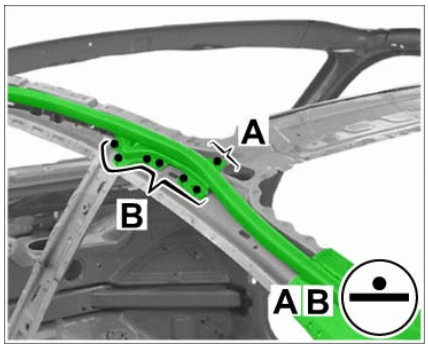
1.1. Position roof frame reinforcement on the body and fix in place with tensioning clamps.

Welding in roof frame reinforcement

2. Welding in roof frame reinforcement

2.1. Resistance spot-weld the roof frame reinforcement in areas **-A-** and **-B-** .

Welding in roof frame reinforcement

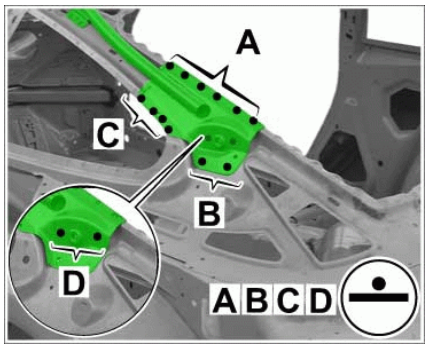


3. Weld in roof frame reinforcement.

3.1. Apply a full weld to the roof frame reinforcement in areas **-A-** and **-B-** using inert gas.

Installing roof pillar (pipe)

1. Fitting roof pillar (pipe) to the body



1.1. Position roof pillar (pipe) on the body and fix in place with tensioning clamps.

Welding in roof pillar (pipe)

2. Welding in roof pillar (pipe)

2.1. Resistance spot-weld the roof pillar (pipe) in areas **-A-** and **-B-** .

Welding in roof pillar (pipe)

3. Weld in roof pillar (pipe).

3.1. Resistance spot-weld the roof pillar (pipe) in areas **-A, B, C, D-** .

4. Install side panel. →535555 Replacing side panel - section on "Installing"

5. Install hinge pillar reinforcement. *→516255 23 Replacing hinge pillar reinforcement - section on "Installing"*

top of page

Subsequent work

Subsequent work for body repairs

1. Removing vehicle from straightening bench
2. Cleaning spot-welded joints and sheetmetal flanges with a wire brush
3. Priming flange areas with 2K primer
4. Restore standard sealing with body sealant
   →501000 Seam seal
5. Restore standard undersealing with underbody sealant
   →501000 Undersealing
6. Painting repair area and adjacent surfaces, if necessary
7. Install removed add-on parts in the repair area
8. Apply cavity preservation.

997110, 997111, 997120, 997121, 997410, 997411, 997430, 997431

as of MY 2005
Country C00, C02, C05, C07, C08, C09, C10, C11, C12, C13, C14, C15, C16, C18, C19, C20, C21, C22, C23, C24, C25, C26, C27, C28, C32, C33, C34, C35, C36, C37, C38, C39, C45, C46, C98, C99

 WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

Preliminary work for body repairs with alignment bench

Preliminary work for body repairs with alignment bench

1. Removing accessories in the repair area

1.1. Remove accessories in the repair area according to the extent of damage to the vehicle.

2. Equipping alignment bench with straightening kit

2.1. Equip alignment bench with the basic straightening attachments according to the plans included with the straightening attachments.

3. Placing vehicle on the alignment bench

3.1. Position vehicle on alignment bench, align according to the reference holes and bolt firmly to the attachment set.

4. Covering accessories adjacent to the vehicle repair area

4.1. Cover all accessories remaining on the vehicle and the neighbouring areas with fire-proof, protective covers.

5. Reshaping connection area of the sheetmetal parts to be replaced

6. Exposing welding areas

6.1. Remove undersealing, paint, etc. from the welding areas of the body with a hot-air gun or rotary brush.

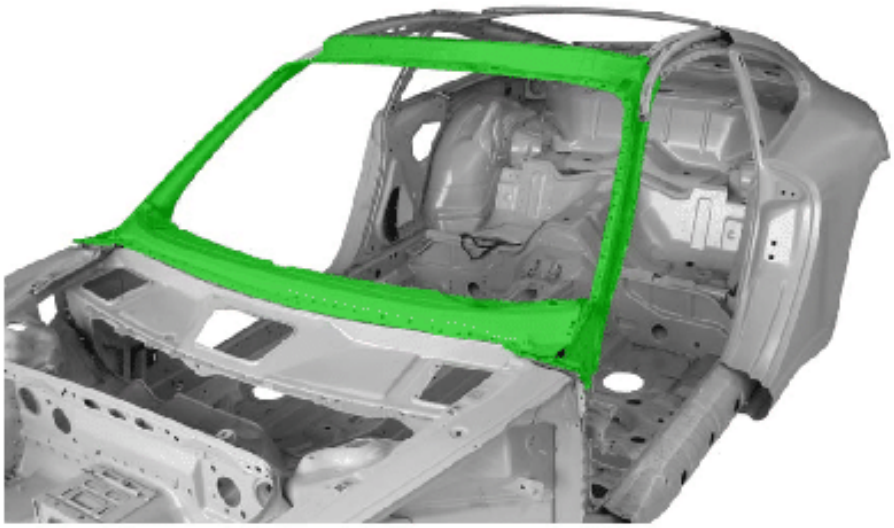
Preliminary work for body repairs with alignment bench

Preliminary work for body repairs with alignment bench



1. Removing accessories in the repair area
1.1. Remove accessories in the repair area according to the extent of damage to the vehicle.
2. Equipping alignment bench with straightening kit
2.1. Equip alignment bench with the basic straightening attachments according to the plans included with the straightening attachments.
3. Placing vehicle on the alignment bench
3.1. Position vehicle on alignment bench, align according to the reference holes and bolt firmly to the attachment set.
4. Covering accessories adjacent to the vehicle repair area
4.1. Cover all accessories remaining on the vehicle and the neighbouring areas with fire-proof, protective covers.
5. Reshaping connection area of the sheetmetal parts to be replaced
6. Exposing welding areas
6.1. Remove undersealing, paint, etc. from the welding areas of the body with a hot-air gun or rotary brush.

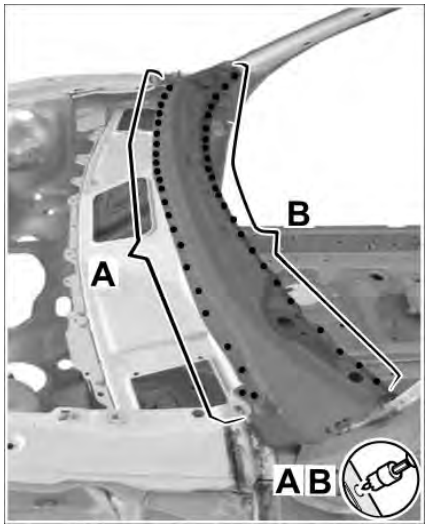
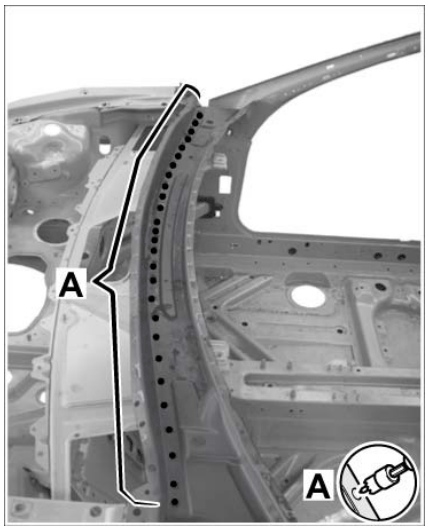
Removing windscreen frame



Removing windscreen frame

Installation Location:

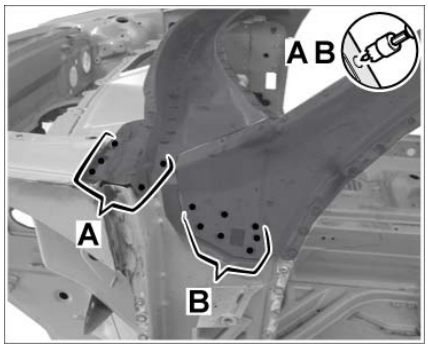
Installation position of windscreen frame



1. Remove roof. →510355 Replacing roof - section on "Removing" [997110 997111 997120 997121] *→510355 21 Replacing roof - section on "Removing" [997410 997411]*
2. Remove hinge pillar reinforcement on the left and right. *→516255 21 Replacing hinge pillar reinforcement - section on "Removing"*

Cutting the spotwelds

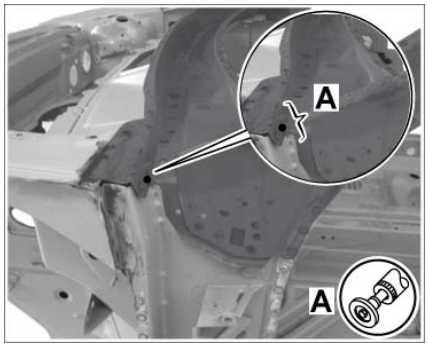
3. Cutting the spotwelds



3.1. Mill off spotwelds in areas **-A-** and **-B-** using a spotweld cutter.

Cutting the spotwelds

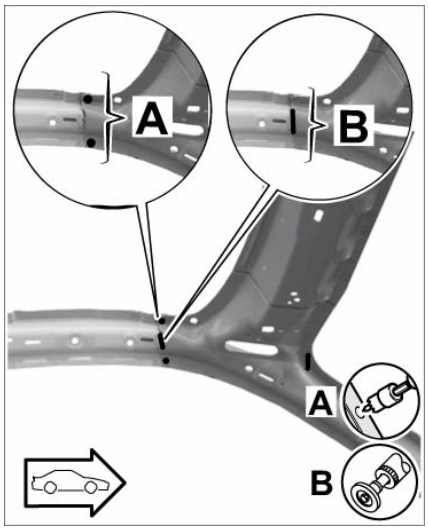
4. Cutting the spotwelds



4.1. Mill off spotwelds in area **-A-** using a spotweld cutter.

Cutting spotwelds at the left and right

5. Cutting spotwelds at the left and right



5.1. Mill off spotwelds at the left and right in areas **-A-** and **-B-** using a spotweld cutter (2 plate thicknesses).

Separating spotwelds at the left and right

6. Separating spotwelds at the left and right

6.1. Separate spotwelds at the left and right in area **-A-** using a parting grinder.

Cutting and separating welded joints at the left and right from the inside

7. Cutting and separating welded joints at the left and right from the inside

7.1. Mill off spotwelds at the left and right in area **-A-** from the inside using a spotweld cutter.

7.2. Separate welded seam at the left and right in area **-B-** from the inside using a parting grinder.

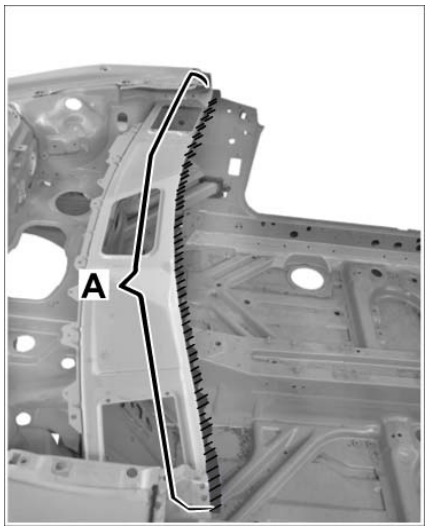
Preparing connection areas of the body for installing the windscreen frame

Safety instructions for flying sparks during grinding and welding work

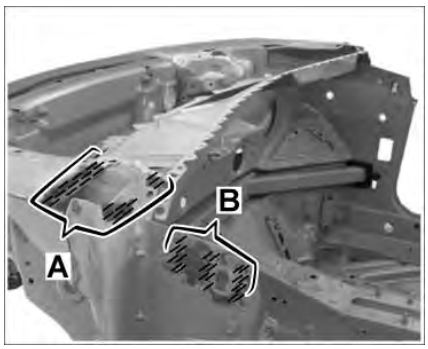
ATTENTION



Danger of explosion and fire from flying sparks during grinding and welding work!

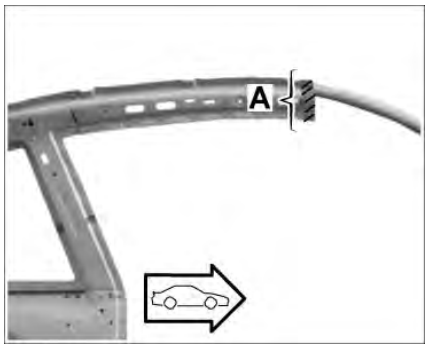
- **Danger of injury and danger of damage to vehicle parts and other vehicles due to flying sparks**

→ Cover vehicle parts such as battery, fuel system, paintwork, glass and passenger compartment parts with fire-proof covers and, if necessary, remove batteries and fuel-carrying components.



→ No other vehicles may be left unprotected in areas used for body repair!

Preparing connection areas of body for installing the windscreen frame



Preparing connection areas of body for installing the windscreen frame

1. Clean undersealing, adhesive residue and paint off the body connecting flanges in the marked area **-A-** using a hot-air gun or rotary brush. Grind the connecting flanges until bare.

Preparing connection areas of body for installing the windscreen frame

2. Clean undersealing, adhesive residue and paint off the body connecting flanges at the left and right in the marked areas **-A-** and **-B-** using a hot-air gun or rotary brush. Grind the connecting flanges until bare.

Preparing connection areas of body for installing the windscreen frame

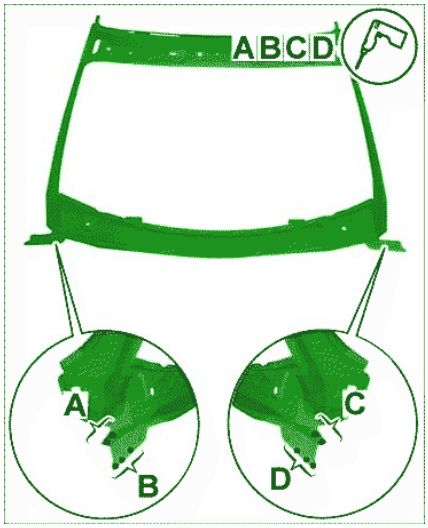
3. Clean undersealing, adhesive residue and paint off the body connecting flanges at the left and right in the marked area **-A-** using a hot-air gun or rotary brush. Grind the connecting flanges until bare.
4. Coating spot-weld flange areas with zinc powder paint

4.1. Coat all spot-weld flange areas with zinc powder paint.

top of page

Fitting in windscreen frame and preparing for installation

Safety instructions for sharp-edged body and unit parts

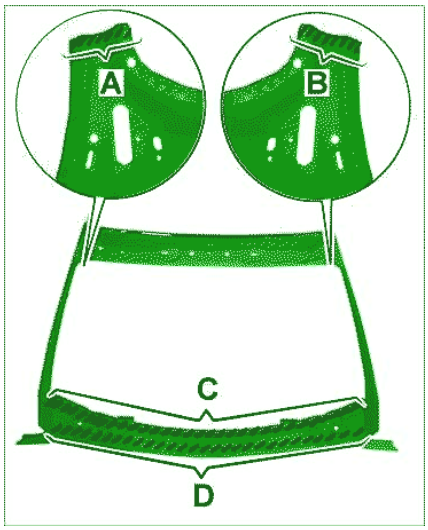


ATTENTION

Danger of injury! Sharp-edge burrs on body and unit parts!

- **Injuries from sharp edges on body and unit parts.**

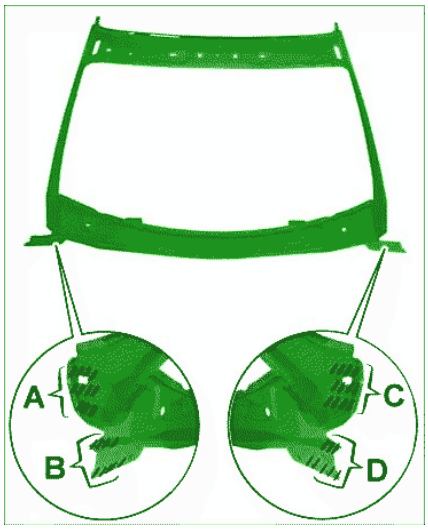
→ Wear protective gloves when working in the area of sharp-edged body and unit parts!



Fitting in windscreen frame and preparing for installation

Drilling holes for plug welding using inert gas

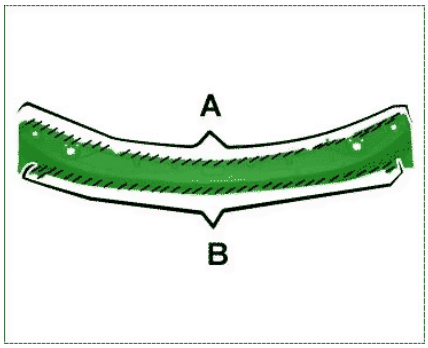
1. Drilling holes for plug welding using inert gas



1.1. Drill holes (Ø = 7 mm) in area **-A, B, C, D-** for plug welding using inert gas. Maintain spacing between the bores as on the old part.

Cleaning the welding areas

2. Cleaning the welding areas



2.1. Grind both sides of the connecting flanges of the windscreen frame in the marked areas **-A, B, C, D-** until bare using a rotary brush.

Cleaning the welding areas

3. Cleaning the welding areas

3.1. Grind both sides of the connecting flanges of the windscreen frame in the marked areas **-A, B, C, D-** until bare using a rotary brush.

Cleaning the welding areas

4. Cleaning the welding areas

4.1. Grind both sides of the connecting flanges of the cowl panel reinforcement in the marked areas **-A-** and **-B-** until bare using a rotary brush.

5. Coat spot-weld flange areas with zinc powder paint.

5.1. Coat all spot-weld flange areas with zinc powder paint.

top of page

Installing windscreen frame

Danger of injury when welding

DANGER

Risk of fatal injury from high voltage during electric welding!

- **Danger of explosion and fire when welding in the area of highly inflammable materials.**
- **Irritation to respiratory tracts from toxic zinc oxide emitted when welding galvanised steel!**
- **Danger of injury from unintentional triggering of pyrotechnical safety components!**
- **Danger of injury from weld spatters and UV light when welding!**

→ Do not perform welding work in a damp environment or on wet ground; there is a risk of fatal injury from the voltage being conducted through the human body. Persons with heart pacemakers should not perform welding work. Use insulating underlays.

→ Remove highly flammable materials from the work area; if necessary, remove units with fuel-carrying parts and protect work areas in the vehicle that are at risk of catching fire using fire-proof covers.

→ Ventilate the work area well.

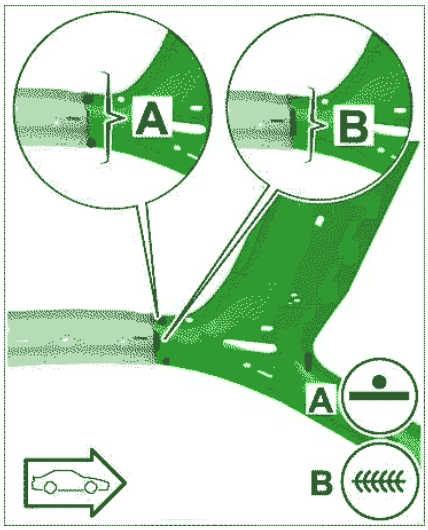
→ Remove smoke gases with a suitable extraction system (refer to Workshop Equipment Manual).

→ Wear suitable protective equipment, such as protective clothing, gloves, a welding shield and, if necessary, a protective mask.

→ For welding work, always disconnect both terminals on the battery. In the case of welding work in the immediate vicinity of the control modules for pyrotechnical safety systems, remove the control modules before beginning work.

→ In addition, the guidelines of the welding equipment manufacturer and the legal accident prevention regulations and those of the mutual indemnity association (BGV D1) must be observed.

Installing windscreen frame



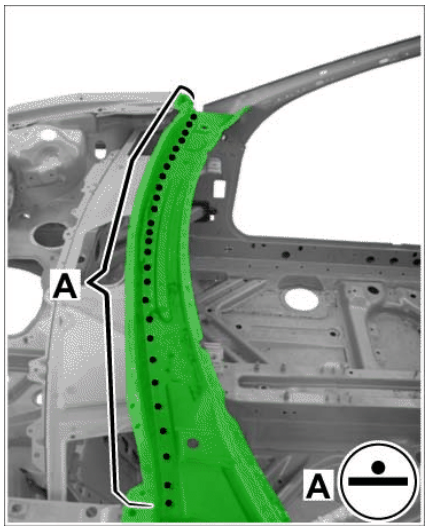
Note

Determine the position of the new part and secure with tensioning clamps.
When butt welding body sheet panels with a sheet thickness of > 1.5 mm, there must be a welding slit width s = 1 x sheet thickness to guarantee the required welding quality (welding through).

1. Fitting windscreen frame to the body

1.1. Place the windscreen frame against the body and secure to the straightening set.

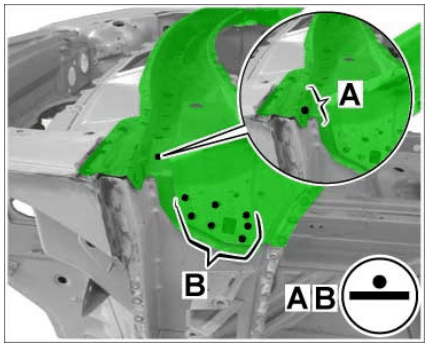
1.2. Secure the windscreen frame with tensioning clamps.



Welding in windscreen frame at the left and right

2. Welding in windscreen frame at the left and right

2.1. Resistance spot-weld the windscreen frame at the left and right in area **-A-** .

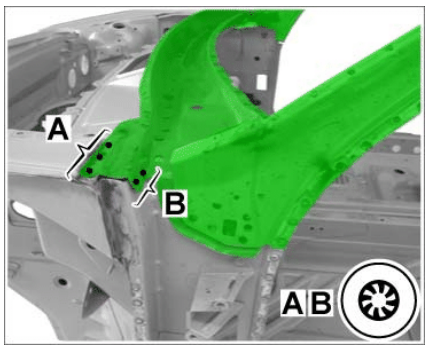


2.2. Apply a full weld to the windscreen frame at the left and right in area **-B-** using inert gas.

Welding in windscreen frame at the left and right

3. Welding in windscreen frame at the left and right

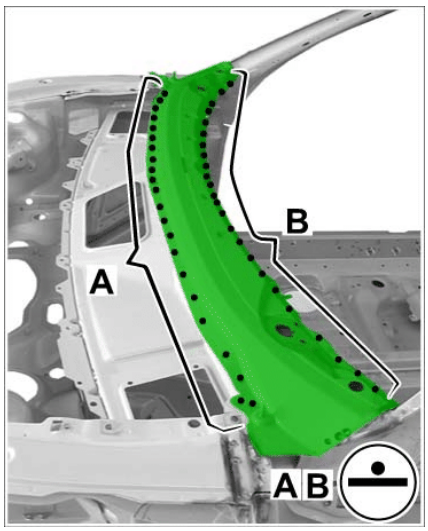
3.1. Resistance spot-weld the windscreen frame at the left and right in area **-A-** .



Welding in windscreen frame at the left and right

4. Welding in windscreen frame at the left and right

4.1. Resistance spot-weld the windscreen frame at the left and right in area **-A-** .



4.2. Resistance spot-weld the windscreen frame at the left and right in area **-B-** .

Welding in windscreen frame at the left and right

5. Welding in windscreen frame at the left and right

5.1. Plug-weld the windscreen frame at the left and right in areas **-A-** and **-B-** using inert gas.

Welding in cowl panel reinforcement

6. Welding in cowl panel reinforcement

6.1. Resistance spot-weld the cowl panel reinforcement in areas **-A-** and **-B-** .

7. Install hinge pillar reinforcement at the left and right. *→516255 23 Replacing hinge pillar reinforcement - section on "Installing"*

8. Install roof. →510355 Replacing roof - section on "Installing" [997110 997111 997120 997121] *→510355 23 Replacing roof - section on "Installing" [997410 997411]*

top of page

Subsequent work

Subsequent work for body repairs

1. Removing vehicle from straightening bench
2. Cleaning spot-welded joints and sheetmetal flanges with a wire brush
3. Priming flange areas with 2K primer
4. Restore standard sealing with body sealant
   →501000 Seam seal
5. Restore standard undersealing with underbody sealant
   →501000 Undersealing
6. Painting repair area and adjacent surfaces, if necessary
7. Install removed add-on parts in the repair area
8. Apply cavity preservation.

997110, 997111, 997120, 997121, 997410, 997411

as of MY 2005
Country C00, C02, C05, C07, C08, C09, C10, C11, C12, C13, C14, C15, C16, C18, C19, C20, C21, C22, C23, C24, C25, C26, C27, C28, C32, C33, C34, C35, C36, C37, C38, C39, C45, C46, C98, C99

 WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo**

risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

Preliminary work for body repairs

Preliminary work for body repairs

Note

- *If it can be ensured there has been no deformation of the vehicle structure, the following repair can be carried out without the need of a straightening bench. In this case, the vehicle must not be raised when welding the component; it must stand on its wheels on an even surface.*

1. Removing add-on parts in the repair area
1.1. Remove add-on parts in the repair area according to the extent of damage to the vehicle.
2. Equipping straightening bench with straightening attachments
2.1. Equip straightening bench with the straightening attachments according to the plans included with the straightening attachments.
3. Placing vehicle on the straightening bench
3.1. Position vehicle on the straightening bench, align according to the reference holes and bolt firmly to the attachment set.
4. Covering add-on parts adjacent to the vehicle repair area
4.1. Cover all add-on parts remaining on the vehicle and the neighbouring areas with fire-proof, protective covers.
5. Reshaping connection area of the sheetmetal parts to be replaced
6. Exposing welding areas
6.1. Remove undersealing, paint, etc. from the welding areas of the body with a hot-air gun or rotary brush.

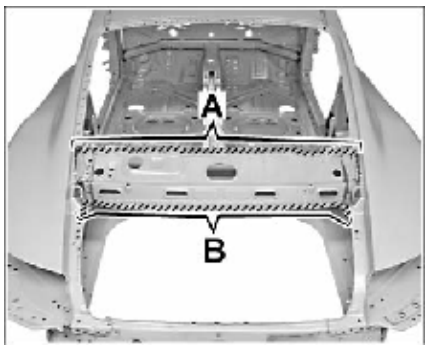
Preparing connection areas of the body for installing rear centre panel reinforcement

Safety instructions for flying sparks during grinding and welding work

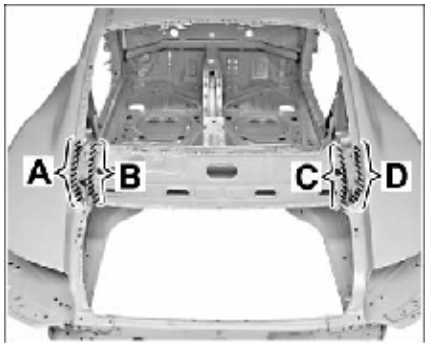
ATTENTION



Danger of explosion and fire from flying sparks during grinding and welding work!

- **Danger of injury and danger of damage to vehicle parts and other vehicles due to flying sparks**

→ Cover vehicle parts such as battery, fuel system, paintwork, glass and passenger compartment parts with fire-proof covers and, if necessary, remove batteries and fuel-carrying components.



→ No other vehicles may be left unprotected in areas used for body repair!

Preparing connection areas of the body for installing rear centre panel reinforcement

Preparing connection areas of the body for installing rear centre panel reinforcement

1. Clean undersealing, adhesive residue and paint off the body connecting flanges in the marked areas **-A-** and **-B-** using a hot-air gun or rotary brush. Grind the connecting flanges until bare.

Preparing connection areas of the body for installing rear centre panel reinforcement

2. Clean undersealing, adhesive residue and paint off the body connecting flanges in the marked areas **-A, B, C, D-** using a hot-air gun or rotary brush. Grind the connecting flanges until bare.

Note

- *Keep bonding areas clean and free of grease and do not coat with zinc powder paint.*

3. Coating spot-weld flange areas with zinc powder paint

3.1. Coat all spot-weld flange areas with zinc powder paint.

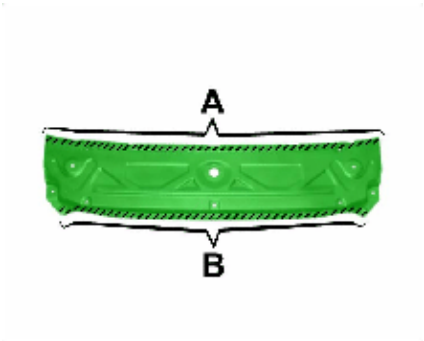
Preparing rear centre panel reinforcement for installation

Safety instructions for sharp-edged body and unit parts



ATTENTION

Danger of injury! Sharp-edge burrs on body and unit parts!

- **Injuries from sharp edges on body and unit parts.**

→ Wear protective gloves when working in the area of sharp-edged body and unit parts!

Preparing rear centre panel reinforcement for installation

Cleaning the welding areas

1. Cleaning the welding areas

1.1. Grind both sides of the connecting flange of the rear centre panel reinforcement in the marked areas **-A-** and **-B-** until bare using a rotary brush.

Note

- *Keep bonding areas clean and free of grease and do not coat with zinc powder paint.*

2. Coating spot-weld flange areas with zinc powder paint

2.1. Coat spot-weld flange areas with zinc powder paint.

Installing rear centre panel reinforcement

Danger of injury when welding

 DANGER

Risk of fatal injury from high voltage during electric welding!

- **Danger of explosion and fire when welding in the area of highly inflammable materials.**
- **Irritation to respiratory tracts from toxic zinc oxide emitted when welding galvanised steel!**
- **Danger of injury from unintentional triggering of pyrotechnical safety components!**
- **Danger of injury from weld spatters and UV light when welding!**

→ Do not perform welding work in a damp environment or on wet ground; there is a risk of fatal injury from the voltage being conducted through the human body. Persons with heart pacemakers should not perform welding work. Use insulating underlays.

→ Remove highly flammable materials from the work area; if necessary, remove units with fuel-carrying parts and protect work areas in the vehicle that are at risk of catching fire using fire-proof covers.

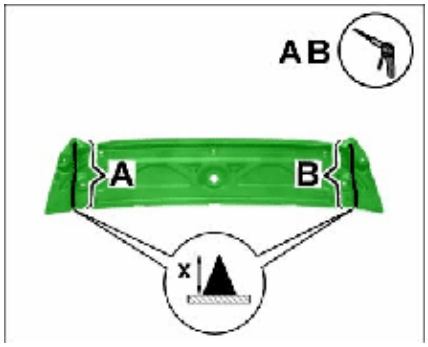
→ Ventilate the work area well.

→ Remove smoke gases with a suitable extraction system (refer to Workshop Equipment Manual).

→ Wear suitable protective equipment, such as protective clothing, gloves, a welding shield and, if necessary, a protective mask.

→ For welding work, always disconnect both terminals on the battery. In the case of welding work in the immediate vicinity of the control modules for pyrotechnical safety systems, remove the control modules before beginning work.

→ In addition, the guidelines of the welding equipment manufacturer and the legal accident prevention regulations and those of the mutual indemnity association (BGV D1) must be observed.

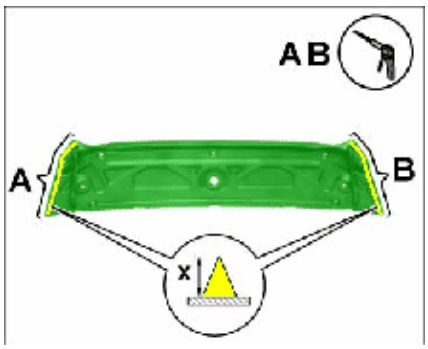


Installing rear centre panel reinforcement

 WARNING

Risk of damage if the processing time is not observed!

- **The quality of the joint will be affected if the adhesive processing time is not observed.**

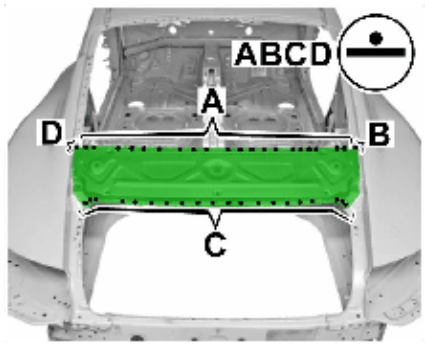


→ The new part must be welded within 30 minutes in the area of the adhesive, otherwise the adhesion of the adhesive will be affected.

Applying body sealant

1. Applying body sealant to the seal

1.1. In areas **-A-** and **-B-** , apply a triangular bead of body sealant measuring **-dimension X= approx. 12 mm-** high all around the seal.



Applying adhesive to the rear centre panel reinforcement

2. Applying adhesive to the rear centre panel reinforcement

2.1. On the inside of the rear centre panel reinforcement in areas **-A-** and **-B-** , apply a triangular bead of adhesive **(Teromix-6700)** measuring **-dimension X= approx. 8 mm-** .

3. Fitting rear centre panel reinforcement to the body

3.1. Fit the rear centre panel reinforcement to the body and fix in place with tensioning clamps.

Welding in the rear centre panel reinforcement

4. Welding in the rear centre panel reinforcement

4.1. Resistance spot-weld the rear centre panel reinforcement in areas **-A, B, C, D-** .

top of page

Subsequent work

Subsequent work for body repairs

1. Removing vehicle from straightening bench
2. Cleaning spot-welded joints and sheetmetal flanges with a wire brush
3. Priming flange areas with 2K primer
4. Restore standard sealing with body sealant
   →501000 Seam seal
5. Restore standard undersealing with underbody sealant
   →501000 Undersealing
6. Painting repair area and adjacent surfaces, if necessary
7. Install removed add-on parts in the repair area
8. Apply cavity preservation.

997110, 997111, 997120, 997121, 997410, 997411, 997430, 997431

as of MY 2005
Country C00, C02, C05, C07, C08, C09, C10, C11, C12, C13, C14, C15, C16, C18, C19, C20, C21, C22, C23, C24, C25, C26, C27, C28, C32, C33, C34, C35, C36, C37, C38, C39, C45, C46, C98, C99

 WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though**

the display on the screen is correct.
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

General warning notes

Safety instructions for body repairs

→5 AW Safety instructions - General warning notes

Preliminary work for body repairs

 **Note**

- *If it can be ensured there has been no deformation of the vehicle structure, the following repair can be carried out without the need of a straightening bench. In this case, the vehicle must not be raised when welding the component; it must stand on its wheels on an even surface.*

1. Removing add-on parts in the repair area

1.1. Remove add-on parts in the repair area according to the extent of damage to the vehicle.

2. Equipping straightening bench with straightening attachments

2.1. Equip straightening bench with the straightening attachments according to the plans included with the straightening attachments.

3. Placing vehicle on the straightening bench

3.1. Position vehicle on the straightening bench, align according to the reference holes and bolt firmly to the attachment set.

4. Covering add-on parts adjacent to the vehicle repair area

4.1. Cover all add-on parts remaining on the vehicle and the neighbouring areas with fire-proof, protective covers.

5. Reshaping connection area of the sheetmetal parts to be replaced

6. Exposing welding areas

6.1. Remove undersealing, paint, etc. from the welding areas of the body with a hot-air gun or rotary brush.

Preliminary work for body repairs with alignment bench

1. Removing accessories in the repair area
1.1. Remove accessories in the repair area according to the extent of damage to the vehicle.
2. Equipping alignment bench with straightening kit
2.1. Equip alignment bench with the basic straightening attachments according to the plans included with the straightening attachments.
3. Placing vehicle on the alignment bench
3.1. Position vehicle on alignment bench, align according to the reference holes and bolt firmly to the attachment set.
4. Covering accessories adjacent to the vehicle repair area
4.1. Cover all accessories remaining on the vehicle and the neighbouring areas with fire-proof, protective covers.
5. Reshaping connection area of the sheetmetal parts to be replaced
6. Exposing welding areas
6.1. Remove undersealing, paint, etc. from the welding areas of the body with a hot-air gun or rotary brush.

Removing centre side member

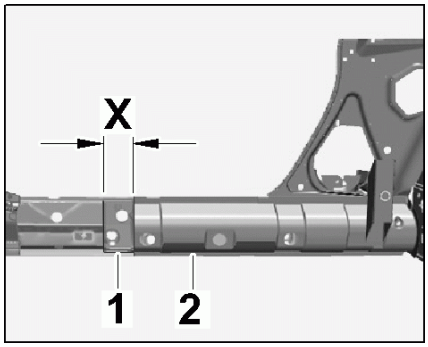
Removing centre side member

 ATTENTION

Possible separation points on centre side member

- **Parts cannot be replaced in the marked area a!**

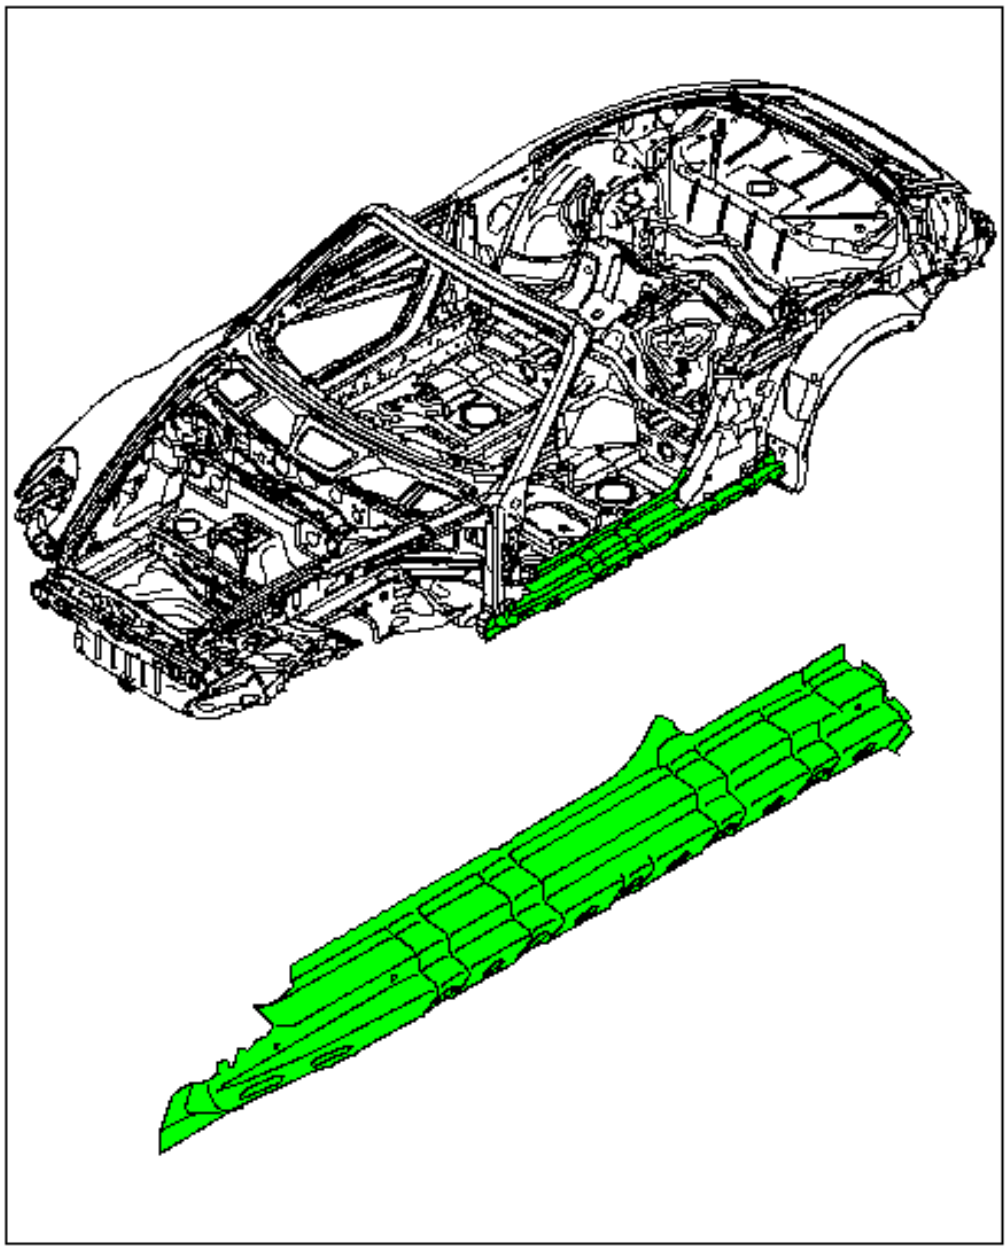
→ The possible separation points on the centre side member can **only be at the marked areas b and c.**
→ Position the separation point between the openings (holes).
→ The separation point must not obstruct the openings (holes).



1. Possible separation points

Possible separation points on centre side member

1.1. The possible separation points on the centre side member can only be at the marked areas **b and c**.



Length offset for part replacement

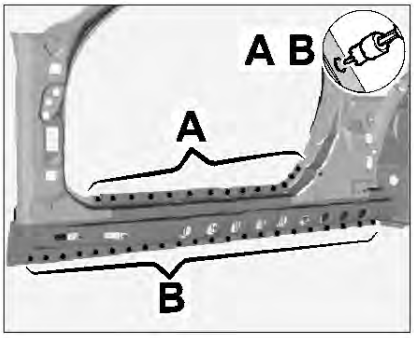
Length offset on centre side member with respect to retaining bracket

Removing centre side member

Installation Location:

Installation position of centre side member

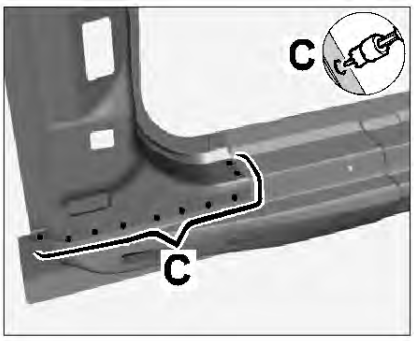
Note



Separating body components

- *In the case of 3-layer spot-welded panel joints with a hardened bonded layer on the outer panel, drill the outer panel in the area of the spotwelds sufficiently well without damaging the spotweld in the second component layer. After removing the loosened body part, old adhesive must be removed and any uneven spots sanded down. The flange area must then be pre-treated for bonding.*

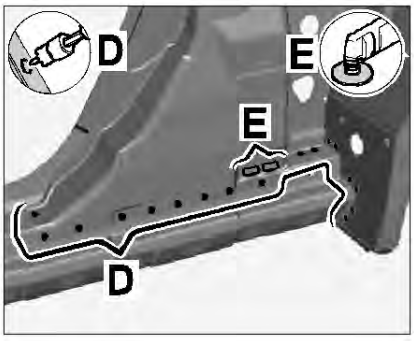
- *For a description of the procedure, see: Information on the use of structural adhesive in vehicle manufacturing →5000IN Working with body structural adhesive - section on "Information" [997310*



997311 997320 997321] →5000IN Working with body structural adhesive - section on "Information" [997610 997611 997620 997621].

1. Milling off spotwelds

Milling off spotwelds



1.1. Mill off spotwelds in areas **A and B** using a spotweld cutter.

Milling off spotwelds

Mill off spotwelds in area **C** using a spotweld cutter.

Mill off spotwelds in area **D** using a spotweld cutter.

Milling off spotwelds

Separate inert-gas welded seam in area **E** using a parting grinder.

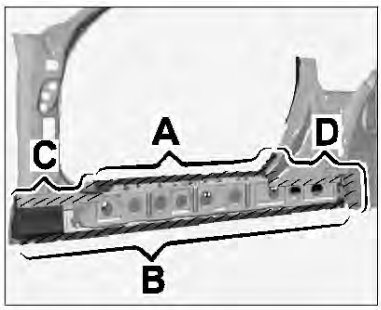
Preparing connection areas of body for installing centre side member

Safety instructions for flying sparks during grinding and welding work

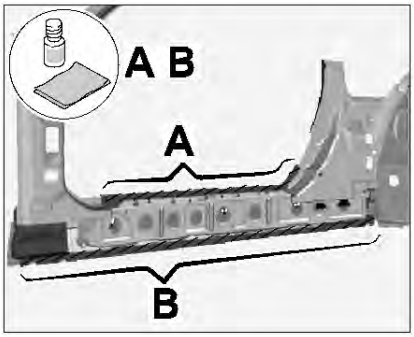
ATTENTION



Danger of explosion and fire from flying sparks during grinding and welding work!

- **Danger of injury and danger of damage to vehicle parts and other vehicles due to flying sparks**

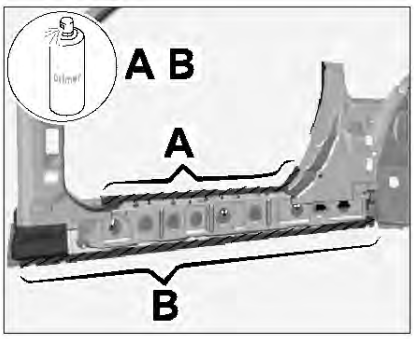
→ Cover vehicle parts such as battery, fuel system, paintwork, glass and passenger compartment parts with fire-proof covers and, if necessary, remove batteries and fuel-carrying components.



→ No other vehicles may be left unprotected in areas used for body repair!

Preparing connection areas of body for installing centre side member

Preparing connection areas of body for installing centre side member



1. Clean undersealing, adhesive residue and paint off body connecting flanges in the marked areas **A, B, C, D** using a hot-air gun or rotary brush. Grind the connecting flanges until bare.

Preparing bonded flange area

2. Preparing bonded flanges

   See: Working with adhesive →5000IN Working with body structural adhesive - section on "Information" [997310 997311 997320 997321]→5000IN Working with body structural adhesive - section on "Information" [997610 997611 997620 997621]

→ For welding work, always disconnect both terminals on the battery. In the case of welding work in the immediate vicinity of the control modules for pyrotechnical safety systems, remove the control modules before beginning work.

→

In addition, the guidelines of the welding equipment manufacturer and the legal accident prevention regulations and those of the mutual indemnity association (BGV D1) must be observed.

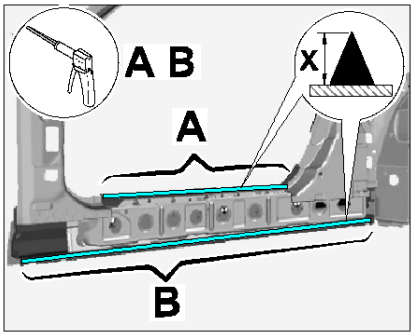
Installing centre side member

WARNING

Traffic safety warning for bonding structural components with structural adhesive!

- **Danger of material damage and injury**

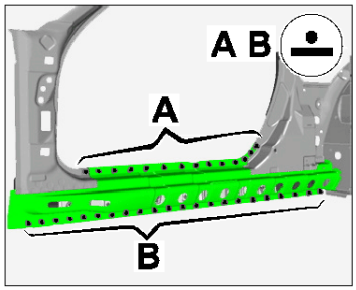
→ Join, fix and resistance spot-weld parts within the processing time. The jointing operation must take place directly after application of the adhesive in order to guarantee high-quality and reliable bonding. Otherwise the adhesive bead must be removed and pre-treatment of the surface and application of the adhesive must be repeated.



→ To ensure that the substance is completely mixed, apply a 30 mm long adhesive bead of fresh adhesive to a piece of cardboard before processing.

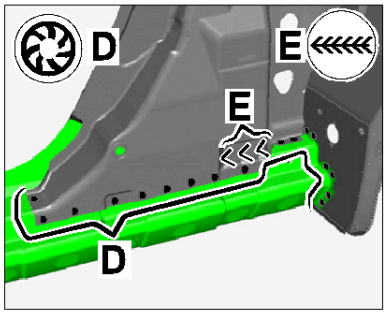
→ Process the adhesive within the processing time. The adhesive must be applied and the body part must be jointed within this period. Any resistance welding to be carried out in the area of the bonding must be performed within this period as well. →Processing time: 60 min

→ Do not apply pressure to bonded parts until hardening is complete!



→ If the contents of the cartridge is not used up completely, the processing nozzle must be kept on the cartridge until the adhesive hardens. If you intend to use the adhesive again later, a new processing nozzle must be used.

1. Apply adhesive to areas **A and B** of the body parts in the form of a triangular bead measuring **X = 3 mm**.



Applying adhesive

See: Working with adhesive →5000IN Working with body structural adhesive [997310 997311 997320 997321]→5000IN Working with body structural adhesive [997610 997611 997620 997621]

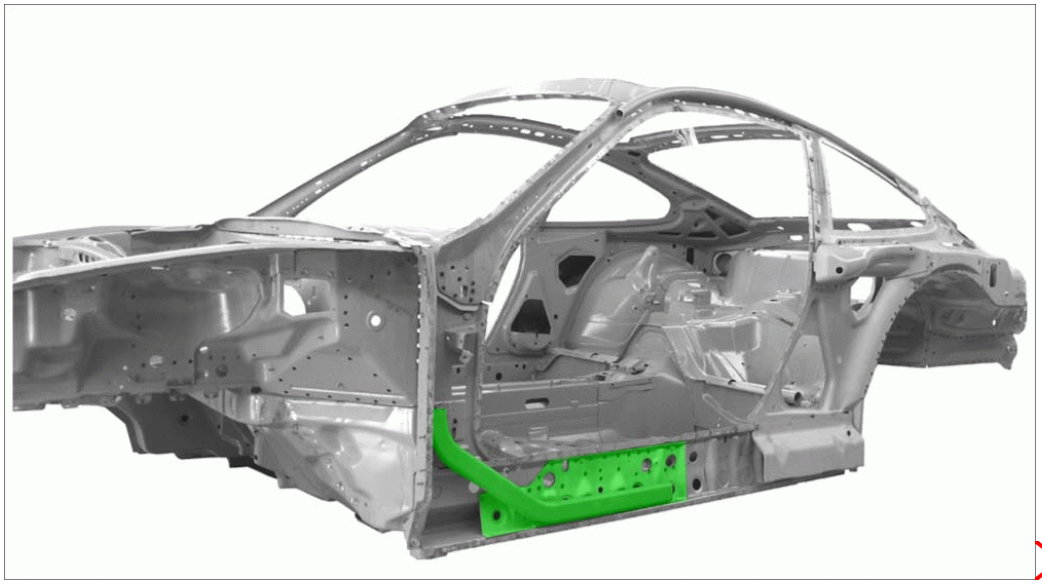
Preliminary work for body repairs with alignment bench

Preliminary work for body repairs with alignment bench

 WARNING
This affects torsion resistance, resistance to bending and crash safety

- **Danger of injury and material damage**

→ The support tube, which is made of highest-strength steel plate, cannot be reshaped.
→ The support tube cannot be straightened or reshaped.
→ In the event of damage or deformation, the support tube must be replaced.



1. Removing accessories in the repair area
1.1. Remove accessories in the repair area according to the extent of damage on the vehicle.
2. Equipping alignment bench with straightening kit
2.1. Set up straightening bench with the straightening set according to the set-up drawings included with the straightening set.
3. Placing vehicle on the alignment bench
3.1. Position vehicle on alignment bench, align according to the reference holes and bolt firmly to the attachment set.
4. Covering accessories adjacent to the vehicle repair area
4.1. Cover all accessories remaining on the vehicle and the neighbouring areas with fire-proof, protective covers.
5. Exposing welding areas
5.1. Remove undersealing, paint, etc. from the welding areas of the body with a hot-air gun or rotary brush.

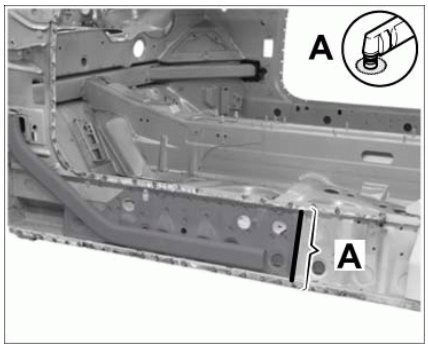
ATTENTION

Cut on retaining bracket for support tube

→ The cut on the retaining bracket for the support tube can **only be at the marked area A.**

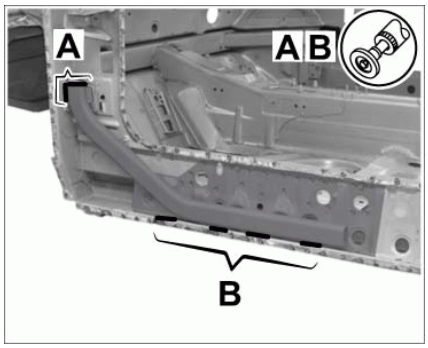
→ Position the cut between the openings (holes).



→ The cut must not obstruct the openings (holes).

Determining the cut

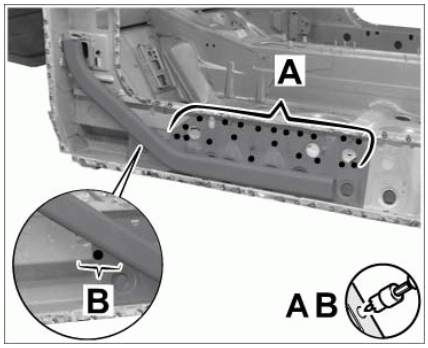
3. Determining the cut



3.1. Determine the position of the cut **-A-** between the openings (holes). Mark the cut.

Cutting through retaining bracket for support tube

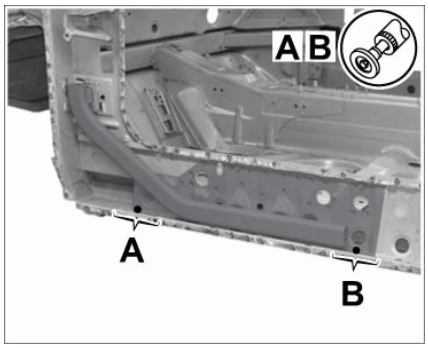
4. Cutting through retaining bracket for support tube



4.1. Cut through retaining bracket for support tube in area **-A-** .

Separating inert-gas welded seams

5. Separating inert-gas welded seams



5.1. Separate inert-gas welded seams in areas **-A-** and **-B -** using a parting grinder.

Cutting the spotwelds

6. Cutting the spotwelds

6.1. Mill off spotwelds in areas **-A-** and **-B-** using a spotweld cutter.

Separating spotwelds

7. Separating spotwelds

7.1. Separate spotwelds in areas **-A-** and **-B-** using a parting grinder.

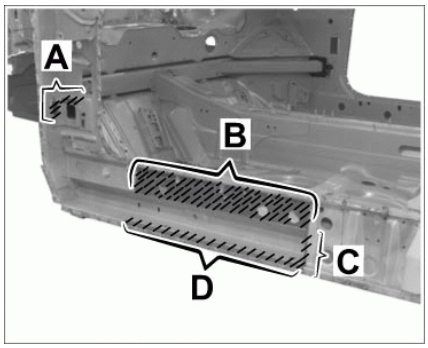
Preparing connection areas of the body for installing lower side member reinforcement

Safety instructions for flying sparks during grinding and welding work

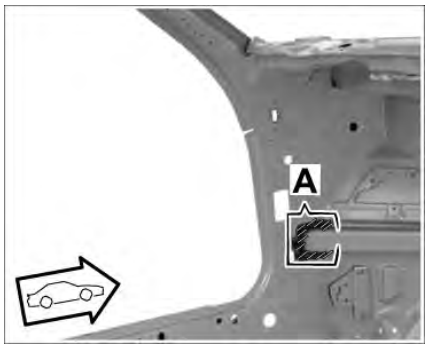
ATTENTION



Danger of explosion and fire from flying sparks during grinding and welding work!

- **Danger of injury and danger of damage to vehicle parts and other vehicles due to flying sparks**

→ Cover vehicle parts such as battery, fuel system, paintwork, glass and passenger compartment parts with fire-proof covers and, if necessary, remove batteries and fuel-carrying components.



→ No other vehicles may be left unprotected in areas used for body repair!

Preparing connection area of body for installing lower side member reinforcement

Cleaning the welding areas

1. Clean undersealing, adhesive residue and paint off the body connecting flanges in the marked areas **-A, B, C, D-** using a hot-air gun or rotary brush. Grind the connecting flanges until bare.

Cleaning the welding areas

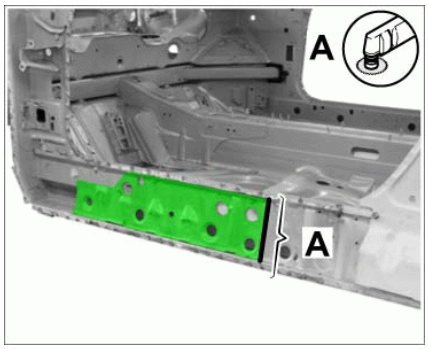
2. Remove expanded sealant on body in the marked area **-A-** using a hot-air gun or rotary brush.
3. Coat spot-weld flange areas with zinc powder paint.

3.1. Coat all spot-weld flange areas with zinc powder paint.

top of page

Fitting lower side member reinforcement and preparing for installation

Safety instructions for sharp-edged body and unit parts



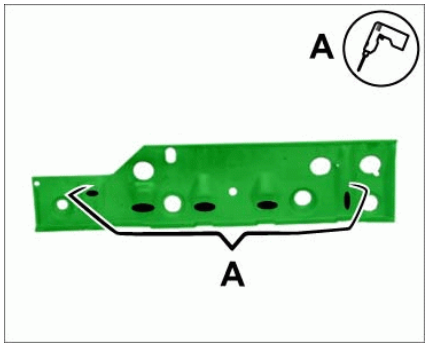
ATTENTION

Danger of injury! Sharp-edge burrs on body and unit parts!

- **Injuries from sharp edges on body and unit parts.**

→ Wear protective gloves when working in the area of sharp-edged body and unit parts!

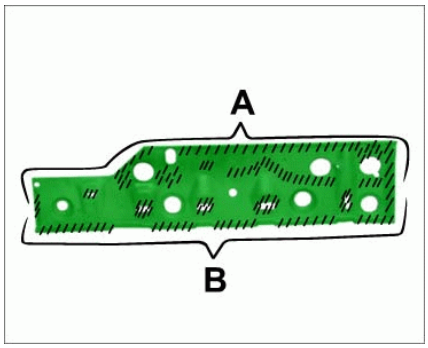
Fitting in retaining bracket and preparing for installation



Fitting retaining bracket to the body

1. Fitting retaining bracket to the body

1.1. Separate replacement part in area **-A-** to obtain a welding slit width s = 1 x sheet thickness.



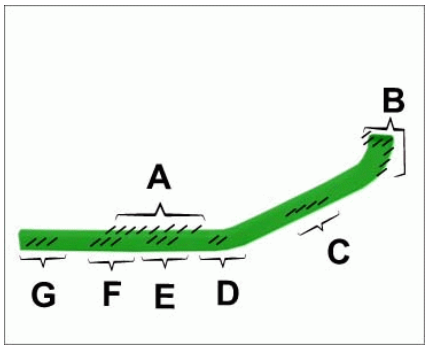
1.2. Fix the retaining bracket with tensioning clamps.

Drilling holes for plug welding using inert gas

2. Drilling holes for plug welding using inert gas

2.1. Drill holes (Ø = 7 mm) in area **-A-** for plug welding using inert gas. Maintain spacing between the bores as on the old part.

Cleaning the welding areas



3. Cleaning the welding areas

3.1. Grind both sides of the connecting flanges of the retaining bracket in the marked areas **-A-** and **-B-** until bare using a rotary brush.

4. Coat spot-weld flange areas with zinc powder paint.

4.1. Coat all spot-weld flange areas with zinc powder paint.

Fitting in support tube and preparing for installation

Cleaning the welding areas

1. Cleaning the welding areas

1.1. Grind both sides of the connecting flanges of the support tube in the marked areas **-A, B, C, D, E, F, G-** until bare from the inside using a rotary brush.

Installing lower side member reinforcement

Danger of injury when welding

DANGER

Risk of fatal injury from high voltage during electric welding!

- **Danger of explosion and fire when welding in the area of highly inflammable materials.**
- **Irritation to respiratory tracts from toxic zinc oxide emitted when welding galvanised steel!**
- **Danger of injury from unintentional triggering of pyrotechnical safety components!**
- **Danger of injury from weld spatters and UV light when welding!**

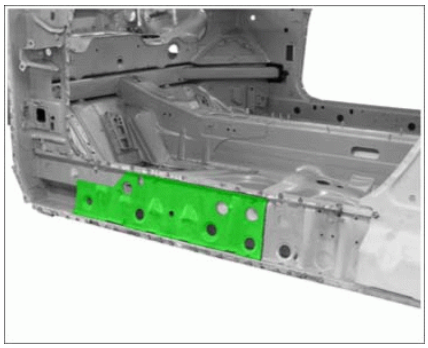
→ Do not perform welding work in a damp environment or on wet ground; there is a risk of fatal injury from the voltage being conducted through the human body. Persons with heart pacemakers should not perform welding work. Use insulating underlays.

→ Remove highly flammable materials from the work area; if necessary, remove units with fuel-carrying parts and protect work areas in the vehicle that are at risk of catching fire using fire-proof covers.

→ Ventilate the work area well.

→ Remove smoke gases with a suitable extraction system (refer to Workshop Equipment Manual).

→ Wear suitable protective equipment, such as protective clothing, gloves, a welding shield and, if necessary, a protective mask.

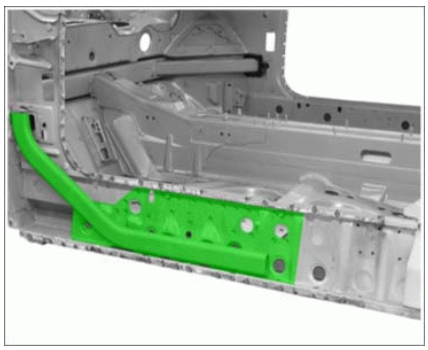


→ For welding work, always disconnect both terminals on the battery. In the case of welding work in the immediate vicinity of the control modules for pyrotechnical safety systems, remove the control modules before beginning work.

→ In addition, the guidelines of the welding equipment manufacturer and the legal accident prevention regulations and those of the mutual indemnity association (BGV D1) must be observed.

Installing lower side member reinforcement

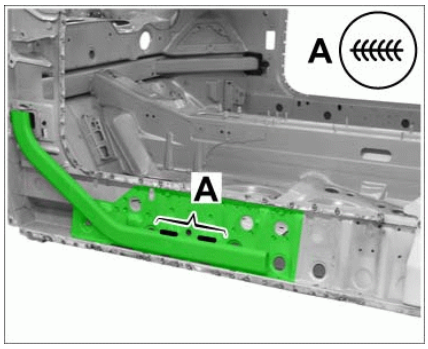
Note



Determine the position of the new part and secure with tensioning clamps.
When butt welding body sheet panels with a sheet thickness of > 1.5 mm, there must be a welding slit width s = 1 x sheet thickness to guarantee the required welding quality (welding through).

Fitting retaining bracket to the body

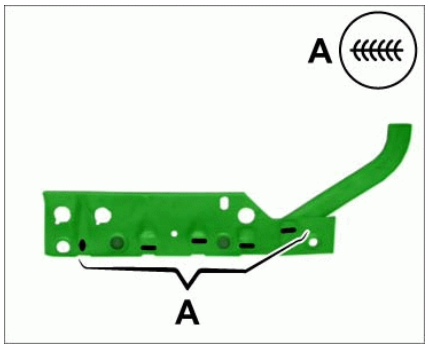
1. Fitting retaining bracket to the body



1.1. Fit the retaining bracket to the body and fix in place with tensioning clamps.

Fitting the support tube to the body

2. Fitting the support tube to the body

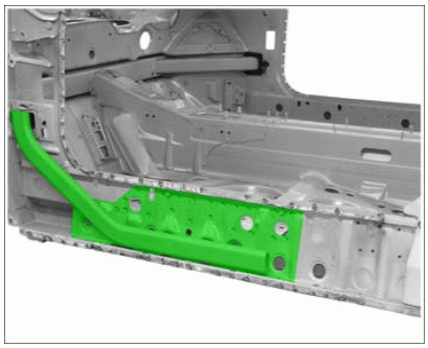


2.1. Fit the support tube to the body and fix in place with tensioning clamps.

Welding in support tube

3. Welding in support tube

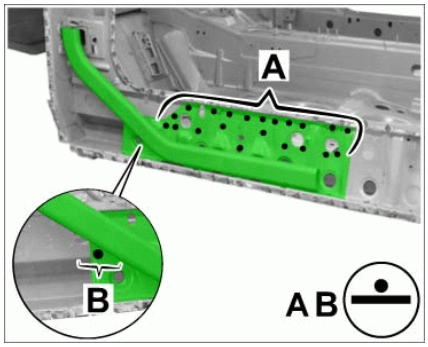
3.1. Apply a full weld to secure the support tube in area **-A-** to the retaining bracket using inert gas.



Welding in support tube

4. Welding in support tube

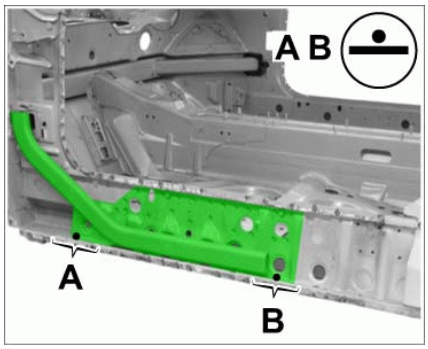
4.1. Detach the support tube together with the retaining bracket from the body.



4.2. Apply a full weld to the support tube with retaining bracket in area **-A-** from behind using inert gas (through existing slots).

Fitting support tube with retaining bracket to the body

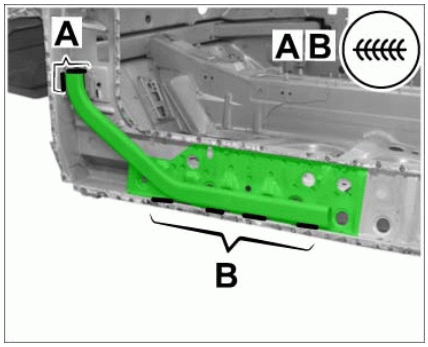
5. Fitting support tube with retaining bracket to the body



5.1. Fit the support tube with retaining bracket to the body and fix in place with tensioning clamps.

Welding in support tube with retaining bracket

6. Welding in support tube with retaining bracket

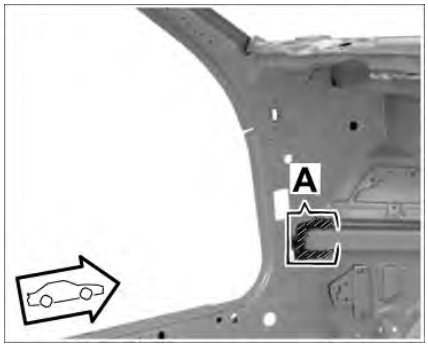


6.1. Resistance spot-weld the support tube with retaining bracket in areas **-A-** and **-B-** .

Welding in support tube with retaining bracket

7. Welding in support tube with retaining bracket

7.1. Resistance spot-weld the support tube with retaining bracket in areas **-A-** and **-B-** .



Welding in support tube with retaining bracket

8. Welding in support tube with retaining bracket

8.1. Apply a full weld to the support tube with retaining bracket in areas **-A-** and **-B-** using inert gas.

Note

After the required hardening time has elapsed, cut off excess expanded sealant to a height of more than 25 mm using a knife.

Applying expanded sealant

9. Applying expanded sealant

9.1. Seal inside of A pillar in area **-A-** with →AFS-Vario .

9.2. Apply expanded sealant using a spatula.

10. Install centre side member. →514855 Replacing centre side member - section on "Installing" [997310 997311 997320 997321 997610 997611 997620 997621] →*514855 23 Replacing centre side member - section on "Installing" [997110 997111 997120 997121 997410 997411 997430 997431]*
11. Install hinge pillar reinforcement. →*516255 23 Replacing hinge pillar reinforcement - section on "Installing"*

top of page

Subsequent work

Subsequent work for body repairs

1. Removing vehicle from straightening bench
2. Cleaning spot-welded joints and sheetmetal flanges with a wire brush
3. Priming flange areas with 2K primer
4. Restore standard sealing with body sealant
   →*501000 Seam seal*
5. Restore standard undersealing with underbody sealant
   →*501000 Undersealing*
6. Painting repair area and adjacent surfaces, if necessary
7. Install removed add-on parts in the repair area
8. Apply cavity preservation.

WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**

- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

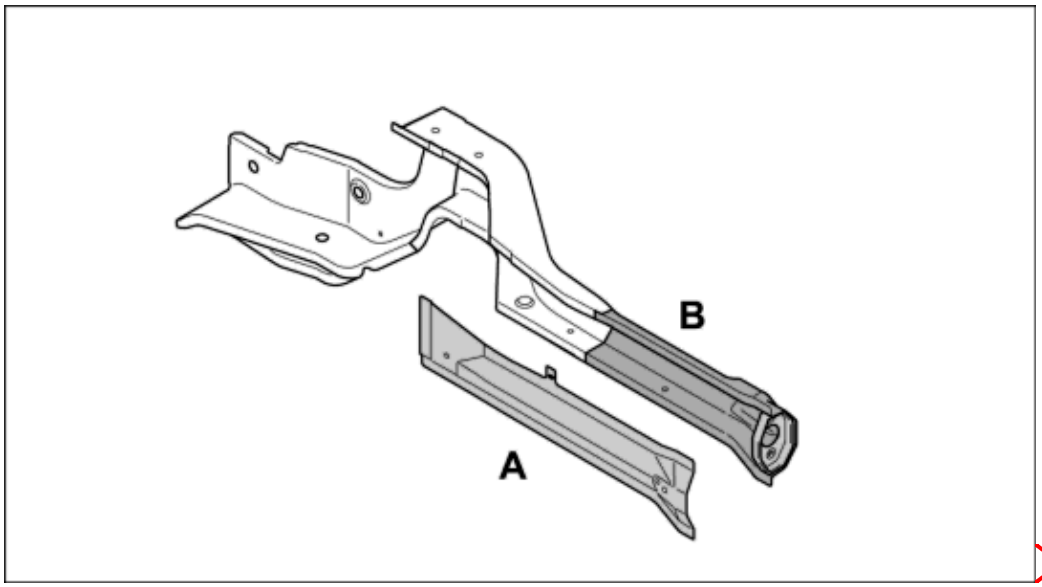
Preliminary work for body repairs with alignment bench

Preliminary work for body repairs with alignment bench



1. Removing accessories in the repair area
1.1. Remove accessories in the repair area according to the extent of damage to the vehicle.
2. Equipping alignment bench with straightening kit
2.1. Equip alignment bench with the basic straightening attachments according to the plans included with the straightening attachments.
3. Placing vehicle on the alignment bench
3.1. Position vehicle on alignment bench, align according to the reference holes and bolt firmly to the attachment set.
4. Covering accessories adjacent to the vehicle repair area
4.1. Cover all accessories remaining on the vehicle and the neighbouring areas with fire-proof, protective covers.
5. Reshaping connection area of the sheetmetal parts to be replaced
6. Exposing welding areas
6.1. Remove undersealing, paint, etc. from the welding areas of the body with a hot-air gun or rotary brush.

Removing side member

Removing side member

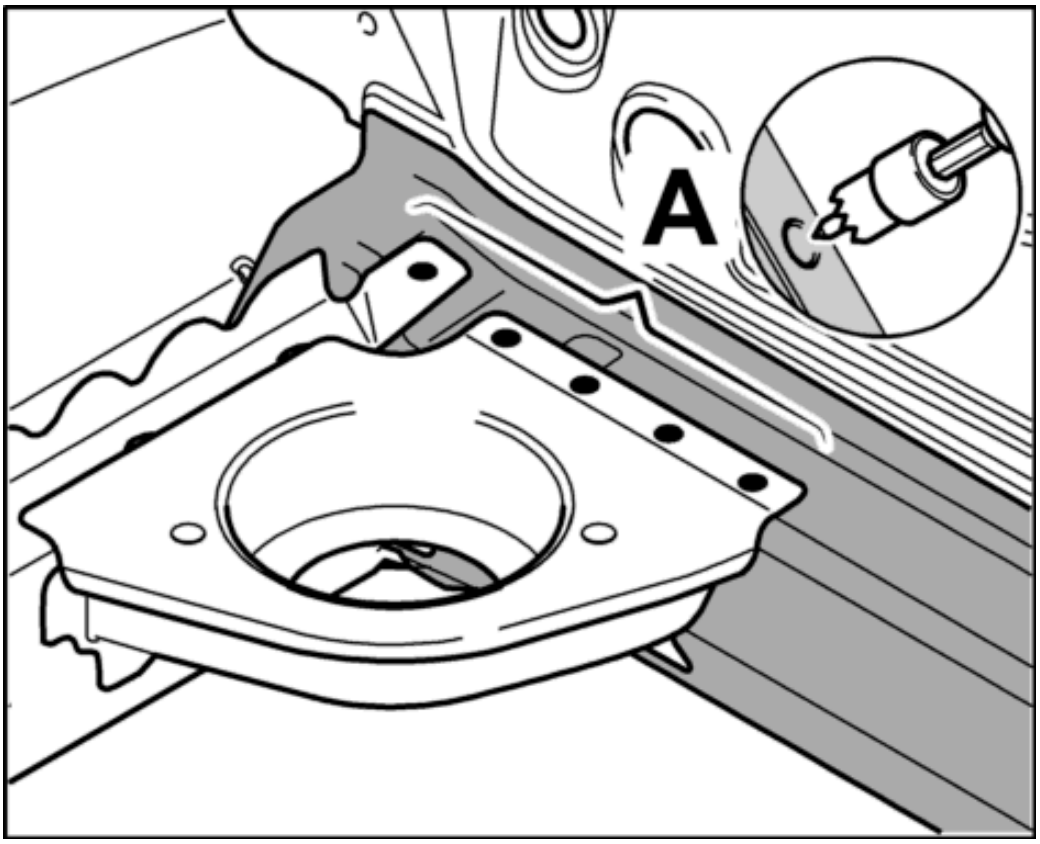
Installation Location:

Side member spare parts

A - Outer side member

B - Inner side member

WARNING

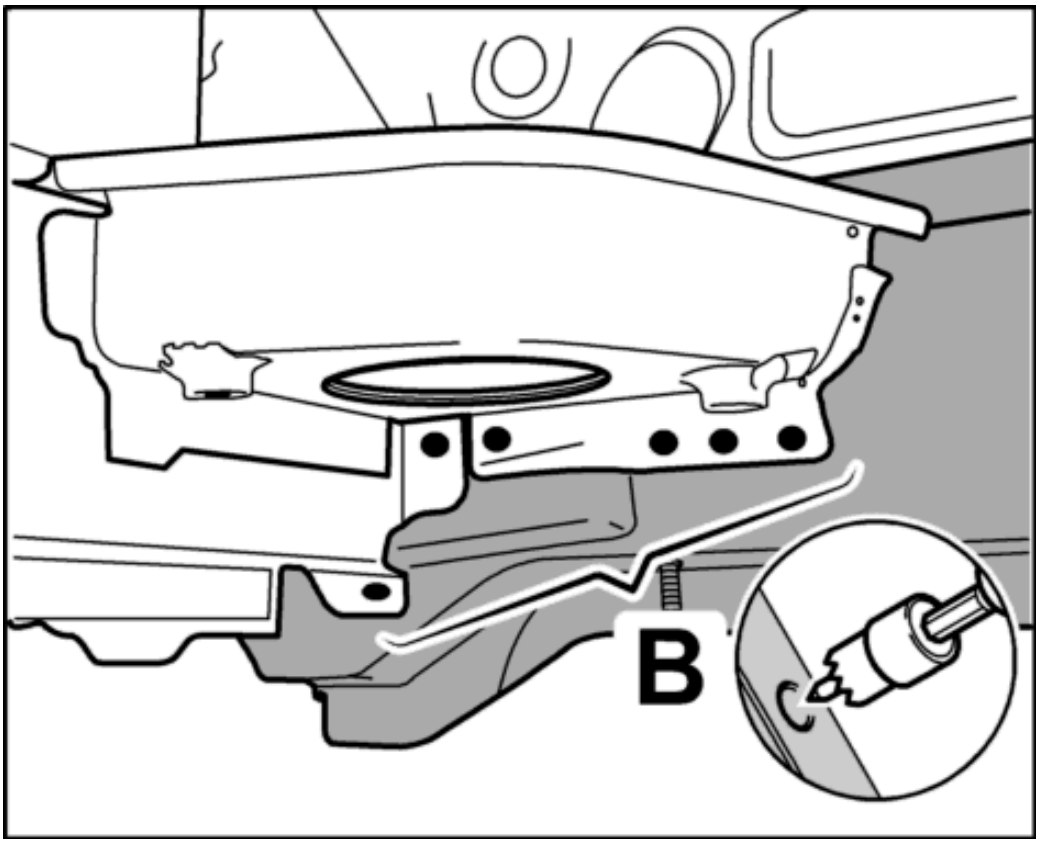


Possible separation points on inner side member

- **Danger of material damage and injury**

→ The possible separation points on the inner side member are **30 mm in front of the tailored blank (laser weld) starting from the rear of the vehicle in the direction of travel.**

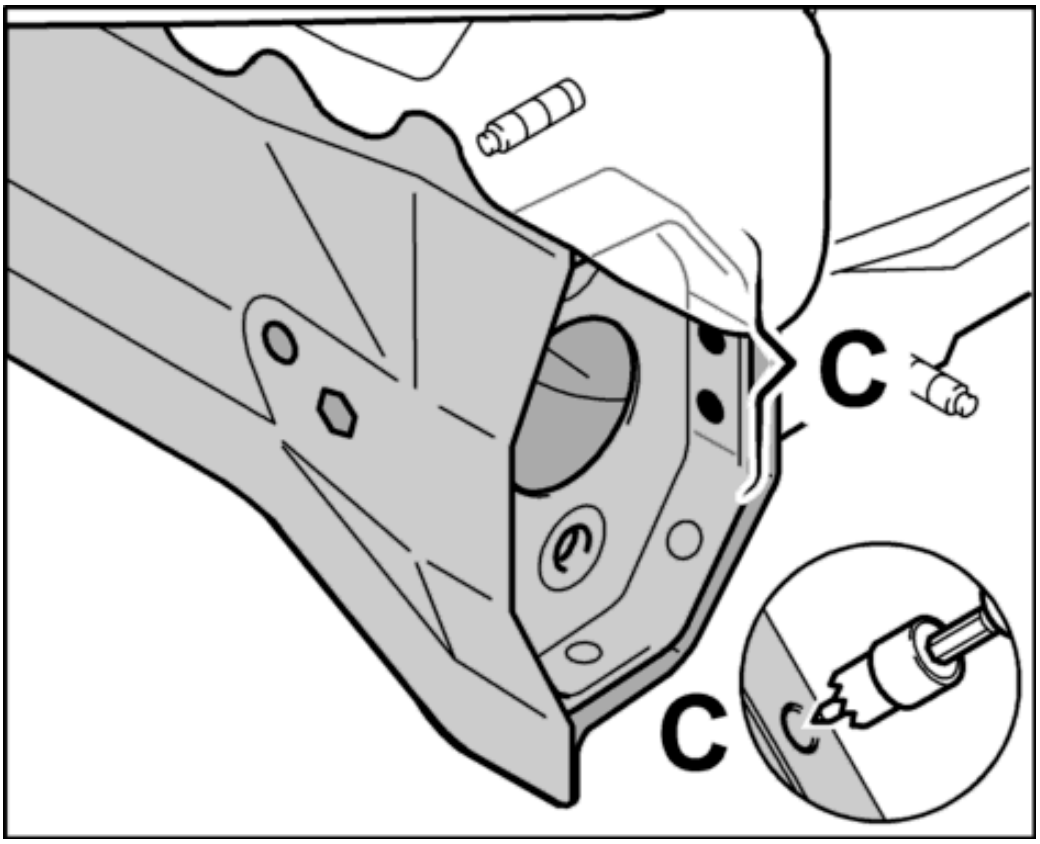
1. Mill off spotwelds on the engine mounting and end plate.



1.1. Mill off spotwelds between the engine mounting, end plate and inner side member in area **A** using a spotweld cutter.

Milling off spotwelds on the engine mounting and end plate

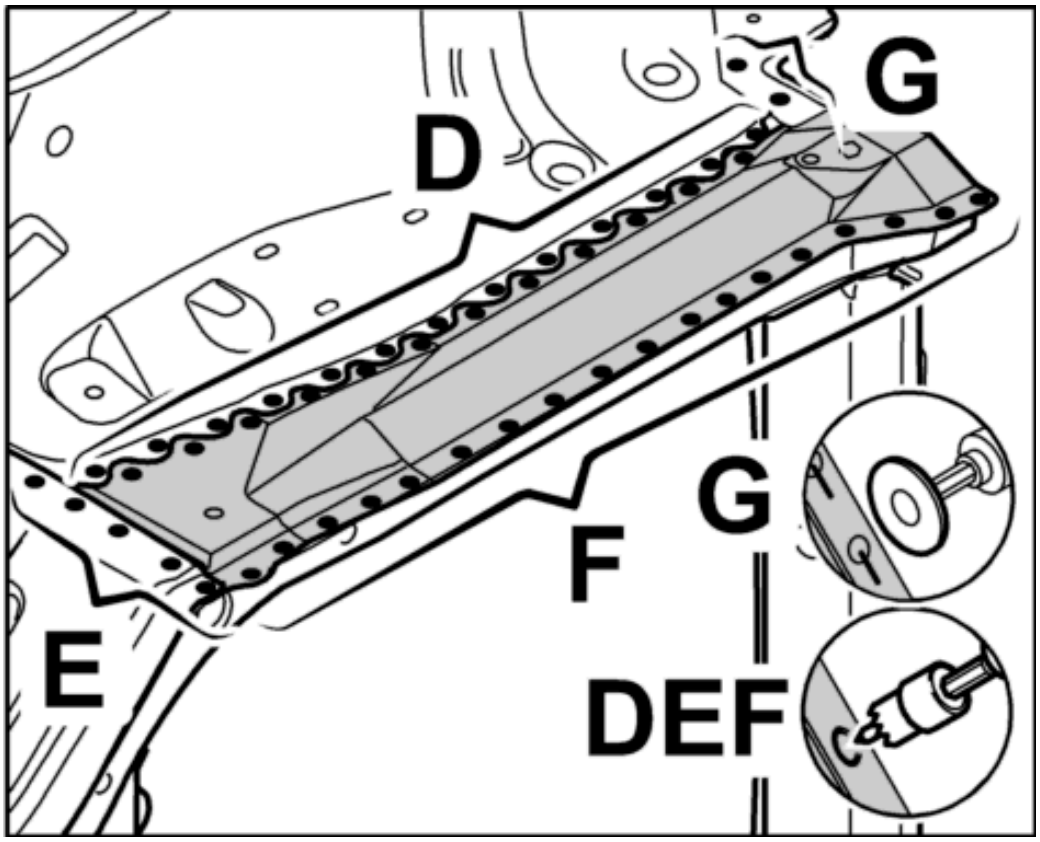
2. Mill off spotwelds on the engine mounting and end plate.



2.1. Mill off spotwelds between the engine mounting, end plate and inner side member in area **B** using a spotweld cutter.

Milling off spotwelds on the engine mounting and end plate

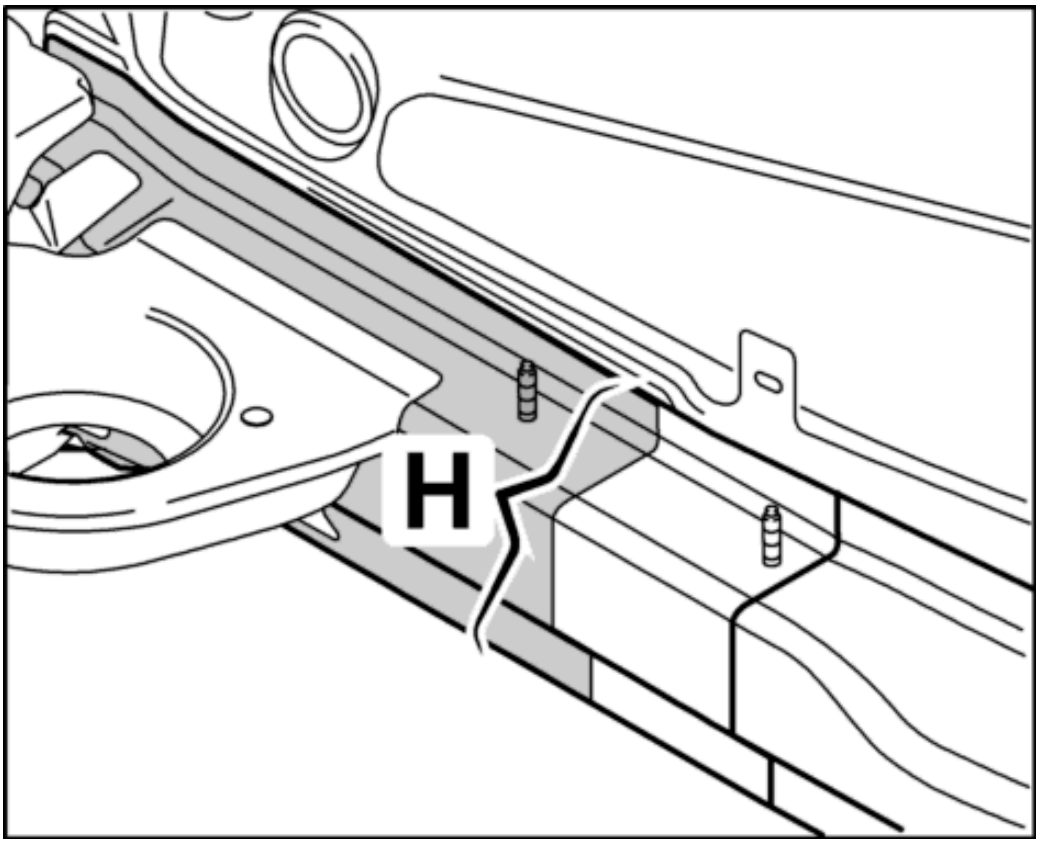
3. Mill off spotwelds on rear closing panel.



3.1. Mill off spotwelds between the rear closing panel and inner side member in area **C** using a spotweld cutter.

Milling off spotwelds on rear closing panel

4. Mill off spotwelds on outer side member.



4.1. Mill off spotwelds between the outer side member and inner side member in areas **D, E, F** using a spotweld cutter. Cut through the shielding gas weld in area **G** using the parting grinder.

Milling off spotwelds on outer side member

5. Cutting off inner side member

5.1. Cut off the inner side member in area **H** in front of tailored blank (laser weld) **dimension X = 30 mm** using the body saw.

Cutting off inner side member

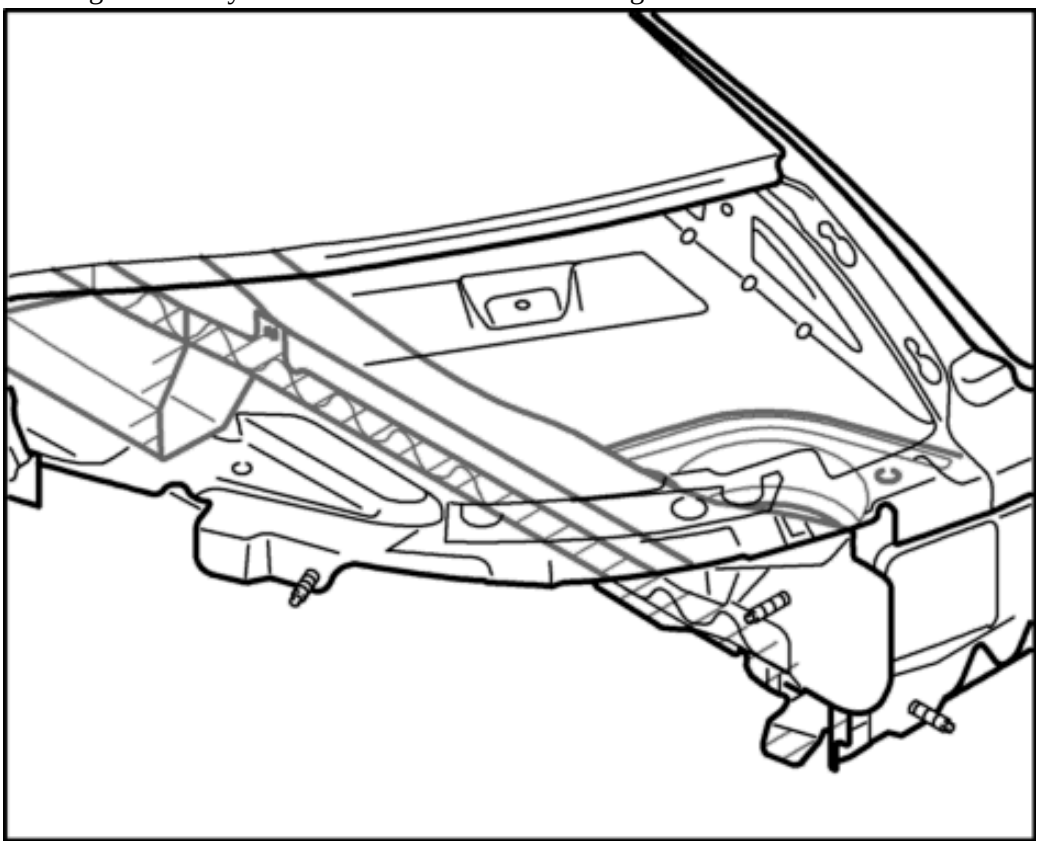
Preparing connection area of body for installing rear side member

Safety instructions for flying sparks during grinding and welding work

ATTENTION

Danger of explosion and fire from flying sparks during grinding and welding work!



- **Danger of injury and danger of damage to vehicle parts and other vehicles due to flying sparks**

→ Cover vehicle parts such as battery, fuel system, paintwork, glass and passenger compartment parts with fire-proof covers and, if necessary, remove batteries and fuel-carrying components.

→ No other vehicles may be left unprotected in areas used for body repair!

Preparing connection areas of body for installing rear side members

1. Clean the body connection flanges of undersealing, adhesive residue and paint in the marked areas using a hot-air gun or rotary brush. Grind the connection flanges until bare.

Preparing connection areas of body for installing rear side members

Installing rear side member

Danger of injury when welding

DANGER

Risk of fatal injury from high voltage during electric welding!

- **Danger of explosion and fire when welding in the area of highly inflammable materials.**
- **Irritation to respiratory tracts from toxic zinc oxide emitted when welding galvanised steel!**
- **Danger of injury from unintentional triggering of pyrotechnical safety components!**
- **Danger of injury from weld spatters and UV light when welding!**

→ Do not perform welding work in a damp environment or on wet ground; there is a risk of fatal injury from the voltage being conducted through the human body. Persons with heart pacemakers should not perform welding work. Use insulating underlays.

→ Remove highly flammable materials from the work area; if necessary, remove units with fuel-carrying parts and protect work areas in the vehicle that are at risk of catching fire using fire-proof covers.

→ Ventilate the work area well.

→ Remove smoke gases with a suitable extraction system (refer to Workshop Equipment Manual).

→ Wear suitable protective equipment, such as protective clothing, gloves, a welding shield and, if necessary, a protective mask.

→ For welding work, always disconnect both terminals on the battery. In the case of welding work in the immediate vicinity of the control modules for pyrotechnical safety systems, remove the control modules before beginning work.

→ In addition, the guidelines of the welding equipment manufacturer and the legal accident prevention regulations and those of the mutual indemnity association (BGV D1) must be observed.

Safety instructions for flying sparks during grinding and welding work

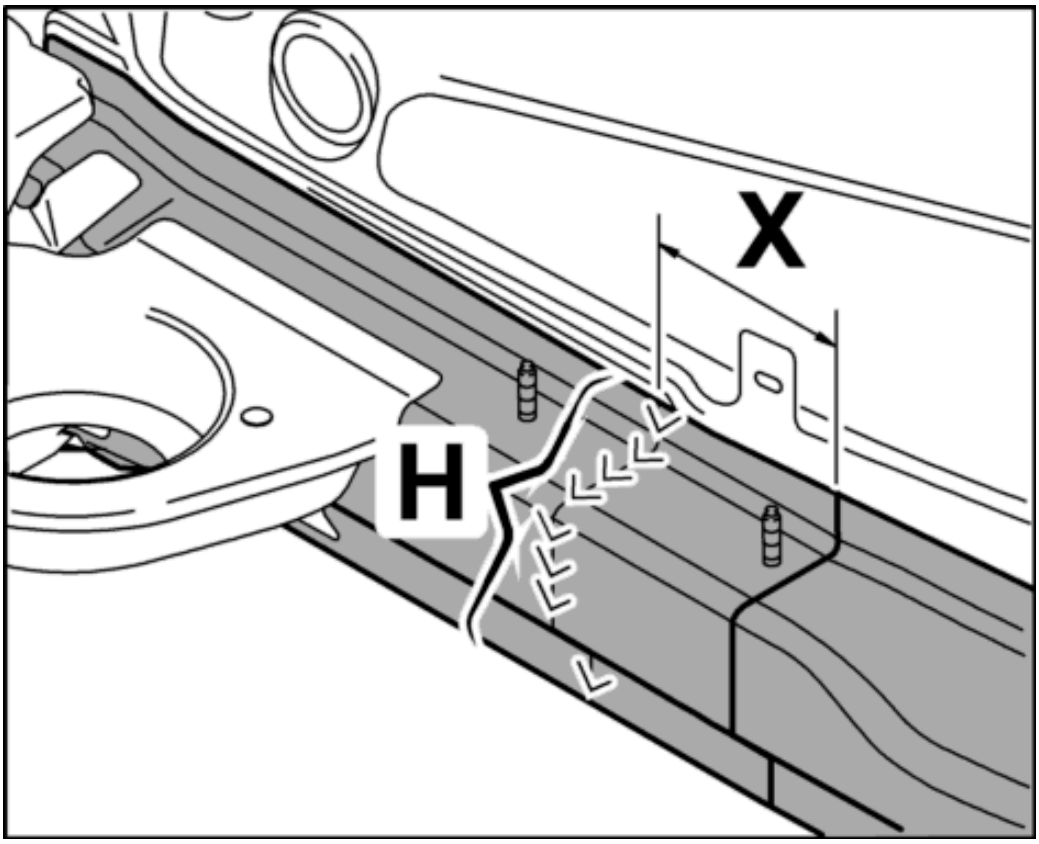
ATTENTION

Danger of explosion and fire from flying sparks during grinding and welding work!

- **Danger of injury and danger of damage to vehicle parts and other vehicles due to flying sparks**

→ Cover vehicle parts such as battery, fuel system, paintwork, glass and passenger compartment parts with fire-proof covers and, if necessary, remove batteries and fuel-carrying components.

→ No other vehicles may be left unprotected in areas used for body repair!



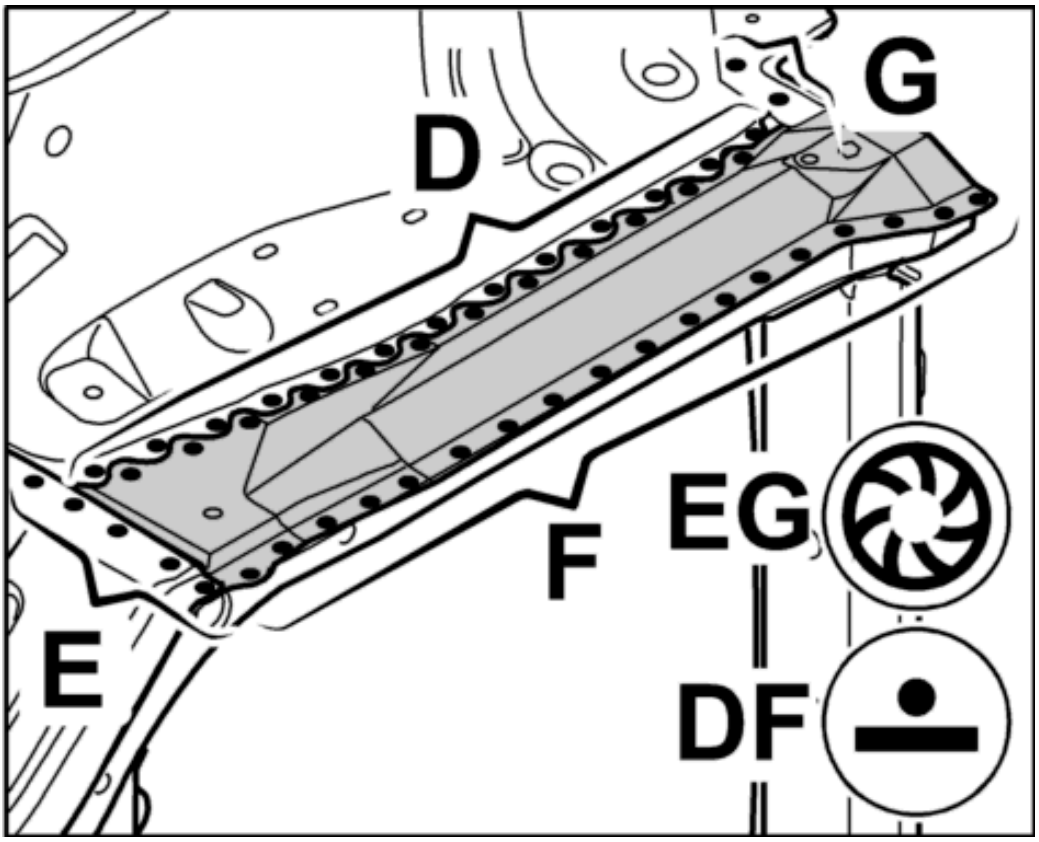
Installing side member

Note

When butt welding body sheet panels with a sheet thickness of > 1.5 mm, there must be a welding slit width s = 1 x sheet thickness to guarantee the required welding quality (welding through).

1. Weld in the inner side member.

1.1. Weld the inner side member with a full butt weld **H** under shielding gas.

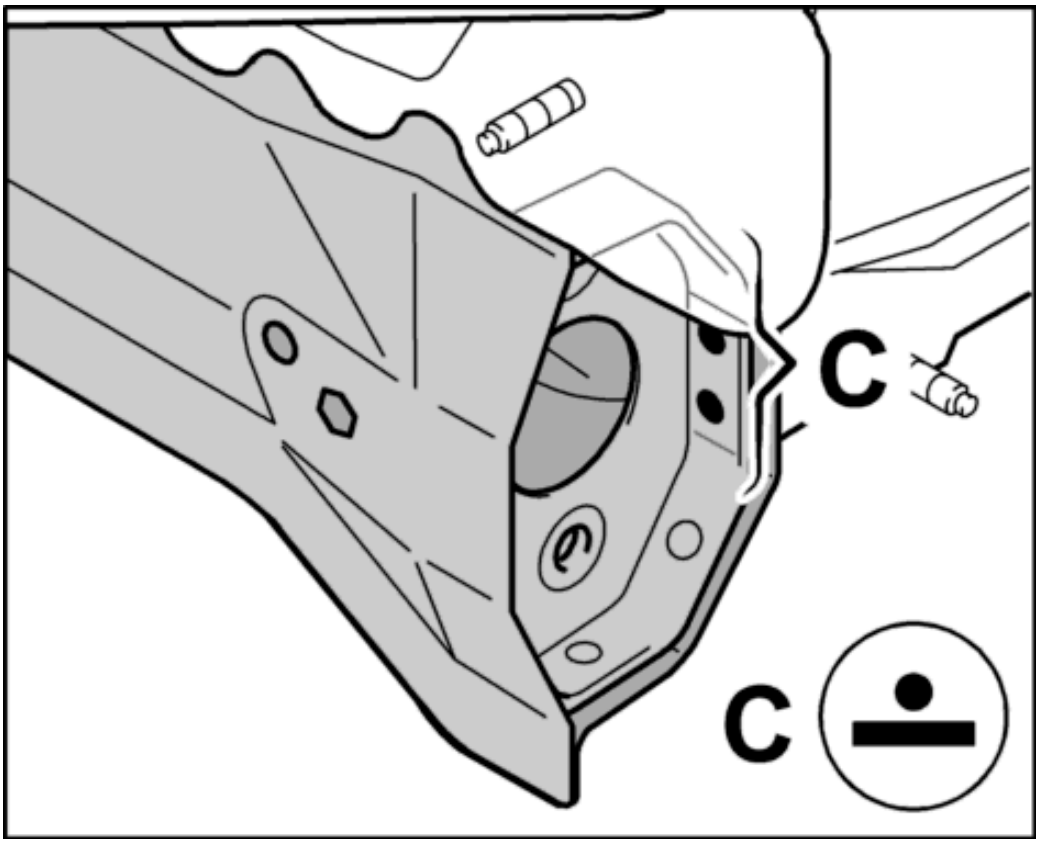


Welding in inner side member

2. Weld in outer side member.

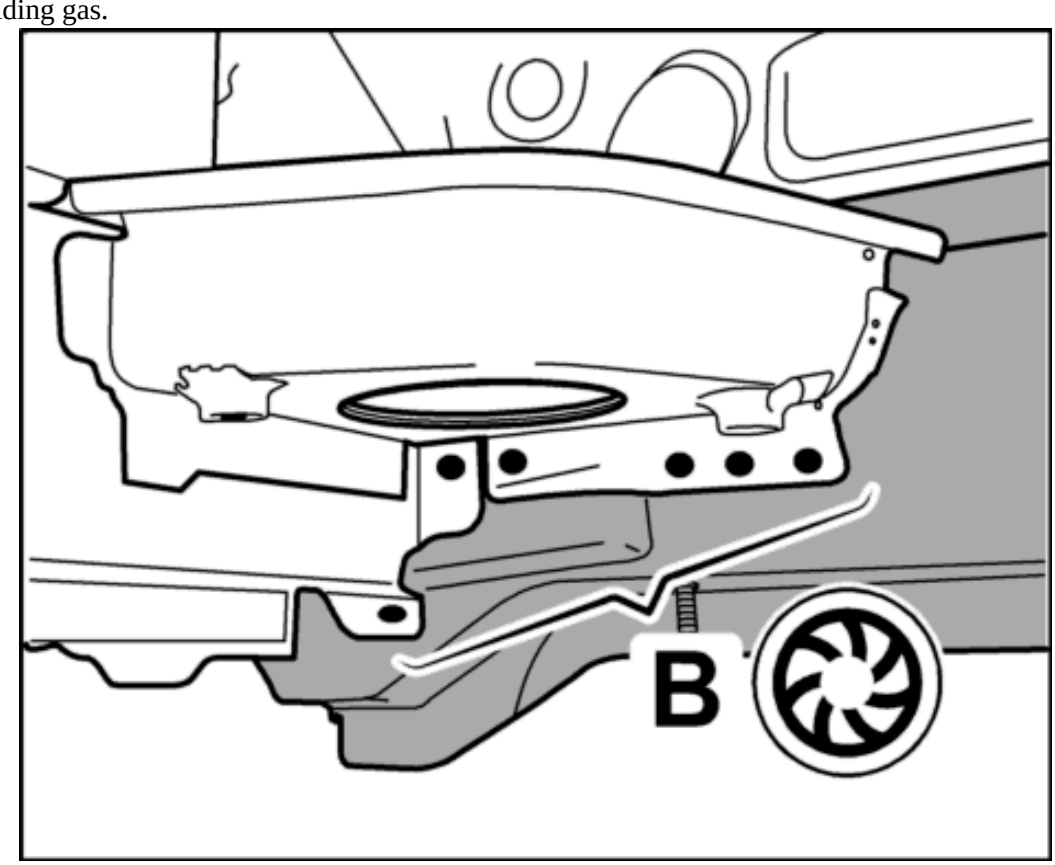
2.1. Spot-weld outer side member to inner side member in areas **D, E**.

2.2. Plug-weld the outer side member to the wheel arch in area **F** under shielding gas.



2.3. Plug-weld the outer side member to the wheel arch in area **G** under shielding gas.

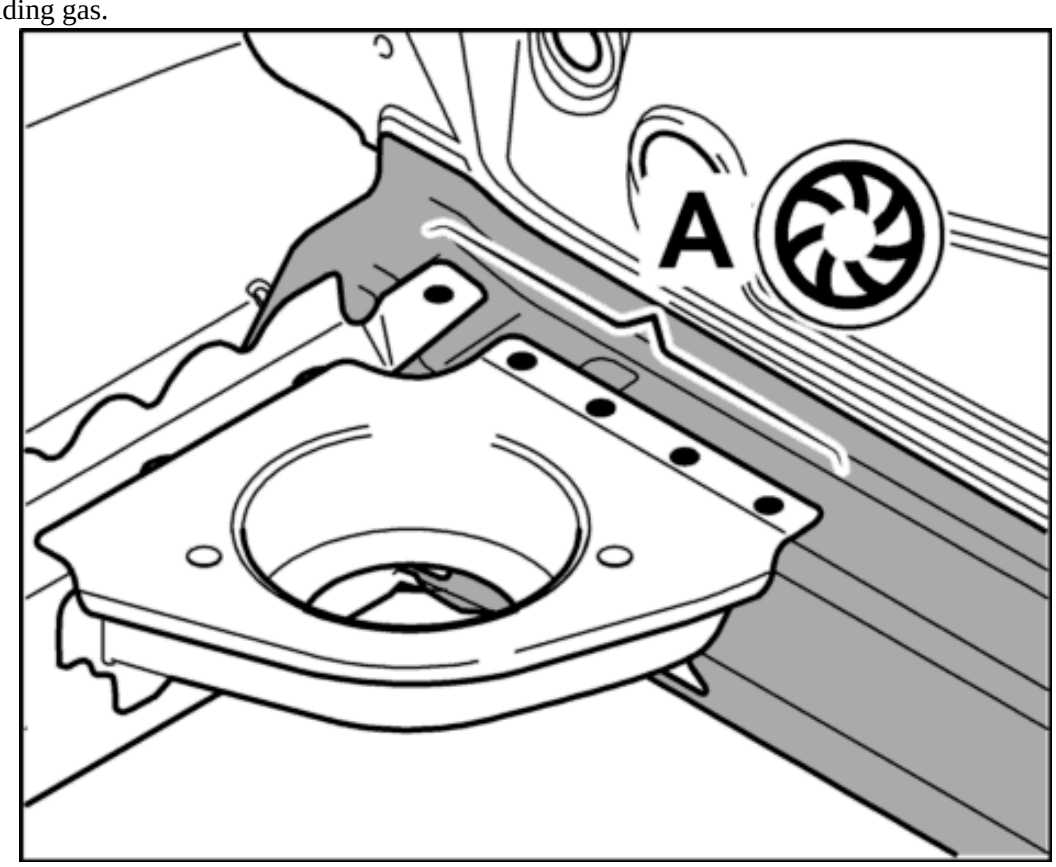
Welding in outer side member



3. Spot-weld inner side member.

3.1. Spot-weld the inner side member to the end plate in area **C**.

4. Weld engine mounting and end plate under shielding gas.



4.1. Plug-weld the top of the engine mounting and the end plate in area **B** to the inner side member under shielding gas.

Welding engine mounting and end plate under shielding gas

5. Weld engine mounting and end plate under shielding gas.

5.1. Plug-weld the bottom of the engine mounting and the end plate in area **A** to the inner side member under shielding gas.

Welding engine mounting and end plate under shielding gas

top of page

Subsequent work

Subsequent work for body repairs

1. Remove vehicle from the alignment bench.
2. Clean welded joints and sheetmetal flanges with a wire brush.
3. Prime flange areas with 2K primer.
4. Restore standard sealing with body sealant.
   →5 Seam sealing
5. Restore standard undersealing with underbody sealant.
   →5 Underbody protection
6. Paint repair area and adjacent surfaces, if necessary.

7. Install removed accessories in the repair area.
8. Apply cavity preservation.

997110, 997111, 997120, 997121, 997310, 997311, 997320, 997321, 997410, 997411, 997430, 997431, 997610, 997611, 997620, 997621

as of MY 2005
Country C00, C02, C05, C07, C08, C09, C10, C11, C12, C13, C14, C15, C16, C18, C19, C20, C21, C22, C23, C24, C25, C26, C27, C28, C32, C33, C34, C35, C36, C37, C38, C39, C45, C46, C98, C99

 WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

Preliminary work for body repairs

Note

- *If it can be ensured there has been no deformation of the vehicle structure, the following repair can be carried out without the need of a straightening bench. In this case, the vehicle must not be raised when welding the component; it must stand on its wheels on an even surface.*

1. Removing add-on parts in the repair area
1.1. Remove add-on parts in the repair area according to the extent of damage to the vehicle.
2. Equipping straightening bench with straightening attachments
2.1. Equip straightening bench with the straightening attachments according to the plans included with the straightening attachments.
3. Placing vehicle on the straightening bench
3.1. Position vehicle on the straightening bench, align according to the reference holes and bolt firmly to the attachment set.
4. Covering add-on parts adjacent to the vehicle repair area
4.1. Cover all add-on parts remaining on the vehicle and the neighbouring areas with fire-proof, protective covers.
5. Reshaping connection area of the sheetmetal parts to be replaced
6. Exposing welding areas
6.1. Remove undersealing, paint, etc. from the welding areas of the body with a hot-air gun or rotary brush.

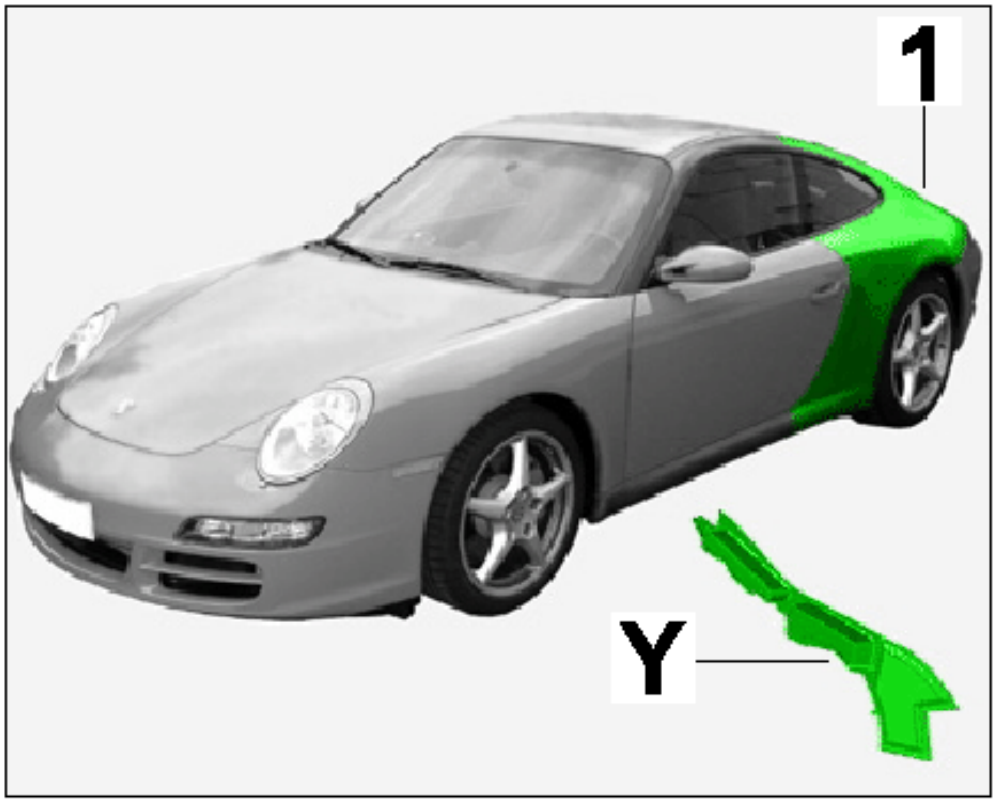
Preliminary work for body repairs with alignment bench

1. Removing accessories in the repair area
1.1. Remove accessories in the repair area according to the extent of damage to the vehicle.
2. Equipping alignment bench with straightening kit
2.1. Equip alignment bench with the basic straightening attachments according to the plans included with the straightening attachments.
3. Placing vehicle on the alignment bench
3.1. Position vehicle on alignment bench, align according to the reference holes and bolt firmly to the attachment set.
4. Covering accessories adjacent to the vehicle repair area
4.1. Cover all accessories remaining on the vehicle and the neighbouring areas with fire-proof, protective

covers.

5. Reshaping connection area of the sheetmetal parts to be replaced
6. Exposing welding areas

6.1. Remove undersealing, paint, etc. from the welding areas of the body with a hot-air gun or rotary brush.

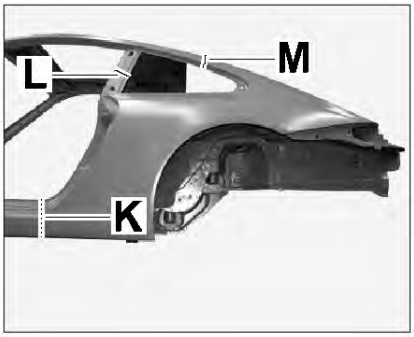


top of page

Removing side section

Removing side section

Removing side section

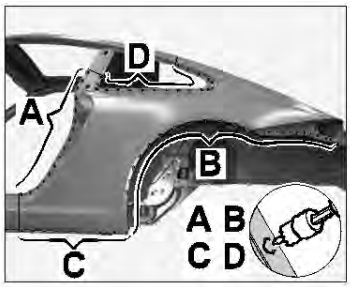


Installation Location:

Side section installation location

1 - Side section

Y - Sealing



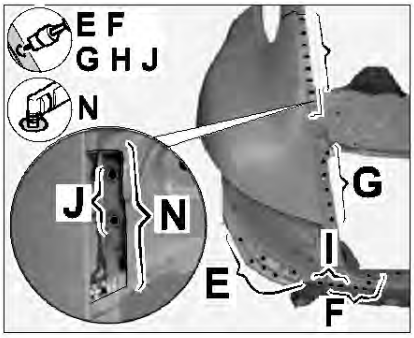
Marking the cut

1. Determine
   cut.

1.1. Position the cut **K** on the lower side member so that the replacement body panel overlaps with the lower side member by approx. 60 mm. Mark the cut.

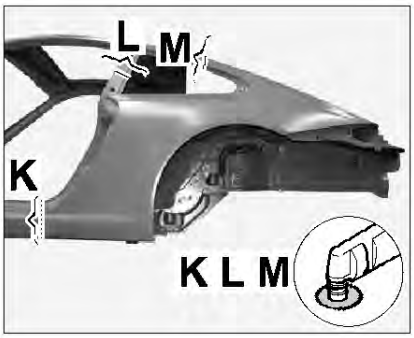
1.2. Position the cut **L** on the B-pillar so that the replacement body panel overlaps with the B-pillar by approx. 60 mm. Mark the cut.

1.3. Position the cut **M** on the C-pillar so that the replacement body panel overlaps with the C-pillar by approx. 60 mm. Mark the cut.



Cutting the spotwelds

2. Mill off spotwelds.



2.1. Using a spotweld cutter, mill off spotwelds in areas **A, B, C, D**.

Mill off spotwelds in areas **E, F, G, H, I** using a spotweld cutter. Use a parting grinder to cut open the gas-shielded arc weld in area **I**.

Cutting the spotwelds

Cut out a viewing window from the rear centre section reinforcement **N = dimension 20 x 50 mm** . Using a spotweld cutter, mill off spotwelds in area **J**.

Cutting the side section

3. Cut through the side section at the marked joints **K, L, M**.

Removing expanded sealant

4. Remove expanded sealant

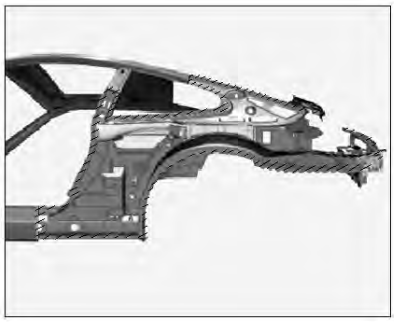
4.1. The side section is factory sealed with expanded sealant **Y** from the light housing to the rear centre section connection. The expanded sealant will be destroyed when replacing the side section and must be replaced.

top of page

Preparing connection areas of the body for installation of the side section

Safety instructions for flying sparks during grinding and welding work

ATTENTION



Danger of explosion and fire from flying sparks during grinding and welding work!

- **Danger of injury and danger of damage to vehicle parts and other vehicles due to flying sparks**

→ Cover vehicle parts such as battery, fuel system, paintwork, glass and passenger compartment parts with fire-proof covers and, if necessary, remove batteries and fuel-carrying components.

→ No other vehicles may be left unprotected in areas used for body repair!

Preparing connection areas of the body for installation of the side section

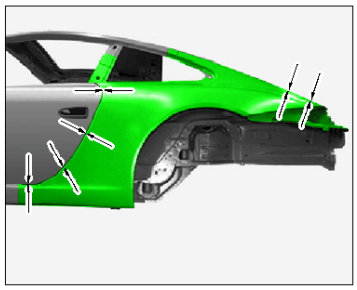
Preparing connection areas of the body for installing the side members

1. Clean the body connection flanges of undersealing, adhesive residue and paint in the marked areas using a hot-air gun or rotary brush. Grind the connection flanges until bare.

top of page

Fitting side section and preparing for installation

Safety instructions for sharp-edged body and unit parts



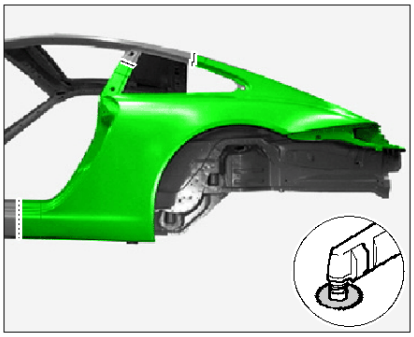
ATTENTION

Danger of injury! Sharp-edge burrs on body and unit parts!

- **Injuries from sharp edges on body and unit parts.**

→ Wear protective gloves when working in the area of sharp-edged body and unit parts!

Fitting in side section and preparing for installation

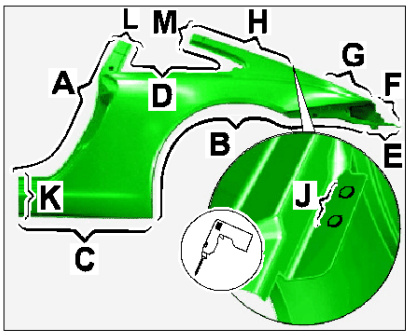


Fit in side section at the rear to the body

1. Fit in side section to the body at the rear

1.1. Cut the replacement part so that there is approx. 60 mm overlap at the joints.

1.2. To complete the fit, install the doors and lid at the rear and set the gap dimensions between the door and lid at the rear and the side section according to the respective adjustment values. *→501000 Diagram - body gap dimensions*



1.3. Fix the side section at the rear with tensioning clamps.

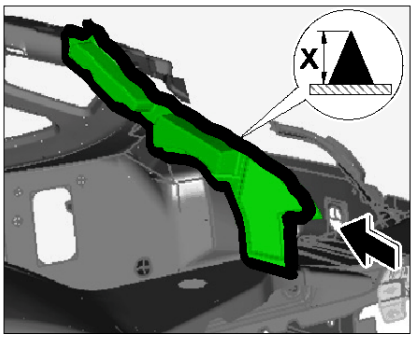
Fitting in side section joints and making the cuts

2. Fit in side section joints and make the cuts

2.1. Use a body saw to cut the two sheetmetal panels in the area of the overlap between the side section and body. Do not damage the internal components when doing this.

Cleaning welding and sealing areas

3. Cleaning welding and sealing areas



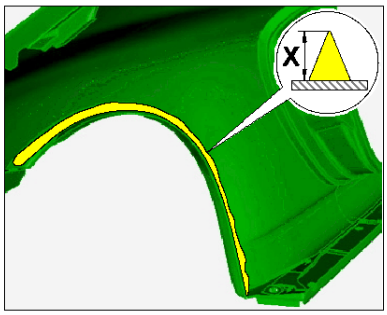
3.1. Grind both sides of the connecting flanges of the side sections in the marked areas A, B, C, D, F, G, H, I, L, J, K, L, M with a rotary brush until they are bright.

3.2. Drill Ø 7 mm holes in area **J** for the plug welds under shielding gas.

top of page

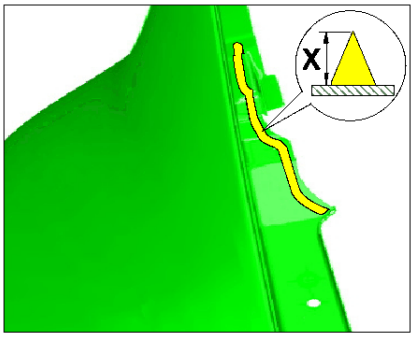
Installing side section

Installing side section



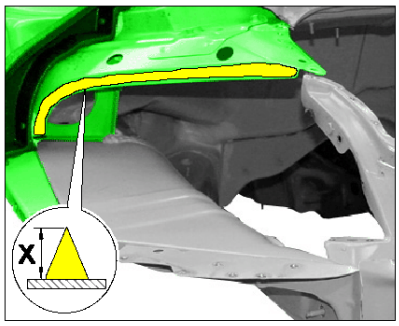
Fitting the seal

1. Install seal



1.1. Apply a triangular bead of body sealant **Y -dimension "X" = approx. 12 mm high -** on all sides of the seal. Apply seal to the prepared holes on the inside of the side section, position the pins of the seal and press into place.

2. Apply adhesive on the side section



Apply adhesive on the side section

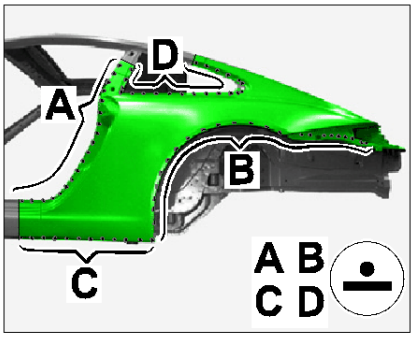
2.1. Apply the adhesive as a triangular bead - dimension "X" = approx. 8 mm - on the inside of the side section, along the wheel arch and up to the start of the sill.

Apply adhesive on the side section

2.2. Apply the adhesive material (replacement part: Klebt und Dichtet from Würth) as a triangular bead - dimension "X" approx. 4 mm. - on the area of the side section at the transition to the rear centre section.

Applying adhesive on the inside of the side section

3. Apply adhesive on the inside of the side section



WARNING

Risk of damage if the processing time is not observed!

- **The quality of the joint will be affected if the adhesive processing time is not observed.**

→ The new part must be welded within 30 minutes in the area of the adhesive, otherwise the adhesion of the adhesive will be affected.

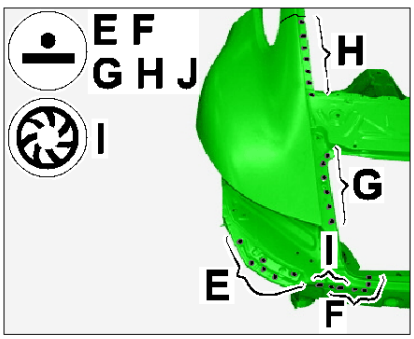
3.1. Apply a triangular bead of adhesive (Teromix-6700) - dimension "X" = approx. 10 mm high - on the connection between the light housing and the inside of the side section. The light housing must lie flush with the inside of the side section.

Welding in the side section

4. Weld in the side section

4.1. Fix the side section at the rear with tensioning clamps.

4.2. Tack-weld the side section at the rear.



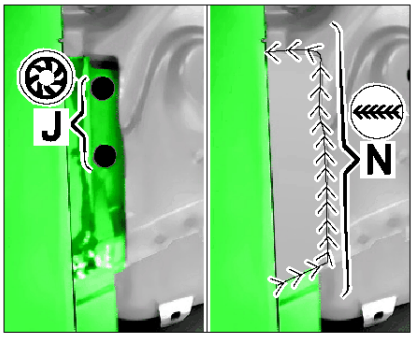
WARNING

Welding in body components

- **Danger of injury and material damage**

→ Once the spare parts have been attached, repair spotwelds must be placed on the old spotwelds because there is no current flow possible in areas with a hardened bonded layer. Welding procedures other than resistance spot-welding are not permitted since the thermal effect would destroy the bonded joint over a wide area. →5000IN IN - Processing structural body adhesives - section on "Welding in body components" [997410 997411] →5000IN IN - Processing structural body adhesives - section on "Welding in body components" [997430 997431] →5000IN IN - Processing structural body adhesives - section on "Welding in body components" [997110 997111 997120 997121]

4.3. Spot weld areas **A, B, C, D** of the side section.

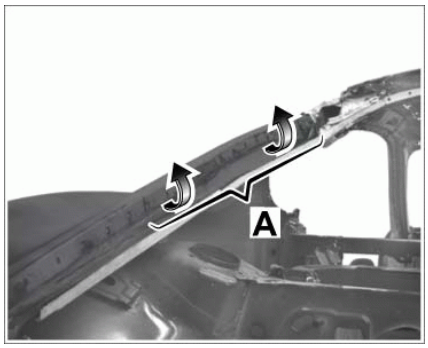


Welding in the side section

5. Weld in the side section

5.1. Spot weld areas **E, F, G, H** of the side section.

5.2. Plug-weld side section in area **I** under shielding gas.



Welding in viewing window

6. Weld in viewing window

6.1. Plug-weld side section in area **J** under shielding gas.

6.2. Weld viewing window **N** of rear centre section reinforcement with a continuous weld under shielding gas.

Welding joints under shielding gas

7. Weld joints under shielding gas

7.1. Weld joints **K, L, M** (lower side member, B-pillar, C-pillar) with a continuous weld under shielding gas.

top of page

Subsequent work

Subsequent work for body repairs

1. Removing vehicle from straightening bench
2. Cleaning spot-welded joints and sheetmetal flanges with a wire brush
3. Priming flange areas with 2K primer
4. Restore standard sealing with body sealant
   →501000 Seam seal
5.

Restore standard undersealing with underbody sealant
→501000 Undersealing

6. Painting repair area and adjacent surfaces, if necessary
7. Install removed add-on parts in the repair area
8. Apply cavity preservation.

997110, 997111, 997120, 997121, 997410, 997411, 997430, 997431

as of MY 2005

Pneumatic body saw No. PS1, see Gr. 3.5; Workshop Equipment Manual 00000
Angle grinder, see Gr. 3.5; see Workshop Equipment Manual 00000
Oscillating body saw (special electrical cutter), see Gr. 3.5; Workshop Equipment Manual 00000
Rotary brush, see Gr. 3.5; Workshop Equipment Manual 00000
Hole punch, see Gr. 3.5; Workshop Equipment Manual 00000
Leister Elektron hot-air gun, see Gr. 3.5; Workshop Equipment Manual 00000
Inverter welding equipment ATL Inverterspot WE1194
Basic straightening attachments for 911 Carrera (996), see Gr. 3.5; Workshop Equipment Manual 00000
Additional straightening attachments for 911 Carrera (997), see Gr. 3.5; Workshop Equipment Manual 00000
Pneumatic spotweld remover, Vario Drill No. WS 90, see Gr. 3.5; Workshop Equipment Manual 00000

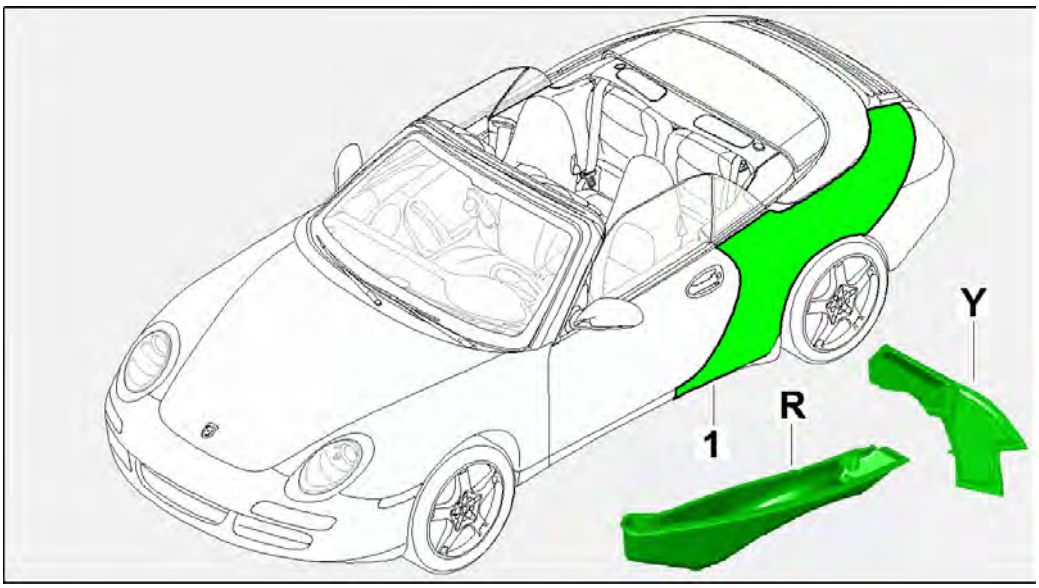
Preliminary work for body repairs

Note

- *If it can be ensured there has been no deformation of the vehicle structure, the following repair can be carried out without the need of a straightening bench. In this case, the vehicle must not be raised when welding the component; it must stand on its wheels on an even surface.*

1. Removing add-on parts in the repair area
1.1. Remove add-on parts in the repair area according to the extent of damage to the vehicle.
2. Equipping straightening bench with straightening attachments
2.1. Equip straightening bench with the straightening attachments according to the plans included with the straightening attachments.
3. Placing vehicle on the straightening bench
3.1. Position vehicle on the straightening bench, align according to the reference holes and bolt firmly to the attachment set.
4. Covering add-on parts adjacent to the vehicle repair area
4.1. Cover all add-on parts remaining on the vehicle and the neighbouring areas with fire-proof, protective covers.
5. Reshaping connection area of the sheetmetal parts to be replaced
6. Exposing welding areas
6.1. Remove undersealing, paint, etc. from the welding areas of the body with a hot-air gun or rotary brush.

Preliminary work for body repairs with alignment bench



1. Removing accessories in the repair area
1.1. Remove accessories in the repair area according to the extent of damage to the vehicle.
2. Equipping alignment bench with straightening kit
2.1. Equip alignment bench with the basic straightening attachments according to the plans included with the straightening attachments.
3. Placing vehicle on the alignment bench
3.1. Position vehicle on alignment bench, align according to the reference holes and bolt firmly to the attachment set.
4. Covering accessories adjacent to the vehicle repair area
4.1. Cover all accessories remaining on the vehicle and the neighbouring areas with fire-proof, protective covers.
5. Reshaping connection area of the sheetmetal parts to be replaced
6. Exposing welding areas
6.1. Remove undersealing, paint, etc. from the welding areas of the body with a hot-air gun or rotary brush.

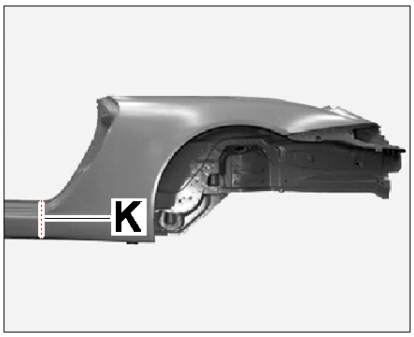
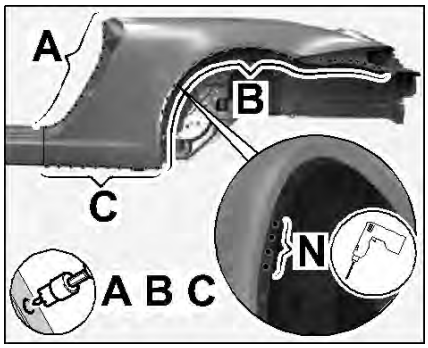
Removing side section



Removing side section

Installation Location:

Installation position for side section

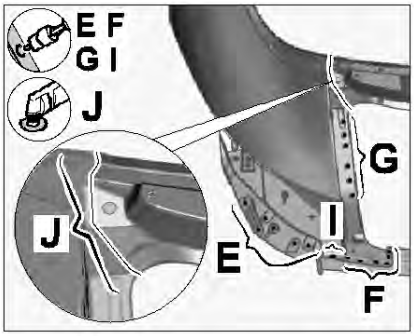


1 - Side section
Y - Seal
R - Water drip pan

Marking the cut

1. Determine cut.

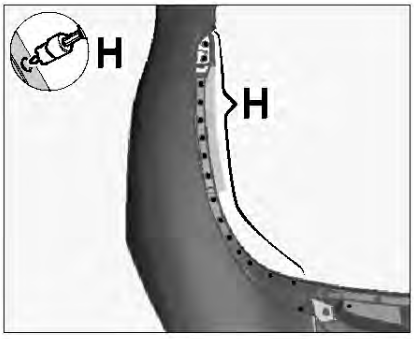
1.1. Position the cut **K** on the lower side member so that the replacement body panel overlaps with the lower side member by approx. 60 mm. Mark the cut.



Milling off spotwelds

2. Milling off spotwelds

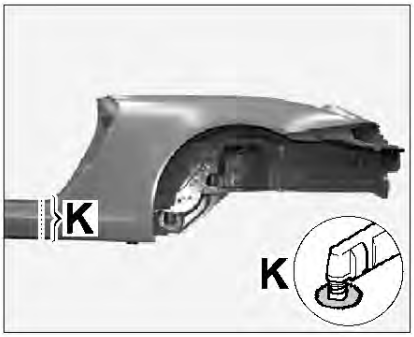
2.1. Use a spotweld cutter to mill off spotwelds in areas **A, B, C**.



In area **N** (Inset), the underlying reinforcement weld to the side section must be milled off (4 spot-weld connections).

Milling off spotwelds

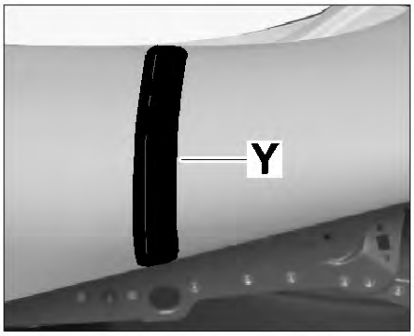
3. Milling off spotwelds



Mill off spotwelds in areas **E, F, G, J** using a spotweld cutter. Separate inert-gas welded seam in area **I** using a parting grinder.

Milling off spotwelds

4. Milling off spotwelds



Mill off spot welds in area **H** using a spotweld cutter.

Cutting the side section

5. Cutting the side section

   Cut through the side section at the marked separation point **K** using the oscillating body saw.

Removing expanded sealant

6. Removing expanded sealant

6.1. The side section is factory-sealed with expanded sealant **Y** from the light housing to the rear centre panel joint. The expanded sealant will be destroyed when you change the side section and must be replaced.

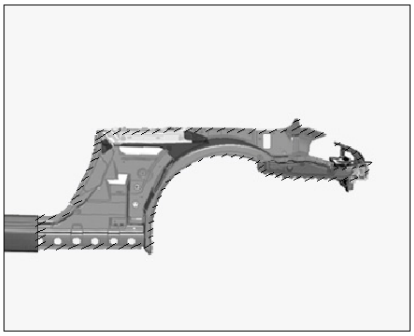
Preparing connection areas of the body for installing the side section

Safety instructions for flying sparks during grinding and welding work

ATTENTION



Danger of explosion and fire from flying sparks during grinding and welding work!

- **Danger of injury and danger of damage to vehicle parts and other vehicles due to flying sparks**

→ Cover vehicle parts such as battery, fuel system, paintwork, glass and passenger compartment parts with fire-proof covers and, if necessary, remove batteries and fuel-carrying components.

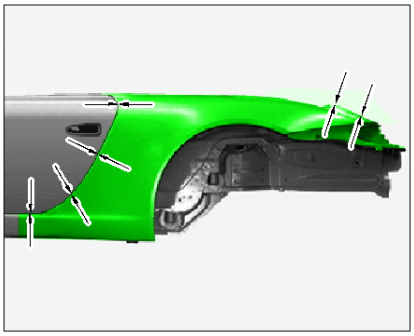
→ No other vehicles may be left unprotected in areas used for body repair!

Preparing connection areas of the body for installing the side section

Preparing connection areas of the body for installing the side members

1. Clean the body connection flanges of undersealing, adhesive residue and paint in the marked areas using a hot-air gun or rotary brush. Grind the connection flanges until bare.

Safety instructions for sharp-edged body and unit parts



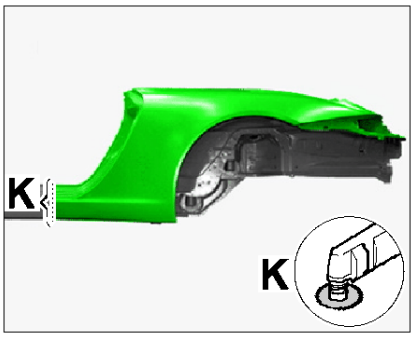
ATTENTION

Danger of injury! Sharp-edge burrs on body and unit parts!

- **Injuries from sharp edges on body and unit parts.**

→ Wear protective gloves when working in the area of sharp-edged body and unit parts!

Fitting side section and preparing for installation

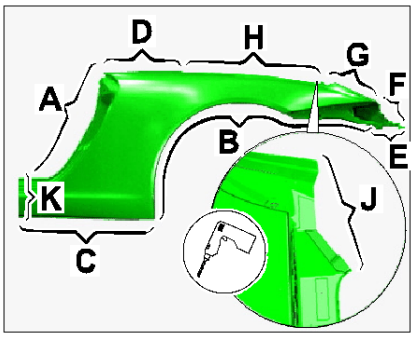


Fitting side section to the body at the rear

1. Fitting side section to the body at the rear

1.1. Cut the replacement part so that there is approx. 60 mm overlap at the joints.

1.2. To complete the fit, install the doors and lid at the rear and set the gap dimensions between the door and lid at the rear and the side section according to the respective adjustment values. *→501000 Diagram - body gap dimensions*



1.3. Secure the side section at the rear with tensioning clamps.

Cutting through side section joint

2. Cutting through side section joints

Cut through the side section at the marked separation point **K** using the oscillating body saw.

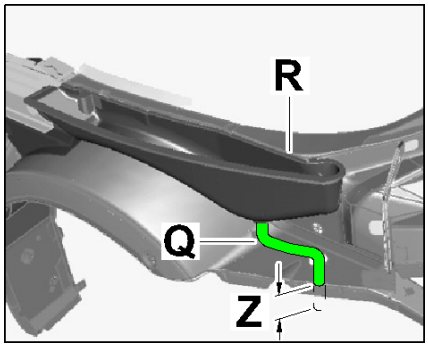
Cleaning welding and sealing areas

3. Cleaning welding and sealing areas

3.1. Grind both sides of the connecting flanges of the side section in the marked areas **A, B, C, D, F, G, H, I, J, K, L** until they are bare using a rotary brush.

top of page

Installing side section



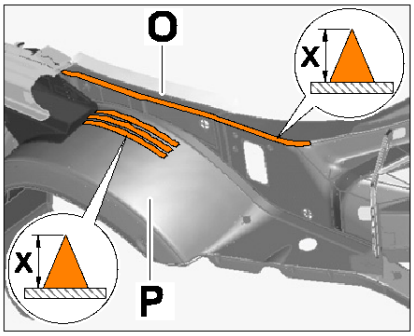
Installing side section

WARNING

Welding in body components

- **Danger of injury and material damage**

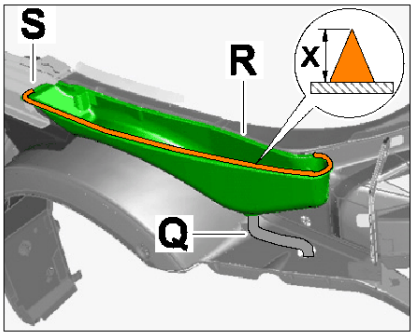
→ Once the spare parts have been attached, repair spotwelds must be placed on the old spotwelds because there is no current flow possible in areas with a hardened bonded layer. Welding procedures other than resistance spot-welding are not permitted since the thermal effect would destroy the bonded joint over a wide area. →5000IN IN - Processing structural body adhesives - section on "Welding in body components"



Fitting water drain hose

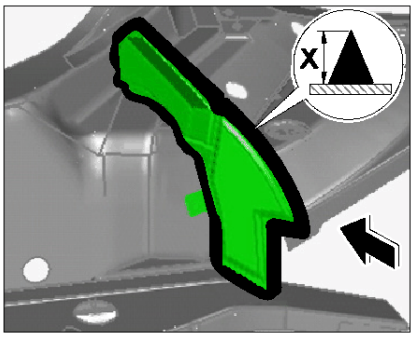
1. Fitting in water drain hose

   Press water drain hose **Q** through the water drip pan **R**; observe specified marking. The groove of the water drain hose must fit all the way around the hole in the water drip pan. Route water drain hose through the grommet to the wheel housing and cut the hose so that approx. **dimension Z = 35 mm** projects outwards.



2. Installing water drip pan

2.1. Apply a triangular bead of body sealant **- dimension "X" = approx. 12 mm high -** to the inside of the side section **O**.



Applying body sealant

Apply a triangular bead of body sealant **- dimension "X" = approx. 12 mm high -** to the wheel housing in area **P**.

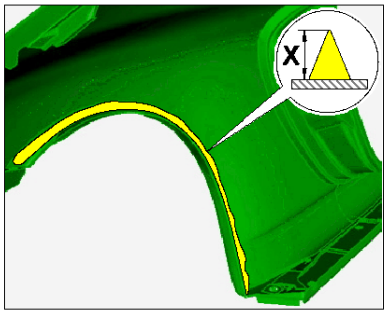
Installing water drip pan

Position water drip pan **R** on the inside of the side section and press on firmly. Route the water drain hose **Q**. Apply a triangular bead of body sealant **- dimension "X" = approx. 12 mm high -** to the outside of the side section **S**.

Fitting the seal

3. Installing seal

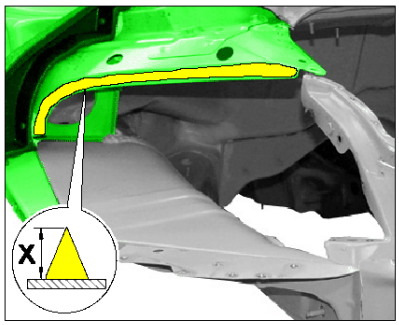
3.1. Apply a triangular bead of body sealant **Y -dimension "X" = approx. 12 mm high** - to all sides of the seal. Apply seal to the prepared holes on the inside of the side section, position the pins of the seal and press into place.



4. Applying adhesive to the side section

WARNING

Risk of damage if the processing time is not observed!



- **The quality of the joint will be affected if the adhesive processing time is not observed.**

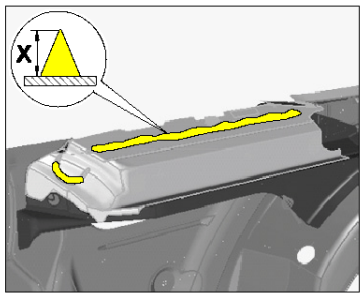
→ The new part must be welded within 30 minutes in the area of the adhesive, otherwise the adhesion of the adhesive will be affected.

Applying adhesive to the side section

4.1. Apply a triangular bead of adhesive measuring **- dimension "X" = approx. 8 mm -** to the inside of the side section, along the edge of the wheel arch and up to the start of the door sill.

Applying adhesive to the inside of the side section

5. Applying adhesive to the inside of the side section



WARNING

Risk of damage if the processing time is not observed!

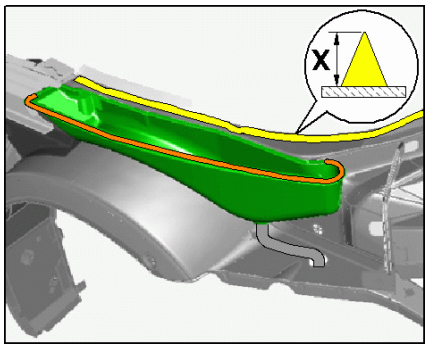
- **The quality of the joint will be affected if the adhesive processing time is not observed.**

→ The new part must be welded within 30 minutes in the area of the adhesive, otherwise the adhesion of the adhesive will be affected.

5.1. Apply a triangular bead of adhesive (Teromix-6700) **- dimension "X" = approx. 10 mm high -** to the joint between the light housing and the inside of the side section. The light housing must lie flush with the inside of the side section.

Applying adhesive to the window slot reinforcement

6. Applying adhesive to the window slot reinforcement



WARNING

Risk of damage if the processing time is not observed!

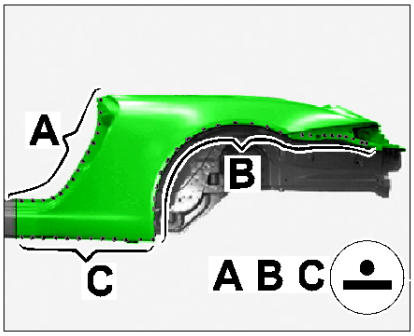
- **The quality of the joint will be affected if the adhesive processing time is not observed.**

→ The new part must be welded within 30 minutes in the area of the adhesive, otherwise the adhesion of the adhesive will be affected.

6.1. Apply a triangular bead of adhesive (Teromix-6700) **- dimension "X" = approx. 10 mm high -** to the joint between the window slot reinforcement and the side section.

Applying adhesive to the inside of the side section

7. Applying adhesive to the inside of the side section



WARNING

Risk of damage if the processing time is not observed!

- **The quality of the joint will be affected if the adhesive processing time is not observed.**

→ The new part must be welded within 30 minutes in the area of the adhesive, otherwise the adhesion of the adhesive will be affected.

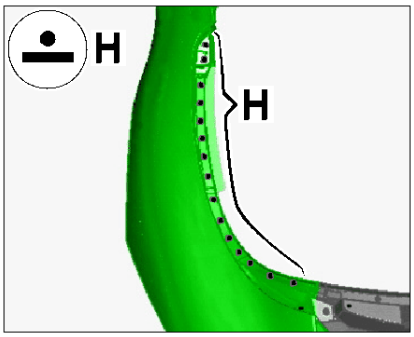
7.1. Apply a triangular bead of adhesive (Teromix-6700) **- dimension "X" = approx. 10 mm high -** to the inside of the side section in area **V**.

Welding in the side section

8. Welding in the side section

8.1. Secure the side section at the rear with tensioning clamps.

8.2. Tack-weld the side section at the rear.

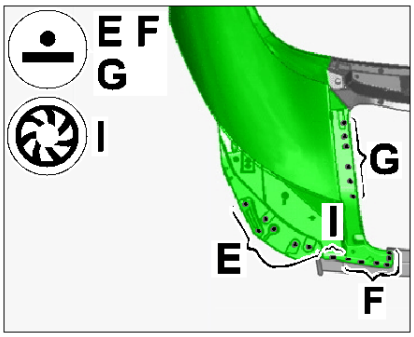


WARNING

Risk of damage if the processing time is not observed!

- **The quality of the joint will be affected if the adhesive processing time is not observed.**

→ The new part must be welded within 30 minutes in the area of the adhesive, otherwise the adhesion of the adhesive will be affected.

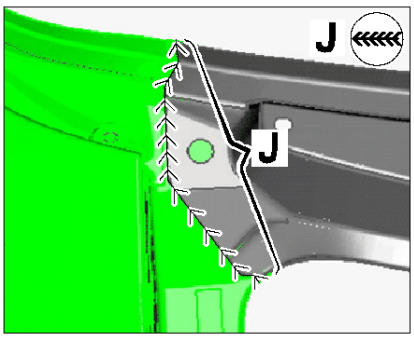


8.3. Resistance spot-weld areas **A, B, C** of the side section.

Welding in the side section

9. Welding in the side section

9.1. Resistance spot-weld area **H** of the side section.



Welding in the side section

10. Welding in the side section

10.1. Resistance spot-weld areas **E, F, G** of the side section.

10.2. Plug-weld the side section in area **I** using inert gas.

Welding joints using inert gas

11. Welding joint using inert gas

11.1. Apply a full weld to joint **J** of lower side member using inert gas.

top of page

Subsequent work

Subsequent work for body repairs

1. Removing vehicle from straightening bench
2. Cleaning spot-welded joints and sheetmetal flanges with a wire brush
3. Priming flange areas with 2K primer
4. Restore standard sealing with body sealant
   →*501000 Seam seal*
5. Restore standard undersealing with underbody sealant
   →*501000 Undersealing*
6. Painting repair area and adjacent surfaces, if necessary
7. Install removed add-on parts in the repair area
8. Apply cavity preservation.

WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

Preliminary work for body repairs with alignment bench

Preliminary work for body repairs with alignment bench

1. Removing accessories in the repair area
1.1. Remove accessories in the repair area according to the extent of damage to the vehicle.
2. Equipping alignment bench with straightening kit
2.1. Equip alignment bench with the basic straightening attachments according to the plans included with the straightening attachments.
3. Placing vehicle on the alignment bench
3.1. Position vehicle on alignment bench, align according to the reference holes and bolt firmly to the attachment set.
4. Covering accessories adjacent to the vehicle repair area
4.1. Cover all accessories remaining on the vehicle and the neighbouring areas with fire-proof, protective covers.
5. Reshaping connection area of the sheetmetal parts to be replaced
6. Exposing welding areas
6.1. Remove undersealing, paint, etc. from the welding areas of the body with a hot-air gun or rotary brush.

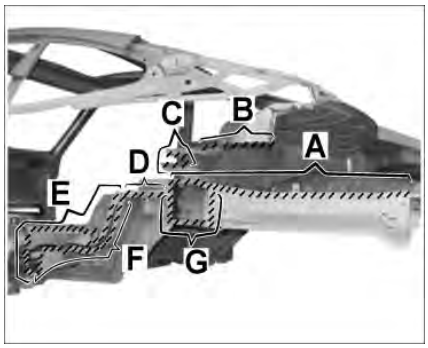
Preparing connection areas of the body for installing the rear wheel housing

Safety instructions for flying sparks during grinding and welding work

ATTENTION



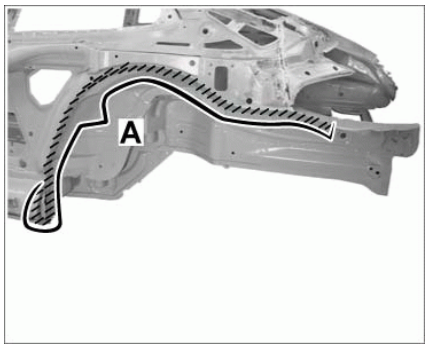
Danger of explosion and fire from flying sparks during grinding and welding work!

- **Danger of injury and danger of damage to vehicle parts and other vehicles due to flying sparks**

→ Cover vehicle parts such as battery, fuel system, paintwork, glass and passenger compartment parts with fire-proof covers and, if necessary, remove batteries and fuel-carrying components.

→ No other vehicles may be left unprotected in areas used for body repair!

Preparing connection areas of the body for installing the inner rear wheel housing



Cleaning the welding areas

1. Clean undersealing, adhesive residue and paint off the body connecting flanges in the marked areas **-A, B, C, D, E, F, G-** using a hot-air gun or rotary brush. Grind the connecting flanges until bare.
2. Coating spot-weld flange areas with zinc powder paint

2.1. Coat spot-weld flange areas with zinc powder paint.

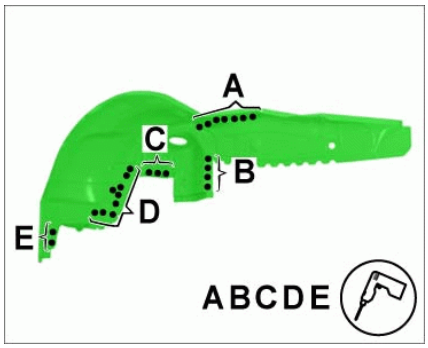
Preparing rear wheel housing for installation

Safety instructions for sharp-edged body and unit parts

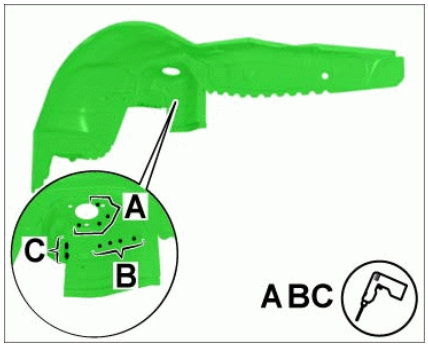


ATTENTION

Danger of injury! Sharp-edge burrs on body and unit parts!

- **Injuries from sharp edges on body and unit parts.**

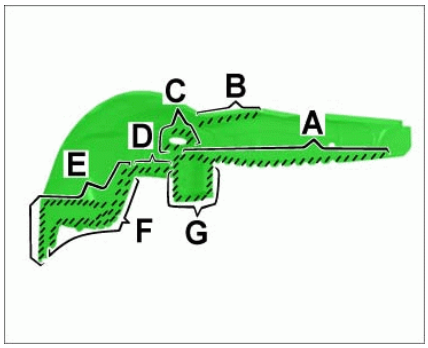
→ Wear protective gloves when working in the area of sharp-edged body and unit parts!



Preparing inner rear wheel housing for installation

Drilling holes for plug welding using inert gas

1. Drilling holes for plug welding using inert gas



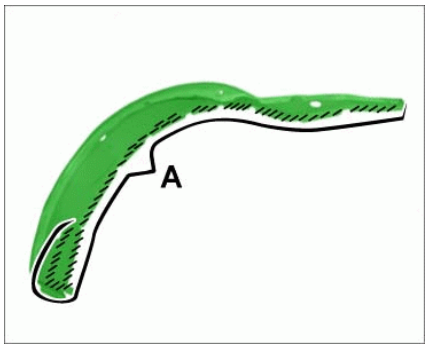
1.1. Drill holes (Ø = 7 mm) in areas **-A, B, C, D, E-** for plug welding using inert gas. Maintain spacing between the bores as on the old part.

Drilling holes for plug welding using inert gas

2. Drilling holes for plug welding using inert gas

2.1. Drill holes (Ø = 7 mm) in areas **-A, B, C-** for plug welding using inert gas. Maintain spacing between the bores as on the old part.

Cleaning the welding areas



3. Cleaning the welding areas

3.1. Grind both sides of the connecting flanges of the inner rear wheel housing in the marked areas **-A, B, C, D, E, F, G-** until bare using a rotary brush.

4. Coat spot-weld flange areas with zinc powder paint.

4.1. Coat spot-weld flange areas with zinc powder paint.

Installing rear wheel housing

Danger of injury when welding

DANGER

Risk of fatal injury from high voltage during electric welding!

- **Danger of explosion and fire when welding in the area of highly inflammable materials.**
- **Irritation to respiratory tracts from toxic zinc oxide emitted when welding galvanised steel!**
- **Danger of injury from unintentional triggering of pyrotechnical safety components!**
- **Danger of injury from weld spatters and UV light when welding!**

→ Do not perform welding work in a damp environment or on wet ground; there is a risk of fatal injury from the voltage being conducted through the human body. Persons with heart pacemakers should not perform welding work. Use insulating underlays.

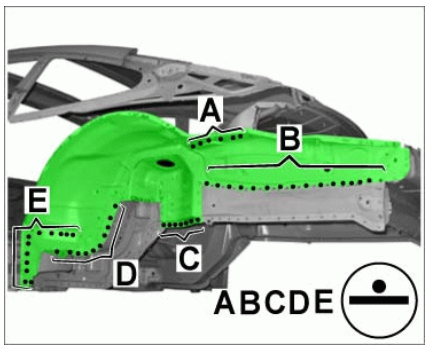
→ Remove highly flammable materials from the work area; if necessary, remove units with fuel-carrying parts and protect work areas in the vehicle that are at risk of catching fire using fire-proof covers.

→ Ventilate the work area well.

→ Remove smoke gases with a suitable extraction system (refer to Workshop Equipment Manual).

→ Wear suitable protective equipment, such as protective clothing, gloves, a welding shield and, if necessary, a protective mask.

→ For welding work, always disconnect both terminals on the battery. In the case of welding work in the immediate vicinity of the control modules for pyrotechnical safety systems, remove the control modules before beginning work.

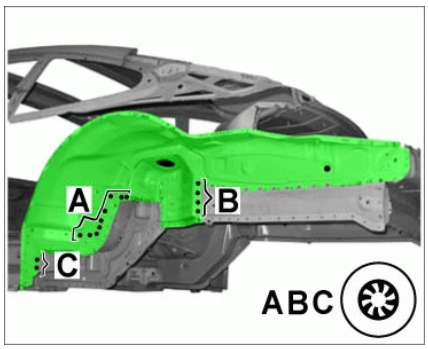


→ In addition, the guidelines of the welding equipment manufacturer and the legal accident prevention regulations and those of the mutual indemnity association (BGV D1) must be observed.

Installing inner rear wheel housing

1. Fitting inner rear wheel housing to the body

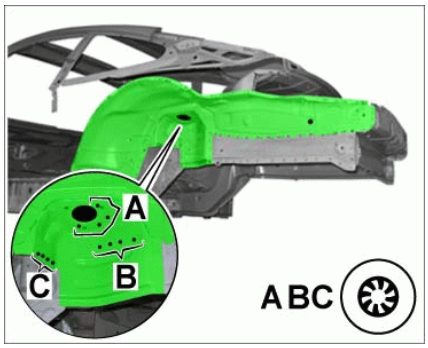
1.1. Place the inner rear wheel housing against the body and secure to the straightening set.



1.2. Fix the inner rear wheel housing in place with tensioning clamps.

Welding in inner rear wheel housing

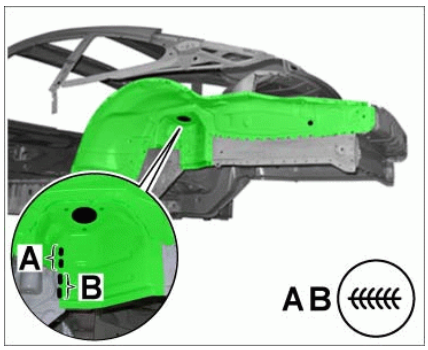
2. Welding in inner rear wheel housing



2.1. Resistance spot-weld the inner rear wheel housing in areas **-A, B, C, D, E-** .

Welding in inner rear wheel housing

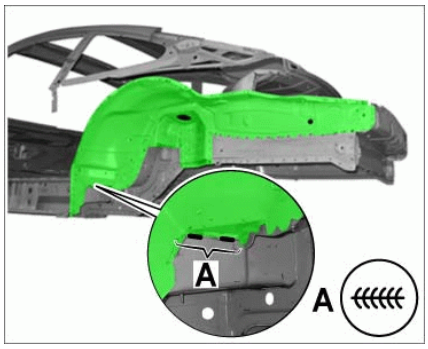
3. Welding in inner rear wheel housing



3.1. Plug-weld the inner rear wheel housing in areas **-A, B, C-** using inert gas.

Welding in inner rear wheel housing

4. Welding in inner rear wheel housing



4.1. Plug-weld the inner rear wheel housing in areas **-A, B, C-** using inert gas.

Welding in inner rear wheel housing

5. Welding in inner rear wheel housing

5.1. Apply a full weld to the inner rear wheel housing in areas **-A-** and **-B-** using inert gas.

Welding in inner rear wheel housing

6. Welding in inner rear wheel housing

6.1. Apply a full weld to the inner rear wheel housing in area **-A-** using inert gas.

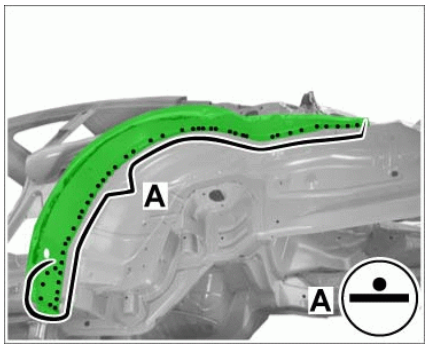
7. Install side reinforcement (frame for light). *→531755 23 Side reinforcement - section on "Installing"*

8. Installing inner side section

8.1. Only on the Coupé

8.1.1. Install inner side section (lower part). *→536155 21 Replacing inner side section - section on "Removing"*

8.2. Only on the Cabriolet



8.2.1. Install inner side section. *→536155 23 Replacing inner side section - section on "Installing"*

Subsequent work

Subsequent work for body repairs

1. Removing vehicle from straightening bench
2. Cleaning spot-welded joints and sheetmetal flanges with a wire brush

3. Priming flange areas with 2K primer
4. Restore standard sealing with body sealant
   →*501000 Seam seal*
5. Restore standard undersealing with underbody sealant
   →*501000 Undersealing*
6. Painting repair area and adjacent surfaces, if necessary
7. Install removed add-on parts in the repair area
8. Apply cavity preservation.

997110, 997111, 997120, 997121, 997310, 997311, 997320, 997321, 997410, 997411, 997430, 997431, 997610, 997611, 997620, 997621

 WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y**

materiales.

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

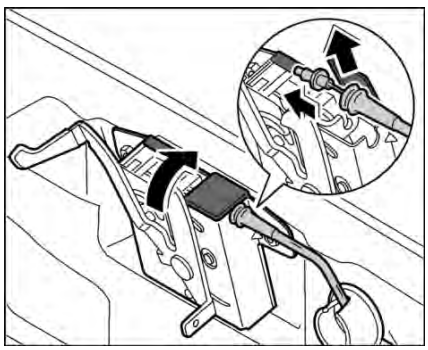
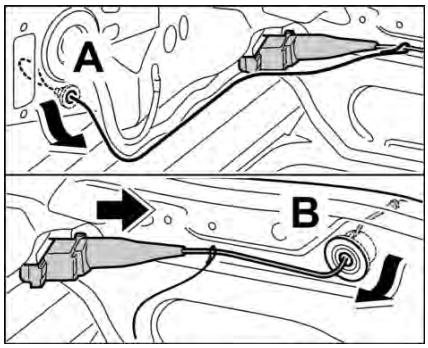
Removing the servo motor for front lid release

Installation Location:



Installation position

1. Switch off ignition and remove ignition key.
2. Lay luggage compartment carpet in front in the direction of travel from left to right..

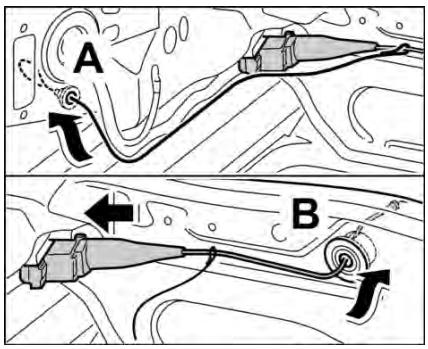


Removing plug

3. Release electric connector **-A-** and unplug it at the servo motor.

Disengaging bowden cable

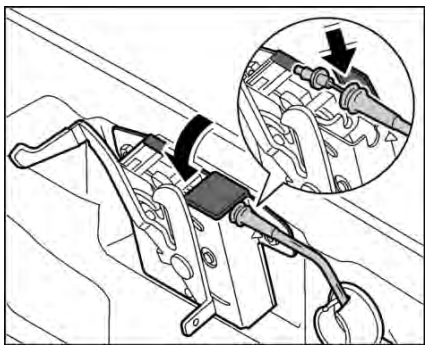
4. Bend up cover at the lock, pull bowden cable to the left and disengage at lock.



Pulling out the Bowden cable

5. Pull the bowden cable for the lock actuator **-B-** and the emergency operation bowden cable **-A-** inward through the grommets.
6. Remove servo motor.

top of page



Installing servo motor for front lid release

Installing the servo motor for front lid release

Routing bowden cable

1. Route the bowden cable for the lock actuator **-B-** and the emergency operation bowden cable **-A-** through the grommets.

Engaging bowden cable

2. Engage the bowden cable at the lock and bend down the cover.
3. Push electric plug onto the servo motor until it is felt to engage.
4. Insert the servo motor in the luggage compartment area and replace the carpet correctly.

 WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**

- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

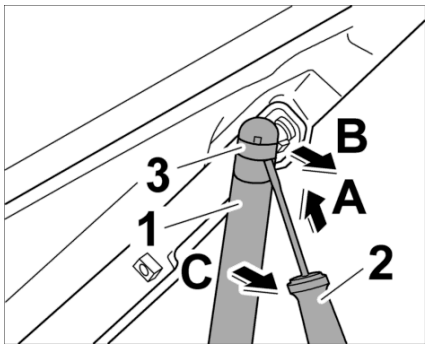
Removing front pneumatic spring

Removing front pneumatic spring at lid end

Installation Location:

Overview, front pneumatic spring

ATTENTION



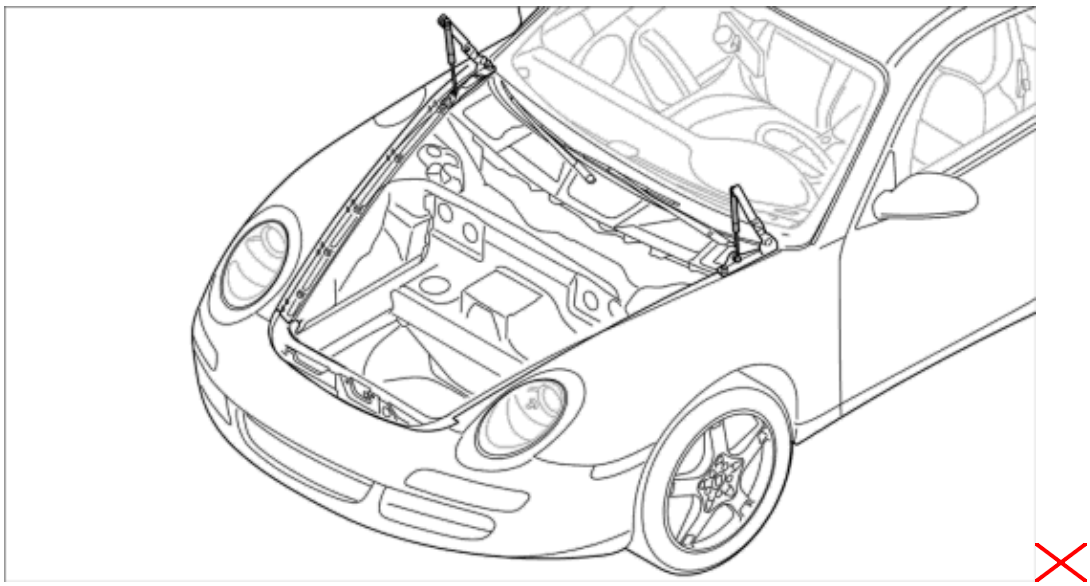
When working on the pneumatic springs of the lid, the following safety measures must be observed, amongst others:

- **Danger of injury if pneumatic springs burst**

→ To remove the pneumatic springs, they must be in idle state: lid open.

→ The lid must be secured against accidental closing after removing the pneumatic springs.

→ Pneumatic springs must not be opened using force - extreme internal pressure.



Removing front pneumatic spring at lid end

1. Open front lid.
2. A second person should hold the front lid to prevent it from closing accidentally.
3. Insert a screwdriver **-2-** between the head of the pneumatic spring and the safety clip **-3-** **-A-** .
4. Release the safety clip **-3-** by levering the screwdriver **-2-** towards the pneumatic spring **-B-** . The safety clip remains in the head of the pneumatic spring.
5. Pull the pneumatic spring **-1-** from the ball head **-C-** .
6. Withdraw the screwdriver.
7. Remove pneumatic spring **-1-** .

WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

 WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo**

risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

Installation Location:

Overview, rear lid

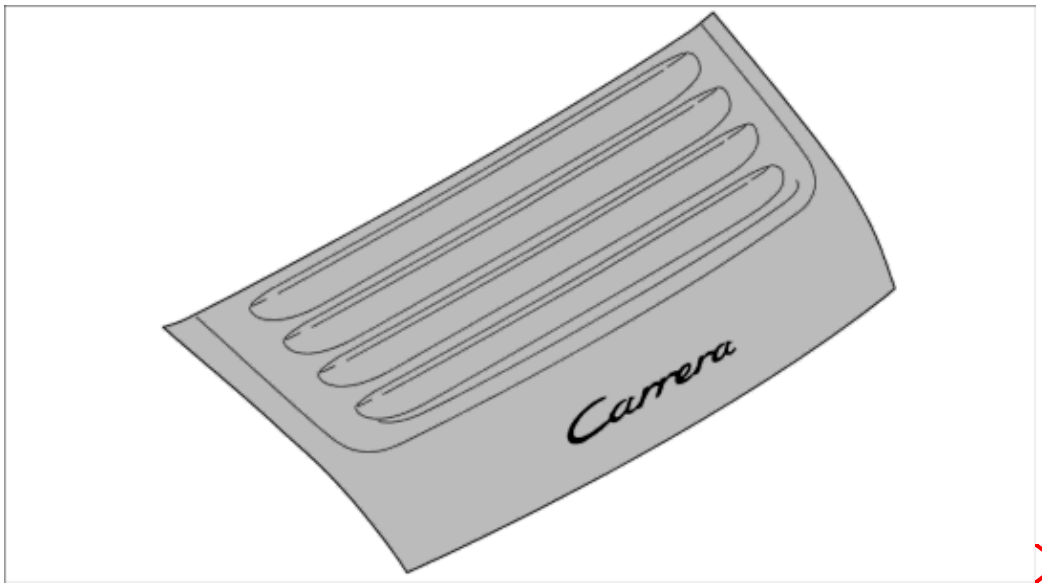
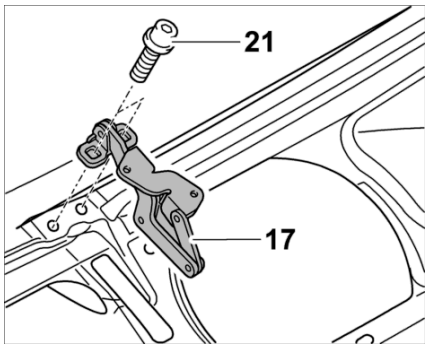
1. Install wiring harness for rear spoiler. → *Removing and installing wiring harness for rear spoiler*



Installing mount

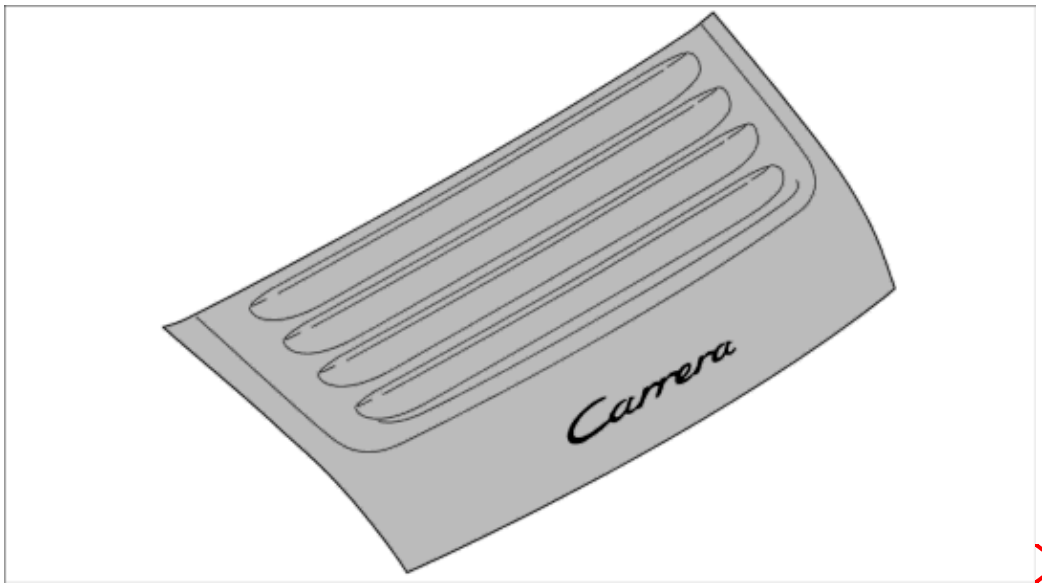


2. Position the mount **-24-** on the rear cover and screw in using the fastening screws M6 **-22, 23-** . Tightening torque →**: 7 ftlb.**

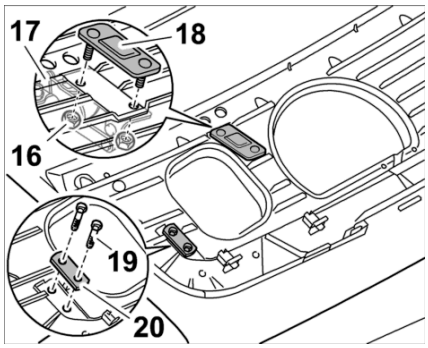
Fitting hinge

Installation Location:

Overview, rear lid



Fitting hinge

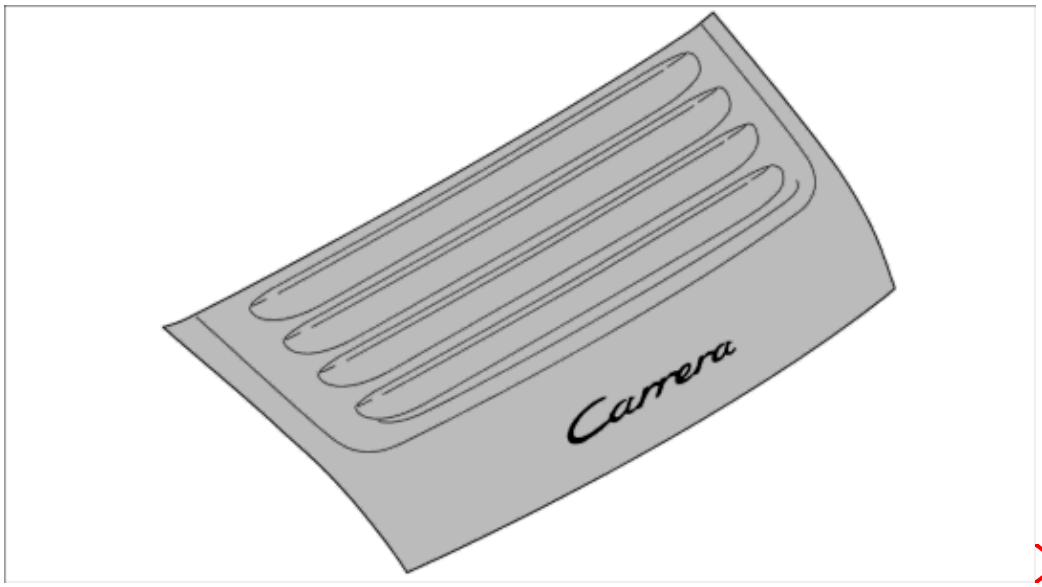


1. Position hinge **-17-** and screw in using the M6 fastening screws **-21-** . Tightening torque →**: 7.1 ftlb.**

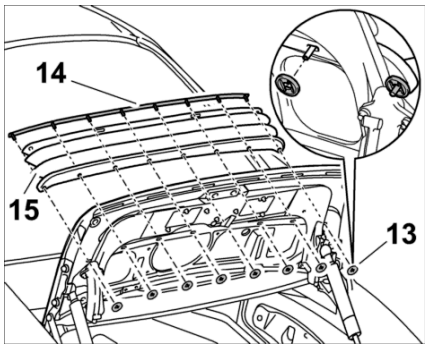
Mounting the lower part of the spoiler

Installation Location:

Overview, rear lid



Mounting the lower part of the spoiler

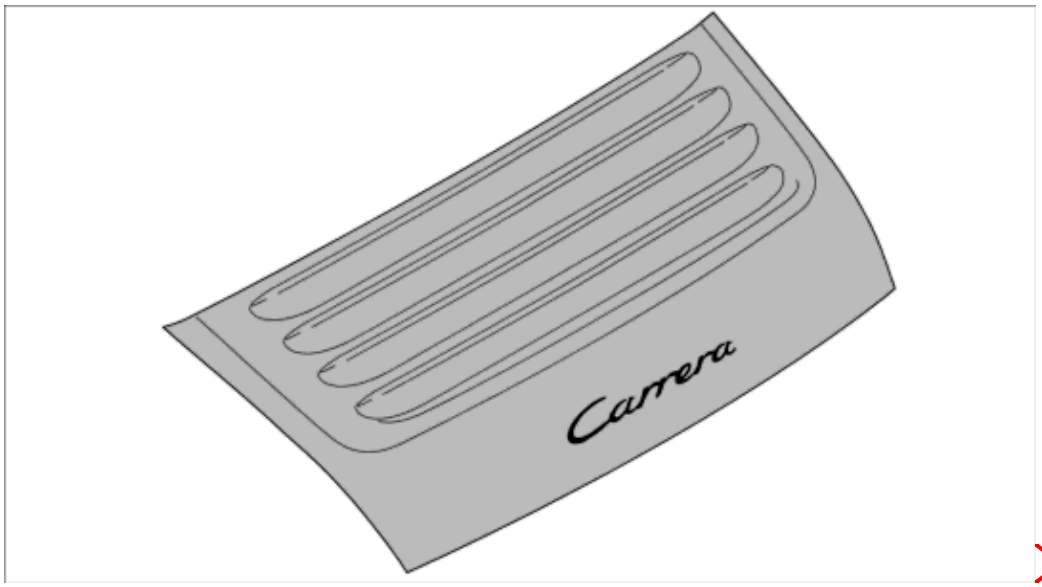


1. Position the spacer **-20-** on the lower part of the spoiler. Tighten M6 fastening screws **-19-** . Tightening torque →**: 7 ftlb.**
2. Position the upper part of the spoiler on the hinge **-17-** . Using the threaded plate **-18-** and the M6 fastening nuts **-16-** , screw in the upper part of the spoiler securely. Tightening torque →**: 7 ftlb.**

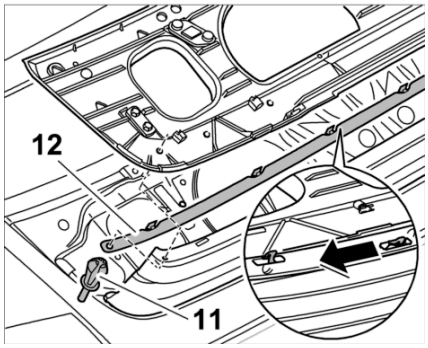
Mounting the folding wall on the lid

Installation Location:

Overview, rear lid



Mounting the folding wall on the lid

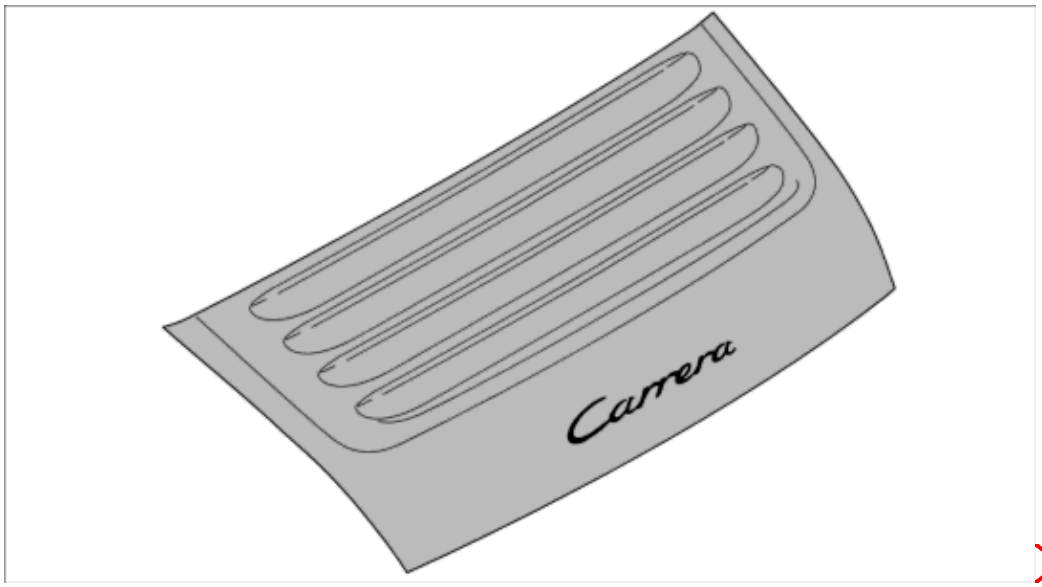


1. Position the fastening rail **-14-** on the folding wall **-15-** and the rear lid.
2. Put new clamping washers **-13-** on the pegs of the fastening rail.

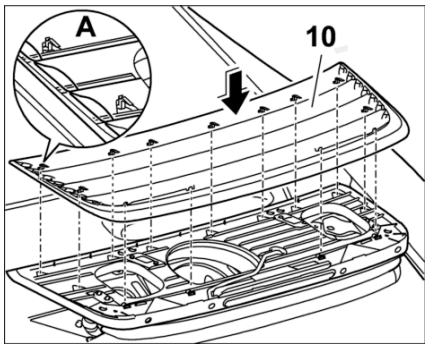
Mounting the folding wall on the upper part of the spoiler

Installation Location:

Overview, rear lid



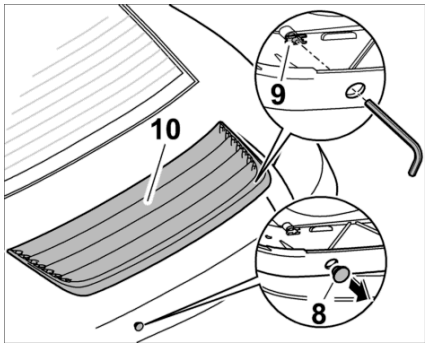
Mounting the folding wall on the upper part of the spoiler



1. Insert the rail **-12-** with the folding wall into the lower part of the spoiler in **-direction of arrow-** .
2. Press in the expanding rivet **-11-** .

Mounting upper part of spoiler

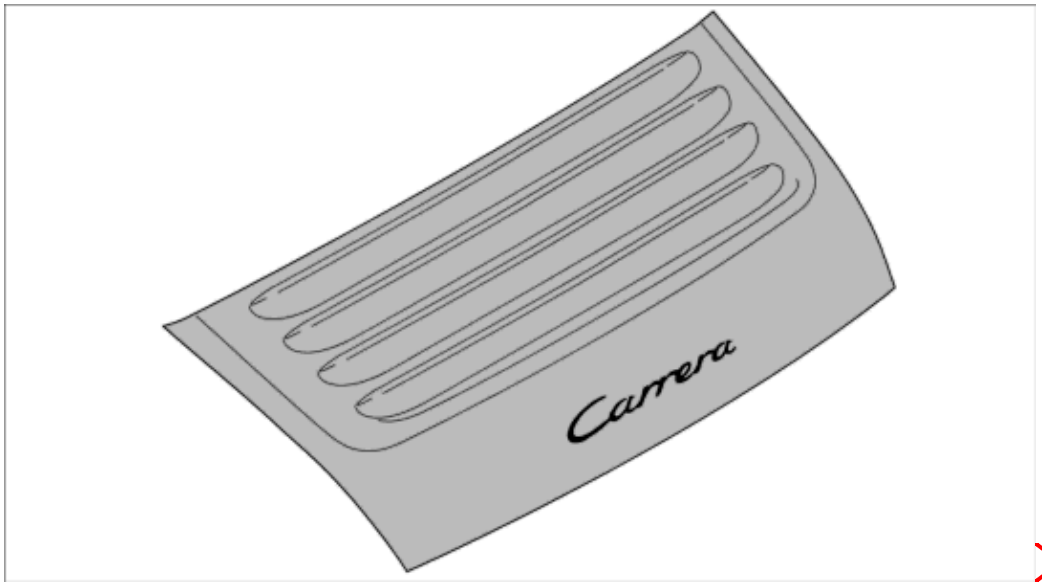
Installation Location:



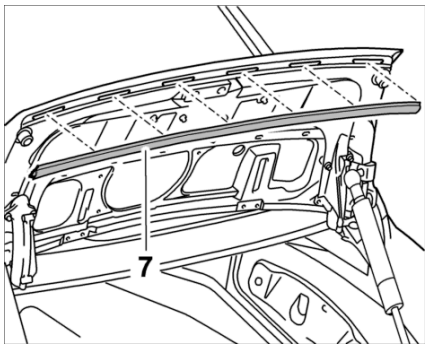
Overview, rear lid

Mounting upper part of spoiler

1. Place the upper part of the spoiler **-10-** on the lower part of the spoiler. Ensure that the locking tabs **-Lupe A-** have engaged.



Securing upper part of spoiler

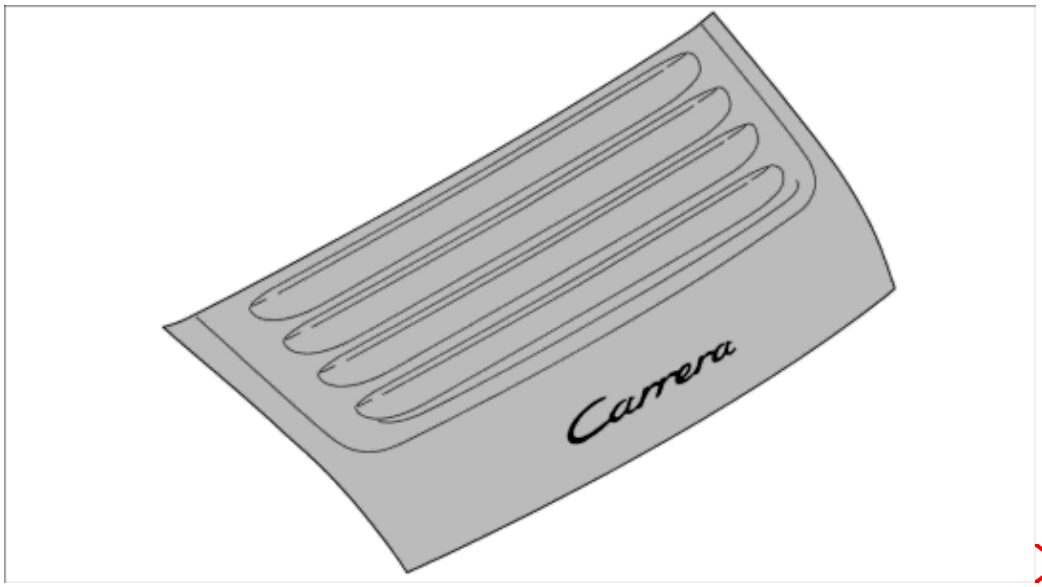


2. Tighten clamping screws **-9-** . Tightening torque →**: 2 ftlb. ±1 ftlb.**
3. Push in the plastic plugs **-8-** .

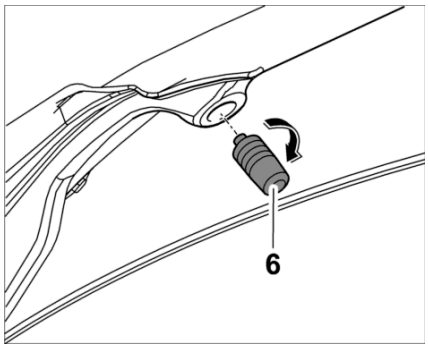
Fitting rubber cover

Installation Location:

Overview, rear lid



Fitting rubber cover

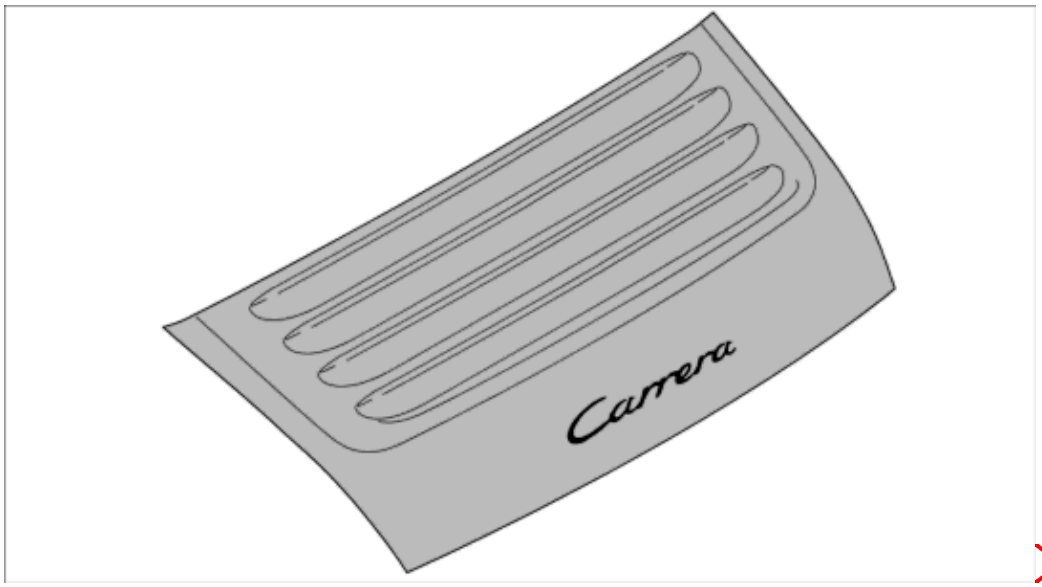


1. Position the rubber cover -7- on the rear lid and push in.

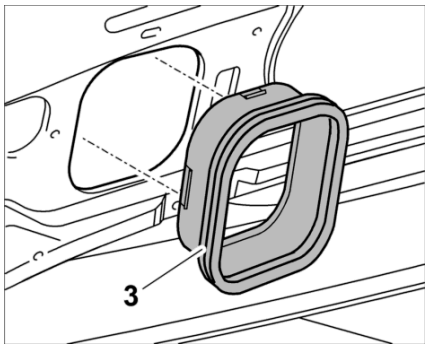
Installing adjusting element

Installation Location:

Overview, rear lid



Installing adjusting element

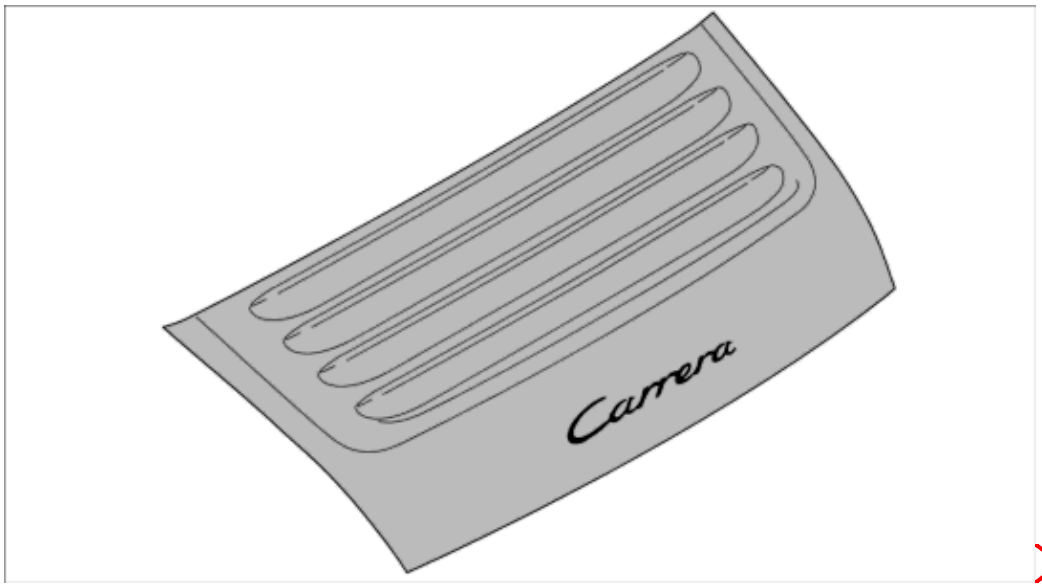


1. Screw in rubber pad **-6-** .

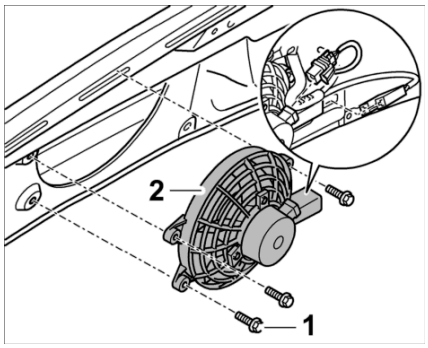
Installing air guide

Installation Location:

Overview, rear lid



Installing air guide



1. Position the air guide **-3-** on the rear lid and insert into position.

Fitting fan with fan housing

Installation Location:

Overview, rear lid

Fitting fan with fan housing

1. Position fan and fan housing **-2-** and tighten with M6 fastening screws **-1-** . Tightening torque →**: 7.1 ftlb.**
2. Connect plugs for fan and engine compartment lighting on the fan housing.

 WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

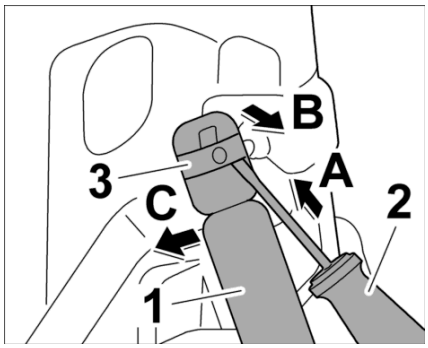
Removing rear pneumatic spring

Removing rear pneumatic spring at lid end

Installation Location:

Overview, removing and installing rear pneumatic spring

ATTENTION



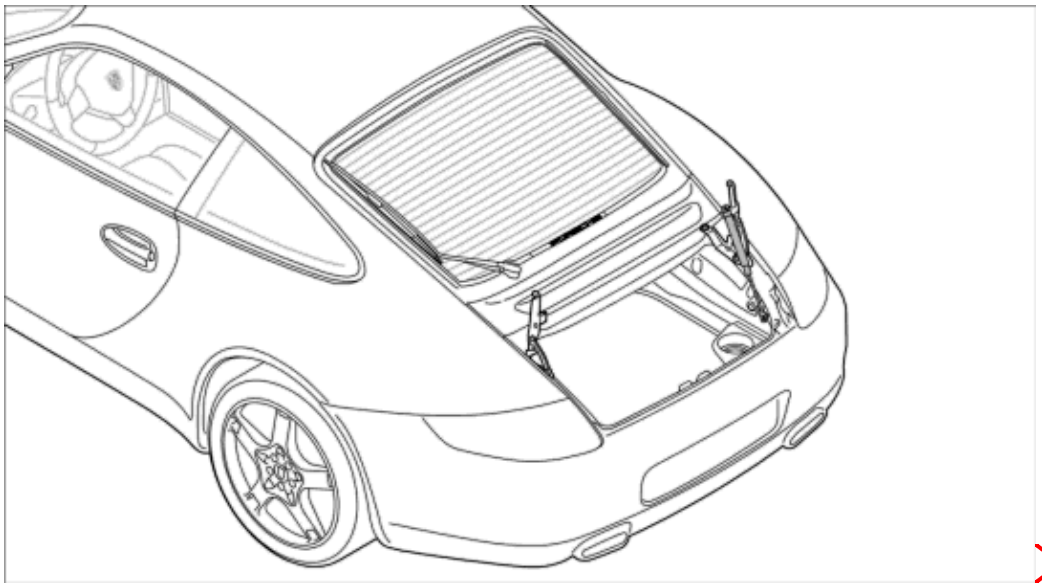
When working on the pneumatic springs of the lid, the following safety measures must be observed, amongst others:

- **Danger of injury if pneumatic springs burst**

→ To remove the pneumatic springs, they must be in idle state: lid open.

→ The lid must be secured against accidental closing after removing the pneumatic springs.

→ Pneumatic springs must not be opened using force - extreme internal pressure.



Disengaging rear pneumatic spring at lid end

1. Open the rear lid.
2. A second person should hold the rear lid to prevent it from closing accidentally.
3. Insert a screwdriver **-2-** between the head of the pneumatic spring and the safety clip **-3-** **-A-** .
4. Release the safety clip **-3-** by levering the screwdriver **-2-** towards the pneumatic spring **-B-** . The safety clip remains in the head of the pneumatic spring.
5. Pull the pneumatic spring **-1-** from the ball head **-C-** .
6. Withdraw the screwdriver.
7. Remove pneumatic spring **-1-** .

Removing rear pneumatic spring at the body

Installation Location:

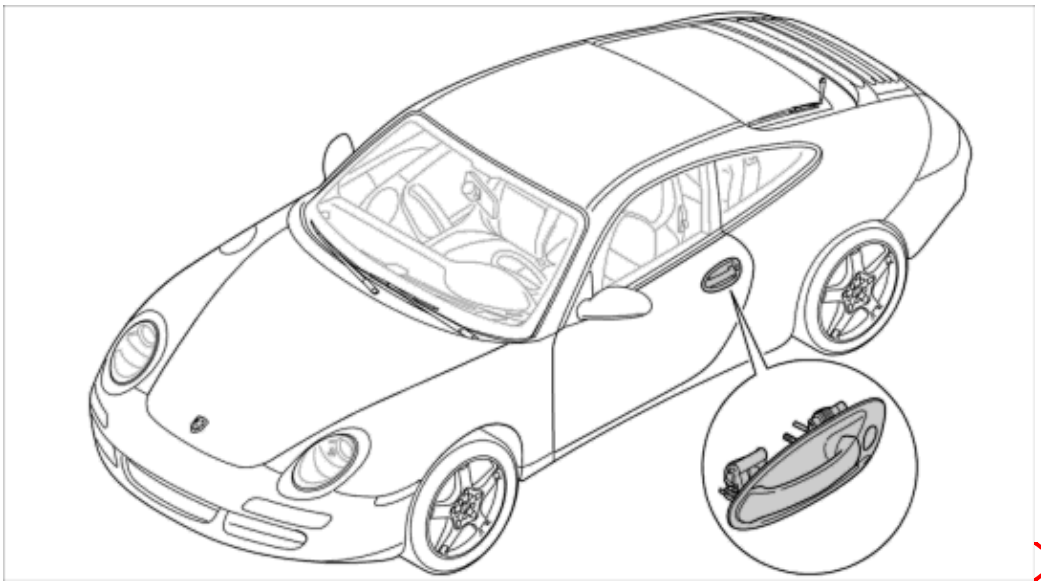
Removing door handle

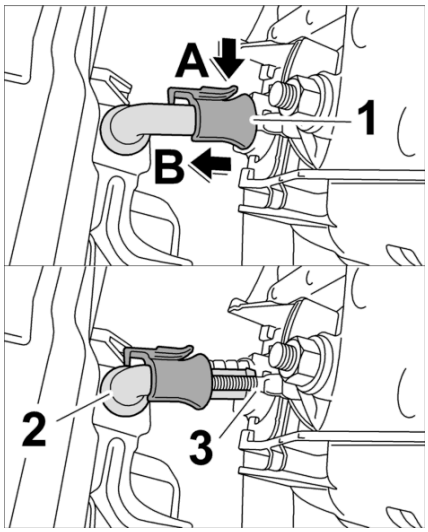
Unclipping electric wire for micro switches

Installation Location:

Overview, removing and installing door handle



Unclipping wire

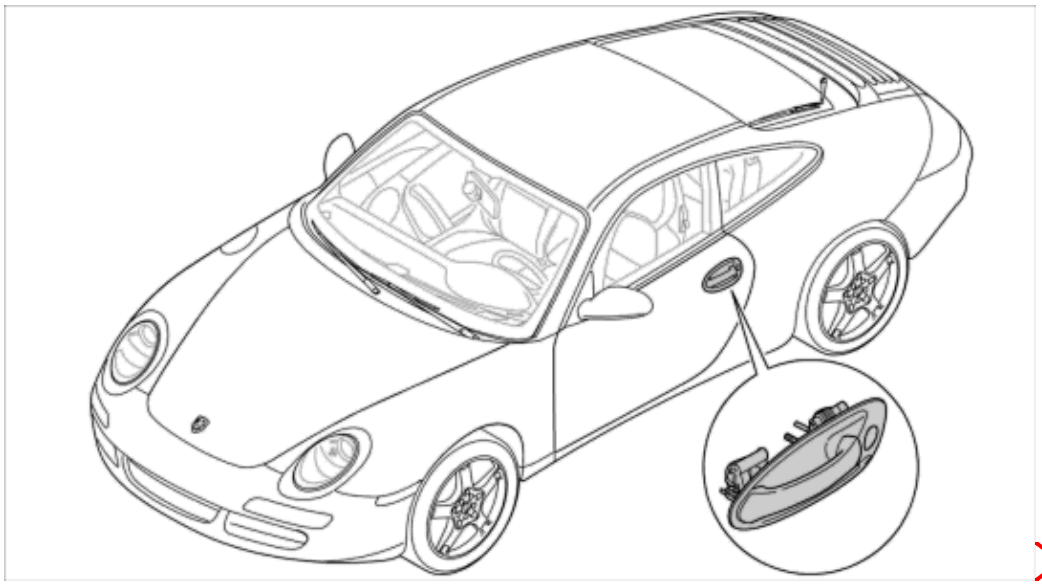


1. Unclip electric wire for microswitch **-1-** from the bottom part of door handle **-2-** .

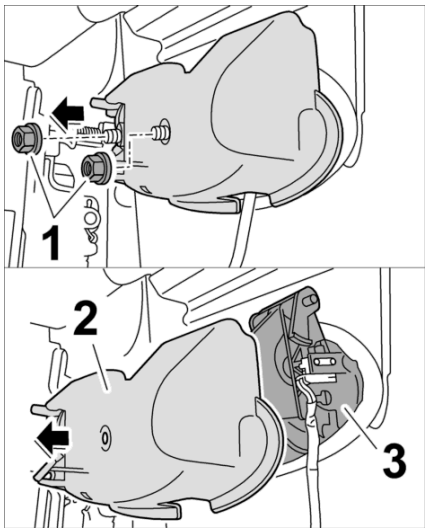
Disconnect connection piece

Installation Location:

Overview, removing and installing door handle



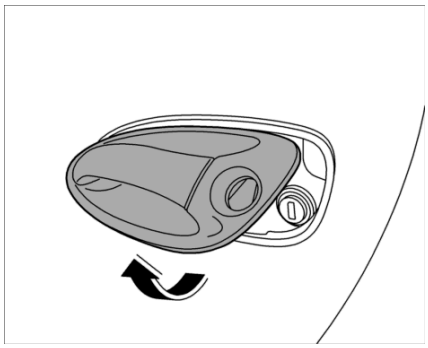
Disconnect connection piece



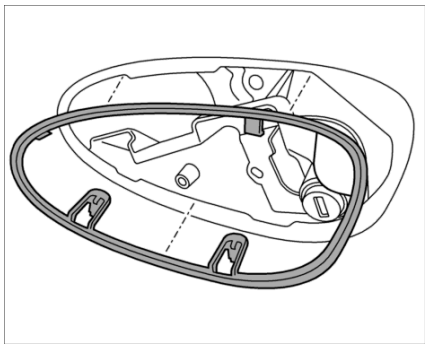
1. Press locking tabs **-Pfeil A-** and move sliding part **-1-** **-Pfeil B-** .
2. Unclip the connection piece **-2-** from the actuating shaft **-3-** .

Removing door handle and bottom part of door handle

Installation Location:



Overview, removing and installing door handle



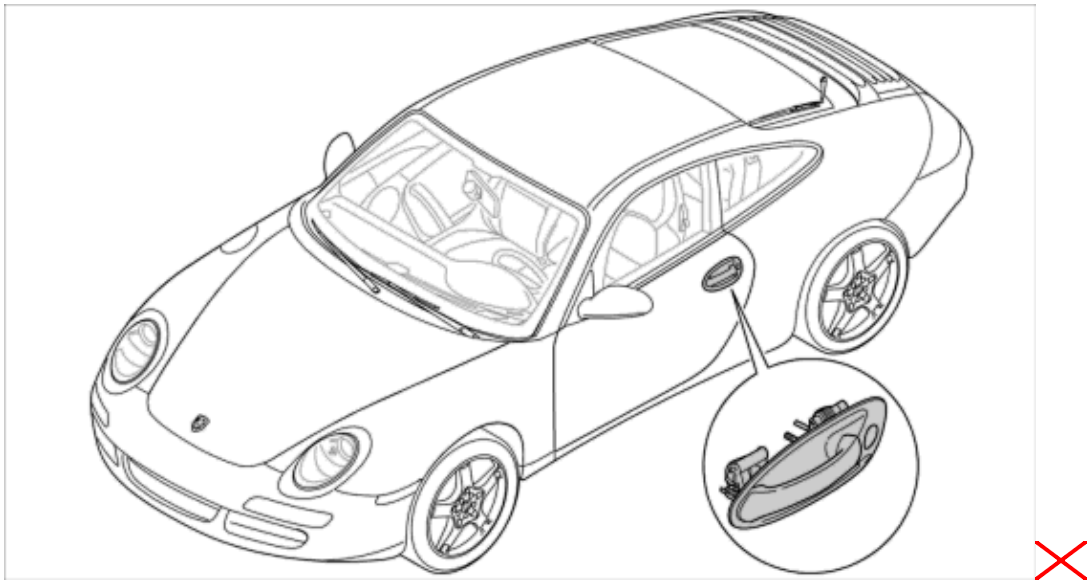
Releasing the door handle

1. Unscrew fastening nuts **-1-** .
2. Separate bottom part of door handle **-2-** from door handle **-3-** .

Removing door handle

3. Pull door handle downward at an angle.

Unclipping support



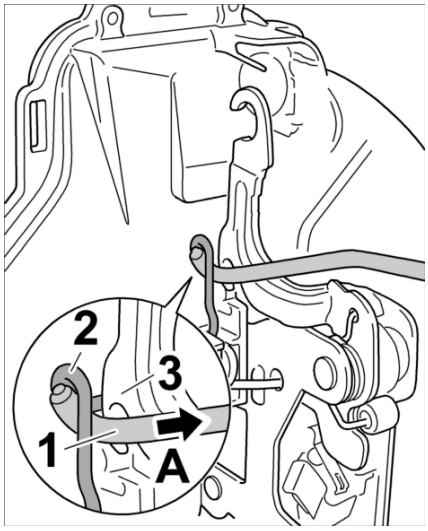
4. Unclip support.

top of page

Additional assembly instructions

Locking lock actuation

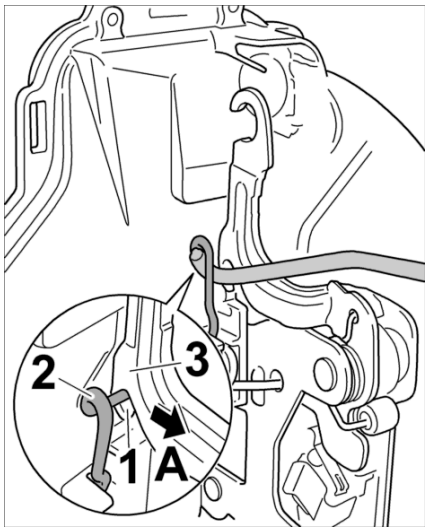
Installation Location:



Overview, removing and installing door handle

Note

- *To fit the lock actuation correctly, the securing spring must be hooked into the lock actuation lever before the door lock is installed.*



- *The secured position of the lock actuation is released automatically when the door handle is first pressed. A clear clicking sound can be heard when the door handle is first pressed.*

1. Light up inside of door with a lamp.

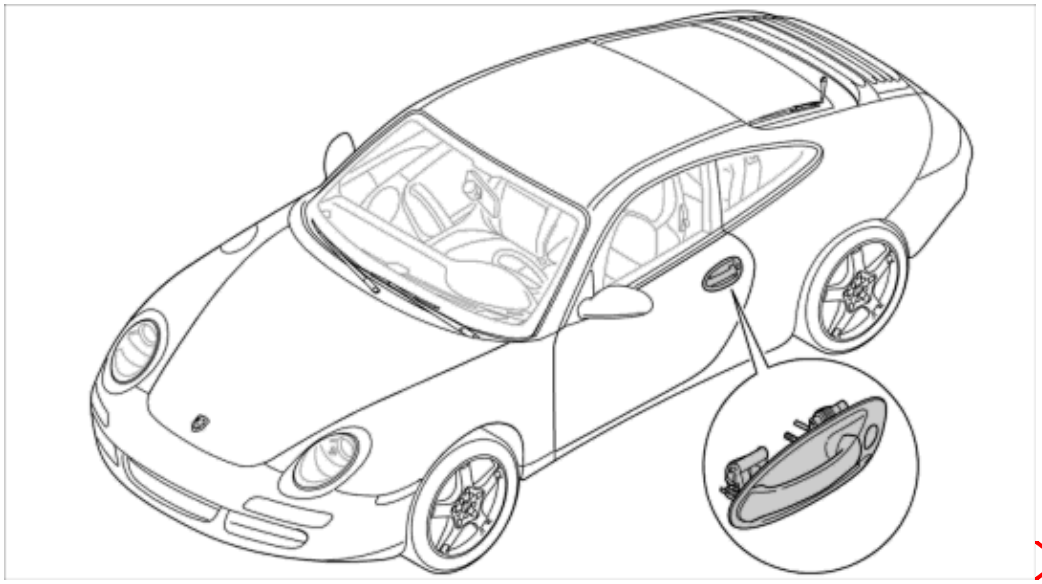
Locking lock actuation

2. Guide the **assembly tool T10118** **-1-** between the securing spring **-2-** and the lever **-3-** .
3. The securing spring **-2-** hooks on to the tool with a rotary movement.

Lock actuation locked

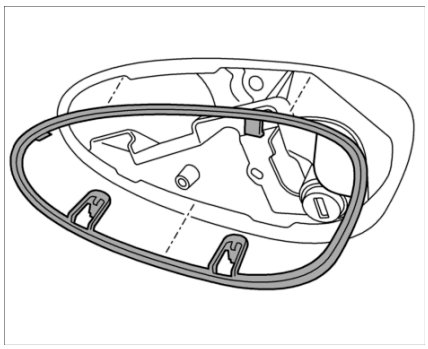
4. Pull the securing spring **-2-** towards the outside of the door **-Pfeil A-** until the spring engages audibly in the locking lug of the lever **-3-** .
5. Unhook the tool **-1-** and remove it.

Note



- *Pull carefully on the lock actuation to check that it is secured in installation position. Repeat the steps listed above if necessary.*

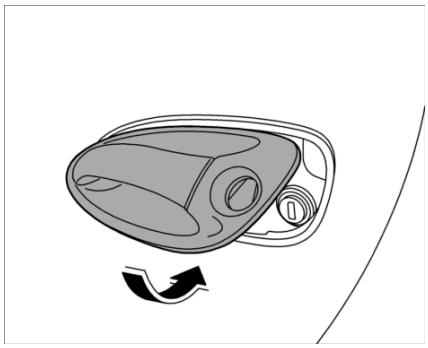
top of page



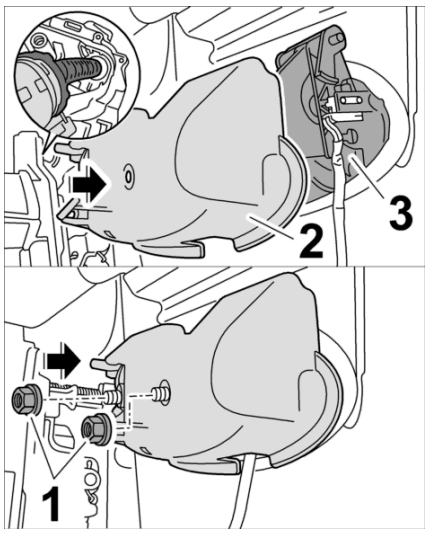
Installing door handle

Fitting door handle and bottom part of door handle

Installation Location:



Overview, removing and installing door handle



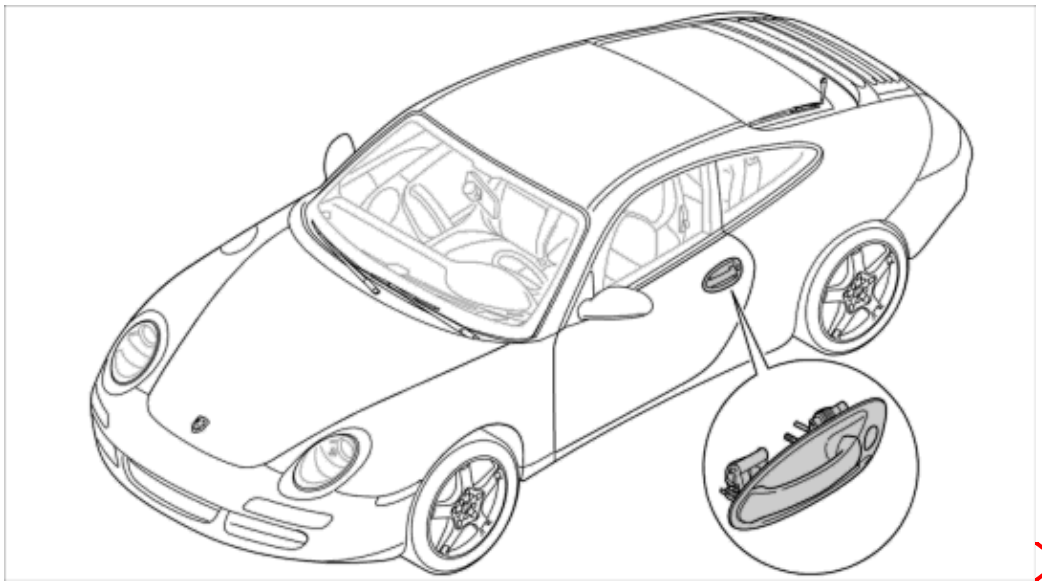
Clipping in support

1. Clip in support.

Installing door handle

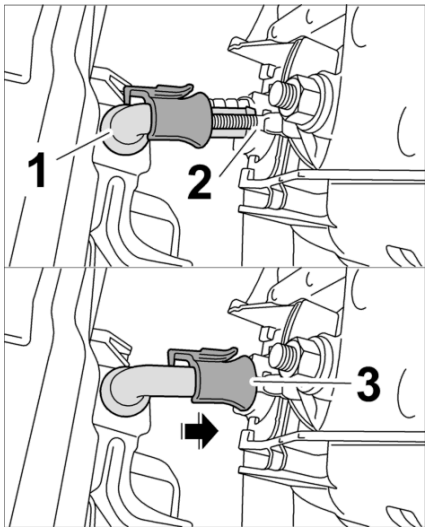
2. Insert door handle carefully.

Fastening the door handle



Note

- *Make sure the electrical lead is routed correctly.*
- *To prevent a malfunction in the closing system, make sure that the closing cylinder shaft is fitted correctly in the door lock.*

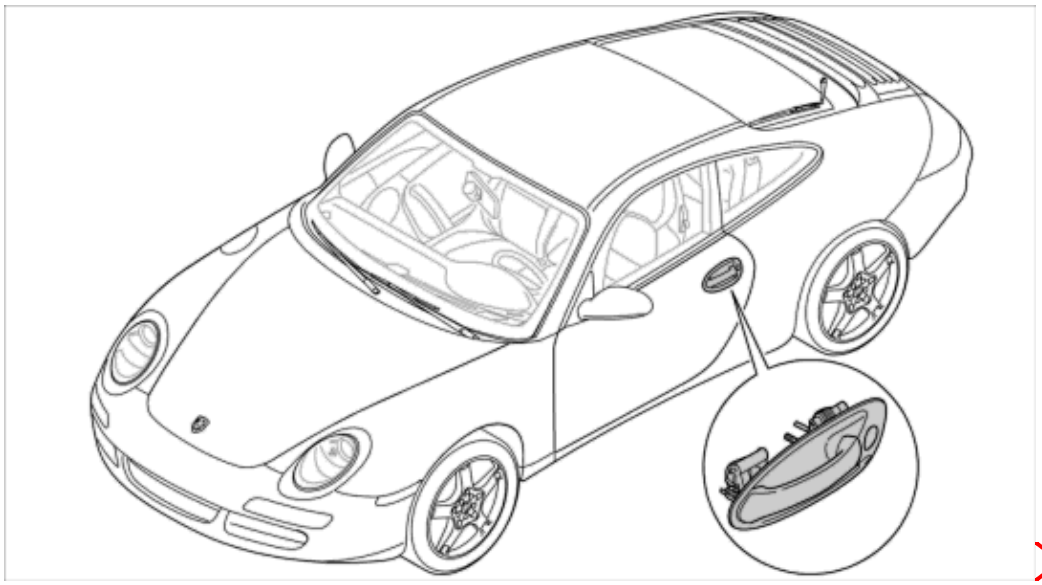


3. Position bottom part of door handle **-2-** from the inside on the door handle **-3-**
.
4. Tighten fastening nuts **-1-** . Tightening torque →**Final tightening: 7 ftlb.**

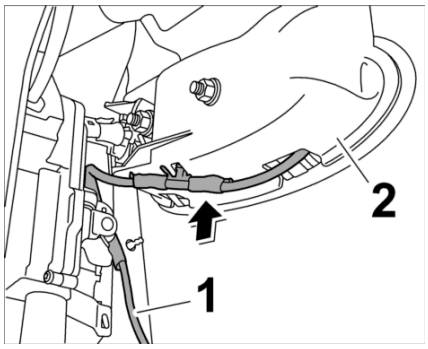
Fit connection piece

Installation Location:

Overview, removing and installing door handle



Fitting connection piece



1. Insert the connection piece **-1-** into the actuating shaft **-2-** without play.
2. Push out the sliding piece **-3-** until it can be heard to engage.
3. Actuate the handle to ensure that the handle and door lock function without play.

Clipping in the electric wire for micro switches

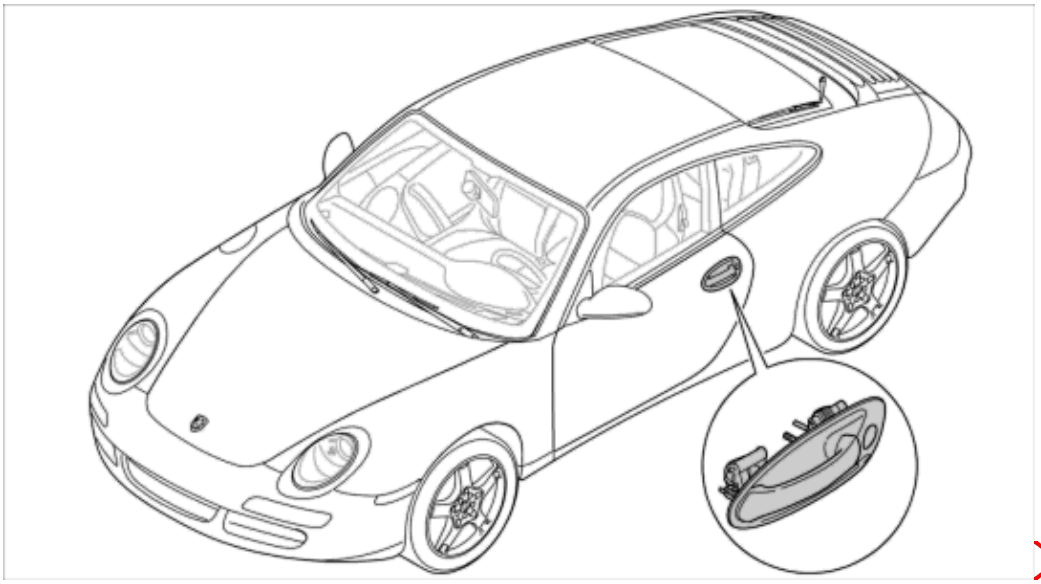
Installation Location:

Overview, removing and installing door handle

Clipping in wire

1. On the bottom part of door handle **-2-** clip in the electrical wire **-1-** .

top of page



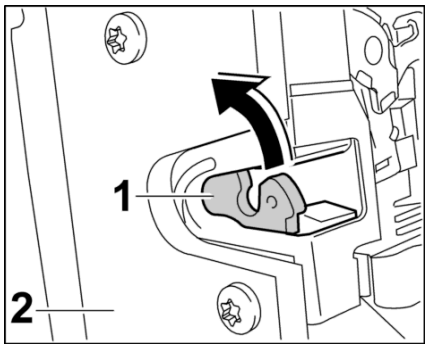
Subsequent work

Subsequent work

1. Install door unit carrier. *→5730 23 Removing and installing door unit carrier - installing*

Function test following assembly work

Installation Location:



Overview, removing and installing door handle

Note

- *A malfunction occurs only after the vehicle is locked for the first time. In other words: if a door handle was fitted incorrectly, the affected door can be opened and closed without difficulty until the vehicle is locked for the first time. After that, the door cannot be opened either from inside or outside. Given this, it is important to perform a function test before the door is closed.*

1. Do not close vehicle door after installing door handle.

Engaging the bolt

2. With the door open **-2-** , use a screwdriver to engage the bolt in the door lock **-1-** fully in the second notch.
3. Lock vehicle with the remote control.
4. Unlock vehicle with the remote control.
5. Press door handle on open door.

Note

- *If the bolt in the door lock does not open, press the door button to make sure that the individual door opening function is deactivated. If the door lock still does not open, the door lock was assembled incorrectly.*

 WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

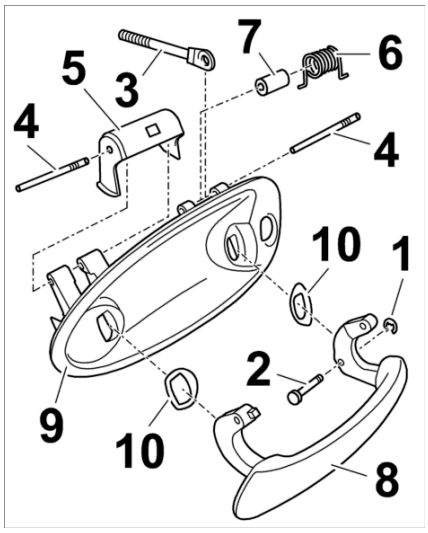
Preliminary work



Preliminary work

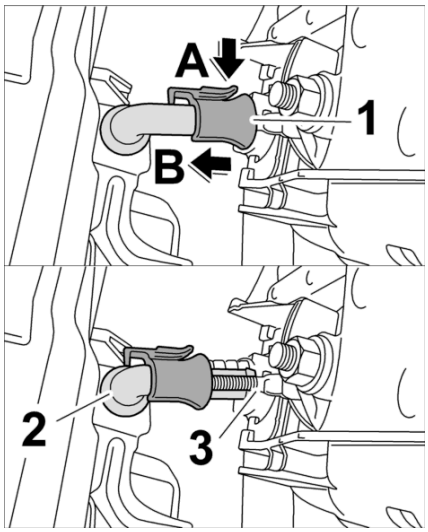
1. Remove door unit carrier. *→5730 21 Removing and installing door unit carrier - removing*

top of page

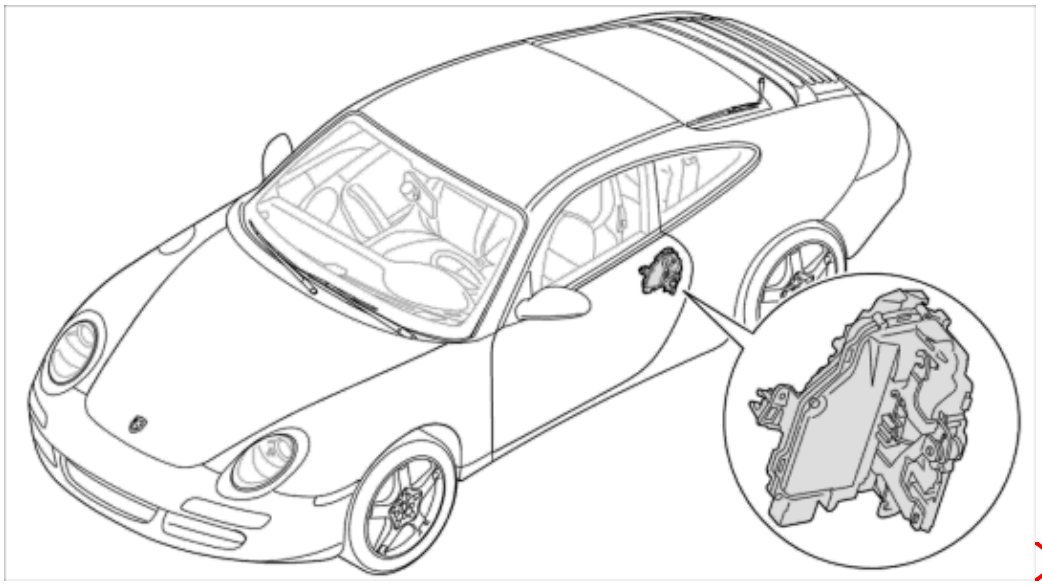


Removing door lock

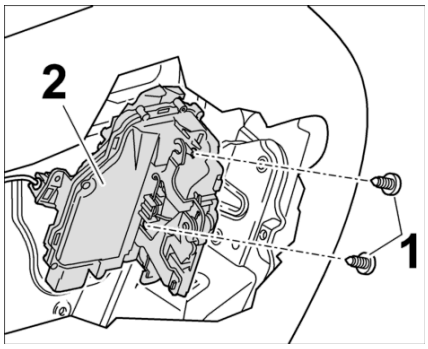
Disconnect connection piece

Installation Location:

Overview, removing and installing door handle



Disconnect connection piece

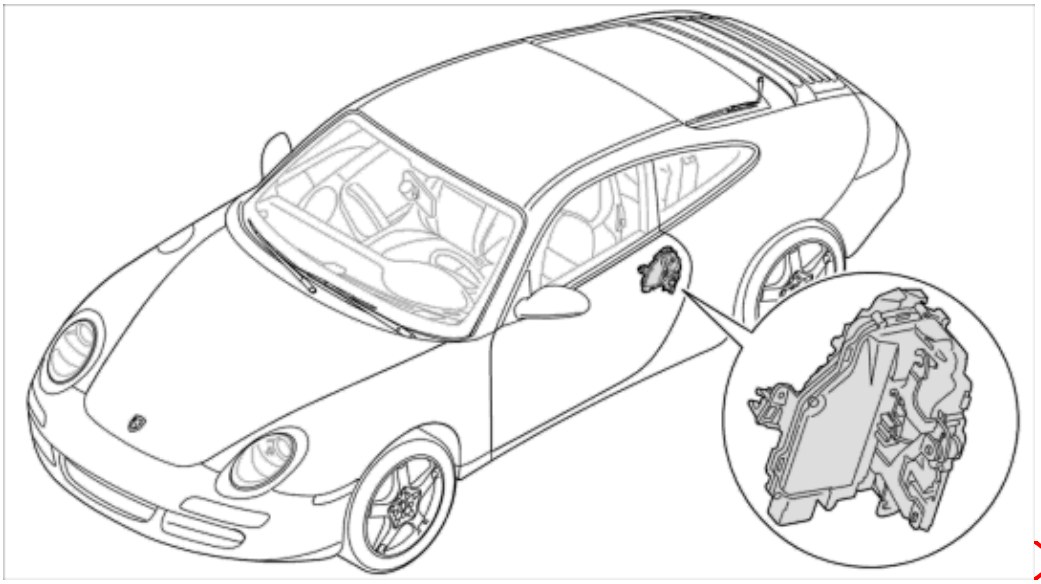


1. Press locking tabs **-Pfeil A-** and move sliding part **-1-** **-Pfeil B-** .
2. Unclip the connection piece **-2-** from the actuating shaft **-3-** .

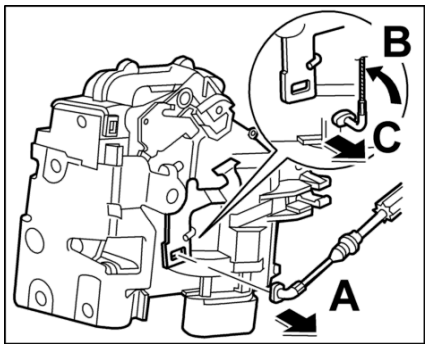
Removing door lock

Installation Location:

Main illustration for removing and installing door lock



Removing door lock



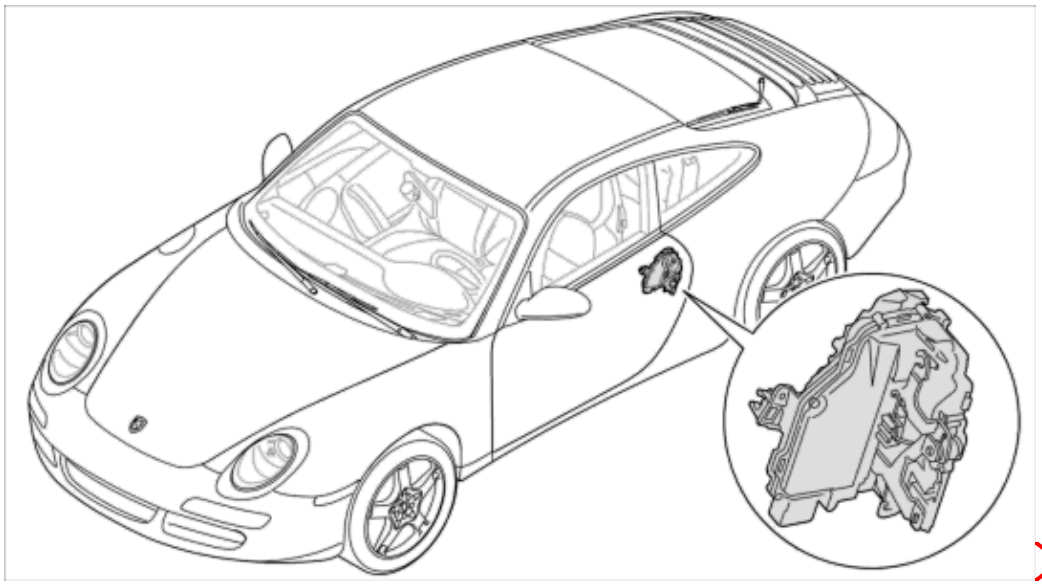
1. Undo fastening screws **-1-** .
2. Pull door lock with actuating motor unit **-2-** out of the door.

Unclipping and disengaging the bowden cable

Installation Location:

Main illustration for removing and installing door lock

Unclipping and disengaging the bowden cable



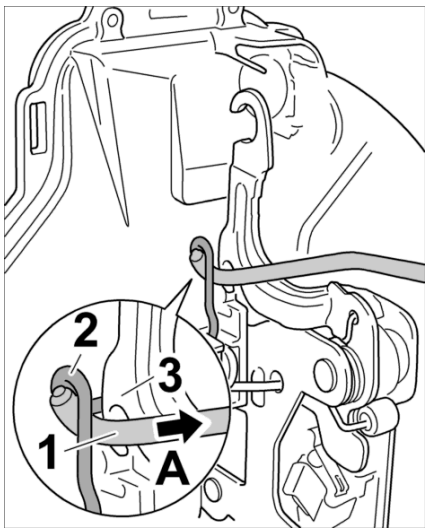
1. Unclip bowden cable from the door lock **-arrow A-** .
2. Swivel bowden cable by 90° **-arrow B-** and pull it out of the actuating lever **-arrow C-** .

top of page

Additional assembly instructions

Locking lock actuation

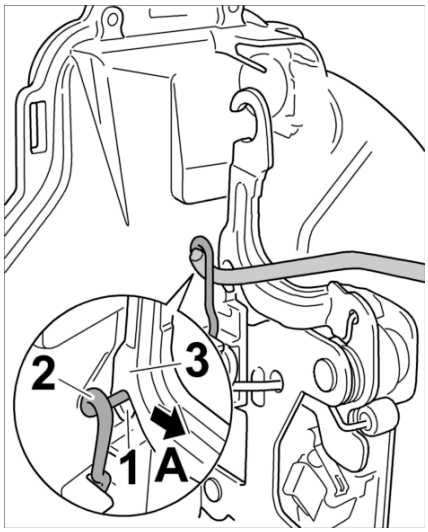
Installation Location:



Main illustration for removing and installing door lock

Note

- *To fit the lock actuation correctly, the securing spring must be hooked into the lock actuation lever before the door lock is installed.*
- *The secured position of the lock actuation is released automatically when the door handle is first pressed. A clear clicking sound can be heard when the door handle is first pressed.*



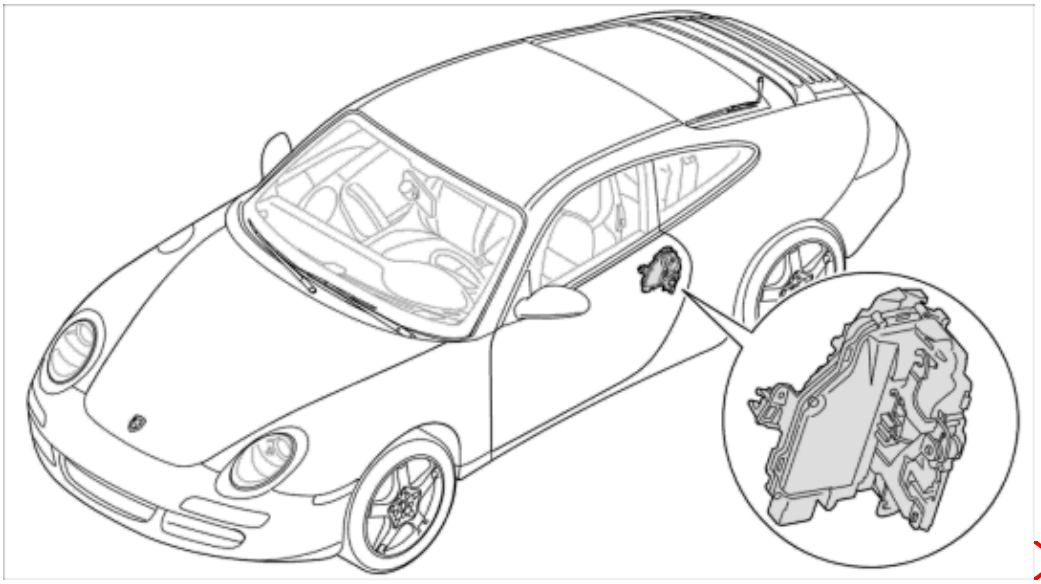
Note

- *Pull carefully on the lock actuation to check that it is secured in installation position. Repeat the steps listed above if necessary.*

Locking lock actuation

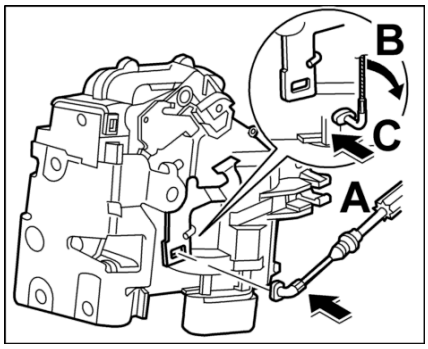
1. Guide the **assembly tool T10118** **-1-** between the securing spring **-2-** and the lever **-3-** .
2. The securing spring **-2-** hooks on to the tool with a rotary movement.

Lock actuation locked



3. Pull the securing spring **-2-** towards the outside of the door (**-arrow A-**) until the spring engages audibly in the locking lug **-1-** of the lever **-3-** .
4. Unhook the tool **-1-** and remove it.

top of page

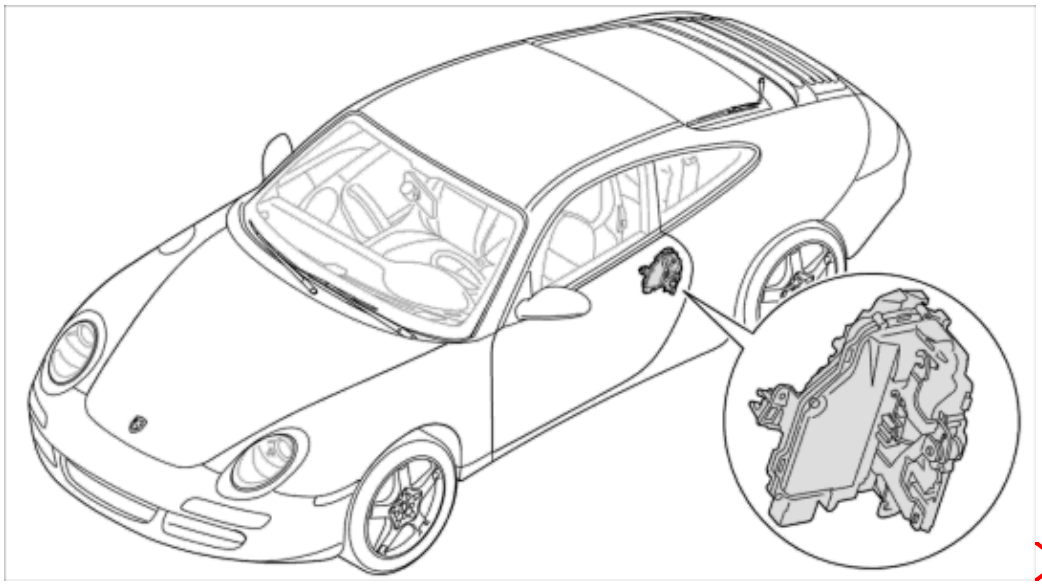


Installing door lock

Fitting the bowden cable

Installation Location:

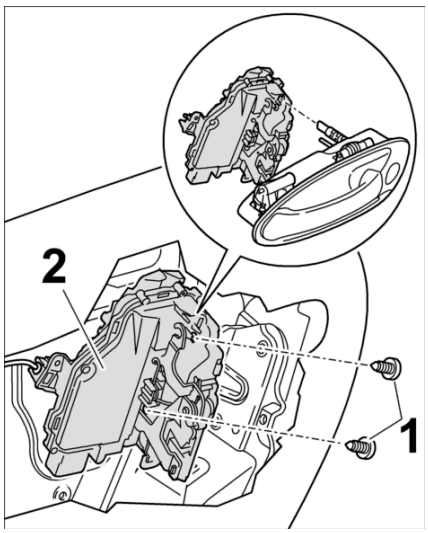
Main illustration for removing and installing door lock



Fitting the bowden cable

1. Insert bowden cable into the actuating lever **-arrow C-** and swivel by 90° **-arrow B-** .
2. Clip bowden cable into the door lock **-arrow A-** .

Installing door lock

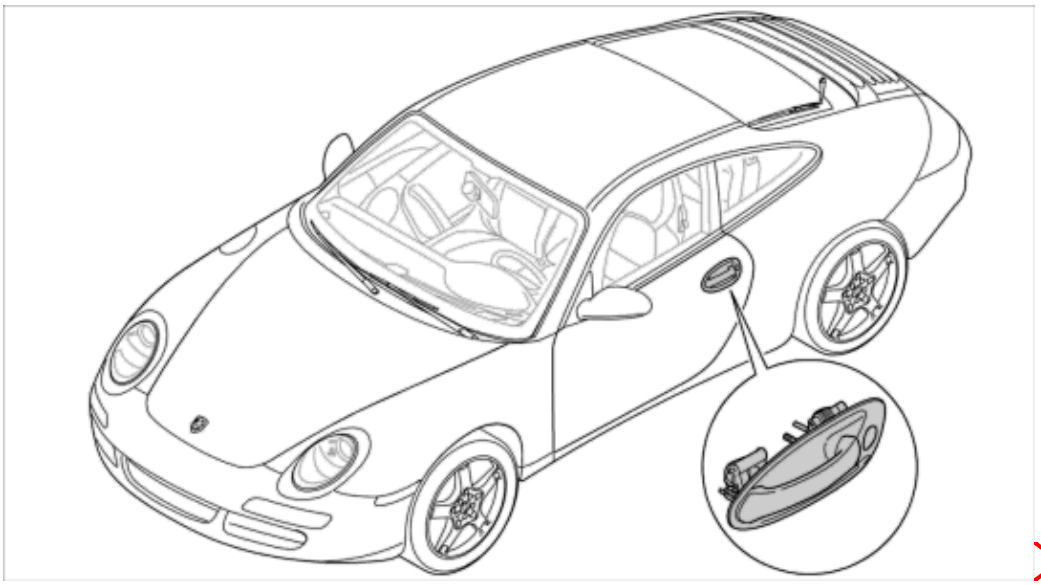


Installation Location:

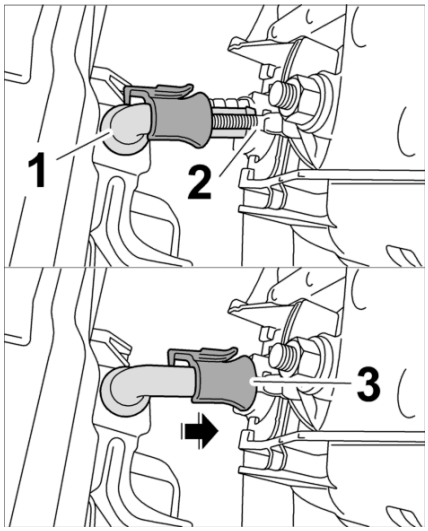
Main illustration for removing and installing door lock

Note

- *To prevent a malfunction in the closing system, make sure that the closing cylinder shaft is fitted correctly in the door lock.*



Installing door lock



1. Insert door lock **-2-** into the door and secure with the fastening screws **-1-** . Tightening torque →**Final tightening: 18 (13) Nm (ftlb.) +2 (1.5) Nm (ftlb.)**

Fit connection piece

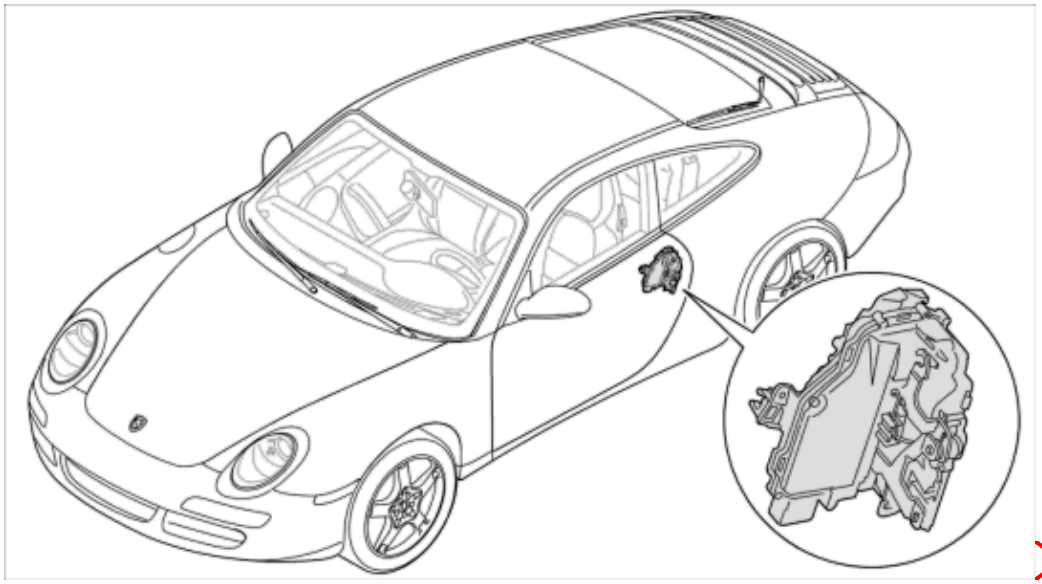
Installation Location:

Overview, removing and installing door handle

Fitting connection piece

1. Insert the connection piece **-1-** into the actuating shaft **-2-** without play.
2. Push out the sliding piece **-3-** until it can be heard to engage.
3. Actuate the handle to ensure that the handle and door lock function without play.

top of page



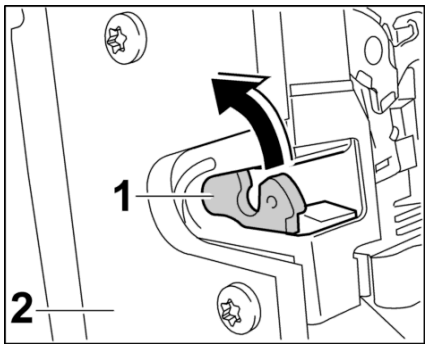
Subsequent work

Subsequent work

1. Install door unit carrier. *→5730 23 Removing and installing door unit carrier - installing*

Function test following assembly work

Installation Location:



Main illustration for removing and installing door lock

Note

- *A malfunction occurs only after the vehicle is locked for the first time. In other words: if a door lock was fitted incorrectly, the affected door can be opened and closed without difficulty until the vehicle is locked for the first time. After that, the door cannot be opened either from inside or outside. Given this, it is important to perform a function test before the door is closed.*

1. Do not close vehicle door after fitting the door lock.

Engaging the bolt

2. With the door open **-2-** , use a screwdriver to engage the bolt in the door lock **-1-** fully in the second notch.

3. Lock vehicle with the remote control.
4. Unlock vehicle with the remote control.

Note

- *If the bolt in the door lock does not open, press the door button to make sure that the individual door opening function is deactivated. If the door lock still does not open, the door lock was assembled incorrectly.*

5. Press door handle on open door.

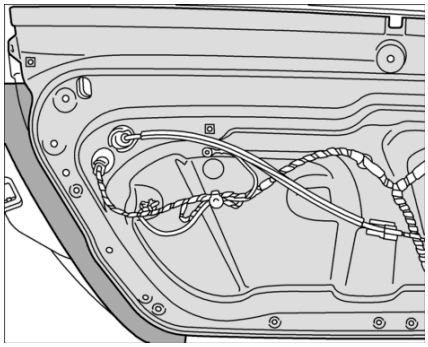
Removing door unit carrier

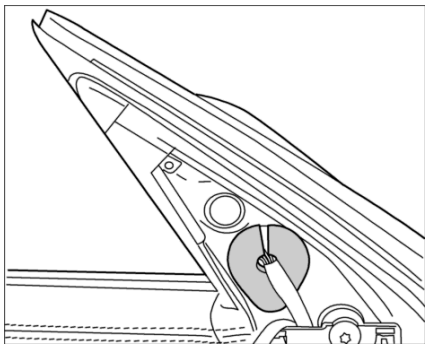
Covering door with adhesive tape



Installation Location:

Overview, door unit carrier

Note

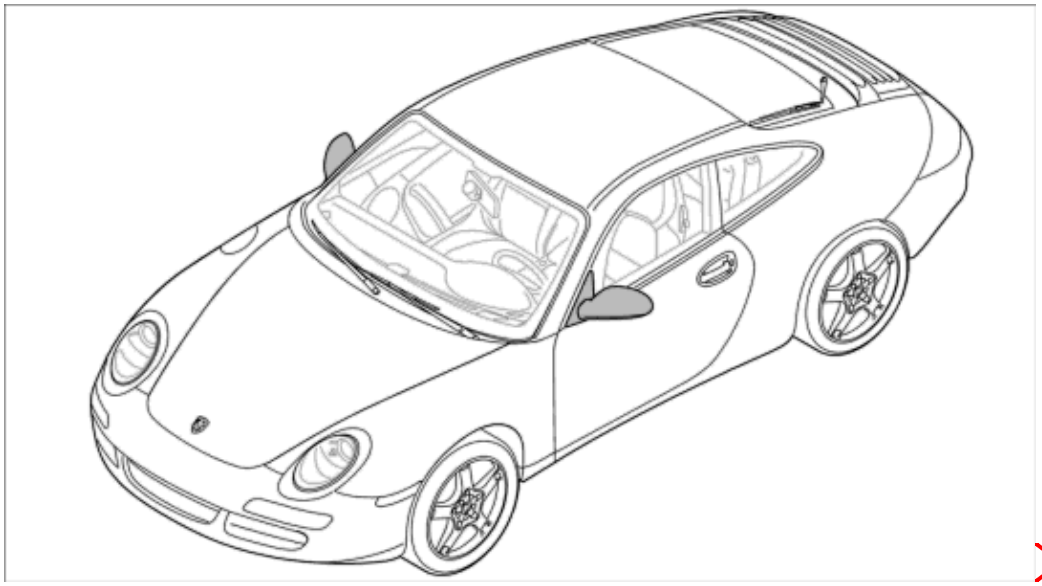


- *Adhesive tape protects the door from paint damage when removing the door unit carrier.*

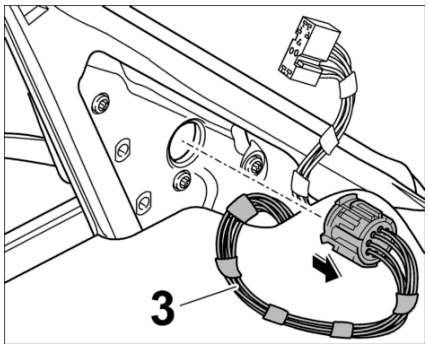
Covering door with adhesive tape

1. Cover door in marked area with adhesive tape.

Removing seal for mirror triangle



Seal for mirror triangle

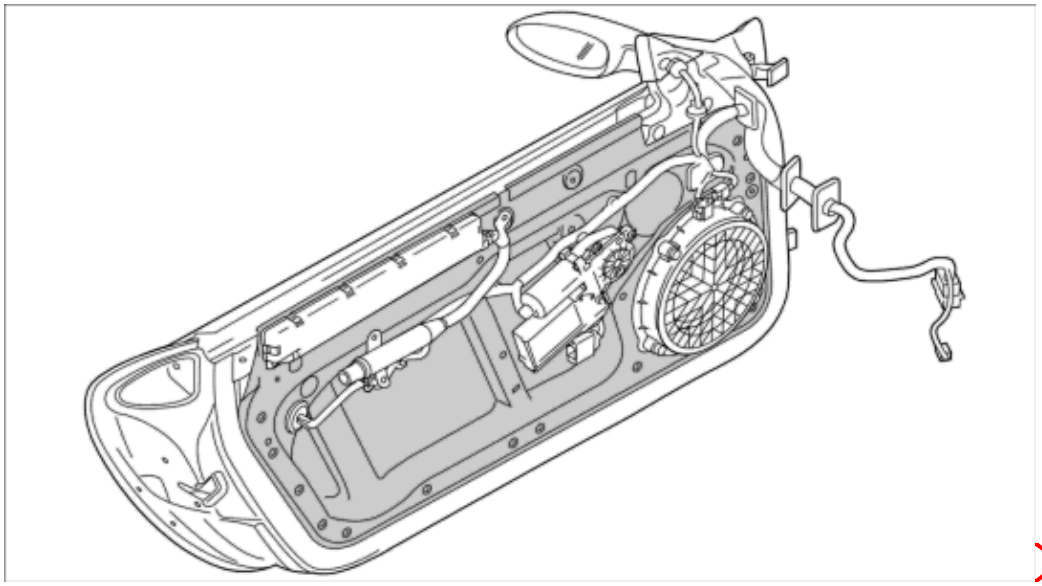


1. Pull out seal for mirror triangle from cable cutout opening for door mirror.

Disconnecting electrical plug connection

Installation Location:

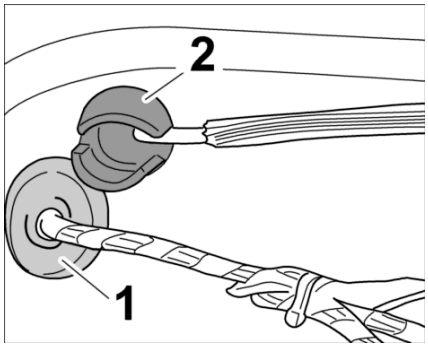
Overview, removing and installing rear-view mirror



Pulling off electrical plug

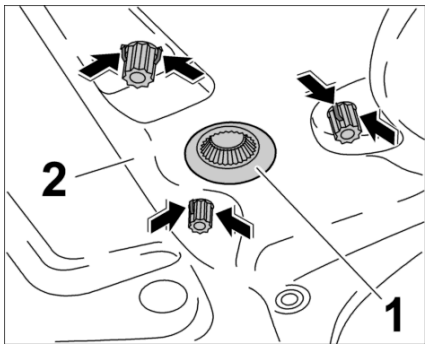
1. Disconnect the plug connection of the mirror housing **-3-** .

Releasing door unit carrier



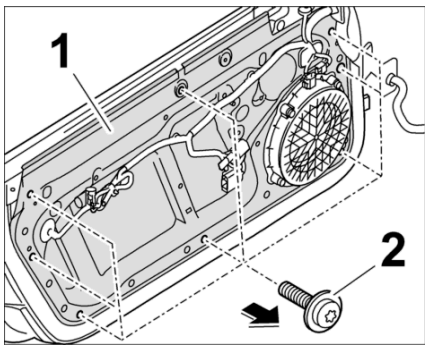
Installation Location:

Overview, door unit carrier



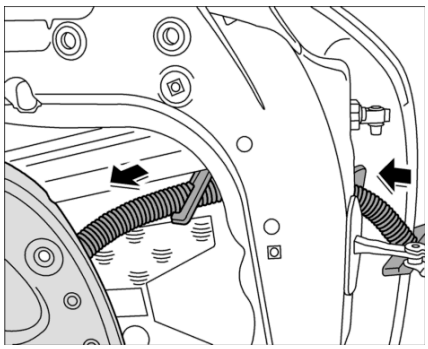
Note

- *A second person is required for removing the door unit carrier to avoid damage.*



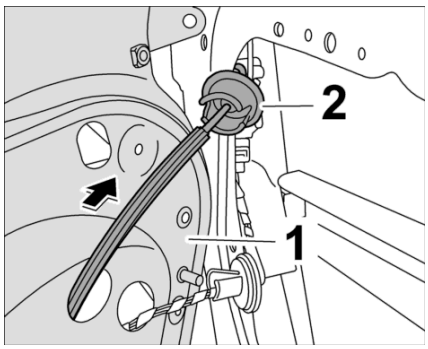
Pressing in rubber grommets

1. Press rubber grommet for electrical wire **-1-** and bowden cable **-2-** inwards.



Unclipping power windows

2. Press in the locking tabs **-arrows-** and unclip power windows **-1-** from door unit carrier **-2-** .

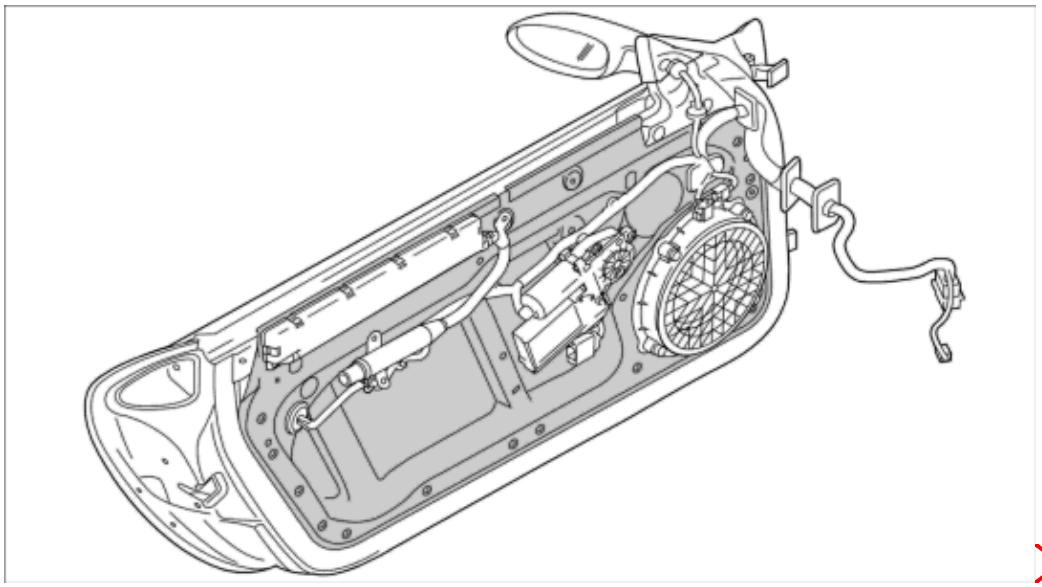


Releasing door unit carrier

3. Unscrew fastening screws **-2-** for the door unit carrier **-1-** .

Pulling out the wiring harness

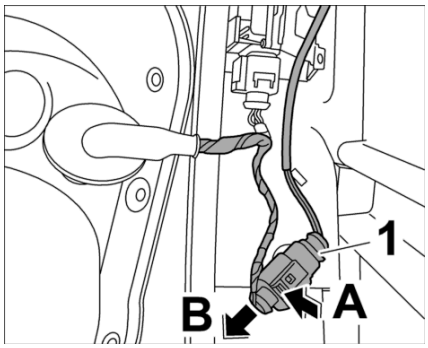
4. Press the rubber grommet on the wiring harness inwards and pull the wiring harness through the door aperture.



Pulling out the Bowden cable

5. Pull out the bowden cable **-2-** from the unit carrier **-1-** .

Disconnecting electrical plug connection on microswitch

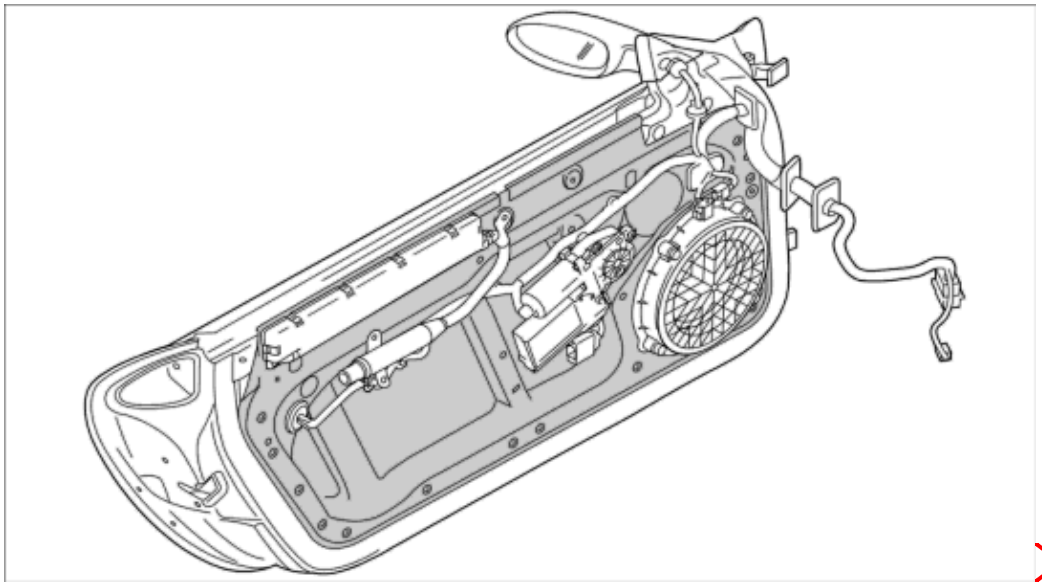


Installation Location:

Overview, door unit carrier

Note

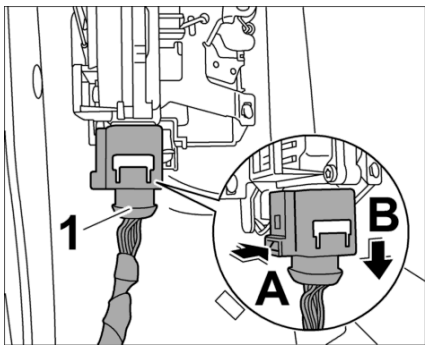
- *A second person is required for removing the door unit carrier to avoid damage.*



Disconnecting the microswitch plug connection

1. Unlock the electrical plug connection for the microswitch **-1-** by pressing the locking tab **-Pfeil A-** and remove **-Pfeil B-** .

Disconnecting the door lock electrical plug connection



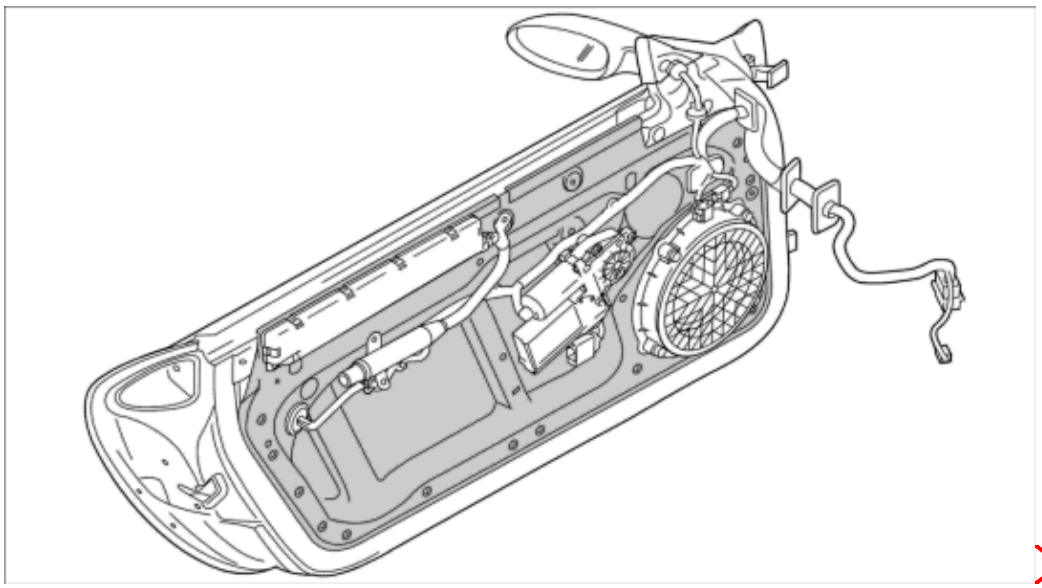
Installation Location:

Overview, door unit carrier

Note

- *A second person is required for removing the door unit carrier to avoid damage.*

Disconnecting the door lock plug connection

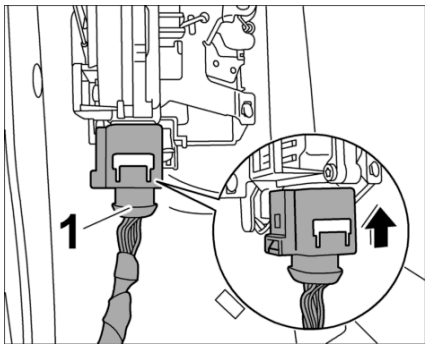


1. Unlock the electrical plug connection for the door lock **-1-** by pressing the locking tab **-Pfeil A-** and remove **-Pfeil B-** .
2. Remove door unit carrier.

top of page

Installing door unit carrier

Locking electrical plug connection for door lock

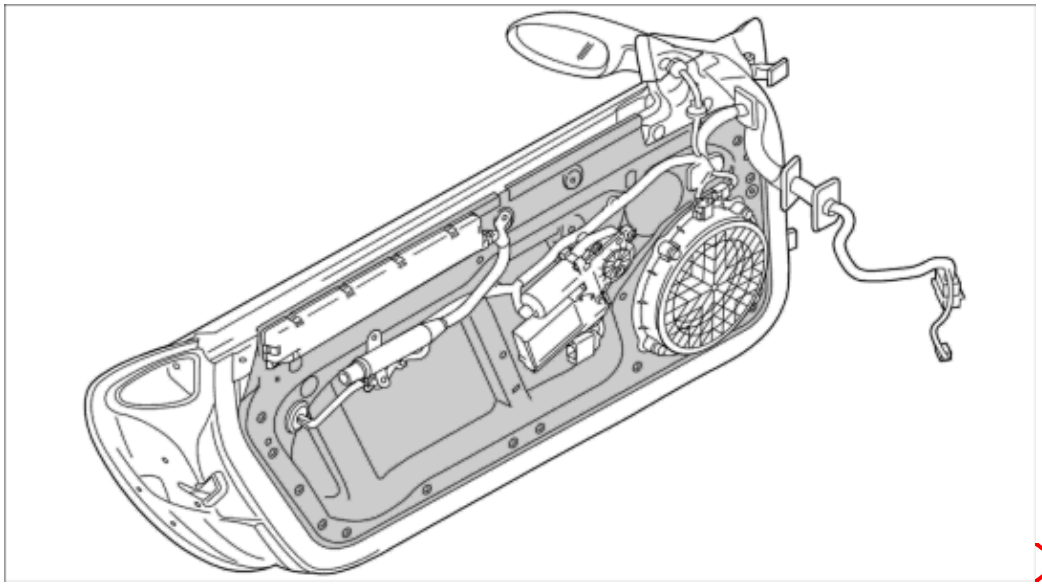


Installation Location:

Overview, door unit carrier

Note

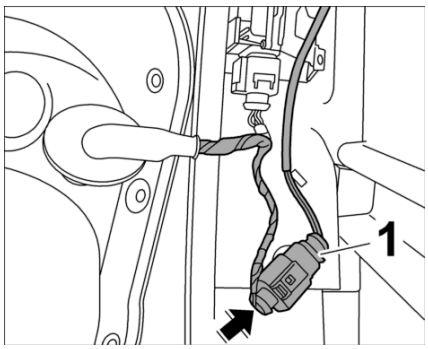
- *A second person is required for removing the door unit carrier to avoid damage.*



Locking plug connection for door lock

1. Lock electrical plug connection for door lock **-1-** until the plug audibly engages.

Locking electrical plug connection for microswitch

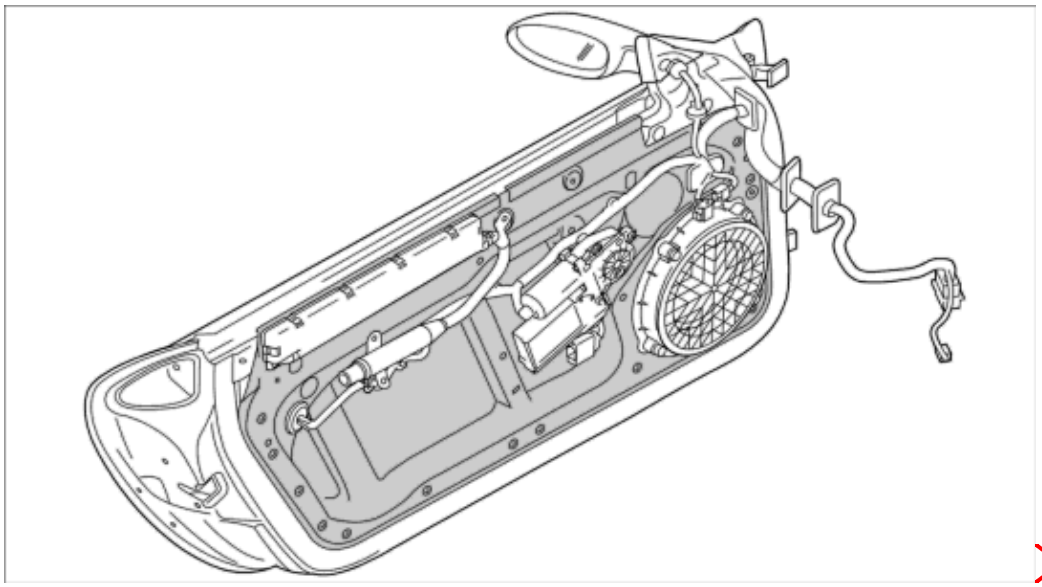


Installation Location:

Overview, door unit carrier

Note

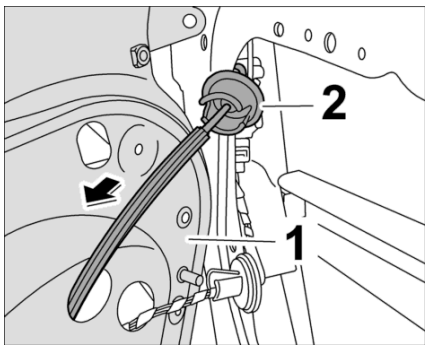
- *A second person is required for removing the door unit carrier to avoid damage.*



Locking plug connection for microswitch

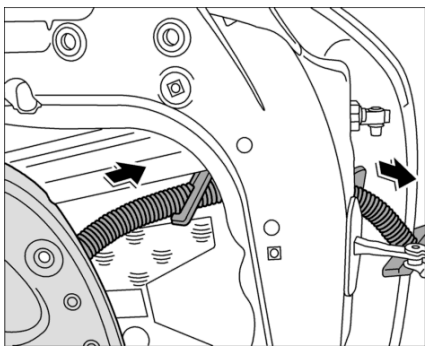
1. Lock electrical plug connection for microswitch **-1-** until the plug audibly engages.

Fastening door unit carrier



Installation Location:

Overview, door unit carrier

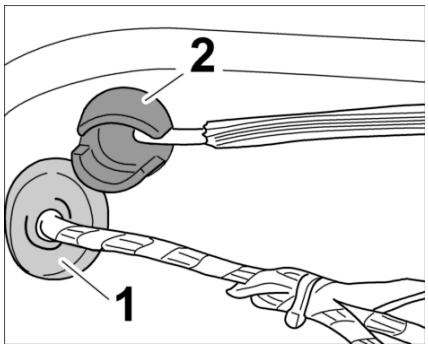


Note

- *A second person is required for removing the door unit carrier to avoid damage.*

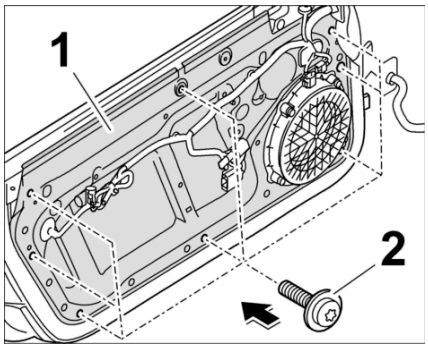
Pushing bowden cable through

1. Push the bowden cable **-2-** through the unit carrier **-1-** .



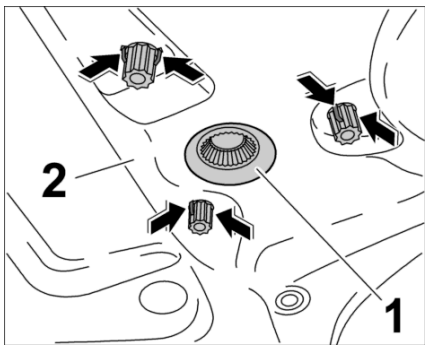
Pushing wiring harness through

Note



- *Make sure that the wiring harness is not twisted through the door opening when fitted.*

2. Push the wiring harness from the inside through the door aperture and press in the rubber grommet on the wiring harness from inside into the door aperture.

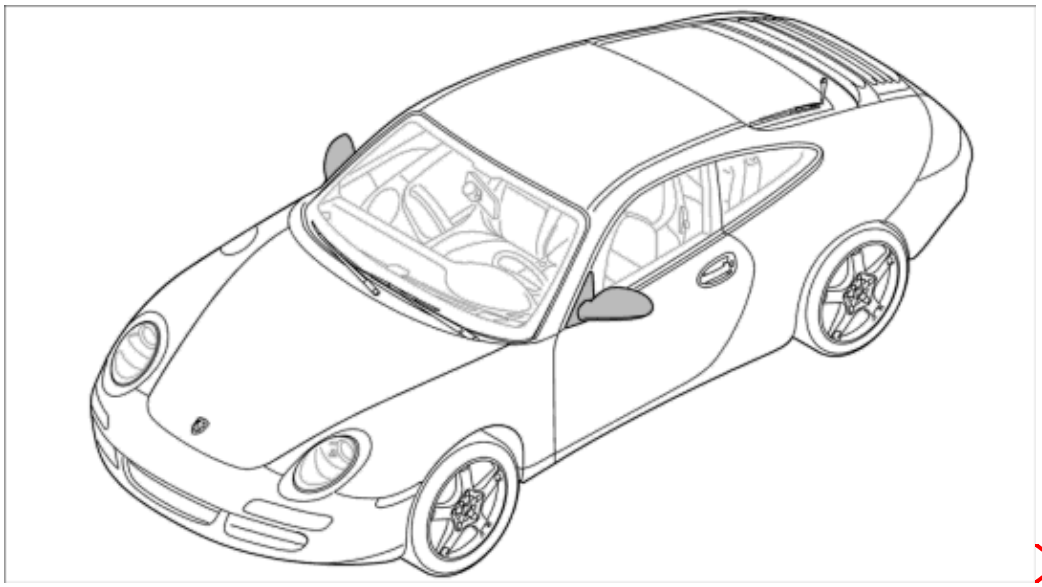


Installing rubber grommets

3. Install the rubber grommet for electric lead **-1-** and bowden cable **-2-** in the unit carrier until this engages all the way around.

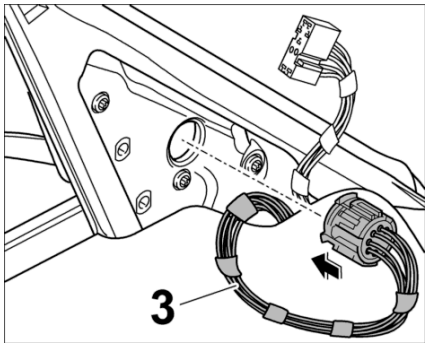
Fastening door unit carrier

4. Screw down fastening screws **-2-** for the door unit carrier **-1-** . Tightening torque →**Final tightening: 9.7 (7.2) Nm (ftlb.)**



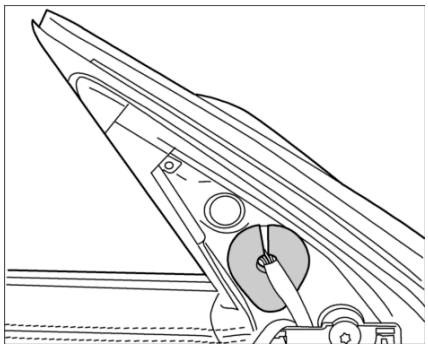
Clipping in power windows

5. Clip in power windows **-1-** on door unit carrier **-2-** .



Locking electrical plug connection

Installation Location:

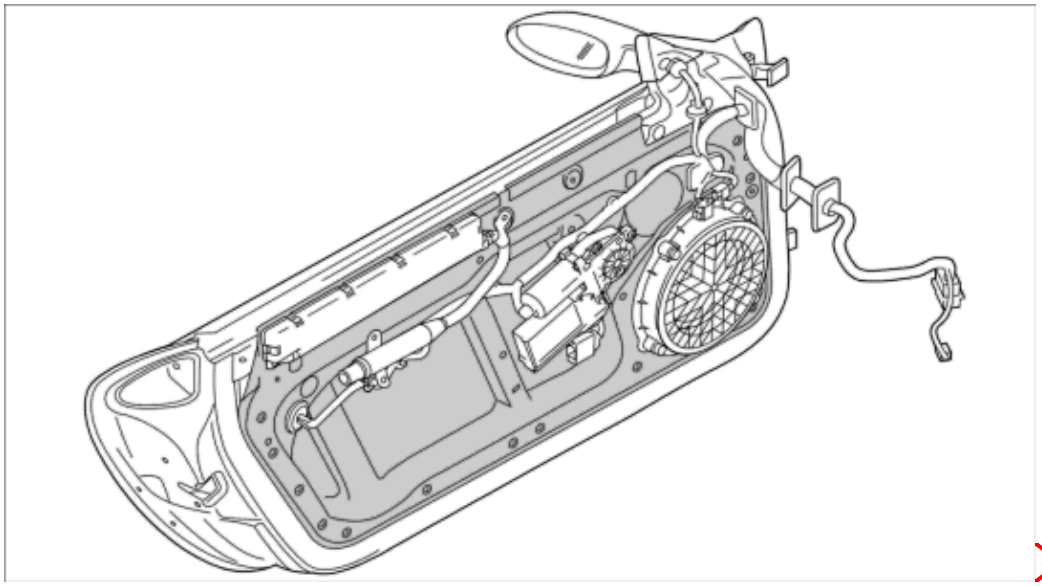


Overview, removing and installing rear-view mirror

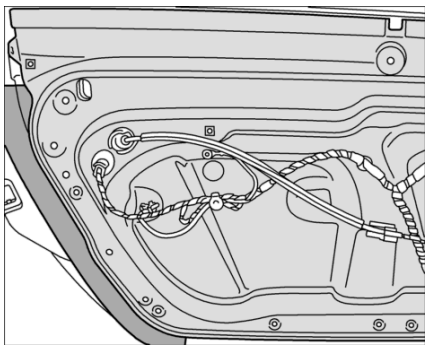
1. Connect the plug connection of the mirror housing **-3-** .

Locking plug connection

Fitting seal for mirror triangle



Seal for mirror triangle



1. Stick seal for mirror triangle at cable cutout opening on door mirror to the basic door frame.

Removing adhesive tape

Installation Location:

Overview, door unit carrier

Remove adhesive tape.

1. Remove adhesive tape, clean marked area if necessary.

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**

- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

 ATTENTION

Material damage! Incorrect installation of the door lock!

- **Danger of material damage if the door lock is installed incorrectly! Malfunctions in the alarm system!**

→ The door lock should be installed only when the actuating lever is in basic position!

 ATTENTION

Damage to plug connection lugs during door removal!

- **Damage to plug connection lugs during door removal! Damage to lugs when pulling the plug connection out of the A-pillar!**

→ The locking element at the bottom part of the plug connection must be pulled out before the plug connection is disconnected!

 ATTENTION

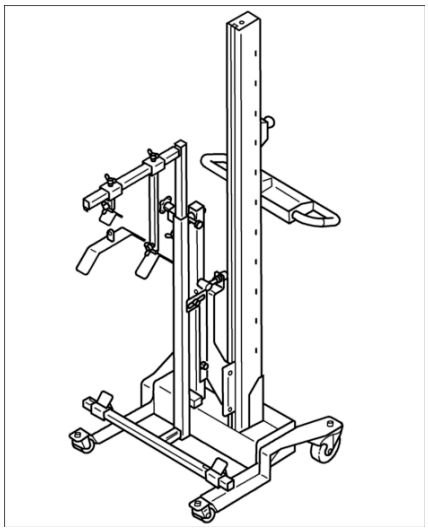
Damage to the bowden cable when removing door trim panel!

- **Damage to the bowden cable when removing door trim panel! Damage by bending the bowden cable at the hook!**

→ Pull the hook out of the end piece only after installation in the inner door release!

ATTENTION

Danger of injury! Malfunction of the door window!



- **There is a danger of injury if fingers or hands are trapped by the door window when the comfort function is triggered: lower and raise door window!**

→ When carrying out assembly work in the area of the connection piece, the door handle and the door lock, the fuse No. 1 in row D must be removed!

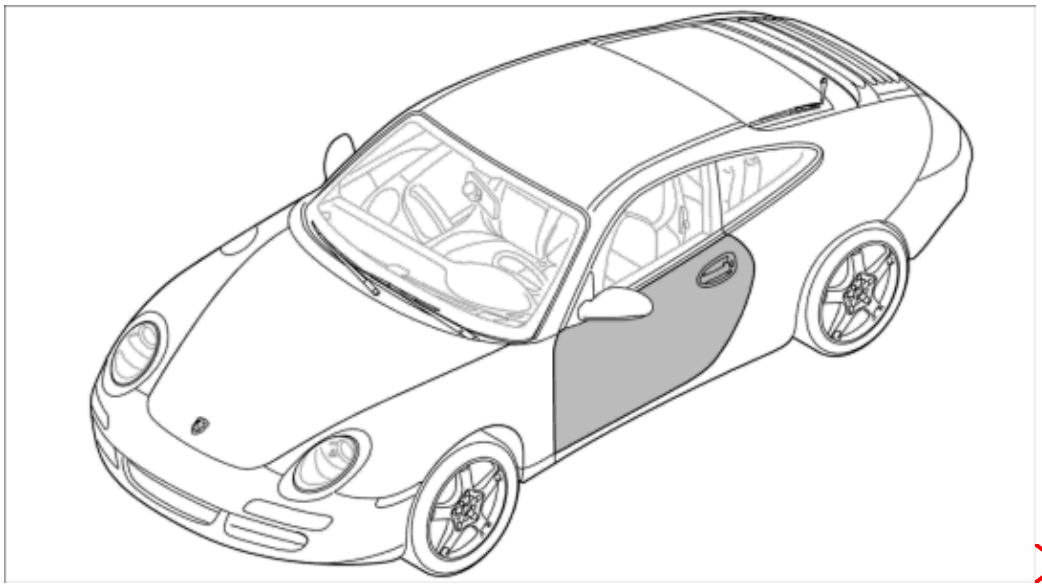
Disassembling door

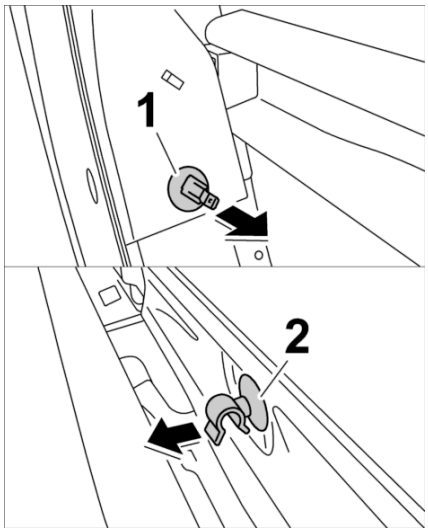
Removing lid and rubber sleeve

Installation Location:

Installation position of lid and rubber sleeves



Removing lid and rubber sleeves

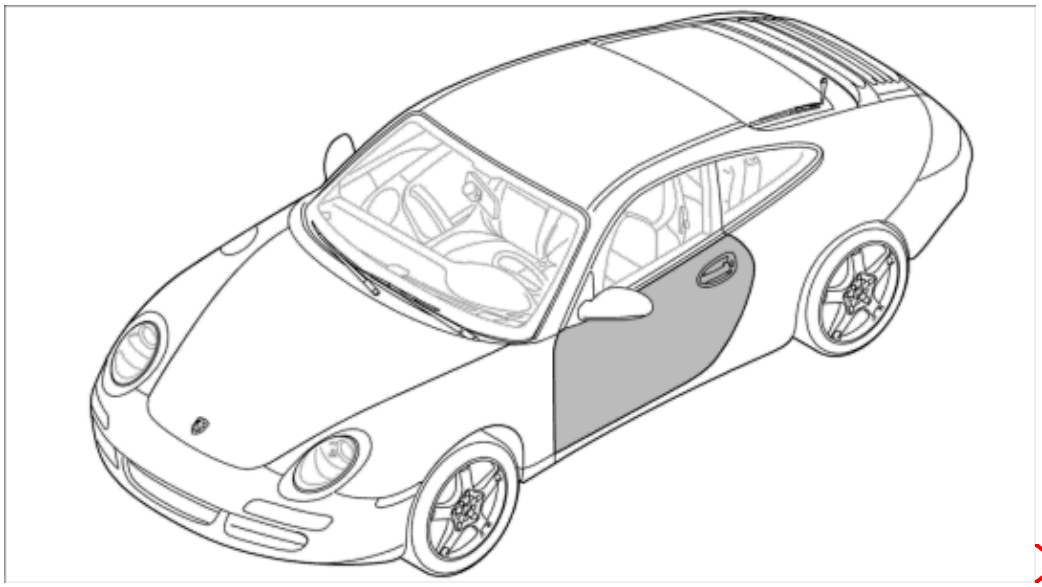


1. Press out the lid **-1-** and rubber sleeve **-2-** using a plastic spatula.

Removing retaining clips

Installation Location:

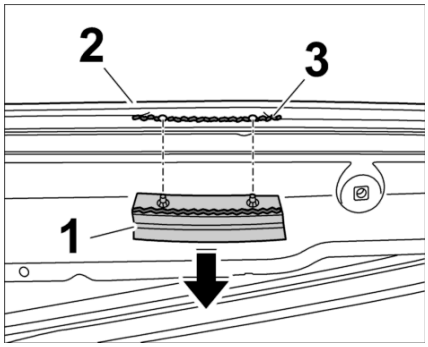
Installation position of retaining clips



Removing retaining clips

1. Unclip retaining clip for electric plug connection **-1-** , examine it and replace if necessary.
2. Unclip retaining clip for bowden cable for power windows **-2-** , examine it and replace if necessary.

Removing rubber pad



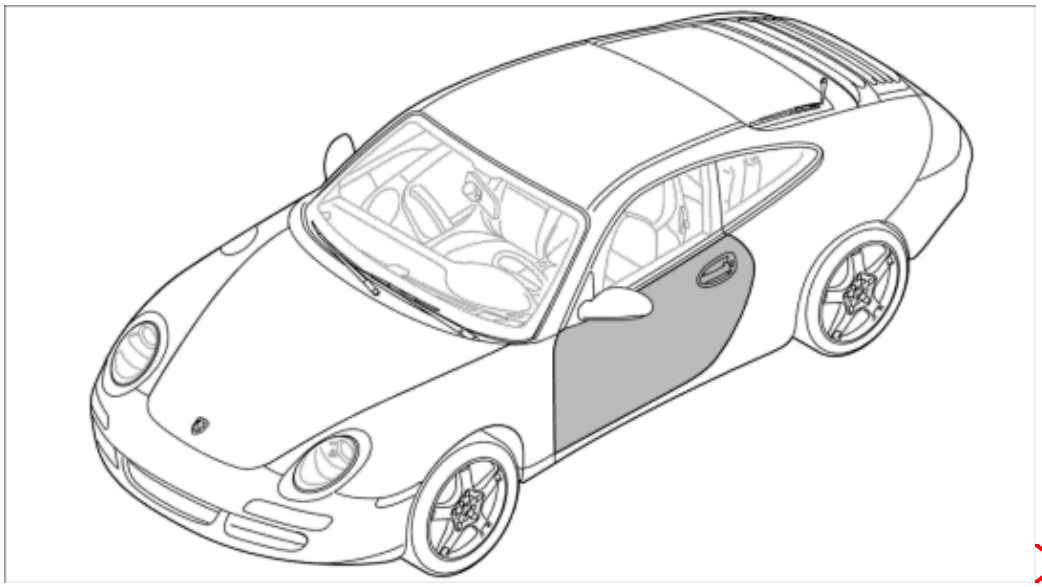
Installation Location:

Installation position of rubber buffer

Note

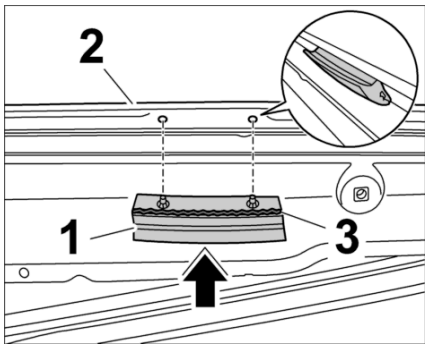
- *Note that removal of the rubber buffer will damage it. It must not be reused.*

Removing rubber buffer



1. Lever the rubber buffer **-1-** off the basic door frame **-2-** using a plastic wedge and remove it **-arrow-** . Clean any residual adhesive **-3-** off the basic door frame using cleaning solution.

top of page

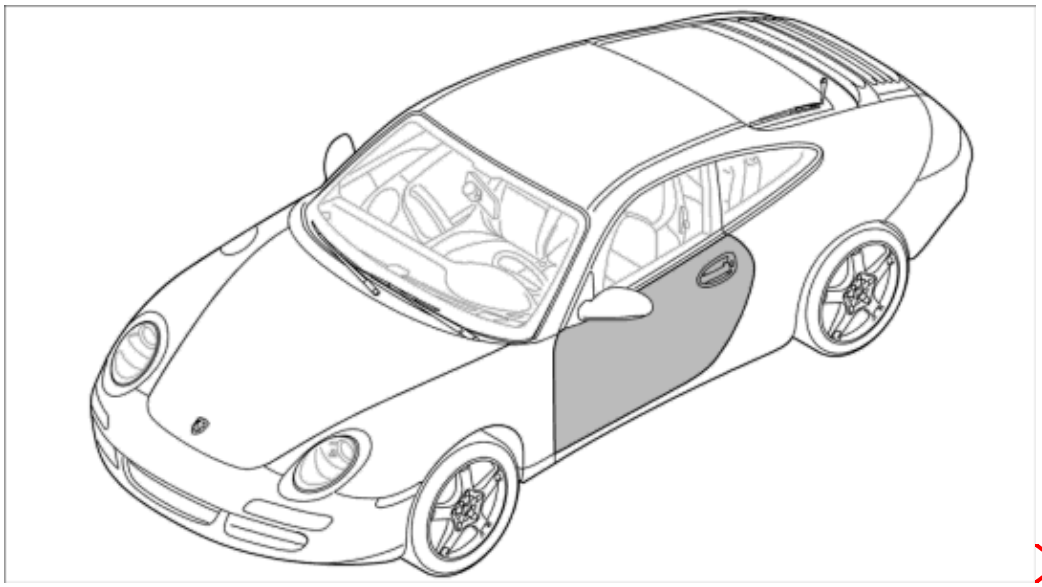


Assembling door

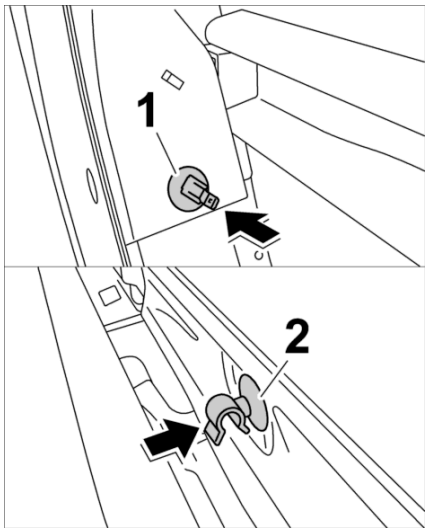
Installing rubber buffer

Installation Location:

Installation position of rubber buffer



Installing rubber buffer

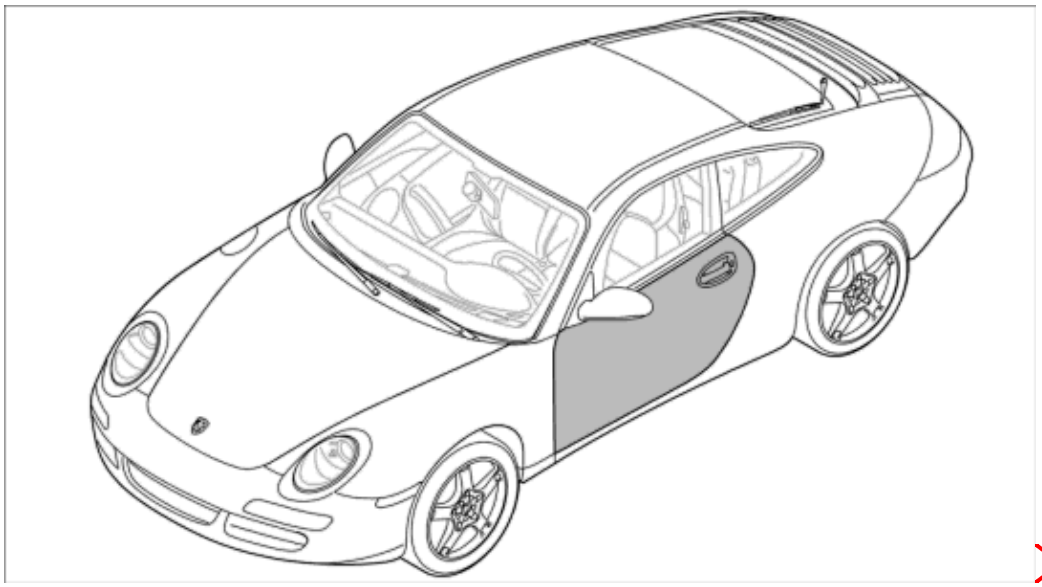


1. Remove protective film **-3-** from rubber buffer **-1-** , clip rubber buffer onto basic door frame **-1-** and press into position **-arrow-** .

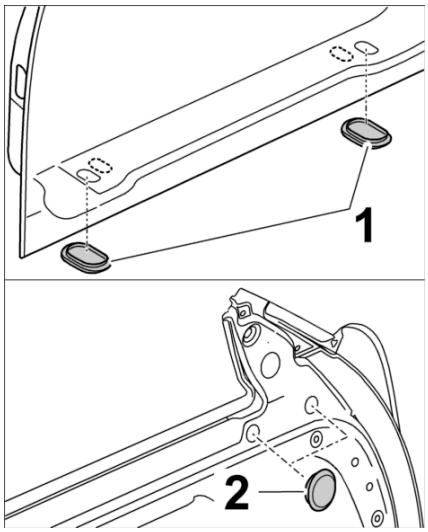
Installing retaining clips

Installation Location:

Installation position of retaining clips



Installing retaining clips



1. Clip in retaining clip for electric plug connection **-1-** (**-arrow-**).
2. Clip in retaining clip bowden cable for power windows **-2-** (**-arrow-**).

Fitting lid and rubber sleeves

Installation Location:

Installation position of lid and rubber sleeves

Installing lid and rubber sleeves

1. Position lid **-1-** and rubber sleeves **-2-** on basic door frame and press in until they click into place.

 WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

Preliminary work for body repairs with alignment bench

Preliminary work for body repairs

Note

- *If it can be ensured there has been no deformation of the vehicle structure, the following repair can be carried out without the need of a straightening bench. In this case, the vehicle must not be raised when welding the component; it must stand on its wheels on an even surface.*

1. Removing add-on parts in the repair area
1.1. Remove add-on parts in the repair area according to the extent of damage to the vehicle.
2. Equipping straightening bench with straightening attachments
2.1. Equip straightening bench with the straightening attachments according to the plans included with the straightening attachments.
3. Placing vehicle on the straightening bench
3.1. Position vehicle on the straightening bench, align according to the reference holes and bolt firmly to the attachment set.
4. Covering add-on parts adjacent to the vehicle repair area
4.1. Cover all add-on parts remaining on the vehicle and the neighbouring areas with fire-proof, protective covers.
5. Reshaping connection area of the sheetmetal parts to be replaced
6. Exposing welding areas
6.1. Remove undersealing, paint, etc. from the welding areas of the body with a hot-air gun or rotary brush.

top of page

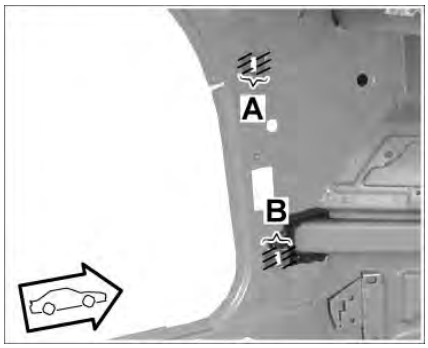
Preparing connection areas of the body for installing the door hinge (on body side)

Safety instructions for flying sparks during grinding and welding work

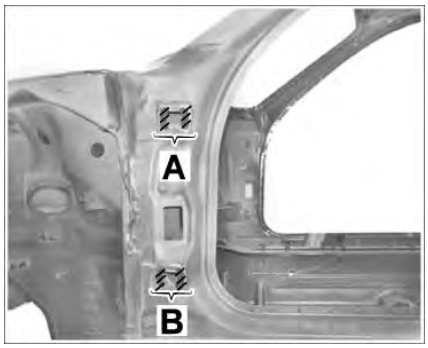
ATTENTION



Danger of explosion and fire from flying sparks during grinding and welding work!

- **Danger of injury and danger of damage to vehicle parts and other vehicles due to flying sparks**

→ Cover vehicle parts such as battery, fuel system, paintwork, glass and passenger compartment parts with fire-proof covers and, if necessary, remove batteries and fuel-carrying components.



→ No other vehicles may be left unprotected in areas used for body repair!

Preparing connection areas of the body for installing the door hinge (on body side)

Preparing connecting flanges

1. Clean undersealing, adhesive residue and paint off the body connecting flanges from inside in the marked areas **-A-** and **-B-** using a hot-air gun or rotary brush. Grind the connecting flanges until bare.

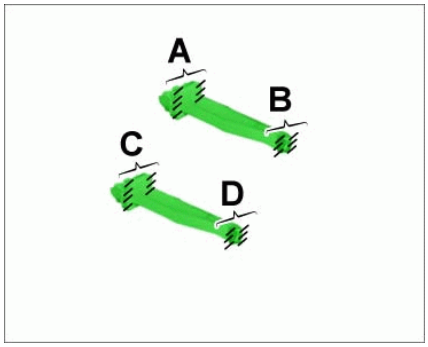
Preparing connecting flanges

2. Clean undersealing, adhesive residue and paint off the body connecting flanges in the marked areas **-A-** and **-B-** using a hot-air gun or rotary brush. Grind the connecting flanges until bare.

top of page

Preparing door hinge (on body side) for installation

Safety instructions for sharp-edged body and unit parts



ATTENTION

Danger of injury! Sharp-edge burrs on body and unit parts!

- **Injuries from sharp edges on body and unit parts.**

→ Wear protective gloves when working in the area of sharp-edged body and unit parts!

Preparing door hinge (on body side) for installation

Cleaning the welding areas

1. Cleaning the welding areas

1.1. Grind both sides of the connecting flanges of the door hinge in the marked areas **-A, B, C, D-** until bare using a rotary brush.

top of page

Installing door hinge (on body side)

Danger of injury when welding

 DANGER

Risk of fatal injury from high voltage during electric welding!

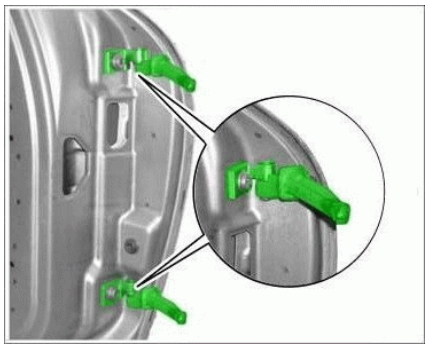
- **Danger of explosion and fire when welding in the area of highly inflammable materials.**
- **Irritation to respiratory tracts from toxic zinc oxide emitted when welding galvanised steel!**
- **Danger of injury from unintentional triggering of pyrotechnical safety components!**
- **Danger of injury from weld spatters and UV light when welding!**

→ Do not perform welding work in a damp environment or on wet ground; there is a risk of fatal injury from the voltage being conducted through the human body. Persons with heart pacemakers should not perform welding work. Use insulating underlays.

→ Remove highly flammable materials from the work area; if necessary, remove units with fuel-carrying parts and protect work areas in the vehicle that are at risk of catching fire using fire-proof covers.

→ Ventilate the work area well.

→ Remove smoke gases with a suitable extraction system (refer to Workshop Equipment Manual).



→ Wear suitable protective equipment, such as protective clothing, gloves, a welding shield and, if necessary, a protective mask.

→ For welding work, always disconnect both terminals on the battery. In the case of welding work in the immediate vicinity of the control modules for pyrotechnical safety systems, remove the control modules before beginning work.

→ In addition, the guidelines of the welding equipment manufacturer and the legal accident prevention regulations and those of the mutual indemnity association (BGV D1) must be observed.

Installing door hinge (on body side)

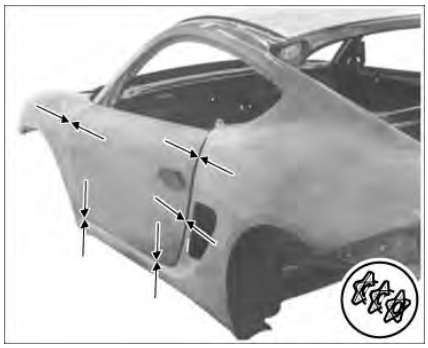
1. Fitting door hinge to the body

Installing door hinge

1.1. Position door hinge on the body, align it and screw down securely.

1.2. Install wing, door lock and striker pin before fitting.

1.2.1. *→505520 23 Removing and installing front wing - section on "Installing"*

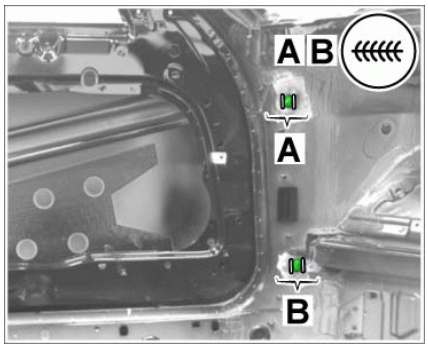


1.2.2. →571719 Removing and installing door lock - section on "Installing"

1.2.3. →572619 Removing and installing striker pin - section on "Installing"

Note

Two persons are needed to install the door hinges!

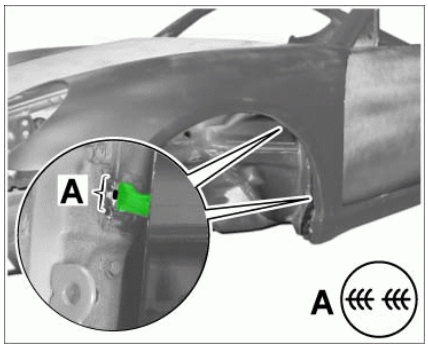


2. Fitting door to the body

Adjusting the door hinge

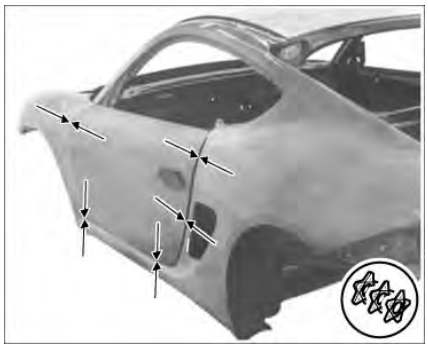
2.1. Fit the door to the body and adjust gaps between the door, wing and outer side member according to the adjustment values. *→501000 IN Diagram - body gap dimensions - section on "Information"*

2.2. Fix the door in place.



Welding in the door hinge

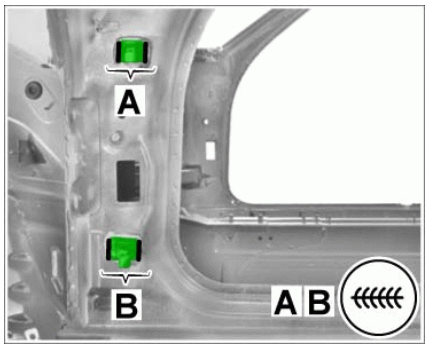
3. Welding in the door hinge



3.1. Apply a full weld to door hinge in areas **-A-** and **-B-** from the inside using inert gas.

4. Welding in the door hinge

Welding in the door hinge

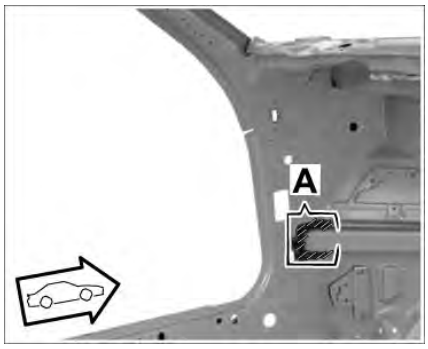


4.1. Secure the door hinge in area **-A-** by tack welding it using inert gas.

Adjusting the door hinge

4.2. Check position and gap dimensions of door and adjust them if necessary.

4.3. Lift the door and remove it.



Welding in the door hinge

5. Welding in the door hinge

5.1. Apply a full weld to the door hinge in areas **-A-** and **-B-** using inert gas.

Note

After the required hardening time has elapsed, cut off excess expanded sealant to a height of more than 25 mm using a knife.

Applying expanded sealant

6. Applying expanded sealant

6.1. Seal inside of A-pillar in area **-A-** with →AFS Vario . See: →5000IN Working with acoustic body foam 2K AFS Vario [997410 997411]→5000IN Working with acoustic body foam 2K AFS Vario [997430 997431]→5000IN Working with acoustic body foam 2K AFS Vario [997310 997311 997320 997321]→5000IN Working with acoustic body foam 2K AFS Vario [997110 997111 997120 997121]→5000IN Working with acoustic body foam 2K AFS Vario [997610 997611 997620 997621]

6.2. Apply expanded sealant using a spatula.

top of page

Subsequent work

Subsequent work for body repairs

1. Remove vehicle from the alignment bench.
2. Clean welded joints and sheetmetal flanges with a wire brush.
3. Prime flange areas with 2K primer.
4. Restore standard sealing with body sealant.
   →5 Seam sealing
5. Restore standard undersealing with underbody sealant.
   →5 Underbody protection
6. Paint repair area and adjacent surfaces, if necessary.
7. Install removed accessories in the repair area.
8. Apply cavity preservation.

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

Programming control unit for rear convenience systems

Reading from and writing to the rear convenience system control unit

WARNING

Sudden voltage interruption of the power supply to the control module.

- **Destruction of the control module.**

→ During programming, it is essential to guarantee the power supply for the Porsche System tester. It is essential to connect a battery charger with a current rating of at least 40 A to the vehicle battery.

→ Prior to disconnecting the control module, switch off the ignition and remove the ignition key.

Note

The **PIWIS tester 9718** instructions take precedence and in the event of a discrepancy these are the instructions that must be followed. Deviations may occur with later software versions.
The procedure described here has been structured in general terms; different text or additions may appear in the **PIWIS tester 9718**.

1. Connect the Porsche System Tester to the vehicle and start the System Tester. Switch on ignition. >> Continue.
2. Select the vehicle type.
3. Switch from the vehicle type to the list of control units.
4. Select **Rear** with the cursor keys and press the >> key.
5. Select **Control unit replacement** with the cursor keys and press the >> key.
6. Select **Read out values** (codings) with the cursor keys and press >> .
7. The message **Codes successfully read out** appears on the screen of the Porsche System Tester. Press >> .
8. Switch off ignition and replace control unit → *21 Removing and installing control unit for rear convenience systems - removing*
9. Switch to the **Special functions** menu and perform **vehicle handover** by pressing F8 .
10. Erase **all fault memories** in the **Special functions** menu and press >> .
11. Carry out automatic search of control units.
12. Switch to the **Write in data** menu and press >> to load the data that was read out.
13. System Tester displays **Coding write-in complete** >> .
14. Change to the **Coding** menu and compare the coding with the vehicle equipment. Recode if necessary.
15. Exit the menu, carry out a test drive and read out the fault memory.

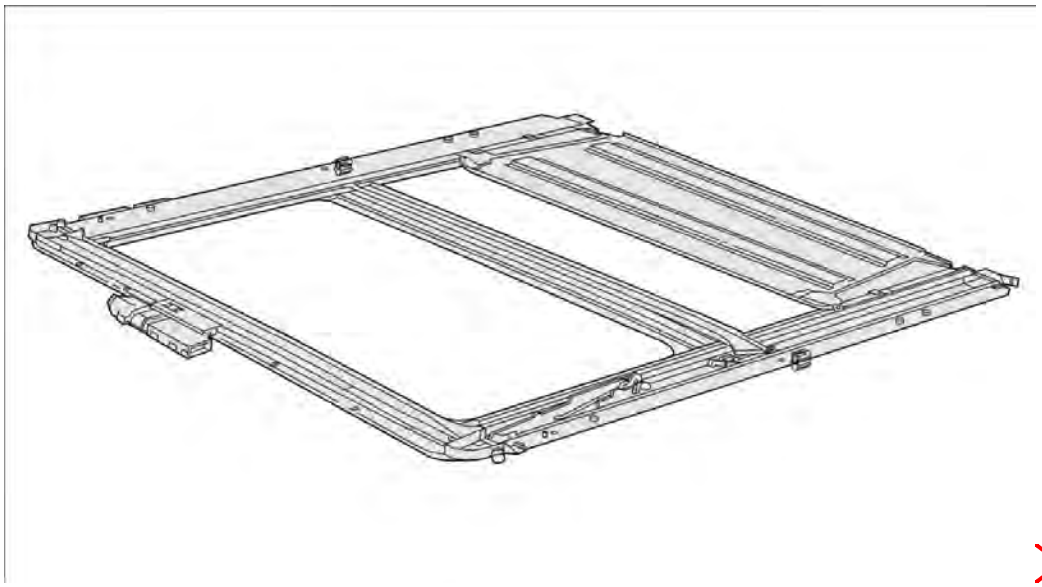
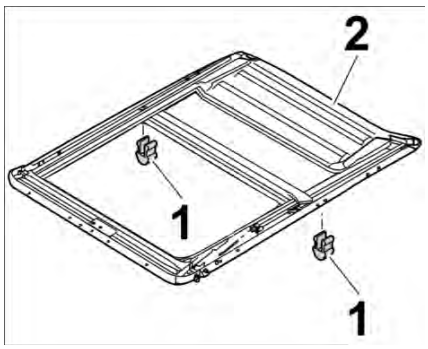
Disassembling frame for sliding roof



Disassembling frame for sliding roof

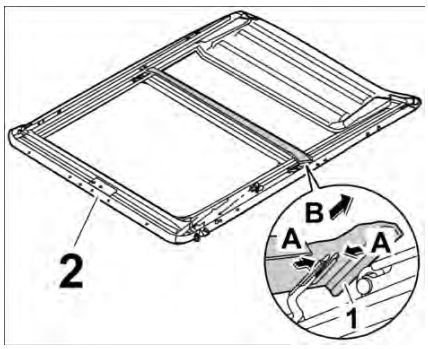
Note



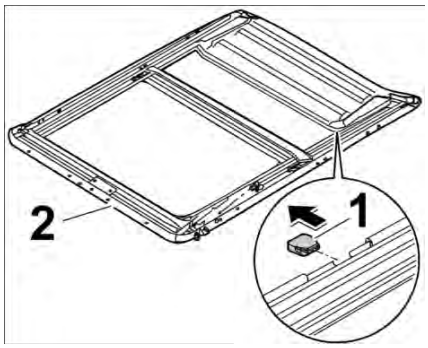
- *For model year 2005 a new sliding roof frame and air deflector are being used. This can be retrofitted in all vehicles (model years).*
- *The new plastic air deflector can also be installed into old sliding roof frames. Also use damping rubbers for sliding/tilting roof trim and washers for the sliding roof frame.*
- *Placing washers under the sliding roof frame or new frame will lower the frame and will require the use of 30 mm long fastening screws during installation.*

- *For the procedure see: →602837 Disassembling and assembling frame for sliding roof.*

Installation Location:

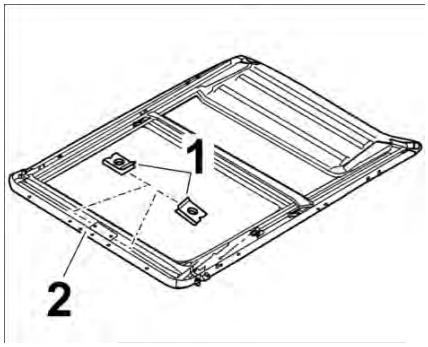


Overview: Disassembling and assembling frame for sliding roof



Pressing out frame clip

1. Press in left and right locking tabs of the frame clip **-1-** and remove it from the sliding roof frame **-2-** .

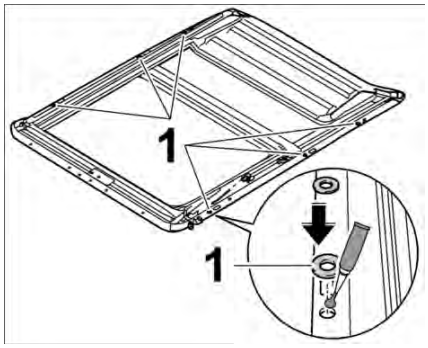


Removing seal

2. Press locking tabs together **-Arrows A-** and remove seal **-1-** from sliding roof frame **-2-** **-Arrow B-** .

Removing holder for transverse strut

3. Remove holder for transverse strut **-1-** on sliding roof frame **-2-** .

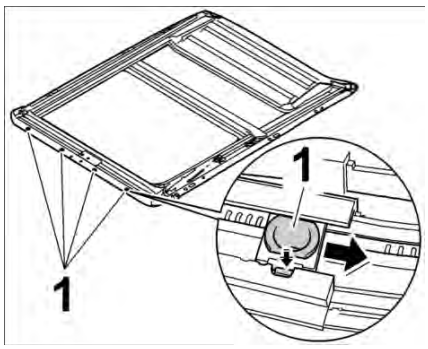


Removing fastening nut

4. Remove fastening nuts **-1-** from sliding roof frame **-2-** , inspect them and replace if necessary.

top of page

Converting frame for sliding roof

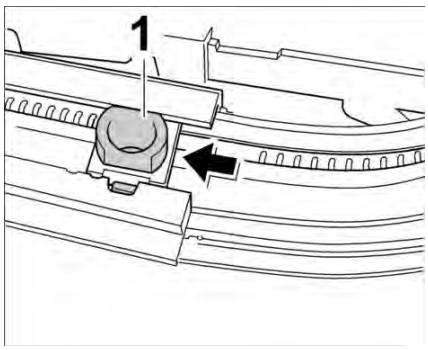


Converting frame for sliding roof

Installing washers

1. **Installing washers (6x)**

1.1. Affix washers **-1-** left and right at the fastening points of the sliding roof frame with Loctite 424.

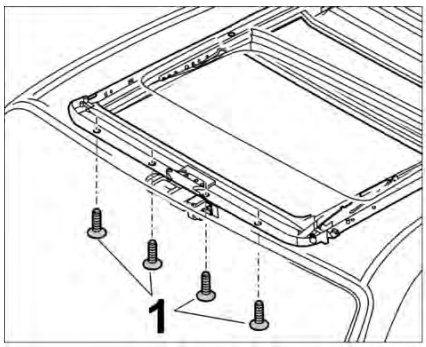


Removing short spacer sleeves

Note

- *For sliding roof frames converted for the new air deflector, the short spacer sleeves must be replaced by the long spacer sleeves.*

2. **Remove short spacer sleeves (4x)**



2.1. Press and hold the tab **-arrow-** on the spacer sleeves **-1-** and remove from the sides of the sliding roof frame.

Installing long spacer sleeves

3. **Install long spacer sleeves (4x)**

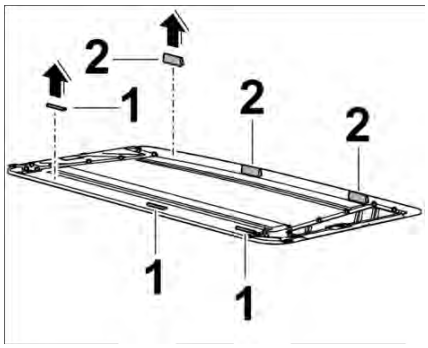
3.1. Insert spacer sleeves **-1-** into the sides of the sliding roof frame; the tab must be felt to engage.

Installing longer fastening screws

ATTENTION

Material damage due to fastening screws on the roof being too long.

- **Pressure marks in the front roof area.**



→ Only use the longer fastening screws at the front of the sliding roof frame in conjunction with the long spacer sleeves.

4. **Install longer fastening screws (4x)**

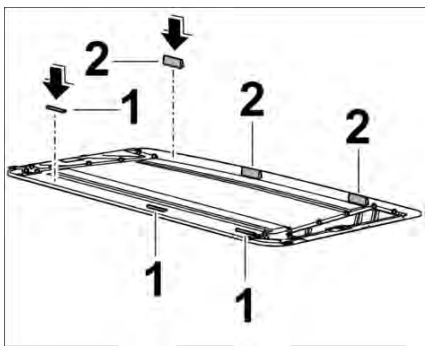
4.1. Replace fastening screws **-1-** at the front of the sliding roof frame.

Install only in conjunction with the long spacer sleeves.

Only if re-installing the sliding roof frame.

Removing damping rubber

ATTENTION



Incorrectly mounted damping rubbers.

- **Noises during driving due to rattling of the sliding/tilting roof trim.**

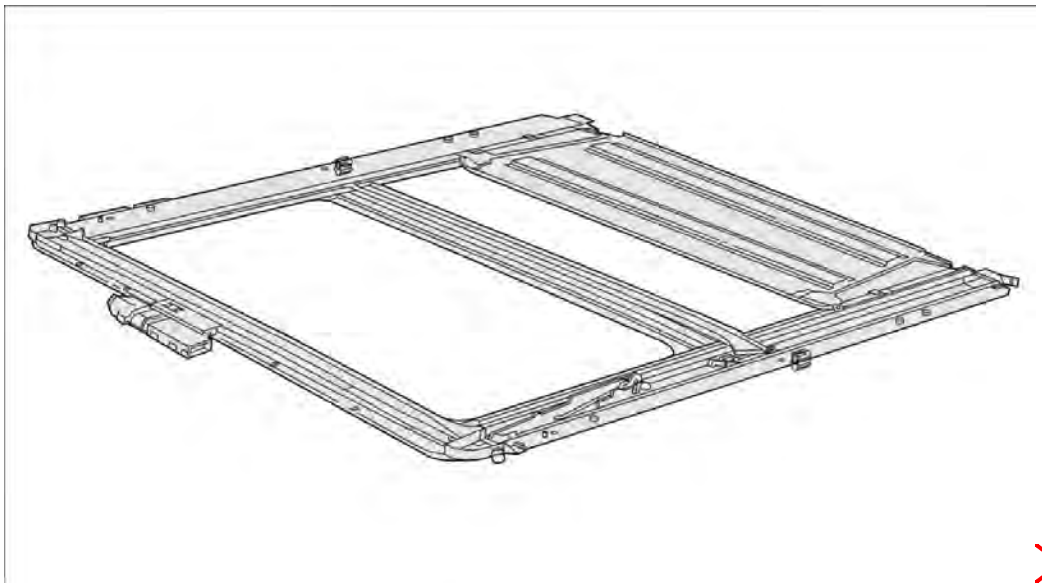
→ When using the new air deflector, the damping rubber at the front and rear of the sliding/tilting roof trim must be replaced by longer ones.

5. **Remove set of damping rubbers for sliding/tilting roof trim**

5.1. Remove damping rubber front **-1-** and damping rubber rear **-2-** .

Installing damping rubber

6. **Install set of damping rubbers for sliding/tilting roof trim**



6.1. Remove protective film from the longer damping rubber front **-1-** and damping rubber rear **-2-** , and affix as shown in the figure or at the old position

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

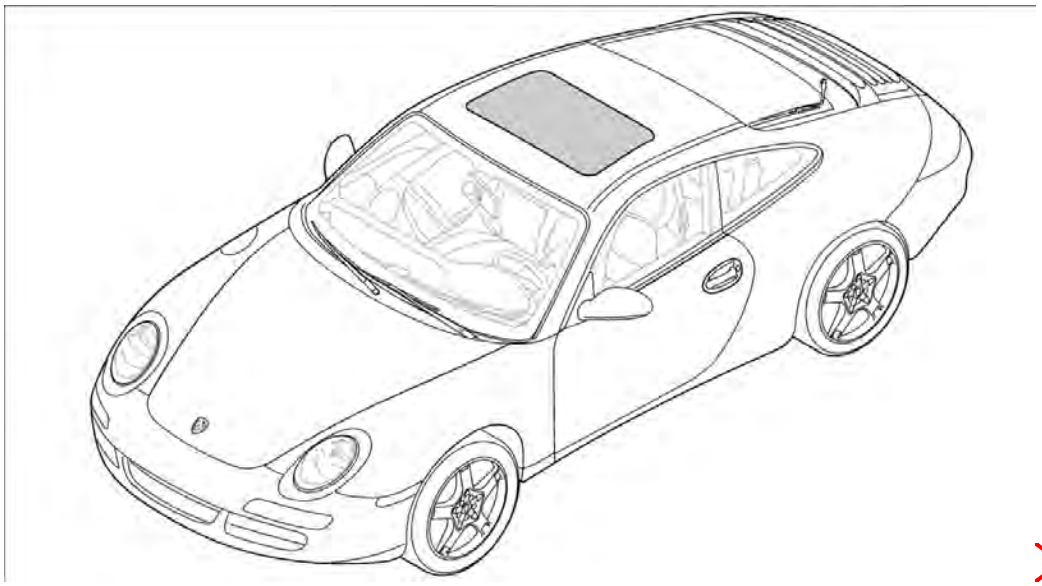
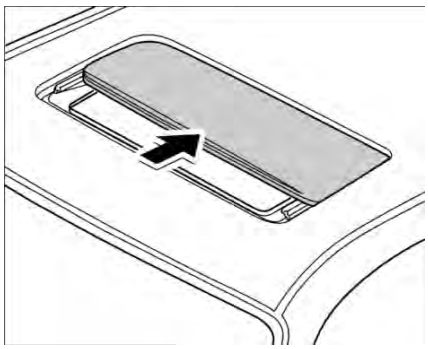
60 40 19 Removing and installing cover for sliding roof - as of MY 2005



- Removing cover for sliding roof
- Installing cover for sliding roof

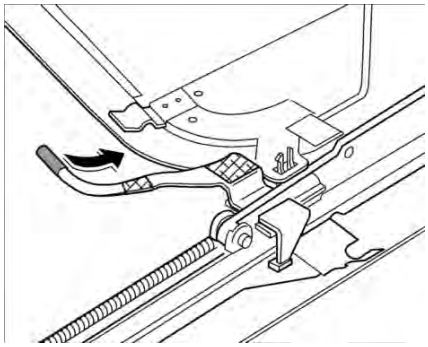
top of page



Removing cover for sliding roof

Removing cover for sliding roof

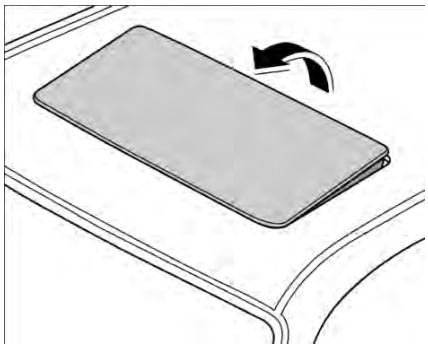
Installation Location:



Installation position for sunroof

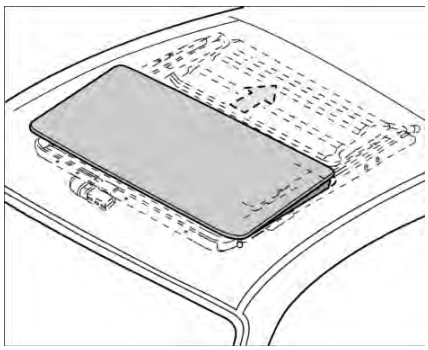
Opening sliding-roof panel

1. Open sliding-roof panel approx. 80 mm.



Disengaging slide/tilt sunroof trim

Note

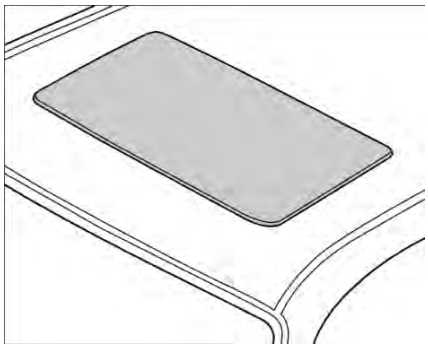


The slide/tilt sunroof trim must be moved without the use of force.

2. Disengage (press) slide/tilt sunroof trim out of the left and right-hand front catches towards the rear and out of the drivers, and push back by approx. 30 mm.

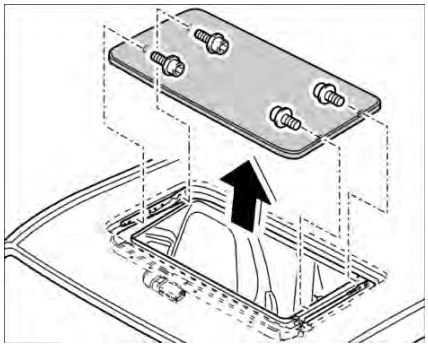
Moving sliding-roof panel to tilting position

3. Close sliding-roof panel and move to tilting position.



Slide/tilt sunroof trim

Note



The slide/tilt sunroof trim must be moved without the use of force.

4. Push slide/tilt sunroof trim back evenly on the left and right as far as it will go.

Moving sliding-roof panel to zero position

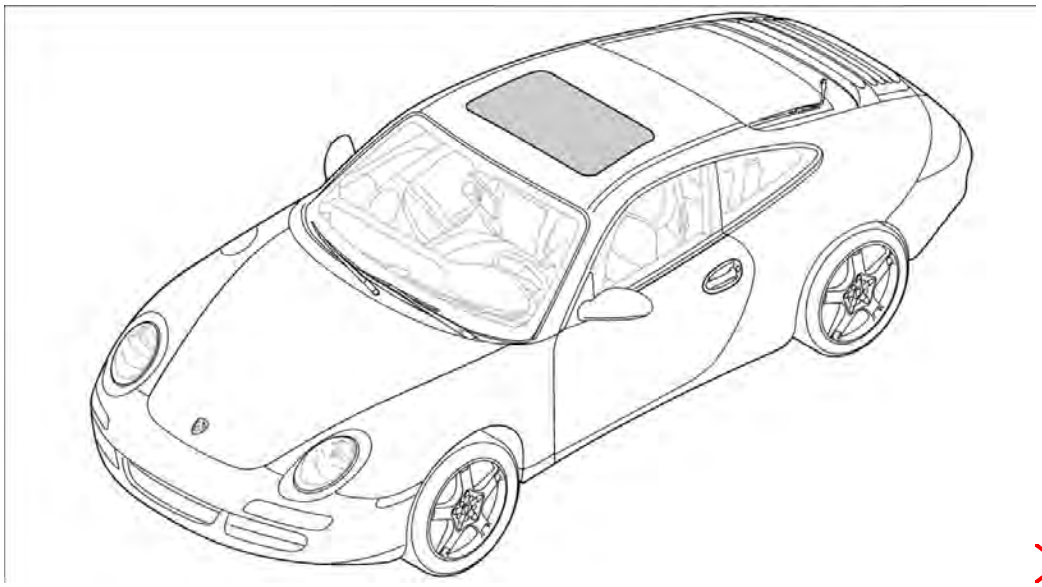
5. Move sliding-roof panel to zero position (closed).

Undoing sliding-roof panel

ATTENTION

Damage to rear water drainage channel or to the sunroof mechanism when the sliding-roof panel is removed and when moving the slide/tilt sunroof trim.

→ Once the sliding-roof panel has been removed, the frame for the sunroof must not be moved to the "Open" position.

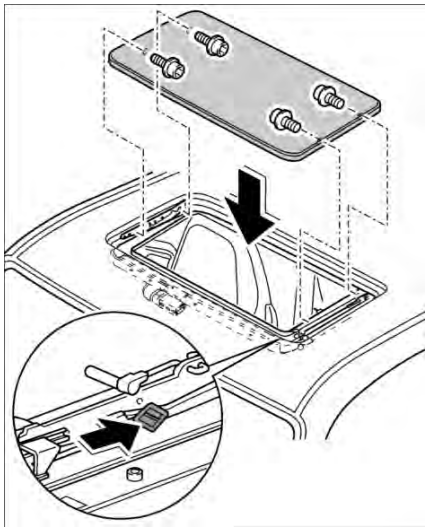


6. Unscrew fastening screws and lift sliding-roof panel up and off.

top of page

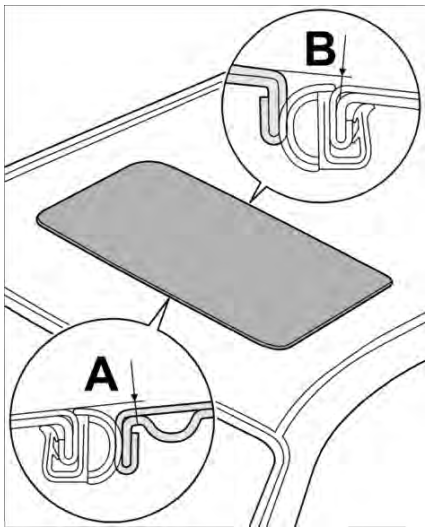
Installing cover for sliding roof

Installing cover for sliding roof



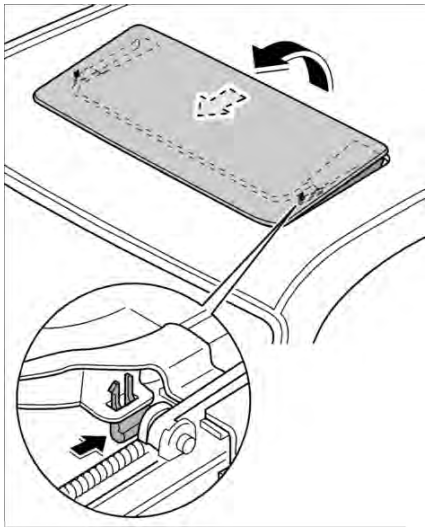
Installation Location:

Installation position for sliding-roof panel



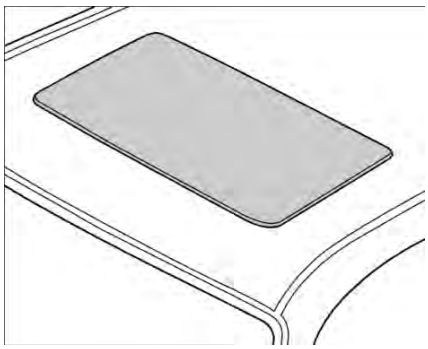
Note

- *Sliding-roof panel may only be installed in the zero position in the frame for the sunroof!*



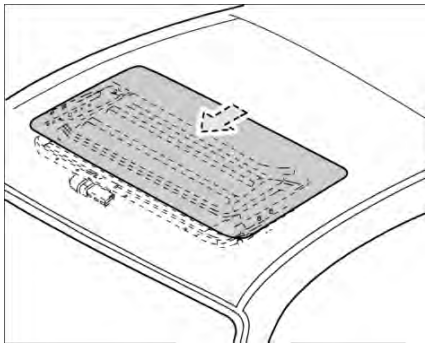
Inserting sliding-roof panel

1. Push gate (inset) back on the left and right. Insert panel for sliding roof in the designated frame and position fastening screws.



Adjusting sliding-roof panel

2. Adjust the sliding-roof panel according to the front and rear roof contour to **-dimension A-** up to -1.0 mm lower, **-dimension B-** up to +1.0 mm higher. Tighten fastening screws. Tightening torque →**Tightening torque: 4 ftlb.**

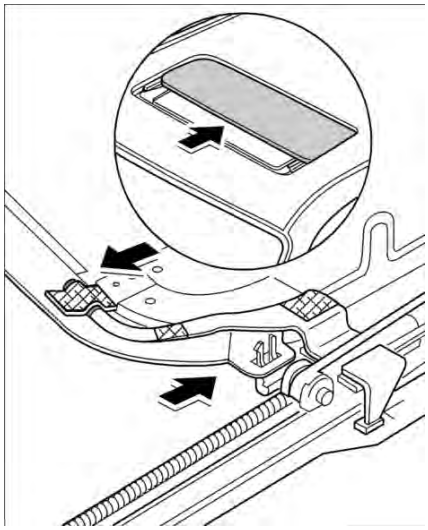


Moving sliding-roof panel to tilting position

3. Extend sliding-roof panel to tilting position. Carefully pull slide/tilt sunroof trim forward evenly on the left and right until it is approx. 40 mm in front of the roof edge cut-out. Check whether the left and right-hand inner side panels **-inset-** have engaged.

Moving sliding-roof panel to zero position

4. Move sliding-roof panel to zero position (closed).



Engaging slide/tilt sunroof trim

Note

- *If inner panels are damaged or have become detached from the groove of the sunroof frame, take off the slide/tilt sunroof trim with the sliding-roof panel removed and replace the inner panels if necessary. →708619 Removing and installing slide/tilt sunroof trim*

5. Push slide/tilt sunroof trim forward as far as the roof edge cut-out. While doing so, take care not to push slide/tilt sunroof trim upwards. This could detach or damage the inner panels.

Closing sliding-roof panel

6. Open sliding-roof panel approx. 80 mm. Pull slide/tilt sunroof forward until the left and right-hand drivers engage. Close sliding-roof panel.
7. **Function test:**The slide/tilt sunroof trim lies against the rear of the sliding-roof panel in tilting position. Close sliding-roof panel. The slide/tilt sunroof trim must lie against the clamping frame of the roof lining on the front, right and left with a slight degree of pre-tension. The slide/tilt sunroof trim must not lie against the rear cross bar of the roof lining.
   A gap of approx. **-0,5 mm-** (cheque card thickness) must be left. There is no gap at the rear cross bar and the roof lining in vehicles with a fully coated (flocked) clamping frame.

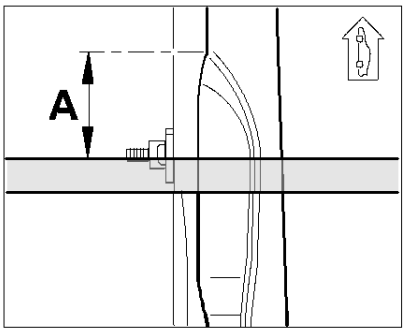
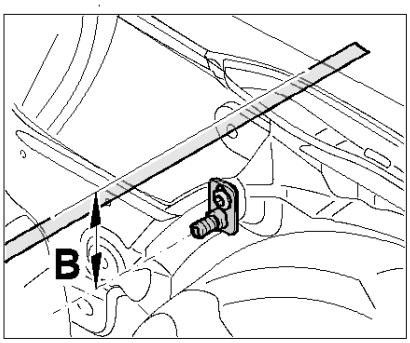
61 01 15 Adjusting convertible top - as of MY 2005



- Adjusting convertible top

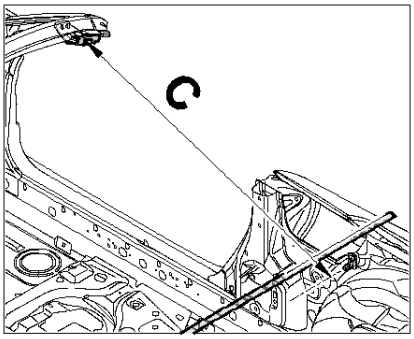
top of page

Adjusting convertible top



Adjusting assembly aids

The assembly aids must be recalibrated after removal following accident repairs in the area of the inner side section.
The calibration of the assembly aids represents the basic position for convertible top installation.
The required tools include a tape measure and a rule or an aluminium section that is at least 1,600 mm long.



Adjusting assembly aids

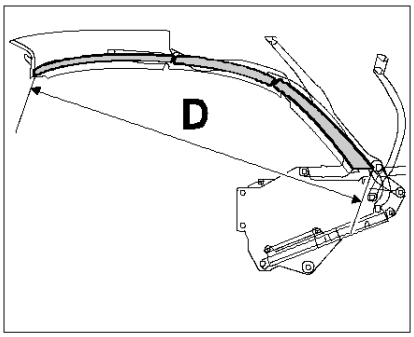
1. Place the rule or aluminium section over the front of the rear side panel. Measured from the top of the side panel to the rule →**Adjustment value A: 50 mm**

Adjusting assembly aid

2. Dimension **B** is measured from the rear side panel (rule or aluminium section) to the centre of the assembly aid peg →**Adjustment value: 139 mm**

Calibrating assembly aid

3. Dimension **C** is measured from the centre of the assembly aid peg to the lower edge of the convertible-top peg housing on the inside →**Adjustment value: 1070 mm**



Adjusting convertible-top peg housing

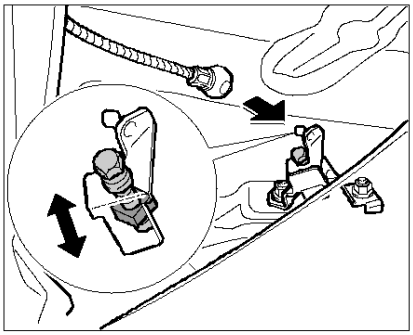
Note

The convertible top must be closed or the hardtop must be fitted to check the adjustment.

To prevent rattling noises, each of the convertible-top peg housings on the left and right must be facing outwards with respect to the centring pins fitted on the convertible top or hardtop when tightening.

Checking diagonal dimension of styling edge

Checking diagonal dimension of styling edge



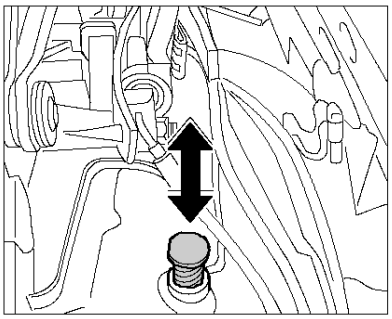
After calibrating the assembly aids and fitting the convertible top with convertible top closed, the check dimension from the styling edge, roof frame 1, lower edge diagonal to styling edge, roof frame 3, upper edge, rear should be →**Adjustment value D: 1024 mm +/-2 mm** .

Adjusting tension cable on adjusting piece

Note

- *On vehicles that were operated for an extended period with the convertible top open or with a hardtop, the centring pins of the roof frame and the locking hook might not engage in the windscreen frame the first time the convertible top is closed. It is necessary to provide manual assistance at the handhold on the convertible-top latch. The folded convertible-top covering must first stretch again.*

The tension put on the tensioning bow by the left and right tension cables braces the convertible-top covering and presses the tension bow seal against the convertible-top compartment lid. If the pressure of the tension bow seal is too great, the convertible-top compartment will project with respect to the lid and the side panel.



Adjusting tension cable on adjusting piece

Adjustment procedure: Raise the convertible-top compartment lid to upper position. Adjust tension of the tension bow at the hexagon-head bolt in the adjusting piece on the roll-over bar →**Adjustment range: approx. 15 mm** according to the lid and side-panel contours and the contact pressure on the convertible-top compartment lid.

Adjusting end setting for convertible-top resting position

With the convertible top open, the corner bow rests on the adjusting piece in the water drip pan. The adjusting piece can be vertically adjusted by **approx. 30 mm** by screwing the adjusting piece in or out.

Adjusting end setting for convertible-top resting position

Adjustment procedure: Adjust height at the adjusting piece so that the convertible-top compartment lid can still close freely.

Country C00, C02, C05, C07, C08, C09, C10, C11, C12, C13, C14, C15, C16, C18, C19, C20, C21, C22, C23, C24, C25, C26, C27, C28, C32, C33, C34, C35, C36, C37, C38, C39, C45, C46, C98, C99

 WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

61 02 15 Adjusting the hardtop - as of MY 2005

Star gauges for body gap dimensions	commercially available tool	NR.127-1		

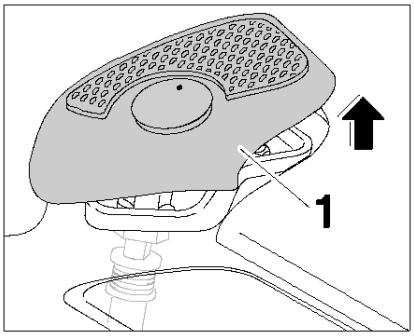
top of page

Adjusting the hardtop

Adjusting the hardtop

Installation Location:

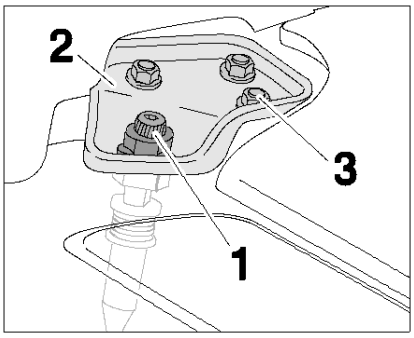
Main illustration for adjusting hardtop



Note

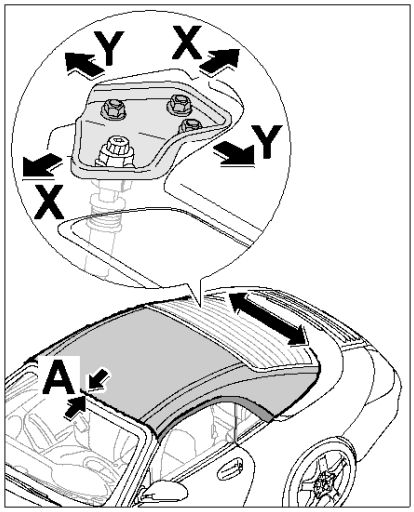
- *Set gap dimensions on the lids, doors and covers, or accessories in accordance with the gap specifications.*
- *Given a clearance in the opening that is too great or too small, the movable body or the accessories must be centred accordingly.*
- *Ensure that the gaps do not taper or do not narrow at local points.*
- *The given values are guidelines which should be observed as far as possible.*
- *The guidelines apply to repair and assembly work.*
- *Use star gauges to measure the gap dimensions,* ***Star gauges for body gap dimensions NR.127-1***

Note



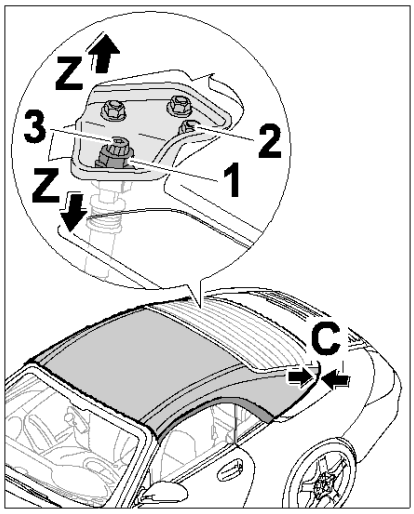
Change setting on the convertible top pin housing only after checking the adjusting dimensions with the convertible top closed.

1. Check gap dimensions for hardtop. *→501000 Diagram - body gap dimensions*



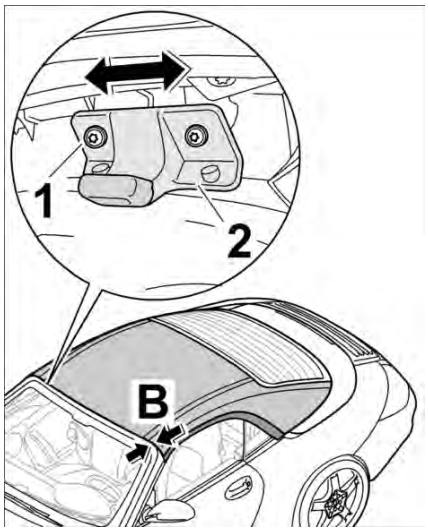
Unclipping trim panel

2. Unclip trim panel for hardtop locking element **-1-** in an upward direction.



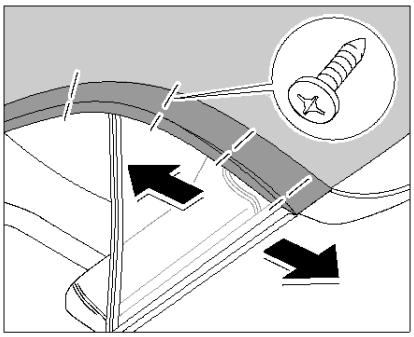
Loosening rear hardtop locking element

3. Loosen fastening screw **-1-** of rear hardtop locking element **-2-** approx. 2 turns and completely loosen by hand (approx. 8 turns).
4. Loosen the fastening screws **-3-** .



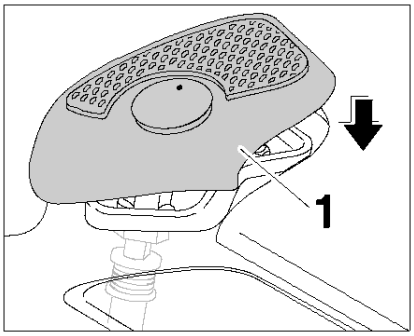
Aligning hardtop at the front

5. By shifting the hardtop sideways at the rear hardtop locking elements, set a parallel gap **-A-** at the windscreen frame.



Setting gap between hardtop and convertible top compartment lid

6. Tightening the fastening screws **-2-** of the rear hardtop locking elements. Tightening torque → **Tightening torque: 10 (7.5 ftlb.) Nm**
7. By turning the fastening nuts **-1-** adjust the gap dimension between hardtop and convertible top compartment lid **-C-** on both sides of the vehicle. Tighten fastening nuts **-1-** . Tightening torque → **Tightening torque: 90 (67 ftlb.) Nm**
8. Screw down the fastening screw **-3-** of the rear hardtop locking element. Tightening torque → **Tightening torque: 46 (34 ftlb.) Nm**



Laterally aligning the hardtop

9. Loosen the fastening screws **-1-** .
10. By shifting the centring journal **-2-** sideways at the hardtop by **-2 mm +/-1-** , set a parallel gap at the sides **-B-** of the windscreen frame. Tighten fastening screws **-1-** . Tightening torque → **Tightening torque: 10 (7.5 ftlb.) Nm**
11. Close all side windows.

Adjusting channel strips on hardtop

12. Check for smooth operation and freedom from leaks; re-adjust the channel strips on the hardtop if necessary, adjust side windows if necessary. Before setting, check position of the side windows in relation to the convertible top. →647519 Removing and installing side window - section on "Adjusting"
13. It might be possible to avoid adjusting the side windows by varying the gap at the hardtop at the rear. If the windows are in contact with the hardtop at their end position, correct the gap at the hardtop at rear toward the max. value. If the side windows leak, correct the gap at the hardtop at rear toward the min. value. →644019 Removing and installing front door window

Clipping in the trim panel

14. Check fastening clips, replace if necessary. Clip in trim panel for hardtop locking element **-1-** .

997310, 997311, 997320, 997321, 997610, 997611, 997620, 997621

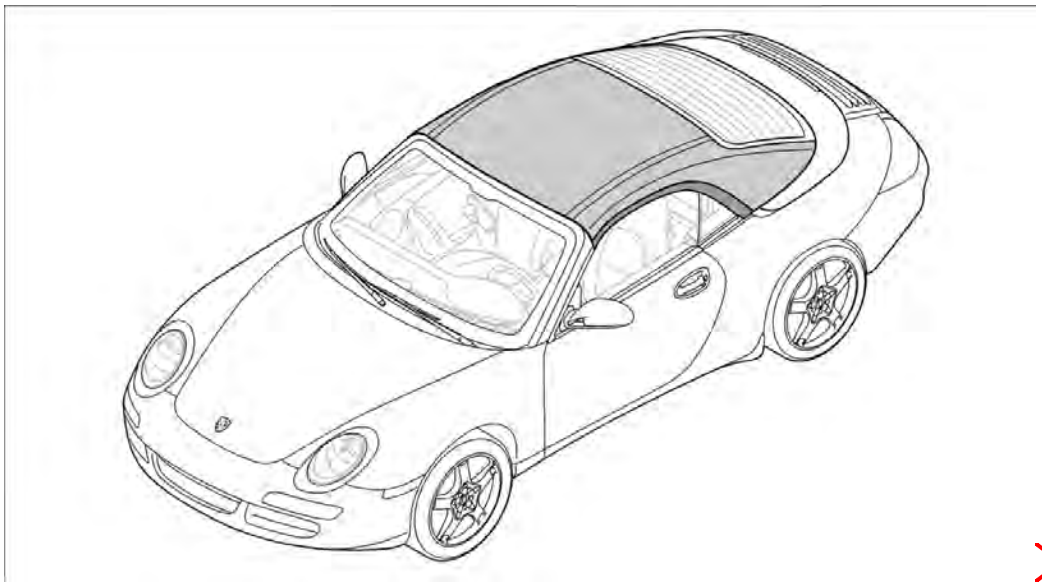
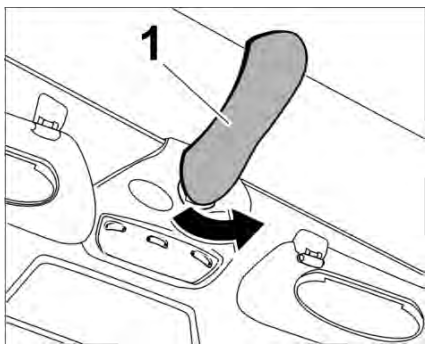
61 02 19 Removing and installing hardtop - as of MY 2005



- Removing hardtop
- Installing hardtop

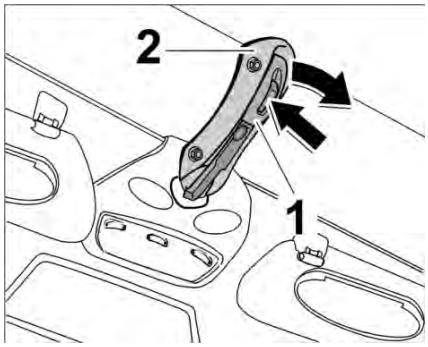
top of page

Removing hardtop



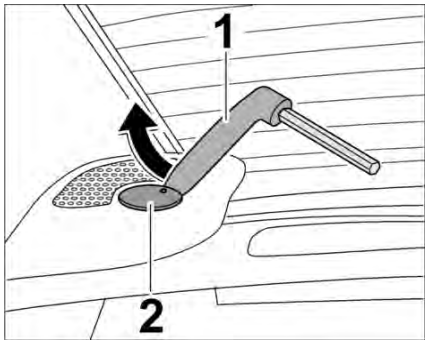
Removing hardtop

Installation Location:



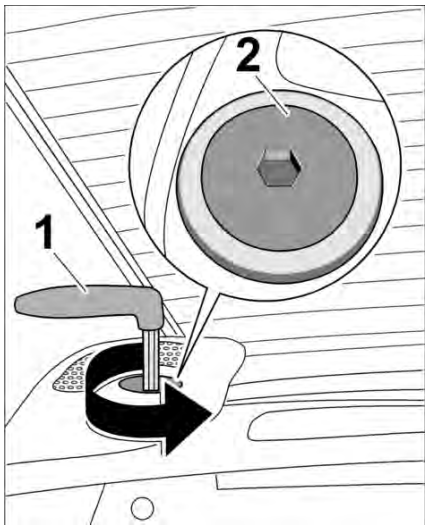
Main illustration, removing and installing hardtop

1. Open all four side windows.



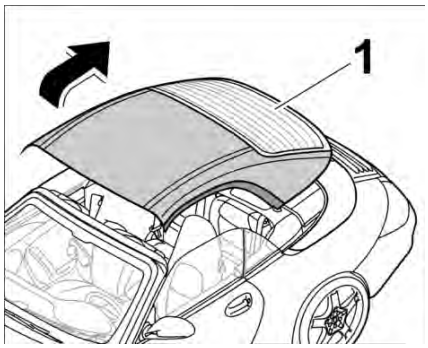
Pulling off cover for locking lever

2. Pull cover of the front locking lever **-1-** down and off.



Opening the locking lever

3. Press red knob **-2-** on the front locking lever **-1-** and open the catch fully.

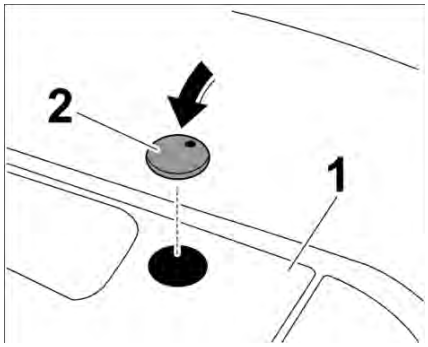


Removing the plastic cover

4. Take unlocking handle **-1-** from the shelf between the two front seats. Carefully remove the plastic cover **-2-** on both sides of the hardtop using the unlocking handle **-1-** .

Unlock hardtop lock

5. Insert unlocking handle **-1-** into one of the rear hardtop locking elements. Loosen fastening screw **-2-** approx. 2 turns, pull off handle and completely loosen fastening screw **-2-** by hand (approx. 8 turns).
6. Unscrew fastening screw **-2-** up until stop and turn 2 turns to the left (safeguard it against damage).
7. Repeat procedure on the other side of the hardtop.



Removing the hardtop

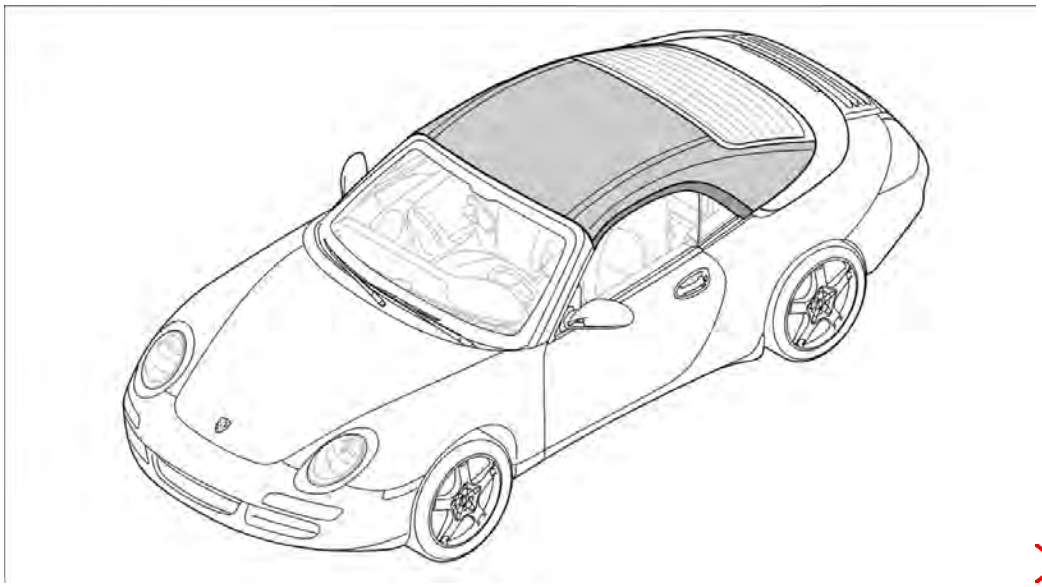
ATTENTION

Hand can be trapped between the hardtop and convertible top compartment lid.

→ Evenly lift the hardtop at both sides.

8. Together with another person on the other side, evenly lift the hardtop **-1-** out of the locking elements. Carefully lift the hardtop up and over the vehicle to the rear. Carefully take the protective cover out of the roll-over protection cover to the rear and press the plastic cover into the locking elements.

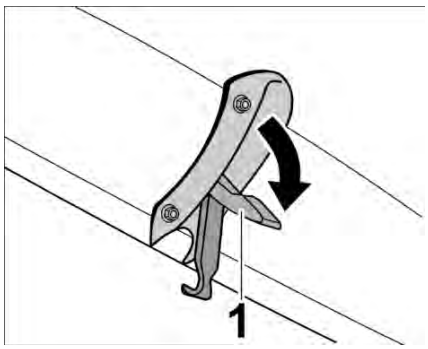
Pressing in covers



9. Press both plastic covers **-2-** in the rear cover **-1-** .

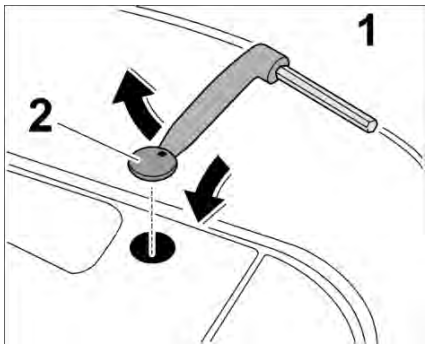
top of page

Installing hardtop



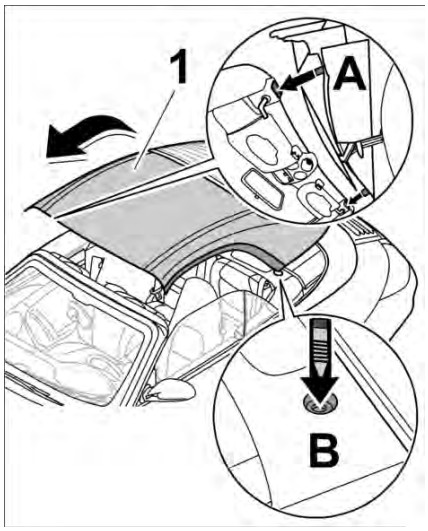
Installing hardtop

Installation Location:



Main illustration, removing and installing hardtop

1. Open all four side windows.

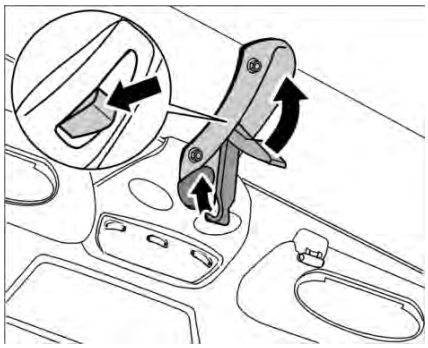


Opening the locking lever

2. The locking lever **-1-** must be opened fully.

Lifting the plastic cover

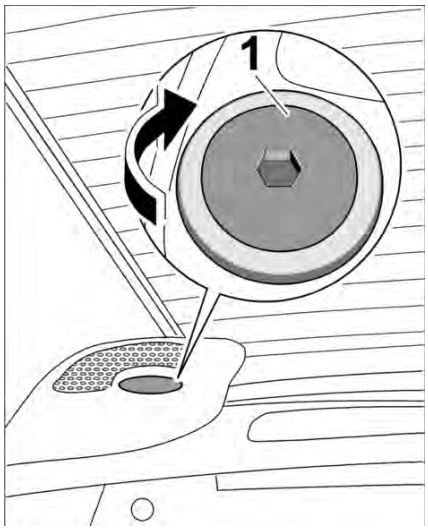
3. Take unlocking handle **-1-** from the shelf between the two front seats. Carefully remove the plastic cover **-2-** on both sides of the rear cover using the unlocking handle **-1-** .



Fitting the hardtop

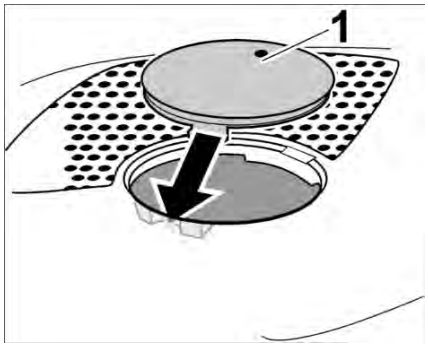
ATTENTION

Hand can be trapped between the hardtop and convertible top compartment lid.



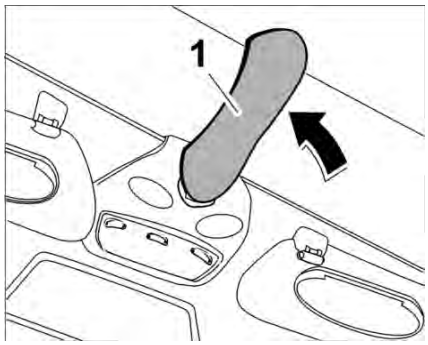
→ Evenly lift the hardtop at both sides.

4. Carefully lift the hardtop **-1-** over the vehicle from the rear and insert it first into the mounts of the windscreen frame at the front **-inset A-** . Then carefully lower the hardtop into the locking elements at the rear **-inset B-** .



Closing locking lever at the front

5. Swivel the locking lever for the front lock to the rear. When doing so, the locking hook must engage in the windscreen frame. The white marking line on the red locking button **-inset-** must become visible when the hardtop is locked properly.



Closing rear locking mechanism

6. Screw in fastening screw **-1-** by hand and then screw down at tightening torque →**Tightening torque: 34 ftlb.** .
7. Repeat procedure on the other side of the hardtop.

Inserting plastic cover

8. Press both plastic covers **-1-** into the trim panel of the hardtop lock.

Pushing on cover of the locking lever

9. Push on the cover **-1-** of the front locking lever.

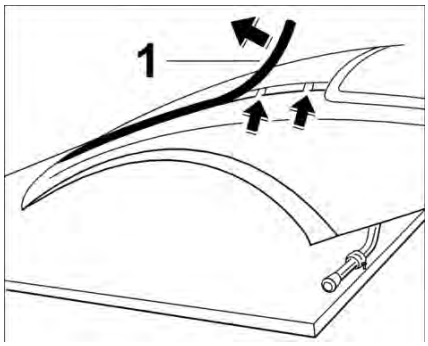
Preliminary work



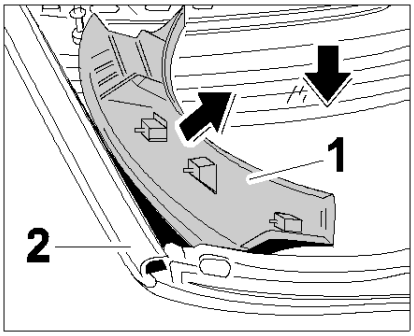
Preliminary work

1. Remove rear window. →648619 Removing and installing rear window - chapter on "Removing"
2. Remove centring peg. →611019 Removing and installing front convertible-top mount - chapter on "Removing"
3. Remove rear hardtop locking mechanism. →611119 Removing and installing rear mount - chapter on "Removing"

top of page

Disassembling hardtop

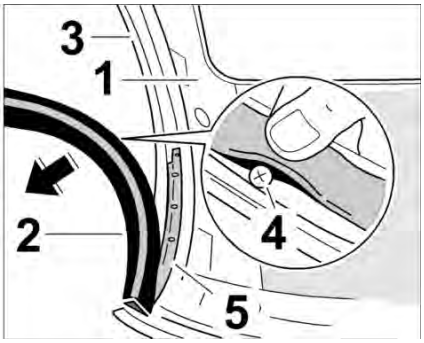
Disassembling hardtop



Detaching cover strips and roof strip clips

1. Detach cover strips and roof strip clips.

1.1. Lift up the cover strip **-1-** at left and right using a plastic spatula and pull it off. The roof strip clips are destroyed on removal.

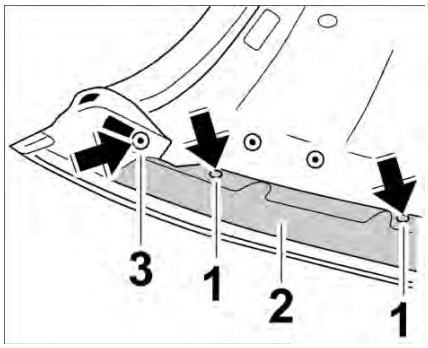


2. Place outer roof panel of hardtop on the assembly fixture.

Unclipping linings

3. Unclip linings.

3.1. Unclip linings **-1-** front and rear from hardtop **-2-** .



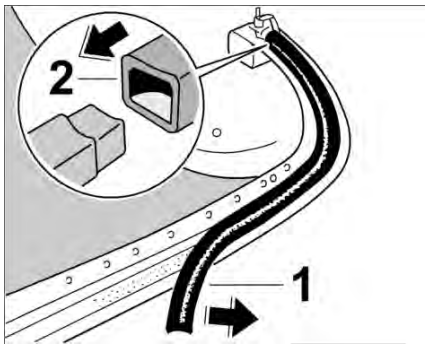
Detaching seal at sides of roof frame

4. Detach seal at sides of roof frame.

4.1. The seal at the sides of the roof frame **-1-** is in two parts. Pull the upper seal **-2-** out of the profile of the retaining strip **-3-** .

4.2. Unscrew fastening screws **-4-** from the retaining strip **-3-** .

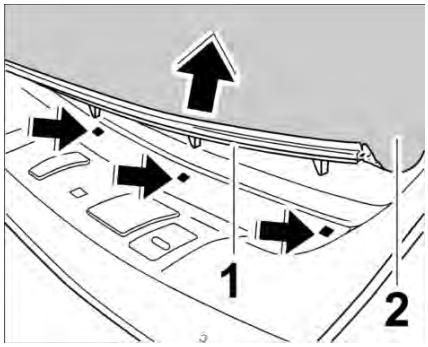
4.3. Remove the seal below together with the retaining strip **-5-** from the roof frame **-1-** .



Detaching seal at sides of roof frame

5. Loosen and detach retaining strip and roof frame seal.

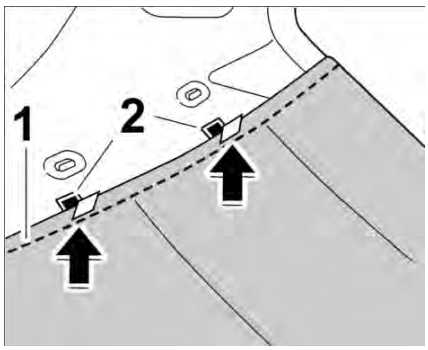
5.1. Unscrew tapping screws **-1-** from retaining strip **-2-** .



5.2. Unscrew pan-head screw **-3-** from the roof frame seal, detach the seal at the corners and remove it.

Pulling off sealing rubber

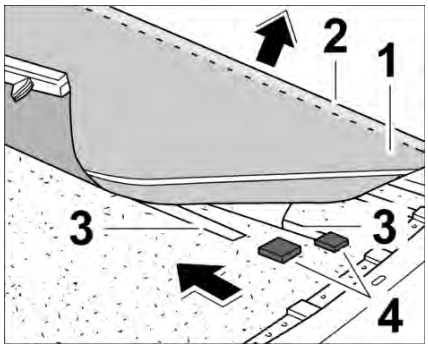
6. Pull off sealing rubber.



6.1. Pull off the surrounding sealing rubber **-1-** to the rear and pull it out at the ends from the roof frame seal **-2-** .

Detaching roof liner at front

7. Detach roof liner at front.

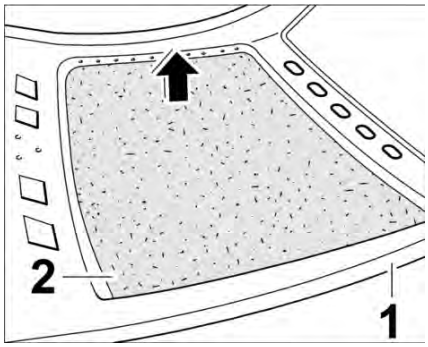


7.1. Lift front retaining strip **-1-** of roof liner **-2-** with a plastic spatula and pull it off.

Detaching roof liner at sides

8. Detach roof liner at sides.

8.1. Lift up the roof liner **-1-** on the left and right sides with a plastic spatula and disengage from the sheetmetal clips **-2-** .

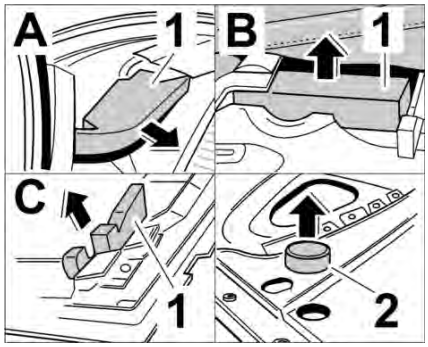


Detaching roof liner at rear and transverse struts

9. Detach roof liner at rear and transverse struts.

9.1. Pull plastic strip **-2-** of roof liner to the rear and detach it **-1-**

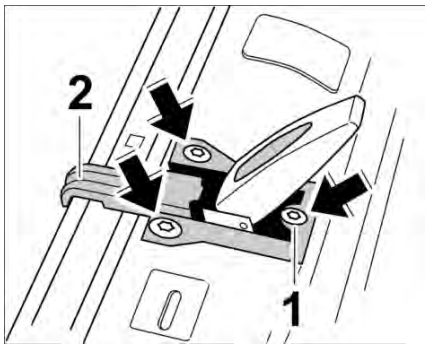
.



9.2. Pull out transverse struts **-3-** with plastic sleeves **-4-** and remove the roof liner **-1-** .

Detaching sound absorber from the hardtop body

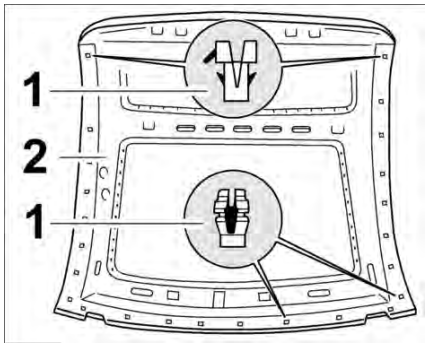
10. Loosen sound absorber from the hardtop body.



10.1. Loosen the sound absorber **-2-** of the hardtop body **-1-** using a spatula.

Removing foam strips

11. Remove foam strips.



11.1. Carefully pull off foam strips **-1-** on B-pillar **-A-** , at rear of roof **-B-** and at the centring pegs at front **-C-** and the foam pads **-2-** on the left and right.

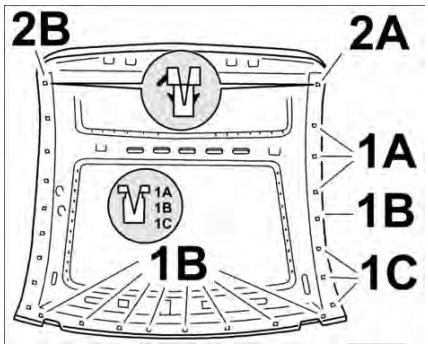
Removing locking lever

12. Remove locking lever.

12.1. Unscrew and remove fastening screws **-1-** from the locking lever **-2-** .

Pressing expander nuts out of the hardtop body

13. Press expander nuts out of the hardtop body.



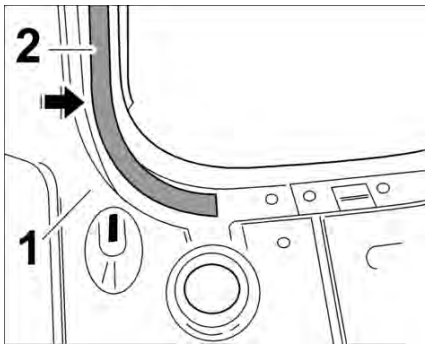
13.1. Press expander nuts **-1-** out of the hardtop body **-2-** at the sides and top.

top of page

Assembling hardtop

Assembling hardtop

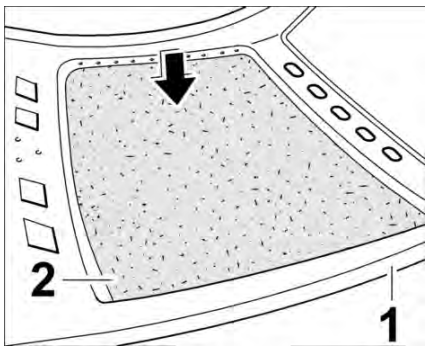
1. Set the hardtop down on the assembly fixture on the outer roof panel.



Pressing expander nuts into the hardtop body

Note

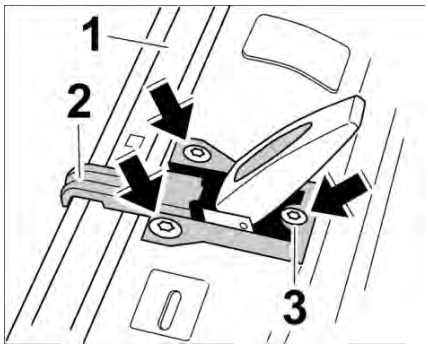
- *Please observe the coloured installation position of the expander nuts!*
- *1A = yellow*
- *1B = white*
- *1C = green*
- *2A = red*
- *2B = white*



2. Press expander nuts into the hardtop body.
2.1. Beginning in the direction of travel going left
2.2. One red **-2A-** expander nut
2.3. Three yellow **-1A-** expander nuts
2.4. One green **-1C-** expander nut
2.5. One white **-1B-** expander nut
2.6. Press three green **-1C-** expander nuts into the hardtop body.
2.7. Beginning in the direction of travel going right
2.8. One white **-2B-** expander nut
2.9. Three yellow **-1A-** expander nuts
2.10. One green **-1C-** expander nut
2.11. One white **-1B-** expander nut
2.12. Press three green **-1C-** expander nuts into the hardtop body.
2.13. Press the expander nuts at the front **-1B-** into the hardtop body in the direction of travel.

Sticking felt strips on inside of window aperture

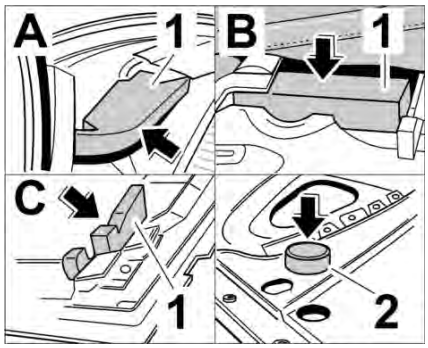
3. Stick felt strips on inside of window aperture.



3.1. Stick a felt strip **-2-** approx. 2 cm wide along the window aperture on the rivet joints of the hardtop body **-1-** .

Sticking sound absorber in the hardtop body

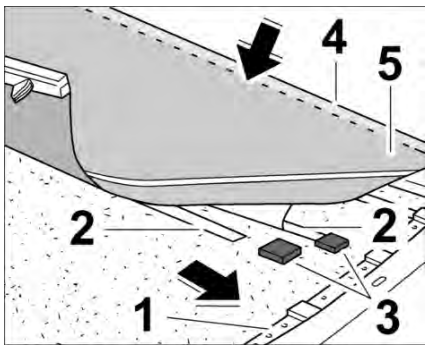
4. Stick sound absorber on the hardtop body.



4.1. Position the self-adhesive sound absorber **-2-** in the hardtop body **-1-** and press firmly into place.

Fitting locking lever

5. Fit locking lever.

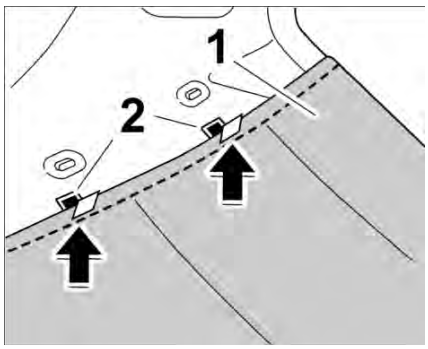


5.1. Position locking lever **-2-** on hardtop body **-1-** and secure with fastening screws **-3-** . Tightening torque →**Tightening torque : 10 (7.5 ftlb.) Nm**

Sticking in foam strips and foam pads

6. Stick in foam strips and foam pads.

6.1. Position foam strips **-1-** on B-pillar **-A-** , at rear of roof **-B-** and at centring pegs at front **-C-** and the foam pads **-2-** on the left and right. Press on firmly.

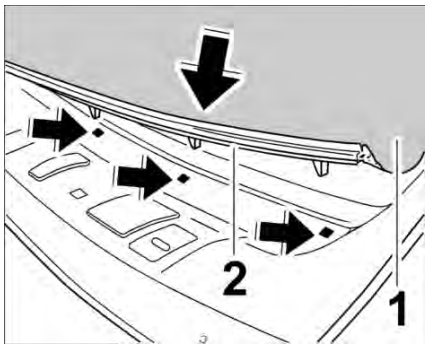


Engaging roof liner at rear and transverse struts

7. Engage roof liner at rear and transverse struts.

7.1. Insert transverse struts **-2-** with plastic sleeves **-3-** into the hardtop body **-3-** .

7.2. Pull back plastic strip **-4-** of roof liner **-5-** and engage in groove of hardtop body **-1-** .

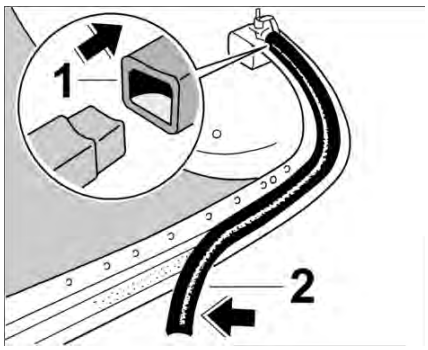


Engaging roof liner at sides

Note

- *If the hardtop body is new, the sheetmetal clips on the left and right must be bent over to the outside using a plastic hammer.*

8. Engage roof liner at sides.

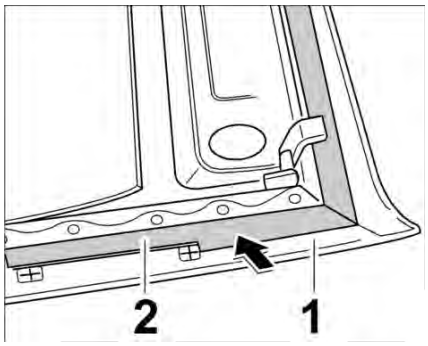


8.1. Engage roof liner **-1-** at the left and right sides in the sheetmetal clips **-2-** .

Fitting roof liner at front

9. Fit roof liner at front.

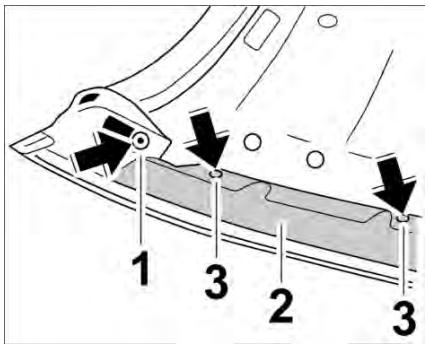
9.1. Position front retaining strip **-2-** of roof liner **-1-** and clip it in.



Fitting rubber seal

10. Fit sealing rubber.

10.1. Insert self-adhesive sealing rubber **-2-** at the ends of the roof frame seal **-1-** .

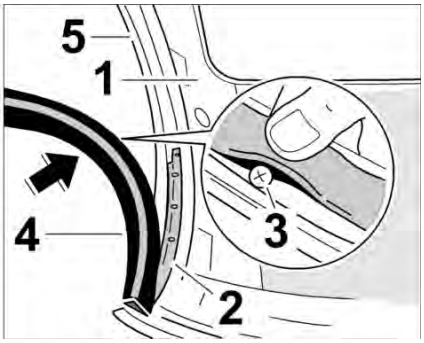


10.2. Remove protective film of the sealing rubber and press firmly into place at the rear on all sides.

Affixing Nito tape to the hardtop body

11. Affix Nito tape to the hardtop body.

11.1. Stick a 2 cm wide strip of Nitto tape **-2-** on the hardtop body **-1-** at the front left and right.

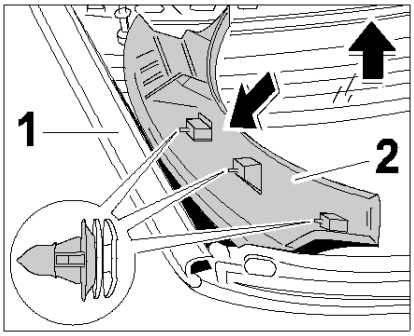


Fitting roof frame seal and retaining strip

12. Fit roof frame seal and retaining strip.

12.1. Engage roof frame seal in the hardtop body at the corners and fasten with the fastening screw **-1-** . Tightening torque →**Tightening torque : 10 (7.5 ftlb.) Nm**

12.2. Position retaining strip **-2-** and screw down using the fastening screws **-3-** .

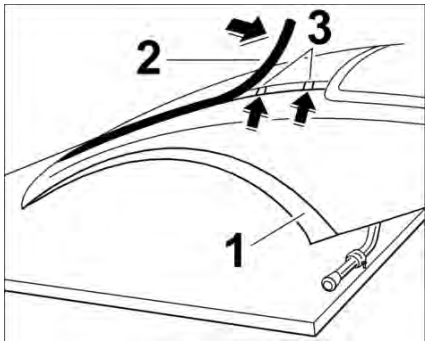


Fitting seal at sides of roof frame

13. Fit seal at sides of roof frame.

13.1. The seal at the sides of the roof frame **-1-** is in two parts. Position lower seal with retaining strip **-2-** on roof frame **-1-** and fasten with fastening screws **-3-** .

13.2. Press upper seal **-4-** into the profile of the retaining strip **-5-** .



Clipping in lining

Note

- *Once a trim panel has been clipped in, the old plastic clips are no longer usable and must always be replaced.*

14. Fit lining.

14.1. Clip linings **-2-** front and rear into hardtop **-1-** .

Clipping in roof strip clips and cover strips

15. Clip in roof strip clips and cover strips.

15.1. Fit roof strip clips **-3-** .

15.2. Fit cover strip seal on the cover strip **-2-** .

15.3. Position cover strips on the hardtop body **-1-** and press into the roof strip clips.

top of page

Subsequent work

Subsequent work

1. Install rear hardtop locking mechanism. →611119 Removing and installing rear mount - chapter on "Installing"

as of MY 2005
Country C00, C02, C05, C07, C08, C09, C10, C11, C12, C13, C14, C15, C16, C18, C19, C20, C21, C22, C23, C24, C25, C26, C27, C28, C32, C33, C34, C35, C36, C37, C38, C39, C45, C46, C98, C99

WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**

- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

Country C00, C02, C05, C07, C08, C09, C10, C11, C12, C13, C14, C15, C16, C18, C19, C20, C21, C22, C23, C24, C25, C26, C27, C28, C32, C33, C34, C35, C36, C37, C38, C39, C45, C46, C98, C99

 WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**

- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

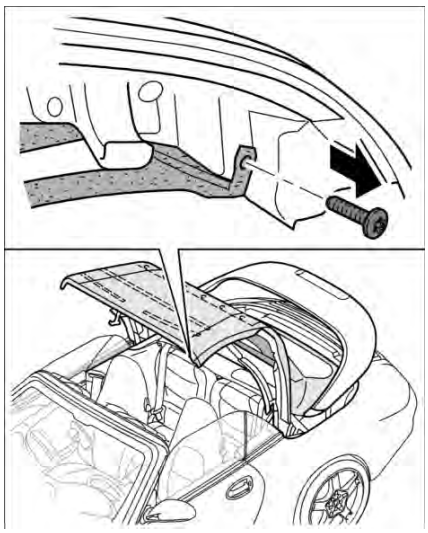
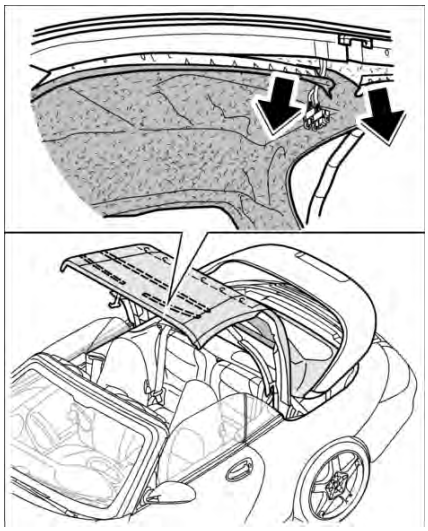
Removing convertible-top inner lining



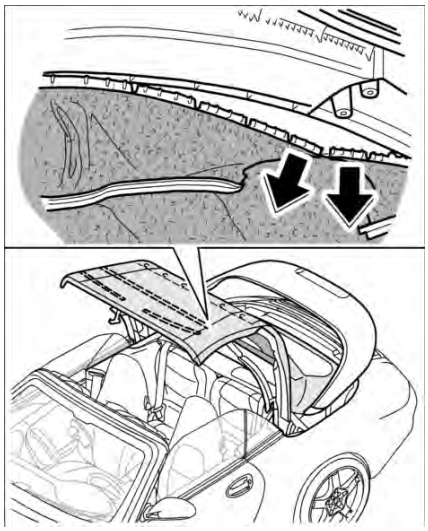
Removing front inner lining of convertible top

Installation Location:



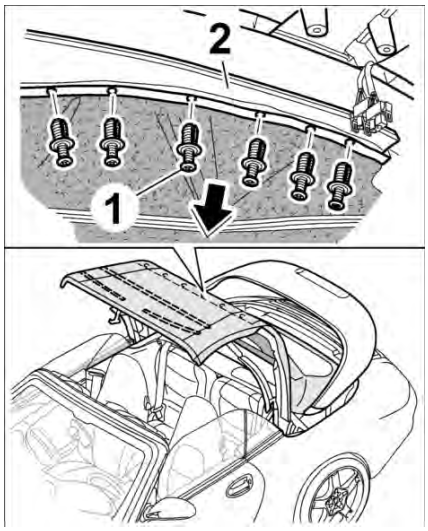
Installation position of convertible-top inner lining

1. Remove convertible top lock. →611919 Removing and installing convertible top lock - chapter on "Removing"



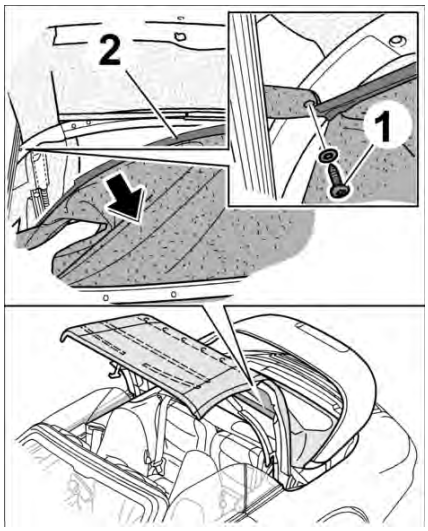
Unscrewing fastening screws

2. Unscrew fastening screws at the left and right.



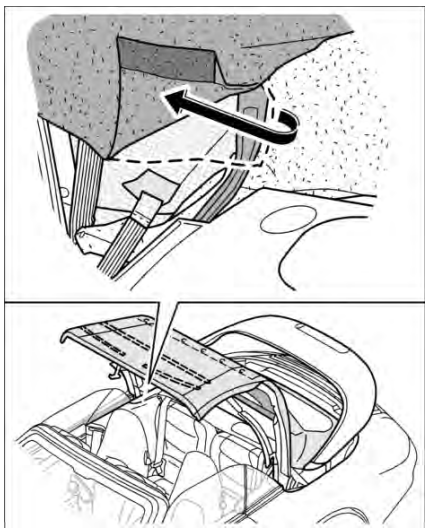
Pulling off front clamping rail

3. Pull off sewn-on clamping rail of headliner at roof frame 1 front left and right.



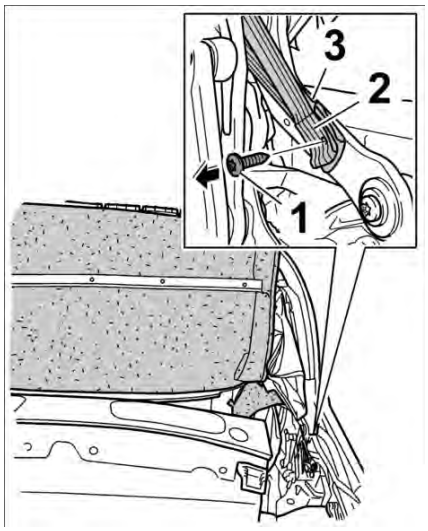
Pulling off the rear clamping rail

4. Pull off sewn-on clamping rail of headliner at roof frame 1 rear left and right.



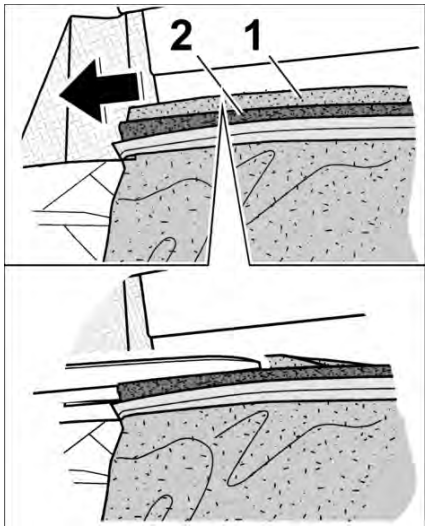
Loosen connection of convertible-top inner lining to roof frame

5. Unscrew expander nuts **-1-** from covering strips **-2-** and roof frame 1 at rear.



Removing clamping rail from main folding top bow

6. Unscrew fastening screws **-1-** at the left and right. Remove clamping rail connection **-2-** from the main folding top bow.
7. Open Velcro fastener of convertible-top inner lining on left and right.

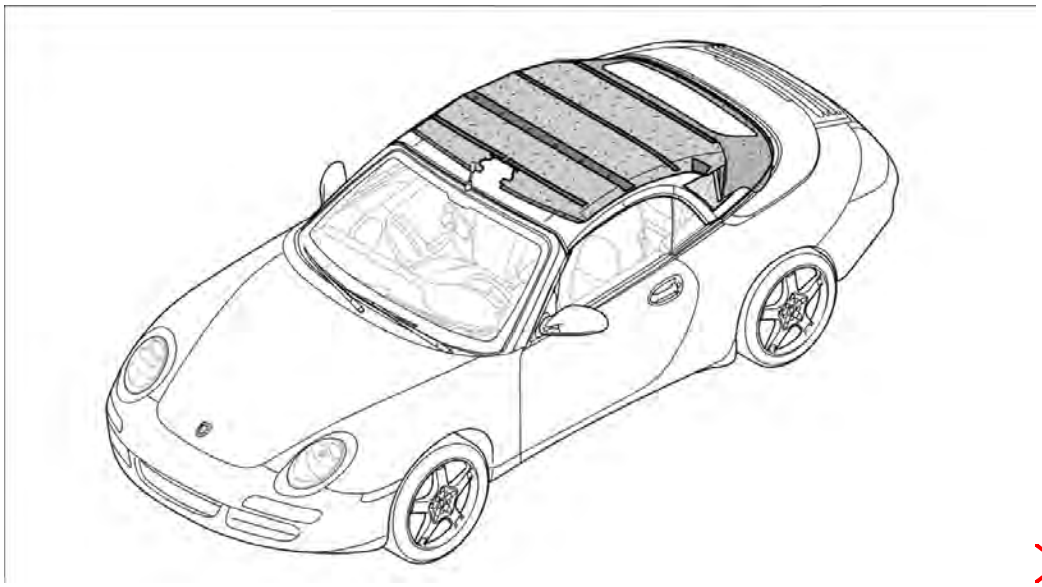


Opening Velcro fastener

8. Open Velcro fastener of headliner on the corner bow.

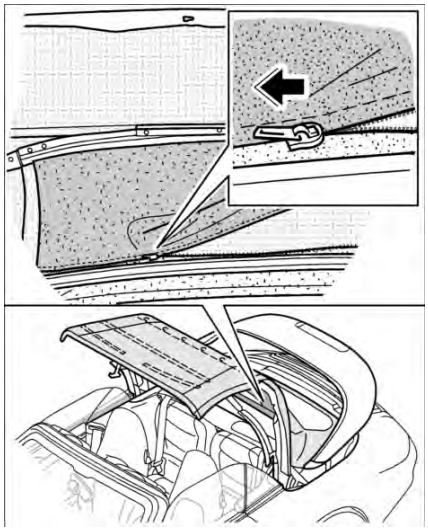
Removing bracing straps

9. Unscrew fastening screw **-1-** from bracing straps **-2 and 3-** .



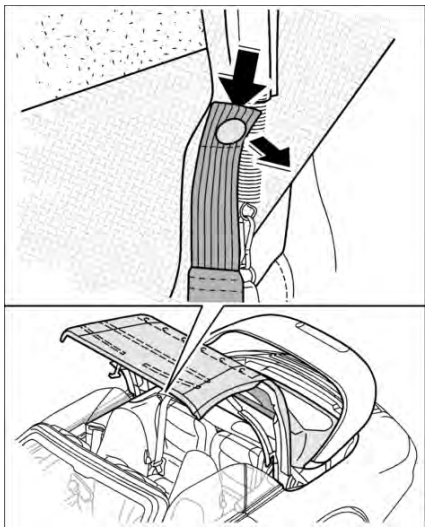
Removing corner bow connection

10. Using a plastic spatula, press out the connection strips **-1-** of the convertible-top inner lining from the rear groove of the corner bow. Detach convertible-top inner lining connection **-2-** from the front groove of the corner bow.



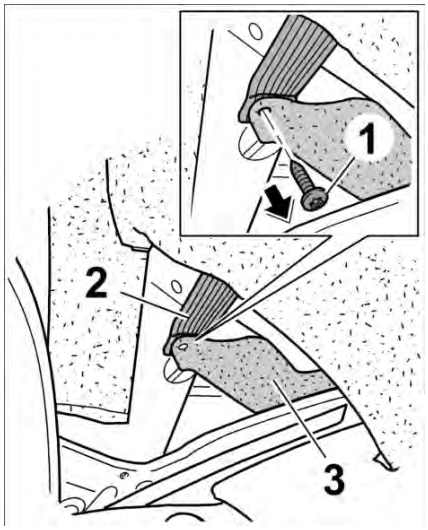
Removing inner lining of convertible top at rear

Installation Location:



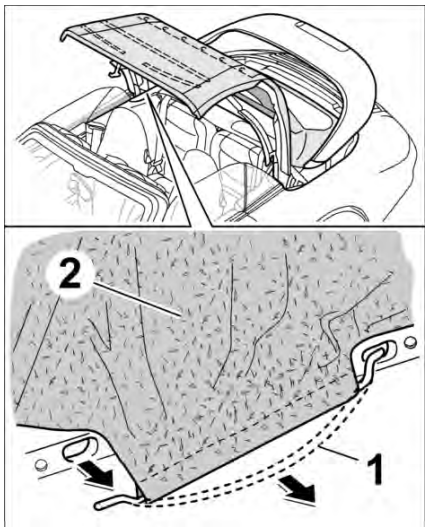
Installation position of convertible-top inner lining

1. Open Velcro fastener of convertible-top inner lining on left and right.



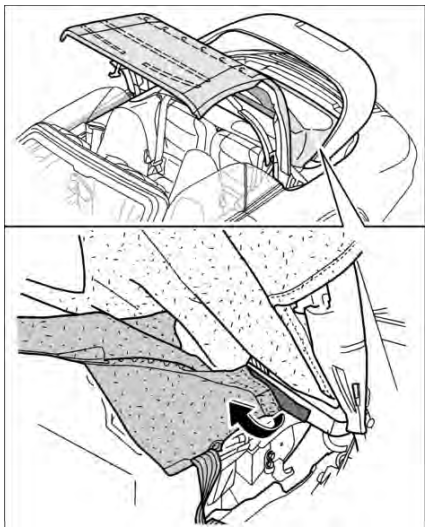
Separating inner lining from convertible top covering

2. Separate rear inner lining from convertible-top covering by opening the zip fastener zip.



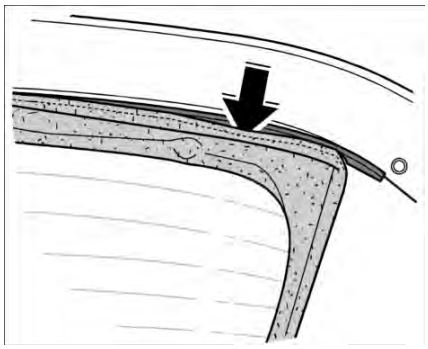
Release snap fastener

3. Release snap fastener.



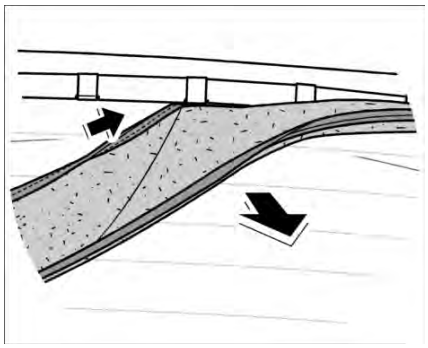
Loosening bracing strap.

4. Unscrew fastening screw **-1-** left and right from bracing strap **-2-** and rear of convertible-top inner lining **-3-** .



Removing brace

5. Bend brace **-1-** and remove to the front out of the tension bow. Remove brace from fabric pocket of convertible-top inner lining **-2-** .

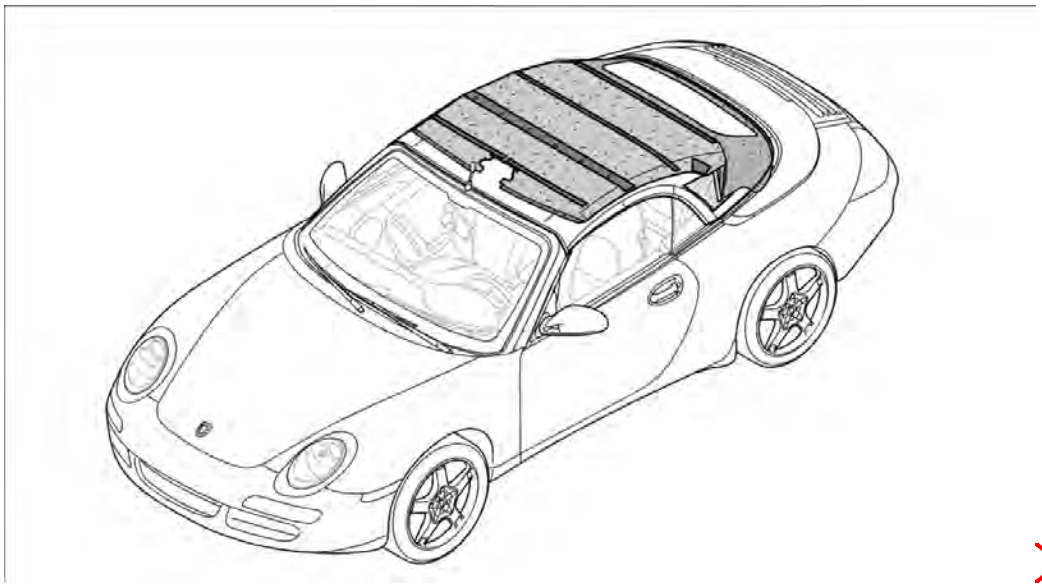


Opening Velcro fastener

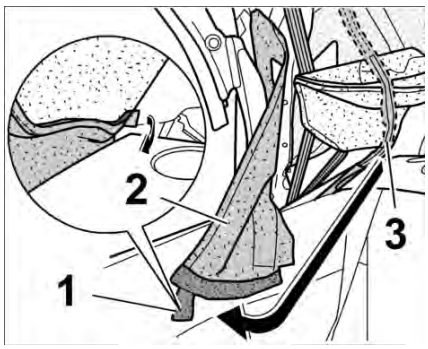
6. Open Velcro fastener of tension bow.

Loosening connection on tension bow

7. Press connection out of groove on tension bow.



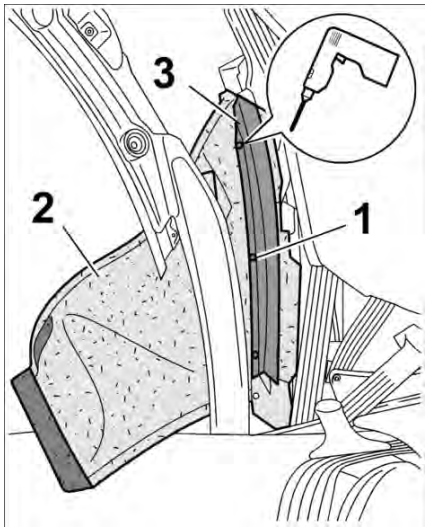
Loosening connection at rear window



8. Carefully pull connection out of groove at rear window.

Removing convertible-top inner lining at sides

Installation Location:

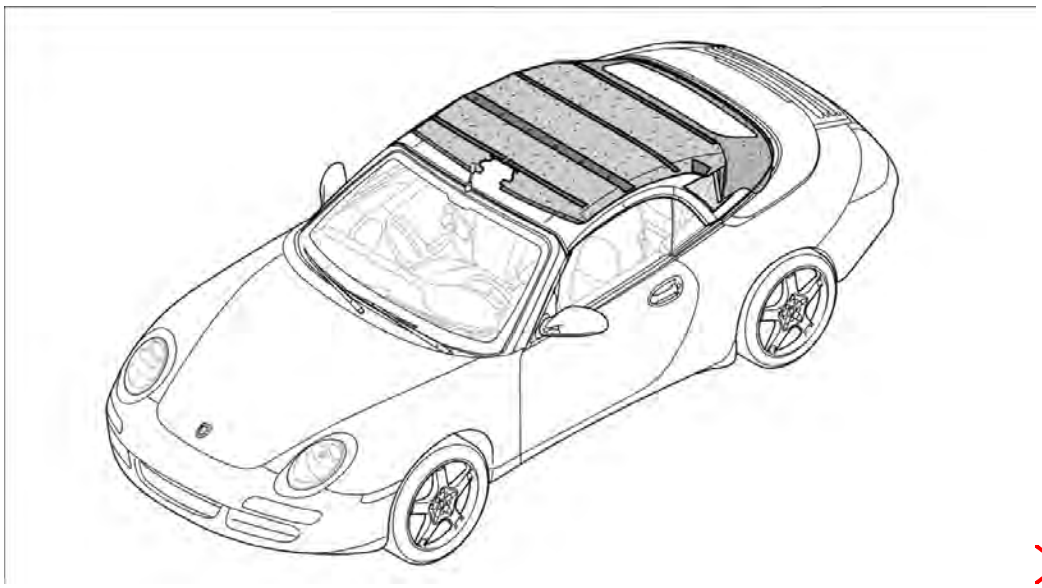


Installation position of convertible-top inner lining

Loosening Velcro fastener

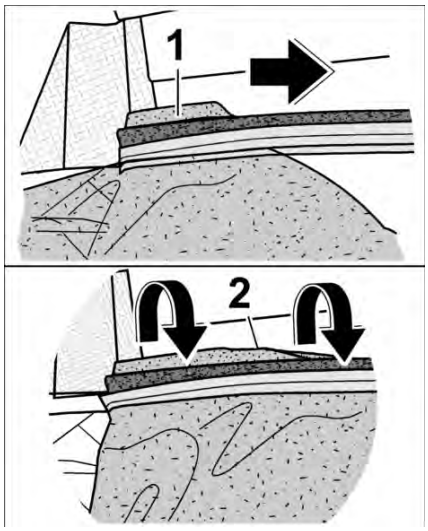
1. Separate the Velcro fastener connection **-1-** between the sides of the convertible-top inner lining **-2-** and the corner bow **-3-** .

Removing convertible-top inner lining at sides



2. Drill out the rivets **-1-** Remove convertible-top inner lining at the sides **-2-** and the plastic insert **-3-** .

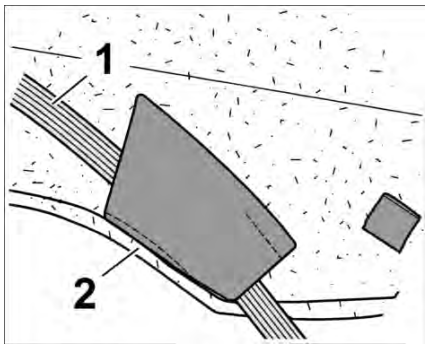
top of page



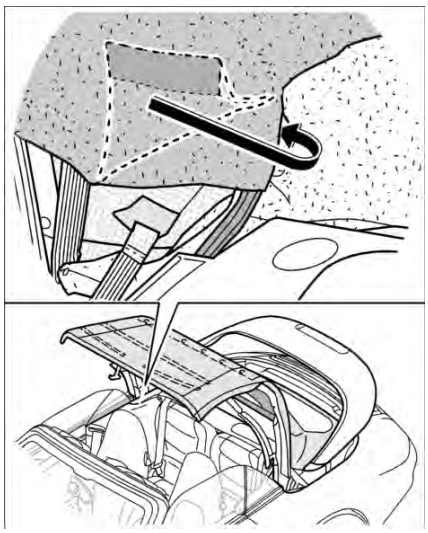
Installing convertible-top inner lining

Installing convertible-top inner lining at front

Installation Location:

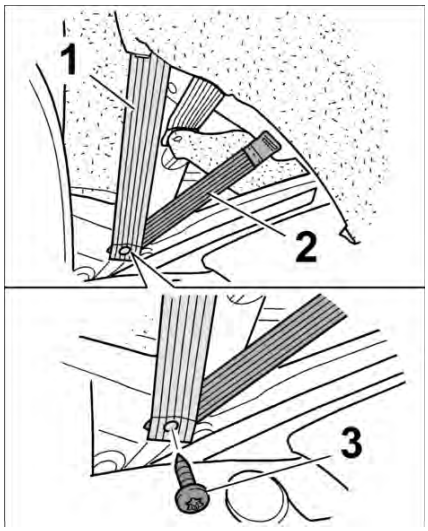


Installation position of convertible-top inner lining



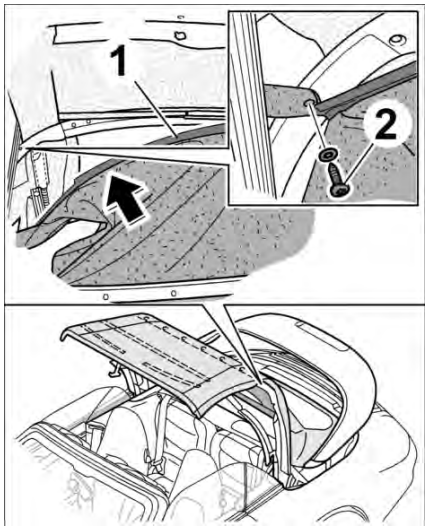
Installing corner bow connection

1. Insert convertible-top inner lining connection **-1-** into the front groove of the corner bow and centralise. Insert connecting strip **-2-** into the rear groove.



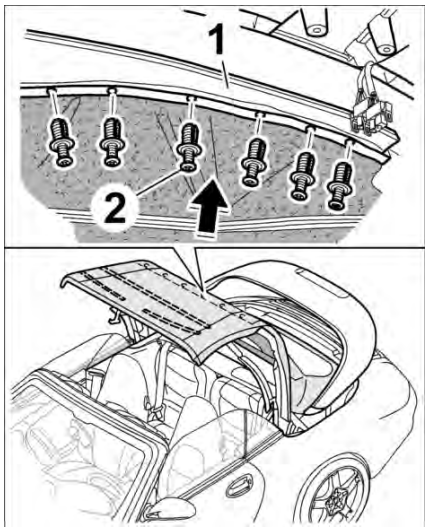
Pulling in bracing strap

2. Pull the bracing strap **-1-** into the plastic connection of the convertible-top inner lining **-2-** .



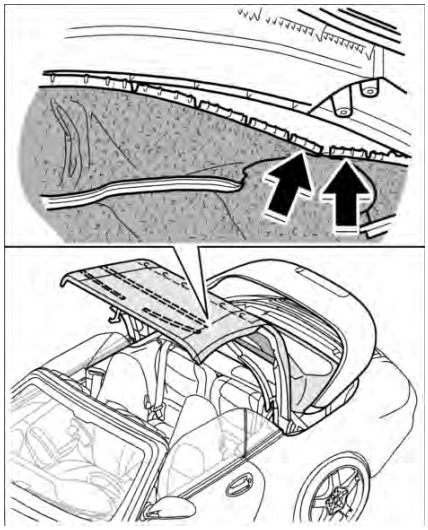
Closing Velcro fastener

3. Press Velcro fastener of convertible-top inner lining onto the corner bow.



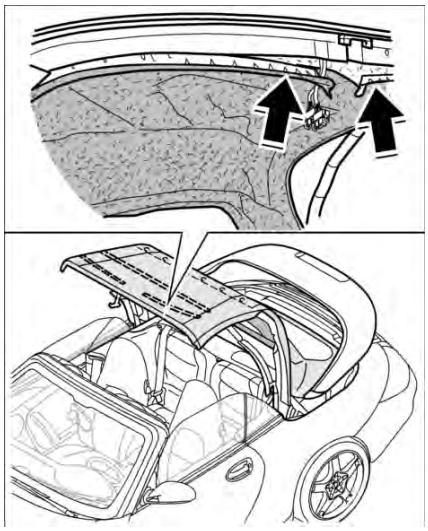
Installing bracing straps

4. Position bracing strap **-2-** under the bracing strap **-1-** . Follow the sequence as shown in the illustrated. Tighten fastening screw **-3-** with the bracing straps on the main folding top bow.
5. Close Velcro fastener of convertible-top inner lining on left and right sides.



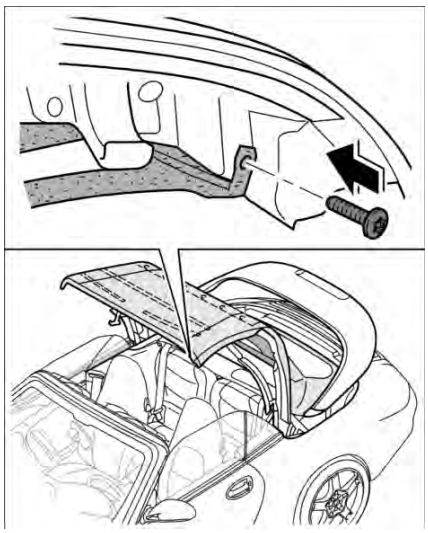
Fitting clamping rail to main folding top bow

6. Fit clamping rail connection **-1-** to the main folding top bow. Tighten the connection on the left and right with **-2-** .



Fit connection of convertible-top inner lining to roof frame

7. Position covering strip **-1-** on roof frame 2 and press in expander nuts **-2-** .

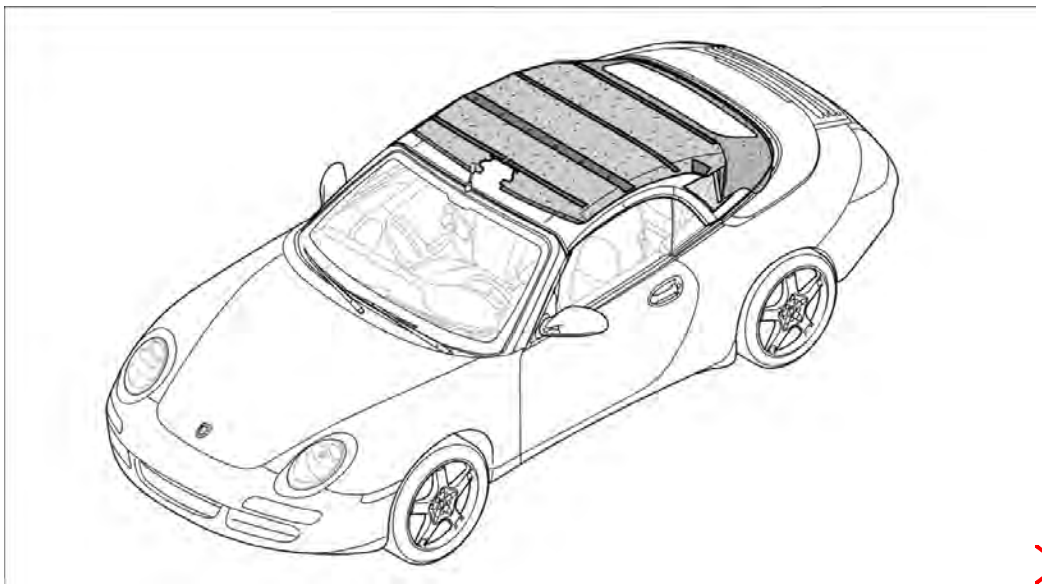


Fitting clamping rail at rear

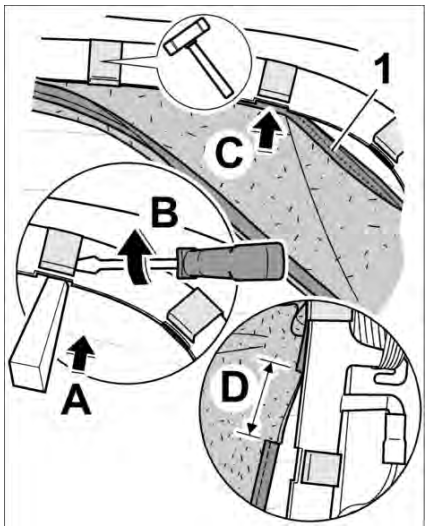
8. Fit sewn-on clamping rail of convertible-top inner lining at rear left and right of roof frame 1.

Fitting front clamping rail

9. Fit front sewn-on clamping rail at front left and right of roof frame 1.



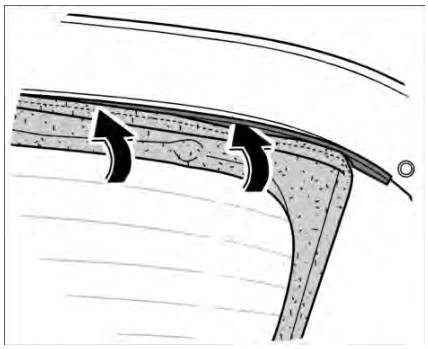
Tightening front clamping rail



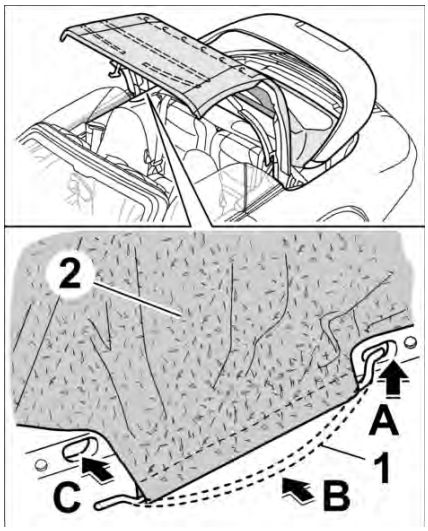
10. Tighten connection left and right with fastening screws.
11. Installing convertible top lock →611919 Removing and installing convertible top lock - chapter on "Installing"
12. End convertible top service position.

Installing convertible-top inner lining at rear

Installation Location:

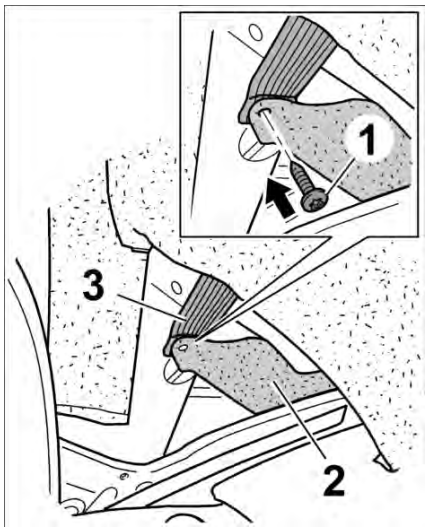


Installation position of convertible-top inner lining



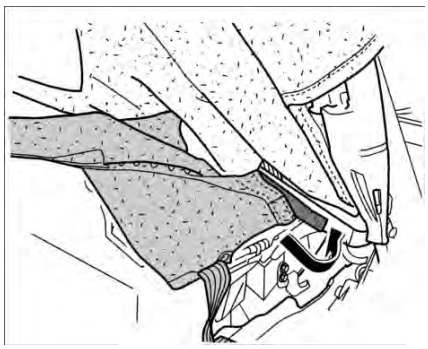
Convertible-top inner lining connection to the rear window

1. Lift the metal clips using a plastic spatula **-A-** and insert a small screwdriver under the metal clips **-B-** . Insert the connection piping **-1-** of the convertible-top inner lining underneath the metal clips **-C-** . Ensure that the clearance cuts of the convertible-top inner lining **-D-** are positioned at the electric connection of the rear window.
2. Knock the metal clips with a plastic hammer. Make sure that the metal clips engage in the frame cut-outs.



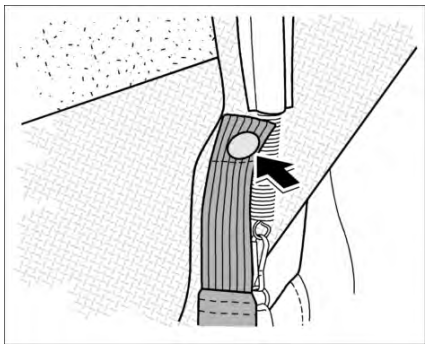
Convertible-top inner lining connection to the tension bow

3. Press the convertible-top inner lining connection into the groove of the tension bow.



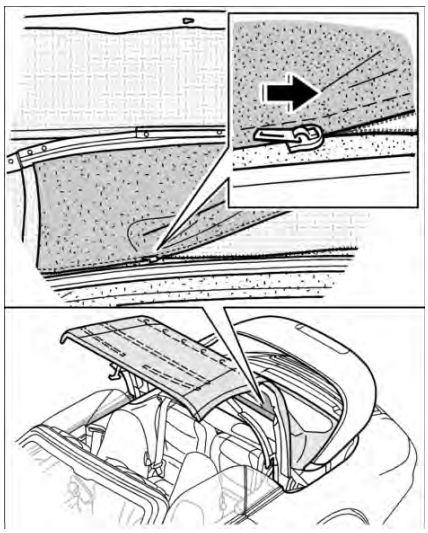
Installing brace

4. Insert brace **-1-** into fabric pocket of convertible-top inner lining **-2-** . First insert brace into tension bow at rear **-Arrow A-** , then bend it **-Arrow B-** and insert it at front **-Arrow C-** .



Installing brace

5. Position brace **-3-** under convertible- top inner lining **-2-** and secure to main folding top bow with fastening screw **-1-** .

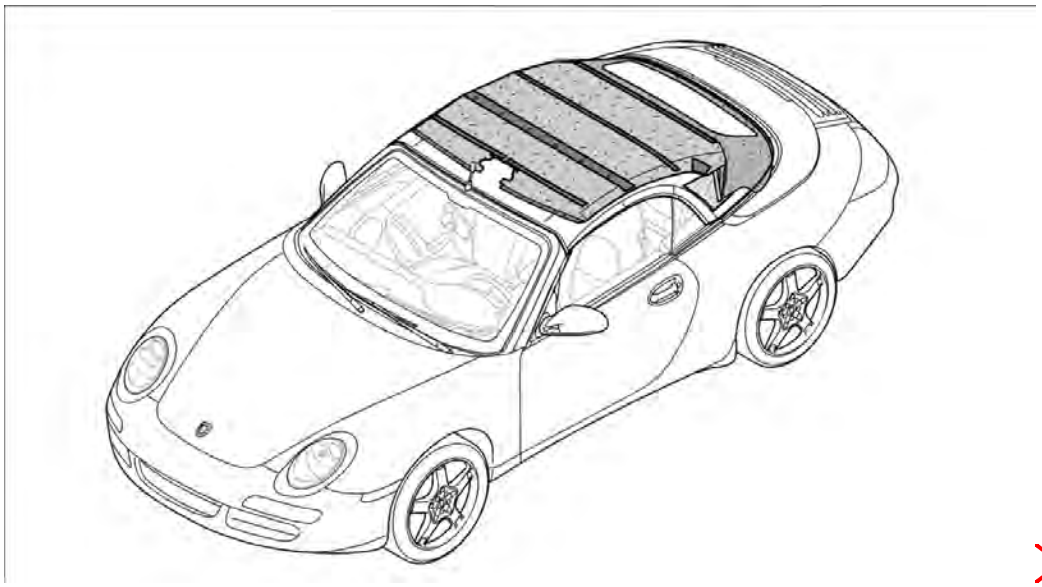


Closing Velcro fastener

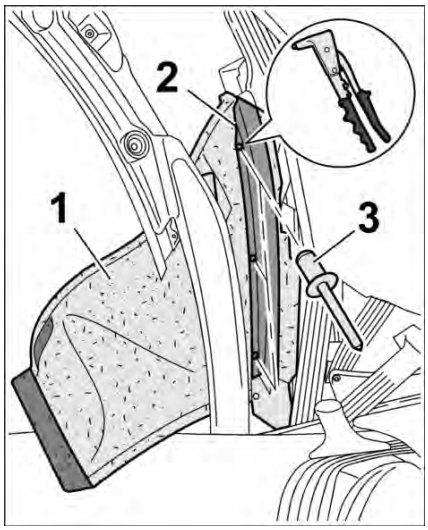
6. Close Velcro fastener of tension bow.

Pressing on snap fastener

7. Press on snap fastener.



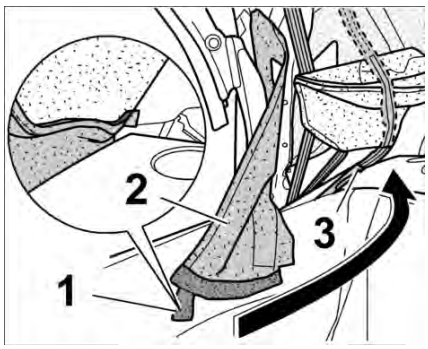
Closing zip fastener



8. Close zip between convertible- top inner lining at rear and the main folding top bow connection.
9. Close Velcro fastener of convertible-top inner lining on left and right sides.

Installing convertible-top inner lining at sides

Installation Location:



Installation position of convertible-top inner lining

Installing convertible top inner lining

1. Position convertible-top inner lining at the sides **-1-** and the plastic insert **-2-** on the main folding top bow.
2. Rivet on to the holes provided on the main folding top bow using the fastening rivets **-3-** (included in scope of replacement parts)

Closing Velcro fastener

3. Close the Velcro fastener connection **-1-** between the sides of the convertible-top inner lining **-2-** and the corner bow **-3-** .

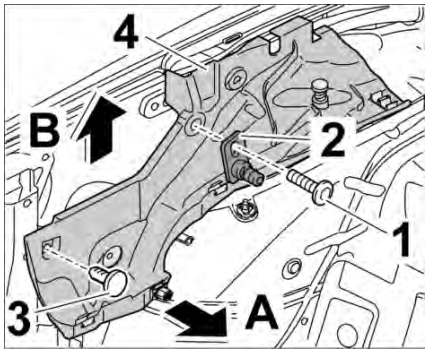
Removing water drip pan

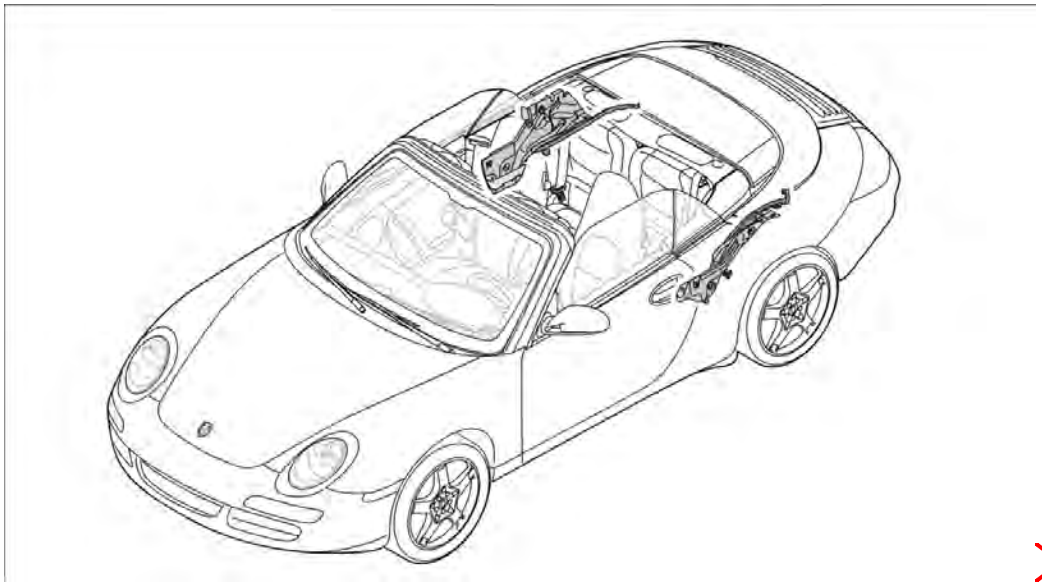


Removing water drip pan

Installation Location:

Installation position of water drip pan

1. Pull seal for convertible-top compartment lid up slightly close to the water drip pan.

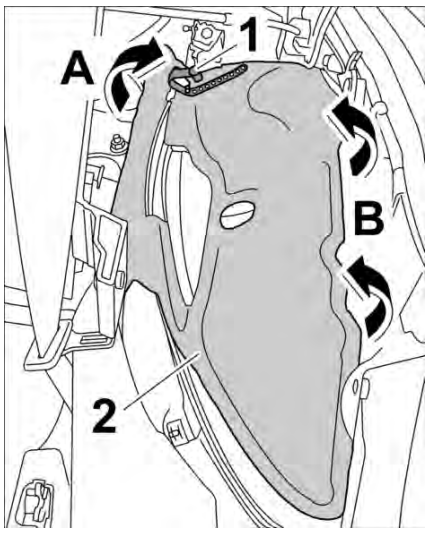


Removing water drip pan

2. Unscrew fastening screw **-1-** and remove support **-2-** .
3. Push out plug **-3-** .
4. Disconnect water drip pan **-4-** at the bottom from water drain tube **-arrow A-** and remove upwards **-arrow B-** .

Removing water channel

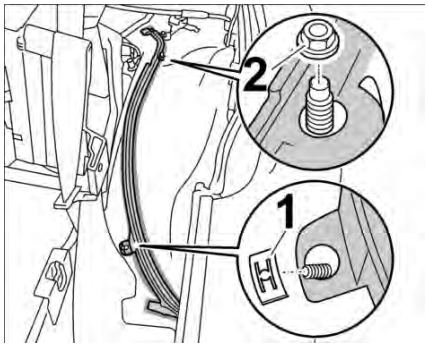
Installation Location:



Installation position of water drip pan

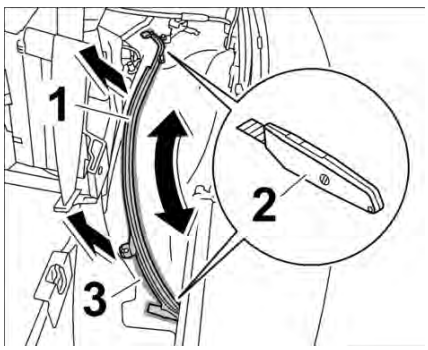
ATTENTION

Danger of injury! Sharp-edge burrs on body and unit parts!



- **Danger of injury from sharp edges on body and unit parts!**

→ Wear protective gloves when working in the area of sharp-edged body and unit parts!



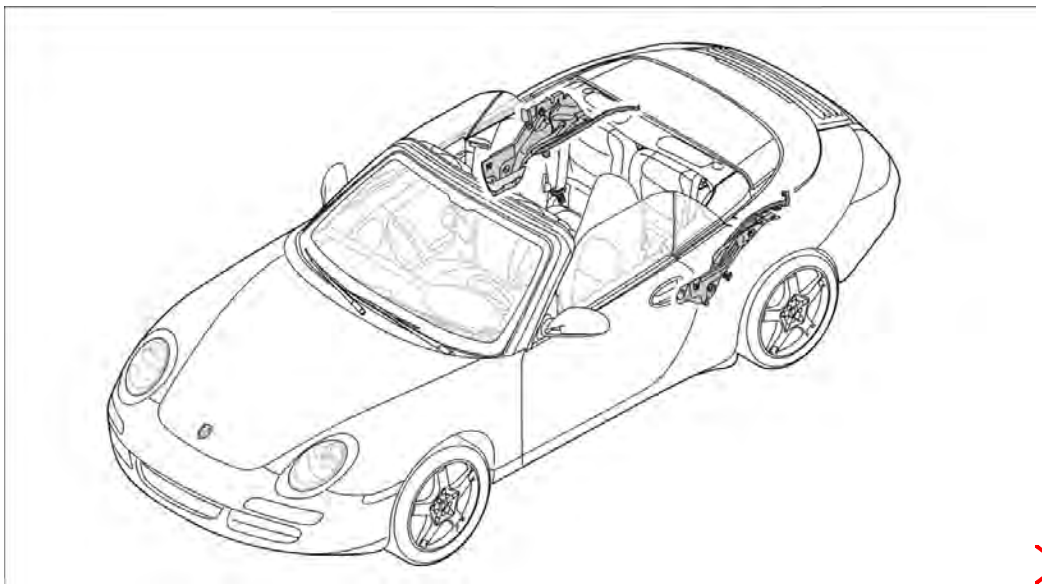
Loosening sound absorber

1. Remove cable holder **-1-** (**-arrow A-**) and loosen sound absorber **-2-** to the side **-arrow B-** .

Loosening water channel

2. Press out clamp **-1-** and screw off fastening nut **-2-** .

Removing water channel



3. Cut out water channel **-1-** with a knife **-2-** .
4. Remove residual adhesive **-3-** and clean sealing surface.

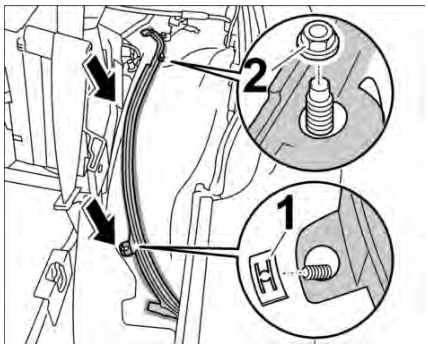
ATTENTION

Danger of injury! Sharp-edge burrs on body and unit parts!

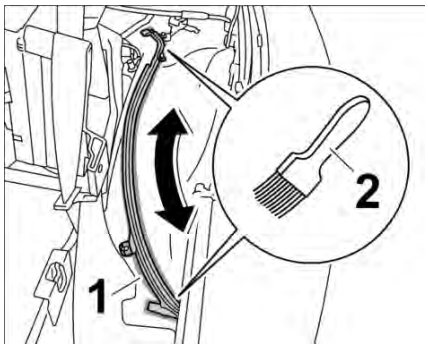
- **Danger of injury from sharp edges on body and unit parts!**

→ Wear protective gloves when working in the area of sharp-edged body and unit parts!



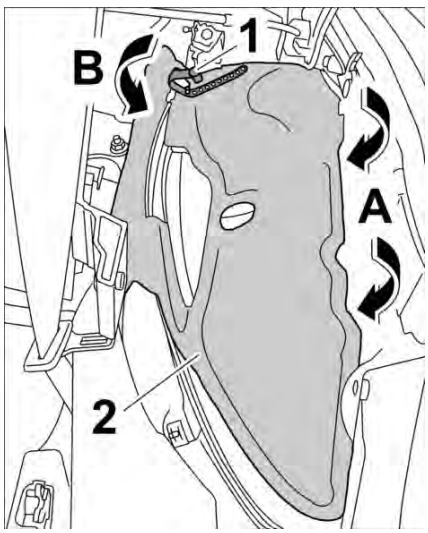
Applying adhesive

Note



Sealing surface of water channel and inner wheel arch must be clean and free of grease.

1. Apply approx. 10 mm of adhesive **-1-** →SEALING MATERIAL along the inner wheel arch.

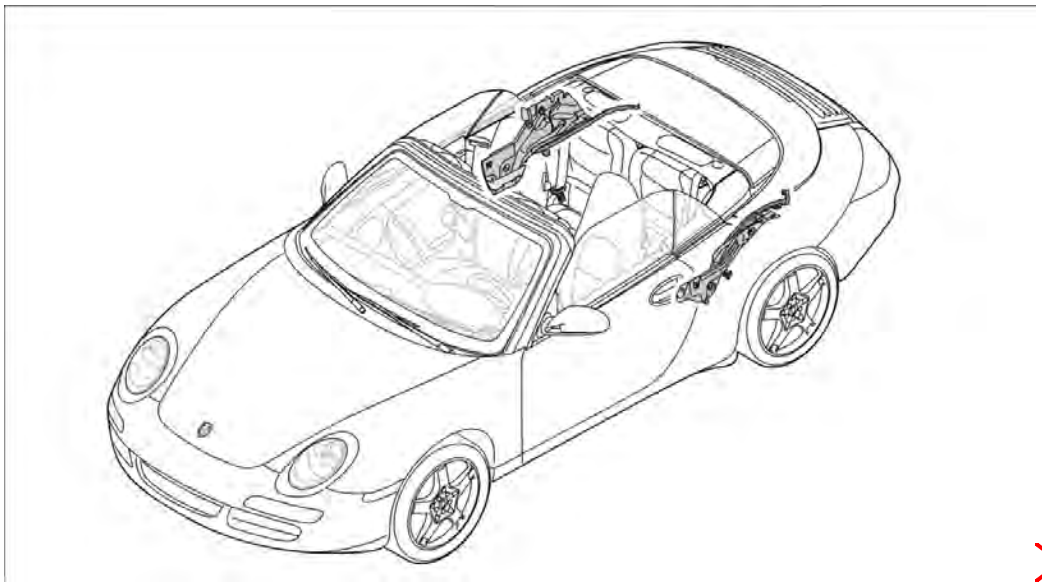


Installing water channel

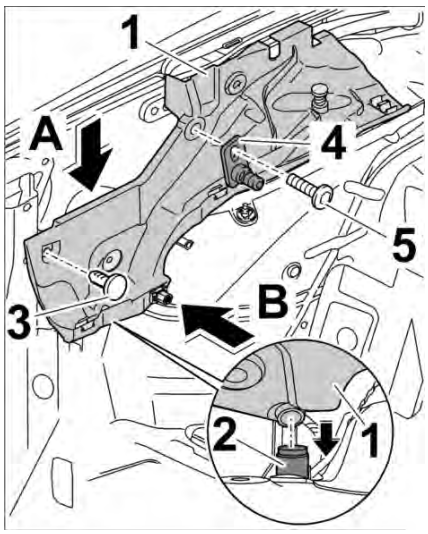
2. Position water channel on the body and screw it on tight with the fastening nut **-2-** . Tightening torque →**Tightening torque: 7 (5 ftlb.) Nm**
3. Press in clamp **-1-** .

Spreading out adhesive

4. Spread out any adhesive emerging at the sides **-1-** with a brush **-2-** .
5. Patch new sealing face and damage to top-coat paint with the same colour as the vehicle.



Securing sound absorber



6. Secure sound absorber **-2-** to inner wheel arch **-arrow A-** and screw in cable holder **-1-** (**-arrow B-**).

Installing water drip pan

Installation Location:

Installation position of water drip pan

Installing water drip pan

1. Guide water drip pan **-1-** into position from above **-arrow A-** and insert into water drain tube at the bottom **-2-** (**-arrow B-**).
2. Press in plug **-3-** .
3. Position support **-4-** on water drip pan **-1-** and screw fastening screw **-5-** in but do not tighten.
4.

Adjust support **-4-** . →610115 Adjusting convertible top

5. Tighten fastening screw **-5-** . Tightening torque →**Tightening torque: 23 (17 ftlb.) Nm**
6. Press in seal for convertible-top compartment lid close to the water drip pan.

WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

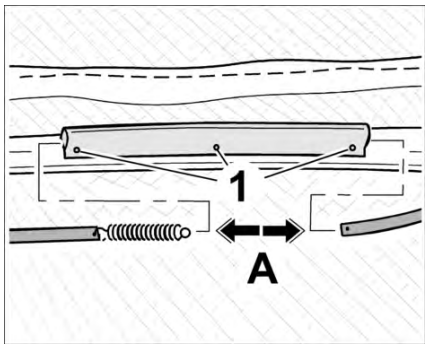
Removing convertible-top covering

Removing convertible-top covering

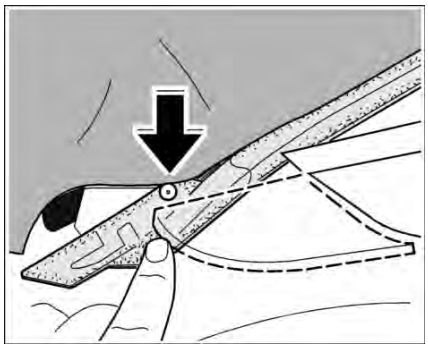


Installation Location:

Installation position for convertible top covering

Note

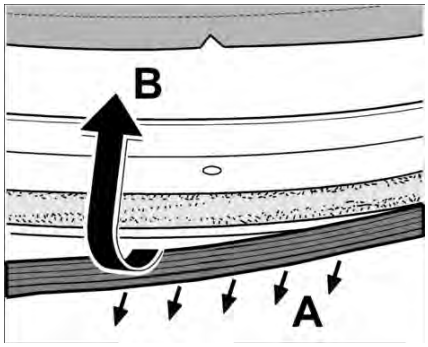
- *The spare parts contained in the "convertible-top covering" scope of parts must always be replaced.*
- *The convertible-top covering must be replaced at a room temperature of at least 15°C (59 Fahrenheit).*



Removing tension strap on main folding top bow

1. Remove tension strap on main folding top bow.

1.1. Unscrew fastening screws **-1-** from the fabric pocket on the main folding top bow.

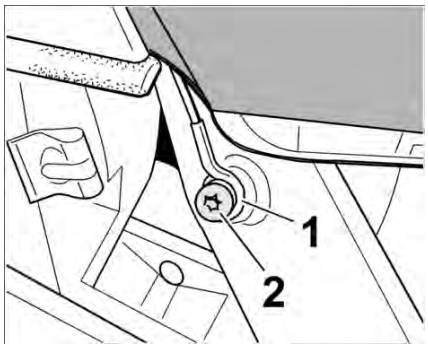


1.2. Move fabric pocket and disengage the tension spring from the tension strap **-A-** .

Removing tension bow seal

2. Remove tension bow seal.

2.1. Unscrew left and right fastening screws from tension bow seal and pull out of groove of tension bow.

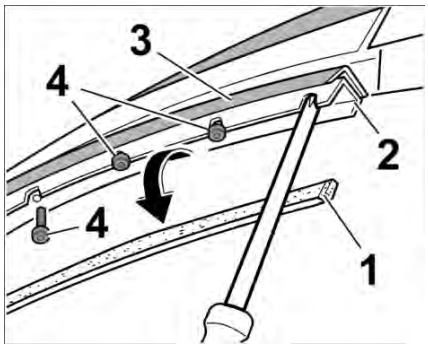


Removing tension bow seal

3. Remove convertible-top covering on tension bow.

3.1. Remove seal **-A-** from groove of tension bow.

3.2. Disengage convertible-top covering from groove **-B-** .



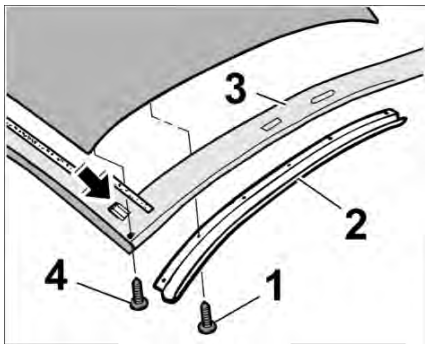
Removing tension cable on convertible-top covering

4. Remove tension cable on convertible-top covering.

4.1. From the tension cable **-1-** unscrew the fastening screw **-2-** .

Note

The seal on the roof frame is in two parts.

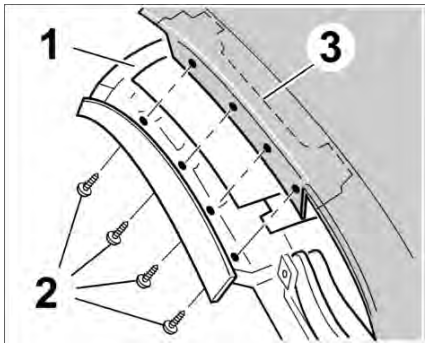


Removing seals and retaining frame

5. Remove seals and retaining bracket at sides of roof frame.

5.1. Pull the lower seal **-1-** out of the profile of the retaining strip **-2-** .

5.2. On the upper seal **-3-** with the retaining strip **-2-** , unscrew the fastening screws **-4-** and remove the seal **-3-** the retaining strip **-2-** from the roof frame.



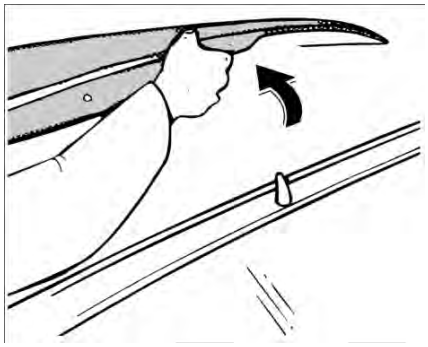
Removing retaining strip and convertible-top seal

6. Remove retaining strip and convertible-top seal on roof frame 1.

6.1. Unscrew and remove fastening screws **-1-** from retaining strip **-2-** .

6.2. From the tension cable **-3-** unscrew the fastening screws **-4-** .

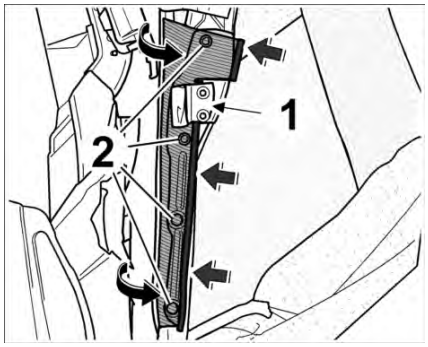
6.3. Pull left and right convertible top seal **-3-** forwards out of roof frame 1



Removing convertible-top covering at sides of roof frame 1

7. Remove convertible-top covering at sides of roof frame 1.

7.1.



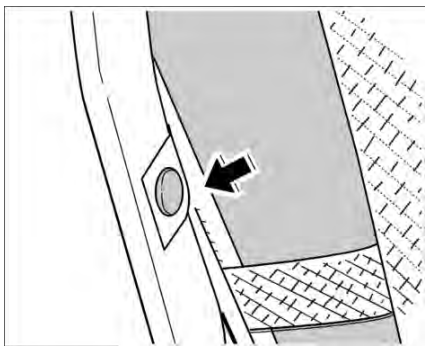
From the roof frame **-1-** Unscrew the fastening screws **-2-** and lift the shaped sheetmetal part **-3-** with convertible-top covering.

Removing convertible-top covering at front on roof frame 1.

8. Remove convertible-top covering at front on roof frame 1.

8.1. Detach convertible-top covering at front on roof frame 1 and lay it down to the rear.

Removing fastening strap on the main folding top bow

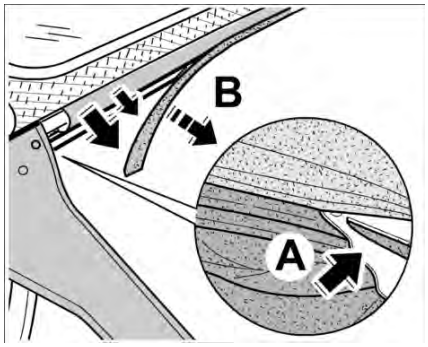


9. Remove fastening strap on the main folding top bow.

9.1. Remove thrust wedge.

9.2. Unscrew fastening screws **-1-** .

9.3. Unscrew fastening screws **-2-** from the shaped sheetmetal part on the main folding top bow from the rear.

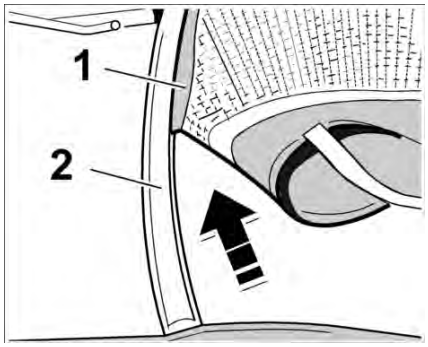


9.4. Pull the connection of the fastening strap off the shaped sheetmetal part.

Removing holding strap of convertible-top covering

10. Remove holding strap of convertible-top covering.

10.1. Press out fixing clip from roof frame 3 at inner right. On the left side, press fixing clip of wire harness out of roof frame 3.



Removing convertible-top covering at corner bow

11. Remove convertible-top covering at corner bow.

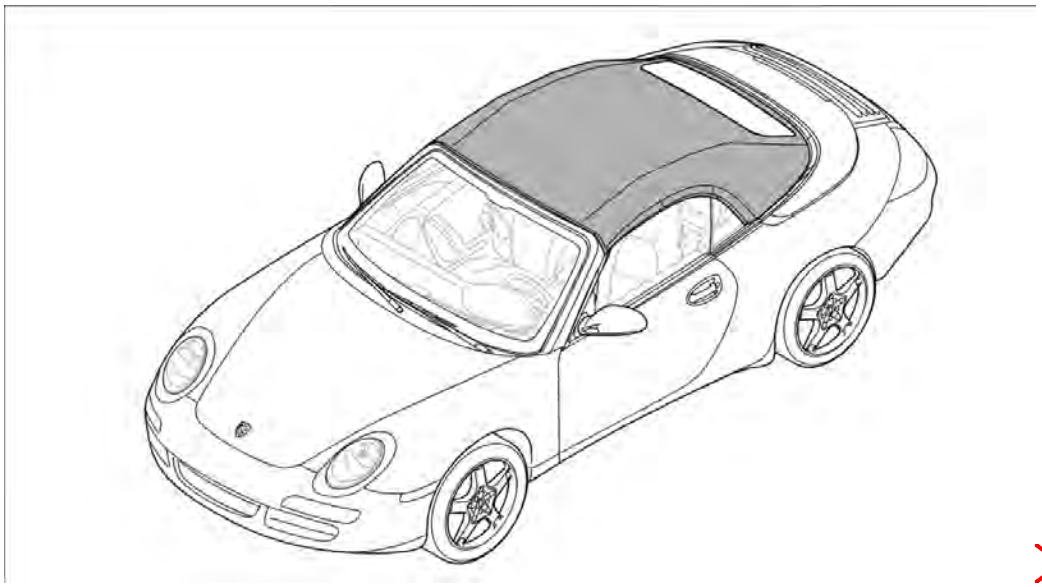
11.1. Loosen bond of cloth inside **-A-** around the corner bow.

11.2. Fold the convertible-top covering forwards to the roof frame.

11.3. Pull seal out of the groove of the corner bow **-B-** and disengage the covering strip of the convertible-top covering in downward direction.

Removing convertible-top covering on main folding top bow

12. Remove convertible-top covering on main folding top bow



12.1. Pull the tightening strip of the convertible-top covering **-1-** from the groove of the main folding top bow **-2-** . Remove convertible-top covering from the vehicle.

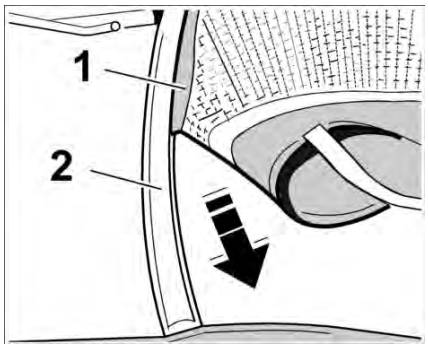
top of page

Installing convertible-top covering

Installing convertible-top covering

Installation Location:

Installation position for convertible top covering

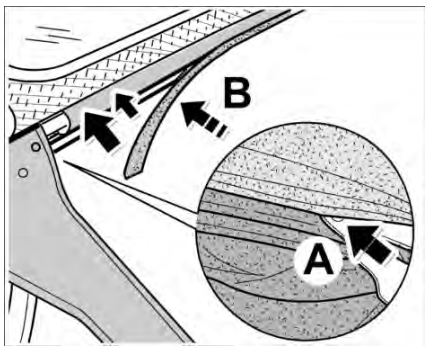


Note

- *If the convertible-top covering is very taut (with new convertible-top covering), close the convertible top and heat the convertible-top covering evenly using an **infra-red radiator 00000**.*
- *Ensure that the convertible-top covering is not heated for longer than 1 hour. Observe a minimum distance of 100 cm for the infra-red radiator and a maximum temperature of approx. 60 ºC (140 Fahrenheit). Then leave the vehicle to stand overnight with the convertible top closed.*
- *The same effect can be achieved if the vehicle is exposed to direct sunlight.*

Note

- *The spare parts contained in the "convertible-top covering" scope of parts must always be replaced.*
- *The convertible-top covering must be replaced at a room temperature of at least 15°C (59 Fahrenheit).*

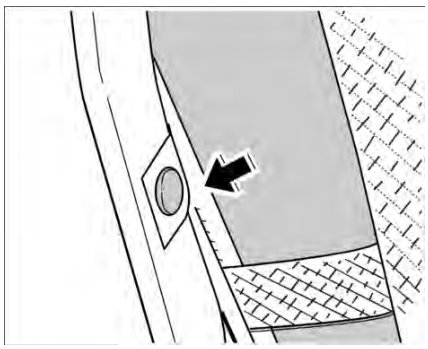


1. All pins and screw joints on the convertible top frame must be checked for tightness before the convertible-top covering is installed.
2. The tension strap and the bracing strap must be replaced before fitting the convertible-top covering.

Fastening convertible-top covering at the main folding top bow

3. Fasten convertible-top covering at the main folding top bow.

3.1. Lay the convertible-top covering on the convertible-top frame, fit the front tightening strip **-1-** of the convertible-top covering in the groove of the main folding top bow **-2-** and centralise.



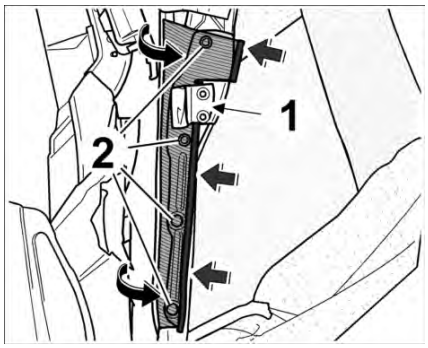
Fastening convertible-top covering at the corner bow

4. Fasten convertible-top covering at the corner bow.

4.1. Press tightening strip centre (notch marking) into groove of the corner bow (centre of the corner bow is identified by a hole).

4.2. The tightening strip is secured by tapping in the piping **-B-** .

4.3. Coat the tension hook cloth with adhesive and stick it inside around the corner bow **-A-** .

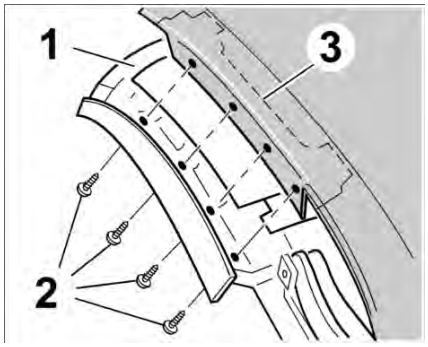


Fitting holding strap of convertible-top covering

5. Fasten holding strap of the convertible-top covering.

5.1. Position holding strap at right on convertible-top frame 3 on the inside and press in the clip.

5.2. On the left side, the holding strap is fastened with the fixing clip of the wire harness.

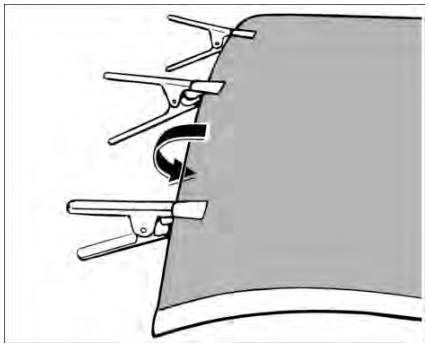


Fitting fastening strap at the main folding top bow:

6. Fasten the fastening strap at the main folding top bow.

6.1. Turn the vertical fastening strap of the convertible-top covering inward around the main folding top bow and place it on the shaped sheetmetal part. Secure with the fastening screws **-2-** . Tightening torque → **Tightening torque : 1.7 (1.5 ftlb.) Nm**

6.2. Position thrust wedge on main folding top bow and screw in place with fastening screws **-1-** . Tightening torque →**Tightening torque: 2.8 (2.0 ftlb.) Nm**

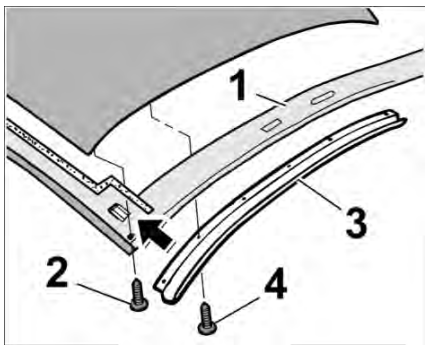


Convertible-top covering at sides of roof frame 1

7. Fasten convertible-top covering at the sides of roof frame 1.

7.1. Lay the convertible-top covering to the front and guide the shaped sheetmetal part **-3-** from above into the roof frame **-1-** .

7.2. Fasten convertible-top covering with fastening screws **-2-** starting from the rear bottom side of the roof frame. Tightening torque →**Tightening torque : 5 (3.5 ftlb.) Nm**



Fastening convertible-top covering at front

8. Fasten convertible-top covering at front.

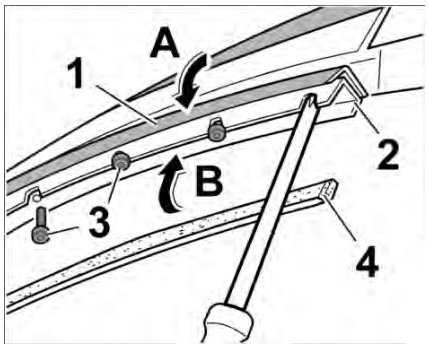
8.1. A cardboard strip and a self-adhesive strip are affixed at the front of the convertible-top covering. Pull the protective film off the adhesive tape.

8.2.

Fold the convertible-top material around the roof frame edge without wrinkles. The convertible-top covering is initially held with fixing clips.

Fastening retaining strip and convertible-top seal

9. Fasten retaining strip and convertible-top seal on roof frame 1.



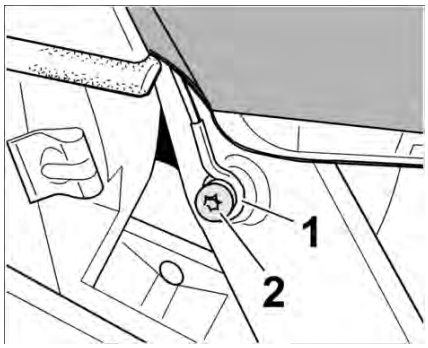
9.1. Remove fixing clips.

9.2. Insert convertible top seal **-1-** at the front corners into roof frame and tighten with fastening screws **-2-** . Tightening torque →**Tightening torque : 1.7 (1.5 ftlb.) Nm**

9.3. Position retaining strip **-3-** on roof frame 1 and tighten with fastening screw **-4-** . Tightening torque →**Tightening torque : 3.5 (2.5 ftlb.) Nm**

Note

The seal on the roof frame is in two parts.

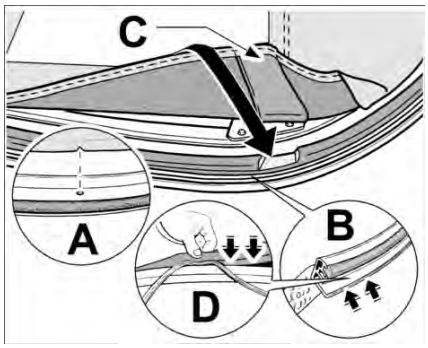


Fastening seals and retaining strip

10. Fasten seals and retaining strip at the sides of roof frame.

10.1. Position upper seal **-1-** onto retaining strip **-2-** and screw on to roof frame with fastening screws **-3-** . Tightening torque →**Tightening torque: 2.8 (2.0 ftlb.) Nm**

10.2. Press the lower seal **-4-** into the profile of the retaining strip **-2-** .



Tension cable on convertible-top covering

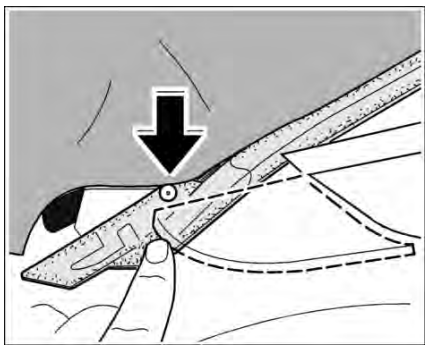
11. Fasten tension cable of convertible-top covering.

11.1. Position tension cable eyelet **-1-** on main folding top bow and screw in place with fastening screw **-2-** . Tightening torque →**Tightening torque: 7 (5 ftlb.) Nm**

Note

Cut-outs have been integrated to the right and left of the additional seal.

Fastening convertible-top covering at the tension bow

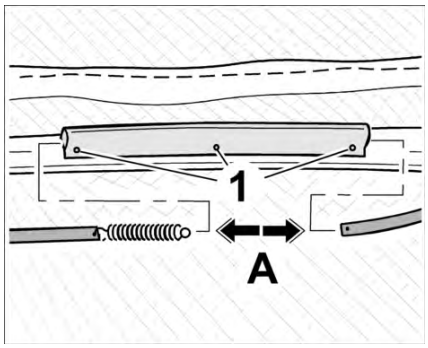


12. Fasten convertible-top covering at the tension bow.

12.1. Integrate the additional seal parallel to the tension strap **-C-** into the cut-outs on the right and left using a knife.

12.2. Press tightening strip centre (notch marking) **-A-** into the lower groove of the tension bow **-B-** (centre of tension bow is identified by a hole) **-A-** .

12.3. The reference overlap seams of the convertible-top covering must be positioned and centralised in the additional seal **-C-** cut-outs on the left and right.



12.4. Secure the convertible-top covering by tapping in the piping **-D-** .

Fitting tension bow seal

13. Fit tension bow seal.

13.1. Press tension bow seal into the lower groove of the tension bow and fasten at both ends with the fastening screws. Tightening torque →**Tightening torque: 5 (3.5 ftlb.) Nm**

Fastening tension strap at the main folding top bow

14. Fasten tension strap at the main folding top bow.

14.1. Pull the left tension strap through the fabric pocket on the main folding top bow.

14.2. Engage both ends of the tension straps in the tension spring **-A-** .

14.3. Position fabric pocket on main folding top bow and screw in place with fastening screws **-1-** .

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

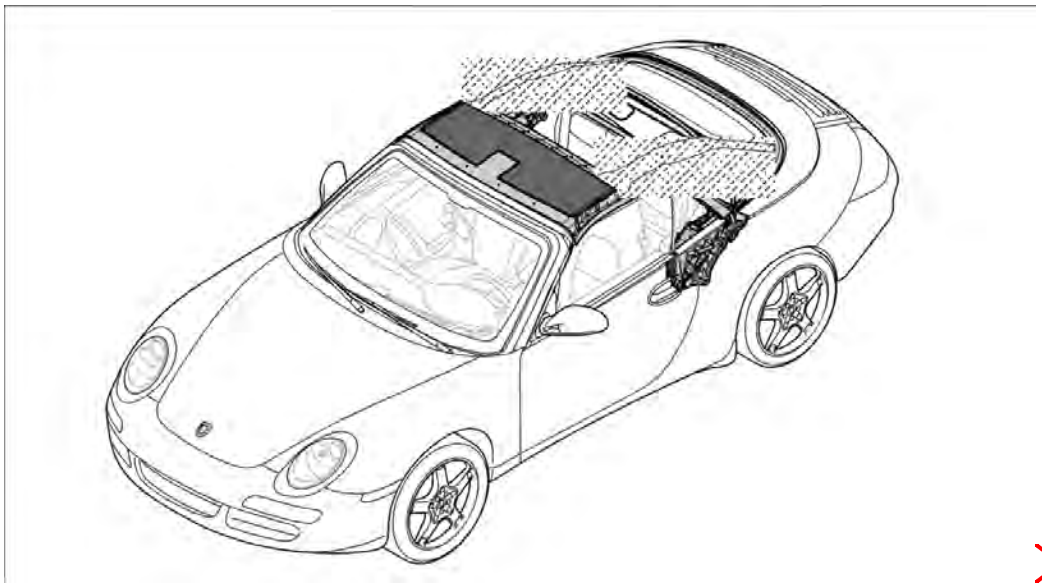
 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

61 30 55 Replacing convertible-top frame - as of MY 2005

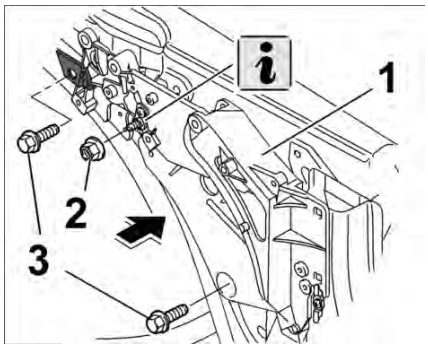


- Replacing convertible-top frame

top of page

Replacing convertible-top frame

Installing convertible top frame

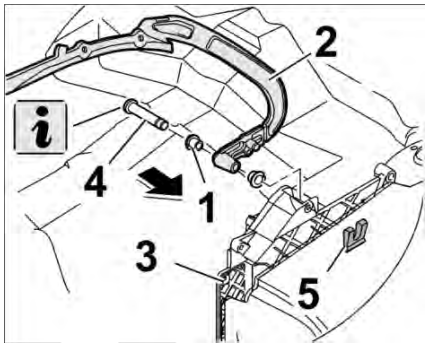


Installation Location:

Installation position for convertible-top frame

Note

Ensure that the assembly aid is seated firmly. The assembly aid must be recalibrated after removal. →610115 Adjusting convertible top



Installing convertible-top support

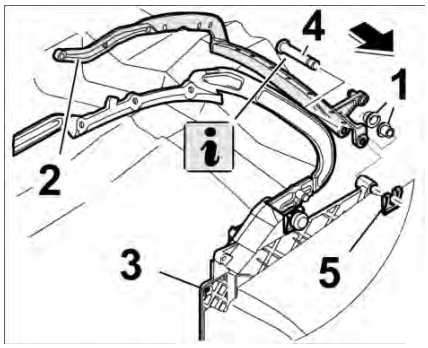
1. Install convertible-top support.

1.1. Position convertible-top support **-1-** on the assembly aid and screw down with fastening screws **-3-** or fastening nut **-2-** . Tightening torque →**Tightening torque: 23 (17 ftlb.) Nm**

Note

- *Use assembly grease when fitting the pins.*

Installing roof frame 2



2. Install roof frame 2.

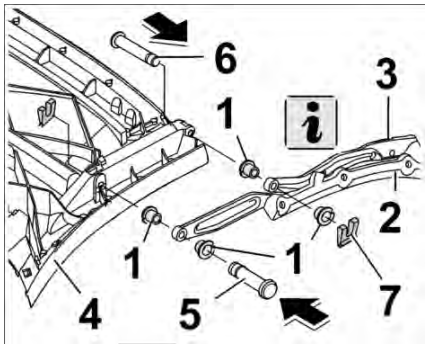
2.1. Insert bushes **-1-** into the bore of roof frame 2 **-2-** on the outboard side.

2.2. Position roof frame 2 **-2-** on convertible-top support **-3-** and connect with the pin **-4-** . Use the retaining clip **-5-** to secure the pin **-4-** .

Note

- *Use assembly grease when fitting the pins.*

Installing roof frame 3



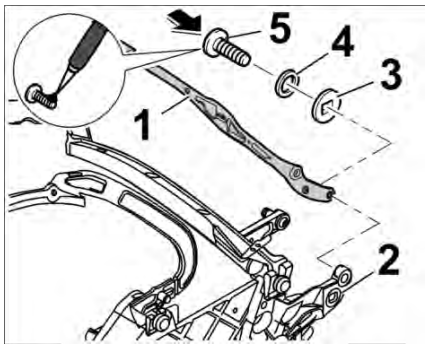
3. Install roof frame 3.

3.1. Insert bushes **-1-** in the bore of roof frame 3 **-2-** on the inboard side.

3.2. Position roof frame 3 **-2-** on the convertible-top support **-3-** and connect with the pin **-4-** . Use the retaining clip **-5-** to secure the pin **-4-** .

Note

- *Use assembly grease when fitting the pins.*

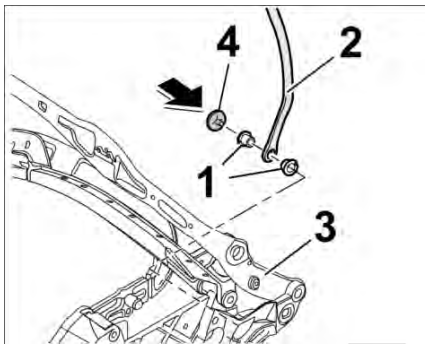


Installing roof frame 1

4. Install roof frame 1.

4.1. Insert bushes **-1-** into the bore of roof frame 2 **-2-** and roof frame 3 **-3-** on the outboard and inboard sides.

4.2. Position roof frame 2 **-2-** and roof frame 3 **-3-** on roof frame 1 **-4-** and connect with the pin **-5-** and **-6-** . Use the retaining clip **-7-** to secure the pin **-5-** and **-6-** .

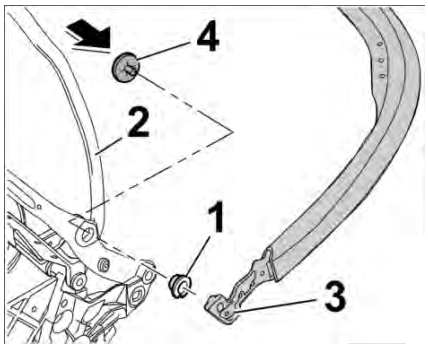


Installing main folding top bow

5. Install main folding top bow.

5.1. Position main folding top bow **-1-** on convertible-top support **-2-** .

5.2. Position square hole washer **-3-** and washer **-4-** on the main folding top bow. Coat fastening screw **-5-** with Loctite 270 and screw in. Use the fastening screw **-5-** to secure the main folding top bow. Tightening torque →**Tightening torque: 9 (6.5 ftlb.) Nm**

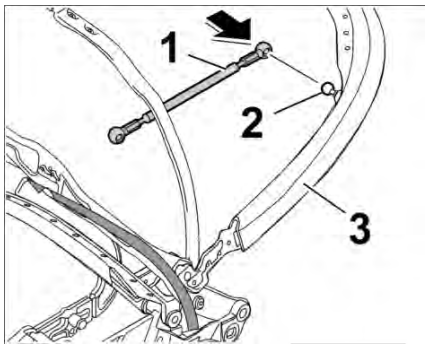


Installing corner bow

6. Install corner bow.

6.1. Insert bushes **-1-** into the bore of the corner bow **-2-**
.

6.2. Position corner bow **-2-** on the convertible-top support **-3-** and press in the anti-spread lock **-4-** . Secure the anti-spread lock with the locking pin.

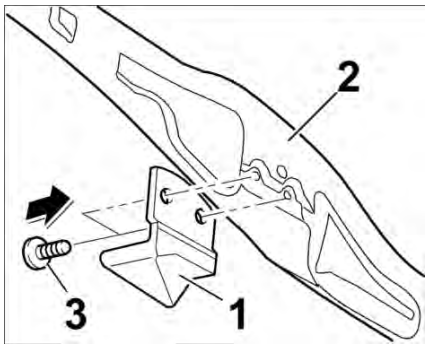


Installing tension bow

7. Install tension bow.

7.1. Insert bushes **-1-** into the bore of the main folding top bow **-2-** .

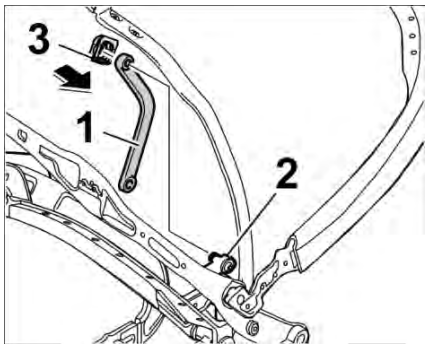
7.2. Position tension bow **-3-** on the main folding top bow and press in the anti-spread lock **-4-** . Secure the anti-spread lock with the locking pin.



Installing tension cable

8. Install tension cable.

8.1. Press tension cable **-1-** into the ball head **-2-** of the tension bow **-3-** .



9. Install centring journal. →611019 Removing and installing front mount - chapter on "Installing"

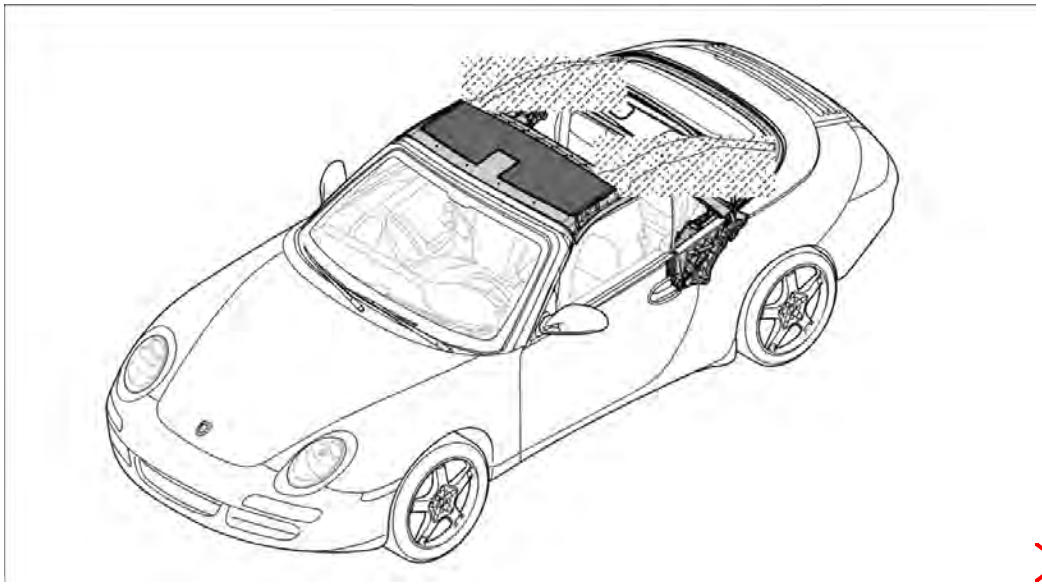
Installing thrust wedge

10. Install thrust wedge.

10.1. Position thrust wedge **-1-** on main folding top bow **-2-** and screw in place with fastening screws **-3-** . Tightening torque →**Tightening torque: 2.8 (2.0 ftlb.) Nm**

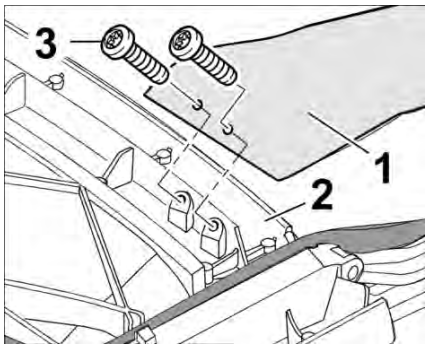
Installing lever

11. Install lever.



11.1. Position lever **-1-** on main folding top bow **-2-** and secure lever with locking clip **-3-** .

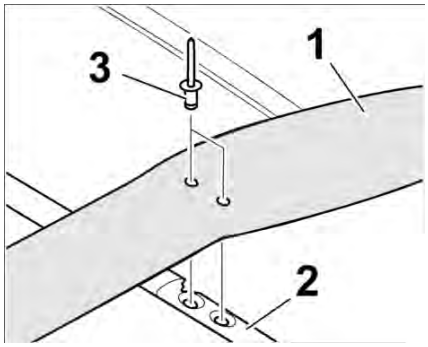
12. Install wire harness for convertible top. →975519 Removing and installing wire harness for convertible top- chapter on "Installing"



13. Install potentiometer. →616619 Removing and installing potentiometer - chapter on "Installing"

Installing tension strap

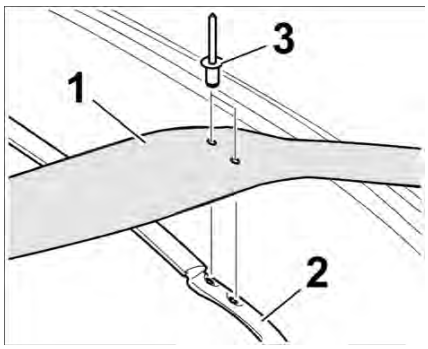
Installation Location:



Installation position for convertible-top frame

Installing tension strap on roof frame 1

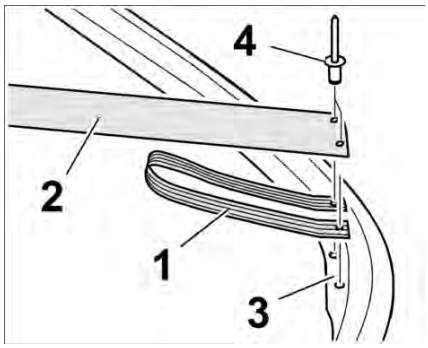
1. Install tension strap on roof frame 1.



1.1. Position tension strap **-1-** on roof frame 1 **-2-** and screw down with the fastening screws **-3-** . Tightening torque →**Tightening torque : 5 (3.5 ftlb.) Nm**

Installing tension strap on the main folding top bow

2. Install tension strap on the main folding top bow.

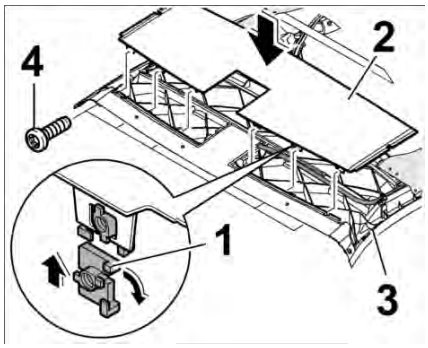


2.1. Position tension strap **-1-** on main folding top bow **-2-** at the holes provided, and use blind rivets **-3-** (in scope of parts for convertible top covering) to rivet on the tension strap **-1-** .

Installing tension strap on corner bow

3. Install tension strap on the corner bow.

3.1. Position tension strap **-1-** on corner bow **-2-** at the holes provided, and use blind rivets **-3-** (in scope of parts for convertible top covering) to rivet on the tension strap **-1-** .

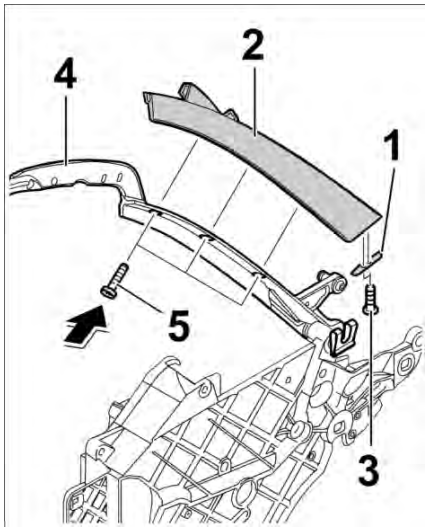


Installing tension strap and bracing strap on the tension bow

4. Install tension strap and bracing strap on the tension bow.

4.1. Position the bracing strap **-1-** as illustrated. Position tension strap **-2-** and bracing strap **-1-** on tension bow **-3-** at the holes provided, and use blind rivets **-4-** (in scope of parts for convertible top covering) to rivet on the tension strap **-2-** .

Installing plastic panel



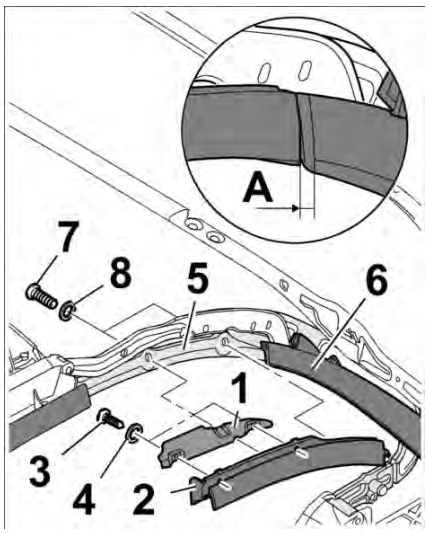
Installing plastic panel

1. Install plastic panel.

1.1. Insert fixing clip **-1-** onto plate of plastic panel from behind **-2-** and turn 90° clockwise.

1.2. Position plastic panel **-2-** on roof frame 1 **-3-** and screw down with the fastening screws **-4-** . Tightening torque →**Tightening torque : 5 (3.5 ftlb.) Nm**

Installing styling frame

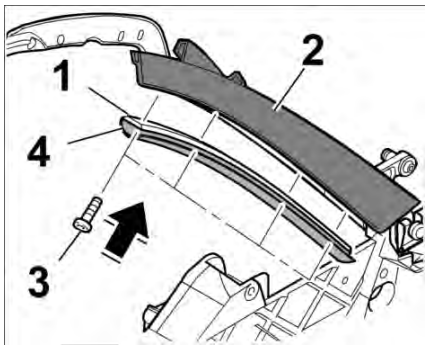


Installing styling frame on roof frame 3

1. Install styling frame on roof frame 3.

1.1. Screw air deflector **-1-** onto front face of styling frame **-2-** with the fastening screw **-3-** . Tightening torque →**Tightening torque: 1.7 (1.5 ftlb.) Nm**

1.2. Position styling frame **-2-** on roof frame 3 **-4-** and screw down with the fastening screws **-5-** . Tightening torque →**Tightening torque : 1.7 (1.5 ftlb.) Nm**

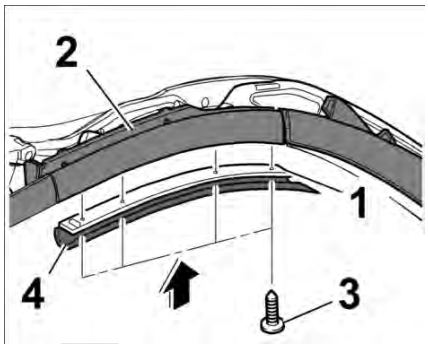


Installing styling frame on roof frame 2

2. Install styling frame on roof frame 2.

2.1. Screw down fabric guide plate **-1-** and styling frame **-2-** with the fastening screws **-3-** and washers **-4-** . Tightening torque →**Tightening torque: 1.7 (1.5 ftlb.) Nm**

2.2. Position styling frame **-2-** on roof frame 2 **-5-** . Adjust gap dimension **-A = 3,1 + 0,5-** between styling frame 2 **-2-** and styling frame 3 **-6-** . Tighten fastening screws **-7-** and washers **-8-** . Tightening torque →**Tightening torque : 9 (6.5 ftlb.) Nm**



Installing seal on styling frame (roof frame 3)

3. Install seal on styling frame (roof frame 3).

3.1. Position aluminium profile **-1-** on styling frame **-2-** and screw in place with fastening screws **-3-** . Tightening torque →**Tightening torque: 1.7 (1.5 ftlb.) Nm**

3.2. Insert seal **-4-** in the aluminium profile **-1-** .

Installing seal on styling frame (roof frame 2)

4. Install seal on styling frame (roof frame 2).

4.1. Position aluminium profile **-1-** on styling frame **-2-** and screw in place with fastening screws **-3-** . Tightening torque →**Tightening torque: 1.7 (1.5 ftlb.) Nm**

4.2. Insert seal **-4-** in the aluminium profile **-1-** .

Bildschirmdarstellung zutreffend wiedergegeben wird.

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**

- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

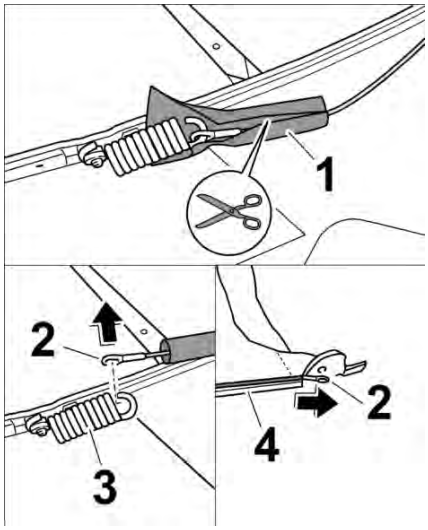
Removing tension cable

Removing tension cable



The following spare parts and tools are required for repairing the tension cable:

Tension cable

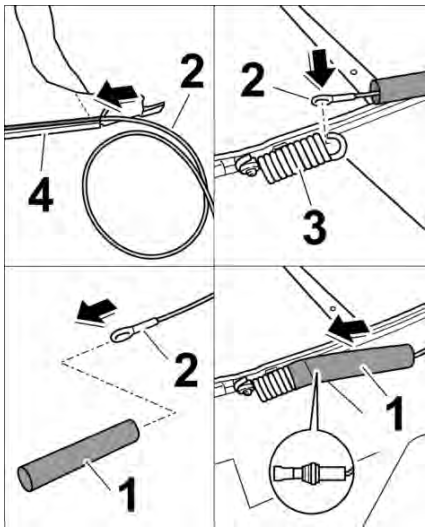
ATension cable

BEye

Removing tension cable

1. Disengage tension cable at the shaped sheetmetal part.

1.1. Cut open plastic sleeve **-1-** with a pair of scissors.



1.2. Disengage tension cable **-2-** from tension spring **-3-** at the shaped sheetmetal part.

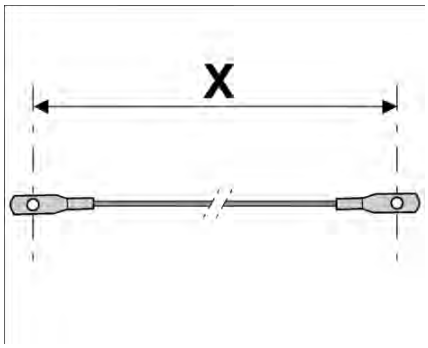
1.3. Pull tension cable **-2-** out of the spring **-4-** .

top of page

Installing tension cable

Installing tension cable

Fitting tension cable



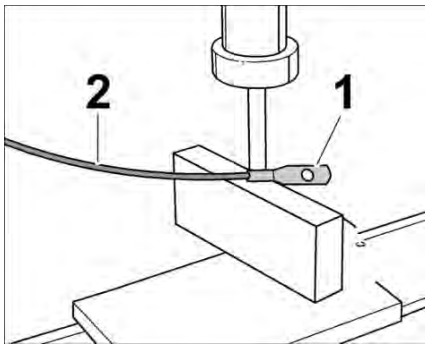
1. Fit tension cable to the shaped sheetmetal part.

1.1. Pull tension cable **-2-** into the spring **-4-** .

1.2. Push shrink-fit hose **-1-** over the tension cable **-2-** .

1.3. Engage tension cable **-2-** in tension spring **-3-** at the shaped sheetmetal part.

1.4. Pull the shrink-fit hose **-1-** over the tension spring. Shrink the shrink-fit hose to the diameter of the tension spring by heating it with a hot-air gun.



Fitting tension cable

2. Place eye on the tension cable and measure the total length.

2.1. Push the eye fully onto the end of the tension cable.

2.2. Measure total length of tension cable from centre of eye to centre of eye with a tape measure **-dimension X = 845 mm-** .

Pressing tension cable

3. Press tension cable and the eye together.

ATTENTION

Damage to eye

- **Compress the eye with the hydraulic stamp press so that the eye is only pressed in 1/4 of the diameter.**
- **If pressed together too strongly, the eye will crack.**

→

3.1. Using a commercially available hydraulic stamp press, press the eye **-1-** together with the tension cable **-2-** .

Installing convertible-top compartment lid drive gear

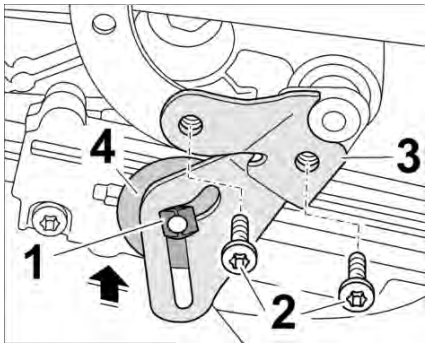
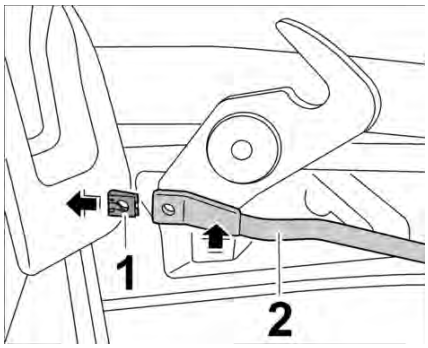
Installation Location:



Installation location of transmission for convertible-top compartment lid drive

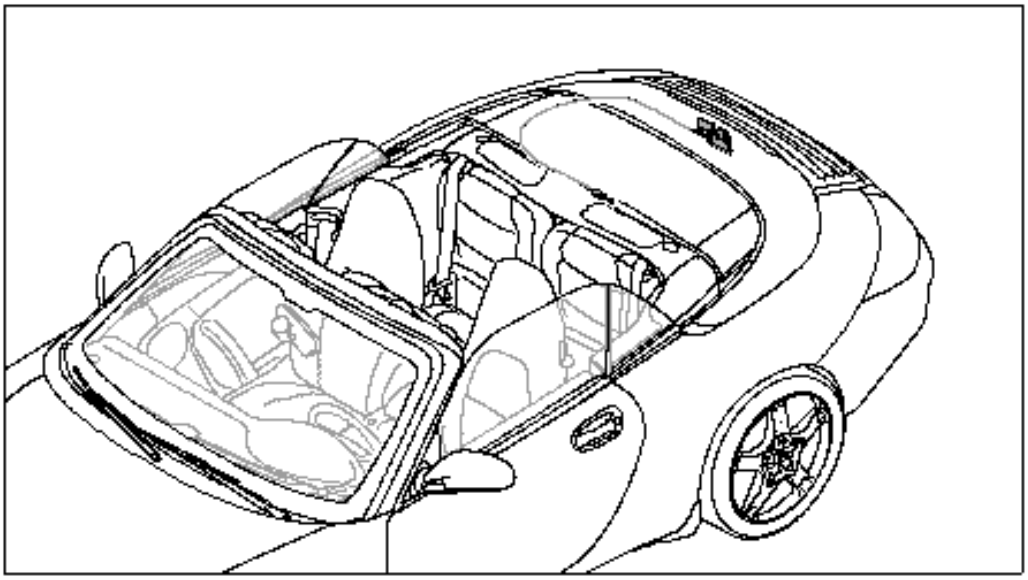


Installing driving mechanism

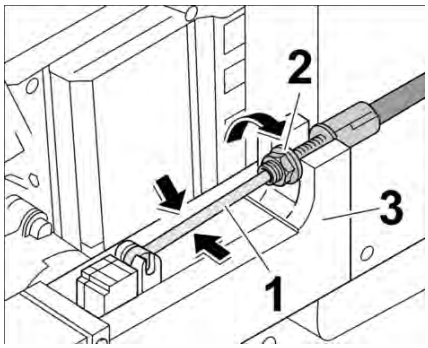
1. Position driving mechanism **-1-** in the centre on the hinge and screw down the positioning bolts **-2-** . Tightening torque →**Tightening torque: 7 ftlb.**

Installing deflector rail

2. Push in plastic washer **-4-** .
3. Position deflector rail **-3-** on hinge and secure with fastening screws **-2-** . Tightening torque →**Tightening torque: 7 ftlb.**
4. Press in fixing clip **-1-** .



Engaging lever



5. Position lever **-2-** on locking hook and clip into fastening clip **-1-** .

Engaging cable for locking hook

Installation Location:

Installation location for locking hook cable

Engaging cable for locking hook

1. Insert nipple in the driving mechanism **-3-** , adjust cable for locking hook **-1-** using the hexagon nut **-2-** so that it is without play.

 WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

Installation location for hydraulic pump

Installing support for hydraulic pump

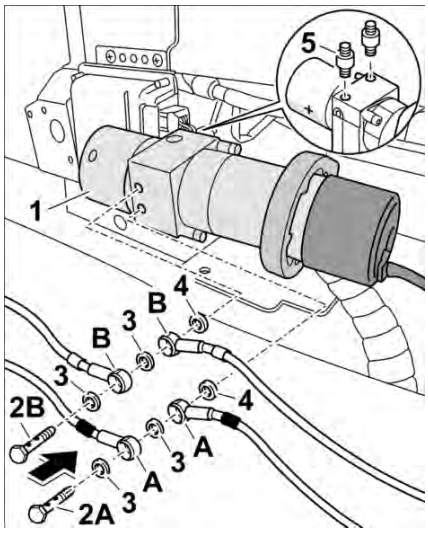
1. Position support for hydraulic pump **-2-** on frame for roll-over protection system **-arrow A-** and screw down the fastening nuts **-4-** . Tightening torque →**Tightening torque : 7.5 ftlb.**
2. Press fixing clip **-1-** on wire harness **-3-** in the support **-arrow B-** .

Installing hydraulic pump

Installation Location:

Installation location for hydraulic pump

ATTENTION



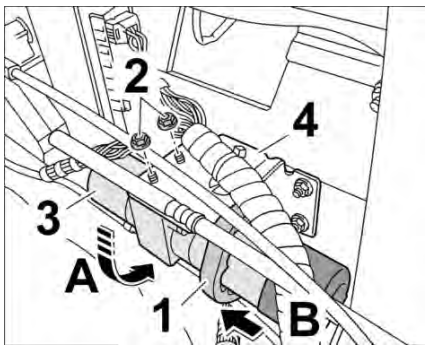
Damage to hydraulic lines.

→ Do not bend, trap or crush hydraulic lines when removing and installing.

→ Pay special attention when routing hydraulic lines in the clips.

Note

Always replace sealing rings.

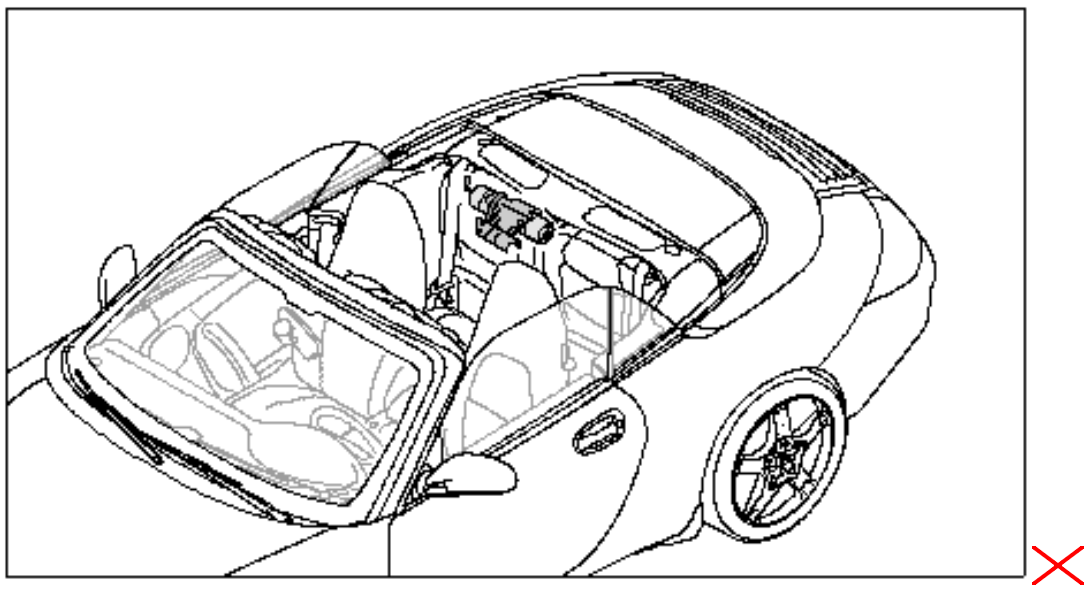


Connecting hydraulic line

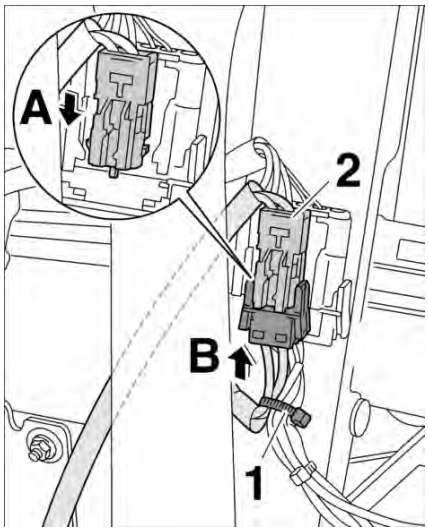
1. Screw down silent mount -5- .
2.

Push on sealing rings **-3, 4-** and hydraulic lines **-A-** with the red ring. Screw in banjo bolt **-2A-** on the lower or right side of the hydraulic pump **-1-** . Tightening torque →**Tightening torque: 9 ftlb. +1.5 ftlb.**

3. Push on sealing rings **-3, 4-** and hydraulic lines **-B-** with the blue ring. Screw in banjo bolt **-2B-** on the upper or left side of the hydraulic pump **-1-** . Tightening torque →**Tightening torque: 9 ftlb. +1.5 ftlb.**



Fastening hydraulic pump



4. Position hydraulic pump **-3-** on holder for hydraulic pump **-4-** **-arrow A-** and screw down the fastening nuts **-2-** .
5. Push in rubber holder **-1-** in support for hydraulic pump **-arrow B-** .

Locking electric plug connection for hydraulic pump

Installation Location:

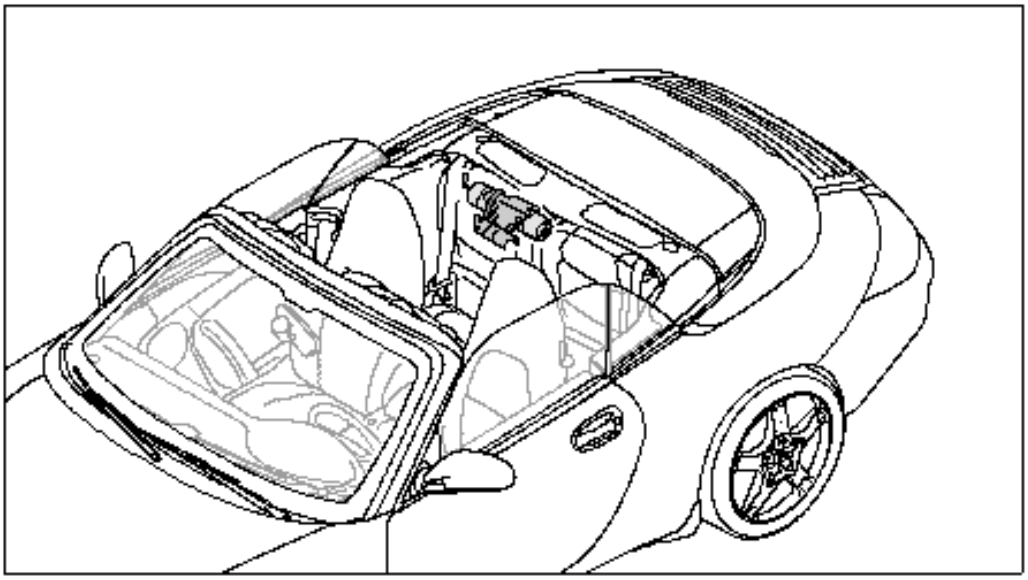
Installation location for hydraulic pump

Locking plug connection for hydraulic pump

1. Push plug connection **-2-** in bracket **-arrow A-** and join plug connection **-arrow B-** .
2. Insert new tie-wrap **-1-** around wire harness for hydraulic pump and fasten.

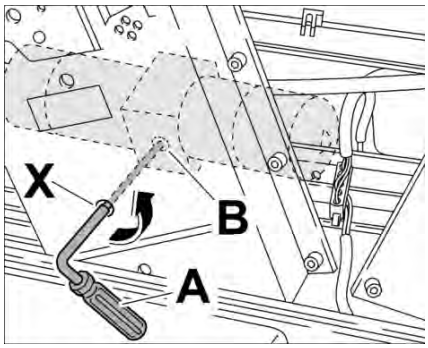
top of page

General information on the hydraulic system



The hydraulic system is sensitive to penetration of dirt. As soon as the system is opened by the plug, a cloth must be placed under the hydraulic lines to catch escaping hydraulic oil.
The hydraulic convertible top uses a closed hydraulic system. In general, the hydraulic system will need to be filled only if the hydraulic circuit was opened (after parts replacement). Only Original Porsche hydraulic oil →OIL must be used when changing or topping up the hydraulic oil.

top of page



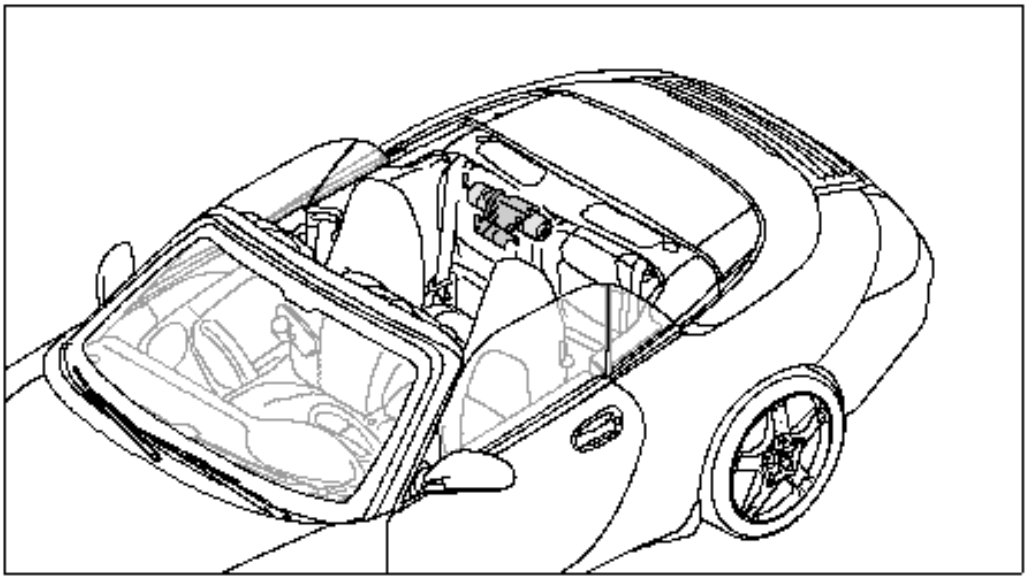
Opening and closing hydraulic valve of the hydraulic pump

Access for opening and closing the hydraulic valve

Installation Location:

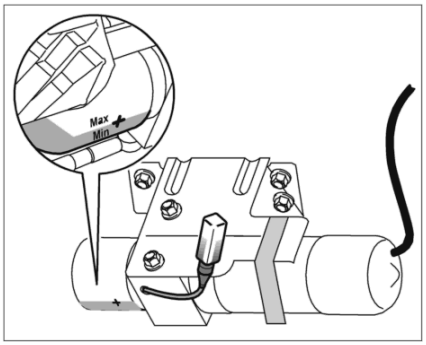
Installation location for hydraulic pump

Opening and closing hydraulic valve



To open, insert the Allen key **-A-** through the bore **-X-** of the roll-over bar module into the hydraulic valve **-B-** and turn approx. 1 turn to the left.
To close, insert the Allen key **-A-** through the bore of the roll-over bar module **-X-** into the hydraulic valve **-B-** and turn to the right.

top of page



Filling and bleeding the hydraulic system

Filling the hydraulic system

Installation Location:

Installation location for hydraulic pump

Filling the hydraulic system

It is essential to lay a cloth underneath the hydraulic pump when filling. Do not fill above the cross hair marking.

1. Unscrew screw plug.
2. Fill system only using Original Porsche hydraulic oil →OIL .
3. Screw in plug. Tightening torque →**Tightening torque: 7.5 ftlb. +0.5 ftlb.**

Bleeding the hydraulic system

ATTENTION

Damage to the convertible-top frame if not running synchronously.

- **Bleed the hydraulic system only after the hydraulic cylinders have been removed from the convertible-top supports and drive levers on the left and right.**

→

The system has a self-bleeding feature. Three to four operations will bleed the system. After bleeding, check the oil level in the container on the hydraulic pump and check if necessary.

To bleed, the hydraulic valve must be closed.

Installation location for hydraulic pump

Opening and closing hydraulic valve

To open, insert the Allen key **-A-** through the bore **-X-** of the roll-over bar module into the hydraulic valve **-B-** and turn approx. 1 turn to the left.
To close, insert the Allen key **-A-** through the bore of the roll-over bar module **-X-** into the hydraulic valve **-B-** and turn to the right.

Bleeding the hydraulic system

ATTENTION
Damage to the convertible-top frame if not running synchronously.

- **Bleed the hydraulic system only after the hydraulic cylinders have been removed from the convertible-top supports and drive levers on the left and right.**

→

The system has a self-bleeding feature. Three to four operations will bleed the system. After bleeding, check the oil level in the container on the hydraulic pump and check if necessary.
To bleed, the hydraulic valve must be closed.

 WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

Programming control unit for convertible top

Reading out and writing values for convertible top control unit

 WARNING

Sudden voltage interruption of the power supply to the control module.

- **Destruction of the control module.**

→ During programming, it is essential to guarantee the power supply for the Porsche System tester. It is essential to connect a battery charger with a current rating of at least 40 A to the vehicle battery.

→ Prior to disconnecting the control module, switch off the ignition and remove the ignition key.

 **Note**

The **PIWIS tester 9718** instructions take precedence and in the event of a discrepancy these are the instructions that must be followed. Deviations may occur with later software versions.
The procedure described here has been structured in general terms; different text or additions may appear in the **PIWIS tester 9718**.

1. Connect the Porsche System Tester to the vehicle and start the System Tester. Switch on ignition. >> Continue.
2. Select the vehicle type.
3. Switch from the vehicle type to the list of control units.
4. Select **convertible top** with the cursor keys and press the >> key.
5. Select **Control unit replacement** with the cursor keys and press the >> key.

6. Select **Read out values** (codings) with the cursor keys and press the >> key.
7. The message **Codes successfully read out** appears on the screen of the Porsche System Tester. Press >> .
8. Switch off ignition and replace control unit.
9. Switch to the **Special functions** menu and perform the **vehicle handover** using the F8 key.
10. In the **Special functions** menu, erase **All fault memories** by pressing >> .
11. Carry out automatic search of control units.
12. In the menu **Write in data** >> , the data read-out is installed.
13. System Tester displays **Coding write-in complete** >> .
14. Change to the **Coding** menu and compare the coding with the vehicle equipment. Recode if necessary.
15. Leave menu and read out fault memory.

9. Calibrate convertible top. →619619 Removing and installing control unit for convertible top - section on "Calibration"
10. Carry out a convertible top operation and read out fault memory.

top of page

Calibrating the convertible top

Calibrating the convertible top

Note

- *The convertible top opens and closes automatically during convertible-top calibration with the **PIWIS tester 9718**. Calibration can be started irrespective of whether the convertible top is open or closed. The latching hook in roof frame 1 does not close during calibration. There must not be any objects in or on the convertible top to obstruct this.*

1. Connect and switch on the **PIWIS tester 9718**.
2. Switch on ignition.
3. Select the menu item **Convertible top, Drive links**, and select **Calibrate** menu item in the command line which then appears.
4. Start calibration with the F7 key.

Installing rear bumper

Installing heat shield at the sides

Installation Location:

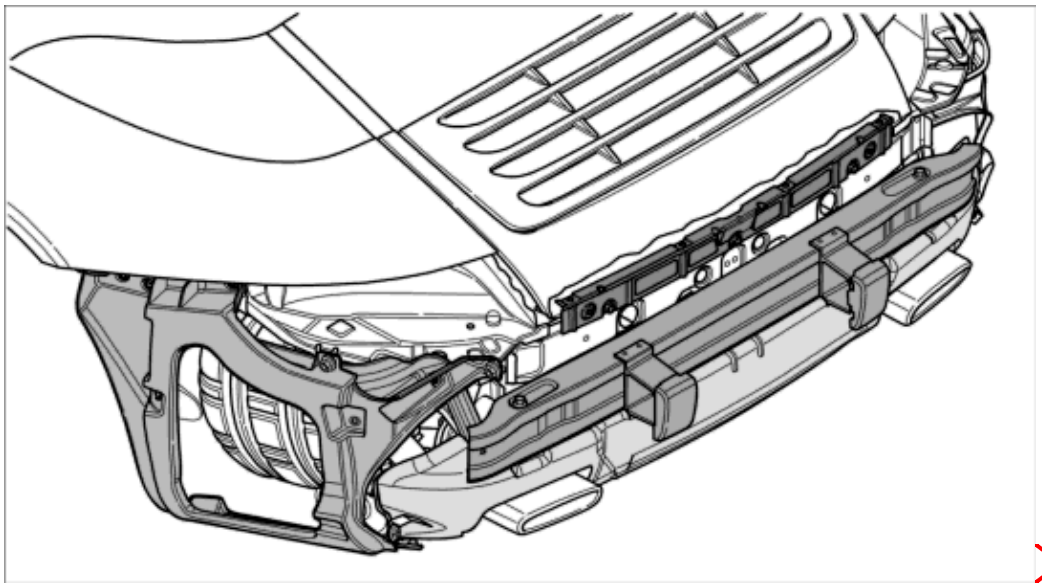
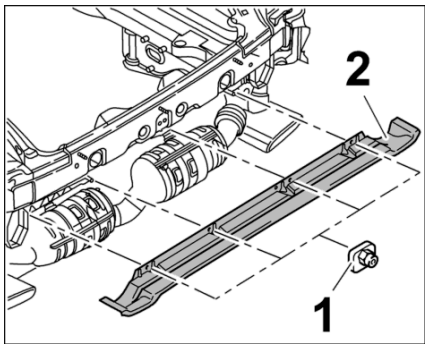
Overview, rear bumper



Installing heat shield at the sides

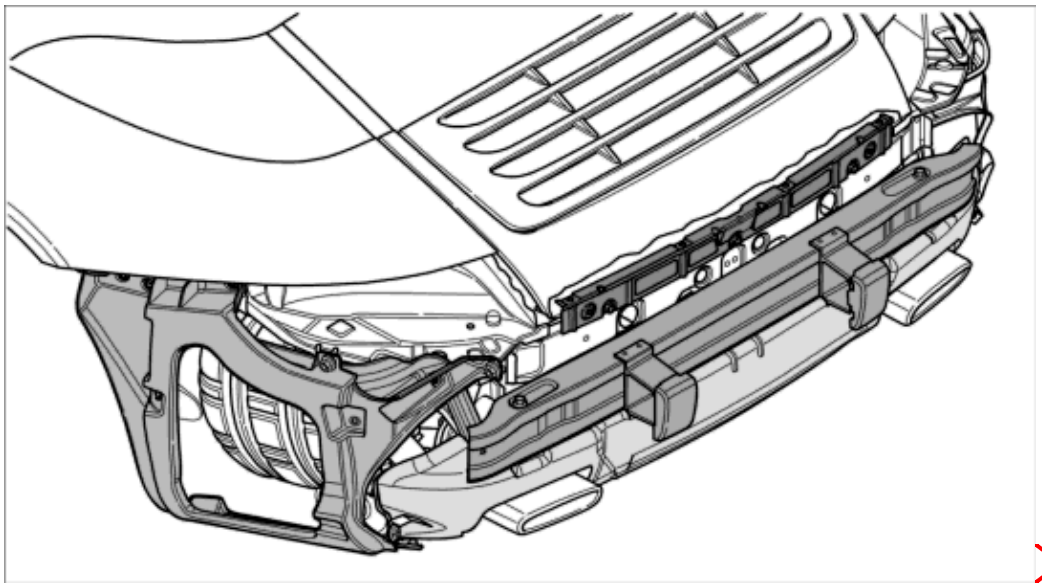


1. Position the heat shield at the sides **-3-** so that these against the side section without gaps.
2. Screw on fastening nuts **-1-** and fasten using tightening torque →**: 7 ftlb.** .
3. Screw on fastening screw **-2-** and fasten using tightening torque →**: 7 ftlb.** .

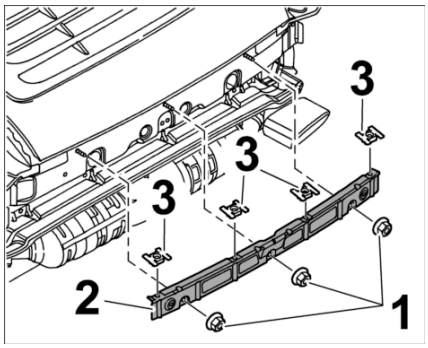
Installing centre heat shield

Installation Location:

Overview, rear bumper



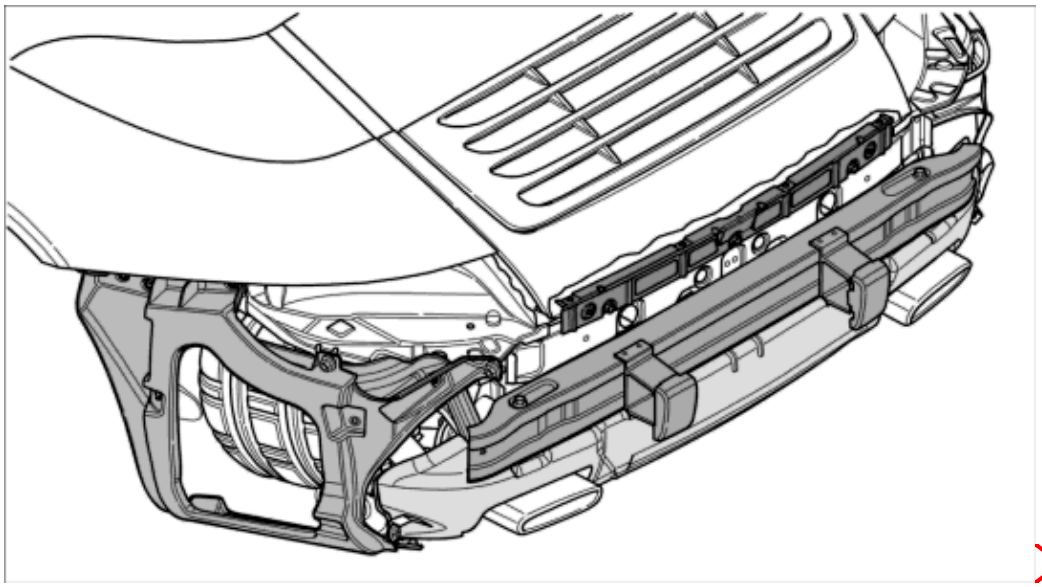
Installing centre heat shield



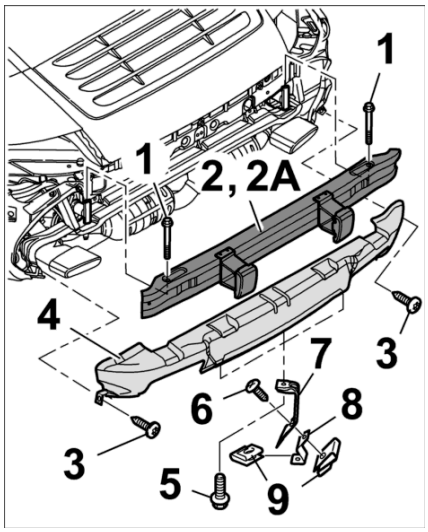
1. Screw on centre heat shield **-2-** with fastening nuts **-1-** .

Installing centre retaining strip

Installation Location:



Overview, rear bumper



1. Position centre retaining strip **-2-** with sheetmetal nuts attached **-3-** .
2. Screw on fastening nuts and fasten with tightening torque →**: 7 ftlb.** .
3. Check the adjustment dimensions of the centre retaining strip and correct if necessary.

Installing rear bumper

Installation Location:

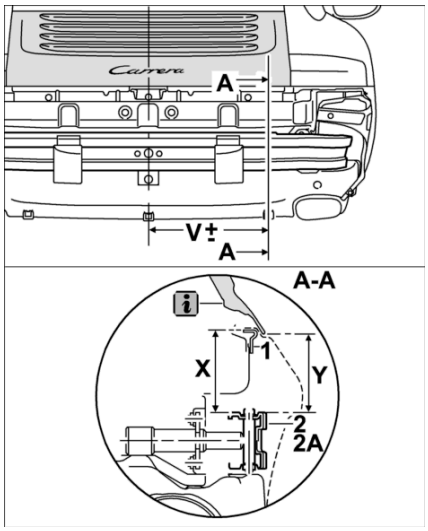
Overview, rear bumper

Installing rear bumper

1. Position lower centre heat shield **-4-** together with rear support **-7-** and screw in with fastening screws **-5-** .
2. Position connecting angle **-8-** and screw in with fastening screws **-6-** .
3. Position rear bumper **-2-** or (USA/Canada version) **-2A-** with mounted centre heat shield **-4-** in a downward direction.
4. Screw in fastening screws **-1-** and tighten using tightening torque →**: 63 ftlb.** .
5. Screw in fastening screws **-3-** .
6. Check the adjustment dimensions of the rear bumper and the assembly of the heat shield and correct if necessary

top of page

Additional assembly instructions for installation of the bumper



Adjustment dimensions of the bumper

Note

- *In order to reduce adjustment work to a minimum when assembling the rear spoiler, the rear bumper or centre retaining strip must be aligned with the lower support of the rear lid according to the dimensions shown above.*
- *However, the precondition for precise positioning of the components is that the rear lid is optimally adjusted and correctly locked in the lock in accordance with the joining plan, before the rear bumper or centre retaining strip are assembled.*

Note

All measurements refer to the position **-V = 280 mm-** .

Adjustment dimensions of the bumper

1. Adjust the rear lid according to the joining plan. *→5 Diagram - body gap dimensions*
2. Adjust the rear bumper **-2, 2A-** on both sides to dimension **-X = 173 mm-** . The measurements can be changed by undoing or moving the impact pipes or impact absorbers (Canada version).
3. Adjust the centre retaining strip **-1-** according to dimension **-Y = 171 mm-** .

Correct assembly of the heat shields

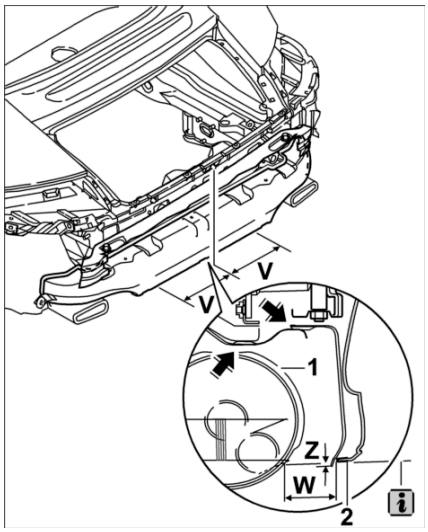
ATTENTION

Damage will result if heat shields are fitted incorrectly!

- **Observe the following points during assembly!**

→ Make sure the heat shields **-Pfeil-** overlap correctly.

→ There should not be any continuous gaps along the entire length of the heat shields.



→ A gap of up to 2 mm wide and 30 mm long is permissible locally.

→ At least more than 80 % of the total sealing area must be sealed off without gaps.

→ The following minimum gap dimensions must be observed.

Note

All measurements refer to the position **-V = 280 mm-** .

Correct assembly of the heat shields

1. After assembly of the rear spoiler, check that there is a gap dimension of **-W = 40 mm-** between the shield of the exhaust system **-1-** and the lower retaining strip **-2-** . The heat shield must not project **-Z = 2 mm-** .

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

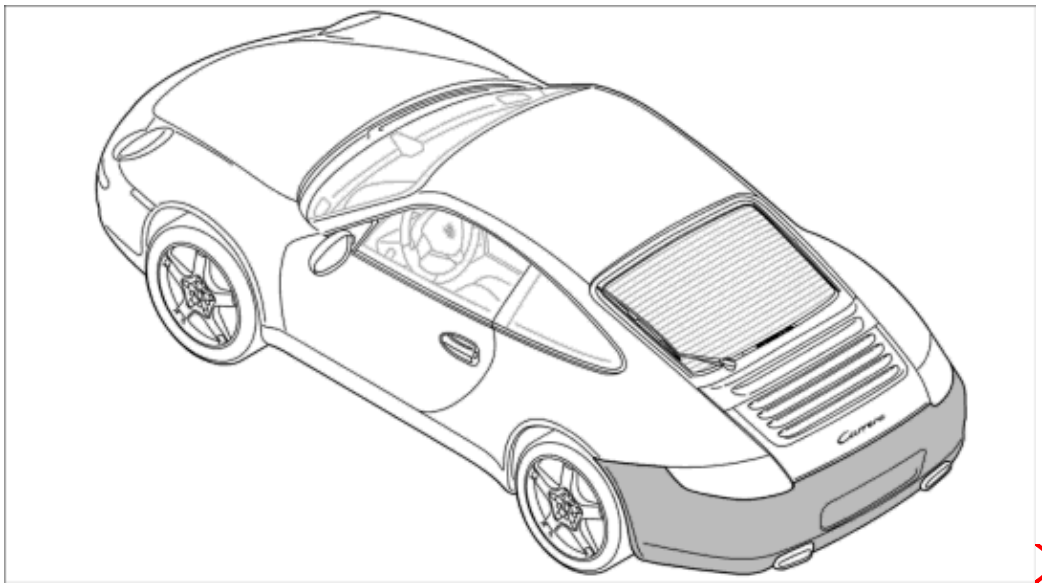
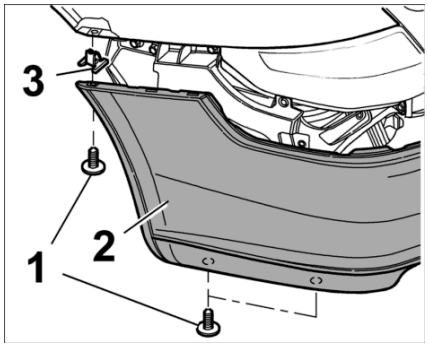
General warning notes

General warning notes



General warning notes for rear spoiler. → *Safety notes*

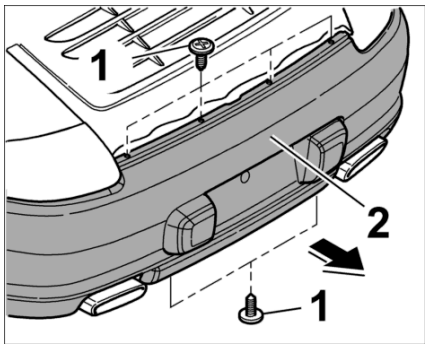
top of page



Removing rear spoiler

Removing rear spoiler

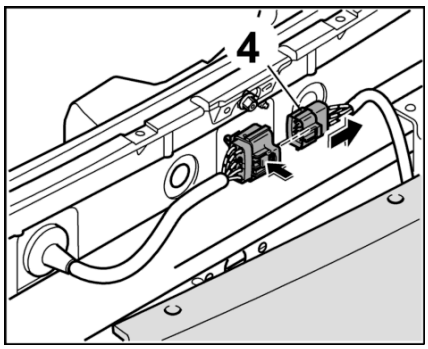
Installation Location:



Installation position of rear apron

Undoing rear spoiler at the sides

1. Unscrew fastening screws **-1-** at the sides of the rear spoiler **-2-** .
2. Check sheetmetal nuts **-3-** , replace if necessary.



Undoing rear spoiler at the top and bottom

3. Unscrew fastening screws **-1-** at the top and bottom of the rear spoiler **-2-** .

Note

Two persons are needed to disengage and engage the rear apron!

4. Pull rear apron **-2-** carefully to the rear until the plug connection can be reached.

Disconnecting plug connection

5. Press lug **-arrow-** of the plug connection **-4-** and disconnect it.
6. Remove rear spoiler.

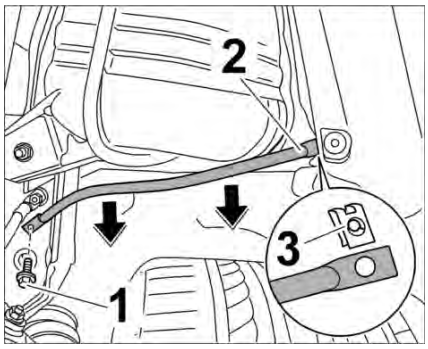
top of page

Installing rear spoiler

Safety instructions for the heat shield

ATTENTION

The installation of deformed heat shields will cause damage!



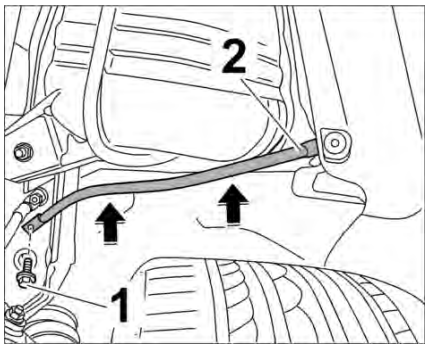
- **The installation of deformed heat shields will cause damage due to parts heating up!**

→ Damaged or distorted heat shields must be straightened or replaced.

→ Check heat shields for deformation, fixing of the aluminium braided cord, tears and missing or damaged fixing tabs.

→ After fitting the bumper, check heat shields and aluminium braided cord for leaks.

Removing and installing strut for rear apron

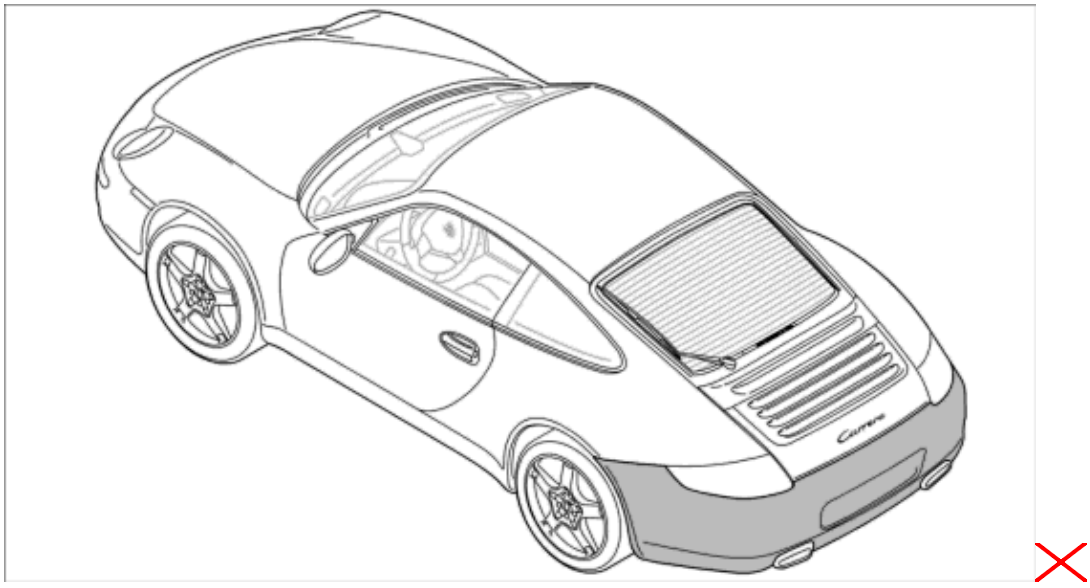


Removing strut for rear apron

1. Remove strut

1.1. Unscrew fastening screw **-1-** and remove strut **-2-** .

1.2. Check strut **-2-** and fastening nut **-3-** , and replace if necessary.



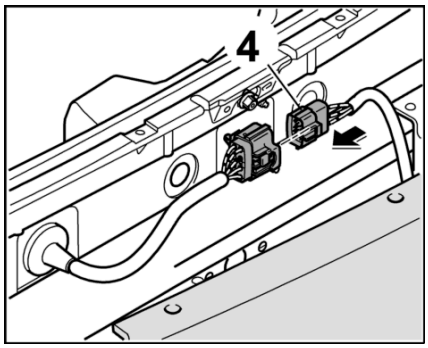
Installing strut for rear apron

2. Install strut

2.1. Position strut **-2-** on the body and screw down with the fastening screw **-1-** . →**Tightening torque: 9.7 (7.0 ftlb.) Nm +/-20 %**

Installing rear spoiler

Installation Location:



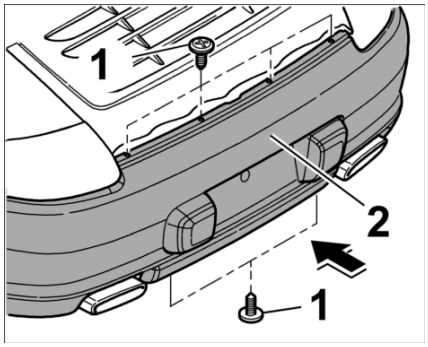
Installation position of rear apron

1. Before installing the rear apron, the following points must be carried out:

1.1. Inspect heat shield on vehicle and replace if necessary. →635019 Removing and installing rear bumper - chapter on "Checking and adjusting"

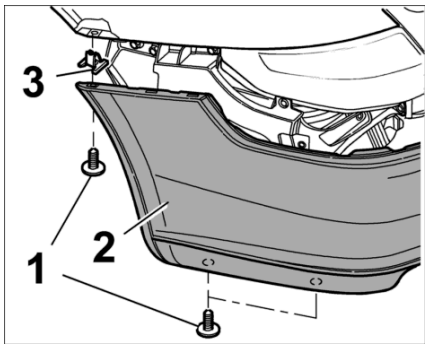
1.2. Check adjustment of rear lid, and correct if necessary. →559015 Adjusting rear lid - chapter on "Adjusting"

1.3. Check mounting points (fastening nuts) of rear apron, and replace if necessary.



Connecting the plug connection

Note



Two persons are needed to disengage and engage the rear apron!

2. Position rear apron on vehicle until the electric plug connection **-4-** can be connected.

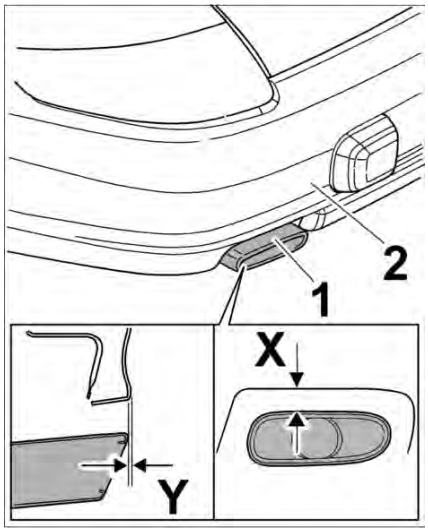
Fastening rear spoiler at the top and bottom

3. Position rear apron **-2-** fully on the vehicle.
4. Screw down fastening screws **-1-** at the top and bottom of the rear apron **-2-** . →**Tightening torque: 2.8 (2.0 ftlb.) Nm**

Fastening rear spoiler at the sides

5. Screw in fastening screws **-1-** at the sides of the rear apron **-2-** . →**Tightening torque: 2.8 (2.0 ftlb.) Nm**

top of page



Dimensions of tailpipes

Gap dimensions of tailpipe

ATTENTION
Heating of vehicle parts.

- **Damage will result if tailpipe is fitted incorrectly!**

→ The following gap dimensions must be observed.
→ After the test drive check the gap dimension again and readjust if necessary.

Gap dimensions of tailpipes

1. Check gap dimensions of tailpipes **-1-** from rear apron **-2-** , and replace tailpipes if necessary. →263419 Removing and installing tailpipe - chapter on "Installing"

→**Gap dimension: 28 mm**
→**Fugenmaß: 29 mm**
→**Gap dimension: 2 mm**

 WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

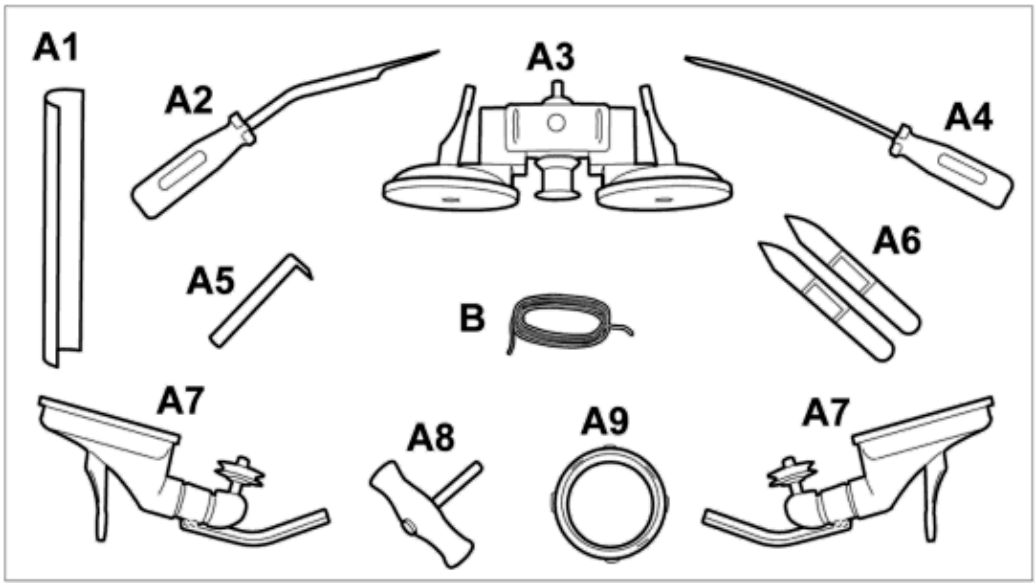
Tools and materials

Tools and materials



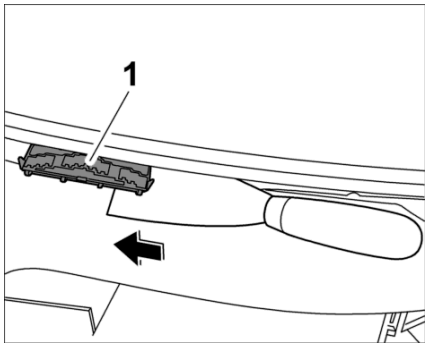
The following tools and materials are required for removing and installing the windscreen with 2-component adhesive:

Tools and materials

Item .	Designation	Source	Explanation
-A-	**Double cartridge gun vas 5237**	→"See Workshop Equipment Manual, Chapter 3.5"	
-B-	**Pipette vag 1344**	→"See Workshop Equipment Manual, Chapter 3.5"	
-C-	**Special electric cutter (fine) vag 1561 a**	→"See Workshop Equipment Manual, Chapter 3.5"	
-D-	**Flashing knife, U-type 639.031.130.22**		
-H-	**2-component window bonding agent 000.043.300.94**		Contains set components

Item .	Designation	Item .	Designation
-H1-	Cleaning solution	**-H5-**	Cartridge, component A
-H2-	Primer	**-H6-**	Cartridge, component B
-H3-	Activator	**-H7-**	Mixing nozzle
-H4-	Swab	**-H8-**	Processing nozzle

Glass separating tool



Item	Designation	Source	Explanation
-A-	**Glass separating tool vag 1474 b**	→"See Workshop Equipment Manual, Chapter 3.5"	Contains set components A1-A9
-B-	**Cutting thread**	→"See Parts Catalogue in Main Group 8"	

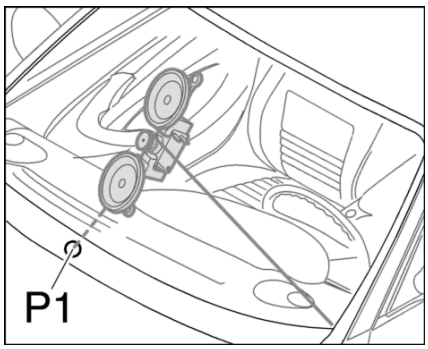
Item	Designation	Item	Designation
-A1-	Guide rails	**-A6-**	Filler
-A2-	Cutting tool (wire holder)	**-A7-**	Steering roller with arm bracket
-A3-	Spooling device	**-A8-**	Handle
-A4-	Awl	**-A9-**	Square cutting wire
-A5-	Guide rails		

top of page

Removing windscreen

Removing spacer blocks

Removing spacer blocks



1. Insert a spatula under the spacer blocks **-1-** and remove the expanding rivets. Spacer blocks **-1-** must be replaced.

Removing windscreen

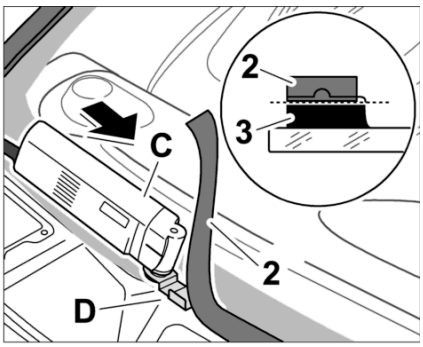
Note

- *The door windows must not be closed until after the curing time has elapsed.*

1. Lower the door windows.

Removing windscreen

2. Remove windscreen with the cutting wire separator. → *General information on installing and removing car windows*



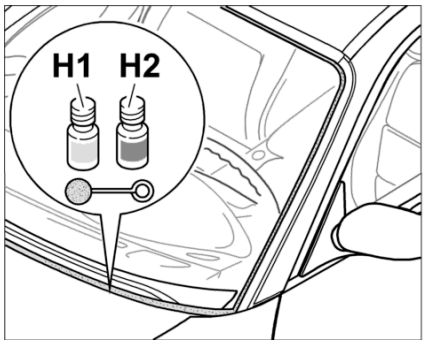
top of page

Preparing window frame for installation

Removing adhesive from the body

Note

- *The surface coating of adhesive residue on the window aperture of the body acts as an adhesive base for new bonding material. Keep cut surfaces clean and free of grease and do not clean with cleaning solution.*



Removing adhesive from the body

1. When removing remaining adhesive **-2-** with the cutting tool **-C-** and the flashing knife **-D-** on the body, ensure that a surface coating of adhesive remains **-3-** .

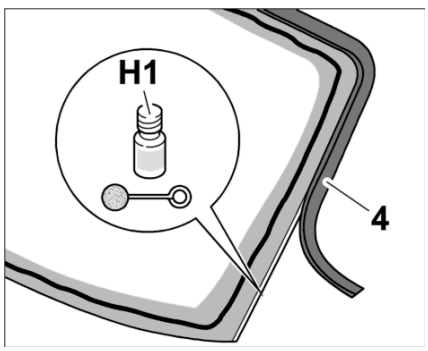
Cleaning and priming areas that are free of adhesive residue or have paint damage or where there is newly built-up paint in the window aperture of the body

Note

- *A flash-off time of at least 2 minutes must be observed between the cleaning of the window aperture and the application of the primer! No cleaning solution residues must remain on the body.*

Cleaning and priming the body

1. Clean areas that are free of adhesive residue or have new paint or where there is damage to the top coat paint in the non-visible area of the window aperture in the body with cleaning solution **-H1-** and touch up with primers **-H2-** .



top of page

Preparing windscreen for installation

Removing windscreen seal

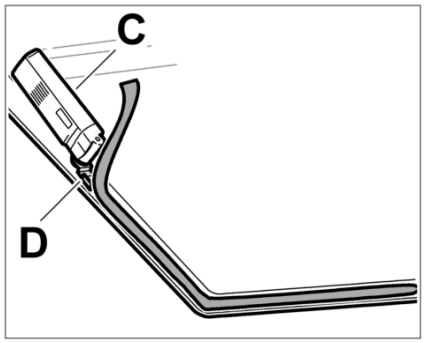
Note

- *Only if the windscreen is re-installed*

Pull off the seal

1. Pull off the seal **-4-** . Remove adhesive residues with cleaning solution **-H1-** .

Cleaning and priming areas that are free of adhesive residue or have paintdamage or where there is newly b

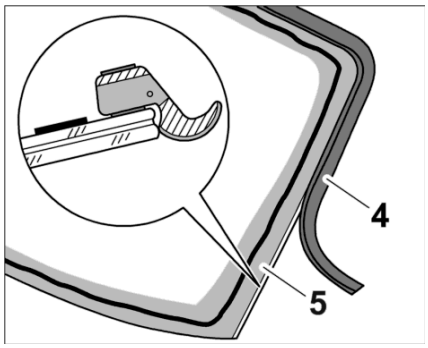


Removing adhesive from the windscreen

Note

- *Only if the windscreen is re-installed*

Note

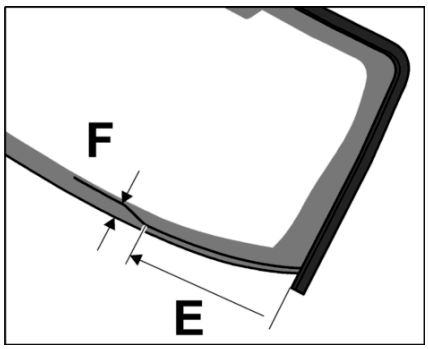


- *The remaining adhesive helps new adhesive to stick. Keep cut surfaces clean and free of grease and do not clean with cleaning solution.*

Removing adhesive from the windscreen

1. Equip cutting device **-C-** with the flashing knife **-D-** and remove the remaining adhesive from the windscreen, ensuring that a surface coating of adhesive remains.

Fitting windscreen seal



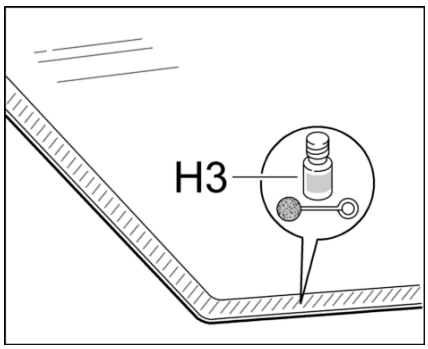
Fit the windscreen seal

1. Stick seal **-4-** to the windscreen **-5-** from one edge along the entire border.

Marking the bonding area

Note

- *Only if the windscreen is new and does not have a preliminary coat*



Marking the bonding area

1. Before applying the adhesive, mark the course of the adhesive bead in accordance with the dimensions **-E-** = 160 mm, **-F-** = 30 mm on the left and right on the lower edge of the windscreen.

Activating the bonding section of the windscreen

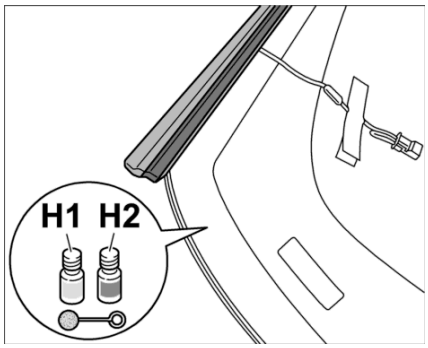
Note

- *Only if the windscreen is re-installed*

Activating the bonding section of the windscreen

1. During long idle periods (> 24 hours) apply activator **-H3-** to the remaining adhesive.

Priming the windscreen



Note

- *Only with new windscreens*

Note

- *A ventilation period of at least 2 minutes must be observed between the cleaning of the glass and the application of the primer! No cleaning solution residues may remain on the body.*

1. Clean the windscreen with cleaning solution **-H1-** .

Priming the windscreen

2. Apply primer **-H2-** to the glass flange in the area of the marking.

top of page

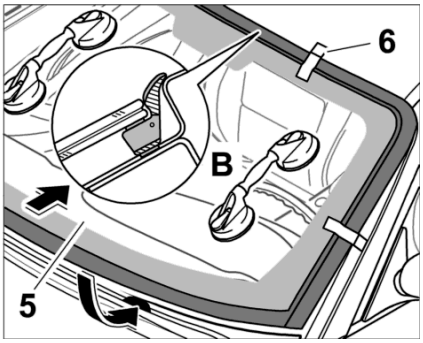
Installing windscreen

Preliminary work before windscreen installation

Note

- *The removed windscreen can be reinstalled if there was no prior damage to the windscreen and the windscreen was removed without damage.*

1. Clip in spacer blocks and press in body-bound rivets.
2. Installing cover for instrument panel (defroster cover). *→ 23 Removing and installing cover for instrument panel (defroster cover) - installing*



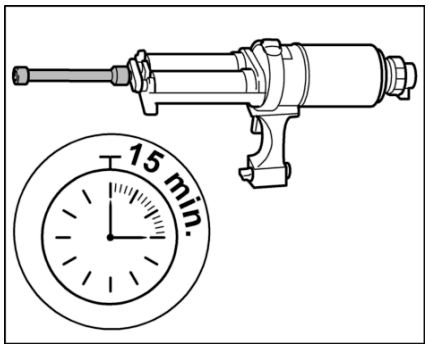
Fitting windscreen into the body

Note

- *Two persons are needed to insert and adjust the windscreen.*

Note

- *Owing to the bonding section, the windscreen can no longer be aligned on the seal because the section immediately adheres to the windscreen when inserted.*



Fitting windscreen into the body

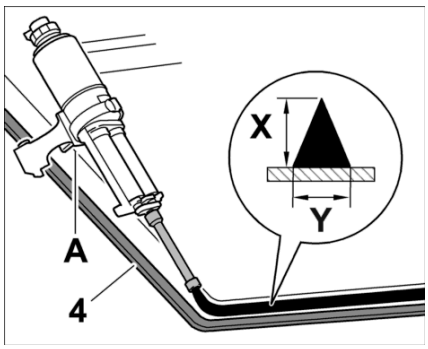
1. Apply suction cups **-B-** to the windscreen **-5-** and insert the windscreen into the window aperture. Press the windscreen **-5-** up as far as it will go. When doing so, press the lower edge of the glass against the spacer blocks. Mark the windscreen with adhesive tape **-6-** and remove.

Preparing 2-component adhesive for processing

Note

- *The adhesive has an open time of **-15 min-** , which means that the bonding material must be applied and the car window must be assembled within this period of time.*

Preparing the adhesive



- *In order to ensure that the substance is completely mixed, apply a 30 mm long adhesive bead of fresh adhesive to a piece of cardboard before processing.*

1. Preparing 2-component adhesive for processing. → *Processing of Porsche 2-component window bonding agents*

Applying adhesive to the windscreen

Note

- *When applying the adhesive, it is essential to ensure that the adhesive bead overlaps by approx. 30 mm at the beginning and at the end.*

Apply adhesive

1. Using the bonding gun **-A-** , apply 2-component adhesive to the windscreen along the seal **-4-** in the form of a triangular bead measuring **-X= ca. 15 mm-** **-Y= ca. 8 mm-** .

Pulling off protective film

Note

- *Make sure that no further work is performed in the area of the seal once the protective film has been removed.*

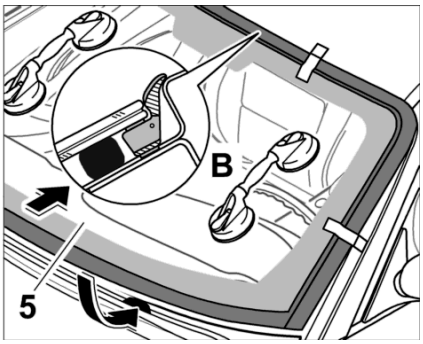
1. Before bonding the windscreen, remove the protective film from the seal such that no residues remain.

Inserting windscreen into the body

ATTENTION

Danger of material damage if specified curing time of adhesive is not observed!

- **There will not be a proper adhesive bond if the prescribed curing time of the adhesive is not observed!**



→ The vehicle must not be used until the curing time has elapsed.
→ Curing time: 3 hours
→ Temperature: at least 10°C
→ Fixing time: approx. 1 hour

Note

- *Two persons are needed to insert and adjust the windscreen.*

Note

- *The rear window can no longer be aligned, because the bonding section on the seal immediately sticks to the body when the rear window is installed.*

Pulling off protective film

Insert the windscreen

1. Guide the windscreen **-5-** into the window aperture and insert in the pre-marked positions.

Cleaning fields of vision

Note

- *The door windows must not be closed until after the curing time has elapsed.*

1. Adhesive which has oozed out must be removed immediately and the affected fields of vision must be cleaned using cleaning agent **-H1-** .

 WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e**

relativa immagine.

- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

64 40 19 Removing and installing front door window - as of MY 2005

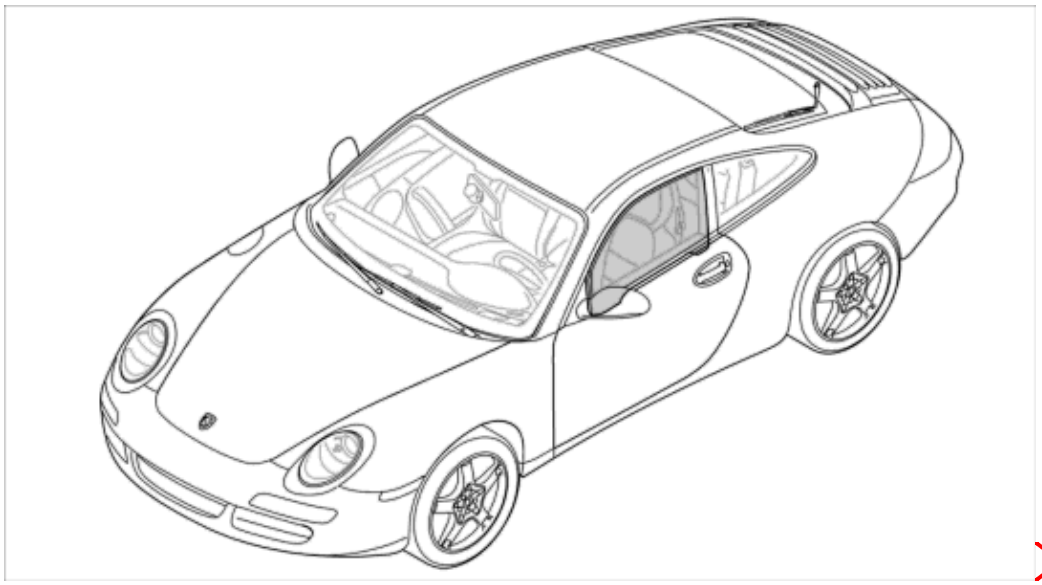
- Preliminary work
- Removing front door window
- Installing front door window
- Subsequent work

top of page

Preliminary work

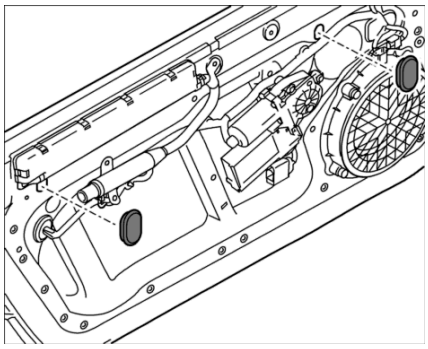
Preliminary work

Raising front door window



1. Raise front door window **-1-** .
2. Remove door trim panel. →705919 Removing and installing the door trim panel - Removing

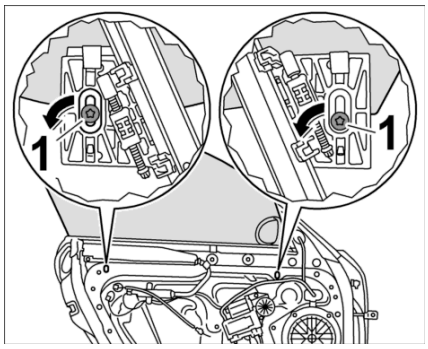
top of page



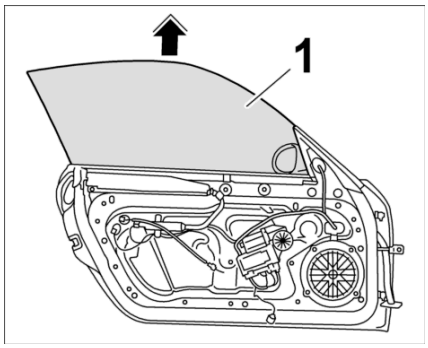
Removing front door window

Removing front door window

Installation Location:



Installation position of front door window



Removing plastic lid

1. Remove plastic lid. Fastening screws are then accessible.

Detaching door window

2. Loosen fastening screw **-1-** of the clamping jaws at the front and rear by 2 turns.

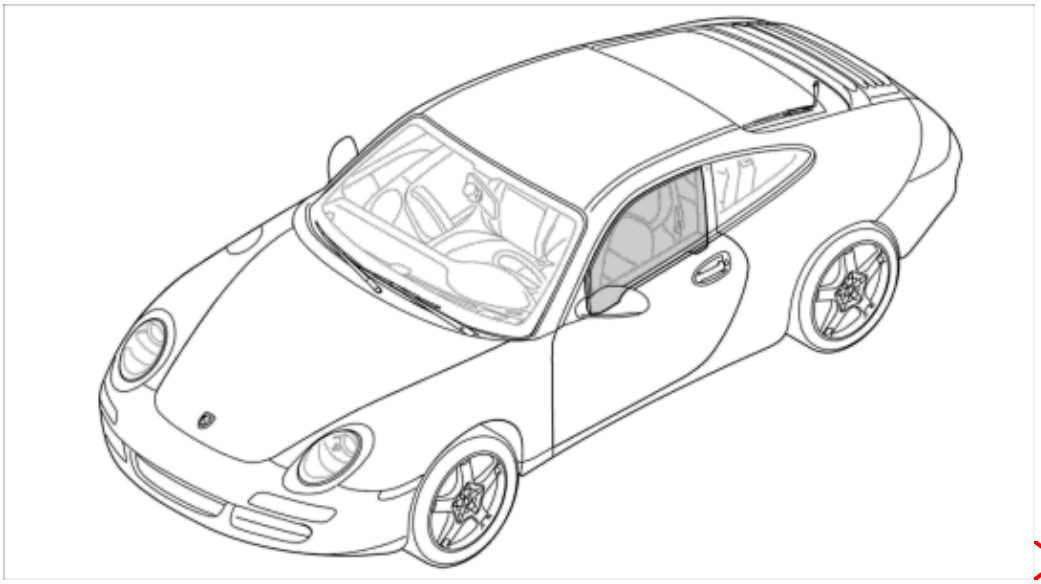
Removing door window

3. Pull front door window **-1-** upwards out of the door channel **-arrow-** .

top of page

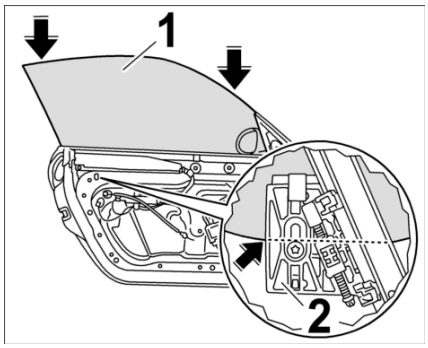
Installing front door window

Installing front door window



ATTENTION

Door glass can become soiled during installation!

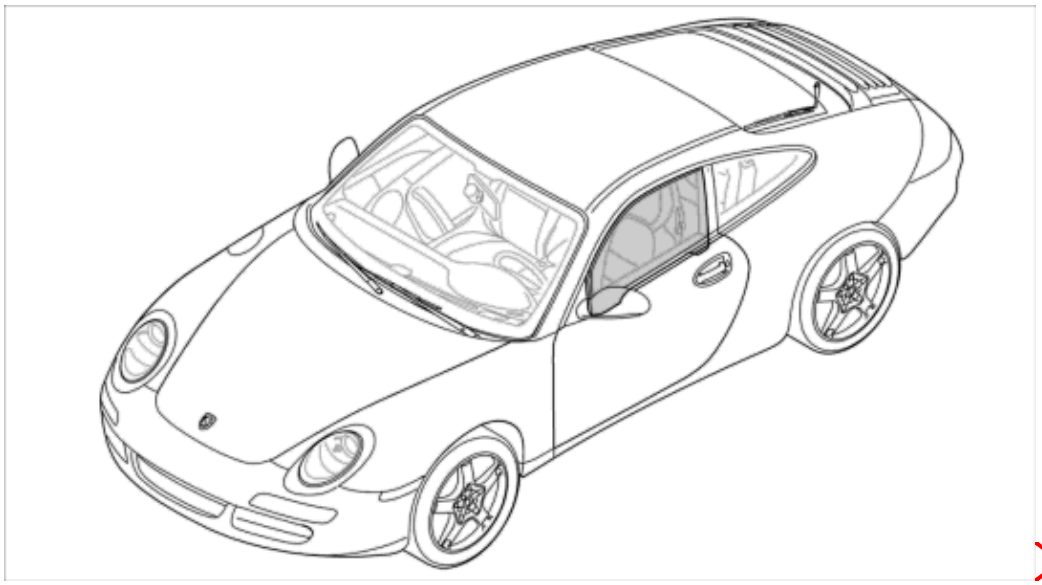


- **Risk of irreparable damage to front window shaft seal!**

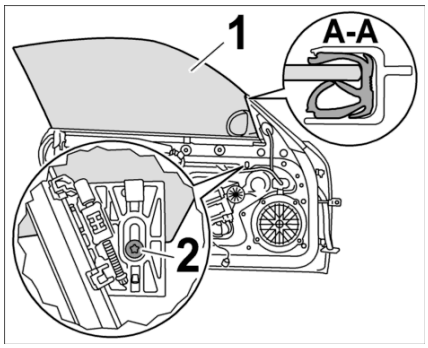
→ During installation, make sure that no lubricant (grease) gets onto the door glass from the window guides. Clean door glass if necessary and check front window shaft seal for soiling, and replace the seal if necessary.

Installation Location:

Installation position of front door window



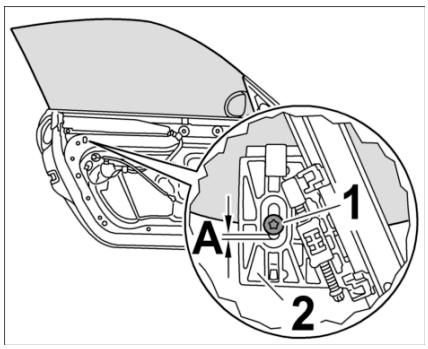
Installing front door window



1. Insert front door window **-1-** into the door channel **-Arrows-** and position in the clamping jaws **-2-** .
2. Press the door window down as far as it will go **-Arrow-** into the clamping jaws.

Securing front door window

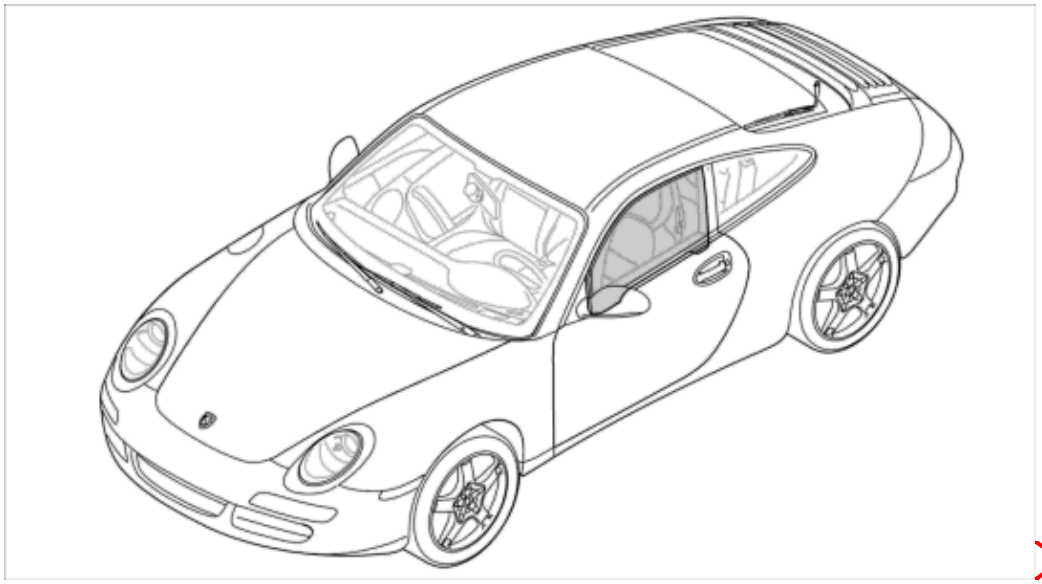
Installation Location:



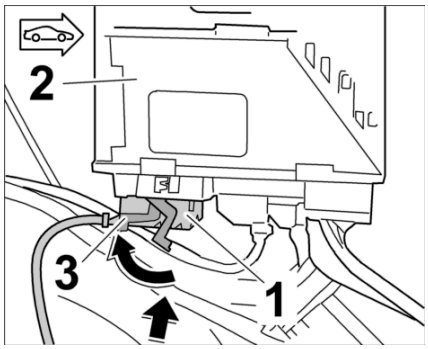
Installation position of front door window

Securing front door window

1. Slide door window **-1-** all the way forward into the window channel **-section A - A-** and screw down the fastening screw **-2-** on the front clamping jaw. Tightening torque →**Final tightening: 8.5 (6.25) Nm (ftlb.) +/-1.5 (1) Nm (ftlb.)** .



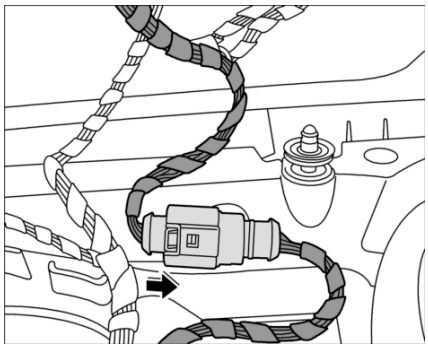
Securing door window



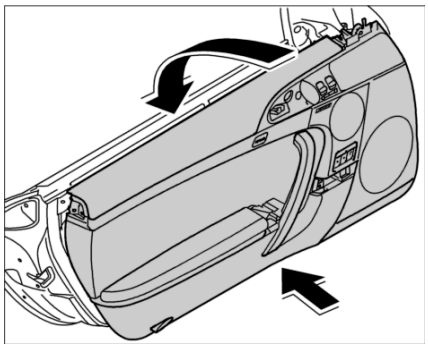
2. Raise rear clamping jaw **-2-** approx. 4 mm **-A-** and screw down fastening screw **-1-** . Tightening torque → **Final tightening: 8.5 (6.25) Nm (ftlb.) +/-1.5 (1) Nm (ftlb.)** .

Inserting door trim panel

Installation Location:



Installation position of front door window



Lock plug connection to control module.

1. Connect electrical plug connection **-1-** to control module **-2-** by operating locking lever **-3-** and lock.

Locking electrical plug connection

2. Lock electrical plug connection **-arrow-** until it engages audibly.

Hooking in door trim panel

3. Hook front door trim panel into sealing channel at the top.

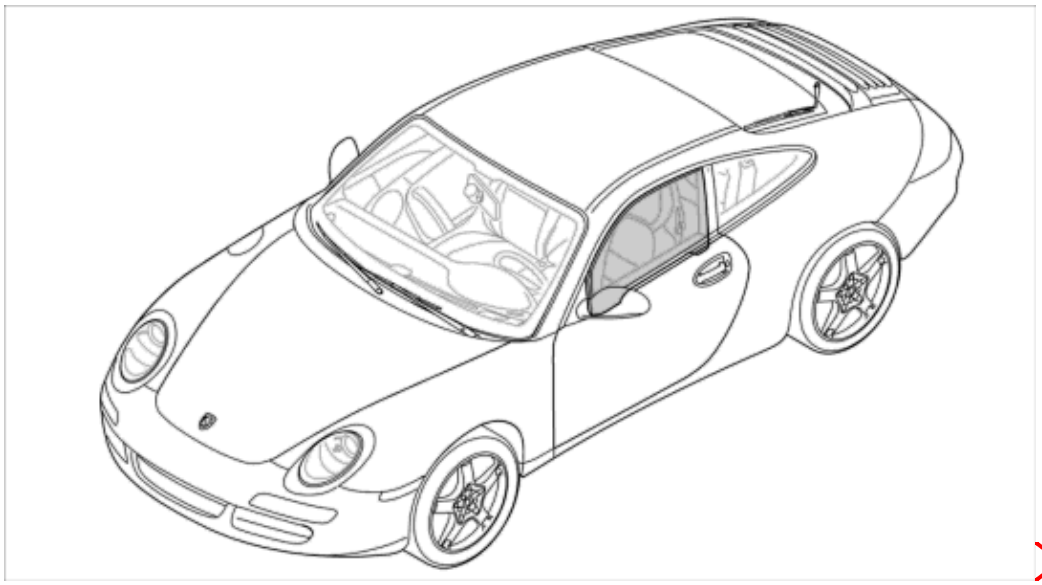
Standardising the power windows

The system must be re-standardised after an interruption in the power supply to the power window electronics in the door. The position values for the short-stroke lowering function, position-controlled lowering function in the case of convertible top actuation and enabling for "automatic start-up of window closing" (one-touch function) are redefined. The standardisation process is initiated by continuous actuation of the operating button Raise window .

– Hold down the Raise window button until the window is closed and is switched off by the blockage detection function of the power windows.

Blockage detection function

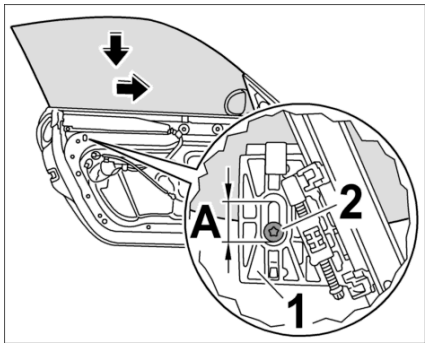
Note



- *If the window drive encounters resistance during the door window movement, the motor is switched off after a delay of 500 ms.*

Precondition for operation of the power windows

Ignition switched on.
Ignition key should not be removed from the steering lock with the ignition switched off.
The door is opened for the first time after switching off the ignition.
Door opened.

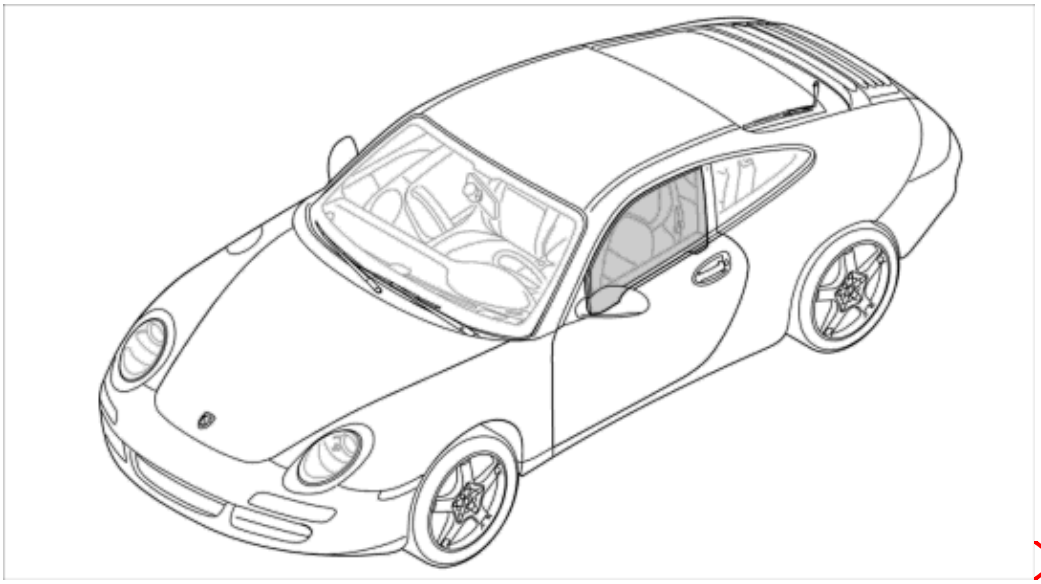


Adjusting the door window angle in the vehicle's longitudinal direction

Installation Location:

Installation position of front door window

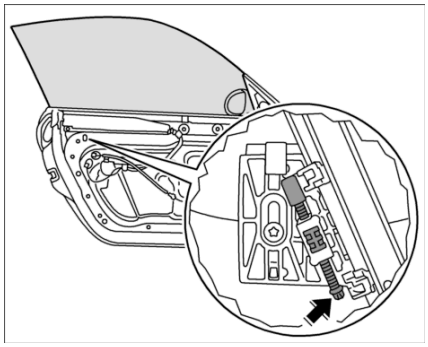
1. Raise door window. Fastening screws are accessible.
2. Release electrical plug connections for door trim panel and remove door trim panel.



Adjusting the door window angle in the vehicle's longitudinal direction

3. Adjust to equalise the angle of the door window on the clamping jaws of the driver (upwards or downwards) **-A-** . **Adjustment range: 10 mm**
4. Tighten the fastening screw **-1-** on the clamping jaw **-2-** after completing the adjustment. Tightening torque →**Final tightening: 8.5 (6.25) Nm (ftlb.) +/-1.5 (1) Nm (ftlb.)**

Adjusting the door window height



Installation Location:

Installation position of front door window

Note

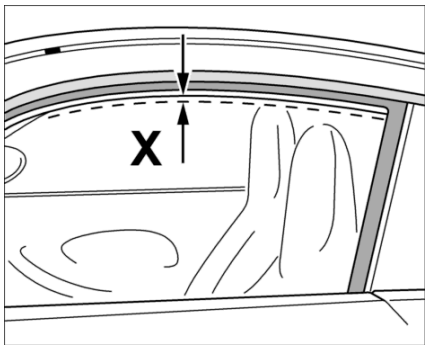
- *The wax marking along the door window should be uniformly approx. 4 mm.*

Adjusting the door window height

Note

- *The adjusting screws of the drivers for the upper limit stops for the door window height are accessible through 2 holes at the bottom of the door.*

1. Adjust the upper limit stops of the drivers by screwing the fastening screw in or out using socket E6 in or against the direction of travel. **Adjustment range: approx. 15 mm**



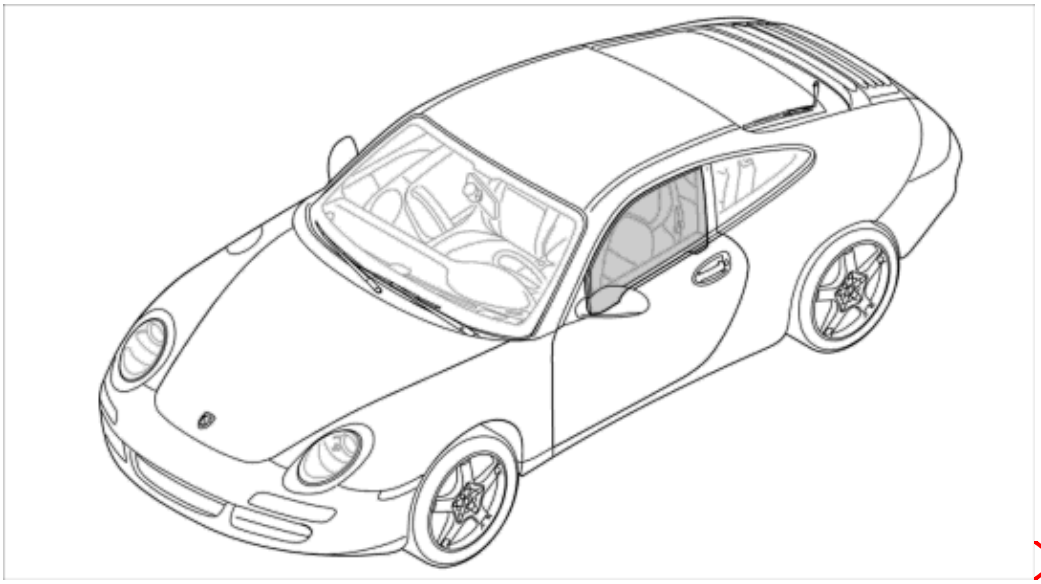
Note

- *The adjusting screws of the drivers for the upper limit stops for the door window height are accessible through 2 holes at the bottom of the door.*

2. Adjust the drivers so that they meet the upper limit stops at the same time.

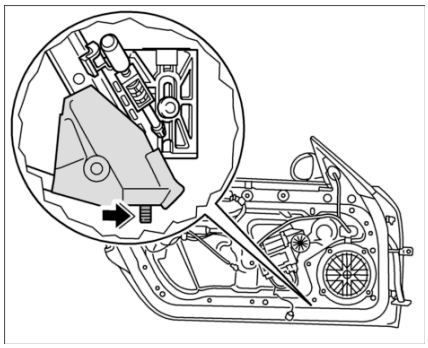
Adjustment procedure:

3. Open the door.
4. Lock door lock with a screwdriver.
5. Re-insert the door trim panel (see Inserting door trim panel).
6. Move the power window regulator into its upper position.
7. Adjust door window height at the drivers so that the door window evenly projects approx. 2 mm above the roof strip.



Overlapping of door window to roof

Checking the adjustment



8. Close the door.
9. Use a wax marker to mark the door window along the roof strip.
10. Actuate the door handle until the window lowering function is activated. **Lowering function adjustment value: approx. 11 mm**
11. The wax marking along the door window must have the dimension **-X = approx. 4 mm-** . Correct adjustment if necessary.

Adjustment of the door window pressing force on the door seal at the top and sides

Installation Location:

Installation position of front door window

Adjustment of pressing force

Note

- *The adjusting nuts of the power window unit rails for the pressing force of the door window upper edge against the convertible top are accessible through two holes at the bottom of the door.*

1. Move the power window unit rails outwards or inwards by approx. 10 mm.

Adjustment procedure:

2. Open the door.

Note

- *The adjusting nuts of the power window unit rails for the pressing force of the door window upper edge against the convertible top are accessible through two holes at the bottom of the door.*

3. Move the power window regulator into its upper position and undo the fastening nuts on the power window rails.
4. Adjust the power window unit so that the upper edge of the door window is sufficiently pressed against the door seal at the side. Tightening torque →**Final tightening: 9.7 (7.2) Nm (ftlb.)**

Checking the adjustment:

Note

- *It should not be possible to pull out the sheet of paper along the B-pillar when the door is closed.*

– clamp a sheet of paper between the door window and door seal.

WARNUNG
Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

WARNING
Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

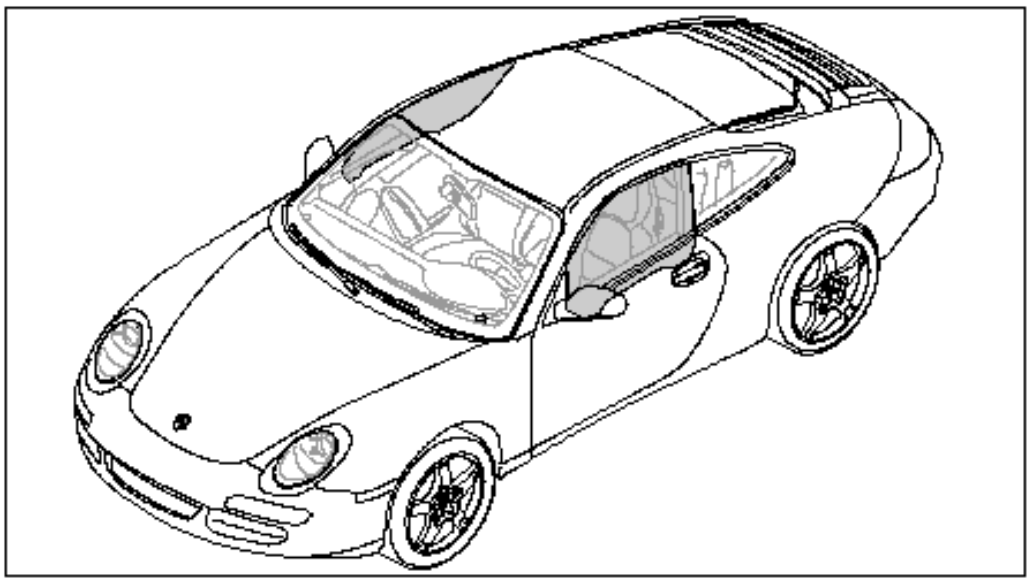
General warning notes

Warning note on hydrophobic window



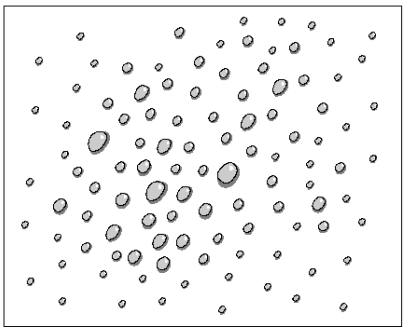
WARNING
Coating of windows

- **Fogging, dazzling and danger of accident!**

→ Hydrophobic coating is approved by the Porsche AG for the door windows only.

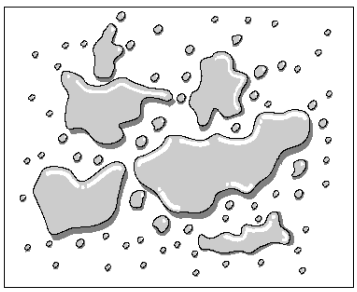
Checking front door window

Installation Location:



Installation position of door windows

Note



- *The hydrophobic coating has a very long life. If the hydrophobic coating deteriorates, the side window can be recoated without any special measures being required.*
- *You can see if reworking (coating) is required by checking how droplets form.*

Spray on water using a water spray bottle with an atomiser and check the hydrophobic layer from the droplet formation.

Droplet formation - hydrophobic door window OK

– Droplet formation - hydrophobic door window OK

Droplet formation - hydrophobic door window coating worn

– Droplet formation - coating worn.

top of page

Preliminary work

Mixing the components

Note

Once mixed, hydrophobic coating agent must be used within 24 hours!

1. Pour the entire contents of the Component 2 bottle into the Component 1 bottle.
2. Close the bottle tightly again and shake well immediately for at least three minutes.

Cleaning the surface

Note

Immediately after buffing, the side window should be coated.

1. Clean the side window with a commercially available glass cleaner
2. Shake the polish well before use.
3. Dampen polishing cloths with water, apply polish and buff for several minutes.
4. Allow polish film to dry and then remove completely.

Reworking (coating) front door window

Note

- *Do not let the hydrophobic coating come into contact with water for at least 30 minutes after applying the coating.*

1. Apply hydrophobic coating agent as a liquid film extensively over the surface and immediately rub evenly with a paper towel.
2. After buffing, a grey bloom forms over the treated surface. This grey bloom must be completely polished off with a new, dry and clean paper towel.
3. Afterwards the coating should be kept free of water or other liquids for at least 30 minutes.

Coating agent that has begun to dry can be softened up by rubbing with the aid of the still soaking towel and then rubbed off with a clean paper towel.

Programming power window motor (door control unit)

Reading from and writing to the power windows motor (door control unit)

 WARNING

Sudden voltage interruption of the power supply to the control module.

- **Destruction of the control module.**

→ During programming, it is essential to guarantee the power supply for the Porsche System tester. It is essential to connect a battery charger with a current rating of at least 40 A to the vehicle battery.

→ Prior to disconnecting the control module, switch off the ignition and remove the ignition key.

 **Note**

The **PIWIS tester 9718** instructions take precedence and in the event of a discrepancy these are the instructions that must be followed. Deviations may occur with later software versions.
The procedure described here has been structured in general terms; different text or additions may appear in the **PIWIS tester 9718**.

1. Connect the Porsche System Tester to the vehicle and start the System Tester. Switch on ignition. >> Continue.
2. Select vehicle type using the cursor keys.
3. Switch from the vehicle type to the list of control units.
4. Select **Door** and press the >> key.
5. Select **Control unit replacement** and press the >> key.
6. Select **Read out values** (codings) and press >> .

7. The message **Coding read-out complete**appears on the screen of the Porsche System Tester >> .

 WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

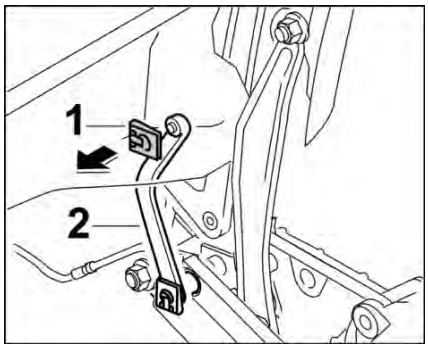
3. Remove rear side trim panel. →707519 Removing and installing rear side trim panel - section on "Removing"

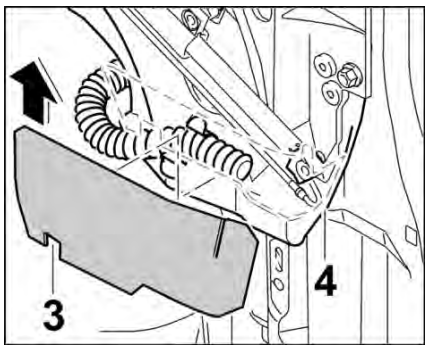
top of page



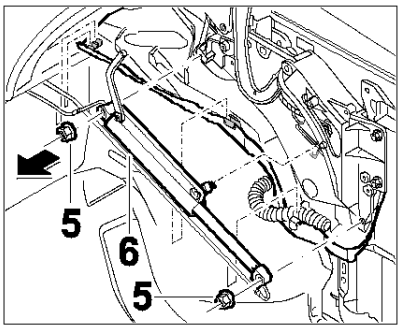
Removing rear window lifter

Loosening hydraulic cylinder

Installation Location:



Installation position for hydraulic cylinder



Removing lever

1. Press out the two retaining clips **-1-** from the lever **-2-** using **assembly tool for Springfix System pin circlips NR.131** and remove lever.

Removing protection plate

2. Pull the protection plate **-3-** upwards out of the chamber in the water drip pan **-4-** .

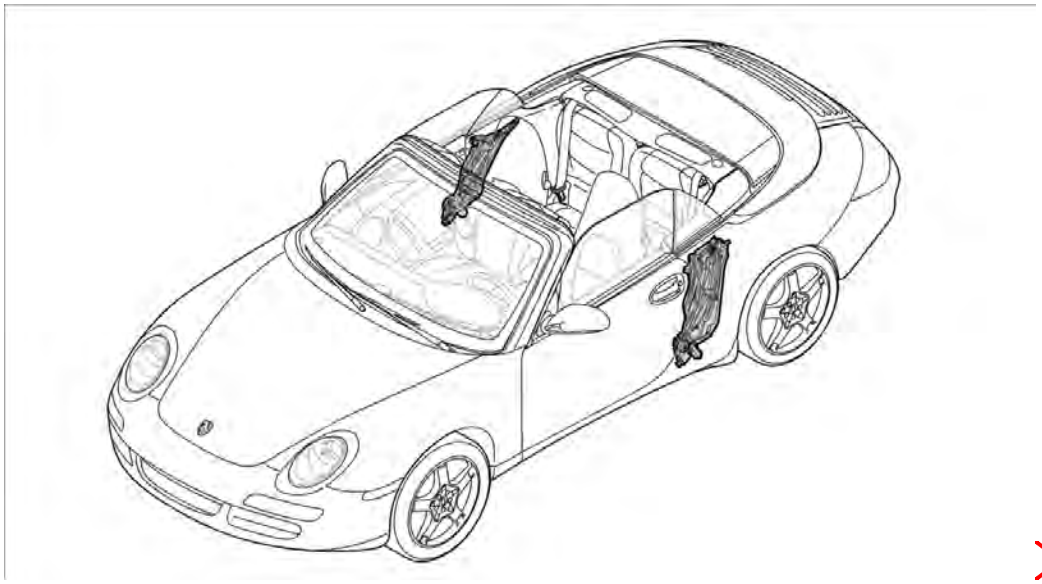
Loosening hydraulic cylinder

ATTENTION

Damage to hydraulic lines.

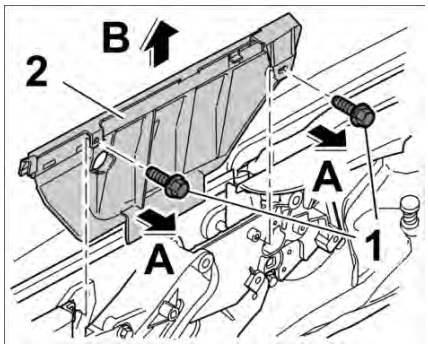
→ Do not bend, trap or crush hydraulic lines when removing and installing.

→ Pay special attention when routing hydraulic lines in the clips.



3. Unscrew fastening nut **-5-** and lay hydraulic cylinder **-6-** with lever to one side.

Removing rear window lifter



Note

- *Removal and installation of the rear window lifter should be carried out with the side window. Otherwise adjustment work is hindered during installation.*

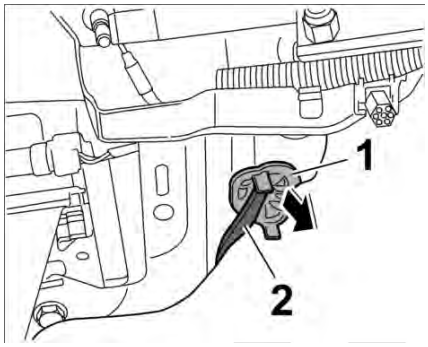
Installation Location:

Installation position of rear window lifter

Removing rear window inner seal

1. Undo front and rear fastening screws **-1-** from the convertible top support and the belt guide section **-arrows A-** , and pull rear window inner seal **-2-** up and out **-arrow B-** .
2. Connect the **PIWIS tester 9718** to the diagnostic socket.
3. Switch on ignition.

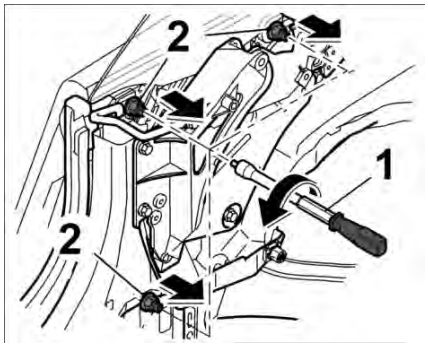
Note



- *The rear window lifter can only be removed when closed.*

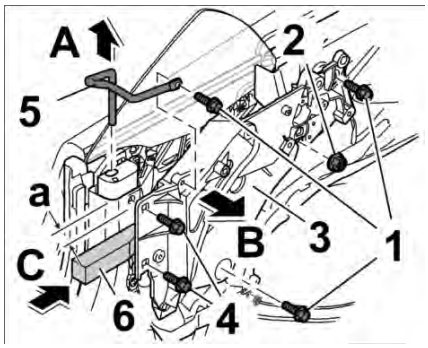
- *This closed state can only be achieved with the PIWIS tester when the convertible top is in service position.*

4. Select the **Convertible top** menu item, then **Drive links**, and select the**Raise rear door window (left or right)** menu item in the command line which then appears.



Note

- *The lower adjusting element for power windows is only accessible by removing the rubber sleeve from the wire harness for power windows.*



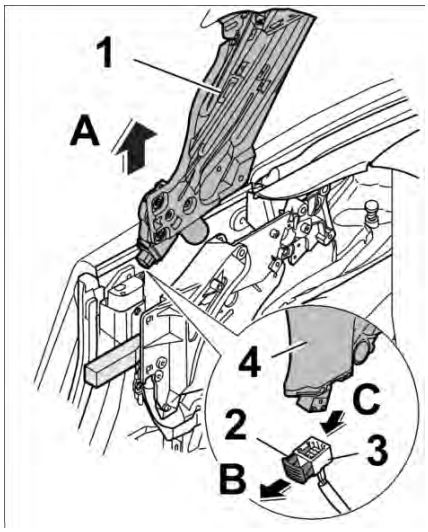
Removing rubber sleeve

5. Remove rubber sleeve **-1-** from wire harness for power windows **-2-** by pulling it inwards **-arrow-** .

Loosening adjusting elements for power windows

6. Release adjusting elements for power windows with the adjustment tool **-1-** **adjustment tool for rear window NR.123-1**. To do this, loosen and unscrew the nuts **-2-** on the adjusting elements (**-arrows-**).

Detaching convertible top support



ATTENTION

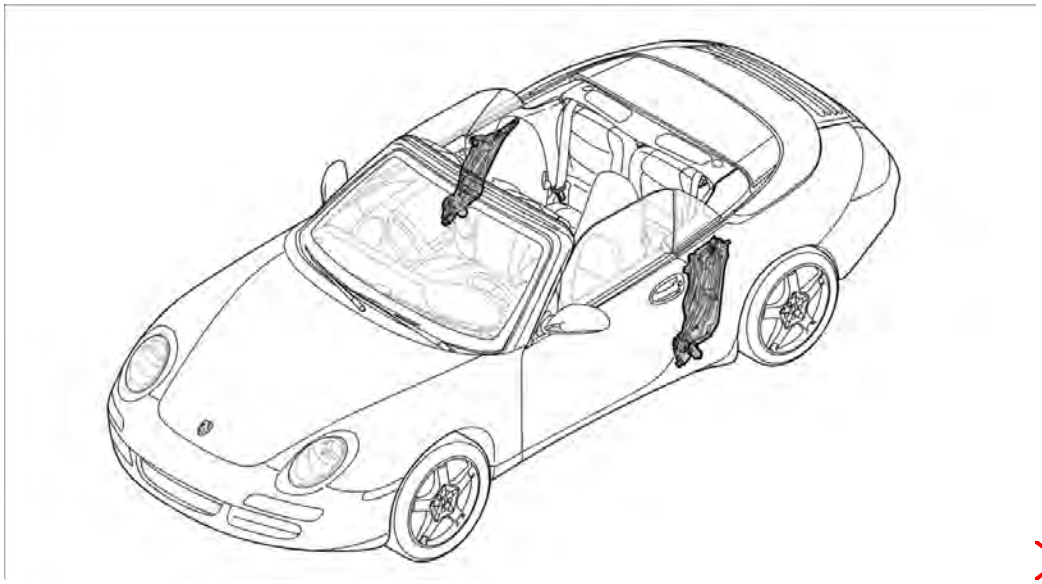
Risk of damage to or destruction of the convertible top when the convertible top support is removed!

- **The convertible top must no longer be electrically operated when the convertible top support is detached.**

→

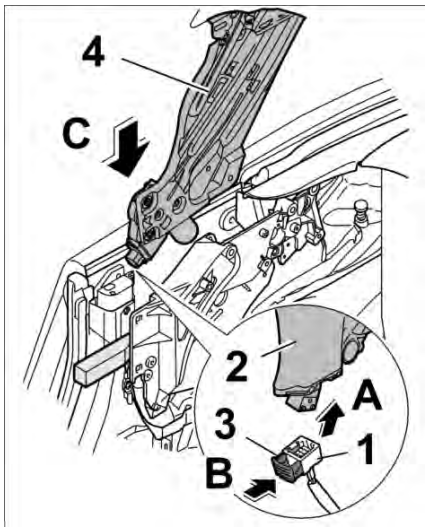
7. Remove fastening screws **-1-** and fastening nuts **-2-** from the convertible top support **-3-** . Remove fastening screws **-4-** for securing the deflection fitting **-5-** in the belt guide section. Pull deflection fitting **-5-** up out of the belt guide section. **-arrow A-** Pull convertible top support **-3-** inwards (**-arrow B-**) and fix a spacing block **-6-** measuring **-dimension a = 30 mm-** between B-pillar and convertible top support **-arrow C-** .

Removing window lifter



8. Pull window lifter **-1-** up and off **-arrow A-** .
9. Release latch **-2-** on electric plug connection **-3-** (**-arrow B-**) and pull plug connection off window regulator motor **-4-** (**-arrow C-**).

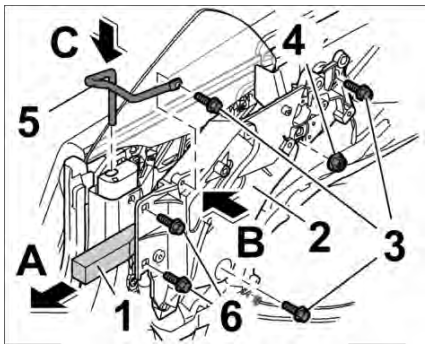
top of page



Installing rear window lifter

Installing rear window lifter

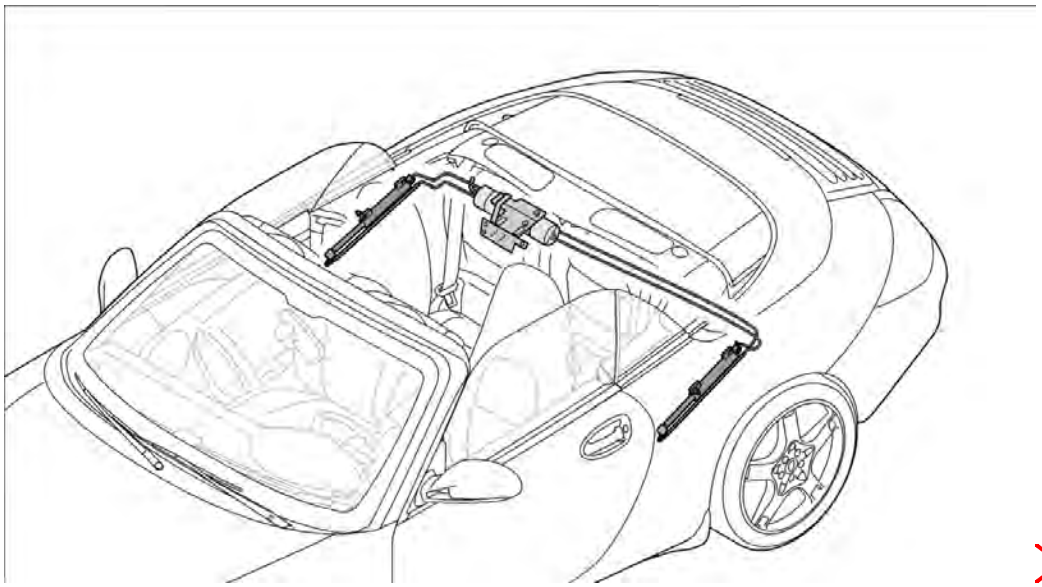
Installation Location:



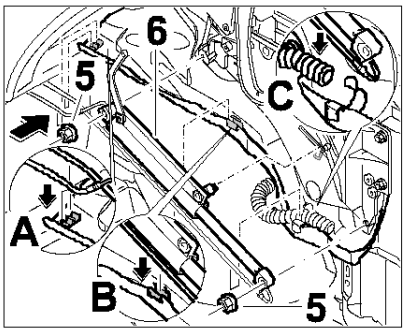
Installation position of rear window lifter

Installing power windows

1. Connect electric plug connection **-1-** to window regulator motor **-2-** (**-arrow A-**) and lock the latch **-3-** (**-arrow B-**).
2. Guide window lifter **-4-** into the window shaft from above **-arrow C-** and position in the mounts in the inner side section.



Securing convertible top support



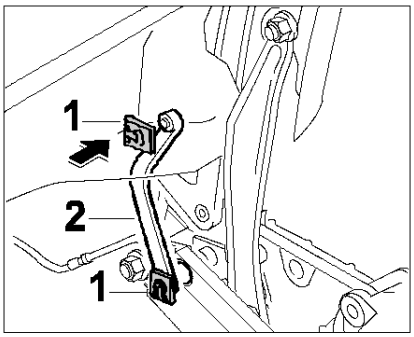
3. Remove spacing block **-1-** between B-pillar and convertible top support **-2-** (**-arrow A-**). Position convertible top support **-2-** (**-arrow B-**). Position and tighten fastening screws **-3-** and fastening nuts **-4-** in convertible-top support **-2-** . →**Tightening torque: 23 (17 ftlb.) Nm**
4. Insert the deflection fitting **-5-** into the belt guide section **-arrow C-** . Screw in and tighten fastening screws **-6-** . →**Tightening torque: 50 (37 ftlb.) Nm**

Installing hydraulic cylinder

Installation Location:

Installation position for hydraulic cylinder

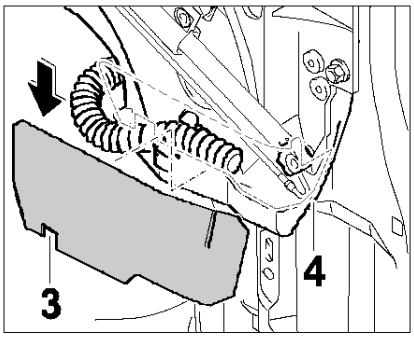
Installing hydraulic cylinder



ATTENTION

Damage to hydraulic lines.

→ Do not bend, trap or crush hydraulic lines when removing and installing.



→ Pay special attention when routing hydraulic lines in the clips.

1. Position hydraulic cylinder **-6-** with the lever on the convertible-top support. Insert potentiometer fork into the pin of the hydraulic housing (on the left side only).
   Lay hydraulic line **-Figure A-** in the clip under the water drain hose. In **-Figure B-** and **-Figure C-** press the hydraulic lines into the clips. Tighten fastening nuts **-5-** . →**Tightening torque: 17 (13 ftlb.) Nm +/-2 (1.5 ftlb.) Nm**

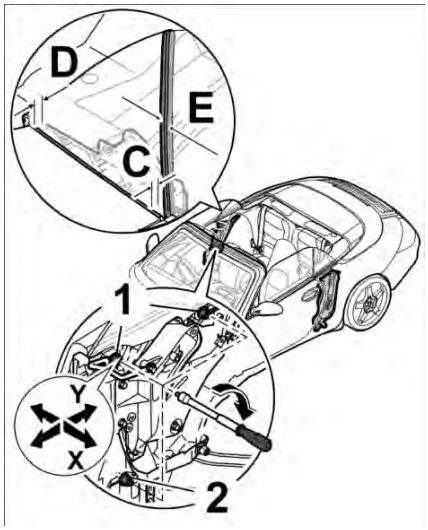
Installing lever

2. Fit lever **-2-** and secure with retaining clip **-1-** .

Installing protection plate

3. Insert protection plate **-3-** in chamber of water drip pan **-4-** .

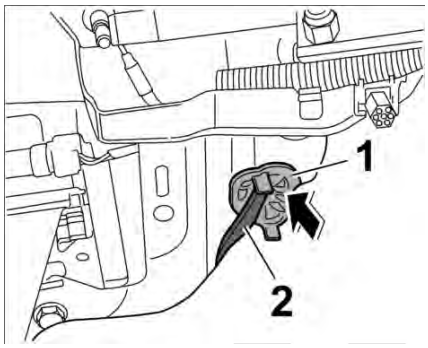
top of page



Adjusting rear window lifter

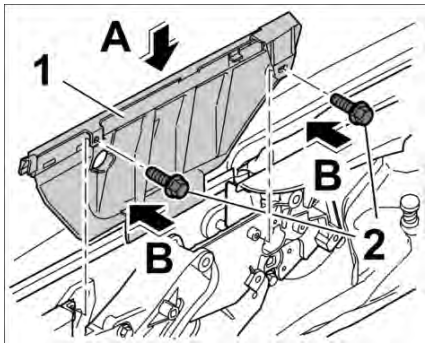
Adjusting rear window lifter

Adjusting rear window lifter



Note

By moving the window lifter with respect to the longitudinal axis of the vehicle, the power windows can be adjusted by dimension **-Y = ± 10 mm-** . The contact pressure of the upper edge of the side window on the convertible top is adjusted by screwing the adjusting element in or out by dimension **-X = ± 10 mm-** . The contact pressure on the rear window inner seal or the offset from the door window is adjusted by screwing both of the upper adjusting elements in or out by dimension **-X = ± 5 mm-** .
Adjusting tool for rear window lifter. **Adjusting tool for rear window NR.123-1**



Adjusting power windows

1. Adjust the basic setting of the adjusting elements **-1-** from the upper edge moulding of the rear side panel to the side window. →**Gap dimension C: 11 mm** →**Gap dimension D: 14 mm**
2. Push the power window backwards or forwards to adjust the gap between the side window and door window. →**Gap dimension E: 9 mm +/-1 mm**
3. Adjust the contour or the offset with respect to the door window on the adjusting element **-2-** .
4. Screw on adjusting elements for power windows **-1-** and **-2-** . →**Tightening torque: 23 (17 ftlb.) Nm**

Fitting rubber sleeve

5. Fit rubber sleeve **-1-** on wire harness **-2-** for power windows **-arrow-** .

Installing rear window inner seal

6. Insert rear window inner seal **-1-** into rear side section slot from above **-arrow A-** and position on the convertible top support or belt guide section.
7. Insert and tighten front and rear fastening screws **-2-** (**-arrows B-**). →**Tightening torque: 10 (7.5 ftlb.) Nm**

top of page

Additional instructions for adjusting or replacing the rear window lifter

Additional instructions for adjusting or replacing the rear window lifter

The rear power windows can be operated if:
1) the convertible top is closed.
2) the ignition is switched on.
3) the ignition key is not removed from the steering lock after the ignition is switched off.
4) after the ignition is switched off until a door is opened for the first time.
5) the door is open, USA vehicles do not have this function.

Note

The end positions of the power windows are deleted from the control unit when the electric connectors are disconnected and connected.

Standardising the system

1. Set rocker switch and fully close window once.
2. Set rocker switch to Close again. The upper end position of the side window is stored.
3. Set rocker switch and fully open window once.
4. Set rocker switch to Open again. The lower end position of the side window is stored.

Blockage detection function

If the window drive encounters resistance when activated, the motor is switched off after a delay of 500 ms. If the rocker switch is pressed again within 10 seconds, the side window closes the power window with all of its closing force. The anti-crushing protection is deactivated.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

- Subsequent work

Tools

Designation	Type	Number	Explanation	
PIWIS tester	special tool	9718		

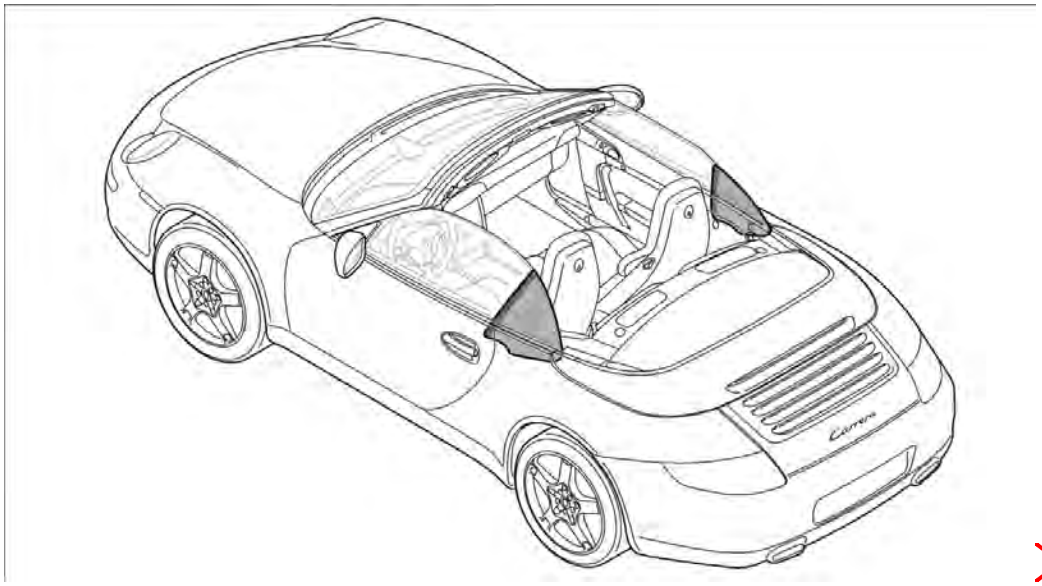
top of page

Preliminary work

Preliminary work

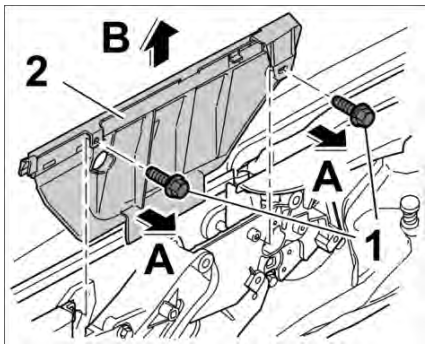
Note

Only for vehicles with hardtop.



1. Remove hardtop. →610219 Removing and installing hardtop - section on "Removing"
2. Move convertible top to service position. →6101IN IN -Convertible top service position
3. Remove rear side trim panel. →707519 Removing and installing rear side trim panel - section on "Removing"

top of page

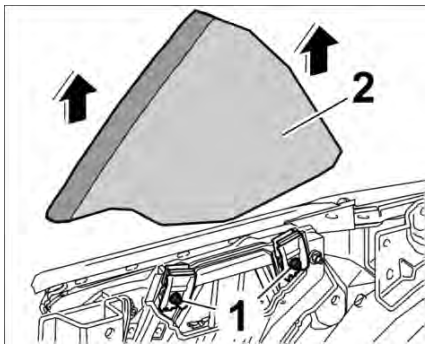


Removing rear side window

Removing rear side window

Installation Location:

Installation position of rear side window



Removing rear window inner seal

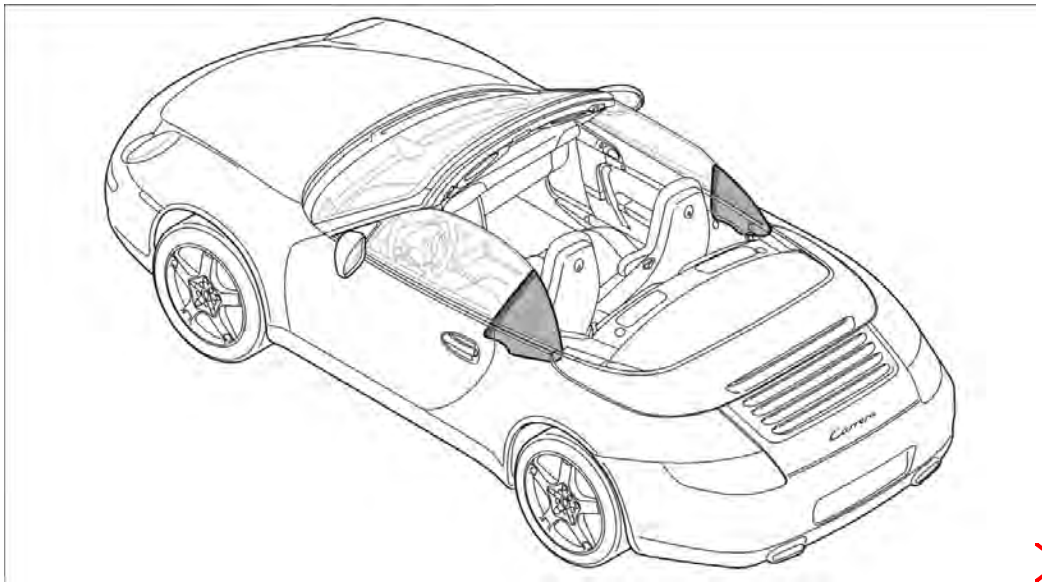
1. Undo front and rear fastening screws **-1-** from the convertible top support and the belt guide section **-arrows A-** , and pull rear window inner seal **-2-** up and out **-arrow B-** .
2. Connect the **PIWIS tester 9718** to the diagnostic socket.
3. Switch on ignition.

Note

- *The rear window lifter can only be removed when closed.*
- *This closed state can only be achieved with the PIWIS tester when the convertible top is in service position.*

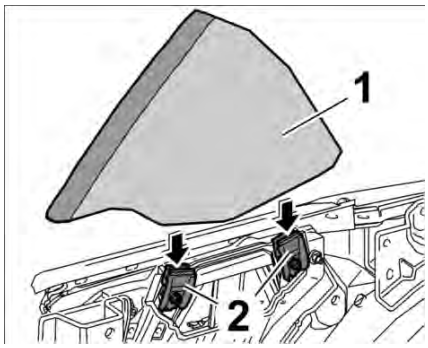
4. Select the **Convertible top** menu item, then **Drive links**, and select the**Raise rear door window (left or right)** menu item in the command line which then appears.

Removing side window



5. Loosen fastening nuts **-1-** on mounting pieces and remove side window **-2-** by pulling it up through the slot in the rear side panel. **-arrows-**

Installing rear side window



Note

- *The convertible top must be in service position or fully open in order to fit the side window.*
- *The power window must be in the upper position.*

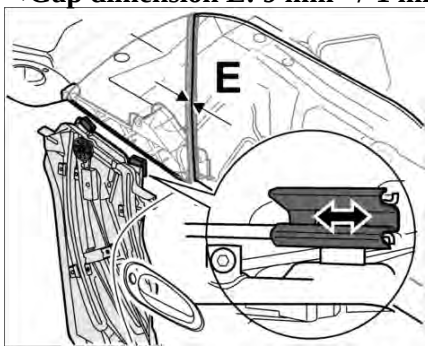
Installation Location:

Installation position of rear side window

Installing side window

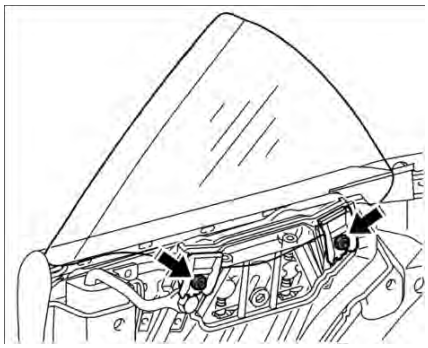
1. Insert the side window **-1-** through the side section slot from above and into the clamping jaws **-2-** of the front and rear drivers **-Arrows-** .

Adjusting rear side window



Adjusting the side window angle in the vehicle's longitudinal direction

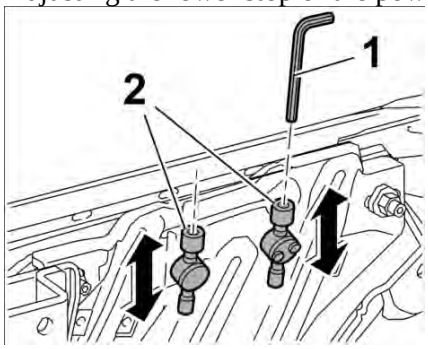
Note



- *Moving the side window into the clamping jaws on the receiving rollers equalizes the angle of the side window with respect to the door window.*
- *The bottom edge of the window must lie against the receiving rollers in the clamping jaws.*

1. Adjust the side window in accordance with the contour of the door window.

→Gap dimension E: 9 mm +/-1 mm

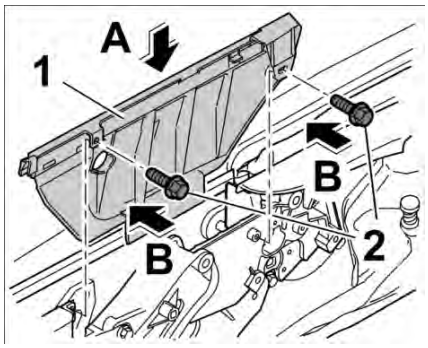


Adjusting the side window angle

Securing side window

2. Tighten fastening nuts **-arrows-** on clamping jaws to secure side window. →**Tightening torque: 8.5 (6.3 ftlb.) Nm +/-1.5 (1 ftlb.) Nm**

Adjusting the lower stop of the power window unit



Adjusting height of lower stop

Note

- *It is possible to adjust the height of both lower stops, but these should only be adjusted synchronously.*
- *The adjustment is only possible when the side window is lowered.*

3. Insert hexagon-socket wrench **-1-** from above. Adjust the height by turning the screws **-2-** .

Installing rear window inner seal

4. Insert rear window inner seal **-1-** into rear side section slot from above **-arrow A-** and position on the convertible top support or belt guide section.
5. Insert and tighten front and rear fastening screws **-2-** (**-arrows B-**). →**Tightening torque: 10 (7.5 ftlb.) Nm**

top of page

Subsequent work

Subsequent work

1. Install rear side trim panel. →707519 Removing and installing rear side trim panel - section on "Installing"
2. End service position. →6101IN IN -Convertible top service position

Note

Only for vehicles with hardtop.

3. Install hardtop. →610219 Removing and installing hardtop - section on "Installing"

Note

Only for vehicles with hardtop.

4. Adjust the hardtop. →610215 Adjusting hardtop

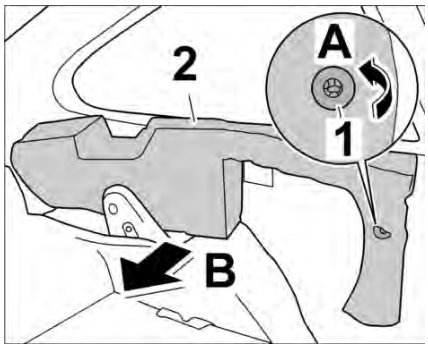
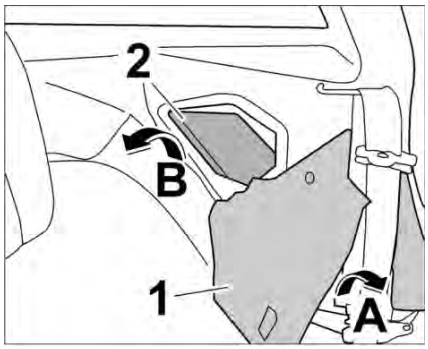
Removing side window seal



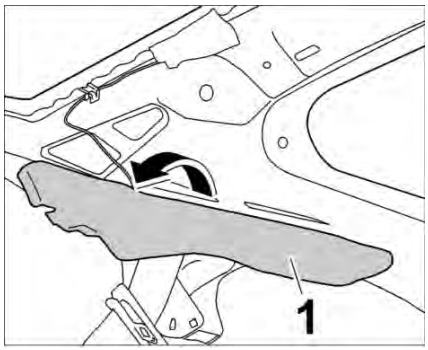
Removing side window seal

Removing side window seal



1. Pull side window seal off the rim of the side window section.

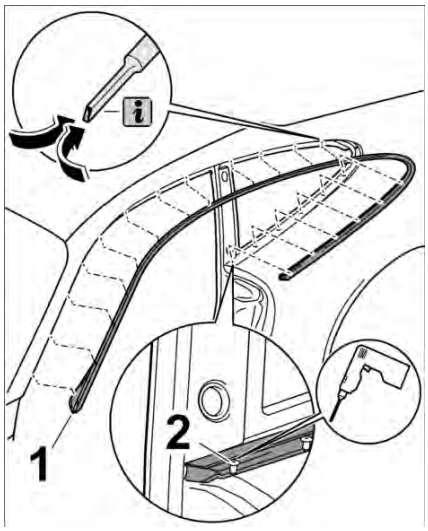
Loosening sound absorber



Removing sound absorber

1. Unscrew fixing clip **-1-** **-Arrow A-** and remove sound absorber **-2-** **-Arrow C-** .

Removing sound absorber

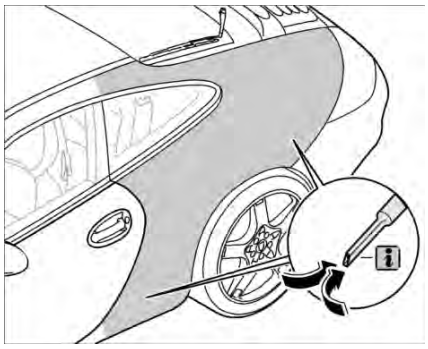


2. Carefully loosen sound absorber **-1-** and fold down **-Arrow A-** .
3. Remove sound absorber **-2-** from the side section **-Arrow C-** .

Loosening seal

4. Carefully loosen seal for side section **-1-** and fold down.

Removing seal for roof frame



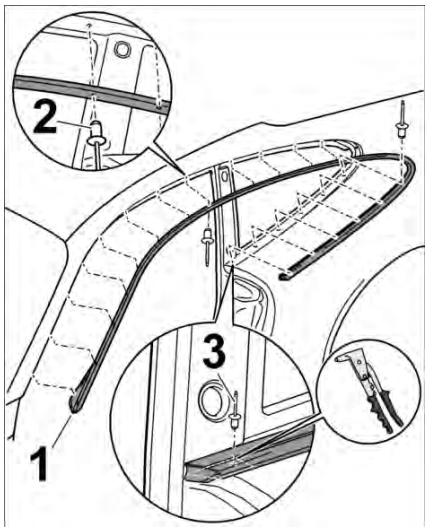
Removing seal for roof frame

Note

During drilling, get a second person to suck away the rivets and rivet swarf with a vacuum cleaner from the interior of the side section area.

1. Drill out rivets **-2-** from the integrated sheetmetal strip of the seal for the roof frame **-1-** using a 4.1 mm drill bit.

Remove seal for roof frame **-1-** .

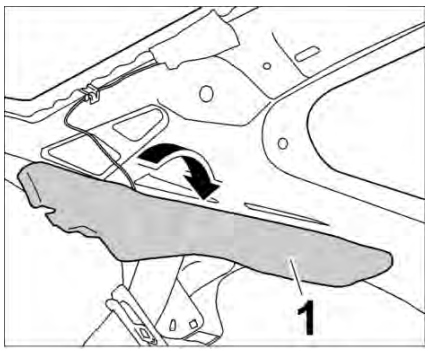


Vacuuming out the interior of the side section

2. Clean out the complete interior of the side section with a vacuum cleaner.

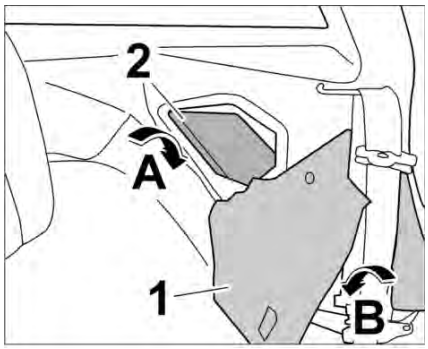
top of page

Installing side window seal



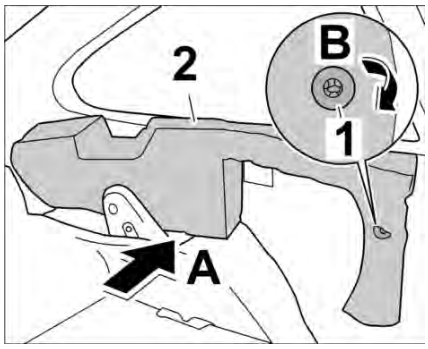
Installing seal for roof frame

Installing seal for roof frame



1. Position seal for roof frame **-1-** on the centring hole and rivet down with the rivet **-2-** . Rivet roof area using rivets **-2-** (4.0 x 7.9).
2. Rivet down seal for roof frame **-1-** in side section area using rivets **-3-** (4.0 x 6.3).

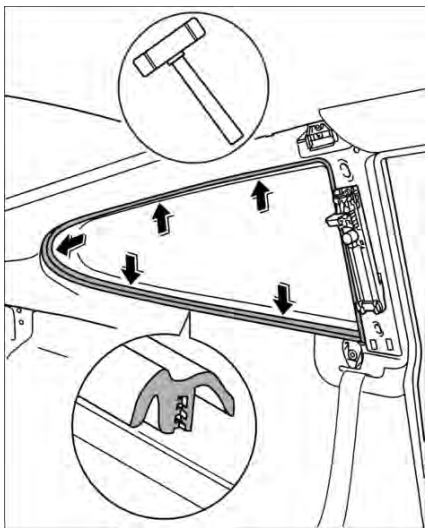
Fastening sound absorber



Sticking in the seal

1. Stick in the existing side section seal **-1-** using a commercially available adhesive or replace it, if necessary.

Installing sound absorber



2. Insert sound absorber **-2-** in the side section **-Arrow A-** .
3. Stick in the existing sound absorber **-1-** using a commercially available adhesive **-Arrow B-** , or replace it, if necessary.

Installing sound absorber

4. Position sound absorber **-2-** on the side wall **-Arrow A-** and screw in fixing clip **-1-** **-Arrow B-** .

Installing side window seal

Installing side window seal

1. Fit side window seal to the rim of the side window section by hand.

Removing rear window

Removing rear window

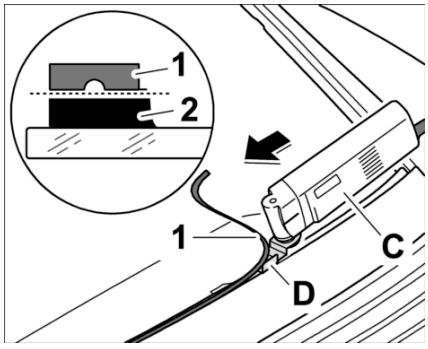
Note

- *The door windows must not be closed until after the curing time has elapsed.*

1. Lower the door windows.
2. Pull off the plug for the rear window heater on the rear window.

Removing rear window

3. Remove rear window with the cutting wire separator. → *General information on installing and removing car windows*



top of page

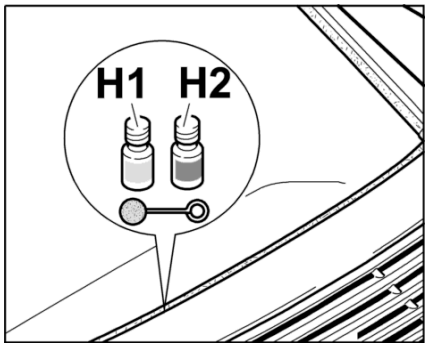
Preparing window frame for installation

Removing adhesive from the body

Note

- *The surface coating of adhesive residue helps new adhesive to stick. Keep cut surfaces clean and free of grease and do not clean with cleaning solution.*

Removing adhesive from the body



1.

When removing remaining adhesive **-1-** with the cutting tool **-C-** and the flashing knife **-D-** on the body, ensure that a surface coating of adhesive remains **-2-** .

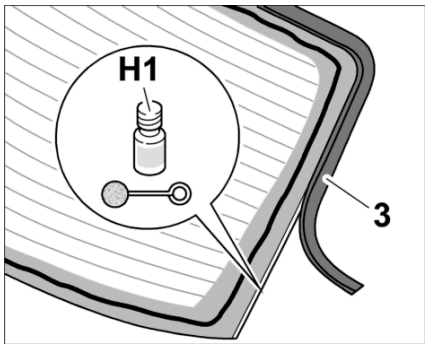
Cleaning and priming paint damage or newly built-up paint areas in the window aperture of the body

Note

- *A ventilation period of at least 10 minutes must be observed between the cleaning of the glass section and the application of the primer! No cleaning solution residues may remain on the body.*

Clean and prime the body.

1. Clean new paint areas or damage to the top coat paint in the non-visible area of the glass section in the body with cleaning solution **-H1-** and patch with primer **-H2-** .



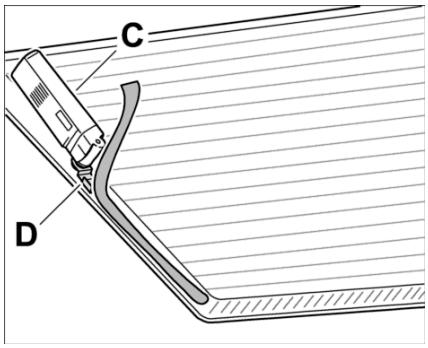
top of page

Preparing rear window for installation

Removing seal for rear window

Note

- *Only if the window is to be re-installed.*



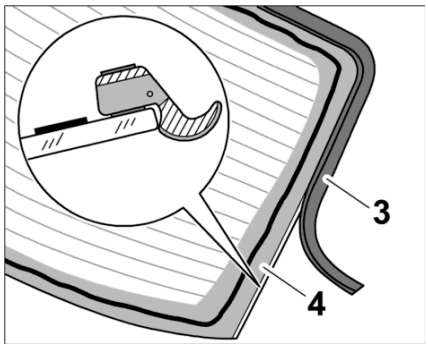
Pulling off seal

1. Pull off seal **-3-** . Remove adhesive residues with cleaning solution **-H1-** .

Removing adhesive from the rear window

Note

- *Only if the rear window is to be re-installed.*



Removing adhesive from the rear window

Note

- *The remaining adhesive helps new adhesive to stick. Keep cut surfaces clean and free of grease and do not clean with cleaning solution.*

1. Equip cutter **-C-** with flashing knife **-D-** and remove remaining adhesive from the rear window, ensuring that a surface coating of adhesive remains.

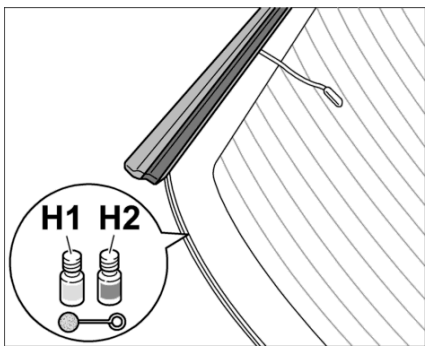
Fitting seal for rear window

Fitting the seal

1. Staring from the edge, adhere the seal **-3-** along the entire border of the rear window **-4-** .

Applying activator to the bonding section of the rear window

Note



- *Only if the rear window is to be re-installed.*

1. During longer idle periods (> 24 h) apply activator **-H3-** to the remaining adhesive.

Note

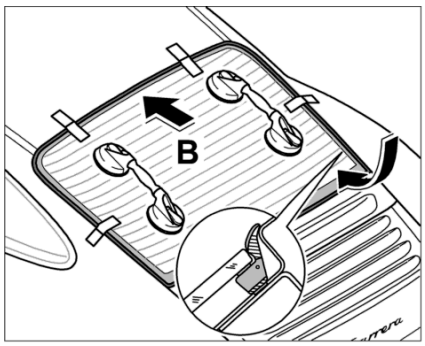
- *A ventilation period of at least 10 minutes must be observed between the cleaning of the glass and the application of the primer! No cleaning solution residues may remain on the body.*

2. Clean window with cleaning solution **-H1-** .

Applying activator to the bonding section of the rear window

3. Apply primer **-H2-** to the window flange in the area of the marking.

top of page



Installing rear window

Aligning rear window

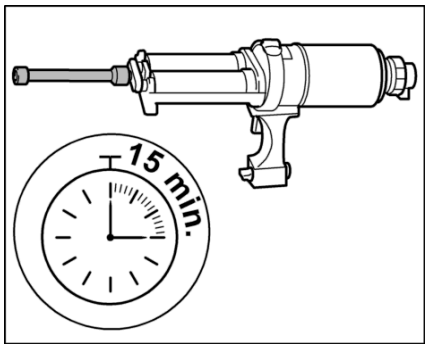
Note

- *Two persons are needed to insert and adjust the rear window.*

1. Apply suction cups **-B-** to the rear window and insert the rear window into the window aperture.

Aligning rear window

Note



- *Ensure that the rear window can no longer be aligned after it is inserted.*

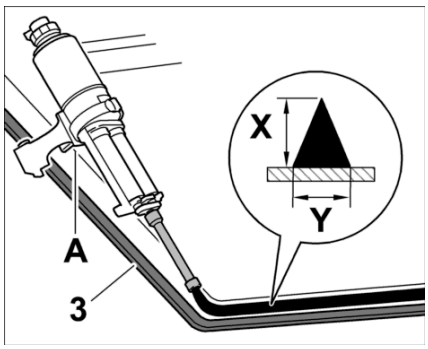
2. Align the rear window in the Z and Y directions. Mark the rear window with adhesive tape and remove.

Preparing 2-component adhesive for processing

Note

- *The adhesive has an open time of **-15 min-** , which means that the bonding material must be applied and the car window must be assembled within this period of time.*

Preparing the adhesive



- *In order to ensure that the substance is completely mixed, apply a 30 mm long adhesive bead of fresh adhesive to a piece of cardboard before processing.*

1. Preparing 2-component adhesive for processing. → *Processing of Porsche 2-component window bonding agents*

Applying adhesive on the rear window

Note

- *When applying the adhesive, it is essential to ensure that the adhesive bead overlaps by approx. 30 mm at the beginning and at the end.*

Applying adhesive

1. Using bonding gun **-A-** apply 2-component adhesive to the rear window along the seal **-3-** in the form of a triangular bead with the dimension **-X= ca. 15 mm-** **-Y= ca. 8 mm-** .

Pulling off protective film

Note

- *Make sure that no further work is performed in the area of the seal once the protective film has been removed.*

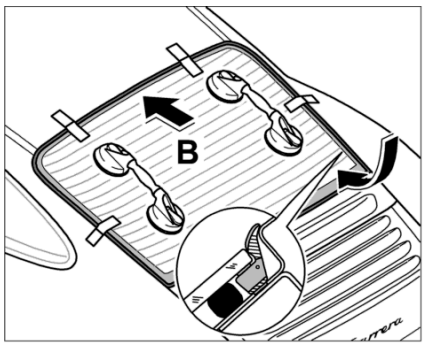
1. Before gluing in the rear window, peel off the protective film on the seal without leaving residues.

Inserting rear window into the body

ATTENTION

Danger of material damage if specified curing time of adhesive is not observed!

- **There will not be a proper adhesive bond if the prescribed curing time of the adhesive is not observed!**



→ The vehicle must not be used until the curing time has elapsed.
→ Curing time: 3 hours
→ Temperature: at least 10°C
→ Fixing time: approx. 1 hour

Note

- *Two persons are needed to insert and adjust the rear window.*

Note

- *The rear window can no longer be aligned, because the bonding section on the seal immediately sticks to the body when the rear window is installed.*

Pulling off protective film

Inserting rear window

1. Insert the rear window into the window aperture and fit it at the previously marked positions.

Cleaning fields of vision

Note

- *The door windows must not be closed until after the curing time has elapsed.*

1. Adhesive which has oozed out must be removed immediately and the affected fields of vision must be cleaned using cleaning agent **-H1-** .

top of page

Subsequent work

Subsequent work

1. Connect plug for the rear window heater.
2. Install left and right C-pillar trim elements. →706819 Removing and installing C-pillar trim - Installing
3. Install rear window wiper → *23 Removing and installing wiper arm for rear window washer system*
4. Install rear centre panel. →512119 Removing and installing rear centre panel - Installing
5. Close door windows.

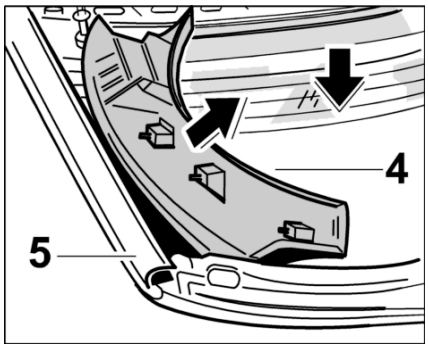
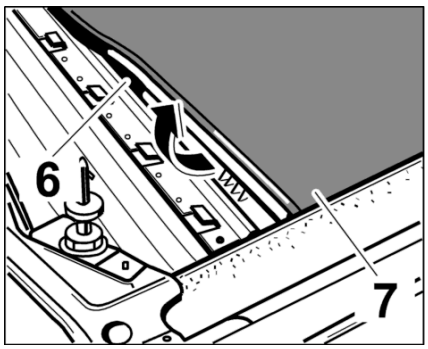
Removing rear window

Preparing the rear window (hardtop) for removal



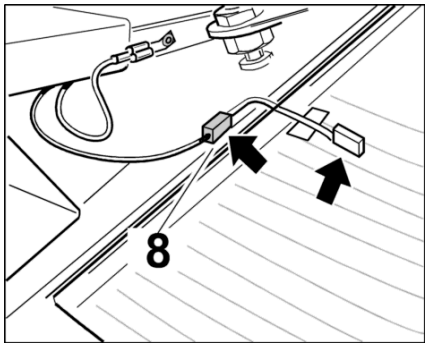
Removing centring journal support

1. Unscrew fastening screw **-1-** from the centring journal **-2-** on the left and right and take off support **-2-** .



Removing centring journal trim panel

2. Unclip hardtop locking element trim panel **-3-** on the left and right.

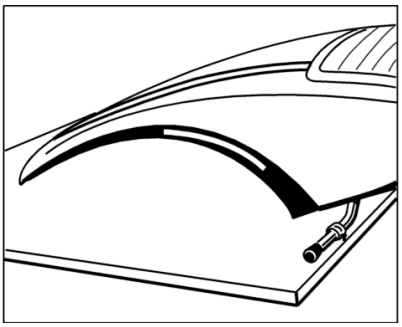


Unclipping linings

3. Unclip lining **-4-** at the sides and at the rear from the hardtop body **-5-** .

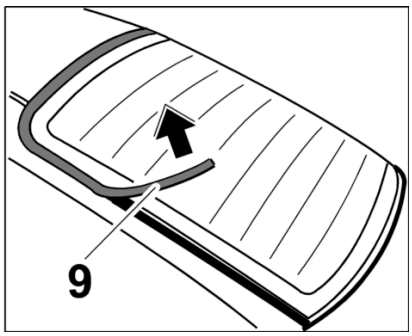
Detaching the roof liner

4. Pull plastic rail **-6-** on roof liner **-7-** to the rear and disengage.



Disconnecting plug connection for rear window

Note



- *To avoid damaging the electric line when cutting out the rear window, affix this to the rear window with adhesive tape.*

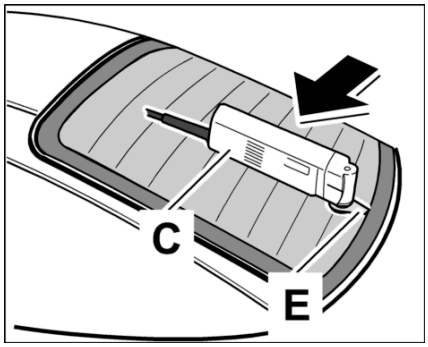
5. Disconnect electrical plug connection **-8-** at left and right of rear window.

Locking hardtop to the assembly fixture

6. Place hardtop on the assembly fixture and lock with the latching levers and the locking lever at front.

Pulling off cover section

Note



- *If the cover section is removed undamaged, it can be re-used.*

7. Loosen and pull off the cover section **-9-** .

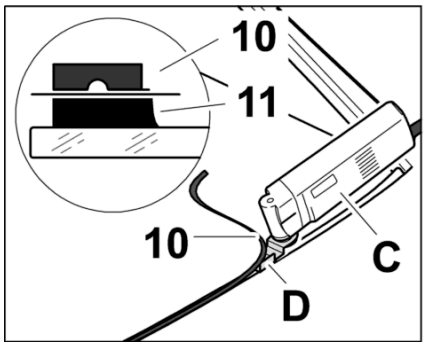
Removing rear window

Note

- *When cutting out the rear window, take care not to damage the rivet connections that are connecting the hardtop body parts.*
- *When cutting out the rear window, make sure to cut close to the rear window.*

Removing rear window

1. Fit a cutter **-C-** with a u-type cutter **-E-** . Set the vibration frequency controller to 5. Cut through the bond between the body and the rear window at the top, bottom and sides. *→641000 General information on installing and removing car windows*
2. Taking off rear window

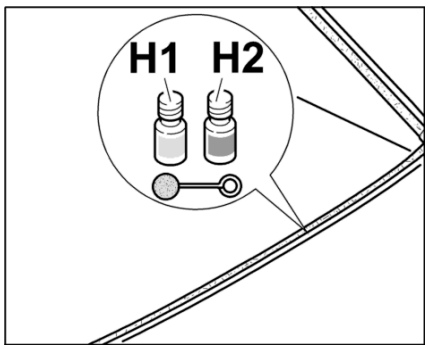


top of page

Preparing window frame for installation

Removing adhesive on the hardtop body

Note



- *The surface coating of adhesive residue helps new adhesive to stick. Keep cut surfaces clean and free of grease and do not clean with cleaning solution.*

Removing remaining adhesive on the hardtop body

1. When removing remaining adhesive **-10-** with the cutting tool **-C-** and the flashing knife **-D-** on the hardtop body, ensure that a surface coating of adhesive remains **-2-** .

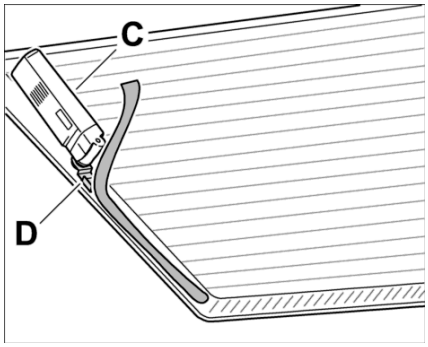
Cleaning and priming paint damage or newly built-up paint areas in the window aperture of the hardtop body

Cleaning and priming the body

Note

- *A ventilation period of at least 10 minutes must be observed between the cleaning of the glass section and the application of the primer! No cleaning solution residues may remain on the body.*

1. Clean new paint areas or damage to the top coat paint in the non-visible area of the glass section in the hardtop body with cleaning solution **-H1-** and patch with primer **-H2-** .



top of page

Preparing rear window for installation

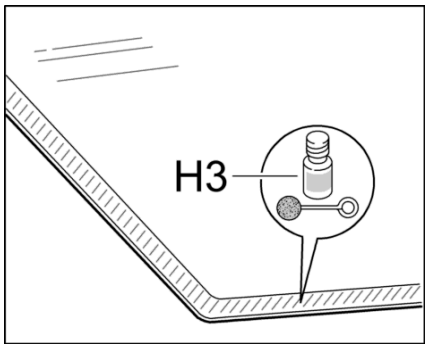
Removing adhesive from the rear window

Note

- *Only if the rear window is to be re-installed.*

Removing adhesive from the rear window

Note



- *The remaining adhesive helps new adhesive to stick. Keep cut surfaces clean and free of grease and do not clean with cleaning solution.*

1. Equip cutter **-C-** with flashing knife **-D-** and remove remaining adhesive from the rear window, ensuring that a surface coating of adhesive remains.

Applying activator to the bonding section of the rear window

Note

- *Only with new rear windows*

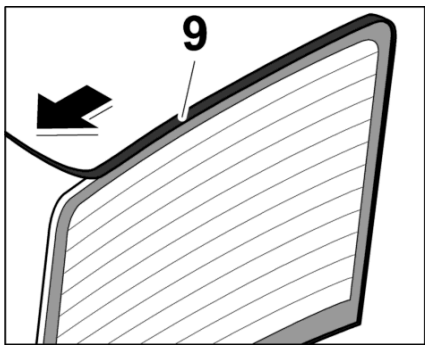
Applying activator to the bonding section of the rear window

Note

- *Only if the rear window is re-installed*

1. During long idle periods apply activator **-H3-** to the remaining adhesive.

Note



- *A ventilation period of at least 10 minutes must be observed between the cleaning of the glass and the application of the primer! No cleaning solution residues may remain on the body.*

2. Clean the windscreen with cleaning solution **-H1-** .
3. Apply primer **-H2-** to the window flange in the area of the marking.

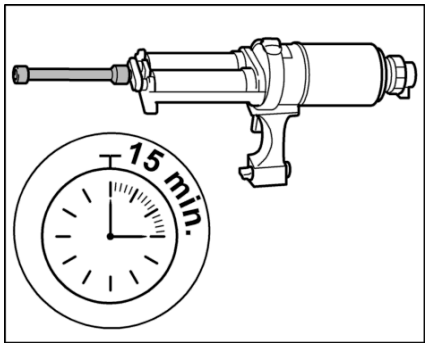
Fitting cover section

Note

- *If the cover section is removed from the rear window undamaged, it can be re-used.*

Fitting cover section

1. Attach cover section **-9-** to the rear window.



top of page

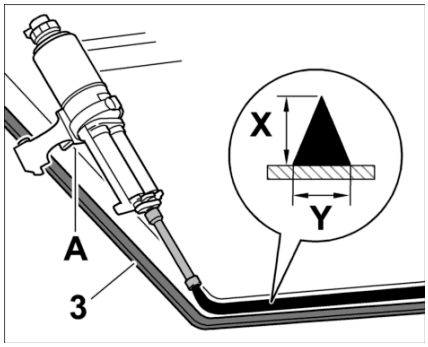
Installing rear window

Preparing 2-component adhesive for processing

Note

- *The adhesive has an open time of **-15 min-** , which means that the bonding material must be applied and the car window must be assembled within this period of time.*

Preparing the adhesive



- *In order to ensure that the substance is completely mixed, apply a 30 mm long adhesive bead of fresh adhesive to a piece of cardboard before processing.*

1. Preparing 2-component adhesive for processing. → *Processing of Porsche 2-component window bonding agents*

Applying adhesive on the rear window

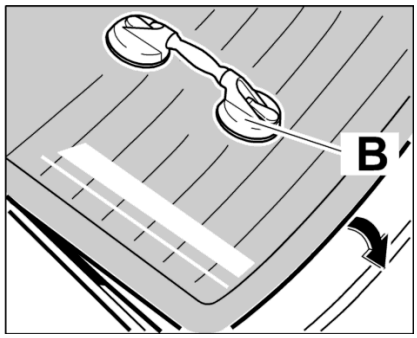
Note

- *When applying the adhesive, it is essential to ensure that the adhesive bead overlaps by approx. 30 mm at the beginning and at the end.*

Applying adhesive

1. Using bonding gun **-A-** apply 2-component adhesive to the rear window along the seal **-3-** in the form of a triangular bead with the dimension **-X= ca. 15 mm-** **-Y= ca. 8 mm-** .

Inserting rear window into the hardtop body



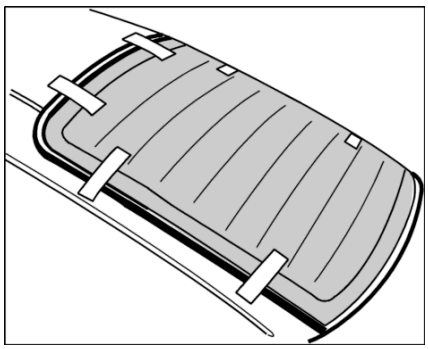
ATTENTION

Danger of material damage if specified curing time of adhesive is not observed!

- **There will not be a proper adhesive bond if the prescribed curing time of the adhesive is not observed!**

→ The vehicle must not be used until the curing time has elapsed.
→ Curing time: 3 hours
→ Temperature: at least 10°C
→ Fixing time: approx. 1 hour

1. Affix suction cups **-B-** to the rear window.



Inserting rear window

Note

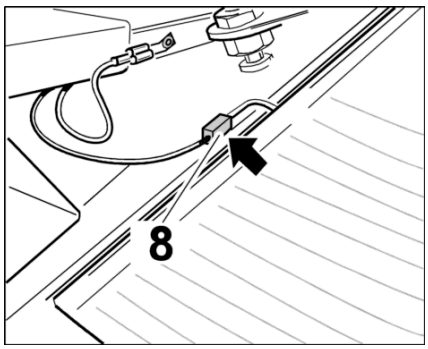
- *Two persons are needed to insert and adjust the rear window.*

2. Insert the rear window at the top of the window aperture and lay it down carefully into the aperture.

Securing rear window

3. Press the rear window fully upwards, pressing on the lower edge of the glass while doing so. Use adhesive tape to prevent the rear window from slipping at the side and the top.

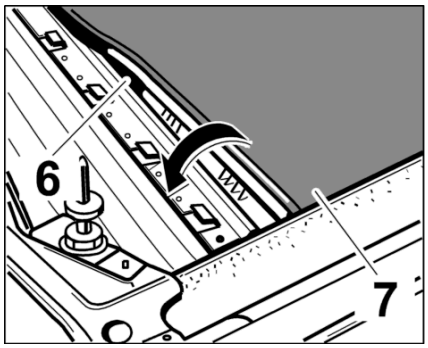
Cleaning fields of vision



Note

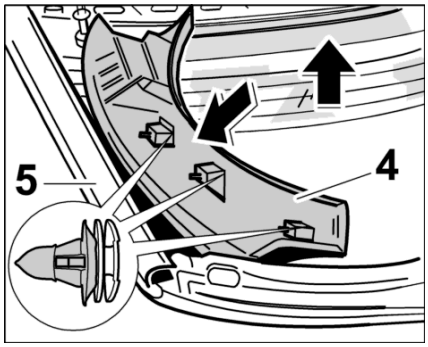
- *The door windows must not be closed until after the curing time has elapsed.*

1. Adhesive which has oozed out must be removed immediately and the affected fields of vision must be cleaned using cleaning agent **-H1-** .



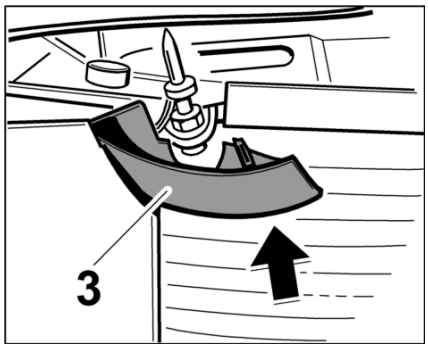
Completing the rear window (hardtop) after installation

1. Place outer side of the hardtop on the assembly fixture.



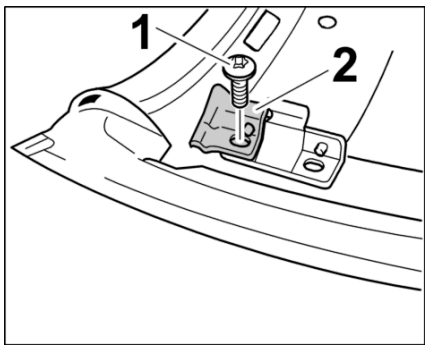
Joining plug connection for rear window heating

2. Connect electrical plug connection **-8-** at left and right of rear window.



Attaching roof liner

3. Engage roof liner **-7-** to the rear using plastic rail **-6-** .



Clipping in linings

4. Clip in lining **-4-** at the sides and at the rear on the hardtop body **-5-** .

Clipping in hardtop locking trim panel

5. Clip hardtop locking element trim panel **-3-** on the left and right.

Installing centring journal support

6. Insert centring journal **-2-** on the left and right, screw in the fastening screw **-1-** und using torque → **Tightening torque: 7.5 ftlb.** .

WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

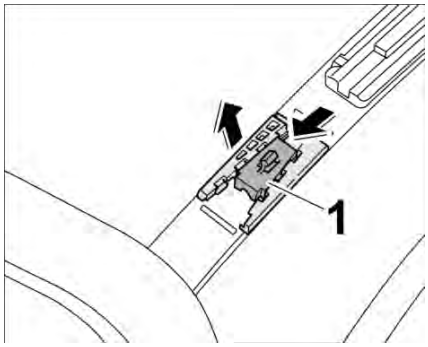
Removing roof joint strip

Removing roof joint cover strip

Installation Location:

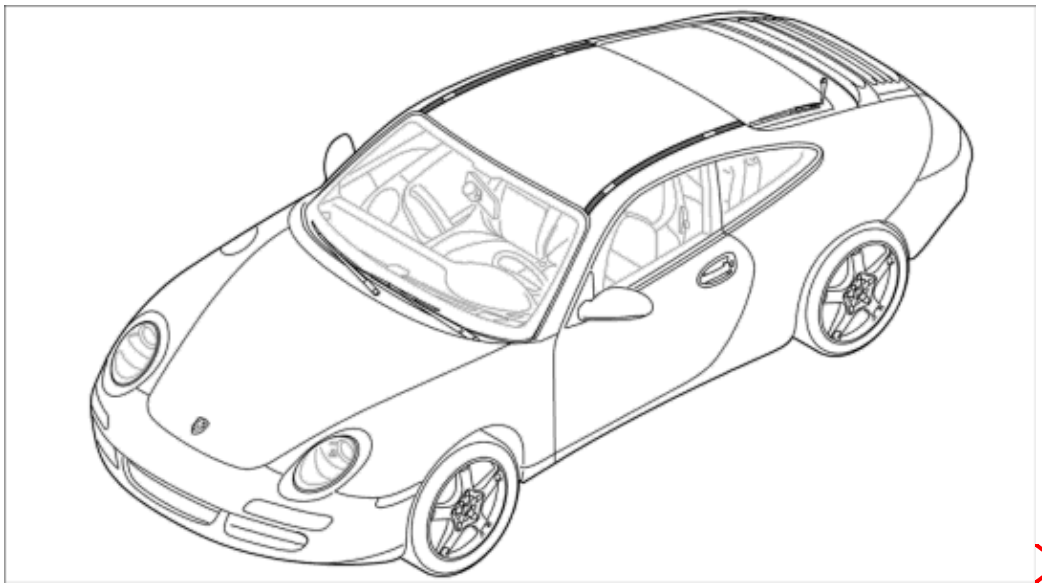


Installation position of roof joint cover strip

Removing roof joint cover strip

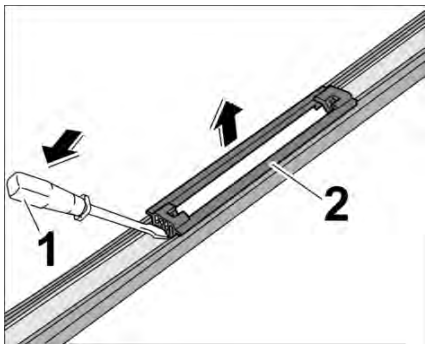
1. Lift roof joint cover strip **-1-** using a plastic spatula **-2 -** and unclip all the way along.

Detaching spreader



2. Move wedge piece of spreader **-1-** with a plastic wedge. Remove spreader.

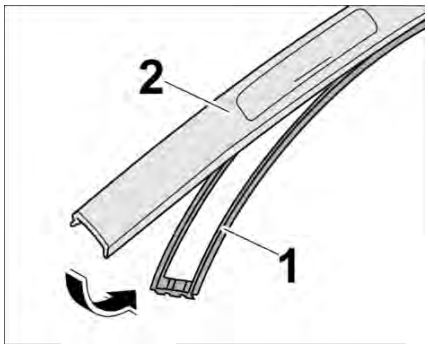
top of page



Disassembling roof joint cover strip

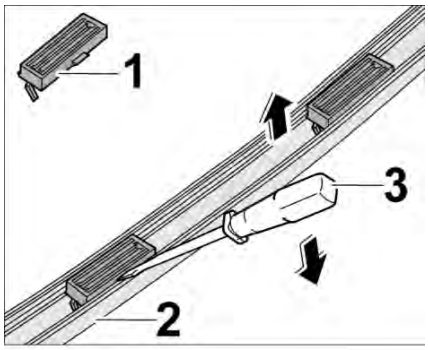
Disassembling roof joint cover strip

Installation Location:



Installation position of roof joint cover strip

Removing fold-out element



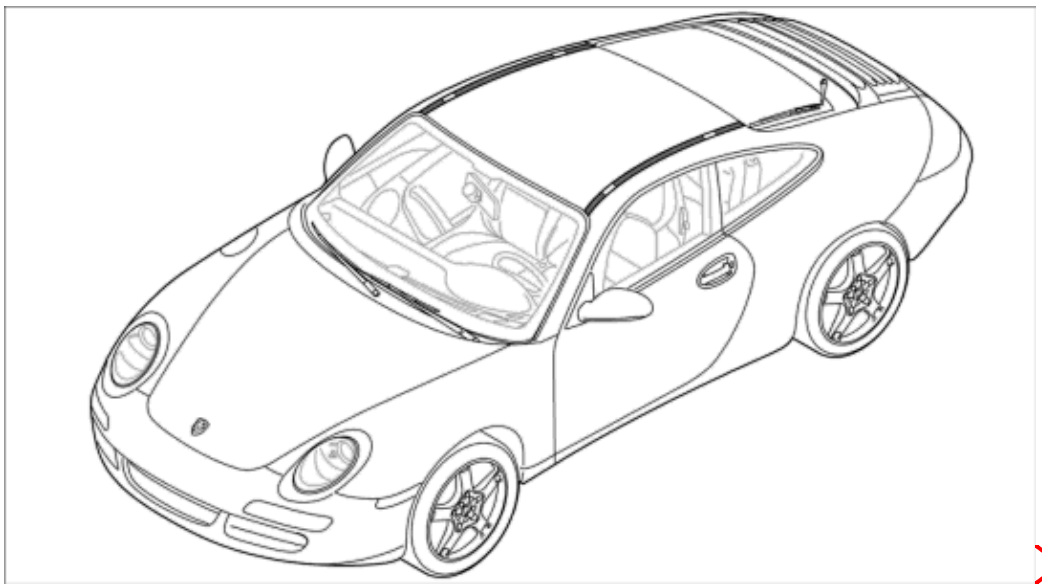
1. Insert a screwdriver **-1-** beneath both ends of the fold-out element **-2-** and press out.

Pulling off roof joint seal

2. Pull roof frame seal **-1-** from the roof joint cover strip **-2-**

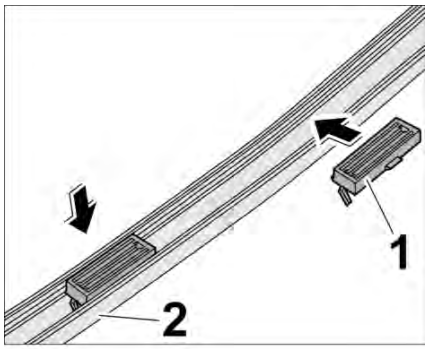
.

Removing roof joint clips



3. Between the roof joint clip **-1-** and the roof joint cover strip **-2-** insert a narrow screwdriver **-3-** and press outwards until the roof joint clip disengages.

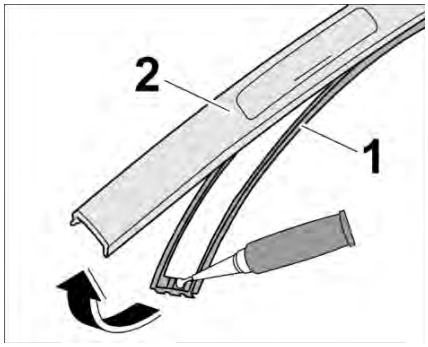
top of page



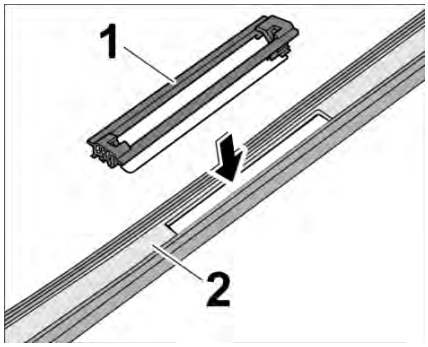
Assembling roof joint cover strip

Assembling roof joint cover strip

Installation Location:



Installation position of roof joint cover strip



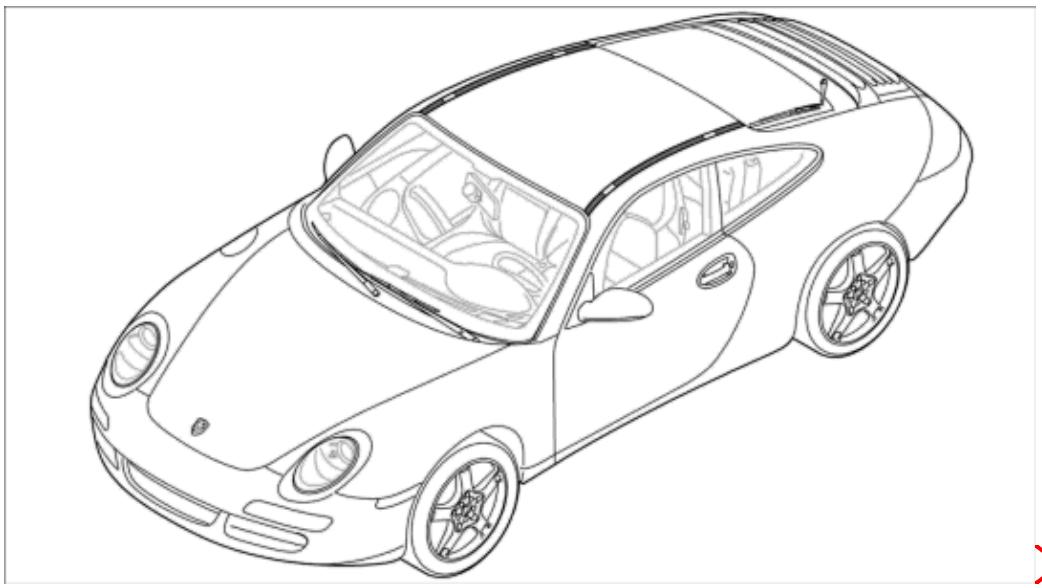
Fitting roof joint clips

1. Insert roof joint clips **-1-** narrow side first, and press in until the locking tab in the roof joint cover strip **-2-** engages.

Fitting roof joint seal

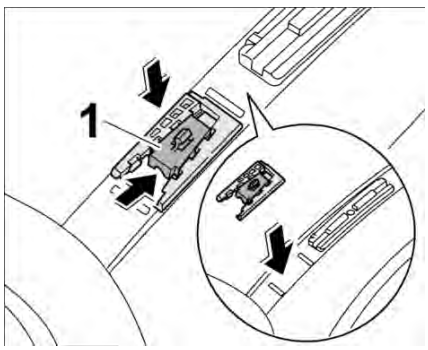
2. Push the roof joint seal **-1-** onto the roof joint strip **-2-** all the way round.
3. Stick in the roof frame seal **-1-** at the ends of the roof joint cover strip **-2-** using **Loctite 241** .

Fitting fold-out element



4. Position the fold-out element **-1-** in the cut-out of the roof joint strip **-2-** , and press in the locking tabs at the ends until they engage.

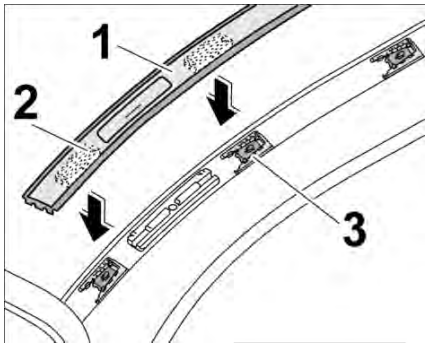
top of page



Installing roof joint strip

Installing roof joint cover strip

Installation Location:



Installation position of roof joint cover strip

Fitting spreader

1. Position spreaders **-1-** (5 per roof channel) in the recesses, beginning at the front. Press the spreader right down into the roof channel.
2. Push wedge piece into the spreader **-1-** until the spreader is braced in the roof channel.

Installing roof joint cover strip

3.

Position the roof joint strip **-1-** on the roof channel, and align the roof joint clips **-2-** in the roof joint cover strip with the spreaders **-3-** so that they lie directly above one another.

4. Press in roof joint cover strip **-1-** until it audibly engages.

 WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

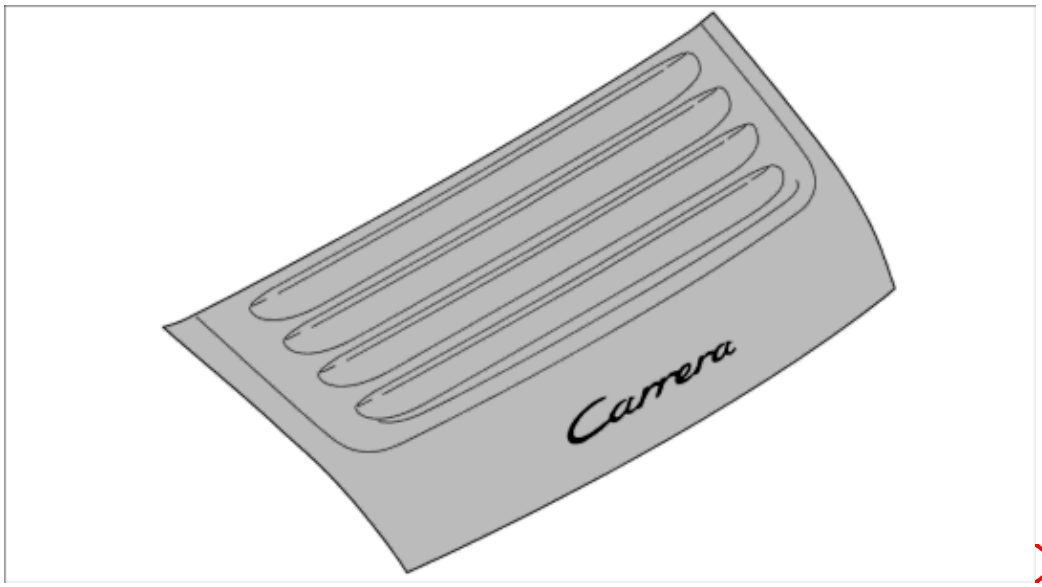
Removing spoiler drive

Removing upper part of spoiler

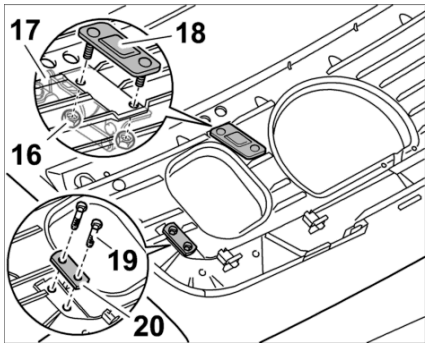
Installation Location:

Overview, rear lid



Removing upper part of spoiler

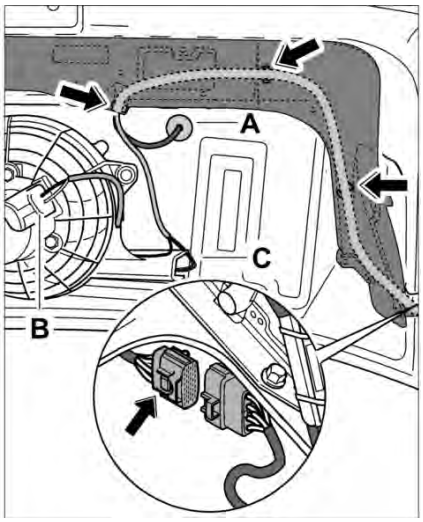
1. Press out plastic plugs **-8-** with a small screwdriver.



2. Unscrew clamping screw **-9-** by 2 to 3 turns and remove spoiler **-10-** by pulling it upwards.

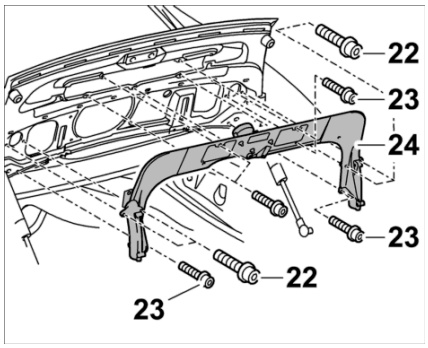
Removing the lower part of the spoiler

Installation Location:



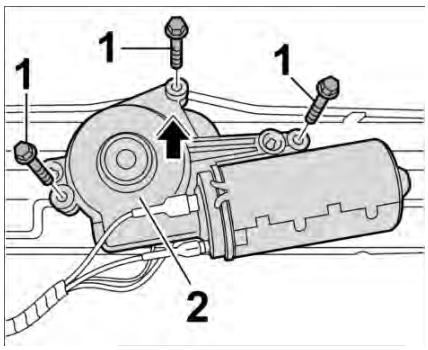
Overview, rear lid

Removing the lower part of the spoiler



1. Unscrew the fastening nuts **-16-** from the upper part of the spoiler and the hinge **-17-** . Remove the threaded plate **-18-** .
2. Unscrew the fastening screws **-19-** from the lower part of the spoiler and the actuating element. Remove the spacer **-20-** .

Removing spoiler drive

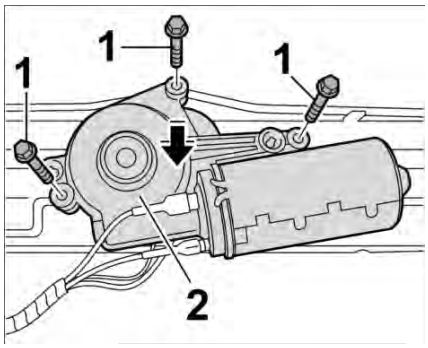


Loosening wire harness

1. Release plug connection for rear wire harness **-inset-** and disconnect.
2. Remove auxiliary brake light. →947019 Removing and installing auxiliary brake light - section on "Removing" [997110 997111 997120 997121 997410 997411 997430 997431]→947019 Removing and installing auxiliary brake light - section on "Removing" [997310 997311 997320 997321 997610 997611 997620 997621]
3. Pull out grommet **-A-** with the auxiliary stop light line. Release connector **-B-** on the engine compartment fan and pull off. Pull off engine compartment lighting connector **-C-** . Check retaining clip **-arrows-** , replace if necessary.

Removing spoiler drive

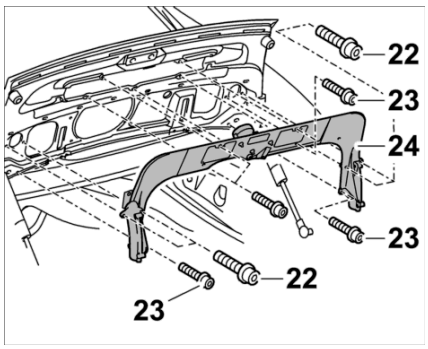
4. Unscrew fastening screws **-22 und 23-** from the spoiler drive **-24-** .



Removing motor for rear spoiler

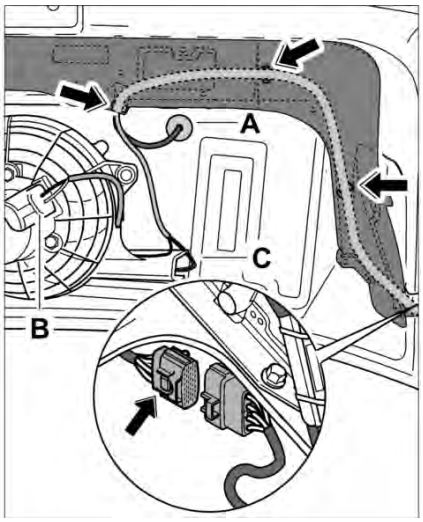
5. Pull off both connectors on motor for spoiler drive **-2-** .
6. Remove spoiler drive with wire harness.

top of page



Installing spoiler drive

Installing spoiler drive

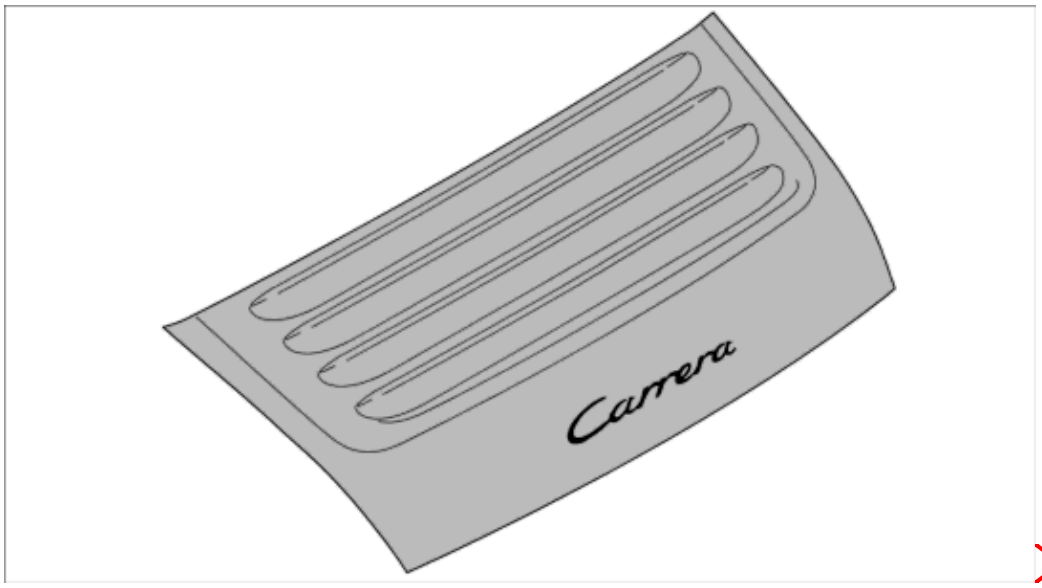


Installing motor for rear spoiler

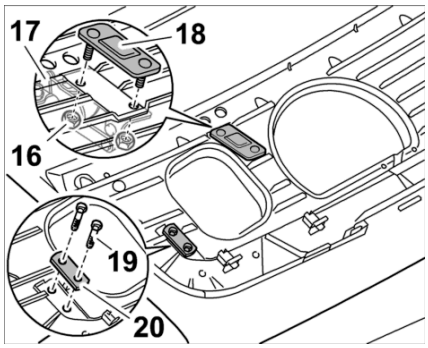
1. Push together both connectors on motor for spoiler drive **-2-** .

Installing spoiler drive

2. Position spoiler drive **-24-** with wire harness on rear lid and tighten the fastening screws **-22 and 23-** . Tightening torque →**: 9.7 (7 ftlb.) Nm**



Securing wiring harness

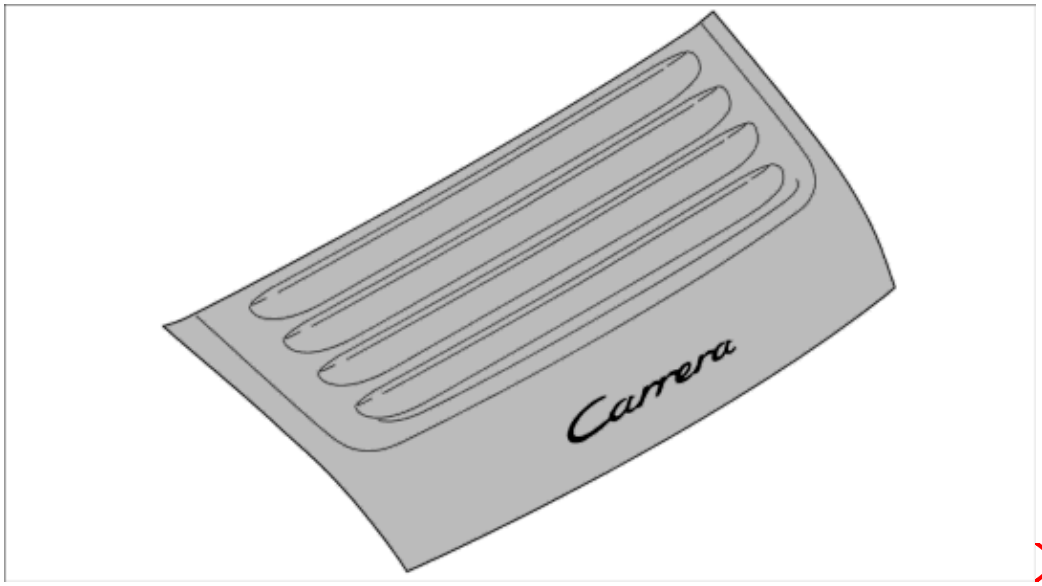


3. Push together connector for engine compartment lighting **-C-** and for engine compartment fan **-B-** , until they are felt to engage. Slide auxiliary stop light line with grommet through the opening in rear lid until grommet **-A-** can be pressed in.
4. Install auxiliary brake light. →947019 Removing and installing auxiliary brake light - section on "Installing" [997110 997111 997120 997121 997410 997411 997430 997431]→947019 Removing and installing auxiliary brake light - section on "Installing" [997310 997311 997320 997321 997610 997611 997620 997621]
5. Push the plug connection for the rear wire harness together until it is felt to engage.

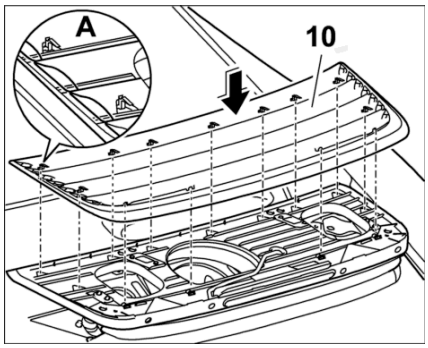
Mounting the lower part of the spoiler

Installation Location:

Overview, rear lid



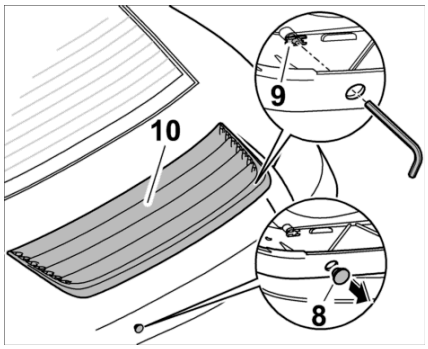
Mounting the lower part of the spoiler



1. Position the spacer **-20-** on the lower part of the spoiler. Tighten M6 fastening screws **-19-** . Tightening torque →**: 7 ftlb.**
2. Position the upper part of the spoiler on the hinge **-17-** . Using the threaded plate **-18-** and the M6 fastening nuts **-16-** , screw in the upper part of the spoiler securely. Tightening torque →**: 7 ftlb.**

Mounting upper part of spoiler

Installation Location:



Overview, rear lid

Mounting upper part of spoiler

1. Place the upper part of the spoiler **-10-** on the lower part of the spoiler. Ensure that the locking tabs **-Lupe A-** have engaged.

Securing upper part of spoiler

2. Tighten clamping screws **-9-** . Tightening torque →**: 2 ftlb. ±1 ftlb.**
3. Push in the plastic plugs **-8-** .

66 77 55 Replacing stone guard film - as of MY 2005

- Replacing stone guard film

top of page

Replacing stone guard film

General affixing regulations for the stone guard film

Note
Affixing space:

- *Room temperature 18 - 30 °C.*
- *Humidity 40 % - 60 % rel. humidity.*

Note
Vehicle for affixing:

- *Acclimated to room conditions.*
- *Wear clean gloves when affixing so that there will not be any visible finger prints on the film.*

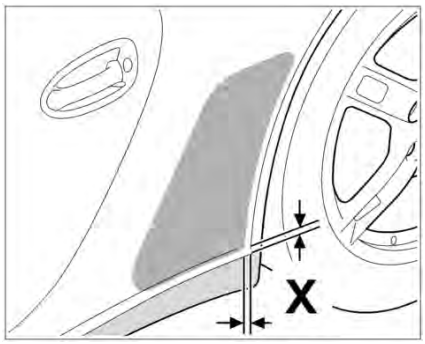
Note
Application fluid:

- *3 drops of non-lubricating washing-up liquid (e.g., Pril) in 1000 ml distilled water.*

Affixing the stone guard film

Cleaning paint surface

Note



- *The surface must be free from dirt, oil, and wax residues.*

1. Clean the paint surface for the stone guard film and rub it dry using a lint-free, moisture absorbing cloth.
2. Wet the surface to be affixed with application fluid after cleaning.

Note

- *The film must be affixed immediately after spraying.*

3. Pull off film for stickers, and wet the bonding surface of the film with the application fluid.

Affixing the stone guard film

4. Affix film to vehicle to the dimension **-X= 0.5 + 1.5 mm-** and press lightly. Slight adjustments to the position can still be made.

Note

- *The film must be applied without bubbles, and no water may remain between the paint surface and adhesive.*

5. Press on the film with a plastic squeegee from the inside to the outside to squeeze out water.
6. The adhesive is activated by the pressure of the squeegee. The contact pressure should be at least 2 kg.
7. After affixing, pull off the thin protective film.
8.

Dry off the entire surface with a lint-free, moisture-absorbing, non-scratching cloth.

9. Check the affixed film for bubbles and faults. The film must bond permanently to the vehicle. Check corners again for correct bonding (press on again if necessary).

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.

General warning notes

Warning notes

 DANGER

Danger of accident (death/danger to yourself and/or other road users)

- **as a result of losing the Roof Transport System and/or add-on modules.**

→ Check the Roof Transport System and add-on modules regularly before each journey and during an extended journey to make sure it is seated correctly and securely on the vehicle.

 DANGER

Danger of accident (death/danger to yourself and/or other road users)

- **as a result of changed vehicle handling (higher centre of gravity and larger area exposed to the wind) when the Roof Transport System is fitted and especially when loaded.**

→ Adapt driving style accordingly!

→ Observe the instructions about the "Roof Transport System" in the Driver's Manual!

→ If the Roof Transport System and add-on modules are not in use, they should be completely removed from the vehicle in the interest of driving comfort (noise level) and fuel economy!

 DANGER

Danger of accident (death/danger to yourself and/or other road users)

- **due to improper loading of the Roof Transport System and/or add-on modules.**

→ Load the Roof Transport System and/or add-on modules so that the load does not project beyond the sides of the roof surface!

→ Select the distances between several add-on modules fitted next to each other so that the transported items cannot bump against each other during the journey!

→ Secure load adequately to prevent it from shifting during the journey!

 ATTENTION

Damage to the vehicle and/or Roof Transport System

- **due to non-observance of the total height of the vehicle.**

→ Observe total height of vehicle when entering car parks, underground car parks and tunnels etc.!

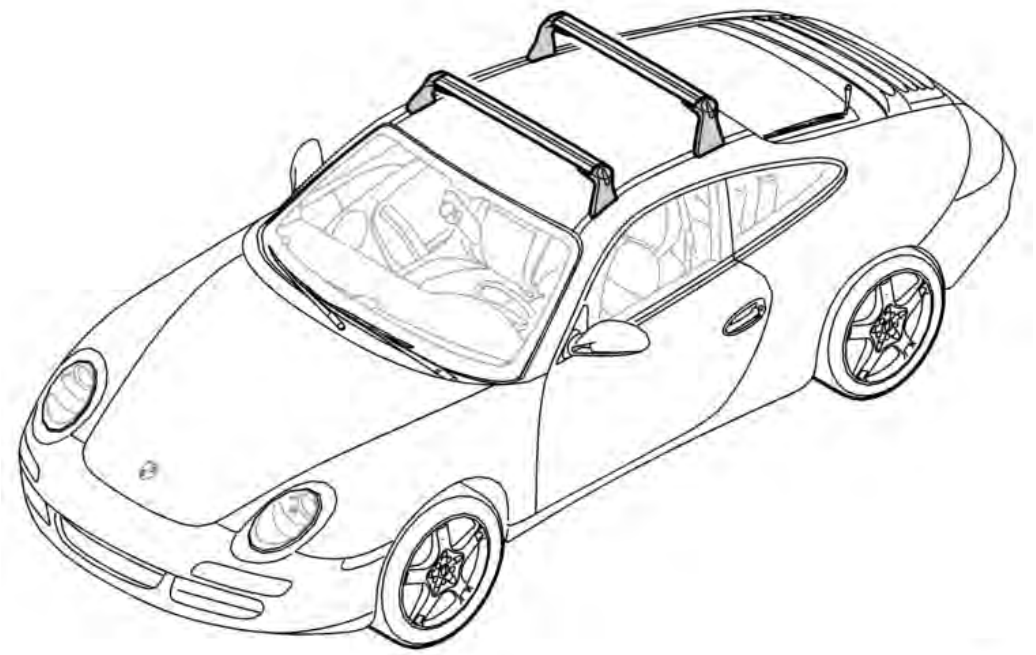
→ Completely remove load and Roof Transport System from the vehicle when not in use!

→ Completely remove the load and Roof Transport System from the vehicle roof before washing the vehicle in automatic car washes!

 ATTENTION

Damage to the vehicle roof and/or Roof Transport System

- **due to incorrect fitting and use**



→ Always take care when fitting or removing both brackets for the adapter. If necessary, have a second person help!

WARNUNG

Gefahr des Verlusts der Text-Bild-Zuordnung beim Ausdruck.

- **Aus technischen Gründen kann derzeit nicht ausgeschlossen werden, dass trotz einwandfreier Darstellung auf dem Bildschirm beim Ausdruck der Zusammenhang von Text und zugehörigem Bild verloren geht.**
- **Wird der Fehler nicht bemerkt, besteht die Gefahr, daß Arbeiten nicht korrekt durchgeführt werden und es dadurch zu Personen- und Sachschäden kommt.**

→Vergleichen Sie deshalb nach dem Druckvorgang unbedingt die Ausdrucke mit der Bildschirmdarstellung. Korrigieren Sie die Ausdrucke im Fehlerfall so, daß der Inhalt der Bildschirmdarstellung zutreffend wiedergegeben wird.

 WARNING

Danger of losing text-figure correspondence when printing out.

- **For technical reasons, it can currently not be ruled out that the correspondence between text and associated figure can be lost when it is printed out, even though the display on the screen is correct.**
- **If the fault is not noticed, there is the danger that work will not be performed correctly which can cause injury and damage.**

→Therefore, always compare printouts with the screen display after printing them out. Correct the printouts if they are faulty so that the content of the screen display matches that on the printouts.

 AVERTISSEMENT

Risque de perte de la correspondance texte-illustration lors de l'impression papier.

- **Pour des raisons techniques, il ne peut pas être exclu à l'heure actuelle que, même en cas d'affichage correct à l'écran, la correspondance entre le texte et l'illustration puisse être erronée sur l'impression papier.**
- **Si l'erreur passe inaperçue, on court le risque d'exécuter certaines opérations de manière incorrecte pouvant conduire à des dommages corporels et matériels.**

→Comparez impérativement pour cette raison les impressions papier avec l'affichage à l'écran. Corrigez-les en cas d'erreur de manière à reproduire correctement l'affichage à l'écran.

 ATTENZIONE

Pericolo di perdita dell'abbinamento testo-immagine nella stampa.

- **Per motivi tecnici non è escluso che, nonostante la rappresentazione sullo schermo risulti perfetta, durante la stampa venga persa la corrispondenza fra testo e relativa immagine.**
- **Se tale difetto non viene rilevato vi è il pericolo che i lavori non siano eseguiti correttamente; ciò può avere come conseguenza lesioni e danneggiamenti.**

→Per questo motivo, dopo la stampa è assolutamente necessario confrontare le stampe con la rappresentazione sullo schermo. In caso di errore si prega di correggere le stampe, così da garantire la riproduzione esatta della rappresentazione sullo schermo.

 ADVERTENCIA

Al imprimir se corre el riesgo de perder la correcta asignación de las figuras al texto.

- **Por motivos técnicos, por el momento no se puede descartar que, aun siendo correcta la imagen que aparezca en la pantalla, al imprimir se pierda la correlación entre el texto y la figura correspondiente.**
- **Si este error pasara desapercibido, existe el riesgo de que los trabajos no se ejecuten de forma correcta y, por tanto, se produzcan daños personales y materiales.**

→Por ello le rogamos que tras el proceso de impresión compare siempre las copias impresas con la imagen de la pantalla. En caso de error, corrija las copias impresas de forma que se correspondan con el contenido de la imagen de la pantalla.
